This course is a broad introduction to the history, doctrine, and culture of the Buddhism of Tibet. We will begin with the introduction of Buddhism to Tibet in the eighth century and move on to the evolution of the major schools of Tibetan Buddhism, Tibetan Buddhist literature, ritual and monastic practice, the place of Buddhism in Tibetan political history and the contemporary situation of Tibetan Buddhism both inside and outside Tibet.

Final exam required.

BUDDSTD C114/S ASIAN C114/TIBETAN C114 Tibetan Buddhism 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; South Asian; Tibetan**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is a broad introduction to the history, doctrine, and culture of the Buddhism of Tibet. We will begin with the introduction of Buddhism to Tibet in the eighth century and move on to the evolution of the major schools of Tibetan Buddhism, Tibetan Buddhist literature, ritual and monastic practice, the place of Buddhism in Tibetan political history, and the contemporary situation of Tibetan Buddhism both inside and outside of Tibet.

Final exam required. Formerly known as Buddhism 114.

BUDDSTD C115/JAPAN C115 Japanese Buddhism 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

A critical survey of the main themes in the history of Japanese Buddhism as they are treated in modern scholarship. The course covers the transmission of Buddhism from China and Korea to Japan; the subsequent evolution in Japan of the Tendai, Shingon, Pure Land, Nichiren, and Zen schools of Buddhism; the organization and function of Buddhist institutions (monastic and lay) in Japanese society; the interaction between Buddhism and other modes of religious belief and practice prevalent in Japan, notably those that go under the headings of "Shinto" and "folk religion."

Final exam required. Formerly known as Buddhism 115.

BUDDSTD C120/EA LANG C120 Buddhism on the Silk Road 4 Units**Department:** Buddhist Studies; East Asian Languages and Cultures;

Group in Buddhist Studies

Course level: Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course is both an historical introduction to the Silk Road, understood as an ever-changing series of peoples, places, and traditions, as well as an introduction to the study of those same peoples, places, and traditions in the modern period. In this way, the class is intended both as a guide to the extant textual, archaeological, and art historical evidence from the Silk Road, but also as a framework for thinking about what it means to study Asia and Asian religions in the context of a contemporary American classroom. All readings will be in English.

Final exam required.

BUDDSTD C126/EA LANG C126 Buddhism and the Environment 4 Units**Department:** Buddhist Studies; East Asian Languages and Cultures;

Group in Buddhist Studies

Course level: Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One lower-division course in Buddhist Studies or consent of instructor.

A thematic course on Buddhist perspectives on nature and Buddhist responses to environmental issues. The first half of the course focuses on East Asian Buddhist cosmological and doctrinal perspectives on the place of the human in nature and the relationship between the salvific goals of Buddhism and nature. The second half of the course examines Buddhist ethics, economics, and activism in relation to environmental issues in contemporary Southeast Asia, East Asia, and America.

Final exam required. Instructor: Williams

BUDDSTD C128/EA LANG C128/S,SEASN C145 Buddhism in Contemporary Society 4 Units**Department:** Buddhist Studies; East Asian Languages and Cultures;

Group in Buddhist Studies; South and Southeast Asian Studies

Course level: Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

A study of the Buddhist tradition as it is found today in Asia. The course will focus on specific living traditions of East, South, and/or Southeast Asia. Themes to be addressed may include contemporary Buddhist ritual practices; funerary and mortuary customs; the relationship between Buddhism and other local religious traditions; the relationship between Buddhist institutions and the state; Buddhist monasticism and its relationship to the laity; Buddhist ethics; Buddhist "modernism," and so on.

Final exam required.

BUDDSTD C130/EA LANG C130 Zen Buddhism 4 Units

Department: Buddhist Studies; East Asian Languages and Cultures; Group in Buddhist Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Prerequisites: One lower division course in Asian religion recommended. This course will introduce students to the Zen Buddhist traditions of China and Japan, drawing on a variety of disciplinary perspectives (history, anthropology, philosophy, and so on). The course will also explore a range of hermeneutic problems (problems involved in interpretation) entailed in understanding a sophisticated religious tradition that emerged in a time and culture very different from our own. Final exam required. Formerly known as Buddhism 130.

BUDDSTD C132/EA LANG C132 Pure Land Buddhism 4 Units

Department: Buddhist Studies; East Asian Languages and Cultures; Group in Buddhist Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

This course will discuss the historical development of the Pure Land school of East Asian Buddhism, the largest form of Buddhism practiced today in China and Japan. The curriculum is divided into India, China, and Japan sections, with the second half of the course focusing exclusively on Japan where this form of religious culture blossomed most dramatically, covering the ancient, medieval, and modern periods. The curriculum will begin with a reading of the core scriptures that form the basis of the belief system and then move into areas of cultural expression. The course will follow two basic trajectories over the centuries: doctrine/philosophy and culture/society.

Research Paper Instructor: Blum

BUDDSTD C135/EA LANG C135/S,SEASN C135 Tantric Traditions of Asia 4 Units

Department: Buddhist Studies; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

The emergence of the tantras in seventh and eighth-century India marked a watershed for religious practice throughout Asia. These esoteric scriptures introduced complex new ritual technologies that transformed the religious traditions of India, from Brahmanism to Jainism and Buddhism, as well as those of Southeast Asia, Tibet, Mongolia, China, Korea, and Japan. This course provides an overview of tantric religion across these regions.

Final exam required.

BUDDSTD C140/CHINESE C140 Readings in Chinese Buddhist Texts 4 Units

Department: Buddhist Studies; Chinese; Group in Buddhist Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 110A. One semester of classical Chinese. Prior background in Buddhist history and thought is helpful, but not required. This course is an introduction to the study of medieval Buddhist literature written in classical Chinese. We will read samples from a variety of genres, including early Chinese translations of Sanskrit and Central Asian Buddhist scriptures, indigenous Chinese commentaries, philosophical treatises, and sectarian works, including Chan (Zen koans). The course will also serve as an introduction to resource materials used in the study of Chinese Buddhist texts, and students will be expected to make use of a variety of reference tools in preparation for class. Readings in Chinese will be supplemented by a range of secondary readings in English on Mahayana doctrine and Chinese Buddhist history.

This course is intended for students who already have some facility in literary Chinese. Final exam required.

BUDDSTD 154 Death, Dreams, and Visions in Tibetan Buddhism 4 Units

Department: Group in Buddhist Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

Tibetan Buddhists view the moment of death as a rare opportunity for transformation. This course examines how Tibetans have used death and dying in the path to enlightenment. Readings will address how Tibetan funerary rituals work to assist the dying toward this end, and how. Buddhist practitioners prepare for this crucial moment through tantric meditation, imaginative rehearsals, and explorations of the dream state. Final exam required.

BUDDSTD C154/S ASIAN C154/TIBETAN C154 Death, Dreams, and Visions in Tibetan Buddhism 4 Units

Department: Buddhist Studies; Group in Buddhist Studies; South Asian; Tibetan

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Tibetan Buddhists view the moment of death as a rare opportunity for transformation. This course examines how Tibetans have used death and dying in the path to enlightenment. Readings will address how Tibetan funerary rituals work to assist the dying toward this end, and how Buddhist practitioners prepare for this crucial moment through tantric meditation, imaginative rehearsals, and explorations of the dream state.

Final exam required. Instructor: Dalton

BUDDSTD C174/JAPAN C174 Japanese Buddhism in Diaspora 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course focuses on Japanese Buddhism during the late 19th and early 20th centuries in its encounter with modernity, colonialism, and immigration history. Looking at the Japanese diaspora around the Pacific Rim, we will begin with Japanese Buddhism's relationship with the Meiji state, State Shinto, Christianity, and the West. Regions covered include Manchuria, Korea, Hawaii, the U.S., Canada, and Brazil.

Final exam required. Instructor: Williams

BUDDSTD 190 Topics in the Study of Buddhism 4 Units**Department:** Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Some prior study of Buddhism or Asian culture is recommended.

This course will focus on specific themes, developments, and issues in the study of Buddhism. The course is intended to supplement our regular curricular offerings, and the content will change from semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

BUDDSTD 198 Directed Group Study 1 - 4 Units**Department:** Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Junior or Senior standing.

Small group instruction not covered by regularly scheduled courses. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

BUDDSTD 199 Independent Study 1 - 4 Units**Department:** Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Prerequisites: Junior or Senior standing.

Independent study in topics not covered by regularly scheduled courses. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

BUDDSTD 200 Proseminar in Buddhist Studies 1 Unit**Department:** Group in Buddhist Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar every 3 to 4 weeks.**Prerequisites:** Graduate standing in the Buddhist Studies Ph.D. program or consent of instructor.

This seminar provides an opportunity for all students and faculty in the Group in Buddhist Studies to gather together on a regular basis to discuss recent theoretically significant works in the field of Buddhist Studies, as well as pertinent and important works in related disciplines (anthropology, art history, literature, history, philosophy, and religious studies). The content of the course will be adjusted from semester to semester so as to best accommodate the needs and interest of the students, but the focus will be on recent works representing the "state of the field."

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD C214/S ASIAN C214/TIBETAN C214 Seminar in Tibetan Buddhism 2 or 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; South Asian; Tibetan**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course provides a place for graduate-level seminars in Tibetan Buddhism that rely primarily on secondary sources and Tibetan texts in translation. Content will vary between semesters but will typically focus on a particular theme. Themes will be chosen according to student interests, with an eye toward introducing students to the breadth of available western scholarship on Tibet, from classics in the field to the latest publications.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Dalton

BUDDSTD C215A/S ASIAN C215A Readings in Indian Buddhist Texts 2 - 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; South Asian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This graduate seminar focuses on reading a wide spectrum of Indian Buddhist texts in the Sanskrit (or Pali) original introducing the students to different genres, and different aspects of Indian Buddhism. The students taking the course for two units (rather than four) will be expected to prepare thoroughly every week for the reading of Buddhist texts in the original. They will also be expected to read all related secondary literature that is assigned to supplement the study of the primary source material. In contrast to the students taking the course for four units, they will not be expected to write a term paper or to prepare special presentations for class.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rospatt

BUDDSTD 220 Seminar in Buddhism and Buddhist Texts 2 or 4 Units**Department:** Group in Buddhist Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Content varies with student interest and needs. The course will normally focus on classical Buddhist texts that exist in multiple recensions and languages, including Chinese, Sanskrit, and Tibetan.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD C220/EA LANG C220/S,SEASN C220 Seminar in Buddhism and Buddhist Texts 2 or 4 Units**Department:** Buddhist Studies; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** unit(s):3 hours of seminar per week; 4 unit(s):3 hours of seminar per week.

Content varies with student interests. The course will normally focus on classical Buddhist texts that exist in multiple recensions and languages, including Chinese, Sanskrit, and Tibetan.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD C223/CHINESE C223 Readings in Chinese Buddhist Texts 2 or 4 Units**Department:** Buddhist Studies; Chinese; Group in Buddhist Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

This seminar is an intensive introduction to various genres of Buddhist literature in classical Chinese, including translations of Sanskrit and Central Asian scriptures. Chinese commentaries, philosophical treatises, hagiographies, and sectarian works. It is intended for graduate students who already have some facility in classical Chinese. It will also serve as a tools and methods course, covering the basic reference works and secondary scholarship in the field of East Asian Buddhism. The content of the course will be adjusted from semester to semester to best accommodate the needs and interests of students.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD C224/S ASIAN C224/TIBETAN C224 Readings in Tibetan Buddhist Texts 2 or 4 Units**Department:** Buddhist Studies; Group in Buddhist Studies; South Asian; Tibetan**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

This graduate seminar provides an introduction to a broad range of Tibetan Buddhist texts as well as to the methods and resources for their study. Readings for the course will be drawn from a variety of genres and historical periods, including (1) chronicles and histories, (2) biographical literature, (3) doctrinal treatises, (4) canonical texts, (5) ritual manuals, (6) pilgrimage guides, and (7) liturgical texts. The seminar is designed to be of interest to graduate students interested in premodern Tibet from any perspective (literature, religion, art, history, philosophy, law, etc.). Students are required to do all of the readings in the original classical Tibetan. The course will also introduce students to "tools and methods" for the study of Tibetan Buddhist literature, including standard lexical and bibliographic references, digital resources, and secondary literature in modern languages. The content of the course will vary from semester to semester to account for the needs and interests of particular students. Final exam not required. Instructor: Dalton

BUDDSTD 298 Directed Study for Graduate Students 1 - 8 Units**Department:** Group in Buddhist Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Special tutorial or seminar on selected topics not covered by available courses or seminars.

Course may be repeated for credit as texts vary. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD 299 Thesis Preparation and Related Research 1 - 8 Units**Department:** Group in Buddhist Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of thesis supervisor and graduate adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD 601 Individual Study for Master's Students 1 - 8 Units**Department:** Group in Buddhist Studies**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of graduate adviser.

Individual study for the comprehensive or language requirements in consultation with the graduate adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

BUDDSTD 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Group in Buddhist Studies**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare for various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Health and Medical Sciences (HMEDSCI)

HMEDSCI 98 Directed Group Study 1 - 3 Units**Department:** Health and Medical Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 to 9 hours of group study (or tutorial or fieldwork) per week.**Prerequisites:** Consent of instructor; freshman/sophomore status.

Organized group study on topics selected by Health and Medical Sciences faculty for freshman/sophomore students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HMEDSCI C133/HISTORY C191/UGIS C133 Death, Dying, and Modern Medicine: Historical and Contemporary Perspectives 4 Units**Department:** Health and Medical Sciences; History; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will study the end of life--dying and death--from the perspective of medicine and history. It seeks to confront the humanist with the quotidian dilemmas of modern clinical practice and medicine's deep engagement with death more generally. It invites pre-med, pre-law, and public policy students to understand these matters in light of the historical and, more broadly, literary and artistic perspectives of the humanities. Final exam required. Instructors: Laqueur, Micco

HMEDSCI 150 Introduction to Aging Issues and Opportunities in Aging Professions 2 Units**Department:** Health and Medical Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division or graduate standing or consent of instructor.

This course will explore current issues in aging from biological, demographic, psycho-social, and policy perspectives. To begin, lectures will focus on: The changing demographics of the general population of which older adults are becoming a larger and larger percentage; How men and women age differently; The historical context within which aging has been viewed; The physical and mental changes that occur over time. These initial lectures will provide the foundation for the lectures that follow in which professionals present issues--unique to their field--that they encounter in meeting the needs of their elderly clientele. Representative professions will include law, medicine, dentistry, architecture, social welfare, optometry, speech and physical therapy. The importance of an interdisciplinary approach to problem solving will be emphasized as speakers highlight pertinent issues in this population through case study scenarios. By using case studies we will shift the focus from "the disease" or "condition" to "the person." Speakers will discuss how they became interested in their respective professions and what opportunities/challenges await a new generation of professionals. Final exam required. Instructors: Micco, Rothman

HMEDSCI 197 Field Study in Health and Medical Sciences 1 - 3 Units**Department:** Health and Medical Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 to 9 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Consent of instructor.

Field experience relevant to health and medical sciences. Regular individual and/or group meetings with faculty sponsor are required. A final written report or ongoing field notebook is required. One unit of credit represents three hours of work per week on the part of the student. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HMEDSCI 198 Directed Group Study 1 - 3 Units**Department:** Health and Medical Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Directed group study per week for 15 weeks.

Organized group study on topics selected by Health and Medical Sciences Program graduate students under the sponsorship and direction of a member of the faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Steinbach, Swartzberg

HMEDSCI 200A Contextual Integrated Case-Based Curriculum 10 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10.5 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in Health and Medical Science Joint Medical Program.

The six semester sequence (200A-200F) introducing principles of the medical basic science, health policy, public health, and clinical aspects of medicine taught in a contextual-integrated case-based format. The sequence includes curriculum in biochemistry, histology, microbiology, immunology, neuroanatomy, pathology, physiology, pharmacology, and clinical sciences.

Final exam not required.

HMEDSCI 200B Contextual Integrated Case-Based Curriculum 10 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10.5 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in Health and Medical Science Joint Medical Program.

The six semester sequence (200A-200F) introducing principles of the medical basic science, health policy, public health, and clinical aspects of medicine taught in a contextual-integrated case-based format. The sequence includes curriculum in biochemistry, histology, microbiology, immunology, neuroanatomy, pathology, physiology, pharmacology, and clinical sciences.

Final exam not required.

HMEDSCI 201 Systemic and Regional Human Anatomy and Development 8 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 11 hours of Lecture and 11 hours of Laboratory per week for 8 weeks.**Prerequisites:** Consent of instructor.

Regional and functional human anatomy and development (embryology) will be taught through lecture, laboratory, and problem-based exercises in a fashion that requires learning traditional anatomy and the use of anatomical reasoning in the context of clinical problem solving.

The understanding of regional anatomy will be taught by prosection demonstration and dissection strengthened by teaching basic interpretation of medical imaging. Computer programs will be used to supplement all elements of the course. To increase clinical competence, the surface anatomy that is essential to physical examination will be taught. Students will learn the skills of professional communication by presenting patients and explaining the anatomical basis of the patient problem. Small group process is used to practice interactional and explicative skills.

Final exam not required. Instructor: Patterson

HMEDSCI 202A Clinical Skills 1 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences Joint Medical Program.

The first course in a six-semester sequence introducing first-year medical students to the skills necessary to obtain a complete medical history, to manage successfully the dynamics of the doctor-patient interaction, and to master interpersonal communication skills required of doctors in a clinical setting.

Final exam not required. Instructor: Micco

HMEDSCI 202B Clinical Skills 2 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory offered alternate weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences Joint Medical Program and completion of all requirements of Health and Medical Sciences 202A.

Students learn the cardiovascular, pulmonary, eye, and gastrointestinal exam and practice a complete medical history and physical exam with their preceptor. The dynamics of the physician-patient relationship are discussed on an ongoing basis with both the preceptor and the faculty instructor. Each student is required to turn in at least five patient write-ups per term.

Final exam not required. Instructor: Micco

HMEDSCI 202C Clinical Skills 3 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory offered alternate weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences Joint Medical Program and completion of all requirements of Health and Medical Sciences 202A and 202B.

Students learn the neurologic, musculo-skeletal, ear, nose, throat, thyroid, and skin exam and practice the medical history and physical exam with their preceptor. The dynamics of the physician-patient relationship are discussed on an ongoing basis. Each student is required to turn in at least five patient write-ups per term.

Final exam not required. Instructors: Stevens, Swartzberg

HMEDSCI 202D Clinical Skills 4 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory offered on alternate weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences Joint Medical Program and completion of all requirements of Health and Medical Sciences 202C.

Students learn the male genito-urinary exam and practice the complete medical history and physical exam with their preceptor. The dynamics of the physician-patient relationship are discussed on an ongoing basis. Each student is required to turn in at least five patient write-ups per term. Final exam not required. Instructor: Stevens Swartzberg

HMEDSCI 202E Clinical Skills 5 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory offered alternate weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences Joint Medical Program and completion of all requirements of Health and Medical Sciences 202C and 202D.

Students learn the gynecologic exam and practice the complete medical history and physical exam with their preceptor. The dynamics of the physician-patient relationship are discussed on an ongoing basis. Each student is required to turn in at least five patient write-ups per term.

Final exam not required. Instructors: Stevens, Swartzberg

HMEDSCI 202F Clinical Skills 6 1 Unit**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory per week.**Prerequisites:** Graduate standing in HMS Joint Medical Program.

Under supervision, students perform a complete history and physical exam on hospitalized or clinic patients five times during the semester. They present the patients in written and verbal format to the instructor and class. These presentations are critiqued and the tools to effectively present cases are taught. The course runs for the first half of the student's last semester in the program. Each student is required to turn in three patient write-ups.

Final exam not required. Instructors: Stevens, Swartzberg

HMEDSCI 203 Introduction to Clinical Radiology/Anatomy Correlates 1 Unit**Department:** Health and Medical Sciences**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 1.5-hour lecture per week for 8 weeks.**Prerequisites:** Graduate standing in HMS Joint Medical Program; must be taken concurrently with 201 and 202.

An introduction for medical students to the study of radiology and the examination of healthy and diseased organs by imaging techniques, correlated with the Gross Anatomy and Anatomy of Human Development courses. Areas that will be covered include introduction to the major organ systems through the use of radiographs.

Final exam not required. Instructor: Price

HMEDSCI 210 Readers' Theater - Topics on Medicine in Society 1 Unit**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week for 8 weeks.**Prerequisites:** Graduate standing or consent of instructor.

In readers' theater, texts not written explicitly for the stage are adapted for public performances. Students thus learn actively about a subject by performance of relevant literature and discourse with involved audiences. In this course, selected stories deal with many aspects of medicine in context, e.g. dying, childbearing, aging, living with chronic pain, biomedical ethics, and disparities in care. The stories are presented to audiences such as elders, care-givers, patients, and providers. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Micco

HMEDSCI 211 Narrative and Medicine 1 Unit**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in health and medical sciences or consent of instructor.

This course's goal is to provide a method for medical students to think, write about, and discuss feelings engendered by clinical encounters. Medical students are taught the need to be emotionally detached from patients, yet being emotionally detached does not mean devoid of emotion. This course offers a means to express and analyze those feelings. Also considered is the value of regarding the medical history as "text" which can be written and read from differing, equally valid viewpoints.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Micco

HMEDSCI 212 Health and Human Rights 1 Unit**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 5 weeks.**Prerequisites:** Graduate standing.

Public health and human rights are two complementary approaches to protecting and promoting human well-being and dignity. Enshrined in international law, human rights describe how governments must create conditions where individuals can achieve their full potential. Human rights abuses profoundly affect health; health policies can directly or indirectly impact human rights adversely. We explore these interrelationships and examine how the "right to health" is challenged both in war and peace. Final exam not required. Formerly known as Public Health 211.

Instructors: Stover, Weinstein

HMEDSCI 215 The Interdisciplinary Team: Improving the Care of Our Elders 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar per week, plus field work.**Prerequisites:** Limited to health care professional graduate students at UCB, UCSF, Samuel Merritt University, and GTU students.

Through field experiences, readings, film, and discussions with multi-specialty healthcare professionals, students will gain an understanding of the purpose, function, and dynamics of the geriatric interdisciplinary team (GIT). We will compare and contrast the unique perspectives, values, and contributions of each profession, and students will consider how participation in a team will affect their own future professional practice. Final exam not required. Instructors: Micco, Robinson

HMEDSCI 240 The Death Course 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course is intended for medical and graduate students who share a keen interest in the problem of death. The topic will be explored from various religious, cultural, and personal perspectives through the use of literature, in-class writing and discussion, and occasionally film and music. A 10-15 page paper will be required.

Final exam not required. Instructor: Micco

HMEDSCI 261 Research Seminar 1 - 2 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks. 2 hours of Seminar per week for 8 weeks.**Prerequisites:** Graduate standing in Health and Medical Sciences UCB-UCSF Joint Medical Program.

A seminar to help Joint Medical Program students acquire skills necessary to define a research question, find appropriate mentorship, and design a research project. Summer course introduces research design, methods, and expectations for M.S. research in Health and Medical Sciences. Fall and spring semesters address topics in research; student progress toward M.S. thesis is reviewed and critiqued. Development of research plan, protocol design and implementation, and research findings will be reviewed. Each student takes this course three times in the first year.

Course may be repeated for credit when topic changes. Final exam not required.

HMEDSCI 296 Special Study 1 - 10 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual meetings with faculty members.**Prerequisites:** Graduate standing.

Designed to permit qualified graduate students to pursue special study under the direction of a faculty member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HMEDSCI 298 Directed Group Study 1 - 5 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Variable.**Prerequisites:** Graduate standing in Health and Medical Sciences Program or consent of instructor.

Group study for graduate students. Intensive examination of health-related topics.

Final exam not required.

HMEDSCI 299 Independent Study and Research in Health and Medical Sciences 1 - 12 Units**Department:** Health and Medical Sciences**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent study. 1 unit of credit represents 4 hours of student work per week in the regular semester.**Prerequisites:** Graduate standing in HMS Program or consent of sponsoring HMS faculty member.

Independent study, research, and writing in an area related to program of study, sponsored by an approved faculty member and approved by program adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Hebrew (HEBREW)

HEBREW 1A Elementary Hebrew 5 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Recitation and 1 hour of Laboratory per week for 15 weeks.

Final exam required.

HEBREW 1B Elementary Hebrew 5 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Recitation and 1 hour of Laboratory per week for 15 weeks.

Final exam required.

HEBREW 10 Intensive Elementary Hebrew 10 Units**Department:** Hebrew**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20 hours of Lecture and 5 hours of Laboratory per week for 8 weeks.

An intensive course in modern Israeli Hebrew. The course covers the basic syntactic and morphological patterns of modern Hebrew through the teaching and practice of communicative and interactive language skills in the four areas of listening, speaking, reading, and writing. The course is equivalent to two semesters of Hebrew in the regular academic year.

Final exam not required.

Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A-1B.

Final exam required.

HEBREW 20B Intermediate Hebrew 5 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A-1B.

Final exam required.

HEBREW 30 Intermediate Hebrew 10 Units**Department:** Hebrew**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20 hours of Lecture per week for 8 weeks.**Prerequisites:** One year of college level Hebrew.

This course is equivalent to a full year of intermediate Hebrew. It will deepen skills in speaking, understanding, reading, and writing modern Israeli Hebrew.

Students will receive no credit for 30 after taking 20A-20B. Final exam required.

HEBREW 100A Advanced Hebrew 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 20A-20B or equivalent.

Advanced Hebrew, especially designed for those going on to the study of modern Hebrew literature. Vocabulary building, grammar review, and literary analysis of a sampling of modern texts.

Final exam required. Instructor: 20A-20B-20C.

HEBREW 100B Advanced Hebrew 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 20A-20B or equivalent.

Advanced Hebrew, especially designed for those going on to the study of modern Hebrew literature. Vocabulary building, grammar review, and literary analysis of a sampling of modern texts.

Final exam required. Instructor: 20A-20B-20C.

HEBREW 102A Postbiblical Hebrew Texts 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 20A-20B or equivalent.

Texts from the rabbinic period (Mishnah, Tosefta, Talmud, and Midrash) and an introduction to the languages of rabbinic texts.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

HEBREW 102B Postbiblical Hebrew Texts 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 20A-20B or equivalent.

Texts from the rabbinic period (Mishnah, Tosefta, Talmud, and Midrash) and an introduction to the languages of rabbinic texts.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

HEBREW 104A Modern Hebrew Literature and Culture 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A-100B or equivalent.

A close reading of selected works of modern Hebrew fiction, poetry, and drama in their cultural and historical contexts. Topics vary from year to year and include literature and politics, eros and gender, memory and nationalism, Middle-Eastern and European aspects of Israeli literature and culture.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

HEBREW 104B Modern Hebrew Literature and Culture 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100A-100B or equivalent.

A close reading of selected works of modern Hebrew fiction, poetry, and drama in their cultural and historical contexts. Topics vary from year to year and include literature and politics, eros and gender, memory and nationalism, Middle-Eastern and European aspects of Israeli literature and culture.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

HEBREW 105B The Structure of Modern Hebrew 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

An analysis of Hebrew grammar, syntax, semantics, morphology, history of the language, fixed expressions, discourse analysis, contrastive features of Hebrew and English in the context of contemporary linguistic theories.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HEBREW 106A Elementary Biblical Hebrew 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

An introduction to the language of the Hebrew Bible.

Final exam required. Formerly known as 2A-2B.

HEBREW 106B Elementary Biblical Hebrew 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

An introduction to the language of the Hebrew Bible.

Final exam required. Formerly known as 2B.

HEBREW N106 Elementary Biblical Hebrew 6 Units**Department:** Hebrew**Course level:** Undergraduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 15 hours of Lecture per week for 6 weeks.

An introduction to the language of the Hebrew bible.

Students will receive no credit for N106 after taking 106A-106B. Final exam not required.

HEBREW 107A Biblical Hebrew Texts 3 Units**Department:** Hebrew**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 20A-20B.

The tools and procedure of biblical exegesis applied to simple narrative texts.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as 101A-101B.

HIN-URD 101A Readings in Modern Hindi 3 Units**Department:** Hindi-Urdu**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Two years of Hindi or consent of instructor.

This course is designed for students who have already achieved an intermediate level of proficiency in speaking, reading, and writing Hindi. Its objective is to move students toward a greater level of fluency in each of these key areas. Students will be introduced to a variety of contemporary literary genres. Weekly readings and discussions will be on short stories, poems, and dramatic sketches from representative authors. These readings focus on various social, cultural, political, and historical aspects of Indian society. Students are encouraged to explore these issues in their written assignments as well as in their class discussions. Written assignments on themes suggested by the reading will be required. We will also work on advanced grammar and special attention will be given to matters of style and idiom. The class will be conducted entirely in Hindi and students will acquire language skills sufficient to approach literary texts on their own.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Jain

History (HISTORY)

HISTORY R1 The Practice of History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 4 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 4 hours of Discussion per week for 6 weeks.

Intended for non-majors as well as prospective majors, this course introduces students to the discipline of history as a humanistic inquiry into the experiences of people in time and space. How do historians interpret and debate the past? How do they gather and make use of their materials and sources? Readings include the works of classical historians from different cultural traditions, contemporary historical debates, and an exploration of historical sources available at Berkeley. Satisfies half of the Reading and Composition requirement.

Satisfies the first or second half of the Reading and Composition requirement

Final exam not required.

HISTORY R1B Reading and Composition in History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. 6 hours of Seminar per week for 8 weeks. 7.5 hours of Seminar per week for 6 weeks.

Reading and composition courses based upon primary historical documents and secondary historical scholarship. These courses provide an introduction to core issues in the interpretation of historical texts and introduce students to the distinctive ways of reading primary and secondary sources. Courses focus on specific historical topics but address general issues of how historians read and write. Satisfies the second half of the Reading and Composition requirement.

Satisfies the second half of the Reading and Composition requirement

Final exam not required.

HISTORY 2 Comparative World History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 3 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 4 hours of Discussion per week for 6 weeks.

This lower-division lecture course introduces students to the study of history in multiple periods and regions. It will typically be co-taught by faculty members with different geographical and chronological expertise and will center around a particular theme, such as cities, food cultures, or war and society. No prior course-work in the history of any particular part of the world will be expected.

Final exam required.

HISTORY 3 After the Roman Empire: the East 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A general introduction to the study of history, this course focuses on Byzantium and the Islamic world, two medieval successors to the Roman empire in the Eastern Mediterranean and the Near East. This course has three aims: to provide an outline of events that transpired in this area from the 4th-15th centuries; to explain how a modern historian can approach medieval sources in order to reconstruct various aspects of the past; and to discuss the commonalities of pre-industrial societies, and how lessons learnt in this class can be applied to the study of other time periods and geographic locations.

Final exam required.

HISTORY 4A Origins of Western Civilization: The Ancient Mediterranean World 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course offers an introductory survey of the history of the ancient Mediterranean world, from the rise of city states in Mesopotamia c.3000 BC to the transformation of the Roman Empire in the 5th and 6th centuries AD. The emphasis will be on the major developments in the political and social history of the ancient Near East, Egypt, Greece, and Rome, with special attention to those institutions, practices, ideas, and objects that have had an enduring influence on the development of western civilization.

Final exam required.

HISTORY 4B Origins of Western Civilization: Medieval Europe 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Introductory study of major historical events in the origins of western civilization. Emphasis on class discussions, readings in the sources, and writing of essays.

Final exam required.

HISTORY 5 European Civilization from the Renaissance to the Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course is an introduction to European history from around 1500 to the present. The central questions that it addresses are how and why Europe--a small, relatively poor, and politically fragmented place--became the motor of globalization and a world civilization in its own right. Put differently how did "western" become an adjective that, for better and often for worse, stands in place of "modern".

Final exam required.

HISTORY W5 European Civilization from the Renaissance to the Present 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 8 weeks. 7.5 hours of Web-based lecture and 2.5 hours of Web-based discussion per week for 6 weeks. This is an online course.

A survey of European history from the Renaissance to the present. This course is web-based.

Final exam required. Formerly known as N5.

HISTORY 6A History of China: Origins to the Mongol Conquest 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

The history of China from its beginnings to the destruction of the Song Dynasty by the Mongols in the 13th century. Topics to be covered include the emergence of Chinese civilization, the Chinese language, early rhetoric and philosophy, the creation of the first empire, law, Buddhism and religious Taoism, the socioeconomic revolution of the 10th to 12th centuries, identities (male and female, Chinese and "barbarian"), lyric poetry, and painting and calligraphy.

Students will receive no credit for History 6A after taking History 6. Final exam required.

HISTORY 6B Introduction to Chinese History from the Mongols to Mao 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This is an introduction to Chinese history from the 13th through the 20th centuries -- from the Mongols and Khubilai Khan's conquest of southern China to the amazing turnaround following the death of Mao Zedong in 1976 and the opening of the era of reform that has led to China's emergence as a major economic and strategic power today. The course assumes no prior knowledge of Chinese history.

Students will receive no credit for History 6B after taking History 6. Final exam required.

HISTORY 7A Introduction to the History of the United States: The United States from Settlement to Civil War 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Seminar per week for 15 weeks.

This course is an introduction to the history of the United States from the beginning of the European colonization of North America to the end of the Civil War. It is also an introduction to the ways historians look at the past and think about evidence. There are two main themes: one is to understand the origin of the "groups" we call European-Americans, Native-Americans, and African-Americans; the second, is to understand how democratic political institutions emerged in the United States in this period in the context of an economy that depended on slave labor and violent land acquisition.

Satisfies the American Cultures and American History requirements. Final exam required.

HISTORY 7B Introduction to the History of the United States: The United States from Civil War to Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 3.5 to 5.5 hours of Lecture and 3.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 5 hours of Discussion per week for 6 weeks.

What does it mean to be American? Whatever your answer is to this question, chances are it is deeply connected to the themes and events we will discuss in this class. Here we will track America's rise to global power, the fate of freedom in a post-Emancipation political setting, and the changing boundaries of nation, citizenship, and community. We will use landmark events to sharpen our themes, but we will also take care to analyze the equally important (and shifting) patterns of where and how Americans lived, worked, and played.

Satisfies the American Cultures and American History requirements. Final exam required.

HISTORY 8A Latin American History: Becoming Latin America, 1492 to 1824 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Forty-5 hours of lecture and 30 hours of discussion per term.

This course covers the history of Latin America from the time of Columbus to around 1870. It thus reckons with almost four centuries of encounter, colonization, accommodation, and struggle that frame the ways that Latin America was becoming Latin American. Lectures and a mix of secondary and primary source readings and images produced during the colonial period serve as points of entry for discussion in section meetings. Final exam required.

HISTORY 8B Latin American History: Modern Latin America 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Forty-5 hours of lecture and 30 hours of discussion per term.

This introductory course surveys the history of modern Latin America from independence to the present, with a strong emphasis on the twentieth century. Our focus will be on broad transformations in politics, place, identity, and work.

Final exam required.

HISTORY 10 African History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An introductory survey of the history of Africa.

Final exam required.

HISTORY 11 India 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Final exam required. Formerly known as 9C.

HISTORY 12 The Middle East 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 5 to 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Final exam required. Formerly known as 9D.

HISTORY 14 Introduction to the History of Japan 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A brisk introduction to the nearly two millennia of recorded Japanese history. As a survey, the course gives attention to broad themes and problems in Japan's political, social, and cultural/intellectual history. Topics include the dialectic of national and local identities in shaping Japanese politics, Japan's interaction with the Asian continent and the Western world, and the relation of past to present in modern times.

Final exam required. Formerly known as 9B.

HISTORY 24 Freshman Seminar 1 Unit**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and topics vary from department to department and semester to semester. Enrollment limited to fifteen freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

This course examines the nature and effects of European colonization of Africa, and African responses to the colonial encounter. Broad themes include colonial conquest and practices of administration, African responses to the imposition of colonial rule, colonial economies, labor migration, introduction and impact of Christianity and Western education; women and the colonial state, urbanization, social change, the apartheid system, liberation struggles, decolonization, and the colonial legacy. Students will receive no credit for 112C after taking 100 section 4 (Fall 2005) or 100 section 1 (Fall or Spring 2007). Final exam required.

HISTORY N112B Modern South Africa, 1652-Present 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

This course will examine three centuries of South African history that account for the origin and development of the recently dismantled apartheid regime. Our aim is to understand the major historical forces that progressively shaped what became a turbulent socio-cultural, economic, political, and racial frontier.

Final exam not required.

HISTORY 113A Traditional Korean History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course surveys major issues in Korean history from the origins of the Korean people to the 19th century.

Final exam required.

HISTORY 113B Modern Korean History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course will survey major social, economic, and political developments on the Korean peninsula from the middle of the 19th century.

Final exam required.

HISTORY 114A India: Medieval and Early Modern India to the Coming of the British 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

We will have two projects in this course. The first of these is to understand, in so far as the sources permit, the nature of state structure in the Indian area between 1000 and 1800 CE. The second of these is to look at the way in which historians have described the history and the society of this period to understand the way in which the Indian state and its society has been constructed. This will involve reading in both substantive texts and theoretical works.

Final exam required.

HISTORY 114B India: Modern South Asia 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Here we will deal with the history of South Asia between the coming of the Europeans and the present. It will be organized around a series of contested formulations about the recent South Asian past. One of these problems is: how was India comprehended and manipulated by the Europeans? The second problem is: How was India conquered, by the sword or by the word? The third is: How did Indians resist the British? Finally, how was the voice of women, lower classes, and others expressed and heard? We will read books about language, gender, the "subaltern" classes, and women in an attempt to understand these questions.

Final exam required.

HISTORY 116A China: Early China 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 116B China: Two Golden Ages: China During the Tang and Song Dynasties 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course explores Chinese history and culture in the period from the 7th to the 13th centuries, when China achieved unprecedented military, political, and cultural power in East Asia. It concentrates on the fundamental transformation of state and society that took place between the 8th and 12th centuries, and on the nature of the new "early modern" order that had come into existence by the end of the Southern Song. Topics of special concern are economic and political power, technology, religion and philosophy, and poetry and painting.

Final exam required.

HISTORY 116C China: Modern China 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 116D China: Twentieth-Century China 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Chinese history from the decline of the Qing empire to the reforms under the Chinese Communist Party in the late 20th century.

Final exam required.

HISTORY 116G Imperial China and the World 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

The history of China's relationship to the world from earliest times to the 20th c. Provides historical contextualization for China's recent resurgence on the world stage. Topics will include early territorial expansion, the Silk Road, the Great Wall, the Chinese diaspora, Mongol and Manchu empire building, the impact of Europeans in the 19th c, the emergence of Chinese nationalism, and China's evolving role in the global economy.

Final exam required.

HISTORY 117A Topics in Chinese History: Chinese Popular Culture 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

It is impossible to understand Chinese history and culture without knowing what ordinary people thought, felt, and believed. In this course, our primary concerns will be 1) the built environment -- village form, houses, temples; 2) village festivals and domestic rituals; 3) the rituals and scriptures of local cults; 4) operas, storytelling, and other forms of village entertainment; and 5) popular visual arts. These subjects will be studied through both written and visual documentation.

Final exam required.

HISTORY 117D Topics in Chinese History: The Chinese Body: Gender and Sex, Health, and Medicine 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course brings a thematic approach to the critical analysis of the "Chinese body," as constructed before the 20th century, from four main perspectives, those of (1) gender, (2) sexual activity, (3) health, and (4) medicine. A variety of sources, material and literary, attest to changing perceptions over time, through the continuing use of standard vocabulary for Yin/Yang and the Five Phases frequently masked innovations.

Final exam required.

HISTORY 118A Japan: Japan, Archaeological Period to 1800 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Emphasis on political, cultural, and intellectual history of the Early Imperial State, Japan's first military governments, early modern, and Meiji Japan.

Final exam required.

HISTORY 118B Japan: Japan 1800-1900 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Emphasis on the social and intellectual history of Japan's pre-war reconstruction.

Final exam required.

HISTORY 118C Japan: Empire and Alienation: The 20th Century in Japan 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

Japan's experience of the 20th century, beginning with the development of capitalism and the acquisition of an empire, and tracing the achievements and tragedy that came with Japan's emergence as a world power. Emphasis on social and intellectual history and on how Japan has understood itself and the world in this century.

Final exam required.

HISTORY 119A Topics in Japanese History: Postwar Japan 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course considers the history of Japan since the end of World War II, beginning with an exploration of the war itself and its complex legacy to the postwar era. Using the best recent scholarship and a selection of translated novels, essays, and poetry along with film and art, we look at the six postwar decades and the transformations of Japanese life that those years have brought. We try, finally, to answer the question: has "postwar" itself come to an end?

Final exam required.

HISTORY N119A Postwar Japan 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

HISTORY 123 Civil War and Reconstruction 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This lecture course will take a broad view of the political, social, economic, and cultural history of the United States in the mid-19th century in order to explore both the causes of the Civil War and its effects on American development. Major topics will include slavery and race relations (north and south), class relations and industrialization, the organization of party politics, and changing ideas about and uses of government power. Final exam required.

HISTORY 124A The Recent United States: The United States from the Late 19th Century to the Eve of World War II 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

During the first half-century before World War II, the United States became an industrialized, urban society with national markets and communication media. This class will explore in depth some of the most important changes and how they were connected. We will also examine what did not change, and how state and local priorities persisted in many arenas. Among the topics addressed: population movements and efforts to control immigration; the growth of corporations and trade unions; the campaign for women's suffrage; Prohibition; an end to child labor; the institution of the Jim Crow system; and the reshaping of higher education. Satisfies the American Cultures requirement
Final exam required.

HISTORY 124B The Recent United States: The United States from World War II to the Vietnam Era 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Immediately prior to World War II, the US military ranked 17th in the world, most African-Americans lived in the rural south and were barred from voting, culture and basic science in the United States enjoyed no world-wide recognition, most married women did not work for wages, and the census did not classify most Americans as middle-class or higher. By 1973, all this had changed. This course will explore these and other transformations, all part of the making of modern America. We will take care to analyze the events, significance and cost of US ascendancy to world power in an international and domestic context.

HISTORY 125A History of African-Americans and Race Relations in the United States: The History of Black People and Race Relations, 1550-1861 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture and 1 hour of voluntary discussion section per week for 6 weeks.

The course will survey African American history from the African background to the outbreak of the Civil War. The origins and development of Afro-American society, culture and politics will be explored from the perspective of African-Americans themselves: slave and free, North and South. Throughout, the enduring dilemma of race relations functions as a central theme.

Final exam required.

HISTORY 125B History of African-Americans and Race Relations in the United States: Soul Power: African American History 1861-1980 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

This course will examine the history of African Americans and ethno-racial relations from the Civil War and Emancipation (1861-1865) to the modern African American Freedom Struggle (1954-1972). Social, cultural, economic, and political developments will be emphasized. Topics to be covered include: Black Reconstruction; black life and labor in the New South; leadership; class; gender; Jim Crow; migration; urbanization; war and social change; the Harlem Renaissance; civil rights; and Black Power. Final exam required.

HISTORY 131B Social History of the United States: Creating Modern American Society: From the End of the Civil War to the Global Age 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines the transformation of American society since the Civil War. The lectures and readings give special attention to the emergence of city culture and its possibilities for a pluralistic society; the experience and effect of immigration in the nineteenth and twentieth centuries; the revolution in communications and industry; changes in family dynamics, the emergence of modern childhood, schooling, and youth culture; changes in gender relations and sexuality; the problematics of race and the changing nature of class relationships in a consumer society; the triumph of psychological and therapeutic concepts of the self. Satisfies the American Cultures and American History requirements. Final exam required.

HISTORY N131B Social History of the United States: 1914-Present 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

The nature and development of social and economic institutions; class, family, and racial relationships; sex roles; and cultural norms in the United States.

Satisfies the American Cultures and American History requirements.

Final exam required.

HISTORY C132B/AMERSTD C132B Intellectual History of the United States since 1865 4 Units**Department:** History; American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

In this course we will be discussing key developments in U.S. thought since the middle of the nineteenth century, roughly beginning with the reception of Darwin. The broader story told in the class weaves together in the history of science and engineering, the arts and popular culture, philosophy, and education. Our goal is to trace how ideas, whether they are dominant, challenging, or look back, have affected the ways in which Americans live together. We will look at how intellectual life has empowered and expanded the capacity of Americans to understand their world and achieve goals more effectively. We will also consider how intellectual theories have contributed to inequality and injustice. Students will receive no credit for C132B after taking 132B. Final exam required.

HISTORY 134A The Age of the City: The Age of the City, 1825-1933 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 5 hours of Discussion per week for 6 weeks.

For most of human history, urban living has been the experience of a distinct minority. Only in the past two hundred years have the physical spaces, social relations, and lifestyles associated with large cities entered the mainstream. This course examines the long century of urban growth between 1825 and 1933, when big cities came into being in the United States. Focusing on large metropolitan centers (especially on New York, Chicago, and San Francisco), we will study the way urban spaces provided sites and sources of new modes of personal interaction, popular entertainment, social conflict, and political expression.

This course examines the coming together of people from five continents to the United States and provides an historical overview of the shifting patterns of immigration. The course begins in the colonial era when servants and slaves typified the migrant to America. It then follows the migration of the pre-industrial immigrants, through migration streams during the industrial and "post-industrial" eras of the nation.

HISTORY 138T History of Science in the US CalTeach 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course is a parallel course to 138, intended for students interested in teaching elementary or secondary school science and math. Students in the "T" course will attend the regular 138 lectures and a special section; this section will focus on techniques, skills, and perspectives necessary to apply the history of science in the juvenile and adolescent science classroom, including pedagogy, devising lesson plans for their classrooms, finding reliable historical information, and writing.

Satisfies the American History requirement

Final exam required.

HISTORY C139B/DEMOG 145AC The American Immigrant Experience 4 Units**Department:** History; Demography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of self-paced laboratory and 1 hour of optional discussion section per week.

The history of the United States is the history of migration. The course covers the evolution of the American population from about 20,000 BC with the goal of understanding the interdependent roles of history and demography. As an American cultures class, special attention is given to the experiences of 18th- and 19th-century African and European immigrants and 20th- and 21st-century Asian and Latin American immigrants. Two substantial laboratory assignments; facility with a spreadsheet program is assumed.

Satisfies the American Cultures requirement

Final exam required. Instructor: Mason

HISTORY C139C/AMERSTD 139AC Civil Rights and Social Movements in U.S. History 4 Units**Department:** History; American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Beginning with the onset of World War II, America experienced not a singular, unitary Civil Rights Movement -- as is typically portrayed in standard textbook accounts and the collective memory -- but rather a variety of contemporaneous civil rights and their related social movements. This course explores the history, presenting a top-down (political and legal history), bottom-up (social and cultural history), and comparative (by race and ethnicity as well as region) view of America's struggles for racial equality from roughly World War II until the present.

Satisfies the American Cultures requirement

Final exam required.

HISTORY 140B Mexico: Modern Mexico 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 8 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

This course surveys Mexican history from the end of the colonial period to the present, with an eye to how the study of Mexican history can help us understand the Mexico of today. Topics include the historical origins of peasant rebellions and their influence on national politics; the tension between democratic pressures and elitist and exclusionary pressures on the political system; neo-liberal economic policies; the powerful influence of the Catholic church; immigration to the U.S.; and the explosive 20th-century growth of Mexico City.

Final exam required.

HISTORY 141B Social History of Latin America: Social History of Modern Latin America 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 7.5 hours of lecture and 2.5 hours of discussion per week for 6 weeks.

Affirmation of the central state. Social conflicts in the 20th century: industrialization and agrarian conflict.

Final exam required.

HISTORY 143 Brazil 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

From 16th Century conquest and settlement to the emergence of an industrial economy during the post-1964 period of military rule. Emphasis on dependence of colony on empire, on plantation agriculture, slavery, export economy, and the transition from agrarian to industrial society.

Final exam required.

HISTORY N143 Brazil 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

From 16th Century conquest and settlement to the emergence of an industrial economy during the post - 1964 period of military rule. Emphasis on dependence of colony on empire, on plantation agriculture, slavery, export economy, and the transition from agrarian to industrial society.

Student will receive no credit for History N143 after taking History 143.

Final exam not required.

HISTORY 146 Latin American Women 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This class surveys the experiences and impact of women in Latin America from the pre-conquest period to the present, as well as the ways that gender ideologies (like patriarchy, honor-shame, machismo) have influenced Latin American history.

Final exam required.

HISTORY 149B Medieval Italy: Italy in the Age of Dante (1000-1350) 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course is a survey of the history of northern Italy during the central Middle Ages (ca. 1000-1350). It traces the emergence, flowering, and decline of the "communes," the independent city republics that made Italian political life distinctive during the Middle Ages. The course explores the culture of these dynamic urban communities, especially emphasizing the rich visual and material culture, as well as the particular relationship between religion and society in Italy before the Renaissance.

Final exam required.

HISTORY 150B Medieval England: From the Conquest to 1290 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Government, observation of government, community, religion, and social change.

Final exam required.

HISTORY 151A Britain 1485-Present: Tudor Stuart Britain, 1485-1660 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6.5 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

The history of Britain, albeit with primary emphasis on England, from the advent of the Tudors through the revolutions of the mid-17th century. Principal concentration on political, religious, and social developments. No prerequisites other than some sense of general European history in the age of the Reformation.

Final exam required.

HISTORY 151B Britain 1485-Present: Britain, 1660-1851 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6.5 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

This is a course about the history of Britain that asks why this small island nation was so central to how Europeans and others understood world history more generally. It looks at Britain as the paradigmatic venue of industrialization, class conflict or its absence, consumer culture, parliamentary democracy, religious tolerance, imperial expansion, and modernity generally. It begins with the aftermath of Europe's first revolution and ends with the first world's fair, 1851's Great Exhibition.

Final exam required.

HISTORY 151C Britain 1485-Present: The Peculiar Modernity of Britain, 1848-2000 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6.5 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

For many years, Britain was seen as the crucible of the modern world. This small, cold, and wet island was thought to have been the first to develop representative democracy, an industrial economy, rapid transport, mass cities, mass communication and mass culture, and, of course, an empire upon which the sun famously never set. And yet, despite this precocious modernity, imperial Britain remained a deeply traditional society unable to rid itself of ancient institutions like the monarchy, the aristocracy, and the established church. The focus of the course is on how this combination of the old and the new produced a broadly 'liberal' set of mentalities through which Britons came to understand and manage the great transformations of modern life, both at home and across the empire.

Final exam required.

HISTORY N151C The Peculiar Modernity of Britain, 1848-2000 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

For many years, Britain was seen as the crucible of the modern world.

This small, cold, and wet island was thought to have been the first to develop representative democracy, an industrial economy, rapid transport, mass cities, mass communication and mass culture, and, of course, an empire upon which the sun famously never set. And yet, despite this precocious modernity, imperial Britain remained a deeply traditional society unable to rid itself of ancient institutions like the monarchy, the aristocracy, and the established church. The focus of the course is on how this combination of the old and the new produced a broadly 'liberal' set of mentalities through which Britons came to understand and manage the great transformations of modern life, both at home and across the empire. Final exam not required.

HISTORY 152A Topics in the History of the British Isles: Ireland Since the Union 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Irish history from the completion of the English conquest (1691) to the present. Topics: the formation of the British colony; the French Revolution and the beginnings of the nationalist tradition; Catholic emancipation and the origins of Home Rule; the Great Famine and the struggle of rural Ireland to the Land League; the transformation of the Catholic unionism, and the Great War; the Irish Revolution; the two Irelands, 1921-1967; Northern Ireland, troubles and terror; Ireland and Europe. Final exam required.

HISTORY 154 Canada 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A survey of Canadian history from exploration and first settlement through colonial times to confederation and nationhood to the present.

Final exam required.

HISTORY 155A Medieval Europe: From the Late Empire to the Investiture Conflict 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Formulation of a West European civilization; stress on tribal settlements, the Carolingian Empire, and Christian foundations.

Final exam required.

HISTORY 155B Medieval Europe: From the Investiture Conflict to the Fifteenth Century 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Crusades; empire, papacy and the Western monarchies; social change, the rise of towns and heresy; culture and learning. Medieval civilization at its height.

Final exam required.

HISTORY C157/RELIGST C124 The Renaissance and the Reformation 4 Units**Department:** History; Religious Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

European history from the fourteenth to the middle of the seventeenth century. Political, social, and economic developments during this transitional period will be examined, together with the rise of Renaissance culture, and the religious upheavals of the sixteenth century.

Final exam required. Formerly known as 157.

HISTORY 158A Modern Europe: Old Regime and Revolutionary Europe, 1715-1815 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The eighteenth century in Europe witnessed a series of "revolutions"--intellectual, political, and to a lesser extent, social and economic--that together constitute the birth rites of modern European society and culture. Historians collectively agree that the Enlightenment, the French Revolution, and the European expansion of Napoleonic France were events of world-historical significance, yet the causes and precise meaning of these events are the subjects of substantial disagreement. We will study the transformations of the eighteenth century that announced our modern world, and we will also try to make sense of the different ways that historians disagree about the meaning of what happened.

Final exam required.

HISTORY 158B Modern Europe: Europe in the 19th Century 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 158C Modern Europe: Old and New Europe, 1914-Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

A survey of the main trends and forces in the history of Europe from 1914 to the present. The course stresses the interaction of political, economic, and socio-cultural changes and explores the relationship between domestic and international politics. Topics discussed include the two world wars, the rise and fall of fascism and communism, imperialism, European integration, the cultural revolution of the 1960s.

Final exam required.

HISTORY N158C Old and New Europe, 1914-Present 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture per week for 8 weeks. 7.5 hours of lecture per week for 6 weeks.

A survey of the main trends and forces in the history of Europe from 1914 to the present. The course stresses the interaction of political, economic, and socio-cultural changes and explores the relationship between domestic and international politics. Topics discussed include the two world wars, the rise and fall of fascism and communism, imperialism, European integration, the cultural revolution of the 1960s.

Final exam not required.

HISTORY 159A European Economic History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Survey of the economic and social developments of Europe up to the eve of industrialization. Including the transformation of peasant-based, agrarian economies, capitalist organization, colonial expansion, and international trade. This course is equivalent to Economics 111A; students will not receive credit for both courses.

Final exam required.

HISTORY 159B European Economic History 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The Industrial Revolution and the rise of the European economy to world dominance in the 19th century, emphasizing the diffusion of the industrial system and its consequences, the world trading system, and the rise of modern imperialism.

Students will receive no credit for 159B after taking Economics 111B.

Final exam required.

HISTORY 160 The International Economy of the 20th Century 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Development and crises of the advanced economies, with particular emphasis on trade relations with third world countries. Economic impact of war, business cycles, and social movements. This course is equivalent to Economics 115; students will not receive credit for both courses.

Final exam required.

HISTORY 162A Europe and the World: Wars, Empires, Nations 1648-1914 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This upper division course looks at the rise and fall of the European great powers from the Peace of Westphalia, traditionally perceived as the beginning of the modern states system, to the coming of the First World War, an era of state and empire building. Economic and technological trends are naturally part of the story as well as cultural, social, and political forces. At the same time, the course highlights the decisive influence of the shakers and movers--kings, emperors, and generals.

Final exam required.

HISTORY 162B War and Peace: International Relations since 1914 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course analyzes the turbulent transitions from the classical European balance of power system to the global multipolar system of today. The course explores the political, economic, ideological, and technological roots of international affairs. Among topics discussed are the two world wars, inter-war collective security, the Cold War, European integration, imperialism and de-colonization, the collapse of Communism, the Middle East conflict, the rise of China and Japan, and the post-1990 international order.

Final exam required.

HISTORY N162A Europe and the World: Wars, Empires, Nations 1648-1914 4 Units**Department:** History**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

This upper division course looks at the rise and fall of the European great powers from the Peace of Westphalia, traditionally perceived as the beginning of the modern states system, to the coming of the First World War, an era of state and empire building. Economic and technological trends are naturally part of the story as well as cultural, social, and political forces. At the same time, the course highlights the decisive influence of the shakers and movers--kings, emperors, and generals. Students will receive no credit for History N162A after taking History 162A. Final exam required.

HISTORY 163A Modern European Intellectual History: European Intellectual History from the Enlightenment to 1870 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Reading primary texts, we will examine the major figures and themes in the intellectual development of Europe from Rousseau to Wagner. Included in the topics of the course will be German Idealism, Romanticism, Utopian Socialism, Marxism, Realism, Feminism and Nationalism. We will read works by Kant, Hegel, Goethe, Marx, Flaubert, Wollstonecraft, Kierkegard, and others. We will also listen to Wagner's Tristan und Isolde. The intellectual and artistic currents of the period will be set against the background of European history as a whole. Final exam required.

HISTORY 163B Modern European Intellectual History: European Intellectual History, 1870 to the Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The focus of the course will be on the social and political thought, primarily in Germany and France, with peripheral attention paid to England and Italy. Related philosophical and cultural trends will also be discussed. The readings will consist largely of selected texts which are representative of the major currents of the period.

Final exam required.

HISTORY 164A Modern European Intellectual History: European Intellectual History from Renaissance to Enlightenment 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Between 1500 and 1800, European thought built the foundations of modern culture, politics, economy, government, law, and religion. This course will introduce students to the period, from the Renaissance rediscovery of antiquity to the Scientific Revolution, from the theological innovation of the Reformation to the new forms of political theory that accompanied both French and American Revolutions.

Final exam required. Formerly known as 163.

European Society from 1750 to the Present.

Final exam not required.

HISTORY 165A Topics in Modern European History: The Reformations of Christendom 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines not a period but a process: the reform and disruption of the civilization called "Christendom" during the 16th and 17th centuries and its transformation into the familiar Europe of the nation states.

Final exam required.

HISTORY 165B Topics in Modern European History: The World, the Picture, and the Page: The Revolution in European Culture since the late 18th Century 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Europe has experienced three revolutions in the past two centuries. The first was political, the second was economic, and the third was what Raymond Williams called the "cultural revolution" - the dramatic shift from a largely oral and iconographic world to one of universal literacy and the technology of modern communications. By means of readings, lectures, discussions, films and slides, the class will examine the meaning of the revolutionary change for the lives of ordinary men and women, as well as the responses of selected writers, artists, and social theorists to the culture of democratization.

Final exam required.

HISTORY 165D The Social and Cultural History of Early Modern Europe 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines the lives of ordinary people in Europe from roughly 1300-1800. Its goal, in the words of the great social historian E.P.

Thompson, is to rescue them from "the enormous condescension of posterity," exploring how the common people made their own history and used their ingenuity to shape not only their own lives but also, at key moments, the development of European modernity.

Final exam required.

HISTORY 166A Modern France: Early Modern France to 1715 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 166B Modern France: Old Regime and Revolutionary France 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

France from the rise of Louis XIV to the fall of Napoleon Bonaparte. The course will explore the socio-economic and political factors that allowed France to emerge as the most powerful nation in Europe under Louis XIV. We will assess the extent of the kingdom's cultural influence and the realities of everyday life under the "old regime." We will then examine the intellectual, social, political, and religious developments of the eighteenth century--such as the Enlightenment, Jansenism, and colonialism--that ultimately led to a total assault against the monarchy in 1789, and finally, the outbreak, course, and consequences of the first great democratic revolution in modern Europe.

Final exam required.

HISTORY 166C Modern France 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 167A Modern Germany: Early Modern Germany 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

From the period of the Protestant Reformation to the era of enlightened despotism and the French Revolution, German history was characterized by severe conflicts and problems unresolved. Early Modern German history contains many lessons concerning the relationship of war and peace, of violence and toleration, of reform and renewal and the rejection of any change, of Baroque splendor and widespread misery, of some progress and much disappointment, in short: of a most complicated legacy for future generations.

Final exam required.

HISTORY 167B Modern Germany: The Rise and Fall of the Second Reich: Germany 1770-1918 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course provides the essential foundation for understanding the catastrophic history of Germany in the 20th Century, as well as some of its successes. A central theme is the struggle to define and impose a single national identity on socially, culturally, and religiously diverse peoples in an age of Great Power conflict. Although the region now known as Germany will be the focus of our investigation, considerable attention will also be paid to the Hapsburg Empire, for until 1866 Austria was officially a part of "Germany" and remained, for nearly a century thereafter, culturally and in popular consciousness a part of a "Greater Germany."

Final exam required.

HISTORY 167C Modern Germany: Germany 1914 to the Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course will survey the political, economic, social, and cultural development of Germany since 1914. Special attention will be paid to the impact of World War I; problems of democratization under the impact of defeat, inflation, and depression; National Socialist racism and imperialism; the evolution of the German Federal Republic and the German Democratic Republic; unification and its problems; and modern Germany's role in Europe.

Final exam required.

HISTORY 168A Spain and Portugal: The Spanish and Portuguese Empires in the Golden Age: 1450-1700 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will focus on the rise and development of early modern Europe's most powerful empires. Rising from the unlikely setting of a weak and fragmented Iberian peninsula in the 15th century, the Spanish and Portuguese Empires went on to become the world's first truly global powers. As such, they had a tremendous impact on the political, economic, cultural, and religious life of not only Iberia, but on significant parts of Europe and the New World.

Final exam required.

HISTORY 169A Modern Italy: Renaissance and Baroque Italy 1350-1800 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course will focus on the history of Italy during a period when it was the leading center of European artistic and cultural production and the driving force in the revival of classical learning and literary ideals.

This was the Italy of Raphael and Michelangelo, Ariosto and Alberti, Brunelleschi and Botticelli. At the same time, Italy was also a political battleground through most of this period, both in the realm of ideas and theory but also in a literal sense. It was in Italy that "the art of war," as Machiavelli called it, took center stage as the peninsula became one of the major theaters of war between the great powers of the age, France and Spain. The course will combine a study of the artistic, intellectual, religious, and political history of Italy in this period both as it developed internally and as it was related to the rest of Europe and the Mediterranean world. Requirements will include a midterm, a final, and an optional final paper.

Final exam required. Formerly known as 169.

HISTORY 170 The Netherlands 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The Lowlands from the earliest times to the present monarchy; emphasis on the Golden Age of the 17th and 18th Centuries.

Final exam required.

HISTORY 171A Russia: Russia to 1700 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines the forces that molded Russian culture, society, and politics from earliest times to the 18th century. Lectures and readings touch upon multiple disciplines, including politics, society, economics, art, architecture, religion, and literature.

Final exam required.

HISTORY 171B Russia: Imperial Russia: From Peter the Great to the Russian Revolution 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

In 1721, Peter the Great chose the title of Emperor for himself, and declared that Russia would be an Empire. The empire lasted until the revolutions of 1917, but was never entirely stable. The Romanovs believed that autocracy was the key to good governance. Yet, the reigns of almost all the Romanov Emperors were marked by coups d'etat, peasant rebellions, and, later, assassination attempts. Russia's expanding boundaries and growing population made it even more difficult to rule. This course will focus heavily on political history and political thought. Given the many factors that were tearing Peter's Empire apart, it will ask, what held it together for so many years?.

Final exam required.

HISTORY 171C Russia: The Soviet Union, 1917 to the Present 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An introductory survey of Soviet history from the revolutions of 1917 to the present. Marxism-Leninism, War Communism, and Real Socialism; the Great Transformation and the Great Terror; family and nationality; state and society; Russia versus Soviet; Gorbachev versus the past.

Final exam required.

HISTORY 172 Russian Intellectual History 4 Units

Department: History

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course introduces students to Russian intellectual history from the end of the eighteenth century to the beginning of the twentieth century, covering aspects of political, social, and religious thought. We will observe Russian thinkers elaborate conceptions of nationalism in a multi-ethnic empire, trying to resolve the eternal question of Russia's national identity: whether it belongs to the East or West? Next, we will move on to social thought, including debates on serfdom, populism, the "women question," the nature of progress, and the rise of Marxism. Finally, we will study debates on religion: the pertinence of Orthodox Christian faith in social and philosophical thought, including early twentieth century religious rebuttals to Marxism.

Final exam required.

HISTORY 173B History of Eastern Europe: The Habsburg Empire, 1740-1918 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 173C History of Eastern Europe: History of Eastern Europe: From 1900 to the Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 7.5 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

This course will examine the history of 20th-century Eastern Europe, understood as the band of countries and peoples stretching from the Baltics to the Balkans. Poland, Czechoslovakia, and Hungary, however, will receive special attention. Topics of study will include foundation of the national states, Eastern European fascism, Nazi occupation, constructing Stalinist socialism, the fate of reform communism, reconstitution of "civil society," and the emergence of a new Eastern Europe. Given the paucity of historical writings on the region, the course will make extensive use of cinematic and literary portrayals of Eastern Europe.

Final exam required.

HISTORY 174A Topics in the History of Eastern Europe: A History of Poland-Lithuania 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The course will focus on the development of identities within the constantly shifting borders of Polish-Lithuanian and Polish states. Among the topics: competing definitions--ethnic, confessional, linguistic, political--of Polishness; continuities and discontinuities in Polish history and historiography; Poland between East and West; the development of Polish self-perceptions; Jewish, Lithuanian, and Ukrainian identities in the Polish context; the Polish chapter in the events leading to the end of Communist hegemony in Eastern Europe.

Final exam required.

HISTORY 174B Topics in the History of Eastern Europe: Poles and Others: the Making of Modern Poland 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course uses the devices of historical and literary interpretation to expose and analyze some of the lines of political and cultural development that have led to the Poland we now know. Beginning with the awakening of modern Polish nationalism, it traces the emergence of this Poland through the rise of mass society; the horrifying and exhilarating spectacles of World War I and national and social revolutions; first experiments with modern Polish statehood (especially policies toward ethnic minorities and socially marginalized groups); then the transformations wrought by a half century of totalitarian rule; ethnic cleansing, elite transfer, forces social stratification, and despite all of this, the defiant return of civil society. Students must attend lectures, complete required readings, take two examinations and write a semester paper. Final exam required.

HISTORY C175B/RELIGST C135/UGIS C155 Jewish Civilization: Modern Period 4 Units**Department:** History; Religious Studies; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This is the fourth course in a four-course sequence in the history of Jewish culture and civilization. It explores the major themes in Jewish history from 1750 to the present, with special attention paid to the transformation of Jewish communal and individual identity in the modern world. Topics to be treated include the breakdown of traditional society, enlightenment and emancipation, assimilation, Hasidism, racial anti-Semitism, colonialism, Zionism, and contemporary Jewish life in Europe, North America, and Israel. The multicultural nature of Jewish history will be highlighted throughout the course through the treatment of non-European Jewish narratives alongside the more familiar Ashkenazi perspective.

Final exam required.

HISTORY 177A Armenia: Armenia from Ethnogenesis to the Dark Ages 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 8 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

This course will cover close to three millennia of Armenian history, from the process of ethnogenesis to the almost complete destruction of the Armenian "feudal" system by the end of the 15th century. This course is based on the broad framework of Armenian political history and institutions, but also emphasizes economic development, social change, and cultural transformations.

Final exam required.

HISTORY 177B Armenia: From Pre-modern Empires to the Present 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This survey course will cover the period from the incorporation of most of the Armenian plateau into the Ottoman Empire to the present day.

Final exam required.

HISTORY 178 History of the Holocaust 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will survey the historical events and intellectual developments leading up to and surrounding the destruction of European Jewry during World War II. We will examine the Shoah (the Hebrew word for the Holocaust) against the backdrop of modern Jewish and modern German history. The course is divided into two main parts: (1) the historical background up to 1939; and (2) the destruction of European Jewry, 1939-1945.

Final exam required.

HISTORY 180 The Life Sciences since 1750 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.

This course will survey the development of the sciences of living nature from the mid-18th to the late-20th century. Topics include scientific and popular natural history, exploration and discovery, Darwin and evolution, cell theory, the organizational transformation of science, physiology and experimentalism, classical and molecular genetics, and the biomedical-industrial complex. Emphasis is on the formation of fundamental concepts and methods, long-term trends toward specialization, institutionalization, professionalization, and industrialization, and the place of the life sciences in modern societies. Many lectures are illustrated by slides.

Students will receive no credit for 180 after taking 180T. Final exam required.

HISTORY 180T History of the Life Sciences Since 1750 (Cal Teach) 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

This course is a parallel course to 180, intended for students interested in teaching elementary or secondary school science and math. Students in the "T" course will attend the regular 180 lectures and a special section; this section will focus on techniques, skills, and perspectives necessary to apply the history of science in the juvenile and adolescent science classroom, including pedagogy, devising lesson plans for their classrooms, finding reliable historical information, and writing. Final exam required.

HISTORY 181B Topics in the History of the Physical Sciences:**Modern Physics: From the Atom to Big Science 4 Units****Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.

This course examines the establishment of the ideas and institutions of modern physics over the last century and a half. We begin with the nineteenth-century organization of the discipline and the debates over the classical world picture (mechanics, electromagnetism and optics, thermodynamics and statistical mechanics). We then follow the dramatic changes that undid the classical picture, from the discovery of radioactivity through Einstein's theories of relativity on to the creation of quantum mechanics and the accompanying philosophical disputes. Alongside these conceptual upheavals we will look at the evolving structure of the discipline, its links with industry and government, and the massive transformations of the Second World War, culminating in the atomic bomb. In the postwar period we will deal with the conceptual consolidation of the modern physical worldview and the emergence of "big science" in alliance with the state.

Final exam required.

HISTORY 182A Topics in the History of Technology: Technology and Society 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

What drives technological change? How does technology transfer across different cultures? These and other related questions are examined using historical case studies of productive, military, domestic, information, and biomedical technologies from 1700 to the present. The aim of the course is for students to learn about how technology affects social change and, especially, how technological change is invariably shaped by historical and social circumstances.

Final exam required.

HISTORY 182AT Topics in the History of Technology: Technology and Society (Cal Teach) 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course is a parallel course to 182A, intended for students interested in teaching elementary or secondary school science and math. Students in the "T" course will attend the regular 182A lectures and a special section; this section will focus on techniques, skills, and perspectives necessary to apply the history of science in the juvenile and adolescent science classroom, including pedagogy, devising lesson plans for their classrooms, finding reliable historical information, and writing. Final exam required.

HISTORY 183 Topics in the History of Medicine 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Final exam required.

HISTORY 183A Health and Disease 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course introduces major themes in the history of medicine through the lens of disease. It focuses on two questions: How have people defined well-being? How have they responded to illness? Themes considered include changing theories of disease causality, the development of international public health policy, social understandings of the body, and the growth of the pharmaceutical industry. Disease case studies will be analyzed through readings and films.

Final exam required.

HISTORY 185A History of Christianity: History of Christianity to 1250 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

The course deals with the origins of Christianity and the first eleven centuries of its expansion into a major institutional, social, and intellectual force shaping Western Europe. The central themes are the mechanisms and conditions shaping this expansion, rather than a chronological account in order to present this process as a model of institutionalization of religious movements. The emphasis will be on patterns of crisis and reform; i.e., on conflicts arising within the church itself and as a result of its dealings with the "outside" world, and how these crises were resolved. The course is based on the study of primary sources and will include problems of historical method.

Final exam required.

HISTORY 185B History of Christianity: History of Christianity from 1250 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course follows 185A as the second of two semesters on the History of Christianity. It treats the history of (principally Western) Christianity between the High Middle Ages and the present in Europe and in the rest of the world. The course's main theme is Christianity and the encounter of cultures. Its core readings range from Thomas a Kempis, Martin Luther, and St. Teresa of Avila to Simone Weil and Dietrich Bonhoeffer. The lectures will treat social, cultural, and intellectual topics, such as ecclesiastical authority institutions, forms of piety, revivalism, evangelization, theological speculation, Biblical scholarship, and philosophical arguments for and against religion. This introductory course presupposes no previous study of the subject, though almost any previous study of history or religion should be helpful.

Final exam required.

HISTORY 186 International and Global History since 1945 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course explores great and complex global historical changes that have taken place since the end of the second World War. By situating the major postwar upheavals - from decolonization to the Cold War; from population growth to environmental degradation; from globalization to the endurance of economic inequalities - in comparative and international contexts, this course encourages students to see the origins of our own times and dilemmas in their proper historical context and provides an introduction to recent international and global history.

Final exam required.

HISTORY C187/L & S C140V The History and Practice of Human Rights 4 Units**Department:** History; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A required class for students in the human rights minor (but open to others), this course examines the development of human rights. More than a history of origins, it explores the relationships between human rights and other crucial themes in the history of the modern era. As a history of international trends and an examination of specific practices, it will ask students to make comparisons across space and time and to reflect upon the evolution of human rights in both thought and action.

Final exam required. Instructor: Sargent

HISTORY C188A/HISTART C156B Art and Science 4 Units**Department:** History; History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

This course explores the intersections of art and science in medieval, modern, and contemporary history. It focuses on the ways in which artistic and scientific practices have shaped and legitimated each other through the ages. The course takes the form of an overview that spans from the awakening of European culture through the reception of new knowledge from the Near East to the most recent encounters between art and technoscience in the 21st century.

Course Objectives: Big Ideas course.

Final exam required.

HISTORY C191/HMEDSCI C133/UGIS C133 Death, Dying, and Modern Medicine: Historical and Contemporary Perspectives 4 Units**Department:** History; Health and Medical Sciences; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will study the end of life--dying and death--from the perspective of medicine and history. It seeks to confront the humanist with the quotidian dilemmas of modern clinical practice and medicine's deep engagement with death more generally. It invites pre-med, pre-law, and public policy students to understand these matters in light of the historical and, more broadly, literary and artistic perspectives of the humanities.

Final exam required. Instructors: Laqueur, Micco

HISTORY C192/COG SCI C103/INFO C103/MEDIAST C104C History of Information 3 Units**Department:** History; Cognitive Science; Information; Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Upper level undergraduates.

This course explores the history of information and associated technologies, uncovering why we think of ours as "the information age." We will select moments in the evolution of production, recording, and storage from the earliest writing systems to the world of Short Message Service (SMS) and blogs. In every instance, we'll be concerned with both what and when and how and why, and we will keep returning to the question of technological determinism: how do technological developments affect society and vice versa?.

Final exam required. Formerly known as Information Systems and Management C103. Instructors: Duguid, Nunberg

HISTORY C194/DUTCH C170/SOCIOL C189 Dutch Culture and Society: Amsterdam and Berkeley in the Sixties 4 Units**Department:** History; Dutch; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course will focus on the cultural aspects of protest- and youth cultures in two cities that were influential in the sixties: Amsterdam and Berkeley. Particular attention will be paid to how American popular culture was perceived in a European context. All readings and discussions in English.

Final exam required.

HISTORY H195 Senior Honors 4 Units**Department:** History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent.**Prerequisites:** Senior honors standing.

Limited to senior honors candidates. Directed study centering upon the preparation of an honors thesis. Supervisors will be assigned to each student after consultation with the honors committee.

Final exam not required.

HISTORY C196A/GWS C196A/HISTART C196A/MEDIAST C196A/POL SCI C196A/POLECON C196A/SOCIOL C196A/UGIS C196A UCDC**Core Seminar 4 Units****Department:** History; Gender and Women's Studies; History of Art; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.**Prerequisites:** C196B (must be taken concurrently).

This course is the UCDC letter-graded core seminar for 4 units that complements the P/NP credited internship course UGIS C196B. Core seminars are designed to enhance the experience of and provide an intellectual framework for the student's internship. UCDC core seminars are taught in sections that cover various tracks such as the Congress, media, bureaucratic organizations and the Executive Branch, international relations, public policy and general un-themed original research.

Final exam not required. Instructor: Cain

HISTORY C196B/GWS C196B/HISTART C196B/MEDIAST C196B/POL SCI C196B/POLECON C196B/SOCIOL C196B/UGIS C196B UCDC**Internship 6.5 Units****Department:** History; Gender and Women's Studies; History of Art; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 20-4 to Thirty hours of Internship per week for 15 weeks.**Prerequisites:** C196A (must be taken concurrently).

This course provides a credited internship for all students enrolled in the UCDC and Cal in the Capital Programs. It must be taken in conjunction with the required academic core course C196A. C196B requires that students work 3-4 days per week as interns in settings selected to provide them with exposure to and experience in government, public policy, international affairs, media, the arts or other areas or relevance to their major fields of study.

Final exam not required. Instructor: Cain

Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week.

Offers an overview of the history and current state of the field in Japanese studies, with faculty presentations, selected readings, and orientation sessions with East Asian Library staff to acquaint participants with relevant resources for research. Requirements will include completion of course readings and preparation of a research prospectus.

Final exam not required.

HISTORY C250/ANTHRO C254/ESPM C252/STS C200 Topics in Science and Technology Studies 3 Units**Department:** History; Anthropology; Environ Sci, Policy, and Management; Science and Technology Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course provides a strong foundation for graduate work in STS, a multidisciplinary field with a signature capacity to rethink the relationship among science, technology, and political and social life. From climate change to population genomics, access to medicines and the impact of new media, the problems of our time are simultaneously scientific and social, technological and political, ethical and economic.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY C251/ANTHRO C273/ESPM C273/STS C250 Science and Technology Studies Research Seminar 3 Units**Department:** History; Anthropology; Environ Sci, Policy, and Management; Science and Technology Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course will cover methods and approaches for students considering professionalizing in the field of STS, including a chance for students to workshop written work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275A Core Courses in the Literature of the Several Fields of History: Ancient 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275B Core Courses in the Literature of the Several Fields of History: Europe 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275C Core Courses in the Literature of the Several Fields of History: England 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275D Core Courses in the Literature of the Several Fields of History: United States 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275E Core Courses in the Literature of the Several Fields of History: Latin America 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275F Core Courses in the Literature of the Several Fields of History: Asia 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 275S Core Courses in the Literature of the Several Fields of History: History of Science 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To provide a broad survey of the literature and historiographical problems of the different fields in history.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280A Advanced Studies: Sources/General Literature of the Several Fields: Ancient 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280B Advanced Studies: Sources/General Literature of the Several Fields: Europe 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280C Advanced Studies: Sources/General Literature of the Several Fields: England 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280D Advanced Studies: Sources/General Literature of the Several Fields: United States 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280E Advanced Studies: Sources/General Literature of the Several Fields: Latin America 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280F Advanced Studies: Sources/General Literature of the Several Fields: Asia (For M.A. Candidates) 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280G Advanced Studies: Sources/General Literature of the Several Fields: Asia (For Ph.D. Candidates) 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280H Advanced Studies: Sources/General Literature of the Several Fields: Africa 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280N Advanced Studies: Sources/General Literature of the Several Fields: Canada 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280S Advanced Studies: Sources/General Literature of the Several Fields: History of Science 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 280U Advanced Studies: Sources/General Literature of the Several Fields: Studies in Comparative History 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 281 Paleography and Other Auxiliary Sciences 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Introduction to the scholarly handling of texts, whether ancient or modern, inscriptions or manuscripts, and instruction in the methodologies, tools, sources, and the editing and use of texts relevant to a particular field of history; instruction in any auxiliary science requisite for historical research. Course may be repeated for credit with different instructor. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 283 Historical Method and Theory 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Designed especially for candidates for higher degrees in History. Stress is laid on practical exercises. For precise schedule of offerings see department catalog during pre-enrollment week each semester. Final exam not required.

HISTORY 285A Research Seminars: Ancient 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285B Research Seminars: Europe 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285C Research Seminars: England 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285D Research Seminars: United States 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Final exam not required.

HISTORY 285E Research Seminars: Latin America 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285F Research Seminars: Asia 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285H Research Seminars: Africa 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285L Research Seminars: Legal History 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285S Research Seminars: History of Science 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 285U Research Seminars: Studies in Comparative History 4 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

For precise schedule of offerings see department catalog during pre-enrollment week each semester.

Final exam not required.

HISTORY 290 Historical Colloquium 1 Unit**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 4 hours of Lecture per week for 8 weeks.

Colloquium on topics of current research. For precise schedule of offerings, see department catalog during pre-enrollment week each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 295 Supervised Research Colloquium 2 - 5 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Preparation, presentation and criticism of research papers.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 296 Directed Dissertation Research 3 - 12 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 to 12 hours of independent study per week. 5 to 20 2 hours of independent study per week for 8 weeks. 7 hours of independent study per week for 6 weeks.**Prerequisites:** Open to qualified students directly engaged upon the doctoral dissertation.

Directed dissertation research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 298 Independent Study for Graduate Students in History 2 - 12 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 299 Directed Reading 2 - 12 Units**Department:** History**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent.**Prerequisites:** Consent of instructor.

Individual conferences to be arranged. Intended to provide directed reading in subject matter not covered in scheduled seminar offerings. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTORY 375 Teaching History at the University 2 Units**Department:** History**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks. 4 hours of Seminar per week for 8 weeks. 5 hours of Seminar per week for 6 weeks. This class will introduce graduate students to a variety of techniques and theories used in teaching history at the university level. It will examine readings dealing with a range of classroom situations, opportunities, and challenges, with the goal of enabling future college teachers of history to understand the learning process of their students and to develop and improve their own teaching skills. The course will have two primary goals: (1) to train graduate students to work more effectively as graduate student instructors in history classes at Berkeley; and (2) to introduce students to techniques of designing and running their own classes that they will use when they become independent instructors and, ultimately, professors of history in their own right. Final exam not required. Formerly known as History 300.

HISTORY 601 Individual Study for Master's Students 1 - 8 Units**Department:** History**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent.**Prerequisites:** For candidates for M.A. degree.

Individual study, in consultation with the graduate adviser, to prepare for student's language examinations and the master's examination. Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

HISTORY 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** History**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent.**Prerequisites:** For candidates for doctoral degree.

Individual study, in consultation with the graduate adviser, to prepare students for language examinations and the doctoral examination. Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

History of Art (HISTART)

HISTART R1B Reading and Writing about Visual Experience 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** UC Entry Level Writing Requirement, English 1A, or equivalent.

How do mechanisms of perception structure responses to visual art? What is at stake when words describe images? By means of intensive looking, thinking, speaking, and writing, this course introduces the student to a series of problems and issues in the description and analysis of works of art. Because the course is also an introduction to the historical study of art, it is intended for students with no previous course work in the field. Satisfies the second half of the Reading and Composition requirement. Satisfies the second half of the Reading and Composition requirement. Final exam not required. Formerly known as 1B.

HISTART 10B History of Western Art: Renaissance to Modern 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.

An historical survey of selected works of painting, sculpture, and architecture from the Renaissance to the present. Stress is placed on the acquisition of perceptual and critical skills, the analysis and interpretation of style and meaning, and the ability to relate works to a broader visual tradition and historical context.

Final exam not required. Formerly known as S10B.

HISTART 11 Introduction to Western Art: Renaissance to the Present 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.**Prerequisites:** May follow 1B or 10, though neither is required.

An introduction to the historical circumstances and visual character of Western art from the Renaissance to the present. Not a chronological survey, but an exploration of topics and themes central to this period. For example: What tasks did painting and sculpture perform in the past? For whom, at whose expense? How do the rise of landscape painting, the cult of the artist, and the new emphasis on the nude relate to the emergence of modern society? Do stylistic labels like Classicism, Realism, Impressionism, and Modernism help us answer such questions? This course is recommended for potential majors and for students in other disciplines, both humanities and sciences.

Final exam required. Formerly known as 10B.

HISTART 12 History of Western Art: Renaissance to Modern 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

A historical survey of selected works of painting, sculpture, and architecture from the Renaissance to the present. Stress is placed on the acquisition of perceptual and critical skills, the analysis and interpretation of style and meaning, and the ability to relate works to a broader visual tradition and historical context.

Final exam required. Formerly known as S10B.

HISTART 24 Freshman Seminar 1 Unit**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman Seminars are offered in all campus departments, and topics may vary from department to department and semester to semester. Enrollment limited to fifteen freshman.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

HISTART 30 Art of India 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course surveys the arts of India from 2000 BC to the present, including painting, sculpture, and architecture. It treats prehistoric material (Indus Valley), Buddhist sculpture and painting, Hindu temples and their images, miniature painting, and modern art. Art will be considered in relation to its religious, political, and social contexts. The course will normally focus on major monuments, seen from multiple viewpoints, or upon problems and issues that relate the art of this area to traditions of other parts of the world (or differentiate it from them). No previous background is presumed, and students will be introduced to basic art-historical methods of viewing and analysis.

Final exam required.

HISTART N31 Arts of East Asia 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

This course surveys the artistic traditions of China, Korea, and Japan over six millennia. Through lectures and readings, students are introduced to themes central to the development of art in East Asia. We begin with the form, meaning, and function of archaeological remains, then turn to consider the role of art in Buddhist ritual and worship. Lectures on secular painting will focus on the complex interactions of text and image, and on alternative modes of visualizing exemplary conduct. Theoretical issues and visual analysis of individual works will be introduced through weekly guided discussions.

Final exam not required.

HISTART 32 The Arts of Korea 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will introduce the arts and culture of Korea from the prehistoric period through the early twentieth century. Significant examples of painting, ceramics, sculpture, metalwork, and photography will be closely examined in their political, social, and cultural contexts. Korean art will also be presented in its East Asian context and compared to Chinese and Japanese art. No prior knowledge of Korean art or history, or Chinese or Korean languages, is expected.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Kim

HISTART 33 Buddhist Art of Asia 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

A survey of Buddhist art and architecture of Asia from 566 B.C.E. to the 19th century, including India, China, Japan, Tibet, Sri Lanka, and Southeast Asia. How works of art and architecture reflect or engage with the doctrine and practice of different schools of Buddhism. Topics include the making of "the Buddha image," the relationship between patronage, styles, and the ritual use of arts, the notion of sacred space, and the political usage of Buddha images. Discussion of issues such as the body, gender, and sexuality in the light of Buddhist arts and cultural context.

Final exam required.

HISTART 34 Arts of China 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An introduction to the arts of China, designed for newcomers to the history of art or to the study of Chinese culture. Lectures will survey six millennia of Chinese art thematically and chronologically, including the burial arts of the Neolithic period through the Tang dynasty (4th M. BCE-10th C. CE), Buddhist and Daoist ritual arts, and painting and calligraphy. Lectures, readings, and discussions will introduce students to various systems of Chinese thought, modes of visual analysis, and art historical method. Final exam required. Instructor: Berger

HISTART 35 Art and Architecture in Japan 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course is an introduction to art and architecture in Japan. It is intended for newcomers to the history of art and/or to the study of Japanese history and culture. Lectures will proceed chronologically, beginning with the archaeological objects and tumuli of neolithic Japan and ending with the popular graphic arts of the seventeenth to nineteenth centuries and modern transformations of art. Final exam required.

HISTART 39A Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 2.5 hours of seminar per week per unit for 6 weeks. 3 hours of seminar per week per unit for 5 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

HISTART 39B Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 2.5 hours of seminar per week per unit for 6 weeks. 3 hours of seminar per week per unit for 5 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

HISTART 39C Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 2.5 hours of seminar per week per unit for 6 weeks. 3 hours of seminar per week per unit for 5 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

HISTART 39D Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 2.5 hours of seminar per week per unit for 6 weeks. 3 hours of seminar per week per unit for 5 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

HISTART 39E Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 2.5 hours of seminar per week per unit for 6 weeks. 3 hours of seminar per week per unit for 5 weeks.

Final exam not required.

HISTART 41 Introduction to Greek and Roman Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An introduction to the major works, themes, and agendas of Greek and Roman art and architecture. Participants will learn to acquire the perceptual and critical skills necessary for understanding these works; to analyze and interpret them; and to relate them to broader visual traditions, historical contexts, and social/cultural issues. Wherever possible, newly discovered work will be illustrated and discussed.

Final exam required. Instructor: Stewart

HISTART 51 Introduction to Medieval Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A selective, thematic exploration of the visual arts from the decline of the Roman empire to the beginnings of Early Modern period. The emergence of new artistic media, subject matter, and strategies of making and viewing will be discussed against the ever-shifting historical circumstances of medieval Europe. Emphasis will be placed on the methods of interpreting the works, especially in relation to then-current social practices and cultural values.

Final exam required.

HISTART 62 Introduction to Italian Renaissance Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 10 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Using a few selected examples drawn from Florence, Rome, Milan, and Venice, this course will introduce most types of art and architecture produced in the Italian Renaissance—including city squares, churches, palaces and libraries, and their painted and sculptural decoration. Special attention will be paid to various approaches used in interpreting works of art.

Final exam required.

HISTART 65 Arts of the Renaissance and Reformation 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

The West's "modern" era had its beginnings in the 15th and 16th centuries. Social and economic organization, religious and political thought, were reconfigured into forms we recognize today. Within these configurations, art took on new roles: a commodity in a nascent capitalist society, a vehicle of propaganda by church and state, an expression of an individual's genius. In aesthetic terms, it took on properties which defined the modern. Italy and the Netherlands each contributed to the revolution in pictorial expression. This course investigates those contributions and considers how art expressed the world view of this age.

Final exam required. Instructor: Honig

HISTART 98 Directed Group Study for Freshmen and Sophomores 1 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Consent of instructor.

Instruction for a small group of students on a topic initiated by those students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 100 Theories and Methods of Art History 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

How art has been studied in the past and how it is currently studied, its historiography and methodology. Consideration of the earliest writers (Pliny, Vasari) but also modern approaches, from traditional style analysis and connoisseurship through the "founders" of modern art history (Panofsky, Riegl) to more recent approaches, e.g. psychoanalysis, feminism, social history, anthropology, semiotics, etc.

Final exam required.

HISTART N104 Gender and Representation 3 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

A consideration of historical and theoretical issues posed for visual media by attention to issues of gender. Previous course work in art history recommended. Detailed descriptions of current and future offerings available in 416 Doe Library.

Final exam not required.

HISTART 107 Images and the Law 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course explores issues at the intersection of the law and the visual arts. What is the relationship between the law and the visual arts? Does the law constrain the creation of art, or does it establish conditions under which artists can exercise their creativity more freely? When and how should the legal system be employed to promote or curtail the creation, display, or preservation of works of art?

Final exam required.

HISTART 108 Cities and the Arts 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

The study of various urban centers at particular times in relation to the art produced there. Emphasis may be placed on the rise of artistic centers and professional communities, the representation of places of power, learning or recreation, the construction of urbanity, the reaction to cities, etc. Detailed descriptions of current and future offerings available in room 416 Doe Library.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

HISTART 120 The "Origins" of Art 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.

For millions of years, hominid creatures quite like us made nothing like what we now take to be images or ornaments-"art." Why not? Between 32,000 and 26,000 BC, images and ornaments appear and proliferate. Why? When a workman shovels dirt, the pile is mere garbage. An artist exhibits an identical pile in a gallery as "art." What makes the difference? Detailed examination of paleolithic & prehistoric arts, children's drawings, & some contemporary practices.

Final exam not required.

HISTART C120A/NE STUD C120A The Art of Ancient Mesopotamia: 3500-1000 BCE 4 Units**Department:** History of Art; Near Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The art and architecture of early Mesopotamia will be explored in terms of the social, political, and cultural context of ancient Sumer, Babylonia, and Assyria during the period of urbanization and early kingdoms. The course provides an integrated picture of the arts of Mesopotamia and neighboring regions from 3500-1000 BCE with an emphasis on the development of visual narrative, the use of art in the expression of authority and legitimacy, and artistic interconnections between cultures. Collections on campus or in the area will be incorporated whenever possible.

Final exam required.

HISTART C120B/NE STUD C120B The Art of Ancient Mesopotamia: 1000-330 BCE 4 Units**Department:** History of Art; Near Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The royal art and architecture of later Mesopotamia will be explored in terms of the social, political, and cultural context of the great empires of Assyria, Babylon, and Persia. The course provides an integrated picture of the arts of Mesopotamia and neighboring regions from 1000-330 BCE with an emphasis on the development of visual narrative, the use of art in the expression of authority and legitimacy, and artistic interconnections between cultures. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Primarily the architecture and sculpture of Japanese Buddhist temples, 7th to 13th centuries.

Final exam required. Instructor: Levine

HISTART 134B Topics in Buddhist Art and Architecture: Buddhist Icons in Japan 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course introduces the study of Buddhist icons in Japan, principally paintings and sculpture but also texts, within broader Buddhist ritual and visual cultures from ca. 500 CE to the early 20th century.

Final exam not required. Instructor: Levine

HISTART 134C Topics in Buddhist Art and Architecture: Buddhist Art in the Modern/Contemporary World 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course explores representations of the Buddha and other Buddhist deities in the modern and contemporary world, including pre-modern works of painting and sculpture, images made by contemporary artists, and images within popular culture.

Final exam not required. Instructor: Levine

HISTART 136A The Art of India: Indus Valley Through 550 A.D. 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A survey of Indian art from the Indus civilization through 550 A.D. This class will focus on Buddhist architecture and sculpture with emphasis on the development of (pictorial) narrative, the evolution of style and iconography and problems of dating.

Final exam required.

HISTART 136B The Art of India: 500-1350 A.D. 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 10 hours of Lecture per week for 6 weeks.

A survey of Hindu sculpture and architecture in India from the sixth to fourteenth centuries.

Final exam required.

HISTART 136C The Art of India: 1350 A.D. to the Present 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A selective survey of major developments in Muslim and Rajput painting from 1350 to the present.

Final exam required.

HISTART 137 The Art of Southeast Asia 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The art of Cambodia, Vietnam, Thailand, Burma, and Indonesia focusing on the period from 400 to 1500 A.D. Sculpture and architecture will be considered as a balance of Indian and indigenous elements.

Final exam required.

HISTART C140/NE STUD C129 Minoan and Mycenaean Art 4 Units**Department:** History of Art; Near Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course analyzes the art, architecture, and archaeology of prehistoric Greece, concentrating on the Minoan and Mycenaean palatial arts of the Bronze Age (3000-1200 BCE). The evocative yet still enigmatic remains of palaces and funerary complexes, frescoes and vase paintings, and precious worked pieces will be closely examined in terms of their forms and cultural contexts. The place of prehistoric Greece in the international world of the eastern Mediterranean will also be explored.

Final exam required.

HISTART 141A The Art of Ancient Greece: Archaic Greek Art and Architecture (750-480 B.C.) 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The early development of the major genres of Greek art in the era of the emerging city-states.

Final exam required.

HISTART 141B The Art of Ancient Greece: Classical Greek Art and Architecture (500-320 B.C.) 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The maturity of the major genres of Greek art in Periclean Athens and the other leading centers.

Final exam required.

HISTART 141C The Art of Ancient Greece: Hellenistic Art and Architecture (330-30 B.C.) 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A survey of the major genres of Greek art in the Hellenic world from Italy to India.

Final exam required.

HISTART N142 Introduction to Archaeology: The Tel Dor Excavation 2 or 4 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Thirty-5 hours of fieldwork and 3 hours of lecture per week for 5.5 weeks.

A training school for those with no previous experience in archaeology or ancient art. Volunteers are taught the elements of modern field archaeology, with discussion sessions on site stratigraphy, pottery, and other artifacts. Evening lectures on Israeli, Greco-Roman, and Near Eastern archaeology.

Final exam not required.

HISTART 145 Roman Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

The art of Rome and of the Roman Empire, from its sources in the Republican era to the Age of Constantine the Great.

Final exam required.

HISTART 151 Art in Late Antiquity 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

Imperial art from Gallienus through the collapse of the western empire.

Christian art from the beginning around 200 through the age of Justinian. Revivals in the seventh and eighth centuries. A look back from the court of Charlemagne and contemporary Constantinople.

Final exam required.

HISTART 156A Gothic Art in Northern Europe: 1150-1270 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Gothic art and architecture from its origins in France about 1130. Emphasis on the related developments of architecture, sculpture, and stained glass at the major cathedrals, the impact of the early universities and scientific study, and the political role of the visual arts in the early nation states.

Final exam required.

HISTART C156B/HISTORY C188A Art and Science 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

This course explores the intersections of art and science in medieval, modern, and contemporary history. It focuses on the ways in which artistic and scientific practices have shaped and legitimated each other through the ages. The course takes the form of an overview that spans from the awakening of European culture through the reception of new knowledge from the Near East to the most recent encounters between art and technoscience in the 21st century.

Course Objectives: Big Ideas course.

Final exam required.

HISTART 161 Renaissance Art in Rome 1400-1600 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A selective survey of major developments in Roman Renaissance painting, sculpture, and architecture organized by genre. Particular emphasis on the relationship between art and religion and the ideology of a theocratic papacy. Issues of gender, the status of artists, and the function, audience, and patronage of art will also be considered.

Final exam required.

HISTART 162 Renaissance Art in Venice 1400-1600 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A selective survey of major developments in Venetian Renaissance painting, sculpture, and architecture organized by genre. Particular emphasis on the relationship between art and religion and the ideology of the Venetian commune. Issues of gender, the status of artists, and the function, audience, and patronage of art will also be considered.

Final exam required.

HISTART 166 Van Eyck to Brueghel 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The great age of Netherlandish art, from its roots in manuscript illumination through the masters of panel painting (Van Eyck, Van der Weyden, Bosch, Brueghel) up to the time of the iconoclasm of 1566. Focus on the relation of painting to the beholder; iconic vs. narrative images; rise of genres; art's expression of social and economic ideals; and class and gender issues.

Final exam required.

HISTART 169A Elizabethan Renaissance: Art, Culture, and Visuality 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The Elizabethan Renaissance course will review texts, minor arts, costume, self-presentation, performance, pageantry, architecture, decoration, and other non-traditional routes of addressing issues of visual culture and representation, and their political and social meanings. The courses's goals are to explore the role of visuality in Renaissance England, and to develop research skills. Students learn to analyze primary sources, both visual and written, and to read secondary sources critically.

Final exam not required. Instructor: Honig

HISTART 170 Southern Baroque Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The major artists (among them Caravaggio, Bernini, Velazquez, and Poussin) and the major concerns (including genres such as history painting, landscape, low-life, and notions of imitation and illusionism) of seventeenth century art in Italy, France, and Spain.

Final exam required.

HISTART 171 Visual Culture in Early Modern Spain and Colonial Latin America 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The mutual impact of European conquest on the visual and material cultures of Spain and Colonial Latin America. Paintings by El Greco, Velazquez, Zurbaran, and Ribera are discussed in relation to the trans-Atlantic transmission of material objects including Mexican pictorial codices, European prints, architecture, screen paintings (biombos), featherwork, and enconchados.

Final exam required. Instructor: Olson

HISTART 172 The Dutch Golden Age 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The rise of a rich visual culture in 17th-century Holland that expressed the ideals, aspirations, and identity of the first bourgeois capitalist society. Rembrandt, Vermeer, and others in the context of contemporary aesthetic concerns (realism, optics) and social issues (domestic values, poverty and wealth, colonialism, national identity).

Final exam required.

HISTART 173 The Age of Rubens 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The culture of early 17th-century Europe as it was known (and created) by Sir Peter Paul Rubens, painter, scholar, and diplomat. Begins in Flanders and travels (with Rubens) to Italy, Spain, France and England, examining politics, religion and visual culture in each place. Key issues include the concept of artistic tradition; art and politics; crafting social status; workshop practice.

Final exam required.

HISTART 174 Types of Dutch and Flemish Painting in the 17th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A general study of Netherlandish painting of the seventeenth century organized according to the genres or types of painting done at the time.

The historical and social as well as the art historical contexts for the development in the Netherlands of such genres as history painting, portraiture, landscapes, still-life, and low-life and the kinds of meanings with which they were endowed.

Final exam required.

HISTART 175 Visual Culture in Early Modern France: Renaissance to Enlightenment 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

French art from the 16th century to the mid 18th century. Beginning with the architecture, painting, prints, and decorative arts of the School of Fontainebleau, the course addresses the development of the Royal Academy and its interaction with popular culture, which culminates in the display of ambitious art in the public space of the pre-revolutionary Salon exhibition.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Olson

HISTART 179 Eighteenth-Century British Art 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

The story of art in 18th-century Britain involves the struggle to develop a national artistic identity which was distinct from the artistic traditions of Italy, Holland, and France. This course will address the meaning and function of history painting, portraiture, marine painting, and landscapes in relation to a rapidly expanding art market, taking into account the way that gender, class, and race played into the visual marking of status and power. We will also look at the ways in which visual culture helped to shape Britain's national identity as an emerging imperial power.

Final exam required.

HISTART 180A Nineteenth-Century Europe: Age of Revolution 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Topics in late 18th- and early 19th-century European art, either focusing on a pertinent theme and/or nation (e.g. Romanticism and gender in France) or introducing the art of Europe as a whole during this tumultuous period of revolution and reaction.

Final exam required.

HISTART 180C Nineteenth-Century Europe: The Invention of Avant-Gardes 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Visual arts in the later 19th century. Impressionism and after. The nature of avant-garde culture and its relation to emerging consumer culture. May emphasize Paris, or the struggle for cultural mastery in Europe.

Final exam required.

HISTART N180A 19th-Century Europe: Age of Revolution 3 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

Topics in late 18th- and early 19th- century European art, either focusing on a pertinent theme and/or nation (e.g., Romanticism and gender in France) or introducing the art of Europe as a whole during this tumultuous period of revolution and reaction.

Final exam not required. Instructor: Grigsby

HISTART N180B The Body in Avant-Garde French Art 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

This course studies 19th-century art's search for a new visual language with which to represent the body. It explores ways in which sculptural and painted bodies convey, hide, and displace sexuality to create or prohibit desire, and how they produce different notions of femininity and masculinity. Artists to be discussed: Manet, Monet, Gauguin, Degas, Renoir, Pissarro, Morisot, Cassatt, Rodin, Carpeaux, Cezanne, Millet, Courbet, Daumier, Claudel.

Final exam not required.

HISTART N180C Nineteenth-Century Europe: The Invention of Avant-Gardes 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

Visual arts in the later 19th century. Impressionism and after. The nature of avant-garde culture and its relation to emerging consumer culture. May emphasize Paris or the struggle for cultural mastery in Europe.

Final exam not required.

HISTART N181 French Art of the 19th Century 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Forty 8 hours of lecture per summer session, either 6 or 8 weeks.

Introduction to French art from the Revolution to the First World War. Proceeds chronologically, putting visual art in the context of French political and social development.

Final exam required.

HISTART 182 Histories of Photography 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Topics in 19th- and 20th-century histories of photography; for example, photography in relation to modernism, gender, pictorial genres, or consumerism.

Final exam required. Formerly known as 188.

HISTART N182 Histories of Photography 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

Topics in 19th- and 20th-century histories of photography, for example, photography in relation to modernism, gender, pictorial genres, or consumerism.

Final exam not required.

HISTART 183 Art and Colonialism 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Consideration of the relationship between visual representation and conquest, colonialism and imperialism. Topics include the history of visual ethnographies, representations and constructions of "race," exoticism, orientalism, and primitivism.

Final exam required.

HISTART 183E American Painting and Photography from the Civil War to WW II 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 8 weeks.

The focus of this course will be significant works by American art-makers, analyzed in the context of the dramatic transformations which occurred in American Art from the 1860's to the 1940's. Emphasis will be placed on the analysis of both indigenous and adopted modes of representation within their historical and art historical contexts. Students will be encouraged to acquire the ability to closely "read" and interpret visual images as primary historical "texts."

Final exam not required.

HISTART 185 From Manet to Mondrian 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

Study of major artists and movements in European art from 1860-1930. Will begin with Modernism in the work of Manet and proceed to an examination of Impressionism, Post-Impressionism, Symbolism, Expressionism, Fauvism, Cubism, Futurism, and early abstract art. Directions in the 20th century such as Dadaism and Surrealism will be addressed. Art will be considered in the cultural, political, social, and aesthetic contexts in which it was made. Emphasis is on painting, but important sculptors will be included.

Final exam not required.

HISTART 185A American Art (1800-Present) 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Looking at major developments in architecture, decorative arts, photography, and painting from Romanticism to post-modernism, this course addresses art and its social context over the last two centuries in what is now the United States. Issues include patronage, audience, technology, and the education of the artist as well as style and cultural expression. Field trips.

Final exam required.

HISTART 185B American Architecture: Domestic Forms 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Taking as a point of departure specific exemplary houses, both vernacular and high-style architectural forms are studied from the perspectives of the history of style, of technology and of social use. Both the class as a whole and the student research projects take a case-study approach. Field trips.

Final exam required.

HISTART N185C Contemporary American Art 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

In-depth study of visual culture in America, from 1960 to the present day, with particular attention to theoretical issues and the intersections of art with the culture at large. Previous course work in history of art recommended.

Final exam not required.

HISTART 186A Art in the Early 20th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

A consideration of major issues in art of the early 20th century. May focus on a particular place and period (e.g., Art in Paris or 1900-1914) or on a major artistic problem (e.g., Abstraction and Figuration).

Students will receive no credit for History of Art 186A after taking History of Art 187. Final exam required.

HISTART 186C Art in the Later 20th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A consideration of major issues in art of the present day. Emphases may include conceptual, video, performance, installation and digital art, as well as painting, sculpture and experimental practices.

Students will receive no credit for History of Art 186C after taking History of Art 181, N181, S181, or S181X. Final exam required.

HISTART N186C Art in the Later 20th Century 3 Units**Department:** History of Art**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

This course will take a close look at some of the art produced in Europe and America in the decades following the Second World War. In addition to painting, sculpture, and photography, we will also examine video, performance, and intermedia art. Of particular interest will be defining the balance of concerns demonstrated by artists during this time between form and content, abstraction and representation, and the intersection of their artworks with culture at large--including issues of technology, the body, commercial economy, and public space. Along with a wide range of images, our discussions will consider theoretical and critical texts.

Final exam not required. Formerly known as N181.

HISTART 187AC Race and Representation in the Twentieth Century in the United States 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 8 hours of lecture and 2 hours of discussion per week for 6 weeks.

The course examines a series of artistic formations and critiques of racial, ethnic, gender, class and religious identity among the diverse collection of individuals, cultures, and institutions that compose the United States. Material, formal, social, and political contexts will all be considered as we address a wide range of art practices and media.

Satisfies the American Cultures requirement

Course may be repeated for credit when topic changes. Final exam required. Instructor: Kroiz

HISTART 188 Latin American Art 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

In this course, students will examine how Latin American artists have utilized local indigenous traditions as well as global avant-grade innovations within the context of specific national histories and landscapes. Additionally, students will look at murals, painting, photography, printmaking, street actions, and new media from Colombia, Cuba, Guatemala, and Mexico, as well as contemporary Californian Chicano artistic practices.

Final exam required. Instructor: Bryan-Wilson

HISTART 188A Latin American Art: Before Columbus 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week. This course presents the indigenous artistic traditions of parts of what is now Latin America, from the earliest monuments of the formative periods (e.g. Olmec and Chavín), through acclaimed eras of aesthetic and technological achievement (e.g. Maya and Moche), to the later Inca and Mexica (i.e. Aztec) imperial periods. Our subject encompasses multiple genre including painting and sculpture, textiles and metalwork, architecture and performance. More than a recitation of periods, styles, and monuments, the course will assess the varieties of evidence available for interpretations of artworks that were created in diverse social, religious, and political settings.

Final exam required. Instructor: Trever

HISTART 189 Museums: An Introduction to the History and Practice of Collecting and the Public View 1 Unit**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Seminar per week for 15 weeks. 3 hours of Seminar per week for 3 weeks.

This course will consider museums from historical, practical, and contemporary ethical perspectives. We will visit four of the museums on the Berkeley campus, and from the various viewpoints of humanities, social science, and natural science, we will examine collecting, exhibition, research, and audience in the early 21st-century museum setting. The course will require reading, discussion, four short writing assignments, and one final exam.

Final exam required.

HISTART C189/AMERSTD C112F/ESPM C191/UGIS C136 The American Forest: Its Ecology, History, and Representation 4 Units

Department: History of Art; American Studies; Environ Sci, Policy, and Management; Undergrad Interdisciplinary Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The American forest will be examined in terms of its ecology, history, and representations in paintings, photographs, and literary essays. This examination seeks to understand the American forest in its scientific and economic parameters, as well as the historic, social, and ideological dimensions which have contributed to the evolution of our present attitudes toward the forest.

Final exam required. Instructors: Lovell, McBride

HISTART 190A Special Topics in Fields of Art History: Asian 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. For specific questions concerning preparation for a 190 course, please see individual instructor. Detailed descriptions of current and future offerings in this series available in 416 Doe Library.

Course may be repeated for credit when topic changes. Final exam required.

HISTART 190B Special Topics in Fields of Art History: Ancient 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. For specific questions concerning preparation for a 190 course, please see individual instructor. Detailed descriptions of current and future offerings in this series available in 416 Doe Library.

Course may be repeated for credit when topic changes. Final exam required.

HISTART 190C Special Topics in Fields of Art History: Medieval 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. For specific questions concerning preparation for a 190 course, please see individual instructor. Detailed descriptions of current and future offerings in this series available in 416 Doe Library.

Course may be repeated for credit when topic changes. Final exam required.

HISTART 190DH Digital Humanities for Art Historians 6 Units

Department: History of Art

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 20 7.5 hours of lecture per week for 8 weeks.

An introduction to methods of digital imaging and computational visualization that are relevant to art historical investigation. Topics may include digital photography, modeling/rendering, and network visualization. Some background in art history desirable. For specific questions concerning preparation, please contact the instructor.

Course may be repeated for credit when topic changes. Students will be required to submit a 3-4 page paper and to prepare a project presentation at the end of each module. There will be 4 modules scheduled during the 8-week course: Digital Photography, Metadata and Image Management, Modeling and Rendering, and Network Visualization. Instructor: Underhill

HISTART 190E Special Topics in Fields of Art History: 17th-18th Century 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. For specific questions concerning preparation for a 190 course, please see individual instructor. Detailed descriptions of current and future offerings in this series available in 416 Doe Library.

Course may be repeated for credit when topic changes. Final exam required.

HISTART 190F Special Topics in Fields of Art History: 19th-20th Century 3 - 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero hours of discussion per week. 7 hours of lecture and zero hours of discussion per week for 6 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. For specific questions concerning preparation for a 190 course, please see individual instructor. Course may be repeated for credit when topic changes. Final exam required.

HISTART 190G Special Topics in Fields of Art History: American/British 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Open to all interested students, including graduate students. Some background in art history desirable. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192A Undergraduate Seminar: Problems in Research and Interpretation: Asian 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192AC Undergraduate Seminar: Folk Art in America 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

This seminar will look at specific case studies of the production and use of architecture, paintings, and quilting within specific communities in what is now the United States. We will look, for instance, at Shaker watercolors and design; Puritan painting and city planning; Amish, Hawaiian, and Hmong quilting; the ledger drawings and domestic structures of specific Native American groups; and the sacred architecture of the Hispanic southwest. Our timeframe spans four centuries but our "geographies" will be very focused. We will consider vernacular or folk production within the context of politics and economics as well as aesthetic and social theory. Satisfies the American Cultures requirement

Final exam not required. Instructor: Lovell

HISTART 192B Undergraduate Seminar: Problems in Research and Interpretation: Ancient 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192C Undergraduate Seminar: Problems in Research and Interpretation: Medieval 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192D Undergraduate Seminar: Problems in Research and Interpretation: 15th-16th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192DH Undergraduate Seminar: Digital Imaging and Forensic Art History 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

An introduction to digital modeling and rendering as forms of art-historical investigation. A series of case studies will allow students to explore the research possibilities presented by this new medium. Students will construct their own digital models as part of a research project.

Each student will build a virtual model of a Roman house. An essay (approx. 20 pages) will analyze the structure in historical phenomenological terms we have developed over the course of the semester. Instructor: Underhill

HISTART 192E Undergraduate Seminar: Problems in Research and Interpretation: 17th-18th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192F Undergraduate Seminar: Problems in Research and Interpretation: 19th-20th Century 4 Units**Department:** History of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Primarily for juniors and seniors in the major or consent of instructor.

Concentration on specific problems or works in a particular area of art history. Assigned readings, discussion, and a substantial paper. For specific topics and enrollment, see listings outside 416 Doe Library. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 192G Undergraduate Seminar: Problems in Research and Interpretation: Undergraduate Seminar: American Art, Architecture, and Design 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of seminar per week plus extensive outside work.

Prerequisites: Primarily for juniors and seniors in the major or consent of instructor.

Problems in American and British art, architecture, design of the 17th, 18th, 19th, 20th, or 21st centuries; art institutions, collecting, or related topics.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Lovell

HISTART 192H Undergraduate Seminar: Problems in Research and Interpretation: Modern/Contemporary Art 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of seminar per week plus extensive outside work.

Prerequisites: Primarily for juniors and seniors in the major or consent of instructor.

This undergraduate seminar examines the resurgence of craft within contemporary art and theory. In a time when much art is outsourced--fabricated by large studios of assistants--what does it mean when artists return to traditional, and traditionally laborious, methods of handwork such as knitting, ceramics, or woodworking? Our readings will consider historical and theoretical questions of process, materiality, skill, bodily effort, gendered labor, and alternative economies of production.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bryan-Wilson

HISTART 193 Directed Research 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4.5 conference hours per week and substantial paper.

Prerequisites: Consent of instructor and departmental adviser.

Intended for advanced undergraduates wishing to continue research on topics already begun in a lecture or seminar or to pursue at a high level specialized topics not ordinarily covered in the curriculum. Usually results in a substantial paper. For general independent study see 199; for honors research, see H195.

Final exam not required.

HISTART 194 Museum Internship 1 - 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: 2 to 10 hours of fieldwork per week. 6 to 20 5 hours of fieldwork per week for 6 weeks.

Prerequisites: Approval of undergraduate adviser.

Study and practical professional experience, usually for no fewer than 10 hours per week, involving a substantial project of a curatorial nature. Jointly supervised by a member of the professional staff of the participating museum and a faculty member. Internships ordinarily must be arranged well in advance; for further information, inquire at 416 Doe Library.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART H195 Special Study for Honors Candidates in the History of Art 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Individual conferences and thesis.

Prerequisites: Senior standing and qualifying scholastic record (3.5 GPA overall and 3.5 GPA in upper division courses completed in the major).

Directed study leading to the completion of the honors thesis. Consult the description of the Honors Program in Art History.

Final exam not required.

HISTART C196A/GWS C196A/HISTORY C196A/MEDIAST C196A/POL SCI C196A/POLECON C196A/SOCIOL C196A/UGIS C196A UCDC Core Seminar 4 Units

Department: History of Art; Gender and Women's Studies; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.

Prerequisites: C196B (must be taken concurrently).

This course is the UCDC letter-graded core seminar for 4 units that complements the P/NP credited internship course UGIS C196B. Core seminars are designed to enhance the experience of and provide an intellectual framework for the student's internship. UCDC core seminars are taught in sections that cover various tracks such as the Congress, media, bureaucratic organizations and the Executive Branch, international relations, public policy and general un-themed original research.

Final exam not required. Instructor: Cain

HISTART C196B/GWS C196B/HISTORY C196B/MEDIAST C196B/POL SCI C196B/POLECON C196B/SOCIOL C196B/UGIS C196B UCDC**Internship 6.5 Units**

Department: History of Art; Gender and Women's Studies; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 20-4 to Thirty hours of Internship per week for 15 weeks.

Prerequisites: C196A (must be taken concurrently).

This course provides a credited internship for all students enrolled in the UCDC and Cal in the Capital Programs. It must be taken in conjunction with the required academic core course C196A. C196B requires that students work 3-4 days per week as interns in settings selected to provide them with exposure to and experience in government, public policy, international affairs, media, the arts or other areas or relevance to their major fields of study.

Final exam not required. Instructor: Cain

HISTART C196W/GWS C196W/HISTORY C196W/MEDIAST C196W/POL SCI C196W/POLECON C196W/SOCIOL C196W/UGIS C196W Special Field Research 10.5 Units

Department: History of Art; Gender and Women's Studies; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 240-300 hours of work per semester plus regular meetings with the faculty supervisor.

Prerequisites: Consent of instructor.

Students work in selected internship programs approved in advance by the faculty coordinator and for which written contracts have been established between the sponsoring organization and the student. Students will be expected to produce two progress reports for their faculty coordinator during the course of the internship, as well as a final paper for the course consisting of at least 35 pages. Other restrictions apply; see faculty adviser.

Course may be repeated for a maximum of 12 units. Course may be repeated for a maximum of 12 units. Final exam not required. Formerly known as 196W.

HISTART 198 Supervised Group Study 1 - 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Tutorial.

Prerequisites: Consent of instructor.

Instruction for a small group of students on a topic initiated by those students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 199 Supervised Independent Study 1 - 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Individual conferences.

Prerequisites: Consent of instructor, major adviser and department chair.

For students wishing to pursue an interest not represented in the curriculum by developing an individual program of study supervised by a faculty member. Study may involve readings, projects, papers, fieldwork, etc. For continuing or advanced research projects, see 193.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART N199 Supervised Independent Study 1 - 4 Units

Department: History of Art

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Individual conferences for 10 weeks.

Prerequisites: Consent of instructor and major adviser.

For students wishing to pursue an interest not represented in the curriculum by developing an individual program of study supervised by a faculty member. Study may involve readings, projects, papers, fieldwork, etc. For continuing or advanced research projects, see 193.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 200 Graduate Proseminar in the Interpretation of Art Historical Materials 4 Units

Department: History of Art

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Graduate standing and consent of instructor.

An introduction to the fundamentals of art history, including traditional and innovative perspectives designed for candidates for higher degrees. Offerings vary from year to year. Students should consult the department's "Announcement of Classes" for offerings before the beginning of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 203 Seminar in Material Culture: The Interpretation of Objects 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.

This seminar looks at both material culture theory and the practice of interpreting objects in the West and in Asia. It draws on the practices and inquiries of multiple disciplines including archaeology, anthropology, cultural geography, and art history. We will consider the variety of ways and contexts in which objects have been understood to "speak" as aesthetic vehicles and as cultural texts. Taught by two faculty members who have extensive experience as museum curators--one of American Art, the other of Asian Art, this class will combine theory with hands-on learning.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Berger, Lovell

HISTART C204/CLASSIC C204 Proseminar in Classical Archaeology and Ancient Art 2 or 4 Units**Department:** History of Art; Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Working knowledge of Latin, Greek, and German or French or Italian.

This seminar is intended to introduce graduate students--both archaeologists and non-archaeologists--to the discipline of classical archaeology, history, and evolution, and its research tools and bibliography. Since it is both impossible and undesirable to attempt to cover the entire discipline in one semester, after two introductory lectures on the history of the field, we will address a selection of topics that seems representative of its concerns.

Final exam not required. Instructors: Hallett, Stewart

HISTART C220/NE STUD C220 Seminar in Near Eastern Art 2 or 4 Units**Department:** History of Art; Near Eastern Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Seminar on critical aspects of Near Eastern art requiring intensive study and presentation of a research paper. Topics vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 230 Seminar in Chinese Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 234 Seminar in Japanese Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 236 Seminar in the Art of India 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 240 Seminar in Greek Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 258 Seminar in Late Medieval Art in Northern Europe 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus ex10sive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 260 Seminar in Italian Renaissance Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 262 Seminar in European Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 263 Seminar in European Art: Mimesis 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** unit(s):3 hours of seminar per week; 4 unit(s):3 hours of seminar per week.**Prerequisites:** Graduate standing and consent of instructor.

Mimesis, Greek for "imitation" is a key term in recent debates in a number of disciplines. However, what is at its core is often astonishingly undefined, open and ambivalent. Starting with antique and medieval works addressing key moments of mimesis we will also explore modern theories of mimesis. Crossing the threshold between pre-modern and modern examples will help us to understand the premises for the visual culture involving the rise of naturalism, and more generally the nature of representation in medieval and early modern culture.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Fricke

HISTART 270 Seminar in Baroque Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 281 Seminar in 19th-Century Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 285 Seminar in 20th-Century Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 286 Seminar in 20th-Century Painting and Sculpture 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 289 Seminar in American Art 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 290 Special Topics in Fields of Art History 2 or 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of seminar per week plus extensive outside work.**Prerequisites:** Graduate standing and consent of instructor.

Topics explore themes and problems, often reflect current research interests of the instructor, and supplement regular curricular offerings. Detailed descriptions of current and future offerings available in 416 Doe Library.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 291 Judith Stronach Graduate Travel Seminar in Art History 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week plus 2 to 3 weeks of travel to a selected area or site.**Prerequisites:** Graduate standing and consent of instructor.

This course explores site-specific themes, topics, and problems, reflects current research interests of the instructor(s), and supplements regular curricular offerings. Detailed descriptions of current and (where known) future offerings available in 416 Doe Library.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 296 Directed Dissertation Research 3 - 12 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent study.

Independent study open to qualified students directly engaged upon the doctoral dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 298 Group Study for Graduate Students in the History of Art 1 - 4 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Graduate standing and consent of instructor, and possibly courses in the history of art.

Directed group discussion for graduate students, focused on selected books, articles, problems, primary sources, and/or works of art. Usually but not necessarily offered as preparation for a travel seminar or other supervised fieldwork.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 299 Special Study for Graduate Students in the History of Art 1 - 12 Units**Department:** History of Art**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences. Individual conferences.**Prerequisites:** Graduate standing and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 300 Teaching the History of Art 1 - 5 Units**Department:** History of Art**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Graduate standing and concurrent appointment as a graduate student instructor.

Weekly meetings with the instructor to discuss the methods and aims of the course, to plan the content and presentation of the material for the discussion sections, and to set standards and criteria for grading and commenting upon papers and exams. In addition, after visiting sections early in the semester, the instructor will discuss with each GSI individually his or her performance and make any necessary recommendations for improvement.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

HISTART 375 Teaching History of Art Pedagogy 2 Units**Department:** History of Art**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing and consent of instructor.

This pedagogical seminar introduces graduate students to methods and theories of teaching history of art. The course has two primary goals: (1) to train new graduate student instructors to assist in teaching History of Art classes at UCB; and (2) to introduce students to techniques of designing and teaching their own classes. The seminar may be taken concurrently with the first teaching assignment or in the semester before beginning teaching.

Final exam not required.

HISTART 601 Individual Study for Master's Students in the History of Art 1 - 12 Units**Department:** History of Art**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.**Prerequisites:** For candidates for master's degree.

Individual study in consultation with the graduate adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

HISTART 602 Individual Study for Doctoral Students in the History of Art 1 - 12 Units**Department:** History of Art**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.**Prerequisites:** For candidates for doctoral degree.

Individual study, in consultation with the graduate adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Indigenous Languages of Americas (ILA)

ILA 180 Advanced Studies in Indigenous Languages of the Americas 3 Units

Department: Indigenous Languages of Americas

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 101 and 102.

This course is designed to introduce students to Nahuatl textuality by drawing examples from poetry and painting. Addresses interrelations between alphabetical writing, pictography, and orality. The course will also offer students an introduction to Ancient Nahuatl through the study of James Lockhart's (one day per week will be dedicated to the study of Nahuatl). Students will also be introduced to the paleography of colonial Nahuatl texts.

Final exam required.

Industrial Engin and Oper Research (IND ENG)

IND ENG 24 Freshman Seminars 1 Unit

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

IND ENG 115 Industrial and Commercial Data Systems 3 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 2 hours of laboratory/project per week.

Prerequisites: Upper division standing.

Design and implementation of databases, with an emphasis on industrial and commercial applications. Relational algebra, SQL, normalization. Students work in teams with local companies on a database design project. WWW design and queries.

Final exam required. Instructor: Goldberg

IND ENG 130 Methods of Manufacturing Improvement 3 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 172, Mathematics 54, or Statistics 134 (may be taken concurrently).

Analytical techniques for the improvement of manufacturing performance along the dimensions of productivity, quality, customer service, and throughput. Techniques for yield analysis, process control, inspection sampling, equipment efficiency analysis, cycle time reduction, and on-time delivery improvement. Applications on semiconductor manufacturing or other industrial settings.

Final exam required. Instructor: Leachman

IND ENG 131 Discrete Event Simulation 3 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 5 hours of Lecture and 1.5 hours of Discussion per week for 6 weeks.

Prerequisites: 161, 165; 172 or Statistics 134.

Introductory course on design, programming, and statistical analysis of a simulation study. Topics include the types of problems that can be solved by such methods. Programming material includes the theory behind random variable generation for a variety of common variables. Techniques to reduce the variance of the resultant estimator and statistical analysis are considered. Final project required.

Final exam not required. Instructor: Schruben

IND ENG 140 Introduction to Mobile Industrial Robots 4 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture, 2 hours of design workshop, and 2 hours of programming laboratory per week.

Prerequisites: Knowledge of Java equivalent to completion of Computer Science 9G. Engineering 7 or 77.

Introductory course in the hardware and software design of autonomous vehicles. Basic concepts of sensors, actuators, navigation, exploration, feedback control, and communications. Object-oriented software design principles. Programming for real-time control using Java. Laboratory project teams will design, build, program, and test small prototype vehicles for material handling systems and other applications.

Final exam required. Instructors: Glassey, Goldberg

IND ENG 150 Production Systems Analysis 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 160, 161, 162, 165, and Engineering 120, or senior standing in manufacturing engineering.

Quantitative models for operational and tactical decision making in production systems, including production planning, inventory control, forecasting, and scheduling.

Final exam required. Instructor: Yano

IND ENG 151 Service Operations Design and Analysis 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 161, 162, and a course in statistics.

This course is concerned with improving processes and designing facilities for service businesses such as banks, health care organizations, telephone call centers, restaurants, and transportation providers. Major topics in the course include design of service processes, layout and location of service facilities, demand forecasting, demand management, employee scheduling, service quality management, and capacity planning.

Final exam required.

IND ENG 153 Logistics Network Design and Supply Chain Management 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 160, 162 or senior standing.

We will focus primarily on both quantitative and qualitative issues which arise in the integrated design and management of the entire logistics network. Models and solution techniques for facility location and logistics network design will be considered. In addition, qualitative issues in distribution network structuring, centralized versus decentralized network control, variability in the supply chain, strategic partnerships, and product design for logistics will be considered through discussions and cases.

Final exam required. Instructor: Kaminsky

IND ENG 160 Operations Research I 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 53 and 54.

Deterministic methods and models in operations research. Unconstrained and constrained optimization. Equality, inequality, and integer constraints. Sequential decisions; dynamic programming. Resource allocation, equipment replacement, inventory control, production planning.

Final exam required. Instructor: Atamturk

IND ENG 161 Operations Research II 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 172 or Statistics 134.

Probability review. Conditional expectation. The exponential distribution and poisson process. Markovian Queueing Systems. Component reliability systems. Applications to replacement, repair, transportation and inventory models.

Final exam required. Instructors: Ross, Shanthikumar

IND ENG 162 Linear Programming 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 53 and 54.

Formulation to linear programs. Optimal allocation and control problems in industry and environmental studies. Convex sets; properties of optimal solutions. The simplex method; theorems of duality; complementary slackness. Problems of post-optimization. Special structures; network problems. Digital computation.

Final exam required.

IND ENG S162 Linear Programming 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** Mathematics 50A.

Formulation to linear programs. Optimal allocation and control problems in industry, environmental studies. Convex sets; properties of optimal solutions. The simplex method; theorems of duality; complementary slackness. Problems of post-optimization. Special structures; network problems. Digital computation.

Final exam not required.

IND ENG 165 Engineering Statistics, Quality Control, and Forecasting 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 172 or Statistics 134 or an equivalent course in probability theory.

This course will introduce students to basic statistical techniques such as parameter estimation, hypothesis testing, regression analysis, analysis of variance. Specific applications in forecasting and quality control will be considered in detail.

Students will receive no credit for 165 after taking Statistics 135. Final exam required.

IND ENG 166 Decision Analysis 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 172 or Statistics 134.

Introductory course on the theory and applications of decision analysis. Elective course that provides a systematic evaluation of decision-making problems under uncertainty. Emphasis on the formulation, analysis, and use of decision-making techniques in engineering, operations research and systems analysis. Includes formulation of risk problems and probabilistic risk assessments. Graphical methods and computer software using event trees, decision trees, and influence diagrams that focus on model design.

Final exam required. Instructor: Oren

IND ENG 170 Industrial Design and Human Factors 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division standing.

This course surveys topics related to the design of products and interfaces ranging from alarm clocks, cell phones, and dashboards to logos, presentations, and web sites. Design of such systems requires familiarity with human factors and ergonomics, including the physics and perception of color, sound, and touch, as well as familiarity with case studies and contemporary practices in interface design and usability testing. Students will solve a series of design problems individually and in teams.

Final exam required. Instructor: Goldberg

IND ENG 171 Technology Firm Leadership 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.**Prerequisites:** Upper division standing.

This course explores key management and leadership concepts relevant to the high-technology world. Topics include the firm's key operations, strategic issues, and managerial leadership including personal leadership and talent management. This course prepares technical and business minded students for careers focused on professional and management track careers in high technology. Students undertake intensive study of actual business situations through rigorous case-study analysis. Students cannot receive credit for both 171 and Business Administration 105. Course may be repeated for credit when topic changes. Students will receive no credit for 171 after taking Undergraduate Business Administration 105. Final exam required.

IND ENG 172 Probability and Risk Analysis for Engineers 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Mathematics 1A-1B or 16A-16B.

This is an introductory probability course for students in engineering. It focuses mostly on random variables and their applications. Applications will be given in such areas as reliability theory, risk theory, inventory theory, failure models, stress models, computer science, and others. Note: this course can not be used to fulfill any engineering unit or elective requirements; this is a statistics course and can only be used to fulfill a statistics requirement.

Course may be repeated for credit when topic changes. Students will receive no credit for 172 after taking Statistics 134. Final exam required.

IND ENG 180 Senior Project 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture, 1 hour of consultation with faculty adviser, and 6 hours of company visitation per week.**Prerequisites:** 131, 160, 161, 162, 165, Engineering 120, and three other Industrial Engineering and Operations Research electives.

Application of systems analysis and industrial engineering to the analysis, planning, and/or design of industrial, service, and government systems. Consideration of technical and economic aspects of equipment and process design. Students work in teams under faculty supervision. Topics vary yearly.

Final exam not required.

IND ENG 190A Advanced Topics in Industrial Engineering and Operations Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190B Advanced Topics in Industrial Engineering and Operations Research: Entrepreneurial Marketing and Finance 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190C Advanced Topics in Industrial Engineering and Operations Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190D Advanced Topics in Industrial Engineering and Operations Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190E Advanced Topics in Industrial Engineering and Operations Research: Entrepreneurship & Innovation 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks. 2.5 to 10 hours of Seminar per week for 6 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190F Advanced Topics in Industrial Engineering and Operations Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190G Advanced Topics in Industrial Engineering and Operations Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks. 1.5 to 6 hours of Seminar per week for 10 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks.

The 190 series cannot be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).

Course may be repeated for credit when topic changes. Final exam required.

IND ENG 190H Cases in Global Innovation 1 Unit**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.**Prerequisites:** Junior or Senior standing.

This course is designed primarily for upper-level undergraduate and graduate students interested in examining the major challenges and success factors entrepreneurs and innovators face in globalizing a company, product, or service. Over the duration of this course, students will examine case studies of early, mid-stage, and large-scale enterprises as they seek to start a new venture, introduce a new product or service, or capitalize on global economic trends to enhance their existing business. The course content exposes students interested in internationally oriented careers to the strategic thinking involved in international engagement and expansion. Cases will include both U.S. companies seeking to enter emerging markets and emerging market companies looking to expand within their own nations or into markets in developed nations. The course is focused around intensive study of actual business situations through rigorous case-study analysis.

Final exam not required.

IND ENG 190I Cases in Global Innovation: China 1 Unit**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.**Prerequisites:** Junior or senior standing. Recommended, but not required to be taken after or along with Engineering 198.

This course is designed primarily for upper-level undergraduate and graduate students interested in examining the major challenges and success factors entrepreneurs and innovators face in globalizing a company product or service, with a focus on China. Over the duration of this course, students will examine case studies of foreign companies seeking to start a new venture, introduce a new product or service to the China market, or domestic Chinese companies seeking to adapt a U.S. or western business model to the China market. The course content exposes students interested in internationally oriented careers to the strategic thinking involved in international engagement and expansion and the particularities of the China market and their contrast with the U.S. market. The course is focused around intensive study of actual business situations through rigorous case-study analysis and the course size is limited to 30.

Final exam required. Instructor: Sidhu

IND ENG 190K Cases in Global Innovation: South Asia 1 Unit**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.**Prerequisites:** Junior or senior standing. Recommended but not required to be taken after or along with Engineering 198.

This course is designed primarily for upper-level undergraduate and graduate students interested in examining the major challenges and success factors entrepreneurs and innovators face in conducting business, globalizing a company product or service, or investing in South Asia. Over the duration of this course, students will examine case studies of foreign companies seeking to start a new venture, introduce a new product or service to the South Asian market, or South Asian companies seeking to adapt a U.S. or western business model. The course will put this into the larger context of the political, economic, and social climate in several South Asian countries and explore the constraints to doing business, as well as the policy changes that have allowed for a more conducive business environment.

Final exam not required. Instructor: Sidhu

IND ENG 191 Technology Entrepreneurship 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Junior or senior standing.

This course explores key entrepreneurial concepts relevant to the high-technology world. Topics include the entrepreneurial perspective, start-up strategies, business idea evaluation, business plan writing, introduction to entrepreneurial finance and venture capital, managing growth, and delivering innovative products. This course prepares technical and business minded students for careers focused on entrepreneurship, intrapreneurship, and high technology. Students undertake intensive study of actual business situations through rigorous case-study analysis. This course can not be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise). Students will receive no credit for 191 after taking 190A prior to fall 2009. Final exam not required. Instructor: Sidhu

IND ENG H196A Operations Research and Management Science Honors Thesis 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Independent study per week for 15 weeks.**Prerequisites:** Open only to students in the honors program.

Individual study and research for at least one academic year on a special problem approved by a member of the faculty; preparation of the thesis on broader aspects of this work.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Course may be repeated for credit with consent of instructor. Final exam required.

IND ENG H196B Operations Research and Management Science Honors Thesis 3 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Independent study per week for 15 weeks.

Prerequisites: Open only to students in the honors program.

Individual study and research for at least one academic year on a special problem approved by a member of the faculty; preparation of the thesis on broader aspects of this work.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

IND ENG 197 Undergraduate Field Research in Industrial Engineering 1 - 12 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Forty-5 hours of academic work per unit per term.

Forty-5 hours of academic work per unit per term.

Prerequisites: Completion of two semesters of coursework.

Students work on a field project under the supervision of a faculty member. Course does not satisfy unit or residence requirements for bachelor's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IND ENG 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks.

Prerequisites: Senior standing in Engineering.

Group studies of selected topics. Semester course unit value and contact hours will have a one-to-one ratio.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IND ENG 199 Supervised Independent Study 1 - 4 Units

Department: Industrial Engin and Oper Research

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Individual conferences.

Prerequisites: Consent of instructor and major adviser.

Supervised independent study. Enrollment restrictions apply.

Course may be repeated for credit when topic changes. Course may be repeated for a maximum of four units per semester. Final exam not required.

IND ENG 215 Analysis and Design of Databases 3 Units

Department: Industrial Engin and Oper Research

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 1 hour of laboratory/project per week.

Prerequisites: Graduate standing.

Advanced topics in information management, focusing on design of relational databases, querying, and normalization. New issues raised by the World Wide Web. Research projects on current topics in information technology.

Final exam not required. Instructor: Goldberg

IND ENG 220 Economics and Dynamics of Production 3 Units

Department: Industrial Engin and Oper Research

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 262A (may be taken concurrently), Mathematics 104 recommended.

Analysis of the capacity and efficiency of production systems.

Development of analytical tools for improving efficiency, customer service, and profitability of production environments. Design and development of effective industrial production planning systems. Modelling principles are illustrated by reviewing actual large-scale planning systems successfully implemented for naval ship overhaul and for semiconductor manufacturing.

Final exam required. Instructor: Leachman

IND ENG 221 Introduction to Financial Engineering 3 Units

Department: Industrial Engin and Oper Research

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 162 or 262A, course in probability, or consent of instructor.

A course on financial concepts useful for engineers that will cover, among other topics, those of interest rates, present values, arbitrage, geometric Brownian motion, options pricing, and portfolio optimization. The Black-Scholes option-pricing formula will be derived and studied. Stochastic simulation ideas will be introduced and used to obtain the risk-neutral geometric Brownian motion values for certain types of Asian, barrier, and lookback options. Portfolio optimization problems will be considered both from a mean-variance and from a utility function point of view. Methods for evaluating real options will be presented. The use of mathematical optimization models as a framework for analyzing financial engineering problems will be shown.

Final exam required. Instructors: Adler, Oren, Ross

IND ENG 222 Financial Engineering Systems I 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 221 or equivalent; 172 or Statistics 134 or a one-semester probability course.

Introductory graduate level course, focusing on applications of operations research techniques, e.g., probability, statistics, and optimization, to financial engineering. The course starts with a quick review of 221, including no-arbitrage theory, complete market, risk-neutral pricing, and hedging in discrete model, as well as basic probability and statistical tools. It then covers Brownian motion, martingales, and Ito's calculus, and deals with risk-neutral pricing in continuous time models. Standard topics include Girsanov transformation, martingale representation theorem, Feynman-Kac formula, and American and exotic option pricings. Simulation techniques will be discussed at the end of the semester, and MATLAB (or C or S-Plus) will be used for computation.

Final exam not required. Instructor: Guo

IND ENG 223 Financial Engineering Systems II 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 222 or equivalent; 161 or 263A or equivalent.

Advanced graduate course for Ph.D. students interested in pursuing a professional/research career in financial engineering. The course will start with a quick review of 222: the basics of Brownian motion, martingales, Ito's calculus, risk-neutral pricing in continuous time models. It then covers rigorously and in depth the most fundamental probability concepts for financial engineers, including stochastic integral, stochastic differential equations, and semi-martingales. The second half of the course will discuss the most recent topics in financial engineering, such as credit risk and analysis, risk measures and portfolio optimization, and liquidity risk and models.

Final exam not required. Instructor: Guo

IND ENG C227A/EL ENG C227A Introduction to Convex Optimization 4 Units**Department:** Industrial Engineering and Operations Research; Electrical Engineering; Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks.

Convex optimization is a class of nonlinear optimization problems where the objectives to be minimized, and the constraints, are both convex. Contrary to the more classical linear programming framework, convex programs often go unrecognized, and this is a pity since a large class of convex optimization problems can now be efficiently solved. In addition, it is possible to address hard, non-convex problems (such as "combinatorial optimization" problems) using convex approximations that are more efficient than classical linear ones. The course covers some convex optimization theory and algorithms, and describes various applications arising in engineering design, machine learning and statistics, finance, and operations research. The course includes laboratory assignments, which consist of hands-on experience.

Final exam not required. Instructors: El Ghaoul, Wainwright

IND ENG C227B/EL ENG C227C Convex Optimization and Approximation 3 Units**Department:** Industrial Engineering and Operations Research; Electrical Engineering; Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** 227A or consent of instructor.

Convex optimization as a systematic approximation tool for hard decision problems. Approximations of combinatorial optimization problems, of stochastic programming problems, of robust optimization problems (i.e., with optimization problems with unknown but bounded data), of optimal control problems. Quality estimates of the resulting approximation. Applications in robust engineering design, statistics, control, finance, data mining, operations research.

Final exam required. Instructor: El Ghaoui

IND ENG 231 Introduction to Data Modeling, Statistics, and System Simulation 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A, 263A or equivalents and some programming experience.

This course uses industrial engineering and operations research models for analyzing and optimizing real systems where the underlying processes and/or parameters are not fully known, but data may be available, sampled, or artificially generated. Monte Carlo simulations are used to model systems that may be too complex to approximate accurately with deterministic, stationary, or static models, and to measure the robustness of predictions, and manage the risks, in decisions based on data-driven industrial engineering and operations research models.

Final exam not required. Instructors: Lim, Guo, Schruben, Shanthikumar

IND ENG 240 Optimization Analytics 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** Basic analysis and linear algebra, and basic computer skills and experience.

Computing technology has advanced to the point that commonly available tools can be used to solve practical decision problems and optimize real-world systems quickly and efficiently. This course will focus on the understanding and use of such tools, to model and solve complex real-world business problems, to analyze the impact of changing data and relaxing assumptions on these decisions, and to understand the risks associated with particular decisions and outcomes.

Final exam not required.

IND ENG 241 Risk Modeling, Simulation, and Data Analysis 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** Basic notions of probability, statistics, and some programming and spreadsheet analysis experience.

This is a Masters of Engineering course, in which students will develop a fundamental understanding of how randomness and uncertainty are root causes of risk in modern enterprises. The technical material will be presented in the context of engineering team system design and operations decisions.

Final exam not required.

IND ENG 248 Supply Chain Innovation, Strategy, and Analytics 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory course on Production and Inventory Control or Operations Management.

This course introduces you to the field of supply chain management through a series of lectures and case studies that emphasize innovative concepts in supply chain management that have proven to be beneficial for a good number of adopters. Innovations that we will discuss include collaborative forecasting, social media, online procurement, and technologies such as RFID.

Final exam required.

IND ENG 250 Introduction to Production Planning and Logistics Models 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A and 263A taken concurrently.

This will be an introductory first-year graduate course covering fundamental models in production planning and logistics. Models, algorithms, and analytical techniques for inventory control, production scheduling, production planning, facility location and logistics network design, vehicle routing, and demand forecasting will be discussed.

Final exam required. Instructor: Kaminsky

IND ENG 251 Facilities Design and Logistics 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A, and either 172 or Statistics 134.

Design and analysis of models and algorithms for facility location, vehicle routing, and facility layout problems. Emphasis will be placed on both the use of computers and the theoretical analysis of models and algorithms.

Final exam required. Instructor: Kaminsky

IND ENG 252 Service Operations Management 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Students who have not advanced to M.S., M.S./Ph.D., or Ph.D. levels or are not in the Industrial Engineering and Operations Research Department must consult with the instructor before taking this course for credit.

This course focuses on the design of service businesses such as commercial banks, hospitals, airline companies, call centers, restaurants, Internet auction websites, and information providers. The material covered in the course includes internet auctions, procurement, service facility location, service quality management, capacity planning, airline ticket pricing, financial plan design, pricing of digital goods, call center management, service competition, revenue management in queueing systems, information intermediaries, and health care. The goal of the instructors is to equip the students with sufficient technical background to be able to do research in this area.

Final exam not required. Instructors: Shen, Chen

IND ENG 253 Supply Chain Operation and Management 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Supply chain analysis is the study of quantitative models that characterize various economic trade-offs in the supply chain. The field has made significant strides on both theoretical and practical fronts. On the theoretical front, supply chain analysis inspires new research ventures that blend operations research, game theory, and microeconomics. These ventures result in an unprecedented amalgamation of prescriptive, descriptive, and predictive models characteristic of each subfield. On the practical front, supply chain analysis offers solid foundations for strategic positioning, policy setting, and decision making.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Shen

IND ENG C253/CIV ENG C258 Supply Chain and Logistics Management 3 Units**Department:** Industrial Engineering and Operations Research; Civil and Environmental Engineering; Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

Supply chain analysis is the study of quantitative models that characterize various economic trade-offs in the supply chain. Final exam required. Instructor: Shen

IND ENG 254 Production and Inventory Systems 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A or 150; 263A or 161 recommended.

Mathematical and computer methods for design, planning, scheduling, and control in manufacturing and distribution systems.

Final exam required.

IND ENG 261 Experimenting with Simulated Systems 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: 165 or equivalent statistics course, and some computer programming background.

This course will introduce graduate and upper division undergraduate students to modern methods for simulating discrete event models of complex stochastic systems. About a third of the course will be devoted to system modeling, with the remaining two-thirds concentrating on simulation experimental design and analysis.

Final exam not required. Instructors: Ross, Schruben, Shanthikumar

IND ENG 262A Mathematical Programming I 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 110.

Basic graduate course in linear programming and introduction to network flows and non-linear programming. Formulation and model building. The simplex method and its variants. Duality theory. Sensitivity analysis, parametric programming, convergence (theoretical and practical). Polynomial time algorithms. Introduction to network flows models. Optimality conditions for non linear optimization problems.

Final exam required. Instructors: Adler, Oren

IND ENG 262B Mathematical Programming II 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Math 110 or equivalent.

Basic first year graduate course in optimization of non-linear programs. Formulation and model building. Theory of optimization for constrained and unconstrained problems. Study of algorithms for non-linear optimization with emphasis on design considerations and performance evaluation.

Final exam required. Instructors: Adler, Oren

IND ENG 263A Applied Stochastic Process I 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 172, or Statistics 134 or Statistics 200A.

Conditional Expectation. Poisson and renewal processes. Renewal reward processes with application to inventory, congestion, and replacement models. Discrete and continuous time Markov chains; with applications to various stochastic systems--such as exponential queueing systems, inventory models and reliability systems.

Final exam required. Instructors: Ross, Shanthikumar

IND ENG 263B Applied Stochastic Process II 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 263A.

Continuous time Markov chains. The reversed chain concept in continuous time Markov chains with applications of queueing theory. Semi-Markov processes with emphasis on application. Brownian Motion. Random walks with applications. Introduction to Martinjales. Final exam required. Instructors: Ross, Shanthikumar

IND ENG 264 Computational Optimization 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A.

This course is on computational methods for the solution of large-scale optimization problems. The focus is on converting the theory of optimization into effective computational techniques. Course topics include an introduction to polyhedral theory, cutting plane methods, relaxation, decomposition and heuristic approaches for large-scale optimization problems.

Final exam not required. Instructor: Atamturk

IND ENG 266 Network Flows and Graphs 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A (may be taken concurrently).

Survey of solution techniques and problems that have formulations in terms of flows in networks. Max-flow min-cut theorem. Minimum cost flows. Multiterminal and multicommodity flows. Relationship with linear programming, transportation problems, electrical networks and critical path scheduling.

Final exam required. Instructors: Adler, Hochbaum

IND ENG 267 Queueing Theory 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 263A.

The result " $L = (\lambda w)$ " and other conservation laws. Elementary queueing models; comparing single- and multiple-server queues. PASTA. Work. Markovian queues; product form results. Overflow models. Embedded Markov chains. Random walks and the GI/G/1 queues. Work conservation; priorities. Bounds and approximations. Final exam required. Instructor: Shanthikumar

IND ENG 268 Applied Dynamic Programming 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematics 51.

Dynamic programming formulation of deterministic decision process problems, analytical and computational methods of solution, application to problems of equipment replacement, resource allocation, scheduling, search and routing. Brief introduction to decision making under risk and uncertainty.

Final exam required. Instructor: Dreyfus

IND ENG 269 Integer Programming and Combinatorial Optimization 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A.

The course deals with discrete optimization problems and their complexity. These topics include complexity analysis of algorithms and its drawbacks; solving a system of linear integer equations and inequalities; strongly polynomial algorithms, network flow problems (including matching and branching); polyhedral optimization; branch and bound and lagrangean relaxation.

Final exam required. Instructor: Hochbaum

IND ENG 280 Systems Analysis and Design Project 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A, 263A.

A project course for students interested in applications of operations research and engineering methods. One or more systems, which may be public or in the private sector, will be selected for detailed analysis and re-designed by student groups.

Final exam required.

IND ENG 288 Automation Science and Engineering 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture, 1 hour of Discussion, and 1 hour of Laboratory per week for 15 weeks.

Automation is a central aspect of contemporary industrial engineering that combines sensors, actuators, and computing to monitor and perform operations. It is applied to a broad range of applications from manufacturing to transportation to healthcare. This course provides an introduction to analysis, models, algorithms, research, and practical skills in the field and includes a laboratory component where students will learn and apply basic skills in computer programming and interfacing of sensors and motors that will culminate in a team design project.

Final exam required.

IND ENG 290A Dynamic Production Theory and Planning Models 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 220 and 254.

Development of dynamic activity analysis models for production planning and scheduling. Relationship to theory of production, inventory theory and hierarchical organization of production management.

Final exam required.

IND ENG 290G Advanced Mathematical Programming 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A.

Selected topics in mathematical programming. The actual subjects covered may include: Convex analysis, duality theory, complementary pivot theory, fixed point theory, optimization by vector space methods, advanced topics in nonlinear algorithms, complexity of mathematical programming algorithms (including linear programming).

Final exam required.

IND ENG 290R Topics in Risk Theory 3 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 263A.

Seminar on selected topics from financial and technological risk theory, such as risk modeling, attitudes towards risk and utility theory, portfolio management, gambling and speculation, insurance and other risk-sharing arrangements, stochastic models of risk generation and run off, risk reserves, Bayesian forecasting and credibility approximations, influence diagrams, decision trees. Topics will vary from year to year.

Final exam required.

IND ENG 298 Group Studies, Seminars, or Group Research 1 - 4 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminars.

Advanced seminars in industrial engineering and operations research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IND ENG 299 Individual Study or Research 1 - 12 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Individual conferences. Individual conferences.

Forty-5 hours of work per unit per term. Individual conferences. Forty-5 hours of work per unit per term. Individual conferences.

Individual investigation of advanced industrial engineering problems.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IND ENG 601 Individual Study for Master's Students 1 - 12 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Forty-5 hours of work per unit per term. Individual conferences.

Individual study for the comprehensive in consultation with the field adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IND ENG 602 Individual Study for Doctoral Students 1 - 12 Units**Department:** Industrial Engin and Oper Research**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Forty-5 hours of work per unit per term. Individual conferences.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees). May not be used for unit or residence requirements for the doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Information (INFO)

INFO 1 Bibliography: Information Resource: Effectively Utilizing the Berkeley Campus Libraries and Beyond 1 Unit

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 1-hour lectures per week.

In this course, you will learn how to exploit the resources of one of the richest information treasure in the world. Upon completion of the course, you will: understand how the complex UC Berkeley and University of California libraries are configured and how their collections are interrelated; learn how to create a search strategy that can be used to conduct research in any field; learn to take best advantage of the online public catalogs, GLADIS and MELVYL to uncover a wealth of information; use both print resources and electronic sources, such as the Internet, to find materials in the Berkeley Libraries and beyond; Be a confident, critical researcher.

Final exam required. Formerly known as Information Systems and Management 1.

INFO W10 Introduction to Information 3 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. This is an online course.

This lower-division survey course will provide an introduction to the study of information, an interdisciplinary science that draws on aspects of computer science, sociology, economics, business, law, library studies, cognitive science, psychology, and communication. The course is organized into modules that may cover topics such as social bookmarking, networks and web security, human-computer interaction, interface design, technology and poverty, law and policy, business models and entrepreneurship.

Final exam not required. Instructor: Carver

INFO 24 Freshman Seminar 1 Unit

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in many campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

INFO 39O Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39P Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39Q Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39R Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39S Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39T Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39U Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39V Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39W Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39X Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39Y Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 39Z Freshman/Sophomore Seminar 2 - 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

INFO 90 Programming for Computing Applications 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Restricted to Information Management and Systems students only.

An introduction to high-level computer programming languages covering their basis in mathematics and logic. This course will guide students through the elements that compose any programming language including expressions, control of flow, data structures, and modularity via functions and/or objects. Covers traditional contemporary programming paradigms including sequential, event-based, and object-oriented programming; multi-person programming projects and debugging strategies.

Final exam not required.

INFO 98 Directed Group Study for Lower Division Undergraduates 1 - 4 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INFO C103/COG SCI C103/HISTORY C192/MEDIAST C104C History of Information 3 Units

Department: Information Management and Systems; Cognitive Science; History; Media Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Prerequisites: Upper level undergraduates.

This course explores the history of information and associated technologies, uncovering why we think of ours as "the information age." We will select moments in the evolution of production, recording, and storage from the earliest writing systems to the world of Short Message Service (SMS) and blogs. In every instance, we'll be concerned with both what and when and how and why, and we will keep returning to the question of technological determinism: how do technological developments affect society and vice versa?.

Final exam required. Formerly known as Information Systems and Management C103. Instructors: Duguid, Nunberg

INFO 114 User Experience Research 3 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Methods and concepts of creating design requirements and evaluating prototypes and existing systems. Emphasis on computer-based systems, including mobile system and ubiquitous computing, but may be suitable for students interested in other domains of design for end-users. Includes quantitative and qualitative methods as applied to design, usually for short-term studies intended to provide guidance for designers. Students will receive no credit for 114 after taking 214. Final exam required.

INFO 141 Search Engines: Technology, Society, and Business 2 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

In this course, students will first gain an understanding of the basics of how search engines work, and then explore how search engine design impacts business and culture. Topics include search advertising and auctions, search and privacy, search ranking, internationalization, anti-spam efforts, local search, peer-to-peer search, and search of blogs and online communities. Open to all undergraduate students and designed for those with little technical background.

Final exam not required.

INFO 146 Foundations of New Media 3 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Prerequisites: No prior New Media production experience required.

Introduction to interdisciplinary study and design of New Media. Survey of theoretical and practical foundations of New Media including theory and history; analysis and reception; computational foundations; social implications; interaction, visual, physical, and narrative design. Instruction combines lectures and project-based learning using case studies from everyday technology (e.g., telephone, camera, web).

Final exam required.

INFO 152 Mobile Application Design and Development 3 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Prerequisites: Introductory programming experience.

This course looks at the quickly developing landscape of mobile applications. It focuses on Web-based mobile applications, and thus covers issues of Web service design (RESTful service design), mobile platforms (iPhone, Android, Symbian/S60, WebOS, Windows Mobile, BlackBerry OS, BREW, JavaME/JavaFX, Flash Light), and the specific constraints and requirements of user interface design for limited devices. The course combines a conceptual overview, design issues, and practical development issues.

Final exam required.

INFO 153 Web Architecture and Information Management 3 Units

Department: Information

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 5 hours of Lecture and 2.5 hours of Laboratory per week for 6 weeks.

Prerequisites: Introductory programming experience.

This course focuses on understanding the Web as an information system, and how to use it for information management for personal and shared information. The Web is an open and constantly evolving system which can make it hard to understand how the different parts of the landscape fit together. This course provides students with an overview of the Web as a whole, and how the individual parts fit together. It provides students with the understanding and skills to better navigate and use the landscape of Web information.

Students will receive no credit for 153 after taking 190 section 02 (Spring 2009 or Spring 2010). Final exam required.

INFO 155 Introduction to High-Level Programming 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Laboratory per week for 6 weeks.

An introduction to high-level computer programming languages with emphasis on strings, modules, functions and objects; sequential and event-based programming. Uses the PYTHON language.

Final exam required.

INFO C167/SOCIOL C167 Virtual Communities/Social Media 4 Units**Department:** Information Management and Systems; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

With the advent of virtual communities and online social networks, old questions about the meaning of human social behavior have taken on renewed significance. Using a variety of online social media simultaneously, and drawing upon theoretical literature in a variety of disciplines, this course delves into discourse about community across disciplines. This course will enable students to establish both theoretical and experiential foundations for making decisions and judgments regarding the relations between mediated communication and human community.

Final exam not required.

INFO 181 Technology and Poverty 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 2 and 1 half hours of lecture per week.

This course will encourage students to think broadly about the interplay between technological systems, social processes, economic activities, and political contingencies in efforts to alleviate poverty. Students will come to understand poverty not only in terms of high-level indicators, but from a ground-level perspective as 'the poor' experience and describe it for themselves. The role played by individuals and societies of the developing world as active agents in processes of technology adoption and use will be a central theme.

Students will receive no credit for 181 after taking 190-01 Technology and Poverty. Final exam required. Instructor: Burrell

INFO 190 Special Topics in Information 3 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

A seminar focusing on topics of current interest. Topics will vary. A seminar paper will be required. Open to students from other departments. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

INFO 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hours of lecture per week. Meetings to be arranged.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Information Systems and Management 198.

INFO 199 Individual Study 1 - 4 Units**Department:** Information**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks.

Individual study of topics in information management and systems under faculty supervision.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

INFO 202 Information Organization and Retrieval 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Organization, representation, and access to information. Categorization, indexing, and content analysis. Data structures. Design and maintenance of databases, indexes, classification schemes, and thesauri. Use of codes, formats, and standards. Analysis and evaluation of search and navigation techniques.

Final exam not required.

INFO 203 Social and Organizational Issues of Information 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor required for non-majors.

The relationship between information and information systems, technology, practices, and artifacts on how people organize their work, interact, and understand experience. Individual, group, organizational, and societal issues in information production and use, information systems design and management, and information and communication technologies. Social science research methods for understanding information issues.

Final exam not required.

INFO 205 Information Law and Policy 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor required for nonmajors.

Law is one of a number of policies that mediates the tension between free flow and restrictions on the flow of information. This course introduces students to copyright and other forms of legal protection for databases, licensing of information, consumer protection, liability for insecure systems and defective information, privacy, and national and international information policy.

Final exam not required. Instructor: Mulligan

INFO 206 Distributed Computing Applications and Infrastructure 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Laboratory per week for 6 weeks.**Prerequisites:** An introductory programming course and consent of instructor for nonmajors.

Technological foundations for computing and communications: computer architecture, operating systems, networking, middleware, security. Programming paradigms: object oriented-design, design and analysis of algorithms, data structures, formal languages. Distributed-system architectures and models, inter-process communications, concurrency, system performance.

Course must be completed for a letter grade to fulfill degree requirements.

Final exam not required. Instructor: Chuang

INFO 207 Analysis of Information Systems 2 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 7.5 weeks.**Prerequisites:** Consent of instructor required for nonmajors.

Systems and project management, focusing on the process of information systems analysis and design. Includes such topics as systems analysis, process analysis, cost and statistical analysis, accounting and budgeting, and planning.

Final exam not required. Instructor: Braunstein

INFO 209 Professional Skills Workshop 2 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 202, 203, or consent of instructor.

As information and information systems projects have become increasingly strategic, information workers at all levels and in all environments must demonstrate higher levels of professionalism, not only to perform their duties competently, but to remain competitive in the job market. This course, in conjunction with the School of Information final project, gives students insight into the source and best practice of professionalism, and gives students the chance to refine the essential skills in a simulated but realistic working environment.

Final exam not required.

INFO 211 Group and Organizational Approaches to Information Systems Use 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 203 or consent of instructor.

The transmission and use of information within groups such as work groups and organizations. Information flows in organizations. Organizations as information processors. Collaboration. Computer-assisted cooperative work. Influencing strategies. Adoption of innovation. The uses of information for coordination and communication within organizations.

Final exam not required.

INFO 212 Information in Society 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The role of information and information technology in organizations and society. Topics include societal needs and demands, sociology of knowledge and science, diffusion of knowledge and technology, information seeking and use, information and culture, and technology and culture.

Final exam not required. Instructor: Van House

INFO 213 User Interface Design and Development 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

User interface design and human-computer interaction. Examination of alternative design. Tools and methods for design and development. Human computer interaction. Methods for measuring and evaluating interface quality.

Final exam not required.

INFO 214 Needs and Usability Assessment 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Concepts and methods of needs and usability assessment.

Understanding users' needs and practices and translating them into design decisions. Topics include methods of identifying and describing user needs and requirements; user-centered design; user and task analysis; contextual design; heuristic evaluation; surveys, interviews, and focus groups; usability testing; naturalistic/ethnographic methods; managing usability in organizations; and universal usability.

Final exam not required. Instructor: Van House

INFO 216 Computer-Mediated Communication 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course covers the practical and theoretical issues associated with computer-mediated communication (CMC) systems (e.g., email, newsgroups, wikis, online games, etc.). We will focus on the analysis of CMC practices, the relationship between technology and behavior, and the design and implementation issues associated with constructing CMC systems. This course primarily takes a social scientific approach (including research from social psychology, economics, sociology, and communication).

Final exam not required. Instructor: Cheshire

INFO 218 Concepts of Information 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

As it's generally used, "information" is a collection of notions, rather than a single coherent concept. In this course, we'll examine conceptions of information based in information theory, philosophy, social science, economics, and history. Issues include: How compatible are these conceptions; can we talk about "information" in the abstract? What work do these various notions play in discussions of literacy, intellectual property, advertising, and the political process? And where does this leave "information studies" and "the information society"?

Final exam not required. Instructors: Duguid, Nunberg

INFO 219 Privacy, Security, and Cryptography 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206 or consent of instructor.

Policy and technical issues related to insuring the accuracy and privacy of information. Encoding and decoding techniques including public and private key encryption. Survey of security problems in networked information environment including viruses, worms, trojan horses, Internet address spoofing.

Final exam not required. Instructor: Tygar

INFO 221 Information Policy 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

An examination of the nature of corporate, nonprofit, and governmental information policy. The appropriate role of the government in production and dissemination of information, the tension between privacy and freedom of access to information. Issues of potential conflicts in values and priorities in information policy.

Final exam not required. Instructor: Braunstein

INFO 225 Managing in Information-Intensive Companies 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course focuses on managing people in information-intensive firms and industries, such as information technology industries. Topics include managing knowledge workers; managing teams (including virtual ones); collaborating across disparate units, giving and receiving feedback; managing the innovation process (including in eco-systems); managing through networks; and managing when using communication tools (e.g., tele-presence). The course relies heavily on cases as a pedagogical form. Students will receive no credit for 225 after taking 290, Section 1 (Spring 2009) or Section 6 (Fall 2009). Final exam not required. Instructor: Hansen

INFO 228 Information Systems and Service Design 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Using a mix of theory and case studies, the course provides students with different backgrounds a unifying view of the design life cycle, making them more effective and versatile designers.

Students will receive no credit for 228 after taking 290 section 1 Fall 2008 or Fall 2009. Final exam not required. Instructor: Glushko

INFO 231 Economics of Information 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The measurement and analysis of the role information plays in the economy and of the resources devoted to production, distribution, and consumption of information. Economic analysis of the information industry. Macroeconomics of information.

Final exam not required. Instructor: Braunstein

INFO 234 Information Technology Economics, Strategy, and Policy 3 Units**Department:** Information**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

Application of economic tools and principles, including game theory, industrial organization, information economics, and behavioral economics, to analyze business strategies and public policy issues surrounding information technologies and IT industries. Topics include: economics of information; economics of information goods, services, and platforms; strategic pricing; strategic complements and substitutes; competition models; network industry structure and telecommunications regulation; search and the "long tail"; network cascades and social epidemics; network formation and network structure; peer production and crowdsourcing; interdependent security and privacy.

Course Objectives:

INFO234 is a graduate level course in the school's topical area of Information Economics and Policy, and can be taken by the masters and doctoral students to satisfy their respective degree requirements.

Student Learning Outcomes:

Students will learn to identify, describe, and analyze business strategies and public policy issues of particular relevance to the information industry. Students will learn and apply economic tools and principles to analyze phenomena such as platform competition, social epidemics, and peer production, and current policy issues such as network neutrality and information privacy. Through integrated assignments and project work, the students will apply the theoretical concepts and analytic tools learned in lectures and readings to develop and evaluate a business model, product, or service of their choosing, e.g., a start-up idea they are pursuing.

Final exam not required. Instructor: Chuang

INFO 235 Cyberlaw 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to legal issues in information management, antitrust, contract management, international law including intellectual property, trans-border data flow, privacy, libel, and constitutional rights.

Final exam not required. Instructor: Carver

INFO 237 Intellectual Property Law for the Information Industries 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 205 or consent of instructor.

The philosophical, legal, historical, and economic analysis of the need for and uses of laws protecting intellectual property. Topics include types of intellectual property (copyright, patent, trade secrecy), the interaction between law and technology, various approaches (including compulsory licensing), and the relationship between intellectual property and compatibility standards.

Final exam not required. Instructor: Carver

INFO 240 Principles of Information Retrieval 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202 or consent of instructor.

Theories and methods for searching and retrieval of text and bibliographic information. Analysis of relevance, utility. Statistical and linguistic methods for automatic indexing and classification. Boolean and probabilistic approaches to indexing, query formulation, and output ranking. Filtering methods. Measures of retrieval effectiveness and retrieval experimentation methodology.

Final exam not required. Instructor: Larson

INFO 242 XML Foundations 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The Extensible Markup Language (XML), with its ability to define formal structural and semantic definitions for metadata and information models, is the key enabling technology for information services and document-centric business models that use the Internet and its family of protocols. This course introduces XML syntax, transformations, schema languages and the querying of XML databases. It balances conceptual topics with practical skills for designing, implementing, and handling conceptual models as XML schemas.

Final exam not required.

INFO 245 Organization of Information in Collections 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202 or consent of instructor.

Standards and practices for organization and description of bibliographic, textual, and non-textual collections. Design, selection, maintenance, and evaluation of cataloging, classification, indexing, and thesaurus systems for specific settings. Codes, formats, and standards for representation and transfer of data.

Final exam not required. Instructor: Larson

INFO 246 Multimedia Information 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202, 203, or consent of instructor.

Concepts and methods of design, management, creation, and evaluation of multimedia information systems. Theory and practice of digital media production, reception, organization, retrieval, and reuse. Review of applicable digital technology with special emphasis on digital video. Course will involve group projects in the design and development of digital media systems and applications.

Final exam not required.

INFO 247 Information Visualization and Presentation 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Information 206, Computer Science 160, or knowledge of programming and data structures with consent of instructor.

The design and presentation of digital information. Use of graphics, animation, sound, visualization software, and hypermedia in presenting information to the user. Methods of presenting complex information to enhance comprehension and analysis. Incorporation of visualization techniques into human-computer interfaces.

Final exam not required. Instructor: Hearst

INFO 250 Computer-Based Communications Systems and Networks 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206 or equivalent.

Communications concepts, network architectures, data communication software and hardware, networks (e.g., LAN, wide), network protocols (e.g., TCP/IP), network management, distributed information systems. Policy and management implications of the technology.

Final exam not required. Instructor: Chuang

INFO 252 Mobile Application Design and Development 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206 or consent of instructor.

This course looks at the quickly developing landscape of mobile applications. It focuses on Web-based mobile applications, and thus covers issues of Web service design (RESTful service design), mobile platforms (iPhone, Android, Symbian/S60, WebOS, Windows Mobile, BlackBerry OS, BREW, JavaME/JavaFX, Flash Light), and the specific constraints and requirements of user interface design for limited devices. The course combines a conceptual overview, design issues, and practical development issues.

Students will receive no credit for 252 after taking 152 in spring 2010.

Final exam not required.

INFO 253 Web Architecture 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory programming.

This course is a survey of Web technologies, ranging from the basic technologies underlying the Web (URI, HTTP, HTML) to more advanced technologies being used in the the context of Web engineering--for example, structured data formats and Web programming frameworks. The goal of this course is to provide an overview of the technical issues surrounding the Web today, and to provide a solid and comprehensive perspective of the Web's constantly evolving landscape.

Students will receive no credit for 253 after taking 290 section 2 (fall 2009, 2010) or 290 section 3 (fall 2008). Final exam not required.

INFO 256 Applied Natural Language Processing 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Proficient programming in python (programs of at least 200 lines of code), proficient with basic statistics and probabilities.

This course examines the state-of-the-art in applied Natural Language Processing (also known as content analysis and language engineering), with an emphasis on how well existing algorithms perform and how they can be used (or not) in applications. Topics include part-of-speech tagging, shallow parsing, text classification, information extraction, incorporation of lexicons and ontologies into text analysis, and question answering. Students will apply and extend existing software tools to text-processing problems.

Final exam not required. Instructor: Hearst

INFO 257 Database Management 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to relational, hierarchical, network, and object-oriented database management systems. Database design concepts, query languages for database applications (such as SQL), concurrency control, recovery techniques, database security. Issues in the management of databases. Use of report writers, application generators, high-level interface generators.

Final exam not required. Instructor: Larson

INFO C262/NWMEDIA C262 Theory and Practice of Tangible User Interfaces 4 Units**Department:** Information Management and Systems; New Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

This course explores the theory and practice of Tangible User Interfaces, a new approach to Human Computer Interaction that focuses on the physical interaction with computational media. The topics covered in the course include theoretical framework, design examples, enabling technologies, and evaluation of Tangible User Interfaces. Students will design and develop experimental Tangible User Interfaces using physical computing prototyping tools and write a final project report.

Final exam not required. Instructor: Ryokai

INFO C263/NWMEDIA C263 Technologies for Creativity and Learning 3 Units**Department:** Information Management and Systems; New Media**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

How does the design of new educational technology change the way people learn and think? How do we design systems that reflect our understanding of how we learn? This course explores issues on designing and evaluating technologies that support creativity and learning. The class will cover theories of creativity and learning, implications for design, as well as a survey of new educational technologies such as works in computer supported collaborative learning, digital manipulatives, and immersive learning environments.

Students will receive no credit for Information C263/New Media C263 after taking Information 290/New Media 290 section 2 spring 12 only. Final exam not required. Instructor: Ryokai

INFO C265/NWMEDIA C265 Interface Aesthetics 2 Units**Department:** Information Management and Systems; New Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course will cover new interface metaphors beyond desktops (e.g., for mobile devices, computationally enhanced environments, tangible user interfaces) but will also cover visual design basics (e.g., color, layout, typography, iconography) so that we have systematic and critical understanding of aesthetically engaging interfaces. Students will get a hands-on learning experience on these topics through course projects, design critiques, and discussions, in addition to lectures and readings.

Final exam not required. Instructor: Ryokai

INFO 271A Quantitative Research Methods for Information Systems and Management 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Quantitative methods for data collection and analysis. Research design. Conceptualization, operationalization, measurement. Modes of data collection, including experiments, survey research, observation. Sampling, basics of data analysis.

Final exam not required. Instructor: Tygar

INFO 271B Quantitative Research Methods for Information Systems and Management 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory statistics recommended.

Introduction to many different types of quantitative research methods, with an emphasis on linking quantitative statistical techniques to real-world research methods. Introductory and intermediate topics include: defining research problems, theory testing, casual inference, probability, and univariate statistics. Research design and methodology topics include: primary/secondary survey data analysis, experimental designs, and coding qualitative data for quantitative analysis.

Final exam not required. Instructor: Cheshire

INFO 272 Qualitative Research Methods for Information Systems and Management 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Theory and practice of naturalistic inquiry. Grounded theory. Ethnographic methods including interviews, focus groups, naturalistic observation. Case studies. Analysis of qualitative data. Issues of validity and generalizability in qualitative research.

Final exam not required. Instructor: Burrell

INFO C283/ENE,RES C283 Information and Communications Technology for Development 3 Units

Department: Information Management and Systems; Energy and Resources Group

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

This seminar reviews current literature and debates regarding Information and Communication Technologies and Development (ICTD). This is an interdisciplinary and practice-oriented field that draws on insights from economics, sociology, engineering, computer science, management, public health, etc.

Final exam not required. Instructors: Ray, Saxenian

INFO 287 Information and Communications Technologies for Social Enterprise 3 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

This class is focused on the creation of sustainable enterprises based on ICT (Information and Communications Technologies) innovations supporting international development. We take a broad view of entrepreneurship--including starting new businesses, non-profit initiatives, and/or public sector projects. We will take a highly iterative, design-oriented, feedback-driven approach to developing and refining business plans for social enterprises.

Students will receive no credit for 287 after taking 290 section 7 (Fall 2009 or Fall 2010). Final exam not required. Instructor: Parikh

INFO 290 Special Topics in Information 1 - 4 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 to 6 hours of lecture per week for 7.5 weeks or 1 to 4 hours of lecture per week for 15 weeks.

Prerequisites: Consent of instructor.

Specific topics, hours, and credit may vary from section to section, year to year.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

INFO 290A Special Topics in Information 1 or 2 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1.5 to 2 hours of lecture per week for 8 weeks. 2 hours of lecture per week for 6 weeks. 3 hours of lecture per week for 5 weeks.

Prerequisites: Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Information Systems and Management 290A.

INFO 290M Special Topics in Management 1 - 4 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hours of lecture per week; 2 to 7.5 hours of lecture per week for 7 weeks.

Prerequisites: Consent of instructor.

Specific topics, hours, and credit may vary from section to section and year to year.

Course may be repeated for credit as topics in management vary. Course may be repeated for credit when topic changes. Final exam not required.

INFO 290MA Effective Project Management 2 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

It takes critical thinking, outstanding leadership, and a little magic to be a successful project manager. Come and learn not only the essential building blocks of project management, but the tricks to managing a variety of complex projects. We will have a combination of interactive lectures, guest speakers, and case studies discussions to cover globally recognized standards, best practices, and tools that successful project managers use.

Students will receive no credit for 290MA after taking 290 section 11 (spring 2009) or 290 section 2 (fall 2007). Final exam not required.

INFO 290T Special Topics in Technology 1 - 4 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hours of lecture per week; 2 to 6 hours of lecture per week for 7 weeks.

Prerequisites: Consent of instructor.

Specific topics, hours, and credit may vary from section to section and year to year.

Course may be repeated for credit as topics in technology vary. Course may be repeated for credit when topic changes. Final exam not required.

INFO 290TA Information Organization Laboratory 3 Units

Department: Information

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: It is recommended that students take 202 concurrently, or have taken it in the past.

Students will build tools to explore and apply theories of information organization and retrieval. Students will implement various concepts covered in the concurrent 202 course through small projects on topics like controlled vocabularies, the semantic web, and corpus analysis. We will also experiment with topics suggested by students during the course. Students will develop skills in rapid prototyping of web-based projects using Python, XML, and jQuery.

Students will receive no credit for 290TA after taking 290 section 4 (fall 2009 or fall 2010). Final exam not required.

INFO W290X Research Design and Applications for Data Analysis 3 Units**Department:** Information**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of web-based lecture per week. This is an online course.**Prerequisites:** Master of Information and Data Science students only. Introduces the data sciences landscape, with a particular focus on learning data science techniques to uncover and answer the questions students will encounter in industry. Lectures, readings, discussions, and assignments will teach how to apply disciplined, creative methods to ask better questions, gather data, interpret results, and convey findings to various audiences. The emphasis throughout is on making practical contributions to real decisions that organizations will and should make. Course must be taken for a letter grade to fulfill degree requirements. Final exam not required. Instructor: Weber**INFO W290Y Exploring and Analyzing Data 3 Units****Department:** Information**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of web-based lecture per week. This is an online course.**Prerequisites:** Master of Information and Data Science students only.
College-level basic statistics course or equivalent. An introduction to many different types of quantitative research methods and statistical techniques for analyzing data. We begin with a focus on measurement, inferential statistics and causal inference using the open-source statistics language, R. Topics in quantitative techniques include: descriptive and inferential statistics, sampling, experimental design, tests of difference, ordinary least squares regression, general linear models. Course must be taken for a letter grade to fulfill degree requirements. Final exam not required. Instructor: Cheshire**INFO 293 Curricular Practical Training for International Students 0 Units****Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks. Zero hours of Independent study per week for 10 weeks. This is a zero-unit independent study course for international students doing internships under the Curricular Practical Training program. The course will be individually supervised and must be approved by the head graduate adviser.

Course may be repeated once. Course may be repeated for credit when topic changes. Final exam not required.

INFO 295 Doctoral Colloquium 1 Unit**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Colloquium per week for 15 weeks.**Prerequisites:** Ph.D. standing in the School of Information.

Colloquia, discussion and readings designed to introduce students to the range of interests of the school.

Final exam not required.

INFO 296A Seminar 2 - 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 4 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Topics in information management and systems and related fields.

Specific topics vary from year to year.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

INFO 297 Field Study in Information 1 - 4 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Regular consultation with faculty supervisor. Regular consultation with faculty supervisor.**Prerequisites:** Must be enrolled in the School of Information and consent of instructor.

Individual or group study of specific problems in information management systems with emphasis on field projects and studies.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

INFO 298 Directed Group Study 1 - 3 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Weekly group meetings.**Prerequisites:** Consent of instructor.

Group projects on special topics in information management and systems.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

INFO 298A Directed Group Work on Final Project 2 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Directed group study per week for 15 weeks.**Prerequisites:** Consent of instructor. Course must be taken for a letter grade to fulfill degree requirements.

The final project is designed to integrate the skills and concepts learned during the Information School Master's program and helps prepare students to compete in the job market. It provides experience in formulating and carrying out a sustained, coherent, and significant course of work resulting in a tangible work product; in project management, in presenting work in both written and oral form; and, when appropriate, in working in a multidisciplinary team. Projects may take the form of research papers or professionally-oriented applied work. No credit will be given if 298 has been taken to fulfill final project requirement. Final exam not required.

INFO 299 Individual Study 1 - 12 Units**Department:** Information**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Format varies.**Prerequisites:** Consent of instructor.

Individual study of topics in information management and systems under faculty supervision.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

INFO 375 Teaching Assistance Practicum 1 - 6 Units**Department:** Information**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 4 hours of work per week per unit.

Discussion, reading, preparation, and practical experience under faculty supervision in the teaching of specific topics within information management and systems. Does not count toward a degree.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Information 310.

INFO 602 Individual Study for Doctoral Students 1 - 5 Units**Department:** Information**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 5 hour of Independent study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Integrative Biology (INTEGBI)

INTEGBI C13/ASTRON C13 Origins: from the Big Bang to the Emergence of Humans 4 Units**Department:** Integrative Biology; Astronomy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

This course will cover our modern scientific understanding of origins, from the Big Bang to the formation of planets like Earth, evolution by natural selection, the genetic basis of evolution, and the emergence of humans. These ideas are of great intrinsic scientific importance and also have far reaching implications for other aspects of people's lives (e.g., philosophical, religious, and political). A major theme will be the scientific method and how we know what we know.

Final exam required. Instructors: Marshall, Quataert

INTEGBI 24 Freshman Seminars 1 Unit**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

INTEGBI 31 The Ecology and Evolution of Animal Behavior 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 hour of film/demonstration and 1 hour of discussion per week.**Prerequisites:** Open to all students; designed for those not specializing in biology.

Principles of evolution biology as they relate to animal behavior and behavioral ecology with broad coverage of animal groups. Special attention will be paid to the emerging discipline of behavioral ecology.

Students will receive no credit for Integrative Biology 31 after taking Integrative Biology 144, C144 or Psychology C115B. Final exam required. Instructor: Caldwell

INTEGBI N33 Topics in Paleontology: The Age of Dinosaurs 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks.

Open without prerequisite to all students and designed for those not specializing in paleontology. Evolution history, and ecology of the dinosaurs and their world, including the earliest mammals and birds. More than one course in this series may be taken for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

INTEGBI 35AC Human Biological Variation 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

This course addresses modern human biological variation from historical, comparative, evolutionary, biomedical, and cultural perspectives. It is designed to introduce students to the fundamentals of comparative biology, evolutionary theory, and genetics.

Satisfies the American Cultures requirement

Final exam required. Instructor: Hlusko

INTEGBI 37 Topics in Paleontology: The Antecedents of Man 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of laboratory/discussion per week.

. Open without prerequisite to all students and designed for those not specializing in paleontology. Survey the evolution, ecology, and history of the primate order. Special emphasis will be given to primate origins, geographic distribution, and the evolution of the human lineage. Final exam not required.

INTEGBI 39C Topics in Integrative Biology 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Preferentially open to freshmen; consent of instructor.

Reading and discussion of the literature on particular topics in the field of integrative biology. Term paper and oral presentation. Section topics will vary from semester to semester. Students should check with department secretary for each semester's offerings.

Final exam required.

INTEGBI 41 Marine Mammals 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 4 hours of Lecture per week for 8 weeks. 5.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Designed for those not specializing in Integrative Biology.

A survey of marine mammal evolution, biology, behavior, ecology, and politics with a concentration on those species found in the North Pacific.

Coverage would include: origin and evolution of cetaceans, pinnipeds, sirenians, and sea otters; basic biology and anatomy of marine mammal groups, and North Pacific species in particular; ecological interactions and role in nearshore and pelagic marine communities; and interactions between humans and marine mammals.

Final exam required. Instructor: Lindberg

INTEGBI 42 Primate Biology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.

An introduction to the order of mammals of which we are members. The niches of primates in modern ecosystems, their anatomical and behavioral specialization, and their role as indicator species in conservation. The mechanisms and variety of primate social organization compared with that of other animals.

Open to all students but designed for those not specializing in biology.

Final exam required.

INTEGBI C82/EPS C82/GEOG C82 Oceans 3 Units**Department:** Integrative Biology; Earth and Planetary Science;

Geography

Course level: Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 8 weeks. 5 hours of Lecture per week for 6 weeks.

This course offers multidisciplinary approach to begin answering the question "Why are oceans important to us?" Upon a physical, chemical, and geologic base, we introduce the alien world of sea life, the importance of the ocean to the global carbon cycle, and the principles of ecology with a focus on the important concept of energy flow through food webs. Lectures expand beyond science to include current topics as diverse as music, movies, mythology, biomechanics, policy, and trade.

Final exam required.

INTEGBI 84 Sophomore Seminar 1 or 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.**Prerequisites:** At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

INTEGBI 87 Introduction to Research Methods in Biology 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 8 weeks.**Prerequisites:** Consent of instructor.

This course provides a functional understanding of hypothesis/data driven research and exposure to current approaches and methods in biological science. The lectures address foundational concepts of the scientific method, research ethics, scientific communication, and how to understand scientific literature. The labs provide exposure to faculty research and experimental methods. The course is geared to incoming freshmen, sophomores, and transfer students interested in learning more about research.

Final exam not required. Instructor: Matsui

INTEGBI 88 Leadership Communications for Biology Scholars 1 Unit**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.**Prerequisites:** Acceptance into Biology Scholars Program.

Leadership skills and abilities such as communication, collaboration, critical thinking, and resourcefulness are critical to academic, professional, and personal success. The need for enlightened leaders is evident in every aspect of health and science such as designing innovative health programs, obtaining funding, conducting cutting-edge research, developing and gaining support to implement policy solutions. This course provides an understanding of the principles of leadership and communications for students in the Biology Scholars Program. Students will nurture those traits in themselves and apply those principles in situations specifically related to the health and science sectors. The course is taught in weekly lecture and discussion sessions with case studies and exercises. The specific objectives of this course are to identify leadership principles; understand one's own leadership style and goals; know what resourcefulness means and the strategies that can enhance it; develop skills in written and verbal communication, and develop skills in collaboration and effective team management. Final exam required. Instructors: Hayes, Kim, Myrick

INTEGBI 95 Special Research Project in Biology 1B 1 Unit**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 6 hours of special field research per week for 8 weeks. 4 hours of special field research per week.**Prerequisites:** Consent of instructor; selected by interview.

Students enrolled in Biology 1B can participate in special field research in addition to attending regular laboratory sections. Students work independently with minimal supervision. Students will learn how to develop a project, collect and record data, conduct and analyze experiments, write a report, and make an oral presentation. Project may require traveling to off-campus sites. Students are required to attend at least three department seminars and write a short critique of each. Final exam required.

INTEGBI C96/MCELLBI C96/PLANTBI C96 Studying the Biological Sciences 1 Unit**Department:** Integrative Biology; Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Freshmen will be introduced to the "culture" of the biological sciences, along with an in-depth orientation to the academic life and the culture of the university as they relate to majoring in biology. Students will learn concepts, skills, and information that they can use in their major course, and as future science professionals. Restricted to freshmen in the biology scholars program.

Final exam required. Instructor: Matsui

INTEGBI 98 Directed Group Study 1 - 4 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: 1 hour of group study per unit per week.

Prerequisites: Freshmen and sophomores only.

Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 99 Supervised Independent Study and Research 1 - 3 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 3 hour of Independent study per week for 8 weeks. 1 to 3 hour of Independent study per week for 6 weeks.

Prerequisites: GPA of 3.4 or greater.

Lower division independent study and research intended for the academically superior student. Enrollment only with prior approval of faculty adviser directing the research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Botany 99, Physiology 99, Anatomy 99.

INTEGBI 100B Principles of Biodiversity 3 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week, plus some assigned open computer laboratories.

Prerequisites: Biology 1B.

Biogeographic, temporal, and historical patterns of change in biological diversity; phylogenetics and systematics; processes involved in origin and extinction of taxa and floras/faunas; population structure and demography (including human populations); community processes and maintenance of diversity; ecosystem function; global change; human uses of and effects on biodiversity; conservation biology.

Final exam required.

INTEGBI C100/EPS C100/GEOG C146 Communicating Ocean Science 4 Units

Department: Integrative Biology; Earth and Planetary Science; Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.

Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science; junior, senior, or graduate standing; consent of instructor required for sophomores.

For undergraduates interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam required. Instructor: Ingram

INTEGBI C101/PLANTBI C102 Diversity of Plants and Fungi 2 Units

Department: Integrative Biology; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring. Offered alternate years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Prerequisites: Biology 1A-1B. Must be taken concurrently with 101L.

An integrated treatment of the biology and evolution of the major groups in the plant, algal, and fungal kingdoms.

Final exam required.

INTEGBI C101L/PLANTBI C102L Diversity of Plants and Fungi with Laboratory 4 Units

Department: Integrative Biology; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring. Offered alternate years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 4 hours of laboratory per week, plus 2 1-day field trips.

Prerequisites: Biology 1A-1B. Must be taken concurrently with 101.

An integrated treatment of the biology and evolution of the major groups in the plant, algal, and fungal kingdoms.

Final exam required.

INTEGBI 102LF Introduction to California Plant Life with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 6 hours of laboratory per week.**Prerequisites:** Biology 1B or consent of instructor.

The relationship of the main plant groups and the plant communities of California to climate, soils, vegetation, geological and recent history and conservation. Laboratory will also include at least two Saturday field trips and focus on main plant groups and major plant families in California, and use of keys to identify introduced and especially native pteridophytes, conifers, and flowering plants of the state.

Student will receive partial credit for 102LF after taking 102. Final exam required. Formerly known as 102L.

INTEGBI 103LF Invertebrate Zoology with Laboratory 5 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 6 hours of laboratory per week, plus several weekend field trips.**Prerequisites:** Biology 1A-1B.

Introductory survey of the biology of invertebrates, stressing comparative functional morphology, phylogeny, natural history, and aspects of physiology and development. Laboratory study of invertebrate diversity and functional morphology, and field study of the natural history of local marine invertebrates.

Students will receive partial credit for 103LF after taking 103. Final exam required. Formerly known as 103L. Instructor: Lindberg

INTEGBI 104LF Natural History of the Vertebrates with Laboratory 5 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 3 hours of laboratory, and a 4 hour field trip per week, plus special field projects.**Prerequisites:** Biology 1A-1B.

Biology of the vertebrates, exclusive of fish. Laboratory and field study of local vertebrates exclusive of fish.

Students will receive partial credit for 104LF after taking 104. Final exam required. Formerly known as 104L. Instructors: McGuire, Bowie

INTEGBI C105/ESPM C105 Natural History Museums and Biodiversity Science 3 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week.

(1) survey of museum resources, including strategies for accession, conservation, collecting and acquiring material, administration, and policies; (2) strategies for making collections digitally available (digitization, databasing, georeferencing, mapping); (3) tools and approaches for examining historical specimens (genomics, isotopes, ecology, morphology, etc); and (4) data integration and inference. The final third of the course will involve individual projects within a given museum.

Final paper and oral presentation Instructors: Gillespie, Mishler, Will, Marshall, McGuire

INTEGBI 106A Physical and Chemical Environment of the Ocean 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B; Chemistry 1A or 4A; Mathematics 1A or 16A; Physics 7A or 8A. Recommended: 82.

The biological implications of marine physics and chemistry. History and properties of seawater. Geophysical fluids. Currents and circulations. Deep sea. Waves, tides, and bottom boundary layers. The coastal ocean; estuaries. Air/sea interaction. Mixing. Formation of water masses. Modeling biological and geochemical processes. Ocean and climate change.

Final exam required. Instructor: Powell

INTEGBI C107L/PLANTBI C107L Principles of Plant Morphology with Laboratory 5 Units**Department:** Integrative Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture, 1 hour of Discussion, and 6 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A-1B; must be taken concurrently with 107.

An analysis of the structural diversity of multicellular plants, especially the higher forms, with emphasis on the developmental mechanisms responsible for this variation in form and the significance of this diversity in relation to the environments in which plants grow.

Final exam required. Formerly known as 100L. Instructor: Specht

INTEGBI C110L/PLANTBI C110L Biology of Fungi with Laboratory 4 Units

Department: Integrative Biology; Plant and Microbial Biology

Course level: Undergraduate

Term course may be offered: Fall

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 6 hours of laboratory per week. Several field trips are offered, including day trips to a mushroom farm and winery, and a weekend mushroom foray.

Prerequisites: Biology 1B

Selected aspects of fungi: their structure, reproduction, physiology, ecology, genetics and evolution; their role in plant disease, human welfare, and industry. Offered even fall semesters.

Final exam required. Instructors: Bruns, Taylor

INTEGBI 112 Horticultural Methods in the Botanical Garden 1 Unit

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of direct participation of field work per week.

Prerequisites: Consent of instructor.

An introduction to horticultural techniques utilizing the diverse collections of the University Botanical Garden.

Final exam required. Formerly known as 112L. Instructor: Licht

INTEGBI 113L Paleobiological Perspectives on Ecology and Evolution 4 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: Prior biology experience, or consent of instructor. No paleontological or geological background required.

This course will center around answering the following questions: What do the fossil and geologic records have to tell us about the nature of ecological and evolutionary processes? What do they teach us that cannot be learned from the living world alone? In answering these questions, the course will provide an introduction to the analysis of key problems in paleobiology, with an emphasis on how evolutionary and ecological processes operate on geologic timescales.

Final exam required. Formerly known as 108. Instructor: Marshall

INTEGBI 115 Introduction to Systems in Biology and Medicine 4 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 2 hours of computer laboratory per week.

Prerequisites: Biology 1A, Mathematics 1A or 16B.

This course is aimed at students wishing to understand the general principles of how biological systems operate. Topics include feedback regulation; competition and cooperation; genetic switches and circuits; random processes; chaos; mechanisms for error correction; and the properties of networks. Examples are selected from many fields including medicine, physiology, ecology, biochemistry, cell biology, and genetics. Students will learn to conceptualize and quantify interactions within biological systems using simple mathematical models and computer programs. No previous experience in programming is required.

Final exam required. Instructor: Lim

INTEGBI 116L Medical Parasitology 4 Units

Department: Integrative Biology

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture and 6 hours of Laboratory per week for 6 weeks.

Prerequisites: 1A, 1B, or equivalent.

This course includes the biology, epidemiology, pathogenesis, treatment, and prevention of various medically important parasitic infections. Life cycles of parasitic helminths and protozoa, the biological aspects of the host-parasite relationship, the epidemiology of the infection, and the interplay of social, economical, and ecological factors which contribute to the disease will be covered in both lectures and videos.

Final exam required. Formerly known as 116. Instructor: Sakanari

INTEGBI 117 Medical Ethnobotany 2 Units

Department: Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks. 5 hours of Lecture per week for 6 weeks.

Biological diversity and ethno-linguistic diversity sustain traditional botanical medicine systems of the world. Major topics covered in this course include cultural origins of medicinal plant knowledge on plant-derived pharmaceuticals and phytomedicines; field research methods in ethnobotany and ethnopharmacology; examples of how traditional botanical medicines provide safe, effective, affordable, and sustainable primary health care to tropical countries; human physiology, human diseases, and mechanisms of action of plant-derived drugs.

Final exam required. Instructor: Carlson

INTEGBI 117LF Medical Ethnobotany Laboratory 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of field laboratory per day for 4 Saturdays. 8 hours of field laboratory per day for 4 Saturdays.

Laboratory will focus on studying medicinal plants from the major ecosystems and geographical regions of the world. Students will learn common names, scientific names, plant families, field identification, habitats, and ethnomedical uses of medicinal plants. How the medicinal plant is prepared, administered, and used as a phytomedicine will also be discussed. There will be reference to the phylogenetic relationships between the plant families and genera represented by the medicinal plants.

Final exam required. Formerly known as 117L. Instructor: Carlson

INTEGBI 118 Host-Pathogen Interactions: A Trans-Discipline Outlook 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Biology 1A-1B.

The second half of the 20th century is marked by great strides in the battle against infectious diseases. However, the forces that drive pathogen evolution continue to pose new challenges for science and medicine. In this course we will cover various aspects relating to host-pathogen interactions, focusing on animals and their bacterial pathogens. We will address the ecology of host-pathogen interactions, their shaping by co-evolution, examine prominent molecular mechanisms taking part in this warfare and learn how ancient mechanisms are used and reused through millions of years of evolution. The course will examine how better understanding of host-pathogen interactions can suggest new strategies for fighting infectious diseases.

Final exam required. Instructor: Shapira

INTEGBI 119 Evaluating Scientific Evidence in Medicine 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 computer laboratory, and 1 discussion per week.**Prerequisites:** Biology 1A-1B.

A course in critical analysis of medical reports and studies using recent controversial topics in medicine. Course will focus on information gathering, hypothesis testing, evaluating study design, methodological problems, mechanisms of bias, interpretation of results, statistics, and attribution of causation. Students participate in a mock trial as a way to demonstrate their abilities to gather, critically analyze, and present scientific and medical evidence.

Final exam required. Instructor: G. Caldwell

INTEGBI 123AL Exercise Physiology with Laboratory 5 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A, Chemistry 3B and Integrative Biology 132 or Molecular and Cell Biology 136.

Discussion of how chemical energy is captured within cells and how potential chemical energy is converted to muscular work. Energetics, direct and indirect calorimetry, pathways of carbon flow in exercise, ventilation, circulation, skeletal muscle fiber types. Laboratory component of the course is to obtain practical experience in the measurement of physiological parameters and to be able to compile, compare, contrast, and interpret physiological data. Laboratory demonstrations and exercises will explain lecture content.

Student will receive partial credit for 123AL after taking 123A. Final exam required. Instructor: Brooks

INTEGBI C125L/PHYS ED C165 Introduction to the Biomechanical Analysis of Human Movement 4 Units**Department:** Integrative Biology; Physical Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 9 and Integrative Biology 131 and 131L.

Basic biomechanical and anatomical concepts of human movement and their application to fundamental movement patterns, exercise, and sport skills.

Final exam required. Instructor: Scott

INTEGBI 127L Motor Control with Laboratory 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** 132 or Molecular and Cell Biology 136.

Neural control of movement in humans and other animals. Lectures introduce basic theories of information and control, analyze motor control at the spinal level, survey anatomy and physiology of motor systems of the brain, and synthesize theory and physiology to understand control systems that regulate posture, locomotion, and voluntary movements. In laboratories, students learn theory and motor physiology hands-on, and design and perform independent investigations.

Students will receive partial credit for 127L after taking 127. Final exam required. Instructor: Lehman

INTEGBI C129L/PHYS ED C129 Human Physiological Assessment 3 Units**Department:** Integrative Biology; Physical Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 5 hours of Lecture and 7.5 hours of Laboratory per week for 6 weeks.**Prerequisites:** Biology 1A, IB 132 (may be taken concurrently); IB 123AL is recommended.

Principles and theories of human physiological assessment in relation to physical activity and conditioning. Performance of laboratory procedures in the measurement and interpretation of physiological fitness (cardiorespiratory endurance, body composition, musculoskeletal fitness). Final exam required. Instructor: Johannessen

INTEGBI 130 Human Fertility - The Big History of our Species' Reproductive Journey 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 2 hours of laboratory per week.

This course explores human reproduction through the lenses of evolutionary biology, population statistics, and culture. Throughout, we organize the course in terms of major transitions and the question of choice. How do evolved biology and inherited culture make some choices more accessible and others less so? What happened to human fertility—and to the possibility of making choices about fertility—at such moments of change as the emergence of pair bonding in hominids, the advent of agriculture, the industrial revolution, and the development of both contraceptive and proceptive technologies in the 20th consequences do these histories on different time-scales have for young people today contemplating their own reproductive choices?

Final exam required. Instructors: Hlusko, Johnson-Hanks

INTEGBI 131 General Human Anatomy 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Biology 1A-1B or Chemistry 1A.

The functional anatomy of the human body as revealed by gross and microscopic examination. Designed to be taken concurrently with 131L. Final exam required. Instructor: Carlson

INTEGBI 131A Applied Anatomy 1 Unit**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of lecture per week.

A series of 15 lectures by former students of 131 who have become successful physicians and surgeons. The purpose is to provide the practical applications of anatomy, e.g., plastic surgeons, neurosurgeons, vascular surgeons, pathologists, etc.

Course may be repeated once for credit. Course may be repeated for a maximum of 2 units. Final exam required. Instructor: Diamond

INTEGBI 131L General Human Anatomy Laboratory 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Laboratory per week for 15 weeks. 8 hours of Laboratory per week for 8 weeks. 10 hours of Laboratory per week for 6 weeks.**Prerequisites:** Biology 1A-1B or Chemistry 1A. 131 (may be taken concurrently).

Prepared human dissections, models, and microscopic slides.

Final exam required. Instructor: Carlson

INTEGBI S131 General Human Anatomy 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.**Prerequisites:** A college of course in biology or chemistry.

The functional anatomy of the human body as revealed by gross and microscopic examination.

Final exam not required.

INTEGBI 132 Survey of Human Physiology 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 6 hours of lecture and 2 hours of discussion per week for 8 weeks.**Prerequisites:** 131, Biology 1A.

Mechanisms by which key physiological priorities are maintained in healthy humans. From a basis in elementary theories of information and control, we develop an understanding of homeostasis of cellular composition, structure, and energy metabolism. We then study neural and endocrine signaling in humans, and develop the key concepts of control and homeostasis in all the major organ and multi-organ systems, including cardiovascular, respiratory, renal, metabolic, reproductive, and immune systems, growth and development, and sensory and motor systems. Students will receive no credit for 132 after taking Physiology 100 or 101 or Molecular and Cell Biology 32, 136. Final exam required. Instructors: Brooks, Kaufer, Lehman

INTEGBI 132L Mammalian Physiology Laboratory 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Laboratory per week for 15 weeks. 6 hours of Laboratory per week for 8 weeks.**Prerequisites:** Previous or concurrent enrollment in 132 or equivalent, or consent of instructor.

In the laboratory component of Integrative Biology 132, students gain hands-on experience measuring physiological parameters, interpreting physiological data, designing experiments, and communicating ideas in writing and orally. Guided investigations include measurements of membrane potentials, responses of skeletal muscle to electrical stimulation, electromyography, pulmonary and cardiovascular measurements in humans, contractility and regulation of the frog heart, human electrocardiography, and renal control of body fluids. In two independent investigations, students identify their own questions, develop hypotheses, design and perform experiments, and present their studies in symposia. Background in elementary statistics, data analysis and oral presentation are also provided.

Students will receive no credit for 132L after taking Molecular and Cell Biology 32L or 136L, or if currently enrolled in similar courses. Final exam required. Instructors: Brooks, Kaufer, Lehman

INTEGBI 133 Anatomy Enrichment Program 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Fieldwork--minimum of 4 hours per week arranged.**Prerequisites:** 131 with a grade of A or B.

The purpose of the course is for University students to teach human anatomy to grades K-7 in the public schools. The UCB students work in groups of 2-3 to plan their presentations of the systems of the body and then enter the school rooms to teach what they have learned in 131.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Diamond

INTEGBI 135 The Mechanics of Organisms 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Introductory physics and biology recommended.

Organism design in terms of mechanical principles; basics of fluid and solid mechanics with examples of their biological implications, stressing the dependence of mechanical behavior and locomotion on the structure of molecules, tissues, structural elements, whole organisms, and habitats. Final exam required. Instructors: Dudley, Full, Koehl

INTEGBI C135L/BIO ENG C136L/EL ENG C145O Laboratory in the Mechanics of Organisms 3 Units**Department:** Integrative Biology; Bioengineering; Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of laboratory and 1 hour of discussion per week, plus 1 field trip.**Prerequisites:** Integrative Biology 135 or consent of instructor; for Electrical Engineering and Computer Science students, Electrical Engineering 105, 120 or Computer Science 184.

Introduction to laboratory and field study of the biomechanics of animals and plants using fundamental biomechanical techniques and equipment. Course has a series of rotations involving students in experiments demonstrating how solid and fluid mechanics can be used to discover the way in which diverse organisms move and interact with their physical environment. The laboratories emphasize sampling methodology, experimental design, and statistical interpretation of results. Latter third of course devoted to independent research projects. Written reports and class presentation of project results are required.

Students will receive no credit for C135L after taking 135L. Final exam required. Formerly known as Integrative Biology 135L.

INTEGBI 136 The Biology of Sex 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** The course consists of 3 hours of lectures and 2 hours of computer exercises and/or discussion each week.**Prerequisites:** Biology 1B, introductory genetics (Mendelian genetics, recombination, chromosomes).

The ability to reproduce is a defining characteristic of life, and of great interest to biologists as well as humanity in general. What is sex, and why did it develop? Why do we have sexual reproduction, whereas some animals do not? This course will provide a comprehensive overview on the biology of sex from an evolutionary perspective with an emphasis on humans in comparison to other species. The course will consist of two lectures each week, and a lab where we discuss a paper, watch videos, or have discussion sections on specific topics that were covered in class. Final exam required. Instructor: Bachtrog

INTEGBI 137 Human Endocrinology 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B; human physiology (132) strongly recommended.

Course will address the role of hormones in physiology with a focus on humans. Regulation of hormone secretion and mechanisms of hormone action will be discussed. Physiological processes to be addressed include reproduction, metabolism, water balance, growth, fetal development. Experimental and clinical aspects will be addressed. Final exam required. Instructor: Hayes

INTEGBI 138 Comparative Endocrinology 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B. Organic Chemistry recommended.

The primary goal of this course is to provide students with a broad understanding of the evolution of hormonal systems. A comparative approach allows us to envisage how the complex mammalian endocrine system presumably evolved from that of more primitive vertebrates. Students will learn about endocrine pathways and endocrine-based behaviors of jawless fishes, fishes, amphibia, reptiles, birds, and mammals. In addition, students will gain an understanding of the experimental methods used in endocrine research. The class teaches students how to read and interpret the primary scientific literature; thus it encourages the critical thinking that is a fundamental skill for any scientist. Final exam required. Instructor: Bentley

INTEGBI 139 The Neurobiology of Stress 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: Biology 1A or Psychology 110. You will need a good understanding of the fundamentals of biology to do well in this class. This course is designed to be an interdisciplinary course. It will adopt a broad-based approach to explore the concepts of stress, health, and disease, with a particular focus on current primary literature. The course will cover multiple dimensions in the study of stress, which employ genetic, epigenetic, molecular, cellular, physiological, and cognitive approaches, especially in the context of endocrine and neuroscience research. We will analyze the individual response to stress, how genetic and environmental factors play a role in it, how it translates to physiological and mental health and well-being vs. pathological conditions, and put that in a public health perspective.

Course Objectives: This course will emphasize the interconnected and multidirectional relationships between biology, behavior and the social environment. The study of stress is necessarily an interdisciplinary endeavor. This course is designed to explore the role of genes, hormones and experiences as they affect the stress-response and subsequently brain and behavior.

Final exam required. Instructor: Kaufer

INTEGBI 140 Biology of Human Reproduction 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** Biology 1A or equivalent.

Course focuses on biological and cultural aspects of human reproduction including conception, embryology, pregnancy, labor, delivery, lactation, infant/child development, puberty, and reproductive aging. This includes study of factors that diminish and factors that enhance fertility, reproduction, and maternal-child health. We explore evolutionary, ecological, environmental, cultural, ethnobiological, and nutritional determinants of fertility, reproductive rate, infant survival, and population growth.

Final exam required. Instructor: Carlson

INTEGBI 141 Human Genetics 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.**Prerequisites:** One course in biological science.

Principles of inheritance, especially as applied to human traits, including molecular aspects of genetics, the genetic constitutions of populations, and questions of heredity/environment.

Students will receive no credit for 141 after taking Molecular and Cell Biology 142 or C142 and Integrative Biology C163. Final exam required.

INTEGBI C142L/ANTHRO C103 Introduction to Human Osteology 6 Units**Department:** Integrative Biology; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture and 14 hours of Laboratory per week for 15 weeks.**Prerequisites:** Anthropology 1, Biology 1B.

An intensive study of the human skeleton, reconstruction of individual and population characteristics, emphasizing methodology and analysis of human populations from archaeological and paleontological contexts, taphonomy, and paleopathology.

Final exam required. Instructor: White

INTEGBI C143A/PSYCH C113 Biological Clocks: Physiology and Behavior 3 Units**Department:** Integrative Biology; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Completion of biological prerequisites for the major and one of the following: 110 or a course in animal organismal physiology (Integrative Biology 132, 138, 140, 148, or Molecular and Cell Biology 160).

A consideration of the biological clocks that generate daily, lunar, seasonal and annual rhythms in various animals including people. Emphasis on neuroendocrine substrates, development and adaptive significance of estrous cycles, feeding rhythms, sleep-wakefulness cycles, reproductive and hibernation cycles, body weight and migratory cycles. Final exam required.

INTEGBI C143B/PSYCH C116 Hormones and Behavior 3 Units**Department:** Integrative Biology; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Completion of biological prerequisites for the major and consent of instructor; a course in mammalian physiology recommended. This course provides a comprehensive overview of behavioral endocrinology beginning with hormone production and actions on target issues and continuing with an exploration of a variety of behaviors and their hormonal regulation/consequences. The course uses a comparative approach to examine the reciprocal interactions between the neuroendocrine system and behavior, considering the effects of hormone on development and adult behavior in addition to how behavior regulates endocrine physiology. While much of the course focuses on non-human vertebrate species, the relevance to humans is explored where appropriate. Topics include sexual differentiation and sex differences in behavior, reproductive, parental, and aggressive behaviors, and hormonal and behavioral homeostatic regulation. Final exam required.

INTEGBI 144 Animal Behavior 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion/demonstration per week.**Prerequisites:** Biology 1A, 1B, or Environmental Science, Policy, and Management 140. Molecular and Cell Biology 140 and C160 recommended.

An introduction to comparative animal behavior and behavioral physiology in an evolutionary context, including but not limited to analysis of behavior, genetics and development, learning, aggression, reproduction, adaptiveness, and physiological substrates. Students will receive no credit for 144 after taking C144, 145, 146LF, or Psychology C115B. Final exam required.

INTEGBI C144/ESPM C126 Animal Behavior 4 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Biology 1A, 1B, or Environmental Science, Policy, and Management 140. Molecular and Cell Biology 140 and C160 recommended.

An introduction to comparative animal behavior and behavioral physiology in an evolutionary context, including but not limited to analysis of behavior, genetics and development, learning, aggression, reproduction, adaptiveness, and physiological substrates.

Students will receive no credit for 144 after taking C144, 145, 146LF, or Psychology C115B. Final exam required. Instructors: Lacey, Caldwell, Bentley, Elias

INTEGBI 146 Behavioral Ecology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of discussion per week. In addition, students will be required to at10d 2 afternoon and 1 overnight field trips.**Prerequisites:** C144.

An in-depth examination of the ecological and evolutionary bases for behavioral diversity. Topics covered include behavior as an adaptive response, sexual selection, animal mating system, group living, and cooperative and competitive interactions. Current conceptual approaches to these topics are explored, with an emphasis upon rigorous testing of hypotheses drawn from the primary literature. Discussion sections are used to explore selected topics in greater detail and to stimulate critical review of recent research in behavioral ecology. Two midterms plus several discussion-based written assignments. Final exam required. Instructor: Lacey

INTEGBI 146LF Behavioral Ecology with Laboratory 5 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week, plus 1 weekend field trip.**Prerequisites:** 144 or C144 or consent of instructor.

An in-depth examination of the ecological and evolutionary bases for behavioral diversity. Topics covered include behavior as an adaptive response, sexual selection, animal mating systems, group living, and cooperative and competitive interactions. Current conceptual approaches to these topics are explored, with an emphasis upon rigorous testing of hypotheses drawn from primary literature. Hands-on laboratory training in the methods of experimental design, data collection, and data analysis. Students will receive partial credit for 146LF after taking 146. Final exam required. Formerly known as 146L. Instructor: Lacey

INTEGBI 148 Comparative Animal Physiology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B.

Comparative study of physiological systems among animal phyla. General physiological principles will be illustrated by examining variation in neural, muscular, endocrine, cardiovascular, respiratory, digestive, and osmoregulatory systems. Students will read original literature and give a group presentation in a symposium.

Students will receive no credit for 148 after taking 100A. Final exam required. Instructors: Full, Dudley, Koehl

INTEGBI C149/ESPM C149 Molecular Ecology 4 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C163, 161, or Molecular and Cell Biology C142 (may be taken concurrently), or consent of instructor.

This course focuses on the use of molecular genetic information in ecology. Applications and techniques covered range from analysis of parentage and relatedness (DNA fingerprinting and multilocus genetic analysis) through gene flow, biogeographic history and community composition (comparative DNA sequencing) to analysis of diet and trophic interactions (biological isotopes). Grades are based on one final exam, problem sheets, and a critique of a recent research paper.

Students will receive no credit for C149 if they took 149 prior to spring 2003. Final exam required. Formerly known as 149.

INTEGBI 151 Plant Physiological Ecology 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Spring.

Offered every other spring in odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Biology 1A,1B, or equivalent.

This course focuses on a survey of physiological approaches to understanding plant-environment interactions from the functional perspective. Lectures cover physiological adaptation; limiting factors; resources acquisition/allocation; photosynthesis, carbon, energy balance; water use and relations; nutrient relations; linking physiology; stable isotope applications in ecophysiology; stress physiology; life history and physiology; evolution of physiological performance; physiology population, community, and ecosystem levels.

Three take-home examinations will be given. They consist of a combination of (i) questions meant to be answered with a short essay, (ii) problem solving questions based on alternate outcomes, and (iii) questions that will ask you to evaluate experimental data. They will be based primarily on the lectures and reading assignments. You will have one week to answer 2 to 5 questions. Instructor: Dawson

INTEGBI 151L Plant Physiological Ecology Laboratory 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered every other spring in odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of laboratory per week.**Prerequisites:** Concurrent enrollment in 151.

The laboratory is focused on instructing you on observational and experimental approaches and methods used in plant physiological ecology. Students are introduced to a wide range of techniques and will make measurements on different plant species growing in the field or greenhouse (weeks 1-7). A group research project is required (weeks 9-12).

Final project and oral presentation. Please see attached syllabus.

Instructor: Dawson

INTEGBI 152 Environmental Toxicology 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Background in biology or chemistry is recommended.

The environmental fate and effect of toxic substances from human activities, with emphasis on aquatic systems, including their biological effects from the molecular to the community level. Course will review pollutant types, principal sources, impacts on aquatic organisms, monitoring approaches, and regulatory issues.

Final exam required. Instructor: Weston

INTEGBI 153 Ecology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B or consent of instructor.

Principles of microbial, animal, and plant population ecology, illustrated with examples from marine, freshwater, and terrestrial habitats.

Consideration of the roles of physical and biological processes in structuring natural communities. Observational, experimental, and theoretical approaches to population and community ecology will be discussed. Topics will include quantitative approaches relying on algebra, graph analysis, and elementary calculus. Discussion section will review recent literature in ecology.

Final exam required. Instructor: Ackerly

INTEGBI 153LF Laboratory in Population and Community Ecology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of laboratory per week, plus 2 or 3 weekend field trips.**Prerequisites:** 153 (may be taken concurrently) or consent of instructor; introductory course in statistics strongly recommended.

Introduction to field and laboratory study of ecological patterns and processes in nature. Course begins with a series of group field exercises conducted in local terrestrial, aquatic, and marine habitats. These exercises emphasize sampling methodology, experimental design, and statistical interpretation of results. Latter half of course devoted to independent research projects. A written report and class presentation of project results are required.

Final exam required. Formerly known as 153L.

INTEGBI 154 Plant Ecology 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Biology 1B. Enrollment in accompanying lab course 154L is encouraged but not required.

An introduction to ecology of plants, covering individuals, populations, communities, and global processes. Topics include: form and function, population ecology, life histories, community structure and dynamics, disturbance and succession, diversity and global change.

Final exam required. Instructor: Ackerly

INTEGBI 154L Plant Ecology Laboratory 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of laboratory per week and 2 or 3 1-day field trips.**Prerequisites:** Biology 1B. Concurrent enrollment in 154.

Field and laboratory class in plant ecology. Laboratory exercises covering plant functional morphology, dispersal ecology, spatial dispersion in plant populations, environmental gradients and plant distributions, population dynamics simulations, and restoration ecology. Small-group independent projects, with write-ups and presentations. Concurrent enrollment in Integrative Biology 154 is required.

Final exam required. Instructor: Ackerly

INTEGBI C155/ANTHRO C129D Holocene Paleoecology: How Humans Changed the Earth 3 Units**Department:** Integrative Biology; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Since the end of the Pleistocene and especially with the development of agriculturally based societies humans have had cumulative and often irreversible impacts on natural landscapes and biotic resources worldwide. Thus "global change" and the biodiversity crisis are not exclusively developments of the industrial and post-industrial world. This course uses a multi-disciplinary approach, drawing upon methods and data from archaeology, palynology, geomorphology, paleontology, and historical ecology to unravel the broad trends of human ecodynamics over the past 10,000 years.

Final exam required. Instructor: Kirch

INTEGBI C156/ESPM C103 Principles of Conservation Biology 4 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B or equivalent.

A survey of the principles and practices of conservation biology. Factors that affect the creation, destruction, and distribution of biological diversity at the level of the gene, species, and ecosystem are examined. Tools and management options derived from ecology and evolutionary biology that can recover or prevent the loss of biological diversity are explored.

Final exam required. Instructor: Beissinger

INTEGBI 157LF Ecosystems of California 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Biology 1B or consent of instructor.

The ecosystems of California are studied from both an ecological and historical biogeographical perspective with a focus on terrestrial plant communities. Students learn how to identify about 150 species of native plants (mostly trees, but also other dominant plants from the non-forest biomes). Field trips occur each Friday and over several weekends. Students conduct group projects that involve plant inventories and data collection as well as how to collect plant specimens and use the Herbarium.

Final exam required. Formerly known as 157L. Instructor: Fine

INTEGBI 158LF/ESPM C107 Biology and Geomorphology of Tropical Islands 13 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of lecture for 6 weeks; field projects for 6 weeks; 3 hours of lecture for 3 weeks.

Natural history and evolutionary biology of island terrestrial and freshwater organisms, and of marine organisms in the coral reef and lagoon systems will be studied, and the geomorphology of volcanic islands, coral reefs, and reef islands will be discussed. Features of island biogeography will be illustrated with topics linked to subsequent field studies on the island of Moorea (French Polynesia).

Final exam required.

INTEGBI 159 The Living Planet: Impact of the Biosphere on the Earth System 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B or consent of instructor.

Earth is a complex dynamic system. Interplay between its components (solid earth, oceans, and atmosphere) governs conditions on the planet's outside that we and other biota inhabit. In turn, life asserts a vast influence on the abiotic components; in fact, the biosphere itself is a crucial system component. We will explore the effect that 3.5 billion years of evolving biosphere had on System Earth and vice versa (e.g., in terms of climate), including the recent human impact on the system.

Students will receive two units of credit after taking Earth and Planetary Science 8, Earth and Planetary Science C141/Geography C141, or Geography 40. Final exam required. Instructors: Looy, Duijnste

INTEGBI 160 Evolution 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B.

An analysis of the patterns and processes of organic evolution. History and philosophy of evolutionary thought; the different lines of evidence and fields of inquiry that bear on the understanding of evolution. The major features and processes of evolution through geologic times; the generation of new forms and new lineages; extinction; population processes of selection, adaptation, and other forces; genetics, genomics, and the molecular basis of evolution; evolutionary developmental biology; sexual selection; behavioral evolution; applications of evolutionary biology to medical, agricultural, conservation, and anthropological research.

Final exam required. Instructors: Boore, Moritz, Padian

INTEGBI 161 Population and Evolutionary Genetics 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of computer and/or discussion per week.**Prerequisites:** Biology 1A/1B, Mathematics 16A or 10A.

Population genetics provides the theoretical foundation for modern evolutionary thinking. It also provides a basis for understanding genetic variation within populations. We will study population genetic theory and use it to illuminate a number of different topics, including the existence of sex, altruism and cooperation, genome evolution speciation, and human genetic variation and evolution.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Nielson

INTEGBI 162 Ecological Genetics 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B.

This course integrates ecology, genetics, and evolutionary biology. It presents contemporary approaches to studying evolution in natural populations, including analyzing heritability of ecologically important traits, using molecular techniques to decompose genotypes, documenting and measuring the magnitude of selection in natural systems, and using models to predict evolution in natural populations. Case studies are used to examine evolutionary effects of ecological interactions among organisms, the importance of population size and structure, and interactions among populations through migration and dispersal.

Final exam required. Instructor: Simms

INTEGBI 163 Molecular and Genomic Evolution 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Biology 1A-1B.

This course will introduce undergraduates to the study of evolution using molecular and genomic methods. Topics included will be rates of evolution, evolution of sex chromosomes, insertions and deletions of DNA sequences, evolution of regulatory genetic elements, methods of phylogenetic inference, gene duplication, multigene families, transposons, genome organization, gene transfer, and DNA polymorphism within species.

Final exam required. Instructors: Bachtrog, Slatkin

INTEGBI 164 Human Genetics and Genomics 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of computer laboratory per week.**Prerequisites:** Biology 1A, 1B, and Math 16A, or equivalent.

This course will introduce students to basic principles of genetics, including transmissions genetics, gene regulation, pedigree analysis, genetic mapping, population genetics, and the principles of molecular evolution. The course will also introduce students to recent developments in genomics as applied to problems in human genetic diseases, human history, and the relationship between humans and their closest relatives. Final exam required. Instructors: Bachtrog, Nielsen, Slatkin

INTEGBI 166 Evolutionary Biogeography 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B, 11, Geography 148 or Earth and Planetary Science 50.

The goals of the course are to (a) examine how geographically-linked characteristics of species influence their potential for evolution and extinction; and (b) provide an overview of the analytical techniques and applications for studying the interplay between geographic ranges, environment, evolution, and extinction. Accordingly, the course begins by examining what geographic ranges of species are and what controls them. We then will explore how geographic-range characteristics influence and interact with speciation and extinction processes. With that foundation, we will examine how species assemble into communities and how ecological processes govern distributions at the community and landscape levels, touching on such topics as community energetics, scaling issues, and the influences of humans on "natural" ecosystems. The last third of the course will be devoted to an overview of quantitative analytical techniques that commonly are used to study interactions between biogeographic ranges, evolutionary processes, extinction, and environmental change.

Final exam required. Instructor: Barnosky

INTEGBI 167 Evolution and Earth History: From Genes to Fossils 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** Biology 1A, 1B

The diversity of life is the product of evolutionary changes. This course will integrate fossil and molecular data to consider some of the outstanding questions in the study of evolution. Major topics covered include the origin and early evolution of life, the expansion of the biosphere through time, the generation of variation and the mechanisms of natural selection, genetics and developmental evolution, and the relationships between microevolution and macroevolution.

Final exam required. Instructors: Finnegan, Patel

INTEGBI 168 Systematics of Vascular Plants 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Biology 1A-1B. Must be taken concurrently with 168L.

A discussion of the philosophy, principles, techniques, and history of botanical systematics. An outline of the major group of vascular plants and their evolution.

Final exam required. Instructor: Baldwin

INTEGBI 168L Systematics of Vascular Plants with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A-1B.

A discussion of the philosophy, principles, techniques, and history of botanical systematics. An outline of the major group of vascular plant and their evolution. Laboratory course devoted to a survey on a world-wide basis of the diversity of vascular plant families.

Students will receive partial credit for 168L after taking 168. Final exam required. Instructor: Baldwin

INTEGBI 169 Evolutionary Medicine 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1B, or equivalent.

This course explores the ways that evolutionary theory can illuminate our understanding of human health and disease. The integration of evolutionary concepts into health sciences can deepen our understanding of the origins of diseases and how human populations evolve in response to these ailments. The course begins with an introduction to evolutionary medicine (two hours of lecture) followed by an overview of human genetic variation and natural selection (six hours of lecture). With this foundation, we study the evolution of human diet and the evolution of human ecological relationships with the environment (six hours of lecture). We then explore the fascinating topic of infectious disease ecology from the perspective of both microbial and human evolutionary responses (nine hours of lecture). Next, we evaluate the fields of reproductive biology, gynecology, and infant/child health through an evolutionary lens (twelve hours of lecture). Finally, we examine evolutionary concepts in chronic metabolic and degenerative diseases associated with aging and lifestyle (ten hours of lecture).

Final exam required. Formerly known as 163. Instructor: Carlson

INTEGBI 173LF Mammalogy with Laboratory 5 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 6 hours of laboratory per week, plus 2 weekend field trips.**Prerequisites:** 104LF.

An advanced course in the biology of mammals. Topics covered include elements of modern mammalian biology such as morphology, physiology, ecology, and behavior. For all topics, the traits that define mammals are emphasized, as is the variation on these themes evident within modern mammalian lineages. Laboratory and field explore the biology of modern mammals. Laboratories use the extensive collections of the Museum of Vertebrate Zoology to introduce students to mammalian diversity in a phylogenetic context.

Students will receive partial credit for 173LF after taking 173. Final exam required. Formerly known as 173L. Instructor: Lacey

INTEGBI 174LF Ornithology with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 6 hours of laboratory per week, plus 1 weekend field trip.**Prerequisites:** 104L or consent of instructor.

An advanced course in the biology of birds. Laboratory: an introduction to the diversity, morphology, and general ecology of birds of the world.

Students will receive partial credit for 174LF after taking 174. Final exam required. Formerly known as 174L. Instructor: Bowie

INTEGBI 175LF Herpetology with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 4 hours of laboratory per week, plus 2 field trips.**Prerequisites:** 104LF.

Lectures will introduce students to the diversity of amphibians and reptiles on a world-wide basis, with an emphasis on systematics, ecology, morphology, and life history. Laboratories will teach students the diagnostic characteristics and some functional attributes of amphibians and reptiles on a world-wide basis. Field trips will acquaint students with techniques for collecting, preserving, identifying, and studying amphibians and reptiles.

Students will receive partial credit for 175LF after taking 175. Final exam required. Formerly known as 175L. Instructor: McGuire

INTEGBI C176L/ESPM C115C Fish Ecology 3 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week; 1 Saturday field trip.**Prerequisites:** Introductory course in biological science; upper division or graduate standing.

Introduction to fish ecology, with particular emphasis on the identification and ecology of California's inland fishes. This course will expose students to the diversity of fishes found in California, emphasizing the physical (e.g., temperature, flow), biotic (e.g., predation, competition), and human-related (e.g., dams, fisheries) factors that affect the distribution, diversity, and abundance of these fishes.

Final exam required. Instructor: Carlson

INTEGBI N176L Laboratory in Ichthyology 2 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of laboratory per week for 8 weeks plus 2 field trips. 6 hours of laboratory per week, plus 3 field trips.**Prerequisites:** 176 (may be taken concurrently) and Biology 1A-1B. The laboratory is complimentary to 176 and is highly recommended, though not mandatory.

Laboratory on the biology of fishes. Students will experience hands-on working with fish, including identification, experimental methods, illustration. Particular emphasis will be on California fishes.

Final exam not required.

INTEGBI 181L Paleobotany - The 500-Million Year History of a Greening Planet 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory per week.**Prerequisites:** Courses in botany and geology are recommended.

Introduction to the evolution of plants and terrestrial ecosystems through time. From the invasion of land to the present, we will follow the evolution of major plant groups through important moments of the Phanerozoic eon (the past

540 million years). By studying fossilized plant assemblages, we will interpret how major

environmental changes unfolded across landscapes in the past and how plants have influenced

the shaping of our planet. Lectures will be complemented by an interactive laboratory covering

paleobotanical research techniques, study of fossil and living plant form and function in the lab

and field, and analysis of peer-reviewed literature.

Final exam required. Formerly known as Integrative Biology 181.

Instructor: Looy

INTEGBI 183L Evolution of the Vertebrates with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1B; introductory courses in earth history and zoology are recommended.

Introduction to vertebrate paleontology, focusing on the history and phylogeny of vertebrates ranging from fishes to humans. Emphasis: evolution, taxonomy, functional morphology, faunas through time, problems in vertebrate history, including diversity through time and extinction. Laboratory: vertebrate fossils, focusing on demonstration and study of problems related to taxonomy, evolution, functional morphology, structures, preservation of fossil vertebrates, and their faunas through time.

Students will receive partial credit for 183L after taking 183. Final exam required. Instructor: Padian

INTEGBI 184L Morphology of the Vertebrate Skeleton with Laboratory 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture, 6 hours of Laboratory, and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Anthropology 1 and Biology 1B.

Lectures on comparative osteology of vertebrates, with emphasis on selected groups of terrestrial vertebrates considered in paleoecological, paleoclimatological, and biostratigraphic analyses. Laboratory: comparative osteology of vertebrates, with emphasis on selected groups of vertebrates. Structure, anatomy, morphology, function, and development of the vertebrate skeleton.

Students will receive partial credit for 184L after taking 184. Final exam required. Instructor: Barnosky

INTEGBI C185L/ANTHRO C100 Human Paleontology 5 Units**Department:** Integrative Biology; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Anthropology 1, Biology 1A-1B.

Origin and relationships of the extinct forms of mankind.

Final exam required. Instructor: White

INTEGBI C187/ANTHRO C124C Human Biogeography of the Pacific 3 Units**Department:** Integrative Biology; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: Biology 1B strongly recommended, or evidence the student has mastered an equivalent set of basic concepts in evolution and ecology.

This course examines the history of human dispersal across Oceania from the perspectives of biogeography and evolutionary ecology. *H. sapiens* faced problems of dispersal, colonization, and extinction, and adapted in a variety of ways to the diversity of insular ecosystems. A dual evolutionary model takes into account cultural evolution and transmission, as well as biological evolution of human populations. This course also explores the impacts of human populations on isolated and fragile insular ecosystems, and the reciprocal effects of anthropogenic change on human cultures. Final exam required. Instructor: Kirch

INTEGBI 190 Seminar for Integrative Biology Majors 1 - 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Seminar per week for 15 weeks. 1.5 to 5.5 hours of Seminar per week for 8 weeks. 2.5 to 7.5 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

This upper-division undergraduate course will allow students to pursue specialized topics in biology in a seminar format. The specific content of the course will vary based on the topic and the instructor. In general, weekly meetings will provide a forum for extended discussion of selected aspects of evolutionary biology. Supplementary readings and assignments will provide critical background information and keep students engaged in relevant topics between weekly meetings. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 191 Directed Undergraduate Research 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of supervised independent research per week. 13 and 1 half hours of supervised independent research per week for 10 weeks.**Prerequisites:** Consent of instructor and departmental adviser.

This course is intended for advanced undergraduates wishing to pursue independent research projects under the mentorship of an IB faculty member. Research projects will be rigorous and will provide significant training in the methods of evolutionary research. A project proposal is required to enroll and students are expected to produce a substantial written summary of their work.

Final exam required.

INTEGBI 194 Undergraduate Student Instructor for Integrative Biology Courses 1 - 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 6 hours of lecture per week per unit for 8 weeks. 3 to 4 hours of lecture per week per unit.**Prerequisites:** Must have completed course applying to UGSI with a grade of B or better; or consent of instructor

UGSI will work under supervision of instructor and/or GSI. The UGSI will attend any mandatory preparatory and review meetings, be available in the classroom (discussion or laboratory) to respond to student questions, facilitate lesson plans, perform other tasks as assigned. UGSIs do not evaluate students' work or assign grades.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI C195/PB HLTH C117 Introduction to Global Health**Disparities Research 2 Units****Department:** Integrative Biology; Public Health**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 1 hour of Discussion per week for 15 weeks.

This course is designed to prepare trainees in the UC Berkeley "Minority Health/Global Health" (MH/GH) program to conduct a ten-week infectious disease research project in a disease-endemic country. The course provides a background in neglected tropical disease research, international research ethics, and the conduct of health research in low-resource settings.

Final exam required. Instructor: Reingold

INTEGBI H196A Thesis Course 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individually arranged.**Prerequisites:** Open only to students in Honors Program.

Individual study and research for at least one academic year on a special problem to be chosen in consultation with a member of the staff; preparation of the thesis on broader aspects of this work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI H196B Thesis Course 3 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individually arranged.**Prerequisites:** Open only to students in Honors Program.

Individual study and research for at least one academic year on a special problem to be chosen in consultation with a member of the staff; preparation of the thesis on broader aspects of this work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 197 Supervised Internship 1 - 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours by arrangement with faculty. Hours by arrangement with faculty.**Prerequisites:** Consent of Integrative Biology faculty sponsor.

Supervised experience relevant to specific topics of biology in off-campus organizations. Written report and evaluation from internship supervisor required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 198 Supervised Group Study and Research By Upper Division Students 1 - 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 2 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 10 hours of Directed group study per week for 6 weeks.

Undergraduate research by small groups.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

INTEGBI 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Background courses in chosen subjects.

Enrollment restrictions apply; see department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

INTEGBI 200A Principles of Phylogenetics: Systematics 4 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

The core theory and methodology for phylogenetic systematics with emphasis on both morphology and molecules, and both living and fossil organisms. Topics include homology, character analysis, competing optimality criteria, classification, and a brief introduction to comparative methods. Laboratories are closely integrated with lectures and cover the major algorithms and software. Requirements include a practical term project. Note: this course and 200B may be taken in either order or alone. Final exam required. Instructors: Mishler, Lindberg, Will

INTEGBI 200B Principles of Phylogenetics: Ecology and Evolution 4 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

The uses of phylogenetic trees in comparative biology. Covers the many applications of phylogenetics to biogeography, speciation, conservation, population genetics, ecology, behavior, development, functional morphology, and macroevolution that are revolutionizing those fields. Laboratories are closely integrated with lectures and cover algorithms and software. Requirements include a practical term project. Note: this course and 200A may be taken in either order or alone.

Final exam required. Instructors: Mishler, Ackerly, Lindberg

INTEGBI C204/ESPM C204 Research Reviews in Animal Behavior: Behavior Review 1 Unit**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hours of seminar per week.**Prerequisites:** Graduate standing, basic course in animal behavior. Instructor approval required.

This course will provide a rigorous, critical review of current research in animal behavior. Emphases will include hypothesis testing and experimental design, as well as methods of data collection and analysis. Each week, a student in the course will present original research in the form of a seminar presentation, grant proposal, or manuscript. Through discussion with seminar participants, presenters will gain critical feedback regarding their research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Lacey, Caldwell, Bentley, Elias

INTEGBI C205/ENE,RES C205/ESPM C205 Quantitative Methods for Ecological and Environmental Modeling 3 Units**Department:** Integrative Biology; Energy and Resources Group; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course will review the background mathematical and statistical tools necessary for students interested in pursuing ecological and environmental modeling. Topics include linear algebra; difference equation, ordinary differential equation, and partial differential equation models; stochastic processes; parameter estimation; and a number of statistical techniques. This course will be recommended as a prerequisite for advanced modeling courses in Integrative Biology, Energy and Resources Group, and Environmental Science, Policy, and Management. Final exam not required.

INTEGBI 206 Statistical Phylogenetics 3 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** College level course in calculus.

This course is aimed at students who wish to understand the evolutionary models and methods for estimating phylogenies (which are trees representing how organisms are related to one another). Topics include continuous-time Markov chains as applied in phylogenetics; maximum likelihood estimation; Bayesian estimation; the combinatorics of evolutionary trees; Markov chain Monte Carlo; distance and parsimony methods for estimating trees; optimization strategies for finding best trees. Students will learn to write computer programs that implement many of the methods discussed in class, and apply their knowledge in a research project.

Final exam not required. Instructor: Huelsenbeck

INTEGBI C215/EPS C301/GEOS C301 Communicating Ocean Science 4 Units**Department:** Integrative Biology; Earth and Planetary Science; Geography**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.

Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science. For graduate students interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam not required. Instructor: Ingram

INTEGBI C216/ESPM C216 Freshwater Ecology 3 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This graduate course will combine formal lectures and discussion, with the overall goal of exposing students to general concepts in freshwater ecology. We will discuss a broad range of topics including freshwater environments and biota, natural selection and adaptive evolution, food webs and trophic cascades, cross-ecosystem linkages, and social-ecological resilience of freshwater ecosystems under global change. Upper division undergraduates are welcome, with permission of the instructors.

Final exam not required. Instructors: Carlson, Power

INTEGBI C217/BIO ENG C217/MEC ENG C217 Biomimetic**Engineering -- Engineering from Biology 3 Units****Department:** Integrative Biology; Bioengineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing in engineering or consent of instructor.

Study of nature's solutions to specific problems with the aim of determining appropriate engineering analogs. Morphology, scaling, and design in organisms applied to engineering structures. Mechanical principles in nature and their application to engineering devices. Mechanical behavior of biological materials as governed by underlying microstructure, with the potential for synthesis into engineered materials. Trade-offs between redundancy and efficiency. Students will work in teams on projects where they will take examples of designs, concepts, and models from biology and determine their potential in specific engineering applications.

Final exam not required. Instructor: Dharan

INTEGBI 222 Seminar in Locomotion Energetics and Biomechanics 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Discussion and critique of scientific literature and current topics in the biomechanics and energetic cost of locomotion. Emphasis on terrestrial-legged locomotion. Topics include efficiency, musculoskeletal design, energy-saving mechanisms, muscle mechanics, gaits, effects of scaling, and comparative aspects.

Final exam not required.

INTEGBI 223 Seminar in Physiological Bases of Physical Activity 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** 123A, 123AL.

Immediate and long-range adaptations of the body to exercise.

Physiological limits and work capacities in relation to age, sex, diet, environmental factors, and nature of activity.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Human Biodynamics 205. Instructor: Brooks

INTEGBI C226/ESPM C225 Isotopes 2 Units**Department:** Integrative Biology; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 10 weeks.

This seminar will explore current topics that employ the use of stable isotopes. Discussion topics include the areas of biology, paleontology, biogeochemistry, soil science, and atmospheric science. Students will be required to lead at least one discussion of relevant literature in the topic area.

Final exam not required. Instructors: Amundson, Dawson, Mambelli

INTEGBI C227/EPS C241/ESPM C220 Stable Isotope Ecology 5 Units**Department:** Integrative Biology; Earth and Planetary Science; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing.

Course focuses on principles and applications of stable isotope chemistry as applied to the broad science of ecology. Lecture topics include principles of isotope behavior and chemistry, and isotope measurements in the context of terrestrial, aquatic, and marine ecological processes and problems. Students participate in a set of laboratory exercises involving preparation of samples of choice for isotopic analyses, the use of the mass spectrometer and optical analysis systems, and the analysis of data. Final exam not required. Instructors: Amundson, Dawson, Mambelli

INTEGBI C229/EPS C229 Introduction to Climate Modeling 3 Units**Department:** Integrative Biology; Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course emphasizes the fundamentals of the climate system via a hierarchy of climate models. Topics will include energy balance, numerical techniques, climate observations, atmospheric and oceanic circulation and heat transports, and parameterizations of eddy processes. The model hierarchy will also explore nonlinear and stochastic processes, and biogeochemistry. Students will build computational models to investigate climate feedbacks, climate sensitivity, and response times.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructors: Fung, Powell

INTEGBI 230 Marine Science Review 1 Unit**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Senior or graduate standing; consent of instructor.

Reports and discussion of original research in marine science.

Final exam not required. Instructors: Herrlinger, Stillman

INTEGBI 232 Seminar in Biomechanics 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Presentation, discussion, and critique of current literature in scientific research and current topics in comparative biomechanics which include solid and fluid mechanics, locomotion, and energetics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 234 Seminar on Biology of Amphibians and Reptiles 1 Unit**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 8 weeks.**Prerequisites:** Graduate standing and consent of instructor.

Review of current research activity and literature concerning the biology of amphibians and reptiles.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 241 Advanced Topics in Endocrine-Regulated Development 3 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course will examine intentional endocrine disruption, such as the use of pharmaceuticals to regulate hormones in humans, livestock, and wildlife. We will also evaluate endocrine disrupting pollutants and their impacts on wildlife and humans, including their potential role in cancer. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hayes

INTEGBI 245 Functional Neuroanatomy 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Development, structural (gross and microscopic) and functional relationships of the mammalian central nervous system.

Final exam required. Instructor: Diamond

INTEGBI 245L Functional Neuroanatomy Laboratory 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

Histological examination of the human nervous system; gross dissection of the human brain.

Final exam required. Instructor: Diamond

INTEGBI 246 Seminars in Systems Biology 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 1 hour of discussion/modeling per week.**Prerequisites:** Consent of instructor.

This course discusses seminal papers in the field of systems biology with particular emphasis on gene regulation and cell biology. The course covers the critical analysis of primary research data, computational modeling, and important theoretical concepts in systems biology. Topics vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Lim

INTEGBI 248 Comparative Physiology and Endocrinology Seminar 1 Unit

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Reviews and reports of current research in vertebrate endocrinology and physiology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Firestone

INTEGBI 249 Seminar on Evolutionary Genetics 1 Unit

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of Discussion per week for 15 weeks.

Prerequisites: Consent of instructor.

Recent developments in evolutionary genetics will be discussed in a seminar format.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 250 Seminar in Ecology 2 Units

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: 153

Readings and discussion of current topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 251 Ecological Research Reviews 1 Unit

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1.5 hours of Seminar per week for 15 weeks.

Prerequisites: Graduate standing and consent of instructor.

Reports and discussions of original research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 254.

INTEGBI 257 Current Topics in Behavioral Physiology 2 Units

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: C144 or consent of instructor.

Topics to vary. Report and discussion of current literature.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 259 Advanced Paleoeecology 2 Units

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Topics vary from year to year but will include paleoeecology of major groups of organisms or major environments from population, community evolutionary, or taxonomic perspectives.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

INTEGBI 262 Seminar in Computational Biology 1 Unit

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Consent of instructor.

Students will discuss original papers in the general area of computational biology and will discuss new research presented by instructors in the course and by invited speakers from other departments at UC Berkeley and from other universities and research groups.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Huelsenbeck, Nielsen, Slatkin

INTEGBI 263 Genetics and the Evolution of the Skeleton 2 Units

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of Seminar per week for 15 weeks.

Prerequisites: A graduate-level course in biology or consent of instructor.

In this seminar, we will explore the genetic underpinnings of vertebrate skeletal variation and review how such information is being incorporated into evolutionary and paleontological studies. Topics include quantitative genetic analyses of cranial variation and developmental genetics of the limb and dentition. This course will be tailored each semester to cover new research; therefore, students may enroll in this course multiple semesters.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hlusko

INTEGBI 264 Seminar in Evolutionary Biology of the Vertebrates 1 Unit

Department: Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of Seminar per week for 15 weeks.

Prerequisites: Graduate standing; consent of instructor.

Formerly Presentation of results of original research by students, faculty, and visitors.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 268 Seminar in Evolution above the Species Level 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 281 Seminar in Evolution 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Advanced study and current literature in various fields of evolution. Topics vary from year to year.

Final exam not required. Instructor: Padian

INTEGBI 283 Seminar in Vertebrate Evolution and Paleontology 1 Unit**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** 183, 183L or consent of instructor.

Presentations and discussions of original research and new literature in vertebrate evolution and paleontology. Syllabus and reading list will vary as topics change from semester to semester. Open to Undergraduate students with permission. Enrollment limit: 20.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required. Instructor: Padian

INTEGBI 286 Seminars in Paleontology 2 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Advanced study and current literature in various fields of paleontology. Topics vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 290 Research Seminar 1 Unit**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced study in various fields of Integrative Biology. Topics will be announced in advance of each semester. Enrollment in more than one section permitted.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 291 Research Seminar 1 Unit**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 7.5 weeks.

Review and discussion of topics of current interest. Topics to vary.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 292 Integrative Biology Colloquium 0 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of meeting per week.

Meetings for the presentation of original work by faculty, visiting lecturers, and graduate students.

Final exam not required.

INTEGBI 296 Special Study for Graduate Students 1 - 4 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences.

Reading or other advanced study by arrangement with a staff member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Zoology 296.

INTEGBI 297 Directed Field Studies 1 - 8 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Field work.

Open to qualified students directly engaged in field studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 298 Special Study in Integrative Biology 1 - 12 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Graduate research by small groups.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 299 Graduate Research 1 - 12 Units**Department:** Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual study.

Credit awarded according to work planned and accomplished.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI N299 Graduate Research 1 - 6 Units**Department:** Integrative Biology**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual study.**Prerequisites:** Graduate standing.

Graduate student research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 304 Dissemination of Research: Your Interface with the Public 2 Units**Department:** Integrative Biology**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.

This course will consist of lectures and class discussions about mechanisms of communicating about science to the public. We will consider how to convey the issues, process, and findings of scientific research to a variety of audiences using different media (e.g., posters, web pages, newsletters, newspaper and magazine articles, books, television). Projects conducted by teams of students under the direct supervision of the instructors will include preparation of outreach materials (e.g., posters, newsletters, web pages).

Final exam not required.

INTEGBI 305 Academic Survivorship 2 Units**Department:** Integrative Biology**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar per week and assignments.

Series of lectures and workshops to prepare graduate students for many aspects of academic careers, including grant proposal writing, giving talks at meetings or to academic departments, preparing job applications and having job interviews, advising graduate students and postdocs, reviewing manuscripts and grant proposals, service activities and time management, working at teaching college vs. research universities, alternative careers, etc.

Final exam not required.

INTEGBI 375 Teaching Colloquium: Graduate Student Instructor Training 2 Units**Department:** Integrative Biology**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar plus workshops per week.

Series of workshops and seminars involving graduate students and faculty participation. The main objectives of this course are to train graduate students to become effective instructors and to discuss important issues that graduate students face when teaching undergraduate classes.

Final exam not required. Formerly known as Integrative Biology 303.

INTEGBI 400 Training in Stable Isotope Methods and Mass Spectrometry 1 Unit**Department:** Integrative Biology**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture and laboratory training per week.**Prerequisites:** Consent of instructor.

An intensive lecture and laboratory training course on the fundamental principles and practical applications of stable isotope methods in biogeochemistry, ecology, physiology, and environmental science. Topics covered are sample preparation, operating of an isotope ratio mass spectrometer, and analysis of stable isotope data. This course is required for all students interested in using the facilities housed in the Center for Stable Isotope Biogeochemistry for their research.

Final exam not required. Instructor: Dawson

INTEGBI C407/PHYS ED C407 Introduction to Scientific Diving 3 Units**Department:** Integrative Biology; Physical Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 6 hours of laboratory per day for 12 days.**Prerequisites:** Advanced scuba certification, swim test, medical exam, and consent of instructor.

Diving physics, physiology, medicine, rescue, decompression, theory, navigation, environment, marine life, research methods, equipment, and University regulations. Course leads to University certification to use underwater life support apparatus for study or research under University auspices.

Final exam required.

INTEGBI 601 Individual Study for Master's Students 1 - 8 Units**Department:** Integrative Biology**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.

Individual study for the comprehensive requirements in consultation with the major adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

INTEGBI 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Integrative Biology**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.

Individual study in consultation with the major adviser. Intended to provide an opportunity for qualified students to prepare themselves for the various examinations required for candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

INTEGBI N602 Individual Study for Doctoral Students 1 - 6 Units**Department:** Integrative Biology**Course level:** Graduate examination preparation**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.

Formerly < Paleon 602, Zoology 602, Botany 602, Physiol 602, Anatomy 602> Individual study in consultation with the major field adviser.

Intended to provide an opportunity for qualified students to prepare themselves for the various examinations required for candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Interdisciplinary Studies Field Maj (ISF)

ISF 39A Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

ISF 39B Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

ISF 61 Moral Reasoning and Human Action: The Quest for Judgment 3 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This is an interdisciplinary survey course that seeks to understand how we define justice, evil, and individual responsibility in modern society. In particular we are going to probe carefully how humans reflect on and practice the process of moral reasoning. We will focus on human behavior in extreme situations: war, life and death conflicts, genocide and mass killing, as well as competing conceptions of human freedom. The course has a distinctive dual purpose. On the one hand we want to encourage the learning of critical thinking skills. This includes the ability to systematically evaluate information and competing moral claims. Also, it is intended as an exposure to the interdisciplinary approach. That is, how can different perspectives illuminate the same issue? With this in mind the course draws on important work from philosophy and ethics, social psychology, jurisprudential analysis, historical-political accounts, and personal memoirs.

Final exam required.

ISF 62 Representations of Self-Deception in the Modern World 3 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

In this course, we will utilize works in the humanities and the social sciences in order to explore a number of dimensions of self-deception in the modern world. The focus will be upon the willingness to falsify both personal life as well as one's position in the public sphere. The course will begin with an examination of the psychological dimension, emphasizing the importance of the nature of unconscious experience. In this context, we will examine how self-awareness is shaped by personal relationships, especially family arrangements. In addition, we will look at the manner in which people often engage in acts of self-deception with regard to the political realm.

Final exam required.

ISF 98 Directed Group Study 1 - 3 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.

Seminars for the group study of selected topics not covered by regularly scheduled courses. Topics will vary from semester to semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ISF 100A Introduction to Social Theory and Cultural Analysis 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of lecture and up to 1 hour of discussion per week.

This course draws on the classical traditions of social theory as well as contemporary analysis to examine the basic conceptual underpinnings of modern societies. That is, we explore what it means to live in the modern, postmodern, hyper-modern, or global worlds. In particular we examine the nature of industrial and post-industrial social formations, cultural perceptions, and the development of ideological constructs. Changing understandings of the shapes of power and domination is a central linkage tying these various analyses together. We are particularly interested in charting the interrelationship between quickly shifting social changes on a local and global level and competing theoretical interpretations of their meaning.

Final exam required.

ISF 100B Introduction to Social Theory and Cultural Analysis 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This is a course exploring how we understand the idea of the self in contemporary social worlds. The course shares the presumption that the modern self is a created endeavor. It charts traditional and contemporary understandings of individual identity, the maturation process and the notion of an inner life, the concepts of freedom and individual agency, the force of evolution and heredity, and the influence of social causation. The course stresses the complex interplay between the development of a sense of self, and the socialization pressures at work in the family, society, and global cultures.

Final exam required.

ISF 100C Word and Image 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 4.5 hours of Lecture per week for 10 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is designed to sharpen our skills in understanding what happens when the world of images and words meet. We will investigate how word/image constellations have been examined in the context of a variety of disciplines, such as cognitive linguistics, psychology, neuroscience, or philosophy and/or we will examine how the word/image constellations operate in a variety of media, including poetry, painting, photography, and advertising.

Final exam required.

ISF C100C/SCANDIN C114 Word and Image 4 Units**Department:** Interdisciplinary Studies; Interdisciplinary Studies Field Maj; Scandinavian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is designed to sharpen our skills in understanding what happens when the world of images and words meet. Starting with the work from the Western "classical" tradition we will proceed to investigate how word/image constellations operate in a variety of media, including sculpture and poetry, painting and prose, death masks, tableaux vivants, photography, and advertising.

Final exam required. Instructor: Sanders

ISF 100D Introduction to Technology, Society, and Culture 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of lecture and zero to 1 hour of discussion per week.

This course surveys the technological revolutions of the 19th and 20th centuries, it then focuses on the development of the computer and the Internet. The final part examines the impact of the Internet on social movements.

Final exam required.

ISF 100E The Globalization of Rights, Values, and Laws in the 21st Century 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4s hours of lecture/discussion per week. 7.5 hours of lecture/discussion per week for 8 weeks. 10 hours of lecture/discussion per week for 6 weeks.

This interdisciplinary course is an introduction to the complex interplay of transnational values, international rights and legal institutions that increasingly govern social, cultural and geopolitical interactions in our contemporary world. Theoretical and methodological tools from the social sciences, jurisprudence, and philosophy will be applied in the analyses of these interplays. A study of rights and norms presupposes not only an understanding of the empirical evolution of rights traditions (including constitutional traditions) in a variety of global regions, but also an understanding of the theories of rights and laws that support such traditions as they are embedded in them (just war theories, peace theories, etc.) The study of rights and norms also requires an exploration of the transformations of crucial international norms and rights due to the formation of supranational institutions and organizations in the 20th century (UN, UNESCO, GO's, etc.). The course will provide the students with an opportunity to place emerging transnational rights institutions into a historical and geopolitical framework.

Final exam required.

ISF 100F Theorizing Modern Capitalism: Controversies and Interpretations 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

The focus of this course will be on the various ways the nature and trajectory of modern capitalism has been interpreted. Our stress will be on post-Marxist works of analysis. The initial focal point will be on the work of Max Weber and Joseph Schumpeter, as well as important current debates in economic history and social theory generated by their work. Both Weber and Schumpeter display a strong fascination and elaboration with the work of Marx. The way they analyze Marx is very revealing about the way contemporary analysts seek to understand the capitalist system. We will also consider a number of current efforts that look at the systemic nature of capitalism. In particular, we are interested in how economic historians now see the development of capitalism. We also want to examine the Weberian tradition in terms of the role of culture in shaping economic behavior. Debates about the nature of globalization will also be considered as well as analysis of the changing nature of work. Final exam required. Instructor: Klee

ISF 100G Introduction to Science, Society, and Ethics 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 5.5 to 7 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks. 7 to 9.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.

This interdisciplinary course will explore whether it has proven possible and desirable to understand society through value-free and positivistic scientific methods as predominantly developed in the transatlantic worlds of the 19th centuries. We shall explore questions that may be applied to the realms of public health and human biology, or to the social sciences generally, including anthropology, sociology, economics, and political science.

Final exam not required.

ISF 100H Introduction to Media and International Relations 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 8 to 10 hours of Lecture and Zero to 2.5 hours of Discussion per week for 8 weeks.

How have international actors used media to construct public opinion about salient issues, such as war, terrorism and intervention, international trade and finance, and global warming and resource depletion? The purpose of this course is to introduce students to key concepts, methods, and theories in the analysis of media effects, particularly in the areas of public opinion formation and international relations.

Final exam required.

ISF N100A Introduction to Social Theory and Cultural Analysis 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

Introduction to central theoretical investigations concerning the construction and organization of social life. Using some works from the "classical" traditions of social theory as well as some examples of contemporary analysis, this course will explore such topics as the nature of power and social/historical change, the nature of economic production and consumption, the meaning of difference--racial, sexual, class--the development of institutions, etc.

Final exam not required.

ISF N100D Introduction to Technology, Society, and Culture 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

This course surveys the technological revolutions of the 19th and 20th centuries, then focuses on the development of the computer and the Internet. The final part examines the impact of the Internet on social movements.

Final exam not required.

ISF C101/GEOG C110 Economic Geography of the Industrial World 4 Units**Department:** Interdisciplinary Studies; Geography; Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 20 or prior courses in economic or regional development strongly suggested.

Industrialization, urbanization, and economic growth in the global North. Locational patterns in manufacturing, retailing trade, and finance. Geographic dynamics of technical change, employment, business organization, resource use, and divisions of labor. Property, labor, and social conflict as geographic forces. Local, national, and continental rivalries in a global economy, and challenges to U.S. dominance. Students will receive no credit for C110 after taking 110 or Interdisciplinary Studies 100A. Final exam required. Instructor: Walker

ISF 110 Special Topics in Interdisciplinary Studies 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

This course is designed primarily to allow faculty to develop courses which address specific issues, themes, or problems of interdisciplinary interest. Topics vary semester to semester. Students should consult the department's webpage for current offerings before the start of the semester.

Course may be repeated once for credit with different topic. Course may be repeated for a maximum of 8 units. Final exam required.

ISF 116 Technology, Culture, and Politics 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Through case studies of important innovations such as the automobile, computers, and genetic engineering, this class will explore the interaction between technological development and social change. We will examine the major theoretical paradigms for analyzing both the process and impact of technological innovation and discuss some of the social, cultural, and political influences on, and effects of, specific technologies.

Final exam required. Instructor: Wren

ISF 116X Technology, Culture, and Politics 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

Through case studies of important innovations such as the automobile, computers, and genetic engineering, this class will explore the interaction between technological development and social change. We will examine the major theoretical paradigms for analyzing both the process and impact of technological innovation and discuss some of the social, cultural, and political influences on, and effects of, specific technologies. This course satisfies part of the core requirement for the Interdisciplinary Studies Field Major.

Final exam required. Instructor: Wren

ISF C117/AMERSTD C117/MASSCOM C117 American Television 4 Units**Department:** Interdisciplinary Studies; American Studies; Interdisciplinary Studies Field Maj; Mass Communications**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.

This course offers an interdisciplinary survey of various theoretical and methodological approaches to the social, cultural and political dimensions of American television. Selected readings and viewings will be used to examine the production, reception, and content of television programming. The focus for summer 1994 will be "prime time after 1980," including such shows as HILL STREET BLUES, DALLAS, THE COSBY SHOW, STAR TREK; THE NEXT GENERATION, and TWIN PEAKS. This course satisfies part of the core requirement for the Interdisciplinary Studies Field major, and may be used as an elective in both the American Studies major and the Mass Communications major.

Course may be repeated if focus is different. Course may be repeated for credit when topic changes. Final exam required.

ISF 118AC/AMERSTD 118AC/MASSCOM 118AC American Popular Culture 4 Units**Department:** Interdisciplinary Studies; American Studies; Interdisciplinary Studies Field Maj; Mass Communications**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

An interdisciplinary approach to American popular culture, focusing on the social, economic, commercial, political, and historical construction of popular culture and American identities. This course will satisfy part of the core requirement for the American Studies major.

Satisfies the American Cultures requirement

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ISF C118/AMERSTD C118/MEDIAST C118 American Popular Culture 4 Units**Department:** Interdisciplinary Studies; American Studies; Interdisciplinary Studies Field Maj; Media Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

An interdisciplinary approach to American popular culture, focusing on the social, economic, commercial, political, and historical construction of popular culture and American identities. This course will satisfy part of the core requirement for the American Studies major.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ISF C120/AMERSTD C120 Immigration and American Culture 4 Units

Department: Interdisciplinary Studies; American Studies; Interdisciplinary Studies Field Maj

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Fifty-2 hours of lecture and 8 hours of field trips, to be offered during 6- or 8 week session.

In this course, we will discuss the "immigrant" as both the subject and the object of representation in U.S. literature and culture. We will discuss the works of Jewish American, Asian American, and Chicano authors, and examine the effects of such factors as country of origin, gender, race/ethnicity, social class, and religion on the construction of "American identity." This course may be used as an elective in the American studies major or may be used to fulfill the 100A or 100B requirement in the interdisciplinary studies field major.

Satisfies the American Cultures requirement

Final exam required. Instructor: Camargo

ISF C125/AMERSTD C125/MEDIAST C125 American Media and Global Politics 3 Units

Department: Interdisciplinary Studies; American Studies; Interdisciplinary Studies Field Maj; Media Studies

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Public opinion about world events is largely shaped today by the mass media. How accurate is such coverage in the light of historical analysis? To what extent do systemic sources of bias or distortion affect our understanding of history? To approach these questions, we will analyze the role of the media in several specific case studies.

Final exam required.

ISF W187 Experiential Learning: Organizational Context, Self-Reflection, and Professional Development 4 Units

Department: Interdisciplinary Studies Field Maj

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Web-based lecture and 3 hours of Web-based discussion per week for 10 weeks. This is an online course.

This course facilitates students' learning and self-reflection about various types of organized contexts, structures and cultures, and development of practical strategies to promote successful internship experiences. A series of online lectures, practical exercises, writing assignment, projects, and online group discussions will guide the student through all stages of their internship experience. This course is web-based.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 187.

Instructor: Clark

ISF 189 Introduction to Interdisciplinary Research Methods 3 Units

Department: Interdisciplinary Studies Field Maj

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. 4.5 hours of Seminar per week for 10 weeks. 6 hours of Seminar per week for 8 weeks. 8 hours of Seminar per week for 6 weeks.

Prerequisites: Interdisciplinary Studies Field Majors and intended ISF majors.

This course offers an introduction to interdisciplinary quantitative and qualitative research methods. It will enable the students to deepen and clarify their research topics and to tailor their methodological approaches to their disciplinary inclinations. They will build a grounded bibliography on their research topic and acquire the skills to survey the basic conceptual and theoretical arguments on their particular topic. By the end of the semester, they will have written a critical survey of the literature on their topic which will serve as the introductory chapter to the thesis. Students who write honors theses will also contact faculty on campus who have expertise in the students' research area.

Final exam required.

ISF 190 Senior Thesis 4 Units

Department: Interdisciplinary Studies Field Maj

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of seminar per week plus individual conferences.

Prerequisites: Senior standing; completion of ISF core courses; declared in the major.

The preparation and presentation of a senior thesis pertaining to the student's individual area of concentration within the interdisciplinary studies field major.

Final exam not required.

ISF H195 Honors Thesis 4 Units

Department: Interdisciplinary Studies Field Maj

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of seminar per week plus individual conferences. 5 hours of seminar per week plus individual conferences for 6 weeks. 3.5 hours of seminar per week plus individual conferences for 8 weeks. 3 hours of seminar per week plus individual conferences for 10 weeks.

Prerequisites: Senior in the honors program; completion of ISF core courses; declared in the major; 3.5 GPA overall and 3.6 in the major; and consent of the ISF faculty.

Entails writing a bachelor's thesis pertaining to the student's individual area of concentration within the interdisciplinary studies field major. The completed thesis will be read by the thesis adviser and one other faculty member.

Final exam not required.

ISF 197 Field Studies 1 - 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings. Individual meetings.**Prerequisites:** Upper division standing, declared in the Interdisciplinary Studies Field Major, and consent of instructor.

Supervised experience relevant to the student's specific area of concentration in the Interdisciplinary Studies Field Major in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Ehrlich, Holub, Klee, Wren

ISF 198 Directed Group Study for Advanced Undergraduates 1 - 3 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Conferences.

Prerequisites: Regulations set by the College of Letters and Science. Seminars for the group study of selected topics not covered by regularly scheduled courses. Topics will vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Social Sciences 198 and Humanities 198.

ISF 199 Supervised Independent Study and Research for Upper Division Majors 1 - 4 Units**Department:** Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences. Individual conferences.

Prerequisites: Regulations set by the College of Letters and Science. Directed individual independent study and research of special topics by arrangement with faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

International and Area Studies (IAS)

IAS 20 Perspectives in International Education 2 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of lecture per week for 8 weeks.**Prerequisites:** Freshman or sophomore standing.

This course will examine developments in the field of international education in light of the acceleration of the globalization of economies and the internationalization of cultural flows since the 1980s. In this context, the course will explore cross-cultural issues, economic trends, gender questions, and political considerations as they impinge upon international education programs. Particular attention will be given to the UC Education Abroad Program as a means of understanding the structure, scope, rationale, and characteristics of contemporary international education programs in the United States and corresponding institutions in Latin America, Africa, Asia, and Europe.

Final exam required.

IAS 45 Survey of World History 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

This course focuses on benchmarks of the history of various nations and civilizations. It begins with the ancient Greeks, Romans, and Chinese, but emphasizes world developments since the 15th century. The purpose of the course is to gain a better understanding of the rise and decline of states, empires, and international trading systems. Therefore, political and economic structures and developments as well as military factors will be presented along with the more traditional historical perspectives.

Final exam required.

IAS 98 Issues in Political Economy and Development 2 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.

Hours and format: 2.5 hours of Directed group study per week for 15 weeks.

Prerequisites: Freshman or sophomore standing.

This course is geared towards intended Political Economy and Development Studies majors. It consists of a series of guest lectures presenting different issues and perspectives of political economy and development. Topics will be divided into three general sections: 1) theories on political economy and development; 2) historical background on the causes and effects of politics and markets; and 3) case studies on both the international and domestic levels. Peer discussion groups are led by honors students.

Final exam not required.

IAS 102 Scope and Methods of Research in International and Area Studies 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 10 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Required prerequisite for all students intending to enroll in Development Studies H195 and Political Economy of Industrial Societies H195.

Introduction to interdisciplinary research strategies for the collection, interpretation, and analysis of data. Course integrates the study of the fundamental theories of social science with the practical techniques of social science research methods.

Final exam required. Formerly known as Political Economy of Industrial Societies 102.

IAS H102 Scope and Methods of Research in International and Area Studies 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 10 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Open only to students meeting the requirements for participation and who intend to enroll in the honors seminar during the spring term. Consent of instructor.

Required prerequisite for all students intending to enroll in Development Studies H195, Latin American Studies H195, Political Economy of Industrial Societies H195, and Peace and Conflict Studies H195. Course provides an introduction to interdisciplinary research strategies for the collection, interpretation, and analysis of data. Course integrates the study of the fundamental theories of social science with the practical techniques of social science research methods.

Students will receive no credit for H102 after taking 102, C118, Political Economy of Industrial Societies. Final exam not required. Formerly known as Political Economy of Industrial Societies 102.

IAS 105 The Ethics, Methods, and Pragmatics of Global Practice 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 6 hours of Seminar per week for 8 weeks. 8 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

This course is intended to provide students with the necessary background and knowledge to undertake projects and work experience of a global scope. Students will be exposed to a diversity of methodological frameworks, introduced to the basic skills needed to effectively participate in organizations, and to understand the ethics of global service and practice. Each student will be required to complete a major project beginning with the conceptualization of the problem to field research to forming partnerships and communicating with local organizations and communities to the dissemination of project results.

Final exam required.

IAS 105A The Ethics, Methods, and Pragmatics of Global Practice A 2 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Consent of instructor. 105B (must be taken concurrently).

This course is intended to provide students with the background and knowledge to undertake projects/work experience of a global scope. Students will be exposed to a diversity of methodological frameworks, introduced to the basic skills needed to effectively participate in organizations, and to understand the ethics of global service and practice. Each student will be required to complete a major project beginning with the conceptualization of the problem through dissemination of project results.

Students will receive no credit for 105A after taking 105. Final exam required.

IAS 105B The Ethics, Methods, and Pragmatics of Global Practice B 2 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Seminar per week for 15 weeks. 3.5 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor. 105A (must be taken concurrently).

This course is intended to provide students with the background and knowledge to undertake projects/work experience of a global scope. Students will be exposed to a diversity of methodological frameworks, introduced to the basic skills needed to effectively participate in organizations, and to understand the ethics of global service and practice. Each student will be required to complete a major project beginning with the conceptualization of the problem through dissemination of project results.

Students will receive no credit for 105B after taking 105. Final exam required.

IAS 106 Intermediate Microeconomic Theory 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 10 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Economics 1 or equivalent.

This course is designed as a comprehensive overview of intermediate microeconomic theory. It covers a number of topics including consumer and demand theory, firm, production and cost theory, competitive market theory, imperfect competition, welfare economics, choice under uncertainty and information. All analysis conducted in the course relies on graphical and algebraic techniques. Outside readings and discussion sections will demonstrate the applicability of the models covered in class to topics with an international dimension, such as the setting of tariffs, cartel behavior, and international trade.

Students will receive no credit for 106 after taking Economics 100A, 101A, Business Administration 110, Undergraduate Business Administration 101A, and Environmental Economics and Policy 100. Final exam required. Instructor: Auffhammer

IAS 107 Intermediate Macroeconomic Theory 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 to 2 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 10 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Economics 1 or equivalent.

This course is designed as a comprehensive overview of intermediate macroeconomic theory focusing on economic growth and international economics. It covers a number of topics including history of economic growth, industrial revolution, post-industrial revolution divergence, flexible-price and sticky-price macroeconomics, and macroeconomic policy. Course is structured for majors in International and Area Studies and other non-economic social science majors.

Students will receive no credit for 107 after taking Economics 100B, 101B, Business Administration 111, Undergraduate Business Administration 101BA. Final exam required. Instructor: Hsieh

IAS 115 Global Poverty: Hopes and Challenges in the New Millennium 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

This class seeks to provide a rigorous understanding of 20th-century development and thus 21st-century poverty-alleviation. Students will take a look at popular ideas of poverty-alleviation, the institutional framework of poverty ideas and practices, the social and political mobilizations that seek to transform the structures of poverty.

Final exam required. Instructor: Roy

IAS C118/ENVECON C118 Introductory Applied Econometrics 4 Units**Department:** International and Area Studies; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Formulation of a research hypothesis and definition of an empirical strategy. Regression analysis with cross-sectional and time-series data; econometric methods for the analysis of qualitative information; hypothesis testing. The techniques of statistical and econometric analysis are developed through applications to a set of case studies and real data in the fields of environmental, resource, and international development economics. Students learn the use of a statistical software for economic data analysis.

Final exam required. Instructor: Sadoulet

IAS 120 Selected Topics - International and Area Studies 3 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks. 14 hours of Lecture per week for 3 weeks.

Interdisciplinary study of selected topics in international and area studies focusing on issues in greater than a general topic lecture course. Through the use of lectures, discussions, and multimedia presentations, students will explore a variety of perspectives relating to the subject matter of the course. Students will be expected to successfully complete various writing assignments or short projects, and written exams. Instructor and topic will vary from term to term.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Bailey

IAS 140 Special Topics 2 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 8 weeks.**Prerequisites:** Consent of instructor.

A short course designed to provide a vehicle to take advantage of short-term visitors coming to campus who have considerable expertise in areas of interest to international and area studies. Topics will vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

IAS 150 Advanced Studies in International and Area Studies 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Advanced multidisciplinary research in current issues and topics in international and area studies. Course will focus on specific issues or geographical areas with appropriate comparative material included. A major research project is required as well as class presentations. Topics change each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

IAS 150X Special Topics: European Women-West Encounters East 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

Advanced multidisciplinary research in current issues of international and area studies. Seminars will focus on specific geographical areas or topics with appropriate comparative material included. A major research project is required as well as class presentation.

Final exam required.

IAS 155AC Educational Justice: Undocumented Migrant Students and Struggles to Remake "Citizenship" 3 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course focuses on undocumented migrant students in U.S. schools. It examines the political economy of migration and immigration, and the connection between immigration, poverty, and global displacement. It examines commonalities and differences among undocumented migrants from different ethnic communities based on race, racialization, and racism. It will analyze the ways in which race, citizenship, and "permanent foreignness" shape the undocumented experience in the U.S. school system.

Satisfies the American Cultures requirement

Students will receive no credit for International and Area Studies 155AC after taking International and Area Studies 180 in 2010 or 2011. Final exam required.

IAS 156 Educational Justice: Engaged Scholarship Adjunct Course 1 Unit**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Fieldwork and group meetings with faculty.

This course is part of the American Cultures Engaged Scholarship Program and is adjunct to International and Area Studies 155AC. It is designed to connect students with community partners who are working on various aspects of educational equity issues concerning undocumented migrants. Ten to 15 students enrolled in International and Area Studies 155AC will apply to and be selected to participate in this course. Requirements include class work, reflection, writing, reporting, and two hours per week working at a community partnership site. Final exam not required.

IAS 157AC/ENGIN 157AC Engineering, The Environment, and Society 4 Units**Department:** International and Area Studies; Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course engages students at the intersection of environmental justice, social justice, and engineering to explore how problems that are commonly defined in technical terms are at their roots deeply socially embedded. Through partnerships with community-based organizations, students are trained to recognize the socio-political nature of technical problems so that they may approach solutions in ways that prioritize social justice. Topics covered include environmental engineering as it relates to air, water, and soil contamination; race, class, and privilege; expertise; ethics; and engaged citizenship. This course cannot be used to complete any engineering technical or unit requirements.

Satisfies the American Cultures requirement

In order to achieve the pedagogical goals listed in the syllabus, a final paper is required in lieu of a final exam. Rather than requiring students to learn a specific canon of information, this course instead requires students to learn how to approach complex, situated, real-world problems in nuanced and thoughtful ways. A final paper is better suited to demonstrating this skill.

IAS 158AC/PACS 148AC Social Movements, Urban Histories, and the Politics of Memory 4 Units

Department: International and Area Studies; Peace and Conflict Studies

Course level: Undergraduate

Term course may be offered: Spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Course examines the history of progressive social movements in the San Francisco Bay Area. Combining history, sociology, urban geography, and ethnic studies, we ask: why and how these movements emerged? What cultural, racial, ethnic and political identities were drawn from, reconfigured, and created within these movements? What kinds of knowledge and institutions were created by these movements, and how have these legacies shaped (and been shaped by) the geography, culture, and politics of the area. As part of the ACES program, this course also engages students in creating social movement documentation through collaborations with community partners. Small student groups, supervised by an ACES Fellow, will carry out documentation projects. Satisfies the American Cultures requirement

Course Objectives: #NAME?

Final Research Project Instructor: Burns

IAS 160 Berkeley Summer Institute for the Global Generation 4 Units

Department: International and Area Studies

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 20-5 hours of Lecture per week for 3 weeks.

This course is designed to expose both precollege and college level students to the issues, challenges, and skills needed to negotiate the global economic, social, political, and physical environment. It is an innovative and integrated approach to global studies pedagogy and leadership development. Students will be exposed to and trained in the fundamental concepts of globalization, global inequality, and global change. In addition to the general education provided by the core module of the course, each year the course will tackle a different theme that amplifies key issues in global studies. The course will link theory and analysis to the transformative forms of practice. Students will work in teams on a real-world project related to the course theme, thus developing valuable leadership skills. The faculty coordinator will be joined by experts both from within and outside the institution to bring to students lectures, presentations, experiential opportunities, workshops, and group projects to explore the concept of leadership, issues of human poverty, human rights, social justice, urban planning for sustainable growth, and development.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS C170/PORTUG C170 Portugal: Language and Culture 6 Units

Department: International and Area Studies; Portuguese

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: In10sive 6 week summer travel course. Language acquisition courses in the morning; history, culture, and language courses in the afternoon.

This summer course provides the opportunity to begin and/or continue the study of Portuguese language and enhances awareness of Portuguese culture through direct contact with Portuguese educational and cultural institutions. Additionally, it examines historical, cultural, economic and political links between Portugal, Europe, Africa, Asia, and the Americas, particularly South America.

Course may be repeated for a maximum of 24 units with consent of instructor. Course may be repeated for a maximum of 24 units. Final exam required. Instructor: Adao

IAS C175/ENVECON C175 The Economics of Climate Change 4 Units

Department: International and Area Studies; Environmental Economics and Policy

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Prerequisites: 106, 107, Economics 1, or equivalent.

The course will start with a brief introduction and evaluation of the scientific aspects behind climate change. Economic models will be developed to analyze the impacts of climate change and provide and critique existing and proposed policy tools. Specific topics studied are impacts on water resources and agriculture, economic evaluation of impacts, optimal control of greenhouse gases, benefit cost analysis, international treaty formation, discounting, uncertainty, irreversibility, and extreme events.

Final exam required. Instructors: Aufhammer, Fisher

IAS 180 Current Issues in International and Area Studies 2 or 3 Units

Department: International and Area Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 2 to 3 hours of lecture/discussion per week. 5 to 7.5 hours of lecture/discussion per week for 6 weeks.

This course provides an opportunity to study and discuss issues and events having recent international impact and/or interest. The course will present a multidisciplinary perspective on specific subjects with the intent of linking students with the scholars and scholarship involved in understanding and explaining current international issues, events, and crisis. The subjects will vary from semester to semester. Students may enroll in the lecture only for 2 units or may enroll in the lecture and discussion section for 3 units.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

IAS 194 Senior Seminar in International and Area Studies 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Interdisciplinary research seminar for students in IAS majors. Intensive writing on research questions in social science and public policy best approached from an interdisciplinary perspective. Course assumes intermediate to advanced knowledge of central focus or topic of course. Weekly discussions and critiques of readings and assignments. Final paper or project required. Topic must be approved by instructor. Topics vary from term to term.

Final exam not required.

IAS 196 Special Field Research 2 - 6 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 90 to 270 hours of work per semester plus scheduled meetings with faculty advisor. 90-270 hours of work over 6, 8, or 10 weeks plus scheduled meetings with the faculty advisor.**Prerequisites:** Consent of instructor.

Students to work in internship programs selected and approved in advance by the faculty advisory committee and for which volunteer agreements have been established between the sponsoring organization and the student. Students will be expected to produce two brief progress reports for their faculty advisor during the course of the internship, as well as produce a final capstone piece for the course consisting of no fewer than 25 pages. The capstone paper will be graded A-F and judged on the same scholastic merits as a seminar or honors course. If taken on a P/NP basis, the established C+ standard will apply. The course is only available to students in the Global Poverty and Practice minor. Other International Area Studies majors may enroll if approved by their respective faculty chair.

Course may be repeated for a maximum of 8 units. Course may be repeated for a maximum of 8 units. Final exam required.

IAS 197 Field Studies 1 - 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings.**Prerequisites:** Upper division standing and consent of instructor.

Supervised experience relevant to specific aspects of international and area studies in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 198 Directed Group Study 1 - 4 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings.

Student initiated course, the content of which is approved by faculty in charge.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 199 Supervised Independent Study and Research for Undergraduates 1 - 3 Units**Department:** International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings with faculty sponsor.**Prerequisites:** Consent of instructor.

Written proposal must be approved by a faculty adviser. Enrollment restrictions apply; see the Introduction to Courses and Curricula section of this catalog.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 202 Seminar in Portuguese Studies 1 Unit**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

Portuguese immigrants have exerted a strong imprint on the landscape and culture of California and other regions of North America, and the study of this diaspora continues to be a lively topic of scholarly research. Likewise, the rapid transformations of Portugal and Portuguese society as it has emerged from the stultifying effects of decades of dictatorship and integrates into the EU make for compelling research topics. The strong parallels between the Mediterranean-climate landscapes of Portugal and California provide excellent opportunities for comparative studies in environment and human adaptations in environment. This seminar provides a forum for the presentation and discussion of ongoing research on topics in Portuguese studies by Berkeley faculty and graduate students, as well as visiting scholars and fellows.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kondolf

IAS 206 Intermediate Microeconomic Theory 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Economics 1 or equivalent.

This course is designed as a comprehensive overview of intermediate microeconomic theory. It covers a number of topics including consumer and demand theory, firm, production, and cost theory, competitive market theory, imperfect competition, welfare economics, choice under uncertainty, and information. All analysis conducted in the course relies on graphical and algebraic techniques. Outside reading and discussion sections will demonstrate the applicability of the models covered in class to topics with an international dimension, such as the setting of tariffs, cartel behavior, and international trade.

Students will receive no credit for 206 after taking Economics 100A, 101A, Undergraduate Business Administration 101A, Environmental Economics and Policy 100 or Business Administration 110. Final exam not required. Instructor: Aufhammer

IAS 207 Intermediate Macroeconomic Theory 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Economics 1 or equivalent.

This course is designed as a comprehensive overview of intermediate macroeconomic theory focusing on economic growth and international economics. It covers a number of topics including history of economic growth, industrial revolution, post-industrial revolution divergence, flexible-price and sticky-price macroeconomics, and macroeconomic policy. Course is structured for majors in AIS and other non-economic social science majors.

Students will receive no credit for 207 after taking Economics 100B, 101B, Undergraduate Business Administration 101B, or Business Administration 111. Final exam not required. Instructor: Hsieh

IAS C229/LD ARCH C229 Mediterranean-Climate Landscapes 1 - 3 Units**Department:** International and Area Studies; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture/seminar/studio per week.

Comparative study of environmental conditions and human responses thereto in California and other Mediterranean-climate regions, with intensive treatment of a topic in environmental sciences, policy, planning, management, and/or landscape architecture, with application to California, Portugal, or other Mediterranean-climate regions. Students collect and analyze relevant data, synthesize, and complete technical reports, plans, and/or designs.

Final exam not required. Instructor: Kondolf

IAS 230 Cross-Listed Topics 1 - 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Variable format.**Prerequisites:** Consent of instructor.

This course is designed to accommodate cross-listed courses offered through other departments, when the content of the courses is applicable to the graduate program in International and Area Studies. Content varies from course to course.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 240 Special Topics 2 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week for 8 weeks.**Prerequisites:** Consent of instructor and graduate-level standing.

A short course designed to provide a vehicle to take advantage of short-term visitors coming to campus who have considerable expertise in areas of interest to International and Area Studies graduate students. Topics will vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 250 Graduate Studies in International and Area Studies 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor and graduate-level standing.

Graduate multidisciplinary research in current issues and topics of international and area studies. Seminars will focus on specific geographical areas with appropriate comparative material included. A major research project is required as well as class presentations. Topics change each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 255 Rotary Peace Fellows Seminar 2 - 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Seminar per week for 15 weeks.

Graduate seminar specifically focused on issues of peace, conflict resolution, human rights, and other topics relevant to the scope of study represented by the Rotary Peace Fellows. Seminars will include weekly meetings, readings, presentations, and discussions. Assignments will include both individual projects and group projects of appropriate scope and depth reflective of unit value of each offering.

Final exam not required.

IAS 292 Directed Advanced Research 2 - 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual weekly meetings.**Prerequisites:** Consent of instructor and graduate-level standing.

This course is intended to provide supervision in preparation of a major research paper on international and area studies topics. The topic should be agreed upon in advance by both the student and faculty sponsor and generally will be topics not covered in other existing course work. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

IAS 299 Directed Reading 1 - 4 Units**Department:** International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual weekly meetings.**Prerequisites:** Consent of instructor and graduate-level standing.

Individual conferences intended to provide directed reading in subject matter not covered by available seminar offerings. Final exam not required.

IAS 375 Professional Training: Teaching in IAS 2 Units**Department:** International and Area Studies**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Appointment as a graduate student instructor in one of the International and Area Studies Teaching Programs.

This course is intended to prepare students from the various social science disciplines to be instructors in interdisciplinary/multi-departmental courses. It will serve as a forum to discuss problems and create innovative solutions to these problems. Focusing on course construction and operation, specialists from various disciplines will discuss strategies for moving outside of their areas of specialization and into broader areas of international and area studies. Graduate students will be provided training in building their own interdisciplinary courses from the ground up. Organizing syllabi, preparing lectures, devising written assignments, leading discussion sections, constructing evaluative mechanisms and grading them, will all be covered over the course of the semester. Course may be repeated for a maximum of 8 units. Course may be repeated for a maximum of 8 units. Required for graduate student instructors in International Area Studies major programs for the first time, and is strongly recommended for all IASTP GSIs. Final exam not required. Formerly known as International and Area Studies 301.

Iranian (IRANIAN)

IRANIAN 110A Middle Persian 3 Units**Department:** Iranian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Persian 100A-100B or equivalent; background in German or French recommended, but not required.

Manichaean Middle Persian texts, with an introduction to Pahlavi.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor:

100A-100B-100C.

IRANIAN 201A Iranian Philology 3 Units**Department:** Iranian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110A-110B, 111A-111B, or consent of instructor.

Reading of texts in Avestan, western Middle Iranian, and Sogdian, taken from Zoroastrian, Manichaean, and Buddhist texts.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

IRANIAN 201B Iranian Philology 3 Units**Department:** Iranian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110A-110B, 111A-111B, or consent of instructor.

Reading of texts in Avestan, western Middle Iranian, and Sogdian, taken from Zoroastrian, Manichaean, and Buddhist texts.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Italian Studies (ITALIAN)

ITALIAN 1 Elementary Italian 5 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 10 hours of Lecture and 2 hours of Laboratory per week for 8 weeks.

Basic grammar for beginners: Part one.

Final exam required.

ITALIAN 1G Reading Italian for Graduate Students 0 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

Basic grammar, reading comprehension, and translation.

Final exam not required.

ITALIAN 2 Elementary Italian 5 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 10 hours of Lecture and 2 hours of Laboratory per week for 8 weeks.**Prerequisites:** 1 or 14A.

Basic grammar for beginners: Part two.

Final exam required.

ITALIAN 3 Intermediate Italian 5 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks. 10 hours of Lecture per week for 8 weeks.**Prerequisites:** 2

Grammar review, reading, and written composition.

Final exam required.

ITALIAN 4 Advanced Italian 5 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 3

Selected readings in modern Italian prose; a review of the essentials of grammar; written and oral compositions.

Final exam required.

ITALIAN R5A Reading and Composition 4 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Final exam required.

ITALIAN 102 Italian through Theater: Advanced Language in Performance 4 Units**Department:** Italian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of rehearsal time during RRR Week in preparation for the final performance and a writ10 final examination.**Prerequisites:** Italian 4 or departmental placement.

In this course we will analyze, interpret, adapt and perform a wide range of Italian theatrical texts. You will gain an appreciation for the power of language; you will learn to analyze a dramatic text and a character; you will develop self-confidence in speaking, improving diction and pronunciation; you will learn about the social and historical contexts of selected plays, and you will enjoy the benefits of a unique collaborative learning experience.

Course Objectives: In this course we will analyze, interpret, adapt and perform a wide range of Italian theatrical texts. Theater provides a uniquely interactive experience, and as such it represents a powerful, holistic approach to language learning. You will gain an appreciation for the power of language, you will learn to analyze a dramatic text and a character, you will develop self-confidence in speaking, improving diction and pronunciation, you will learn about the social and historical contexts of selected plays, and you will enjoy the benefits of a unique collaborative learning experience.

There will be a written final examination in addition to participation in a group performance. The final performance may be part of Words in Action, a multilingual student production celebrating linguistic diversity at UC Berkeley, which takes place at the Chevron Auditorium in the International House every April. The performance may also be combined with an end of semester party for undergraduates in the Italian Studies Department. More detailed information will be given on the first day of class. No acting experience will be necessary.

JAPAN 1AL Supplementary Work in Listening--Elementary 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

Designed to supplement 1A-1B, respectively, in order to facilitate students' listening proficiency. 1AL will cover a variety of listening strategies. 1BL is a continuation of 1AL where students will apply these strategies in listening activities.

Final exam not required.

JAPAN 1AS Supplementary Work in Kanji 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** 1AS is prerequisite to 1BS.

A course designed to be taken concurrently with 1A or 1B to help students improve overall kanji performance. The course will make the kanji learning process easier by providing exercises and background information about the relationships between characters and how they function.

Final exam not required.

JAPAN 1B Elementary Japanese 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A is prerequisite to 1B.

In this course, students will develop basic communication skills in Japanese and an understanding of Japanese society and culture. Students will learn vocabulary and grammar structures that will enable them to talk about themselves, their studies, their family and friends, the weather, and many other topics. Students will learn how to read and write in Japanese from the onset, learning approximately 150 (Chinese characters) by the end of each semester.

Students will receive no credit for 1A-1B after taking 1. Final exam not required. Instructor: Aoki

JAPAN 1BL Supplementary Work in Listening--Elementary 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

Designed to supplement 1A-1B, respectively, in order to facilitate students' listening proficiency. 1AL will cover a variety of listening strategies. 1BL is a continuation of 1AL where students will apply these strategies in listening activities.

Final exam not required.

JAPAN 1BS Supplementary Work in Kanji 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** 1AS.

A course designed to be taken concurrently with 1A or 1B to help students improve overall kanji performance. The course will make the kanji learning process easier by providing exercises and background information about the relationships between characters and how they function.

Final exam not required.

JAPAN 7A Introduction to Pre-Modern Japanese Literature and Culture 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course provides an overview of Japanese literature and cultural history, from the seventh to the 18th century. 7A will begin with Japan's early myth-history, , and its first extant poetry anthology, , which show the first stages of transition from a preliterate, communal society to a highly developed courtly culture. Readings from noblewomen's diaries, poetry anthologies, and a selection of chapters from the classical Japanese literary masterpiece , offer a window into that courtly culture as its height of refinement. We will examine the intermingling traces of oral culture and high literary art in popular tales from the Kamakura period and explore the early representations of samurai heroism in military chronicles and medieval noh drama. After considering the development of linked verse in late medieval times, we will read several types of vernacular literature that emerged in the urban culture of the early modern Edo period, including the poetic diaries of the haiku poet Basho. This course does not assume or require any previous exposure to or course work in Japanese literature, history, or language.

Students will receive no credit for 7A after taking 182A. Students can remove a deficient grade in 182A by taking 7A. Final exam required.

JAPAN 7B Introduction to Modern Japanese Literature and Culture 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An introduction to Japanese literature in translation in a two-semester sequence. 7B provides a survey of important works of 19th- and 20th-century Japanese fiction, poetry, and cultural criticism. The course will explore the manner in which writers responded to the challenges of industrialization, internationalization, and war. Topics include the shifting notions of tradition and modernity, the impact of Westernization on the constructions of the self and gender, writers and the wartime state, literature of the atomic bomb, and postmodern fantasies and aesthetics. All readings are in English translation. Techniques of critical reading and writing will be introduced as an integral part of the course. Students will receive no credit for 7B after taking 182B. Students can remove a deficient grade in 182B by taking 7B. Final exam required.

JAPAN 10 Intermediate Modern Japanese--Intensive 10 Units**Department:** Japanese**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of Lecture and 5 hours of Laboratory per week for 10 weeks.**Prerequisites:** 1B, 8.

This course is the equivalent of 10A-10B offered in the regular academic year.

Final exam not required. Formerly known as 20.

JAPAN 10A Intermediate Japanese 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1B; 10A is prerequisite to 10B.

In this course, students will learn how to integrate the basic structures and vocabulary that they acquired in their first year so they can communicate and comprehend reading materials. They will study new structures and vocabulary needed to enhance their language skills. While aural/oral skills are continuously emphasized, an increased amount of reading and writing will also be required. Each course will introduce approximately 150 new . Students will receive no credit for 10A-10B after taking 10. Final exam not required. Instructor: Takaku

JAPAN 10AG Supplementary Work in Grammar - Intermediate 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

These supplementary courses are designed for students who are concurrently enrolled in 10A and 10B to enable their acquisition of a better understanding of Japanese grammar in general and clause linkage in particular.

Final exam not required.

JAPAN 10AS Supplementary Work in Kanji--Intermediate 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** 10AS is prerequisite to 10BS.

These supplementary courses are designed for students who are concurrently enrolled in 10A and 10B to acquire a better understanding of writing system and to improve overall performance.

Final exam not required.

JAPAN 10B Intermediate Japanese 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. JAPAN 10BG Supplementary Work in Grammar - Intermediate 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

These supplementary courses are designed for students who are concurrently enrolled in 10A and 10B to enable their acquisition of a better understanding of Japanese grammar in general and clause linkage in particular.

Final exam not required.

JAPAN 10BS Supplementary Work in Kanji--Intermediate 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

These supplementary courses are designed for students who are concurrently enrolled in 10A and 10B to acquire a better understanding of writing system and to improve overall performance.

Final exam not required.

JAPAN 10X Intermediate Japanese for Heritage Learners 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed specifically for heritage learners who possess high fluency in casual spoken Japanese but little reading and writing abilities. It introduces formal speech styles, reinforces grammatical accuracy, and improves reading and writing competencies through materials derived from various textual genres. Students will acquire the amounts of vocabulary, grammar, and kanji equivalent to those of 10A-10B.

Students will receive no credit for 10X after taking 10B. Final exam not required.

JAPAN 24 Freshman Seminar 1 Unit**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week for 15 weeks or 2 hours of seminar per week for 8 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

JAPAN 98 Directed Group Study for Lower Division Students 1 - 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Lower division standing, 3.5 GPA.

Small group instruction in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

JAPAN 99 Independent Study for Lower Division Students 1 - 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Lower division standing, 3.5 GPA.

Independent study in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

JAPAN 100 Advanced Modern Japanese Intensive 10 Units**Department:** Japanese**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of Lecture and 5 hours of Laboratory per week for 10 weeks.**Prerequisites:** 10B or 20.

This course is the equivalent of 100A-100B offered in the regular academic year.

Final exam required. Formerly known as 30, 100AB.

JAPAN 100A Advanced Japanese 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B; 100A is prerequisite to 100B.

This course aims to develop further context-specific skills in speaking, listening, reading, and writing. It concentrates on enabling students to use acquired grammar and vocabulary with more confidence. Course materials include the textbook, supplemented by newspaper and magazine articles and short stories to provide insight into Japanese culture and society.

Students will receive no credit for 100A-100B after taking 100. Final exam not required.

JAPAN 100B Advanced Japanese 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B; 100A is prerequisite to 100B.

This course aims to develop further context-specific skills in speaking, listening, reading, and writing. It concentrates on enabling students to use acquired grammar and vocabulary with more confidence. Course materials include the textbook, supplemented by newspaper and magazine articles and short stories to provide insight into Japanese culture and society.

Students will receive no credit for 100A-100B after taking 100. Final exam not required.

JAPAN 100S Japanese for Sinologists 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing; 10B and Chinese 100B or equivalents.

Students will be trained to read, analyze, and translate modern Japanese scholarship on Chinese subjects. A major purpose of the course is to prepare students to take reading examinations in Japanese. The areas of scholarship to be covered are: politics, popular culture and religion, sociology and history as well as areas suggested by students who are actively engaged in research projects. Two readings in each area will be assigned, one by the instructor and the second by a student participant. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN 100X Advanced Japanese for Heritage Learners 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 10X.

This course helps heritage learners of Japanese who have completed 10X to develop further their linguistic and cultural competencies. More sophisticated linguistic forms are introduced and reinforced while dealing with various socio-cultural topics. Close reading knowledge and skills, formal and informal registers, and different genres of Japanese reading and writing are practiced. The materials covered are equivalent to those of 100A-100B.

Students will receive no credit for 100X after taking 100B. Final exam not required.

JAPAN 101 Fourth-Year Readings: Social Sciences 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or consent of instructor.

This course provides further development of reading, writing, speaking, and listening skills to enable students to express their points of view and construct argumentative discourse. Readings include Japanese newspapers, magazines, and a selection of Japanese literature as sources of discussions. Students learn various writing styles and in-depth aspects of Japanese culture.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN 102 Fourth-year Readings: Japanese Culture 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or consent of instructor.

This course provides further development of reading, writing, speaking, and listening skills to enable students to express their points of view and construct argumentative discourse. Students read a variety of Japanese texts as sources for discussions to deepen their understanding of Japanese society and people.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN 103 Fourth-Year Readings: Japanese Literature 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or consent of instructor.

This course provides further development of reading, writing, speaking, and listening skills to enable students to express their points of view and construct argumentative discourse. In addition to Japanese literature, readings include newspaper articles and other texts as sources of discussions in order to become familiar with various writing styles and learn more aspects of Japanese society.

Final exam required.

JAPAN 104 Fourth-Year Readings: Japanese History 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or consent of instructor.

This course provides further development of reading, writing, speaking, and listening skills to enable students to express their points of view and construct argumentative discourse. Students read a variety of texts on Japanese history as sources for discussions to deepen their understanding of Japanese society and people.

Final exam required.

JAPAN 111 Fifth-Year Japanese A 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 or equivalent; basic knowledge of, and information retrieval skills related to, the Internet.

This course is designed for students who have studied Japanese for at least four years (540 hours). It aims to develop further their reading, writing, speaking, and listening skills so that they can utilize Japanese materials for research and job-related purposes, to present orally the results of their researches, and/or to pursue college-level courses taught in Japanese. Although much of class time will be devoted to reading- and writing-oriented activities, students are expected to participate actively in oral presentations, discussions, and debates in class.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN 112 Fifth-Year Japanese B 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 or equivalent; basic knowledge of, and information retrieval skills related to, the Internet.

This course is designed for students who have studied Japanese for at least four years (540 hours). It aims to develop further their reading, writing, speaking, and listening skills with special emphasis on essay and research paper writing on topics relevant to the student's major or intended career. Part of this written work will become the material on which the student will give an end-of-the-term oral presentation. Students are expected to fully prepare for and dynamically participate in the discussions and debates that occur in class.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN C115/BUDDSTD C115 Japanese Buddhism 4 Units**Department:** Japanese; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

A critical survey of the main themes in the history of Japanese Buddhism as they are treated in modern scholarship. The course covers the transmission of Buddhism from China and Korea to Japan; the subsequent evolution in Japan of the Tendai, Shingon, Pure Land, Nichiren, and Zen schools of Buddhism; the organization and function of Buddhist institutions (monastic and lay) in Japanese society; the interaction between Buddhism and other modes of religious belief and practice prevalent in Japan, notably those that go under the headings of "Shinto" and "folk religion."

Final exam required. Formerly known as Buddhism 115.

JAPAN 120 Introduction to Classical Japanese 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B.

An introduction to classical Japanese, defined as the native language of the ninth to the 14th centuries. The course initially emphasizes the acquisition of the basics of classical Japanese grammar. Thereafter students apply that grammar to the reading and translation of select classical texts, followed by extensive discussion of literary, historical, and religious contexts and aspects of translation theory.

Final exam required.

JAPAN 130 Classical Japanese Poetry 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

An introduction to the critical analysis and translation of traditional Japanese poetry, a genre that reaches from early declarative work redolent of an even earlier oral tradition to medieval and Early Modern verses evoking exquisitely differentiated emotional states via complex rhetoric and literary allusion. Topics may include the poetry of the , , and poetic anthologies, linked verse (), and the of Basho and other Early modern poets.

Final exam required.

JAPAN 132 Pre-Modern Japanese Diary (Nikki) Literature 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

The tradition of Japanese self-reflective literature, composed by both men and women, is long and rich. Topics for this course include highly personal memoirs by court women and poetic travel diaries.

Final exam required.

JAPAN 140 Heian Prose 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

The course focuses on select masterpieces from the Japanese narrative tradition, including Murasaki Shikibu's and Sei Shonagon's .

Final exam required.

JAPAN 144 Edo Literature 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

Critical reading and translation of important literary texts from the Edo period, including poetic diaries, merchant fiction, and drama.

Final exam required.

JAPAN 146 Japanese Historical Documents 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

Writings in the Japanese vernacular constitute only a limited part of the total pre-modern Japanese written corpus. Until the 20th century, the preferred medium for most historical texts and male diaries was Sino-Japanese (kanji). Familiarity with the grammar of this extraordinarily rich tradition is therefore essential for all students of pre-modern Japanese disciplines.

Final exam required.

JAPAN 155 Modern Japanese Literature 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B (may be taken concurrently).

This course is an introduction to Japanese modernism through the reading and discussion of representative short stories, poetry, and criticism of the Taisho and early Showa periods. We will examine the aesthetic bases of modernist writing and confront the challenge posed by their use of poetic language. The question of literary form and the relationship between poetry and prose in the works will receive special attention.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

JAPAN 159 Contemporary Japanese Literature 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B (may be taken concurrently).

This course examines the historical production and reception of key Japanese literary and film texts; how issues of gender, ethnicity, social roles, and national identity specific to each text address changing economic and social conditions in postwar Japan.

Final exam required.

JAPAN 160 Introduction to Japanese Linguistics: Grammar 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B.

This course deals with issues of the structure of the Japanese language and how they have been treated in the field of linguistics. It focuses on phonetics/phonology, morphology, writing systems, dialects, lexicon, and syntax/semantics. Students are required to have intermediate knowledge of Japanese. No previous linguistics training is required.

Final exam required. Instructor: Hasegawa

JAPAN 161 Introduction to Japanese Linguistics: Usage 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B.

This course deals with issues of the usage of the Japanese language and how they have been treated in the field of linguistics. It concentrates on pragmatics, speech varieties (politeness, gender, written vs. spoken), topic management, historical changes, and genetic origins. Students are required to have intermediate knowledge of Japanese. No previous linguistics training is required.

Final exam required. Instructor: Hasegawa

JAPAN 163 Translation: Theory and Practice 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 1 1/2-hours lectures per week.**Prerequisites:** 102 or equivalent.

An overview of the concepts of theoretical, contrastive, and practical linguistics which form the basis for work in translation between Japanese and English through experience. Topics include analysis of the text, process of translating, faithfulness to the text.

Final exam required.

JAPAN C174/BUDDSTD C174 Japanese Buddhism in Diaspora 4 Units**Department:** Japanese; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course focuses on Japanese Buddhism during the late 19th and early 20th centuries in its encounter with modernity, colonialism, and immigration history. Looking at the Japanese diaspora around the Pacific Rim, we will begin with Japanese Buddhism's relationship with the Meiji state, State Shinto, Christianity, and the West. Regions covered include Manchuria, Korea, Hawaii, the U.S., Canada, and Brazil.

Final exam required. Instructor: Williams

JAPAN C175/ANTHRO C125A Archaeology of East Asia 4 Units**Department:** Japanese; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prehistoric and protohistoric archaeology in China, Japan, and Korea.

Final exam required.

JAPAN C176/ANTHRO C125B Archaeology and Japanese Identities 4 Units**Department:** Japanese; Anthropology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course explores stereotypical images of traditional Japanese culture and people through archaeological analysis. Particular emphasis will be placed on changing lifeways of past residents of the Japanese islands, including commoners, samurai, and nobles. Consideration will be given to the implications of these archaeological studies for our understanding of Japanese identities.

Final exam required.

JAPAN 180 Ghosts and the Modern Literary Imagination 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The course examines the complex meanings of the ghost in modern Japanese literature and culture. Tracing the representations of the supernatural in drama, fiction, ethnography, and the visual arts, we explore how ghosts provide the basis for remarkable flights of imaginative speculation and literary experimentation. Topics include: storytelling and the loss of cultural identity, horror and its conversion into aesthetic pleasure, fantasy, and the transformation of the commonplace. We will consider historical, visual, anthropological, and literary approaches to the supernatural and raise cultural and philosophical questions crucial to an understanding of the figure and its role in the greater transformation of modern Japan (18th century to the present).

Final exam required.

JAPAN 181 Mediating Disaster: Fukushima, Before and After 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

The course considers the different literary, social and ethical formations that arise or are destroyed in disaster. It explores how Japanese literature and media, before and after 3:11, attempt to translate the unrepresentable, and in so doing, to create a new type of literacy about 1) trauma and the temporality of disaster, 2) precarity, community and the public sphere and 3) sustainability and ecological scale. The course will pay particular attention to a range of works that explicitly or obliquely reframe iconic or popular representations of disasters in cinema, literature and other media, taking into account of the readiness with which certain cultural forms lend themselves to vistas of disaster.

Final paper.

JAPAN 185 Introduction to Japanese Cinema 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will offer a survey of Japanese cinema from its earliest days to contemporary anime (animated film). Providing the basic tools for analyzing film language, the course begins by analyzing the interactions between early Japanese film and early Hollywood. We then consider the development of Japanese film, discussing style and structures of connotation, figurative meaning and political critique, the uses of the historical past and ideology, and the roles of youth culture and views of the family. We consider the (sometimes anomalous) place of important individual directors, with a special emphasis on 1960s New Wave cinema and experimental film. We also discuss current critical debates about broader trends in Japanese film and culture, as they illuminate the construction and ruptures in notions of Japanese identity.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

JAPAN 188 Japanese Visual Culture: Introduction to Anime 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of film viewing/discussion per week. 6 hours of lecture and 3.5 hours of film viewing/discussion per week for 8 weeks.

This course is an introduction to Japanese animation, or anime, from its earliest forms (in relationship to manga) to recent digital culture, art, and games. We will analyze and study mainly animated feature films and read the critical work they inspired. We will address such issues as cultural memory and apocalyptic imagination, robots and the post-human, cities, nature, and the transnational; gender, shojo, and the aesthetics of "cute," as well as consider specific issues in the theoretical understanding of anime within technology and media theory.

Final exam required. Instructor: O'Neill

JAPAN 189 Topics in Japanese Film 4 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 to 3 hours of discussion (viewing) per week. 8 hours of lecture and 4 to 6 hours of discussion (viewing) per week for 6 weeks.

Selected topics in the study of Japanese film.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

JAPAN H195A Honors Course 2 - 5 Units**Department:** Japanese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Hours to be arranged.**Prerequisites:** Senior honors standing in East Asian Languages, 3.5 GPA in major, 3.3 overall.

Directed independent study and preparation of senior honors thesis.

Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 1 hour of Discussion per week for 15 weeks.

The course is intended to give Jewish studies minors a general introduction to the field through a survey of eight major phases of Jewish cultural experiences. Considered in chronological order and embracing several different relevant disciplines (history, literature, language, popular culture) covering major themes, phases, or periods, the course offers subject matter from the Bible to the modern period. Each of the lecturers will have selected one or two articles or chapters from books relevant to his/her subject for students to read.

Final exam required.

JEWISH 120 Special Topics in Jewish Studies 2 - 3 Units**Department:** Jewish Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.

Course will focus on specific areas or topics in Jewish studies through a combination of lectures, term papers, and examinations. Instructors and topics to vary from semester to semester. Consult Jewish Studies website for updated course descriptions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. final grade will be based on two inputs: participation in class, and completion of a substantive research paper on a Jewish law topic to be determined in consultation with the instructor.

JEWISH 198 Directed Group Study 1 - 4 Units**Department:** Jewish Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks.**Prerequisites:** Junior or senior standing.

Organized group study on topics selected by upper division students under the sponsorship and direction of the Jewish Studies faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JEWISH 200 Advanced Topics in Jewish Studies 4 Units**Department:** Jewish Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Graduate seminar will focus on specific areas or topics in Jewish studies through a combination of close reading of texts, student presentation, and informal lectures. Instructors and topics to vary semester to semester. Consult department website for updated course descriptions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JEWISH 290 Modern Jewish Scholarship: History and Practice 4 Units**Department:** Jewish Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar per week.**Prerequisites:** This is the required integrative course for doctoral students pursuing the Designated Emphasis in Jewish Studies. It is open to other doctoral students by permission of instructor. This seminar, specifically designed as the 'integrative course' for students pursuing the Designated Emphasis in Jewish Studies, will offer an in-depth introduction to some of the central trends and personalities in modern Jewish historiography. We will read (and read about) the founders of modern Jewish historiography, and then explore some contemporary trends in Jewish scholarship, according to the disciplinary affiliations of the students in the class.

In addition to weekly assignments, students will write a 7000-word paper suitable for publication in a scholarly journal.

Final exam required. Instructor: Efron

JEWISH 296 Joint Doctoral Program Dissertation Research and Writing Credit 1 - 12 Units**Department:** Jewish Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks.**Prerequisites:** Advancement to doctoral candidacy.

The course is offered to graduate students in the Joint Doctoral Program in Jewish studies to provide course credit for conducting dissertation research and dissertation writing, only after the student has successfully advanced to candidacy.

Final exam not required. Instructor: Alter

JEWISH 299 Individual Study and Research - Jewish Studies 1 - 5 Units**Department:** Jewish Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 5 hour of Independent study per week for 15 weeks. 1.5 to 9 hours of Independent study per week for 8 weeks.**Prerequisites:** Graduate standing and consent of instructor.

Topics and instructors will vary depending upon area of study. Special individual study for qualified graduate students only. Individual study and research, including fieldwork, in consultation with instructor on subject matter not covered in scheduled course offerings.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JEWISH 602 Joint Doctoral Program Independent Study 1 - 8 Units**Department:** Jewish Studies**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks.**Prerequisites:** Advancement to doctoral candidacy.

The course is offered to graduate students in the Joint Doctoral Program in Jewish studies to provide opportunities for undertaking independent studies prior to advancement to candidacy.

Final exam not required. Instructor: Alter

Journalism (JOURN)

JOURN 24 Freshman Seminars 1 Unit**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

JOURN 39H Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

JOURN 39J Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

JOURN 39K Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

JOURN 98 Directed Group Study in Journalism 1 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN C101/L & S C101 Edible Education: The Rise and Future of the Food Movement 2 Units**Department:** Journalism; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

As a subject, food is multi-disciplinary, drawing on everything from economics and agronomy to sociology, anthropology, and the arts. Each week experts on organic agriculture, school lunch reform, food safety, animal welfare, hunger and food security, farm bill reform, farm-to-school efforts, urban agriculture, food sovereignty, local food economies, etc. will lecture on what their areas of expertise have to offer the food movement to help it define and achieve its goals.

Final exam not required. Instructors: Henderson, Pollan

JOURN 102AC The Wire: When Journalism Meets Drama 3 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The goal of the class is to make students aware of how the issues of crime, policing, and identity are framed and mediated through television, as well as through conventional journalism. The class will explore the relationship between real crime, popular fiction, and television, specifically *The Wire*.

Satisfies the American Cultures requirement

Final exam not required. Instructor: Drummond

JOURN C103/L & S C103 Edible Education: Telling Stories About Food and Agriculture 2 Units**Department:** Journalism; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

As the costs of our industrialized food system become impossible to ignore, a national debate over the future of food and farming has begun. Telling stories about where food comes from, how it is produced (and might be produced differently) plays a critical role in bringing attention to the issues and shifting politics. Each week a prominent figure in this debate explores what can be done to make the food system healthier more equitable, more sustainable, and the role of storytelling in the process.

Final exam not required. Instructor: Pollan

JOURN C141/MEDIAST C103 Understanding Journalism 4 Units**Department:** Journalism; Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 7 hours of Lecture per week for 8 weeks.**Prerequisites:** Media Studies major or consent of instructor.

In this course, students learn why sound journalism is so important to a healthy, working democracy. Journalism is rapidly changing. The class will give a context to those changes and provide an overview of contemporary journalistic institutions. Students will examine how news is made, who decides what news is, who makes it, who profits by it, and what rules guide how reporters and editors work. Central issues affecting journalism, such as bias and professionalism, will be discussed. The class is not specifically intended for future journalists, but students will learn why pursuing a career in journalism can be so fulfilling and thrilling, as well as becoming better consumers of the news.

Final exam required. Instructor: Goldstein

JOURN 197 Field Study in Journalism 1 - 2 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Fieldwork per week for 15 weeks. 1 to 2 hour of Fieldwork per week for 8 weeks. 1 to 2 hour of Fieldwork per week for 6 weeks.

Supervised experience in the practice of journalism in off-campus organizations. Individual meetings with faculty sponsor and written reports required. See Additional Information, "Field Study and Internships." Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 198 Directed Group Study in Journalism 1 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Seminar with 3 hours of lecture and discussion per week.**Prerequisites:** Total grade point average of not less than 3.0 and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 199 Supervised Individual Study and Research 1 - 4 Units**Department:** Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Supervised individual study and research.**Prerequisites:** Total grade point average of not less than 3.0 and consent of instructor.

Enrollment restrictions apply; see department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 200 Reporting the News 5 - 7 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Seminar and 15 hours of Fieldwork per week for 15 weeks.

This course is an intensive 15-week research and workshop experience. It provides the foundation for the rest of the curriculum offered at the J-School. 200 Stresses hard news reporting, writing, and editing. In small classes faculty members with extensive experience in newspaper reporting work to develop the scope and quality of the reporting and writing ability of their students. The researching, reporting, rewriting, and editing schedule is extensive and students work on a range of stories covering a broad spectrum of subjects. The aim is to produce professional level work--publishable newspaper stories--in an environment and timeline similar to a professional environment.

Final exam not required. Instructors: Chavez, Drummond, Henry, Gorney, Gunnison, Rasky

JOURN 201 Advanced News Reporting 3 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar and 8 hours of field work in news reporting per week.**Prerequisites:** 200 or consent of instructor.

Advanced study of reporting in more complex subject areas and more sophisticated writing styles.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 209 Multimedia Reporting Bootcamp 1 Unit**Department:** Journalism**Course level:** Graduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This is a required one-week intensive multimedia training workshop at the beginning of the fall semester to equip all first-year graduate journalism students with basic knowledge of digital storytelling techniques as well as the use of multimedia equipment and editing software to produce multimedia content. The objective is to train all students—regardless of their planned area of specialty—with some foundational digital skills to be applied during their reporting for the school's local online news sites in the J200 Intro To Reporting class. The concepts and skills taught during the workshop also will be reaffirmed and expanded over the semester in the Multimedia Skills class.

Final exam not required. Instructors: Hernandez, Grabowicz

JOURN 210 News Photography 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of lecture/discussion plus 4 hours of laboratory and field assignments per week.**Prerequisites:** Priority to journalism graduate students.

Fundamentals of photography and taking news photography.

Final exam not required. Instructor: Light

JOURN 211 News Reporting Laboratory 2 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 4 hours of Lecture per week for 15 weeks.

This course is an intensive laboratory course taken in conjunction with our core reporting class, 200. It is designed to simulate as closely as possible the deadline and production pressures of a modern, multi-media news organization. Students report to the newsroom during the week to receive their reporting assignments. Print, audio, and video elements are gathered, produced, edited, rewritten as necessary and then made available to pre-selected media outlets for publication. Each section will produce a themed final project.

Final exam not required.

JOURN 212 Advanced Radio 1 - 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 275 or consent of instructor.

Radio students may continue to develop their news and production skills in several formats: (1) the reporting and production of the weekly "Inside Oakland" program (broadcast on KALX-FM). Each episode explores a specific theme with focus on the geographic, cultural, and political entity known as Oakland; (2) the collaborative production of a documentary program focusing on a particular topic; (3) the development and production of independent long-form pieces for broadcast on different outlets.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Drummond

JOURN 213 Documentary Photography 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

An exploration of magazine photography as applied to photo essay, day assignments and book projects, as well as content based lectures (location lighting, environmental portraiture, etc.) and critiques. Students work on in-depth assignments that include research, reporting, and photographing. Legal/ethical and business issues are explored, including fund-raising and grant writing to support extended projects.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Light

JOURN 214 Photography Tutorial 2 - 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This photo tutorial will emphasize the technical aspects in photography such as darkroom skills, lighting, cropping, composition, editing, and presentation. Students will be working on weekly assignments as well as a final project that would directly correlate with the material covered in class as well as to the courses taught by Ken Light. The tutorial will encourage students to explore the darkroom and to improve not only their conceptual understanding of the medium, but especially their technical, shooting, and printing, knowledge of photography. Several Photoshop tutorials will also be incorporated in the class for those students who are interested in learning digital photography and its possibilities. The sessions will cover scanning, resolution, and tools applicable to image manipulation, color correction, and output. The Photography Tutorial and its content will be, of course, to a large extent determined by the questions raised by students, their levels of experience in the medium, as well as their final goals.

Final exam not required. Instructor: Chakarova

JOURN 215 Multimedia Skills 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Workshop per week for 15 weeks.

This class teaches the fundamentals of using digital video, audio, and photo equipment, as well as editing digital files. The class is designed to expose students to what it is like to report in a multimedia environment. While primarily for students taking new media publishing courses, the class will be valuable to any student who wants to better prepare for the emerging convergence of broadcast, print, and web media.

Final exam not required. Instructor: Grabowicz

JOURN 216 Multimedia Reporting 2 or 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Workshop per week for 15 weeks.**Prerequisites:** 215 (can be taken concurrently); Dreamweaver, Photoshop, and iMovie or Final Cut Pro.

For journalists, the World Wide Web opens a powerful way to tell stories by combining text, video, audio, still photos, graphics, and interactivity. Students learn multimedia-reporting basics, how the web is changing journalism, and its relationship to democracy and community. Students use storyboarding techniques to construct nonlinear stories; they research, report, edit, and assemble two story projects.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 217 Introduction to Visual Journalism 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

"Visual Journalism" explores narratives as they are designed, produced, and consumed in various digital forms. This course serves as your introduction to visual journalism. There is no question that the modern journalist requires a platform-agnostic mindset, along with a broad set of multi-platform newsgathering skills and fluency in the current tools while also upholding the timeless journalistic standards of news judgment, accuracy, fairness and truth.

Student Learning Outcomes: Students will conclude the course with a focused base of visual journalism knowledge that they can use as a foundation for other courses at the J-School, as well as the basis for effective and informed 'newsroom' discourse and innovation upon graduating.

^Students will explore the topic of visual journalism both critically and theoretically through readings, critical thought, and practical, hands-on development with digital tools and technologies.

Final exam required. Instructor: Hernandez

JOURN 219 Mini-Special Topics 1 Unit**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 to 3 hours of Workshop per week for 6 weeks. 2 to 3 hours of Workshop per week for 5 weeks. 2 to 3 hours of Workshop per week for 4 weeks.

A four- to six-week intensive workshop mini-course designed to accompany and enhance other courses in the program. Workshop topics vary from semester to semester, but have included Using the Flash Animation Program, Audio Editing with ProTools, Designing Web Databases, Dynamic Web Page Design, and Using Geographic Information System Programs.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 220 Coding For Journalists 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Prerequisites: Students must have completed the Digital News Packages class in the fall. Students who have not taken this course should contact the instructor for exceptions to the prerequisite. Basic knowledge of jQuery is highly encouraged.

This course is an introduction to programming concepts as they relate to the journalism industry. The goal of this course is to equip students with a foundational technical literacy to construct interactive online stories such as data visualizations, infographics, maps, multimedia packages, games or innumerable other types of projects students may conceive.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Rue

JOURN 221 Introduction to Data Visualization 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This weekly three-hour course will explore the skills needed to find, clean, analyze and visualize data. The class consists of two hours of instruction and one hour of supervised lab time working on directed projects. Students will create a final project suitable for publication. The focus will be on free and open source tools that can immediately be applied to other projects and professional work.

Course may be repeated for credit when topic changes. Final exam required. Instructor: De Groot

JOURN 222 Building Interactive Digital News Packages 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This class teaches students how to develop interactive online news packages using best practices in design and web development. The course focuses on story structure and production of content and will cover the following topics:

Best practices in developing interactive multimedia stories online;
Design fundamentals and typography for online content;
HTML and CSS for designing and constructing web projects;
jQuery coding for adding interactivity to online content.

Course may be repeated for credit when topic changes. Final exam required. Instructors: Grabowicz, Hernandez, Rue

JOURN 223 Advanced Visual Journalism 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

"Visual journalism" explores narratives as they are designed, produced, and consumed in various digital forms. Students will have the opportunity to explore various digital technologies, create and produce narratives, and analyze stories in digital forms. DSLR video narrative, animated visual explainers, data visualization design will all be explored and will serve as the primary areas of inquiry for this project-driven course.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Hernandez

JOURN 226 Science Reporting 3 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion and 8 hours of field work per week.**Prerequisites:** For journalism students, 200 or equivalent; for others, consent of instructor.

Advanced study of methods of reporting developments in such fields as science, education, health, or the environment.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Pollan

JOURN 228 Political Reporting 3 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion and 8 hours of field work per week.**Prerequisites:** For journalism students, 200 or equivalent; for others, consent of instructor.

Study and discussion of politics and practice in reporting political events and campaigns.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Rasky

JOURN 230 Business Reporting 3 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion and 8 hours of field work per week.**Prerequisites:** For journalism students, 200.

Reporting and writing of business, financial, and consumer affairs.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 234 International Reporting 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed for students who are interested in foreign reporting. Course will include a broad overview of the issues that need to be researched when reporting on the politics, economics, and social issues of a foreign country. Past classes have traveled to Mexico, China, Cuba, Hungary, Ghana, Hong Kong, India, Japan, Venezuela, Ecuador, and Peru.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Chavez, Wakeman

JOURN 237 Reporting on Japan 1 or 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Each semester, this course will focus on a different aspect of Japan.

Among other topics, the class may discuss Japan's changing cultural standards or its developing social problems, its political shifts or its history, the changing economy or the shifts in its regional relations and its global role. Through guest speakers--including noted experts, writers, businessmen, and diplomats--and roundtable discussions, students will develop a greater knowledge of the country for use when reporting.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Wakeman

JOURN 242 Profiles 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200 or consent of instructor.

In this workshop students use the profile form to develop a variety of skills that may be helpful whenever undertaking an ambitious story: figuring out what the story is and why you are writing it; interviewing; observation; background reporting; structuring material; finding your voice; describing people without resorting to cliché; crafting a lead from what seems an infinite number of possibilities. Readings will be from great magazine and newspaper profile writers.

Final exam not required. Instructor: Gorney

JOURN 243 Long-Form Writing 3 or 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200 or consent of instructor.

This class will trace the process of writing long-form pieces: how writers choose their sources, gather information, organize their material, and decide whether or not to believe what people tell them. Students will act as an editorial board for each other. Readings include profiles, books and book excerpts, Pulitzer-winning newspaper features, and magazine pieces from a variety of outlets. All assignments are intended for publication.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Gorney, Pollan

JOURN 254 Opinion Writing 2 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

The reporting, writing, and editing of newspaper editorials and op-ed essays.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rasky

JOURN 255 Law and Ethics 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 200 or consent of instructor.

The first eight weeks will concentrate on First Amendment and media law, including libel and slander, privacy, free press/fair trial conflicts, and litigation arising from controversial reporting methods. The closing weeks will focus on ethical dilemmas faced by reporters and editors. Using case studies, readings and guest lecturers, the course examines the murkier conflicts that don't necessarily make it to court but nevertheless force difficult newsroom decision-making.

Final exam not required.

JOURN 260 Investigative Reporting for TV and Print 2 or 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Students will be required to investigate leads that are received by the faculty, and prepare briefing papers for the class to introduce guest speakers. They will work on researching and reporting assignments related to documentary productions and print stories for different outlets. "Sources," people with information critical to developing a story, need to be developed. The responsibilities of a reporter engaged in developing sources will be a constant theme of the seminar.

Final exam not required. Instructors: Bergman, Gunnison

JOURN 275 Radio News Reporting 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion and 4 hours of field and laboratory work per week.

Study of techniques, practices, and methods of gathering and writing radio news. Students will produce weekly live radio news programs. Enrollment is limited to 15.

Final exam not required.

JOURN 282 Introduction to Television News 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion, 15 hours of laboratory per week and some field work.

Study of the history and institutions of broadcast journalism (nine weeks), practice, techniques of reporting news for radio and television.

Final exam not required.

JOURN 283 Reporting for Television 5 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion and 20-4 hours of laboratory/field work per week.**Prerequisites:** 282 and consent of instructor.

Producing, directing, writing, and videotaping of live weekly television news program.

Final exam not required.

JOURN 284 Documentary Production 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 12 hours of laboratory/field work per week.**Prerequisites:** 282, 283, and consent of instructor.

Production of television documentary news programs.

Final exam not required. Instructor: Else

JOURN 285 Advanced Television Reporting: Longform Television 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, and 15 hours of laboratory/field work per week.**Prerequisites:** 282, 283 and consent of instructor.

Reporting and production of television news magazine stories and programs.

Final exam not required. Instructors: Bieder, Calo

JOURN 286 History of Documentary 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course covers the evolution of American documentary film from 1920 to the present, with special attention to independent productions and documentaries for network television. In the works of Fred Wiseman, Henry Hampton, Lourdes Portillo, Errol Morris, Marlon Riggs, Barbara Kopple, Orlando Bagwell, the Maysles, and the network staff producers, we look at the practical problems of making documentaries for a mass audience. (Required for J-School students who are considering specializing in documentary.).

Final exam not required. Instructor: Else

JOURN 287 Inside Frontline 1 or 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 10 weeks.

This seminar course provides students with the opportunity to meet with and discuss projects with producers and reporters. Each session will focus on a single documentary episode and take an in-depth look on the development of the story out of an idea, the journalistic approach and methods used by the team, the process of finding and creating the appropriate dramatic structure, and the public impact and critique of the program.

Final exam not required.

JOURN 290 Editing Workshop 2 or 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of seminar and individual meetings per week.**Prerequisites:** Journalism students only; priority to second-year students completing master's project.

It can take a lifetime of writing to learn how to critique and revise your work. Hard as writing can be, rewriting -- breaking back into your own framework, rethinking, re-imagining, and revising -- can be harder yet. Sometimes only an editor can help you gain the distance needed to view your work. No matter how good a journalist you may be, an editor can help you reach another stage in your writing process.

Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 294 Master's Project Seminar 1 - 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** 200 and consent of instructor.

Group meetings plus individual tutorials. Methods of research, organization, and preparation of professional thesis projects. Required of M.J. candidates working on thesis projects during both Fall and Spring semesters.

Final exam not required.

JOURN 297 Field Study in Journalism 1 - 2 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Field study.

Supervised experience in the practice of journalism in off-campus organizations. Individual meeting with faculty sponsor and written reports required. See Additional Information, "Field Study and Internships." Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 298 Group Study - Special Topics 2 - 4 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of group meeting per week.

Specialized seminar topics in reporting and writing.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 299 Individual Study 1 - 3 Units**Department:** Journalism**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual study.

Supervised individual study and research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

JOURN 601 Individual Study for Master's Students 1 - 8 Units**Department:** Journalism**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual study.**Prerequisites:** Course is restricted to journalism students.

Individual preparation or study in consultation with faculty adviser. Study ultimately leads to the completion of the Master's Project/Examination.

Units may not be used to meet either unit or residence requirements for a master's degree.

Course may be repeated for credit with consent of graduate adviser.

Course may be repeated for credit when topic changes. Final exam not required.

Khmer (KHMER)

KHMER 1A Introductory Khmer 5 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.

Provides a command of the basic structures of standard spoken Cambodian and tools for reading and writing elementary texts. Through use of computer-based materials, a textbook, and communicative practice, students gain a foundation in "survival" spoken Khmer. This involves memorization of question and answer exchanges in Khmer which students are likely to encounter in modern Cambodia. Topics include greetings, speaking to teachers and elders and discussing language learning, talking about family and personal history, and food. Students learn the Khmer alphabet and important sight-words and to read and write simple sentences on everyday topics. Intended for non-native speakers of Khmer with no oral or aural comprehension in the language. Students will also learn important basic behaviors and courtesies necessary for smooth interaction in Khmer society and culture.

Final exam required. Instructors: Smith, F.

KHMER 1B Introductory Khmer 5 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A or equivalent.

Students complete their study of everyday standard Khmer to a "survival" level. While the memorization of vocabulary and common personal exchanges practiced in 1A will make up the majority of material studied, students will have some opportunity to learn to improvise and talk about personal work and research interests in Khmer. Topics include transportation and directions, the world of work, religion, health, and conducting daily life in Cambodia. Students learn to read simple authentic texts such as folk tales, personal letters, forms, and roadside signs. Students continue their study of culturally appropriate behavior in the context of Khmer culture, including notions of "saving face" and maintaining social harmony, and how these are expressed in both spoken language and in one's actions.

Final exam required. Instructors: Smith, F.

KHMER 100A Intermediate Khmer 5 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A-1B or equivalent, or home exposure to Khmer.

Non-native speakers who have completed Beginning Khmer will build spoken proficiency with emphasis on everyday "storytelling" and the expression of emotions, feelings, and opinions. Students will gain experience reading progressively difficult authentic Khmer texts, including folk tales and newspaper articles. Native speakers with family exposure to Khmer will be introduced to the writing system. They will quickly "catch up" with non-native classmates who have studied the writing system before. All students will study important patterns and structures in Khmer grammar and morphology, and gain a foundation in formal spoken Khmer, express opinions and positions, form arguments, and learn to discuss a variety of topics with educated Khmer speakers. These include Khmer religion, village culture, news, and advertising.

Final exam required. Instructors: Smith, F.

KHMER 100B Intermediate Khmer 5 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A.

Students learn to read roadside signs, scholarly articles, and an entire Khmer novel. Topics include current events in Cambodia, Cambodian history and politics, and a basic overview of traditional Khmer literature. Much of this study will be accomplished by working on projects in groups with other students. One such project will involve the preparation and performance of a play based on sections of the modern Khmer novel students read in this course. All students will design and carry out an independent research project on the topic of their choice (which will account for 30% of the final grade), and present their research at the end of the second semester to an audience of their peers, entirely in Khmer.

Final exam required. Instructors: Smith, F.

KHMER 101A Advanced Khmer 3 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Two years of Khmer or consent of instructor.

This course continues the themes and goals of 100B. Students will focus on the same broad topics covered in Intermediate Khmer-- religion, traditional culture, and the language of public information (news and advertising)--but they will learn more advanced vocabulary and grammatical structures necessary for the discussion of these topics with educated native speakers, and read more advanced texts dealing with these topics than the Intermediate students. Additional material beyond the Intermediate curriculum includes reading and analyzing historical folk tales, learning to discuss the rice-farming cycle, and acquiring the tools to discuss research and "development" work in Cambodia at a sophisticated level.

Final exam required. Instructors: Smith, F.

KHMER 101B Advanced Khmer 3 Units**Department:** Khmer**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Two years of Khmer or consent of instructor.

Students will read advanced texts dealing with the topics of politics and history. They will also gain exposure to traditional verse texts, and read, discuss, and undertake group projects based on a variety of modern Khmer short stories. As in the case with Intermediate Khmer, students will also undertake substantial independent study, culminating in a final oral presentation. However, the standard by which both written and oral material will be judged will be much higher for Advanced students. Special attention will be paid to formal speaking style and advanced grammatical structures in Khmer for all students, and colloquial spoken expression for non-native speakers.

Final exam required. Instructors: Smith, F.

Korean (KOREAN)

KOREAN 1 Elementary Modern Korean--Intensive 10 Units**Department:** Korean**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of Lecture and 5 hours of Laboratory per week for 10 weeks. 19 hours of Lecture and 6 hours of Laboratory per week for 8 weeks.

This is the equivalent of 1A-1B offered in the regular academic year.

Students will not receive credit for 1 after taking 1A-1B. Final exam not required. Formerly known as 8.

KOREAN 1A Elementary Korean 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A is prerequisite to 1B; or consent of instructor.

These courses are designed for students who have little or no prior knowledge of the Korean language. With emphasis on speaking, listening, writing, and reading skills, the course will introduce the basic grammar of the Korean language. The courses are also intended to introduce certain cultural aspects through media sources and various activities.

Final exam not required. Instructors: You, Richards

KOREAN 1AX Elementary Korean for Heritage Speakers 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1AX is prerequisite to 1BX; or consent of instructor.

These courses are designed for students who already have elementary comprehension and speaking skills in Korean and have minimum exposure to reading and/or writing in Korean.

Students will receive no credit for 1AX-1BX after taking 1 or 1A-1B. Final exam not required.

KOREAN 1B Elementary Korean 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A is prerequisite to 1B; or consent of instructor.

These courses are designed for students who have little or no prior knowledge of the Korean language. With emphasis on speaking, listening, writing, and reading skills, the course will introduce the basic grammar of the Korean language. The courses are also intended to introduce certain cultural aspects through media sources and various activities.

Final exam not required. Instructors: You, Richards

KOREAN 1BX Elementary Korean for Heritage Speakers 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1AX is a prerequisite to 1BX; or consent of instructor.

These courses are designed for students who already have elementary comprehension and speaking skills in Korean and have minimum exposure to reading and/or writing in Korean.

Students will receive no credit for 1AX-1BX after taking 1 or 1A-1B. Final exam not required.

KOREAN 7A Introduction to Pre-Modern Korean Literature and Culture 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A survey of pre-modern Korean literature and culture from the seventh century to the 19th century, focusing on the relation between literary texts and various aspects of performance tradition. Topics include literati culture, gender relations, humor, and material culture. Texts to be examined include ritual songs, *sijo*, *kasa*, *p'ansori*, prose narratives, art, and contemporary media representation of performance traditions. All readings are in English.

Students will receive no credit for 7A after taking 187A. Students can remove a deficient grade in 187A by taking 7A. Final exam required.

KOREAN 7B Introduction to Modern Korean Literature and Culture 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A survey of modern Korean literature and culture in the 20th century, focusing on the development of nationalist aesthetics in both North and South Korea. Topics include "new woman" narratives, urban culture, colonial modernity, war and trauma, and diaspora. Texts to be examined include works of fiction, poetry, art, and film. All readings are in English. Students will receive no credit for 7B after taking 187B. Students can remove a deficient grade in 187B by taking 7B. Final exam required.

KOREAN 10 Intermediate Korean--Intensive 10 Units**Department:** Korean**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of Lecture and 5 hours of Laboratory per week for 10 weeks. 19 hours of Lecture and 6 hours of Laboratory per week for 8 weeks.**Prerequisites:** 1B or equivalent.

A second-year course in modern Korean. This is the equivalent of 10A-10B offered in the regular academic year.

Final exam required.

KOREAN 10A Intermediate Korean 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1B; 10A is prerequisite to 10B; or consent of instructor.

This is a second-year course in modern Korean with equal attention given to listening, speaking, reading, writing, and cultural aspects of the language.

Final exam not required. Instructor: Ko

KOREAN 10AX Intermediate Korean for Heritage Speakers 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 10AX is prerequisite to 10BX.

Intermediate Korean for students whose Korean proficiency level is higher in speaking than in reading or writing due to Korean-heritage background. Students will receive no credit for 10AX-10BX after taking 10 or 10A-10B. Final exam not required.

KOREAN 10B Intermediate Korean 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1B; 10A is prerequisite to 10B; consent of instructor.

This is a second-year course in modern Korean with equal attention given to listening, speaking, reading, writing, and cultural aspects of the language.

Final exam not required. Instructors: You, Richards

KOREAN 10BX Intermediate Korean for Heritage Speakers 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 10AX is prerequisite to 10BX.

Intermediate Korean for students whose Korean proficiency level is higher in speaking than in reading or writing due to Korean-heritage background. Students will receive no credit for 10AX-10BX after taking 10 or 10A-10B. Final exam not required.

KOREAN 24 Freshman Seminar 1 Unit**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week for 15 weeks. 1.5 hours of seminar per week for 10 weeks. 2 hours of seminar per week for 8 weeks. 3 hours of seminar per week for 6 weeks. 3 hours of seminar per week for 5 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and topics vary from department to department and semester to semester. Enrollment limited to fifteen freshmen. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

KOREAN 84 Sophomore Seminar 1 Unit**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week for 15 weeks. 1 and 1 half hours of seminar per week for 10 weeks. 2 hours of seminar per week for 8 weeks. 3 hours of seminar per week for 6 weeks. 3 hours of seminar per week for 5 weeks.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

KOREAN 98 Directed Group Study for Lower Division Students 1 - 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Lower division standing, 3.5 GPA.

Small group instruction in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

KOREAN 99 Independent Study for Lower Division Students 1 - 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Lower division standing, 3.5 GPA.

Independent study in topics not covered by regularly scheduled courses. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

KOREAN 100A Advanced Korean 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B; 100A is prerequisite to 100B; or consent of instructor.

This is a third-year course in modern Korean with emphasis on acquisition of advanced vocabulary and grammatical structure. Approximately 100 Sino-Korean characters will be introduced in each semester. Students will gain exposure and knowledge of advanced-level Korean by reading authentic texts and writing short compositions, summaries, essays, and critical reviews. Small group discussions will enhance speaking skills. Final exam not required. Instructors: You, Richards

KOREAN 100AX Advanced Korean for Heritage Speakers 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10BX; 100AX is prerequisite to 100BX.

Advanced Korean for students whose Korean proficiency level is higher in speaking than in reading or writing due to Korean-heritage background. Final exam required.

KOREAN 100B Advanced Korean 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B; 100A is prerequisite to 100B; or consent of instructor.

This is a third-year course in modern Korean with emphasis on acquisition of advanced vocabulary and grammatical structure. KOREAN 100BX Advanced Korean for Heritage Speakers 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Advanced Korean for students whose Korean proficiency level is higher in speaking than in reading or writing due to Korean-heritage background. Final exam required.

KOREAN 101 Fourth-Year Readings--Literature 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B.

An advanced course in the reading and analysis of literary texts in modern Korean. Advanced conversation, writing skills, and practice in the use of standard reference tools will also be emphasized, with the goal of preparing students to do independent research in Korean.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

KOREAN 102 Fourth-Year Readings--Social Sciences and History 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B.

An advanced course in the reading and analysis of specialized texts in modern Korean drawn from history, sociology, economics, etc. Advanced conversation, writing skills, and practice in the use of standard reference tools will also be emphasized, with the goal of preparing students to do independent research in Korean.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

KOREAN 111 Fifth-Year Korean A 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102

This course is designed to increase the students' proficiency to advanced-high level in all aspects of modern Korean; it aims to prepare students for research or employment in a variety of Korea-related fields. Text materials are drawn from authentic sources including modern Korean literature, film, intellectual history, and readings on contemporary issues. Radio and TV broadcasts will also be included in the teaching materials. Texts will be selected, in part, according to student interests. With the instructor's guidance, students will conduct research projects based on specialized readings in their own fields of study. The research projects will be presented both orally and in written form at the end of the semester. Final exam required.

KOREAN 112 Fifth-Year Korean B 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102

This course is designed to increase the students' proficiency to advanced-high level in all aspects of modern Korean; it aims to prepare students for research or employment in a variety of Korea-related fields. KOREAN 130 Genre and Occasion in Traditional Poetry 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or equivalent.

This course will examine traditional and poetry, and consider the performative and cultural contexts of compositional practice before the 20th century. The course is intended to introduce key verse forms as well as basic reading knowledge of premodern Korean texts. Topics will vary. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Instructor: Shin

KOREAN 140 Narrating Persons and Objects in Traditional Korean Prose 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is a critical exploration of the broad range of prose literature before the 20th century, including vernacular fiction, memoirs, travel accounts, and essays. Particular attention will be given to narrative styles, issues of personal identity, and a link between literary text and material culture in the development of prose literature before the 20th century. The course is intended as a close reading of key prose narrative works, while functioning simultaneously as an introduction to basic reading knowledge of premodern Korean texts. Topics will vary. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Instructor: Shin

KOREAN 150 Modern Korean Poetry 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or equivalent.

This course will examine the works of major poets in the first half of the 20th century and will consider the formation of modern Korean poetry. Particular attention will be given to the ideas of lyricism, modernism, and the identity of a poet in the context of the colonial occupation of Korea. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Instructor: Shin

KOREAN 170 Intercultural Encounters in Korean Literature 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

This course will explore the moments of intercultural encounters captured in Korean literature. Encounters with foreign cultures and literary reflections on them have emerged as prominent at critical moments of Korean history, such as periods of great social transition or international conflict. In this course, we will be addressing questions concerning how experiences of the encounters of foreign cultures have been represented in Korean literature from the sixteenth through the twentieth century; what their domestic ramifications were, especially in terms of literary genres; and how the transformation of Korean national identity have been imagined and articulated in literary works. Final paper.

KOREAN 180 Critical Approaches to Modern Korean Literature 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One upper division literature course.

This course introduces various critical approaches to modern Korean literature through a set of texts in English translation. Readings will include an assortment of works of fiction, poetry, literary criticism, and visual media. Emphasis is on close reading of texts and literary approaches to them.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Instructor: Shin

KOREAN 185 Picturing Korea 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores the role of modern visual media in shaping geopolitical, cultural, and historical imaginations of Korea during the last hundred years. Drawing examples from photographs, films, and literature, produced in and outside Korea, the course aims to consider the idea of "Korea" primarily via images constructed through transnational cultural networks. Consideration will be given to the relationship between visual media and cultural memory. We will think in particular about the ways in which globally accessible visual media such as photography and film narrate the key local sites of contested memories of colonization, war, and political violence.

Final exam required. Instructor: Shin

KOREAN 186 Introduction to Korean Cinema 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 to 3 hours of viewing per week.

This course offers a historical overview of Korean cinema from its colonial development to its present renaissance. It covers Korean film aesthetics, major directors, film movements, genre, censorship issues, and industrial transformation as well as global circulation and transnational reception. In an effort to read film as sociocultural texts, various topics will be discussed. All readings are in English.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: An

KOREAN 187 History and Memory in Korean Cinema 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 to 3 hours of viewing per week.

This course examines representations of history and memory in contemporary Korean cinema. Korean films have displayed a thematic preoccupation with the nation's tumultuous past by presenting diverse stories of past events and experiences. The course pays close attention to the ways in which popular narrative films render history and memory meaningful and pertinent to contemporary film viewers. All readings are in English.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: An

KOREAN 188 Cold War Culture in Korea: Literature and Film 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 to 3 hours of viewing per week.

This course examines the formation and transformation of global Cold War culture in South Korean literature and film of the 20th century. It pays close attention to representations of the Korean War and its aftermath in literature and cinema, but opens up the field of inquiry to encompass larger sociocultural issues related to the Cold War system manifest in literature and cinema. All readings are in English.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: An

KOREAN H195A Honors Course 2 - 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: Hours to be arranged.

Prerequisites: Senior honors standing in East Asian Languages, 3.5 GPA in major, 3.3 overall.

Directed independent study and preparation of senior honors thesis.

Limited to senior honors candidates in East Asian Languages (for description of Honors Program, see Index).

Final exam not required. Formerly known as Oriental Languages H195A-H195B.

KOREAN H195B Honors Course 2 - 5 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.

Hours and format: Hours to be arranged.

Prerequisites: Senior honors standing in East Asian Languages, 3.5 major GPA, 3.3 overall.

Directed independent study and preparation of senior honors thesis.

Limited to senior honors candidates in East Asian Languages (for description of Honors Program, see Index).

Final exam not required. Formerly known as Oriental Languages H195A-H195B.

KOREAN 198 Directed Group Study 1 - 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Junior standing.

Small group instruction in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

KOREAN 199 Independent Study 1 - 4 Units**Department:** Korean**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Junior standing.

Independent study in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

KOREAN 200 Special Topics in Korean Literature for Graduate Students 2 or 4 Units**Department:** Korean**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing and consent of instructor.

This seminar provides in-depth discussions on a topic germane to Korean and other East Asian literary and cultural studies. Students in the Group in Asian Studies with research interests in Korean literature, intellectual history, and popular culture are particularly recommended to take this course. Students in Chinese and Japanese may take this course for the purpose of comparative examination with the student's main area of research. The course is open to graduate students in all fields, but students should consult with the instructor to determine the viability of this course for the student's overall program of studies. Topics will vary. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Shin

KOREAN 298 Directed Study for Graduate Students 1 - 8 Units**Department:** Korean**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Special tutorial or seminar on selected topics not covered by available courses or seminars.

Final exam not required.

KOREAN 299 Thesis Preparation and Related Research 1 - 8 Units**Department:** Korean**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of thesis supervisor and graduate adviser.

Final exam not required.

KOREAN 601 Individual Study for Master's Students 1 - 8 Units**Department:** Korean**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1.5 to 15 hours of Independent study per week for 8 weeks. 2.5 to 20 hours of Independent study per week for 6 weeks.**Prerequisites:** Consent of graduate adviser.

Individual study for the comprehensive or language requirements in consultation with the graduate adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Final exam not required.

KOREAN 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Korean**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare for various examinations required of candidates for the Ph.D.

Final exam not required.

Landscape Architecture (LD ARCH)

LD ARCH 1 Drawing a Green Future: Fundamentals of Visual Representation and Creativity 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of studio and 2 hours of lecture per week.

This introductory studio course is open to all undergraduate students in the University, who want to investigate the process of drawing as a method to learn how to perceive, observe and represent the environment. This studio will encourage visual thinking as a formative tool for problem solving that provides a means to envision a sustainable future. The focus will be on the critical coordination between hand, mind and idea.

Final review or project. Instructor: Sullivan

LD ARCH 12 Environmental Science for Sustainable Development 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

The scientific basis of sustainability, explored through study of energy, water, food, natural resources, and built environment. Physical/ecological processes and systems, and human impacts from the global scale to local energy/resource use. Energy and water audits, opportunities to increase sustainability of processes/practices. Discussion/lab section involves field data collection/analysis (e.g., habitat characteristics and benthic macro invertebrates in creek, measurement of atmospheric particulate matter concentrations) and integrative sustainability assessment project.

Final exam required.

LD ARCH 24 Freshman Seminars 1 Unit**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

LD ARCH 39A Freshman/Sophomore Seminar 2 - 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

LD ARCH 84 Sophomore Seminar 1 or 2 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.

Prerequisites: At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

LD ARCH 98 Directed Group Study for Freshmen and Sophomores 1 - 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 6 hours of Directed group study per week for 10 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 10 hours of Directed group study per week for 6 weeks.

Prerequisites: Department chair must approve written proposal.

Supervised group studies of various topics relevant to department that are not covered in depth by other courses. Topics may be initiated by students. Open to students in good standing who, in consultation with a faculty sponsor, present a proposal with clearly formulated objectives and means of implementation. Intended for exceptional students. Topics vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

LD ARCH 101 Fundamentals of Landscape Design 5 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** Environmental Design 11A-11B or consent of instructor.

This studio introduces students to the programmatic, artistic, and technical aspects of land form and topographic adjustments to accommodate human use. Topics include pedestrian and vehicular circulation, conservation and addition of plant materials, movement of water, recreation use, and creation of views. Sculptural land forms will be emphasized through the use of topographic plans, sections, and contour models.

Final exam not required.

LD ARCH 102 Case Studies in Landscape Design 5 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 101 or consent of instructor.

This studio stresses the shaping and coordination of ideas from initial concept to complete design product. A product(s) of intermediate scale and complexity (such as a garden, small park, plaza, or campus courtyard) will be developed in detail including the selection of planting, selection of construction materials, and topographic design. Lecture modules on selected professional topics are integrated into this course. Final exam not required.

LD ARCH 103 Energy, Fantasy, and Form 5 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 101, 102, Environmental Design 11A-11B, (Arch 100A or 100B for Architecture students) or by consent of instructor.

This is an undergraduate studio with a central focus on climate modification for energy conservation. We will research historical precedents in order to develop new garden forms for passive green designs. We will also explore how past cultures integrated metaphysics into their gardens as an adjunct to microclimate and habitat design. The contemporary landscape should be a balanced interweaving of proportion, function, comfort, energy conservation, and enlightenment. Additionally, we will study the choreography of space and investigate how to animate the landscape through the creative interpretation of text and film. Many new and exciting opportunities lie ahead for the creation of garden forms that not only conserve energy, but are also works of art and places of spiritual renewal.

Course may be repeated for a maximum of 8 units. Final exam not required. Instructor: Sullivan

LD ARCH 110 Ecological Analysis 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 4 hours of field laboratory per week.

Analysis of environmental factors, ecosystem functions, and ecosystem dynamics, as related to decision-making for landscape planning and design.

Final exam required. Instructor: McBride

LD ARCH 110L Ecological Analysis Laboratory 2 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** Landscape Architecture 110 (may be taken concurrently).

Introduction to field techniques for assessment of landscape factors.

Factors include topography, geology, climate, soil, hydrology, flora, vegetation, and wildlife.

Final exam required. Instructor: McBride

LD ARCH 111 Plants in Design 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Through lecture, research, and studio assignments, this course introduces the use of plants as design elements in the landscape, from the urban scale to the site-specific scale, focusing on the public open space. By analyzing historic, contemporary, and Bay Area examples, the course examines the spatial, visual, and sensory qualities of vegetation, as well as the interplay with ecological functions and engineering uses of plants. Final exam required.

LD ARCH 112 Landscape Plants: Identification and Use 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Fieldwork per week for 15 weeks.

This course is an introduction to the identification and recognition, as well as design applications and uses, of plants in the landscape.

Through lectures, assignments, and fieldwork, the course provides class participants with an appreciation of the importance of vertical vegetation as a design element. Students will be introduced to a variety of built projects and plants commonly used in Bay Area landscapes.

Final exam required. Instructor: Stilgenbauer

LD ARCH 120 Topographic Form and Design Technology 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Studio per week for 15 weeks.**Prerequisites:** 102 or consent of instructor.

Technical, graphic and computational exercises, and studio problems in topographic site design and the shaping of the site for surface drainage.

Final exam not required. Instructor: Jewell

LD ARCH 121 Design in Detail: Introduction to Landscape Materials and Construction 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Laboratory per week for 15 weeks.**Prerequisites:** 101, Architecture 100A, or consent of instructor.

This course introduces the visual and physical characteristics of landscape construction materials including, but not limited to, stone, brick, concrete, metal, asphalt, and wood. Additionally, lectures cover the production and availability of these materials, any existing evaluations on their sustainability, and their potential impact on the immediate environment. Students also learn to utilize standard sources of information on building materials and the terminology typically utilized when choosing and specifying construction materials. They become familiar with dimensional standards for landscape structures, including pavements, stairs, furnishings, retaining walls, freestanding walls, fences, decks, and small overhead structures.

Final exam required. Instructor: Jewell

LD ARCH 122 Environmental Science for Sustainable Development 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/laboratory per week.

Topics include the scientific basis of sustainability, explored through study of energy, water, food, natural resources, and the built environment; physical/ecological processes and systems, and human impacts from the global scale to local energy/resource use; and energy and water audits of the Berkeley campus, opportunities to increase sustainability of processes/practices. Discussion/lab section involves data collection/analysis (e.g., Strawberry Creek, atmospheric particulates) and integrative sustainability assessment projects.

Final exam required.

LD ARCH 130 Sustainable Landscapes and Cities 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

This course introduces the foundations of sustainability most related to the restoration, design, and creation of landscapes and cities. The underlying principles of ecology, nature, and democracy are concretized in centered-ness, connectedness, fairness, sensible status seeking, sacredness, particular-ness, selective diversity, density and smallness, limited extent, adaptability, everyday future, naturalness, inhabiting science, reciprocal stewardship, and pacing.

Final exam required.

LD ARCH 131 Implementation of Sustainable Landscape Design 1 Unit**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/fieldwork per week for 8 weeks. 4 hours of lecture/fieldwork every other week.**Prerequisites:** Minimum of one life science course advised.

Course will explore Bay Area built landscape projects intended to promote sustainable landscapes and urban environments. Site visits plus lectures/discussion. Instructor to present specific problems and how policy, planning, and design can address them. Site visits allow students to examine issues and solutions for sustainable environments. Class meetings include discussion with designers and policy makers as well as readings.

Final exam not required.

LD ARCH 132 Computer Applications in Environmental Design 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3.5 hours of Laboratory per week for 15 weeks.

This course introduces students to the use of computers in Landscape Architecture and Environmental Design. It develops applied computing skills in Web publishing, Computer Aided Design (CAD), image scanning, and Geographic Information Systems (GIS). CAD is emphasized in the first half of the semester and includes: 2D and 3D modeling, object rendering, integration of images, fly-through movies, and solar studies. The rest of the semester expands spatial design, graphics, and virtual modeling by integrating support information from geographic information systems (GIS), digital ortho-photos (DOP/DOQ), and global positioning systems (GPS). Lecture time is spent discussing problems and solutions of data: acquisition, accuracy, representation, modeling, and communication in landscape design. The lab/studio seeks innovative application of technology to medium- to large-scale landscape design problems. The focus of the lab/studio varies from semester to semester, but typical topics include garden design, park design, neighborhood design, open space design, and others.

Final exam required. Instructor: Radke

LD ARCH 132A Computer Applications for Environmental Design 2 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

This course consists of both a lecture and a "hands-on" laboratory session each week. The lecture is structured as a seminar in which the instructor and students discuss problems and CAD solutions in landscape design. The laboratory provides a practical introduction to some tools for spatial data manipulation in CAD.

Final exam required. Instructor: Radke

LD ARCH 134A Drawing Workshop 1 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Studio per week for 15 weeks.

Prerequisites: Environmental Design 11A-11B or consent of instructor. This studio will elaborate on a number of studio themes while introducing the students to a variety of graphic mediums and drawing techniques. Measured drawing procedures (including orthographic projections) will be augmented by figure-ground principles and themes of contrast, color, chiaroscuro, and compositions. On-site and visits to galleries and museums will complement the studio sessions. Final exam not required. Instructor: Hood

LD ARCH 134B Drawing Workshop II 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Prerequisites: Environmental Design 11A-11B or consent of instructor. This course introduces students to digital tools relevant to the discipline of landscape architecture. The course encompasses a series of lectures, lab exercises, and projects designed to equip students with a solid and expandable computing skill base relevant to the learning and practice of landscape architecture. Beyond technical competency, particular emphasis is placed on empowering students to move freely and creatively between software programs as an effective way of representing landscape. Final exam not required. Instructor: Kullmann

LD ARCH 135 The Art of Landscape Drawing 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 4 hours of Studio per week for 15 weeks.

This course develops freehand drawing as an integral part of the creative process and as an expressive design tool. A broad range of exercises is employed to help students progressively gain creativity, skill, and confidence in their drawing. Various media such as ink, colored pencils, and watercolor are explored as a method to design innovative landscapes. A variety of presentation techniques will be investigated for communicating landscape design. In addition to field sketching, there will be excursions to art galleries, artists' studios, and other creative environments. Through the integration of drawing with intuition and imagination, students will be able to bring their visions to reality. Final exam not required. Instructor: Sullivan

LD ARCH 136 Advanced Landscape Delineation 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 4 hours of Studio per week for 15 weeks.

Imagination is the foundation for creative expression in the landscape. This course encourages exploration and personal expression for the realization of new landscape forms. This laboratory intends to refine drawing compositional skills by fostering imagination, intuition, and creativity. The media explored will be pen and ink, watercolor, collage, and 3-dimensional construction. We will study the human figure through analytical drawings and live models. The realms of moving images, the landscape of the animated cartoon, and the sequential art of the comic will be investigated. Final exam required. Instructor: Sullivan

LD ARCH 138 Analysis of Metropolitan Form 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The extraordinary cultural diversity of San Francisco Bay Area shapes the everyday experience of most of its residents. We discuss the process of urbanization in the context of history, culture, and natural resources to better understand how the region is expected to accommodate its share of California's growing population, while addressing the human-induced consequences of climate change, and strategies for overcoming social and functional segregation - visions for a sustainable region. Final exam not required. Instructor: Bosselmann

LD ARCH 138AC The Metropolitan Landscape 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The extraordinary cultural diversity of San Francisco Bay Area shapes the everyday experience of most of its residents. We discuss the process of urbanization in the context of history, culture, and natural resources to better understand how the region is expected to accommodate its share of California's growing population, while addressing the human-induced consequences of climate change, and strategies for overcoming social and functional segregation--visions for a sustainable region. Satisfies the American Cultures requirement

Students will receive no credit for Landscape Architecture 138AC after taking Landscape Architecture 138. Final exam not required. Instructor: Bosselmann

LD ARCH 140 Social and Psychological Factors in Open Space Design 3 Units

Department: Landscape Architecture

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1.5 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

User-oriented approach to design. Post-occupancy evaluation as a tool for understanding use of designed open spaces. Design as a communication process. Environmental needs of vulnerable populations--children, elderly, disabled, low-income families. Personal and societal environmental values.

Final exam required.

LD ARCH 141AC The American Landscape: Multicultural Difference and Diversity 3 Units

Department: Landscape Architecture

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course will compare and contrast the nature of African American, American Indian, and European American relationships with the American Landscape. Traditional patterns of land use within each subculture will be explored, and juxtaposed against prevailing theory and ideology. Social patterns of use, perception, attached meaning and sense of place, and the transformation of the environment as the result of social change are some of the topics to be discussed.

Satisfies the American Cultures requirement

Final exam required. Instructor: Hood

LD ARCH 160 Professional Practice Seminar 3 Units

Department: Landscape Architecture

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: 161 or graduate standing.

Survey and analysis of professional practice in landscape architecture focusing on: the context of professional practice--office structure, public, private and non-profit practice, marketing, project management and delivery; the legal parameters of practice--contracts, codes, planning regulations, project approval processes, liability; and economics--budgeting, profits, project development costs, fiscal impacts, and financing.

Final exam not required.

LD ARCH 170 History and Literature of Landscape Architecture 3 Units

Department: Landscape Architecture

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

This course surveys the history of landscape architecture in four realms: 1) gardens; 2) urban open space, that is, plazas, parks, and recreation systems; 3) urban and suburban design; and 4) regional and environmental planning. The course will review the cultural and social contexts which have shaped and informed landscape architecture practice and aesthetics, as well as the environmental concerns, horticultural practices, and technological innovations of historic landscapes.

Final exam required. Instructor: Mozingo

LD ARCH C171/AMERSTD C171 The American Designed Landscape Since 1850 3 Units

Department: Landscape Architecture and Environmental Planning; American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

This course surveys the history of American landscape architecture since 1850 in four realms: 1) urban open spaces--that is squares, plazas, parks, and recreation systems; 2) urban and suburban design; 3) regional and environmental planning; 4) gardens. The course will review the cultural and social contexts which have shaped and informed landscape architecture in the United States since the advent of the public parks movement, as well as, the aesthetic precepts, environmental concerns, horticultural practices, and technological innovations of American landscapes. Students will complete a midterm, final, and a research assignment.

Final exam required. Instructor: Mozingo

LD ARCH C188/GEOG C188 Geographic Information Systems 4 Units

Department: Landscape Architecture and Environmental Planning; Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Prerequisites: Some computer experience.

This course introduces the student to the rapidly expanding field of Geographic Information Systems (GIS). It addresses both theory and application and provides the student with a dynamic analytical framework within which temporal and spatial data and information is gathered, integrated, interpreted, and manipulated. It emphasizes a conceptual appreciation of GIS and offers an opportunity to apply some of those concepts to contemporary geographical and planning issues.

Final exam required. Formerly known as C188X. Instructor: Radke

LD ARCH 197 Field Study in Landscape Architecture 2 - 3 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged. Hours to be arranged.**Prerequisites:** Upper division standing and consent of instructor and sponsor.

See departmental information sheet for limitations. Supervised experience relative to specific aspects of landscape architecture. Regular individual meetings with faculty and outside sponsor. Reports required.

Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 198 Directed Group Study 1 - 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged. Hours to be arranged.**Prerequisites:** Consent of instructor.

Enrollment restrictions apply.

No more than 4 units allowed each semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Independent study per week for 15 weeks. 1.5 to 6 hours of Independent study per week for 10 weeks. 1.5 to 7.5 hours of Independent study per week for 8 weeks. 2.5 to 10 hours of Independent study per week for 6 weeks.

Prerequisites: Consent of instructor.

Enrollment restrictions apply.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 200A Fundamentals of Landscape Design 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.

This studio introduces students to the programmatic, artistic, and technical aspects of land form and topographic adjustments to accommodate human use. Topics include pedestrian and vehicular circulation, conservation and addition of plant materials, movement of water, recreation use, and creation of views. Sculptural land forms will be emphasized through the use of topographic plans, sections, and contour models.

Final exam not required. Formerly known as Landscape Architecture 101.

LD ARCH 200B Case Studies in Landscape Design 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** Landscape Architecture 200A.

This studio stresses the shaping and coordination of ideas from initial concept to complete design product. A product(s) of intermediate scale and complexity (such as a garden, small park, plaza, or campus courtyard) will be developed in detail including the selection of planting, selection of construction materials, and topographic design. Lecture modules on selected professional topics are integrated into this course. Final exam not required. Formerly known as Landscape Architecture 102. Instructor: Hood

LD ARCH 201 Ecological Factors in Urban Landscape Design 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 110, 134A-134B, or consent of instructor.

Through lectures, studio problems, research projects, and discussion, this course will explore the challenge and potential incorporating ecological factors in urban contexts. The course focuses on the interaction of landscape science (hydrology, geology, etc.) with the necessities and mechanisms of the human environment (urban design, transportation, economics, etc.). Lectures and research projects will particularly emphasize innovative and forward thinking solutions to the ecological problems of the human environment. Throughout the semester, reading and discussion sessions will highlight the connections between the broader concerns of the global ecological crisis and landscape design and planning.

Final exam not required.

LD ARCH 202 Design of Landscape Sites 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 201 or consent of instructor.

A site design studio stressing the shaping and coordination of ideas from initial concept to complete design of open space in various contexts. Typical projects will be of an intermediate scale and might include a park, plaza, museum sculpture garden, playground, office park, or housing project. Modules on social factors and planting design are included. Final exam not required. Instructors: Hood, Kullman

LD ARCH 203 Landscape Project Design 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 201, or consent of instructor.

A site design studio stressing the shaping and coordination of ideas from initial concept to the thoughtful execution of design ideas at the site scale. Typical projects will focus on the experiential rather than the pictorial. Projects might include a park, plaza, or rehabilitation of a brownfield site. Final exam not required.

LD ARCH 204 Advanced Project Design 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 201 or consent of instructor.

Special topics in the design and planning of the landscape. The focus of the studio varies from semester to semester. Possible topics include community design, educative environments, landscape as art, park design, or energy-conserving design. For current offerings, see department announcement. Final exam not required.

LD ARCH 205 Environmental Planning Studio 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 201 or consent of instructor.

Application of environmental planning principles to a complex problem involving a variety of environmental criteria and desired land uses in a complex institutional and political setting. Student teams will identify needed data, assess environmental developmental problems, weigh competing uses, and prepare an environmental management plan. Final exam not required.

LD ARCH 206 Final Project Preparation Studio: Thesis and Reports 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Studio per week for 15 weeks.**Prerequisites:** 252 and graduate standing.

This is a spring studio for students to work on final projects (theses and professional reports). The studio, including lectures by the instructor, is meant to train and assist students in thesis or professional project research and help them in finalizing their thesis or professional report topic. The course includes weekly exercises ranging from writing articles documenting, illustrating, and critiquing landscapes to finally producing a thesis or professional report.

Final exam not required. Instructor: Mozingo

LD ARCH 221 Quantitative Methods in Environmental Planning 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Discussion and critique of the application of quantitative methods to environmental assessment, analysis, and evaluation in environmental planning. Topics to include geographical information systems and data bases, remote sensing, and multivariate analysis. This course emphasizes computer applications and data analysis.

Final exam not required. Instructor: Radke

LD ARCH 222 Hydrology for Planners 4 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of laboratory per week, plus 3 days of weekend field trips.

This course presents an overview of relevant hydrologic, hydraulic, and geomorphic processes, to provide the planner and ecologist with insight sufficient to coordinate with technical specialists in the field of hydrology. In addition, relevant regulations and policies are reviewed.

Final exam not required. Instructor: Kondolf

LD ARCH 223 Introduction to California Landscapes 1 Unit**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of lecture/discussion per week plus 2 field trips (total of 4 days).

Introduction to the ecology, visual characteristics, land use, and design history of the major landscape regions in California.

Final exam not required. Instructor: McBride

LD ARCH 225 Urban Forest Planning and Management 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week plus 2 1-day field trips. Introduction to the field of urban forestry, its history, and its role in contemporary towns and cities. Emphasis on planning and management of the urban forest, restoration of old parks, street trees, and community participation.

Final exam not required. Instructor: McBride

LD ARCH 226 Landscape Design Construction 2 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 121 (may be taken concurrently).

The course investigates the process of developing schematic landscape design proposals into constructed landscapes. Emphasis will be placed on understanding the durability of materials and design details, the efficient use of materials, and the ability to evaluate how material selection and detailing can impact the environment. Field trips to construction sites, manufacturing facilities, and built landscapes will be included.

Final exam not required. Instructor: Jewell

LD ARCH 227 Restoration of Rivers and Streams 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Prior background in hydrology, geomorphology, ecology, restoration, or consent of instructor.

This course reviews the underlying goals and assumptions of river and stream restoration projects, reviews techniques employed in these efforts, and emphasizes strategies for evaluation of project success. The course focuses on geomorphic and hydrologic analyses relevant to restoration and enhancement of aquatic and riparian habitat in freshwater systems. Format: lectures by instructor, guest lectures, presentation of student independent projects, and field trips. Course requirement: independent term project involving original research.

Final exam not required. Instructor: Kondolf

LD ARCH 228 Research in Environmental River Planning, Management, and Restoration 1 Unit**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar bi-weekly.**Prerequisites:** Open to all graduate students interested in the field.

This course consists of (1) presentation by students of proposals, progress reports, and final results of their independent research projects, and (2) reviews of recently published research papers in the field.

Students review recent issues of specific journals for all papers relevant to environmental river planning, management and restoration, and report on the papers to the seminar, broadly reviewing all the relevant papers and going into depth on one. Emphasis is on research methods and new findings. Oral presentation skills are also critiqued. Requirement: one or two oral presentations, accompanied by a 2-page handout.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kondolf

LD ARCH C229/IAS C229 Mediterranean-Climate Landscapes 1 - 3 Units**Department:** Landscape Architecture and Environmental Planning; International and Area Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture/seminar/studio per week. Comparative study of environmental conditions and human responses thereto in California and other Mediterranean-climate regions, with intensive treatment of a topic in environmental sciences, policy, planning, management, and/or landscape architecture, with application to California, Portugal, or other Mediterranean-climate regions. Students collect and analyze relevant data, synthesize, and complete technical reports, plans, and/or designs.

Final exam not required. Instructor: Kondolf

LD ARCH C231/CY PLAN C251 Environmental Planning and Regulation 3 Units**Department:** Landscape Architecture and Environmental Planning; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will examine emerging trends in environmental planning and policy and the basic regulatory framework for environmental planning encountered in the U.S. We will also relate the institutional and policy framework of California and the United States to other nations and emerging international institutions. The emphasis of the course will be on regulating "residuals" as they affect three media: air, water, and land.

Final exam not required. Instructor: Corburn

LD ARCH 232 The Landscape As a Sacred Place 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered every third year.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 2 field trips (total of 3 days).

Visual and cultural analysis of landscapes, inventory procedures for "place" values, and problems related to sustainable design development, with special emphasis on highly valued places.

Final exam not required.

LD ARCH C237/CY PLAN C257 The Process of Environmental Planning 3 Units**Department:** Landscape Architecture and Environmental Planning; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** C231/Landscape Architecture C251.

A review of the techniques used in environmental planning, and evaluation of alternate means of implementation in varying environmental and political circumstances. The class will examine and critique a number of well-known environmental planning programs and plans. Lectures and discussion will address recurrent planning problems, such as the limitations of available data, legal and political constraints on plans, conflicts among specialists.

Final exam not required.

LD ARCH C241/CY PLAN C241 Research Methods in Environmental Design 4 Units**Department:** Landscape Architecture and Environmental Planning; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar and 2 hours of laboratory per week.

The components, structure, and meaning of the urban environment. Environmental problems, attitudes, and criteria. Environmental survey, analysis, and interview techniques. Methods of addressing environmental quality. Environmental simulation.

Final exam not required. Formerly known as Interdepartmental Studies 241. Instructor: Bosselmann

LD ARCH C242/CY PLAN C261 Citizen Involvement in the City Planning Process 3 Units**Department:** Landscape Architecture and Environmental Planning; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.

An examination of the roles of the citizens and citizen organizations in the city planning process. Models for citizen involvement ranging from advising to community control. Examination of the effectiveness of different organizational models in different situations.

Students will not receive credit for C242 after taking City and Regional Planning 208, Interdepartmental Studies 206 Fall 1990, and Interdepartmental Studies 206 Fall 1991. Final exam not required. Formerly known as Interdepartmental Studies 223.

LD ARCH C250/CY PLAN C240 Theories of Urban Form and Design 3 Units**Department:** Landscape Architecture and Environmental Planning; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Theories and patterns of urban form throughout history are studied with emphasis on the role of planning and design in shaping cities and the relationship between urban form and social, economic, and geographic factors. Using a case study approach, cities are evaluated in terms of various theories and performance dimensions.

Final exam required. Instructor: Southworth

LD ARCH 251 Theories of Landscape Architecture and Environmental Planning 2 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

The focus will be on debate and discussion of central ideas in landscape architecture and environmental planning, drawing on primary literature over many decades of thought. This is not a history course, but it will include some literature that goes back to the early years of the field. This course covers the breadth of thinking in the field, including both environmental planning and landscape design as well as other sub disciplines. Each week students will lead a debate on a different theoretical issue.

Final exam not required. Instructor: Mozingo/Southworth

LD ARCH 252A Thesis and Professional Project Proposal Seminar 2 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Session per week for 15 weeks.**Prerequisites:** Proposal must be submitted prior semester and approved by LAEP Curriculum Committee.

Students learn research methods including social factors, historical/archival, design exploration, master planning, theoretical, and scientific field work. Students develop a conceptual framework, survey instrument, literature review, and detailed work plan. A full committee and funding proposal due on the last day of class.

Final exam not required.

LD ARCH 252B Thesis and Professional Project Proposal Seminar 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Seminar and 1.5 hours of Discussion per week for 15 weeks.**Prerequisites:** 252A.

Students learn research methods including social factors, historical/archival, design exploration, master planning, theoretical, and scientific field work. Students develop a conceptual framework, survey instrument, literature review, and detailed work plan. A full committee and funding proposal due on the last day of class.

Final exam not required.

LD ARCH 253 Landscape Architecture and Environmental Planning Colloquium 1 Unit**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

Invited lectures on current research, planning practice, and design projects. Out of approximately 14 presentations per term, typically two or three would be by department faculty, two or three by graduating students, the remainder by outside speakers.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 254 Topics in Landscape Architecture and Environmental Planning 1 - 5 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 5 hour of Seminar per week for 15 weeks.

Designed to be a forum for presentation of student research, discussions with faculty researchers and practitioners, and examination of topical issues in landscape architecture and environmental planning. Topics will be announced at the beginning of each semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 255 Doctoral Seminar in Environmental Planning 1 Unit**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 8 weeks.**Prerequisites:** Doctoral student or consent of instructor.

Designed to be a forum for presentation of doctoral student research, discussions with faculty researchers and environmental planning practitioners, and examination of topical issues in environmental planning. Topics will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 257 Special Topics in Design 1 - 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 3 hour of Seminar per week for 15 weeks. 1 to 3 hour of Seminar per week for 8 weeks. 1 to 3 hour of Seminar per week for 6 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Research seminar on selected topics in landscape design. Seminars will focus on the theoretical foundations and practical applications of design and planning methods as well as emerging issues in the discipline. Seminars will include lectures by the faculty member offering the course, guest lecturers, student presentations, and discussions. Readings and requirements vary from year to year based on the topic and instructor. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 258 California Water: An Interdisciplinary Seminar 1 Unit**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 8 weeks.

This seminar studies California water issues from an interdisciplinary perspective, building upon the established California Colloquium on Water, to increase understanding and appreciation of water resources and contribute to informed decision-making about water in California. Each semester four distinguished scholars in the fields of humanities, natural sciences, engineering, social sciences, law, and environmental design present lectures to students, faculty, and the general public. Students in the seminar attend the colloquium lectures, complete background readings, and meet for two hours on alternate weeks in the seminar session to discuss issues raised by the colloquium presentations and related readings. Course requirements: attendance at colloquia, attendance and participation in seminars, completion of course readings, brief written critiques of lectures, and a short presentation of literature relevant to colloquium topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kondolf

LD ARCH 295 Supervised Research in Landscape Architecture and Environmental Planning 2 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing and appointment as a research assistant.

Supervised experience on a research project in landscape architecture and/or environmental planning. Regular meetings with faculty sponsor required. See departmental sheet for other limitations.

Any combination of 295 or 297 may be taken for a total of six units maximum toward the M.L.A. degree. Final exam not required.

LD ARCH 296 Directed Dissertation Research 1 - 12 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged. 3 hours per unit.**Prerequisites:** Advancement to Ph.D. candidacy.

Open to qualified students who have been advanced to candidacy for the Ph.D. degree and are directly engaged upon the doctoral dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 297 Supervised Field Study 2 - 3 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing and consent of instructor and sponsor.

Supervised experience relative to specific aspects of practice in landscape architecture and/or environmental planning. Regular meetings with faculty and outside sponsor as well as final report required. See departmental information sheet for other limitations.

Any combination of 295 or 297 may be taken for a total of six units maximum toward the M.L.A. degree. Final exam not required.

LD ARCH 298 Group Study 1 - 4 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Special group studies. Topics to be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 299 Individual Research 1 - 6 Units**Department:** Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing and consent of instructor.

Research work conducted preparatory to completion of the thesis or professional project as well as other approved research. A maximum of six units will be counted toward the M.L.A. degree. The six units allows for four units maximum for thesis or professional project research, and two units maximum for other approved research. See departmental information sheet for other limitations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 300 Supervised Teaching in Landscape Architecture and Environmental Planning 2 Units**Department:** Landscape Architecture**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing and appointment as a Teaching Assistant.

Supervised teaching experience in undergraduate courses. Regular meetings with faculty sponsor. See departmental sheet for other limitations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LD ARCH 301 Methods of Teaching in Landscape Architecture and Environmental Planning 2 Units**Department:** Landscape Architecture**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar/discussion per week.**Prerequisites:** Graduate student standing.

This course presents general pedagogical principles and methods adapted to teaching in the fields of landscape architecture, environmental planning, and environmental sciences. The format varies from week to week, but involves presentations by faculty and experienced graduate student instructors (GSIs), guided discussions, sharing of teaching experiences for current GSIs, discussion of readings on effective teaching, viewing of videos, and presentation by GSIs of sections for upcoming weeks. Required of all graduate students to be eligible for appointment as GSIs; may be taken concurrently with first GSI position for entering students. Topics include learning objectives, lesson plans, active learning, group learning, classroom diversity, assessing student learning, giving constructive feedback, teaching in the studio environment, engaging students through field exercises, grading, and composing effective tests.

Final exam not required.

LD ARCH 375 Methods of Teaching in Landscape Architecture and Environmental Planning 2 Units**Department:** Landscape Architecture**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar/discussion per week.**Prerequisites:** Graduate student standing.

This course presents general pedagogical principles and methods adapted to teaching in the fields of landscape architecture, environmental planning, and environmental sciences. The format varies from week to week, but involves presentations by faculty and experienced graduate student instructors (GSIs), guided discussions, sharing of teaching experiences for current GSIs, discussion of readings on effective teaching, viewing of videos, and presentation by GSIs of sections for upcoming weeks. Required of all graduate students to be eligible for appointment as GSIs; may be taken concurrently with first GSI position for entering students. Topics include learning objectives, lesson plans, active learning, group learning, classroom diversity, assessing student learning, giving constructive feedback, teaching in the studio environment, engaging students through field exercises, grading, and composing effective tests.

Final exam not required. Formerly known as Landscape Architecture 301.

LD ARCH 601 Individual Study for Master's Students 1 - 8 Units**Department:** Landscape Architecture**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Last semester of residence in M.L.A. program.

Individual study for final degree requirements in consultation with adviser. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

LD ARCH 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Landscape Architecture**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** For candidates for doctor's degree.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Language Proficiency Program (LAN PRO)

LAN PRO 100A Language Proficiency Workshop 0 Units**Department:** Language Proficiency Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed to meet the needs of prospective international graduate student instructors and focuses on English language pronunciation and other language skills, teaching effectiveness in the U.S. classroom, and cross-cultural issues. These concerns are addressed through reading, discussion, group work, and videotaped oral presentations. The course includes one hour of small group or individualized instruction per week. The course is required for all prospective GSIs who do not meet minimum requirements on the SPEAK Test or Oral Proficiency Test. Recognized as 2 units in computing the study list.

Final exam not required. Formerly known as College Writing 140A.

LAN PRO 100B Language Proficiency Tutorial 0 Units**Department:** Language Proficiency Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hour of lecture, 1 hour of laboratory, and 1 hour of small group or individual pronunciation work.**Prerequisites:** Consent of instructor.

This small class focuses on the specific language proficiency needs of the participants, especially in the area of pronunciation. The course also addresses issues in teaching effectiveness in the U.S. classroom and cross-cultural communication through group discussion and videotaped oral presentations. This course is required for all prospective graduate student instructors who do not meet the minimum requirements on the Oral Proficiency Test following 100A. Recognized as 2 units in computing the study lists.

Final exam not required. Formerly known as College Writing 140C.

LAN PRO 150A Advanced Language Proficiency Seminar 0 Units**Department:** Language Proficiency Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar and 1 hour of Tutorial per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed for international graduate student instructors who are in their initial two semesters of GSI assignment at Berkeley. It focuses on oral and written English language proficiency, teaching effectiveness in the U.S. classroom, and cross-cultural communication. These concerns are addressed through group discussion and videotaped presentations. The course includes one hours of small group or individualized instruction per week. Recognized as 2 units in computing the study lists.

Final exam not required.

Latin (LATIN)

LATIN 1 Elementary Latin 4 Units

Department: Latin

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 or 4 hours of lecture per week.

Beginners' course.

Final exam required.

LATIN 2 Elementary Latin 4 Units

Department: Latin

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 to 4 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

Prerequisites: 1 or equivalent.

Beginners' course.

Final exam required.

LATIN 10 Intensive Elementary Latin 8 Units

Department: Latin

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Beginners' course (intensive); equivalent to Latin 1-2.

Final exam required.

LATIN 15 The Latin Workshop 10 Units

Department: Latin

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of instruction per day for 10 weeks.

Prerequisites: Senior or graduate standing, or consent of instructor.

Designed primarily for prospective and beginning graduate students wishing to complete as early as possible the Latin requirement for doctoral work in Comparative Literature, English, French, German, Italian, or Spanish. Lectures, discussions, drills, and tutorial sessions on grammar and vocabulary; readings in Vergil, Cicero, and Horace. A grade of B enables the student to enroll directly in upper division Latin.

Final exam not required. Instructor: Chairman

LATIN 40 Intermediate Latin Prose Composition 4 Units

Department: Latin

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 2, 10, or 15.

Development of skills in writing Latin prose and sight reading; review of grammar.

Final exam required.

LATIN 98 Directed Group Study for Freshmen and Sophomores 1 - 4 Units

Department: Latin

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

Latin American Studies (LATAMST)

LATAMST 10 Introduction to Latin American Studies 4 Units**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks.

This course is intended as a lower division, interdisciplinary core course for students planning to pursue the Latin American Studies major, as well as other interested students. The aim is to provide an introduction to the field that integrates the offerings from the various disciplines. Particular attention will be given to the analysis of the relationship between cultural expression and the politics, economy, and history of the region.

Course may be repeated for credit when topic changes. Final exam required.

LATAMST 24 Freshman Seminar 1 Unit**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks. 2 hours of Seminar per week for 8 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment is limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

LATAMST 150 Advanced Studies in Latin American Studies 4 Units**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Consent of instructor.

Advanced research in current issues or regions of Latin American Studies. The course will focus on specific areas or topics with appropriate comparative material included. Topics change each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

LATAMST 160 The Politics of Development in Chile 6 Units**Department:** Latin American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course examines the politics of development in Chile. We will consider the different social and economic policies implemented during the years of the Popular Unity Coalition, the Pinochet dictatorship, in the transition back to a democratic political system, and the Concertacion governments that followed. We end the course by studying challenges to the neoliberal model, including the recent massive student mobilizations demanding reforms to the educational system, as well as challenges by labor and indigenous groups. We will conclude by considering how globalization shapes the politics of development today.

Final exam not required.

LATAMST 192 Senior Thesis 3 or 4 Units**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged. Hours to be arranged.**Prerequisites:** Senior standing.

This course is designed to provide a vehicle for undergraduate students who do not participate in the departmental honors program but are interested in writing a major paper on a Latin American studies topic. The paper should be approximately 30-50 pages in length; the topic must be agreed upon in advance by both the students and faculty sponsor. Requires weekly consultations with faculty sponsor. Final exam required.

LATAMST H195 Senior Honors Thesis Seminar 4 Units**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** International and Area Studies 102 and consent of instructor; senior standing.

The honors student is required to research and write a thesis based on the prospectus developed in International and Area Studies 102. The thesis work is reviewed by the honors instructor. A second reader is to be selected based on the thesis topic. Weekly reports required. Final exam not required.

LATAMST 198 Directed Group Study 1 - 4 Units**Department:** Latin American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings to be announced.**Prerequisites:** Upper division standing and consent of instructor. Topics vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 200 Latin American Studies Seminar 1 Unit**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Mandatory for Latin American Studies graduate students. Seminars by faculty and advanced graduate students on their current research on Latin America.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 230 Cross-Listed Topics 1 - 4 Units**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Variable.**Prerequisites:** Consent of instructor.

This course is designed to accommodate cross-listed courses offered through other departments, the content of which is applicable to the graduate program in Latin American Studies. Content varies from course to course.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 250 Selected Topics in Latin American Studies 4 Units**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Seminar will take a multidisciplinary approach to specific geographical areas with appropriate comparative material included. Topics change each semester.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 292 Directed Study and Research 1 - 4 Units**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 1.5 to 7.5 hours of Seminar per week for 8 weeks. 2.5 to 10 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

Directed study and research for graduate students in Latin American Studies. Primarily for graduate students engaged in an interdisciplinary exploration of Latin America-related topics in subject matter not covered in available course offerings. The course will involve directed readings and writing of a report.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 298 Directed Graduate Group Study 1 - 4 Units**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Group meetings to be announced.**Prerequisites:** Consent of instructor and graduate-level standing. Topics vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LATAMST 299 Individual Study 1 - 4 Units**Department:** Latin American Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks.**Prerequisites:** Consent of instructor.

Individual study for graduate students in Latin American Studies. Intended to provide directed reading and supervision for thesis development or special study in Latin American area.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Legal Studies (LEGALST)

LEGALST R1A Reading and Composition in Connection with the Law as a Social Institution 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course is designed to fulfill the first half of the Reading and Composition requirement. Students will learn to identify an author's point of view and main arguments; evaluate an author's credibility and the merits of his or her argument, write a unified essay with intro, thesis statement, transitions between paragraphs, a concluding paragraph and develop an argument about an issue related to the course.

Satisfies the first half of the Reading and Composition requirement
Final exam not required.

LEGALST R1B Reading and Composition in Connection with the Law as a Social Institution 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course is designed to fulfill the second half of the Reading and Composition requirement. Students will develop their skills at critical reading, writing, and analysis, and will complete a series of essays culminating in a research paper relating to law, legal actors, and legal institutions. Emphasis will be placed on the process of writing, including developing research questions, constructing an argument, and revising for content and style.

Satisfies the second half of the Reading and Composition requirement
Final exam not required. Instructor: Bruce

LEGALST 39B Freshman/Sophomore Seminar 2 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

LEGALST 39D Freshman/Sophomore Seminar 2 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

LEGALST 39E Freshman/Sophomore Seminar 2 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

LEGALST 98 Directed Group Study 1 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Small group instruction in topics not covered by regularly scheduled courses. Topics may vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

LEGALST 100 Foundations of Legal Studies 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This is a liberal arts course designed to introduce students to the foundational frameworks and cross-disciplinary perspectives from humanities and social sciences that distinguish legal studies as a scholarly field. It provides a comparative and historical introduction to forms, ideas, institutions, and systems of law and sociological ordering. It highlights basic theoretical problems and scholarly methods for understanding questions of law and justice.

Final exam required. Formerly known as 100A. Instructor: Perry

LEGALST 102 Policing and Society 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines the American social institution of policing with particular emphasis on urban law enforcement. It explores the social, economic, and cultural forces that pull policing in the direction of state legal authority and power as well as those that are a counter-weight to the concentration of policing powers in the state. Special attention is given to how policing shapes and is shaped by the urban landscape, legal to cultural.

Final exam required. Instructor: Musheno

LEGALST 103 Theories of Law and Society 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An historical examination of major interpretations of law, morals and social development, with special emphasis on the social thought of the 18th and 19th centuries and including the writings of Marx, Maine, Durkheim, Weber and other contemporary figures.

Final exam required.

LEGALST 104 Marx, Durkheim and Weber on Law and Society 3 Units**Department:** Legal Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 8 weeks.

Karl Marx, Emile Durkheim and Max Weber each exercised a major influence on the development of Western social thought, and their writing continue to inform current scholarship in sociology and in the sociological study of law. This course provides a detailed examination of the major works of each author, with a special emphasis on the treatment and use of law in their social theories.

Final exam not required.

LEGALST 104AC Youth Justice and Culture 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course challenges adult-centered representations of urban youth of different ethnicities, their problems, and the supposed solutions to those problems. It departs from the conceptualizations and methods used to study youth in mainstream criminology and developmental psychology. Attention is given to youth conflict, peer relations, identity building within and across ethnic groups, claims on territory, the salience of law and rights, and adaptations to adult authorities and practices.

Satisfies the American Cultures requirement

Final exam not required. Instructors: Musheno, Morrill

LEGALST 105 Theoretical Foundations of Criminal Law 3 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 1 1/2-hour seminar per week.**Prerequisites:** Sophomore standing.

Criminal law raises fundamental theoretical issues that have occupied philosophers over the years. In this course we will discuss a selection of articles that bring to bear such a philosophical perspective on important aspects of criminal law. Topics include justification of punishment, foundations of blame and responsibility, substantive values protected by criminal law, significance of actual harm, liability of groups and other collectivities, and virtues and limits of the rule of law.

Course may be repeated for credit when topic changes. Final exam required.

LEGALST 107 Theories of Justice 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Major perspectives in social and economic thought, e.g., natural law, natural right, laissez faire, "possessive individualism," contractualism, pluralism, and social equality as they affect contemporary discussion of "higher law," fairness, civic competence, and distributive justice. Final exam required.

LEGALST 109 Aims and Limits of the Criminal Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Analysis of the capacity of criminal law to fulfill its aims. What are the aims of criminal law? How are they assigned relative priority? What principles can be identified for evaluating the effort to control disapproved activities through criminal law?.

Final exam required.

LEGALST 116 Legal Discourse 1500-1700 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course focuses on the history of legal thought and discourse from the late medieval period to the Enlightenment. Topics to be considered include the relationship between legal thought and intellectual developments and the relationship between political and constitutional developments and legal discourse. Although the emphasis is on England, there will be some consideration of differences between English and continental European legal thought.

Final exam required.

LEGALST 119 Philosophy and Law in Ancient Athens 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This is an introduction to important aspects of the philosophical and constitutional thought of classical Athens. We will pay particular attention to accounts of the origins of the Athenian legal system; criticisms and defenses of the democracy; arguments about the nature of justice, law, and legal obligation; and the context of the Athenian way of organizing trials, taxation, and administration. Readings from Aeschylus, Thucydides, Aristophanes, Plato, Lysias, Aristotle, and others.

Final exam not required. Instructor: Hoekstra

LEGALST 132AC Immigration and Citizenship 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

We often hear that America is a "nation of immigrants." This representation of the U.S. does not explain why some are presumed to belong and others are not. We will examine both historical and contemporary law of immigration and citizenship to see how law has shaped national identity and the identity of immigrant communities. In addition to scholarly texts, we will read and analyze excerpts of cases and the statute that governs immigration and citizenship, the Immigration and Nationality Act.

Satisfies the American Cultures requirement

Final exam required. Instructor: Volpp

LEGALST 138 The Supreme Court and Public Policy 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines a number of leading U.S. Supreme Court decisions in terms of what policy alternatives were available to the Court and which ones it chose. Prospective costs and benefits of these alternatives and who will pay the costs and who gets the benefits of them are considered. Among the areas considered are economic development, government regulation of business, national security, freedom of speech and discrimination. Readings are solely of Supreme Court decisions.

Final exam required. Instructor: Shapiro

LEGALST 139 Comparative Perspectives on Norms and Legal Traditions 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course is an introduction to the comparative study of different legal cultures and traditions including common law, civil law, socialist law, and religious law. A section of the class will be dedicated to the comparison of the colonial and post-colonial legal process in Latin America and in Africa.

Final exam not required. Instructor: Mayali

LEGALST 140 Property and Liberty 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will explore the relation between property law and limits of liberty in different cultures and at different times. The course will cover theories of property law, slavery, the clash between aboriginal and European ideas of property, gender roles and property rights, common property systems, zoning, regulatory takings, and property on the internet. Readings will include legal theorists, court cases, and historical case studies.

Final exam required.

LEGALST 145 Law and Economics I 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Together Law and Econ I and II provide comprehensive introduction to economic analysis of law. Courses need not be taken in numerical order; nor is one a prerequisite to the other.

The course will apply microeconomic theory analysis to legal rules and procedures. Emphasis will be given to the economic consequences of various sorts of liability rules, remedies for breach of contract and the allocation of property rights. The jurisprudential significance of the analysis will be discussed.

Final exam required.

LEGALST 146 The Law and Economics of Innovation 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Prerequisites: Economics 1 or a course in microeconomics.

We will discuss how the creation of knowledge, artistic, literary, and musical works are supported in a competitive economy especially in the digital age. We will discuss intellectual property, copyrights, trade secrets, trade marks, and geographic indications, in historical and institutional contexts. We will consider the problems of competition that arise in the digital economy, such as Google Books, the Microsoft antitrust cases, and search advertising.

Final exam required. Instructor: Schotchmer

LEGALST 147 Law and Economics II 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

Law and Economics I is not a prerequisite for Law and Economics II.

Students may take either or both courses. Government uses many mechanisms to influence the provision of goods and services. Economists and lawyers have developed a critique of these mechanisms which has prompted substantial reforms in recent years, e.g., deregulation in transportation. The course examines this critique.

Final exam required.

LEGALST 151 Law, Self, and Society 3 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Contemporary moral and political philosophy has been increasingly interested in how conceptions of the self relate to various aspects of our social and political life. These issues have an important bearing on legal theory as well. Law is shaped by certain implicit assumptions about the nature of individuals and collectivities, while it also actively participates in forming the identities of persons and in structuring collective entities such as families, corporations, and municipalities. This course will explore some theoretical approaches to this reciprocal relationship between law and the different social actors that it governs.

Final exam required.

LEGALST 154 International Human Rights 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course considers how the practice of punishing crime can be understood in terms of the larger system of social life and cultural values in which punishment occurs. In exploring the social meanings of punishment, it examines some of the major historical changes in punishment that have been introduced in America and Europe since the 18th century.

Final exam required. Instructor: Boyd

LEGALST 155 Government and the Family 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

How has the law constructed and deconstructed "family" relationships? What are the common law, statutory, and constitutional principles that affect the formation, regulation, and dissolution of families? How do these principles, as well as diverse cultural and social values, guide the state in determining marriage, family, and child welfare policies?.

Final exam required. Instructor: Hollinger

LEGALST 156 Bioethics and the Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Law now plays a prominent role in medicine and science. Recent years have witnessed a major expansion of law's involvement. Law (statutory and court-made) articulates and interprets norms of conduct. This course will examine a number of topics where law and medicine intersect involving many of our most fundamental values including body, life, death, religion, reproduction, sexuality, and family. In each area, we will include both traditional issues, like "right to die" and more current disputes such as physician assisted suicide.

Final exam required. Instructor: Shultz

LEGALST 158 Law and Development 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Focusing on developing countries, this course considers the relationship between legal institutions and rules--including informal and traditional ones--and development--defined by different actors by economic growth, education, health, or a wide spectrum of freedoms. It examines efforts by national leaders, international organizations, foreign aid agencies, and NGOs to "reform" law to promote development, along with the resistance and unplanned consequences that often ensue.

Final exam required. Instructor: O'Connell

LEGALST 160 Punishment, Culture, and Society 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course surveys the development of Western penal practices, institutions, and ideas (what David Garland calls "penality") from the eighteenth-century period to the present. Our primary focus will be on penal practices and discourses in the United States in the early 21st century. In particular we will examine the extraordinary growth of US penal sanctions in the last quarter century and the sources and consequences of what some have called "mass imprisonment.".

Final exam required. Instructor: Simon

LEGALST 161 Law in Chinese Society 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

The course examines concepts that form the basis of the Chinese legal system, traditional theories and institutions of pre-1911 society, and the expression and rejection of the traditional concepts in the laws of the Nationalist period and the People's Republic.

Final exam required.

LEGALST 162AC Restorative Justice 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course advances the claim that the criminal justice system is both a product and a powerful engine of racial hierarchy in American society, and that strategies of restorative justice, which have recently garnered attention in settings from prisons to middle schools, hold out promise as practices of racial justice. We explore this thesis by examining the ways in which criminal justice systems shape the emotions and social relations of victims, offenders, and members of the larger community.

Satisfies the American Cultures requirement

The final project will be an oral history. Instructors: Abrams, Frampton

LEGALST 163 Adolescence, Crime and Juvenile Justice 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines the premises, doctrine, and operational behavior of juvenile courts, particularly in relation to the commission of seriously anti-social acts by mid-adolescents. Topics include the history of theories of delinquency; the jurisprudence of delinquency; the incidence and severity of delinquency; police response to juvenile offenders; the processes of juvenile courts and youth corrections; and reforms or alternatives to the juvenile court system.

Final exam required.

LEGALST 168 Sex, Reproduction and the Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines recent American legal and social history with respect to reproductive and sexual behavior. We will consider two theoretical aspects of the problem: first, theories of how law regulates social behavior and second, more general theories about how reproduction is socially regulated. Armed with these theoretical perspectives, the course will then examine closely a number of legal/social conflicts, including sterilization, abortion and contraception.

Final exam required.

LEGALST 170 Crime and Criminal Justice 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Introduction to the etiology of crime and criminal justice administration. What is crime? What are the main features and problems of the process by which suspected criminals are apprehended, tried, sentenced, punished? Past and current trends and policy issues will be discussed. Final exam required.

LEGALST 171 European Legal History 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Most contemporary legal systems derive from one or the other of the two legal orders that developed in continental Europe and England over the course of the centuries. This course introduces students to some of the main features of the continental European or civil law tradition, a tradition that has its origins in Roman law. We will look at the English common law tradition, which began to diverge from the law of continental Europe in the middle ages, and acquired its own distinctive character.

Final exam required. Instructor: McClain

LEGALST 174 Comparative Constitutional Law: The Case of Israel 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course will provide an introduction to constitutional law using Israel as a case study. Topics include: Constitutionalism and judicial review, state neutrality and self-determination, minority rights, state and religion, Human Rights Law, the concept of "defensive democracy" and ban of non-democratic political parties, legal aspects of the fight on terror, freedom of expression, equality and anti-discrimination, social rights, and constitutional limitations on privatization.

Take home final or a final research paper.

LEGALST 176 Twentieth-Century American Legal and Constitutional History 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Prerequisites: Junior or senior standing. It is recommended that students have completed at least one course in legal studies or political science that deals with American history or American government prior to taking 176.

Development of American law and the constitutional system in the 20th century. Topics include Progressive Era Regulatory policy, criminal justice and relations, freedom of speech and press, New Deal legal innovations, modern tort liability, environmental regulation, judicial reform, and federalism.

Final exam required.

LEGALST 177 Survey of American Legal and Constitutional History 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Overview of American legal and constitutional history from colonial times to the present. Topics include colonial legal institutions, early constitutional history, history of the common law, business regulation, race and the law, history of the legal profession, and the modern constitutional order.

Final exam required.

LEGALST 178 Seminar on American Legal and Constitutional History 3 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor. Enrollment is limited.

This course will provide advanced reading and independent research in the history of American law. Preference may be given to students who have taken 177.

Final exam not required.

LEGALST 179 Comparative Constitutional Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An examination of constitutional decision-making in a number of countries based on selected high court opinions.

Final exam required.

LEGALST 180 Implicit Bias 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Implicit bias, automatic or unconscious stereotyping, and prejudice that guides our perception of and behavior toward social groups, is a fast growing area of law and psychology. Students will look at research in substantive areas of employment discrimination, criminal law, and questions regarding communications, voting, health care, immigration, property, and whether research findings showing unconscious gender, racial, and other biases can be used as courtroom evidence to prove discrimination.

Final exam required. Instructor: Plaut

LEGALST 181 Psychology and the Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.**Prerequisites:** Minimum sophomore standing.

This course will examine the implications of cognitive, social, and clinical psychology for legal theory, policies, and practices. The course will analyze the psychological aspects of intent, responsibility, deterrence, retribution, and morality. We will examine applications of psychology to evidence law (e.g. witness testimony, psychiatric diagnosis, and prediction), procedure (e.g. trial conduct, jury selection), and topics in criminal tort and family law.

Final exam required. Instructor: MacCoun

LEGALST 182 Law, Politics and Society 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines the theory and practice of legal institutions in performing several major functions of law: allocating authority, defining relationships, resolving conflict, adapting to social change, and fostering social solidarity. In doing so, it will assess the nature and limits of law as well as consider alternative perspectives on social control and social change.

Final exam required.

LEGALST 183 Psychology of Diversity and Discrimination in American Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Seminar per week for 6 weeks.

Course will examine concepts of race and culture, various understandings of and approaches to diversity found in the law, and the role of sociocultural structures in shaping the operation of antidiscrimination law and social policy. Topics include: psychology of desegregation, colorblindness and equal protection, affirmative action, stereotyping, sexism in the workplace, prejudice toward immigrants, social class and poverty.

Final exam not required. Instructor: Plaut

LEGALST 184 Sociology of Law 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course explores major issues and debates in the sociology of law. Topics include theoretical perspectives on the relationship between law and society, theories of why people obey (and disobey) the law, the relationship between law and social norms, the "law in action" in litigation and dispute resolution, the roles of lawyers, judges, and juries in the legal system and in society, and the role of law in social change. The course will examine these issues from an empirical perspective. Final exam required.

LEGALST 185AC/ARCH 180AC/ETH STD 181AC Prison 4 Units**Department:** Legal Studies; Architecture; Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Taking a broad interdisciplinary approach, this course embraces the longue duree of critical prison studies, questioning the shadows of normality that cloak mass incarceration both across the globe and, more particularly, in the contemporary United States. This course thus explores a series of visceral, unsettling juxtapositions: "freedom" and "slavery"; "citizenship" and "subjugation"; "marginalization" and "inclusion", in each case explicating the ways that story making, political demagoguery, and racial, class, and sexual inequalities have wrought an untenable social condition.

Satisfies the American Cultures requirement

Final exam required. Instructors: Hilden, Simon, Stoner, Robinson

LEGALST 189 Feminist Jurisprudence 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.**Prerequisites:** Minimum sophomore standing.

This course will explore the ways in which feminist theory has shaped conceptions of the law, as well as examine a range of feminist legal theories, including equality, difference, dominance, intersectional, poststructural, postcolonial theories. It will ask how these theories have shaped legal interventions in areas including workplace/educational access, sexualized coercion, work/family conflict, "cultural" defenses, and globalized sweatshop labor.

Final exam required. Instructor: Abrams

LEGALST 190 Seminar on Topics in Law and Society 1 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of seminar per week plus individual conferences.**Prerequisites:** Consent of instructor.

Advanced study in law and society with specific topics to be announced. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

LEGALST H195A Honors Seminar 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Senior standing, acceptance into Honors Program in Legal Studies.

This course provides Legal Studies honors students with the opportunity to learn about the conduct of legal studies research, how to write an honors thesis proposal, and prepare for writing an honors thesis in the spring.

Final exam not required. Instructor: Musheno

LEGALST H195B Honors Thesis 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Study of an advanced topic under the supervision of a faculty member leading to the completion of a senior honors thesis.

Final exam not required.

LEGALST 198 Directed Group Study 1 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Lecture per week for 15 weeks.

Small group instruction in topics not covered by regularly scheduled courses. Topics may vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

LEGALST 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Legal Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.

Prerequisites: Upper division standing. Consent of instructor and approval of Program Chairman.

Enrollment restrictions apply. Consult the Legal Studies department for more information.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Lesbian Gay Bisexual Transgender St (LGBT)

LGBT 20AC Alternative Sexual Identities and Communities in Contemporary American Society 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week. 7 hours of lecture and 3 hours of discussion per week for 6 weeks.

An introduction to varied dimensions of alternative sexual identities in the contemporary United States, with a focus ranging from individuals to communities. This course will use historical, sociological, ethnographic, political-scientific, psychological, psychoanalytical, legal, medical, literary, and filmic materials to chart trends and movements from the turn of the century to the present.

Satisfies the American Cultures requirement

Students will receive no credit for 20AC after taking Undergraduate Interdisciplinary Studies 20AC. Final exam required.

LGBT 98 Directed Group Study for Advanced Undergraduates 1 - 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Gender and women's studies major.

Seminars for group study of selected topics not covered by regularly scheduled courses. Topics will vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

LGBT 100 Special Topics 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 3 hours of lecture/discussion per week.

This course is designed to provide students with an opportunity to work closely with LGBT faculty, investigating a topic of mutual interest in great depth. Emphasis in on student discussion and collaboration. Topics will vary from semester to semester. Number of units will vary depending on specific course, format, and requirements.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

LGBT 145 Interpreting the Queer Past: Methods and Problems in the History of Sexuality 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

This course examines interpretive issues in studying the history of sexuality and the formation of sexual identities and communities. Considering primary documents, secondary literature, and theoretical essays, we investigate specific historiographical concerns and raise questions about historical methodology and practice.

Final exam required. Formerly known as Undergraduate Interdisciplinary Studies C145.

LGBT 146 Cultural Representations of Sexuality 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 7.5 hours of lecture and discussion per week for 6 weeks.

This course will draw upon a wide range of critical theory, film, music, literature, popular culture, ethnography, theater, and visual art to explore the relationship between cultural forms of representation and individual and collective forms of expression. Central questions for mutual consideration will include: Who/what constitutes the subject of queer cultural production? How are queer theories relevant (or irrelevant) to queer cultural and political practices?.

Final exam required.

LGBT C146A/GWS C146A Cultural Representations of Sexualities: Queer Literary Culture 4 Units

Department: Lesbian, Gay, Bisexual, and Transgender Studies; Gender and Women's Studies; Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

This course examines modern literary cultures that construct ways of seeing diverse sexualities. Considering Western conventions of representation during the modern period, we will investigate the social forces and institutions that would be necessary to sustain a newly imagined or re-imagined sexual identity across time.

Final exam required.

LGBT C146B/GWS C146B Cultural Representations of Sexualities: Queer Visual Culture 4 Units

Department: Lesbian, Gay, Bisexual, and Transgender Studies; Gender and Women's Studies; Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

This course examines modern visual cultures that construct ways of seeing diverse sexualities. Considering Western conventions of representation during the modern period, we will investigate film, television, and video. How and when do "normative" and "queer" sexualities become visually defined?.

Final exam required. Formerly known as Women's Studies C146.

LGBT C147B/ANTHRO C147B Sexuality, Culture, and Colonialism 4 Units

Department: Lesbian, Gay, Bisexual, and Transgender Studies; Anthropology; Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

Prerequisites: 3 or Sociology 3.

An introduction to social theory and ethnographic methodology in the cross-cultural study of sexuality, particularly sexual orientation and gender identity. The course will stress the relationships between culture, international and local political economy, and the representation and experience of what we will provisionally call homosexual and transgendered desires or identities.

Final exam required.

LGBT C148/ETH STD C126 Ethnicity, Gender, and Sexuality 4 Units

Department: Lesbian, Gay, Bisexual, and Transgender Studies; Ethnic Studies; Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3 hours of Lecture and 1 hour of Discussion per week for 8 weeks.

Course focuses on the production of sexualities, sexual identification, and gender differentiation across multiple discourses and locations.

Final exam required. Formerly known as 126.

LGBT 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units

Department: Lesbian Gay Bisexual Transgender St

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Gender and women's studies major.

Seminars for group study of selected topics not covered by regularly scheduled courses. Topics will vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

Library and Information Studies (LINFOST)

LINFOST N1 Bib 1: Information Resources: Effectively Utilizing the UC Berkeley Library and Beyond 2 Units

Department: Library and Information Studies

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of Lecture per week for 6 weeks.

The explosive growth of the information world is threatening to overwhelm us all. With so much available, how do you find what you need? The goals of the course are to 1) Learn how to conduct research in the UC Berkeley libraries: students will understand how the enormous and complicated UC Berkeley and University of California library systems are configured and how their collections are interrelated; take advantage of the sophisticated searching capabilities of the online catalogs, GLADIS and MELVYL; and use a variety of printed and electronic resources. 2) Learn how to access information beyond the walls of UC Berkeley, including the Internet. 3) Understand the concepts of research: Students will learn how to create a search strategy that can be used to conduct research in any field; understand how information sources are structured and develop the ability to apply that understanding to new tools; learn to critically evaluate information sources. 4) Understand how information is organized and accessed and the role of information in society.

Final exam not required. Instructors: Barker, Lee, Maughan, Phillips

Linguistics (LINGUIS)

LINGUIS 1A American Sign Language I 5 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of language instruction and 1 hour of laboratory per week.

Prerequisites: Not open to native signers.

Introduction of the fundamentals of American Sign Language:

comprehension skills, grammatical structures, practice in the production aspects of the language, and exposure to Deaf culture.

Final exam required.

LINGUIS 1B American Sign Language II 5 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of language instruction and 1 hour of laboratory per week.

Prerequisites: Linguistics 1A; not open to native signers.

Continuation of the study of the fundamentals of American Sign Language: comprehension skills, grammatical structures, practice in the production aspects of the language, and exposure to Deaf culture.

Final exam required.

LINGUIS R1B Endangered Languages: What We Lose when a Language Dies 4 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

In this course, we will investigate such questions as: What causes language endangerment and death, and why does it matter? Can dying languages be revitalized? How are thought, identity, and culture influenced by language, and vice versa? The course is designed to hone students' reading, writing, and research skills. Satisfies the second half of the reading and composition requirement.

Satisfies the second half of the Reading and Composition requirement
Final exam not required. Formerly known as R6.

LINGUIS 3 Linguistic Diversity 3 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

(For students with no previous background in linguistics.) Introduction to the scope of human linguistic diversity. Concepts for understanding in what ways human languages can vary and how such variation is constrained. Overview of how linguistic structures are distributed among the world's major linguistic families, and how these linguistics structures cluster geographically. Theories of how and why languages change, diverge, diversify, and in some cases, become extinct.

Student Learning Outcomes: Gain introductory familiarity with Phonetics and phonology (sounds and sound systems), Morphology (word structure), and Historical linguistics (language change) to gain a foundation for the mastery of linguistic knowledge. ^Possess a working knowledge of sources of reliable information about languages and linguistics (typological databases), understand and evaluate current linguistic issues in the world at large (language diversity and endangerment, language politics) to acquire Lifetime Learning Skills. ^Understand Sociolinguistics (language variation within and across speech communities, social relations and language shift), Language and the natural sciences (animal communication, evolution of language) to know how language interfaces with other fields.

Final exam required.

LINGUIS 5 Language and Linguistics 4 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A general survey of the field of linguistics. Students are introduced to a wide range of data from diverse languages to basic principles of linguistic analysis.

Final exam required.

LINGUIS 11 Writing Systems 3 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Examines different writing systems in terms of their historical origin and their cognitive properties. Enrollment limited to 15 students.

Final exam required.

LINGUIS 16 The English Vocabulary 3 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. Zero hours of Lecture per week for 8 weeks. Zero hours of Lecture per week for 6 weeks.

The sources and the resources of the English lexicon. The structures, meanings, formational principles, and pronunciation of complex words in English. Native and borrowed word-formational processes. The development of technical terminologies. Etymology and semantic change. Final exam required.

LINGUIS S16 The English Vocabulary 3 Units

Department: Linguistics

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks.

The sources and the resources of the English lexicon. The structures, meanings, formational principles, and pronunciation of complex words in English. Native and borrowed word-formational processes. The development of technical terminologies Etymology and semantic change. Final exam not required. Instructor: Fillmore

LINGUIS 22 Introduction to the History of the English Language 3 Units

Department: Linguistics

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

An introduction to the major ways in which the English language has changed over the past 1,200 years. Students will be expected to learn and be able to apply a few basic linguistic concepts in order to understand better the developments we observe. We will investigate data from both literary and non-literary texts.

Final exam required.

LINGUIS 23 Language and Sex 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 to 8 hours of Lecture per week for 6 weeks.

Introduction to linguistic principles through analysis of sexual terminology and collocations. Exploration of sociolinguistic issues related to sex, gender, and sexuality. Examination of how societal attitudes about sexuality are reflected in language, and how different languages express sexual concepts differently.

Final exam required.

LINGUIS 24 Freshman Seminar 1 Unit**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to 15 freshmen.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

LINGUIS 40 Language of Advertising 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The ways in which language is used in advertising. An introduction to basic linguistic principles of how speech acts work, the semantic effects of framing, and the contribution of language to multimodal print and video advertising: the division of labor between images and words, and different strategies in integrating them into a single message. Cultural differences both in advertising "message strategies" (what content is presented) and in "formal strategies" (how is it presented?).

Final exam required. Instructor: Sweetser

LINGUIS 47 Language and Communication Disorders 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

An overview of major communication disorders, and an introduction to career options in speech/language pathology and related career paths.

The characteristics of all major types of adult aphasia and several other common adult-onset communication disorders, including dysarthria, apraxia of speech, and communication disorders accompanying right-hemisphere disorders. Principal differences and similarities between symptoms of aphasia and the effects of aging in neuro-typical speakers, and between symptoms of aphasia and effects of dementia on language processing. Career paths related to language disorders, such as speech language pathology, and how to prepare for them. Resources for people living with aphasia in the Bay Area and U.S.

Final exam required.

LINGUIS 51 The Brain's Politics: How the Framing of Issues Works 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The ways in which knowledge about the brain, mind, and language illuminates politics. Covers political topics of current interest.

Final exam not required. Instructor: G. Lakoff

LINGUIS 55AC The American Languages 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 6 to 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

A linguistic view of the history, society, and culture of the United States. The variety of languages spoken in our country and the issues surrounding them: language and ethnicity, politics of linguistic pluralism vs. societal monolingualism, language and education, language shift, loss, retention, and renewal. Languages include English (standard and nonstandard; African American English), pidgins and creoles, Native American languages, Spanish, French, and immigrant languages from Asia and Europe.

Satisfies the American Cultures requirement

Final exam required.

LINGUIS S55 The American Languages 3 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.

A linguistic view of the history, society and culture of the United States. The variety of languages spoken in our country, and the issues surrounding them: language and ethnicity, politics of linguistic pluralism vs. societal monolingualism, language and education, language shift, loss, retention and renewal. Languages include English (standard and nonstandard; Black English), pidgins and creoles, Native American languages, Spanish, French, and immigrant languages from Asia and Europe.

Satisfies the American Cultures requirement

Final exam not required.

LINGUIS S55X The American Languages 3 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture and 1.5 hours of Discussion per week for 6 weeks.

A linguistic view of the history, society, and culture of the United States. The variety of languages spoken in our country and the issues surrounding them: language and ethnicity, politics of linguistic pluralism vs. societal monolingualism, language and education, language shift, loss, retention, and renewal. Languages include English (standard and nonstandard; Black English), pidgins and creoles, Native American languages, Spanish, French, and immigrant languages from Asia and Europe.

Satisfies the American Cultures requirement

Final exam not required.

LINGUIS 65 Music and Language 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 to 8 hours of Lecture per week for 6 weeks.

This course investigates the musical characteristics of human language. Major questions include: the relationship between musical and linguistic structures, such as tone, stress, and rhythm; the role of ethnomusicology in language study; how music and language are perceived and processed in the brain differently; and the acoustic properties of speech and music. Final exam required.

LINGUIS 97 Research Practicum 1 - 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Prerequisites:** Completion of Linguistics 100.

Individual research on projects in the subfields of Linguistics, sponsored by a faculty member; written reports required.

Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 98 Directed Group Study 1 - 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks. 2 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 10 hours of Directed group study per week for 6 weeks.

Group study of a topic not included in the regular department curriculum.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 100 Introduction to Linguistic Science 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An intensive introduction of linguistic analysis, including core areas such as phonetics and phonology, morphology, and syntax and semantics, with data from a range of languages. Argumentation and writing skills are developed through substantial weekly homework assignments.

Final exam required.

LINGUIS C104/COG SCI C104 The Mind, Language, and Politics 4 Units**Department:** Linguistics; Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An analysis of contemporary liberal and conservative thought and language, in terms of the basic mechanisms of mind: frames, prototypes, radial categories, contested concepts, conceptual metaphor, metonymy, and blends. The framing of political discourse. The logic of political thought. The purpose of the course is to provide students interested in political and social issues with the tools to analyze the framing of, and logic behind, contemporary political discourse.

Final exam not required. Instructor: G. Lakoff

LINGUIS C105/COG SCI C101 The Mind and Language 4 Units**Department:** Linguistics; Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks.

Conceptual systems and language from the perspective of cognitive science. How language gives insight into conceptual structure, reasoning, category-formation, metaphorical understanding, and the framing of experience. Cognitive versus formal linguistics. Implications from and for philosophy, anthropology, literature, artificial intelligence, and politics. Final exam not required. Formerly known as 105. Instructors: G. Lakoff, E. Sweetser

LINGUIS 106 Metaphor 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Lower division students must have instructor approval.

The role of metaphor in structuring our everyday language, conceptual system, and world view. Topics include cross-cultural differences, literary metaphor, sound symbolism, and related theoretical issues in philosophy, linguistics, psychology and anthropology.

Final exam not required. Instructors: G. Lakoff, Sweetser

LINGUIS 110 Introduction to Phonetics and Phonology 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or concurrent enrollment or graduate status.

Introduction to (1) phonetic transcription of speech using the International Phonetic Alphabet, (2) acoustic analysis of speech, (3) physiological and cognitive aspects of speech production and perception, and (4) phonological analysis of language sound systems.

Final exam required.

LINGUIS 113 Experimental Phonetics 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110

Practical training in experimental phonetics; acoustic, physiological, and perceptual analysis of speech.

Final exam not required.

LINGUIS 115 Phonology and Morphology 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100

Introduction to important cross-linguistic phonological and morphological phenomena as well as standard methods of description and analysis.

Final exam required.

LINGUIS 120 Introduction to Syntax and Semantics 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100

An introduction to the study of the structural properties of sentences and the connections between sentence structure and sentence meaning.

Final exam required.

LINGUIS 121 Logical Semantics 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** 120 or consent of instructor.

Basic logical concepts. Truth, denotation, and their relation. Models and interpretation. Translation from natural language into logical form and compositionality. Quantification and scope. Intensionality, context-dependency, and presupposition.

Final exam required.

LINGUIS 122 Language Typology and Linguistic Universals 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100

Issues in language typology and linguistic universals. An examination of various linguistic subsystems in different languages. Topics will include interrogatives, pronominal systems, relative clause formation, case systems, etc.

Final exam required.

LINGUIS 123 Pragmatics 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100

The relation between language use and human actions. Some topics to be emphasized are conversational logic, speech act theory, politeness, social role, psychological perception of oneself and language, variation in language use.

Final exam required.

LINGUIS 124 Discourse 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100

Language beyond the sentence. Global and local properties of connected speech and writing. Narrative structures, new and old information, subjects and topics, foregrounding and backgrounding, etc. Final exam required.

LINGUIS 125 Gesture, Cognition, and Culture 3 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture per week for 6 weeks.

Everyone gestures – even when they might not realize it. This course seeks to uncover what we can learn about cognition and culture through the lens of this integral aspect of our communicative and cognitive selves. We will consider the relationship between language and gesture including its role in language acquisition and in signed languages, and study how gestures help us communicate and help us think. We will also look at cross-cultural differences in gesture, the role of gesture in child development, applications of gesture from education to politics, and unpack the possibility of the gestural origins of human language. Students will write a substantial research paper comprising a proposed experiment with a literature review, predicted results, and broader analysis which ties in to course material. Instructor: Stickles

LINGUIS 127 Cross-Cultural Verbal Art 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines parallels and differences between language art in different cultures, both at the level of form (linguistic parallelism, rhyme, alliteration) and meaning (how is metaphor used, what rhetorical patterns are artistic?). This course is intended to help students develop a sense of what artistic language is, crossculturally, and to let them examine a chosen poetic tradition in detail for their project. The course readings and the theoretical models will be drawn equally from Anthropology and Linguistics.

Final exam not required.

LINGUIS 128 Linguistic Analysis of Literature 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100 or consent of instructor.

Literary texts provide unique material for linguists: good authors manage to use everyday grammatical forms in exceptional ways. In this course, students will read scholarly linguistic works on literary analysis, and also analyze literary texts using the tools they acquire. Linguistics readings will focus on narratology and cognitive linguistic approaches, including mental spaces theory, conceptual metaphor theory, and work on iconicity, viewpoint, and causal structure.

Final exam not required. Instructor: Sweetser

LINGUIS 130 Comparative and Historical Linguistics 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100

Methods of reconstruction. Types and explanations of language change. Dialectology. The establishment of language relationships and subgroupings.

Final exam required.

LINGUIS C137/SLAVIC C137 Introduction to Slavic Linguistics 4 Units**Department:** Linguistics; Slavic Languages and Literatures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** A year or more of a Slavic language or consent of instructor.

An introduction to best practices in applying linguistic analysis to Slavic languages. Development of critical thinking and analytical skills. Students will receive no credit for Slavic Languages and Literatures C137/ Linguistics C137 after taking Slavic Languages and Literatures 137; a deficient grade in Slavic Languages and Literatures 137 may be removed by taking Slavic Languages and Literatures C137/Linguistics C137. Final exam required. Instructor: Kavitskaya

LINGUIS C139/SLAVIC C139 Language Spread 3 Units**Department:** Linguistics; Slavic Languages and Literatures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Linguistic background and the general principles of language spread. Mechanisms of language spread, including creolization-decreolization, language planning, and the role of bilingualism. Case studies in language spread, including Austronesian, Indo-European, Amerindian, Uralic, African, Sinitic, and Australian languages. Relationship of language spread to immigration and culture spreads.

Final exam required.

LINGUIS 140 Introduction to Field Methods 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110 and 115.

Training in the discrimination and transcription of the sounds of a particular language. Methods and practice in collecting and processing data from a particular language.

Final exam not required.

LINGUIS 141 Empiricism and Linguistics 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 5 or 100.

This course considers the status of linguistics as a scientific field of inquiry. Methodological approaches and the type of information that serve as data in linguistics are surveyed and placed in the context of other social science methodology and data. Throughout the course, the practice of linguistics as the science of language, its successes and weaknesses, are placed in the context of thought on the philosophy of science. Students design and carry out projects using subject methodologies (introspection, corpus, statistical, fieldwork, experimental).

Final exam required.

LINGUIS C142/COG SCI C142 Language and Thought 3 Units**Department:** Linguistics; Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar explores the relation of language and thought. Is language uniquely human, and if so, what does this reveal about the human mind? Does the particular language you speak affect the way you think, or do human languages reflect a universal conceptual repertoire? The goal of this class is to familiarize you with a set of classic arguments on these themes, together with current research that evaluates these arguments, through weekly reading and discussion.

Final exam not required. Instructor: Regier

LINGUIS 146 Language Acquisition 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 to 8 hours of Lecture per week for 6 weeks.

An overview of topics and theories in language acquisition: early development of speech perception and production, word learning, generalizing linguistic structure, and differences between first language acquisition, second language acquisition, and bilingualism. We will also compare different theoretical approaches, and address the classic "nature vs. nurture" question by examining both traditional generativist approaches and more recent usage based models.

Final exam required.

LINGUIS C146/PSYCH C143 Language Acquisition 3 Units**Department:** Linguistics; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 to 8 hours of Lecture per week for 6 weeks.

An overview of topics and theories in language acquisition: early development of speech perception and production, word learning, generalizing linguistic structure, and differences between first language acquisition, second language acquisition, and bilingualism. We will also compare different theoretical approaches, and address the classic "nature vs. nurture" question by examining both traditional generativist approaches and more recent usage based models.

Final exam required.

LINGUIS C147/COG SCI C147 Language Disorders 3 Units**Department:** Linguistics; Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

An introduction to experimental and theoretical research on language disorders, particularly acquired aphasia in adults. Major course themes include the relationship between normal and pathological language, and the usefulness of linguistic analysis for empirical research. Topics include phonetic, phonological, morphological, semantic, syntactic, and pragmatic aspects of language disorders in mono- and multilingual speakers of typologically diverse languages.

Final exam required. Instructor: Gahl

LINGUIS 150 Sociolinguistics 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100

The principles and methods of sociolinguistics. Topics to be covered include linguistic pragmatics, variation theory, social and regional dialectology, and oral styles.

Final exam required.

LINGUIS 151 Language and Gender 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 to 8 hours of Lecture per week for 6 weeks.

An overview of research over the past 30 years on the relationship between language and gender: how women's use of language differs from men's, in U.S. and other cultures; how men and women are spoken of differently; how women and men have different amounts of access to power via public discourse; gender differences in nondominant groups (e.g., lesbians and gays; African Americans); the role of stereotyping in linguistic differences between the sexes; role of gender in discourse genres.

Final exam required. Instructor: R. Lakoff

LINGUIS 152 Pidgin and Creole Languages 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 5 or consent of instructor.

This course will cover various pidgins and creoles of the world, examining their linguistic and sociohistorical significance, as well as their use in the modern world.

Final exam required.

LINGUIS 155AC Language in the United States: a Capsule History 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course brings together history, sociology, and linguistics to develop a deeper view of who we are as a nation. It is organized as a narrative history of the U.S. from the perspective of immigration and language. We devote significant portions to the languages of Native Americans, African American English, and to the Spanish spoken in the U.S., as well as addressing the various other dialects of American English, the numerous smaller immigrant languages, Hawaiian, and ASL.

Satisfies the American Cultures requirement

Students will receive two units of credit for Linguistics 155AC after taking Linguistics 55AC. Final exam required. Instructor: Rhodes

LINGUIS 158 Computational Methods 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100 or consent of instructor.

An introduction to computational methods for linguists. No prior programming experience required. Students will learn how to program, and will use that knowledge to manipulate and analyze linguistic datasets, including corpora. The course will also prepare students for further study in computational modeling.

Final exam not required.

LINGUIS 159 The Deaf Community and American Sign Language 3 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks.

Social and linguistic aspects of the deaf community and its language--American Sign Language (A.S.L.). Lecture, discussion, and videotape presentations will provide an introductory survey of American Deaf Culture in general; the Bay Area community in particular. Specific areas covered include historical, social and political aspects of A.S.L. with particular emphasis on educational and legal institutions. All presentations are conducted in American Sign Language and English.

Final exam not required. Instructor: Rutherford

LINGUIS 159L American Sign Language Laboratory 2 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Laboratory per week for 8 weeks.**Prerequisites:** Concurrent enrollment in 159 or consent of instructor.

Introduction to American Sign Language with native speaker. Adjunct to Linguistics 159.

Final exam not required. Instructor: Telford

LINGUIS C160/COG SCI C140 Quantitative Methods in Linguistics 4 Units**Department:** Linguistics; Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or graduate student standing.

An introduction to research using quantitative analysis in linguistics and cognitive science. Students will learn how to use the R programming environment for statistical analysis and data visualization.

Final exam required. Instructor: Gahl

LINGUIS 165 Topics in Music and Linguistics: Rhythm, Meter, and Text-setting 3 Units**Department:** Linguistics**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** Linguistics 100 and 110; or Music 49B and 49C plus either Music 108 or 109.

This course will introduce the basics of meter and phrasing in both music and linguistics. It will examine the similarities and differences between the two domains, and go on to consider what happens when elements of the two domains are combined, as in music and lyrics.

Student Learning Outcomes: Acquire more knowledge in phonetics, phonology, metrics, music for deeper mastery of linguistic knowledge^Apply linguistic analysis to evaluate specific theoretical proposals and to analyze complex linguistic patterns, which develops critical thinking skills

^Collect data using specific qualitative or quantitative research methods to learn research methodologies

Final exam not required.

LINGUIS 170 History, Structure, and Sociolinguistics of a Particular Language 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** As particular instructor requires.

In this course, students explore with a faculty member the history, structure, and sociolinguistics of a particular language. Generally, this is a language that is a research interest of the professor. The language investigated changes with each offering of this course.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 175 American Indian Languages 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to the native languages of the Americas.

Final exam required.

LINGUIS 181 Lexical Semantics 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

Lectures and exercises in the description of word meanings, the organization of lexical systems, the lexicalization of particular semantic domains (kinship, color, etc.), and contrastive lexicology: lexicalization pattern differences across languages.

Final exam required.

LINGUIS H195A Linguistics Honors Course 2 - 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of work per unit per week. Hours to be arranged.

Prerequisites: 3.5 GPA or higher, overall and in the major.

A two-semester course consisting of independent study of an advanced topic, supervised by a faculty member, and culminating with a senior honors thesis which will be evaluated by a faculty honors committee.

Thesis is due on the Monday of the 13th week of the second semester, and honors students will be invited to present their research at an Undergraduate Colloquium.

Final exam not required.

LINGUIS H195B Linguistics Honors Course 2 - 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.

Hours and format: 3 hours of work per unit per week. Hours to be arranged.

Prerequisites: 3.5 GPA or higher, overall and in the major.

A two-semester course consisting of independent study of an advanced topic, supervised by a faculty member, and culminating with a senior honors thesis which will be evaluated by a faculty honors committee.

Thesis is due on the Monday of the 13th week of the second semester, and honors students will be invited to present their research at an Undergraduate Colloquium.

Final exam not required.

LINGUIS 197 Research Practicum 1 - 3 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Prerequisites:** completion of Linguistics 100.

Individual research on projects in the subfields of Linguistics, sponsored by a faculty member; written reports required.

Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 198 Directed Group Study and Research 1 - 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: Hours to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 200 Graduate Proseminar in Linguistics 1 Unit**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Required of graduate students during first year in program. An introduction to linguistics as a profession, its history, subfields, and methodologies.

Final exam not required.

LINGUIS 201A Second-Year Proseminar in Linguistics 1 Unit**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Second-year standing (or equivalent) in the Linguistics graduate program.

The goal of the course is to help second-year graduate students navigate the graduate program and develop professional skills.

Final exam not required. Instructor: Gahl

LINGUIS 201B Advanced Graduate Proseminar in Linguistics 2 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** M.A. requirements should be completed or instructor approval.

The course is designed to help students become professional linguists by showing them how to write abstracts of papers, how to prepare papers for presentation at conferences, and how to prepare written versions of papers for submission as qualifying papers (and for journal publication), as well as to give students practical experience in the public presentation of their work.

Course must be taken at the beginning of graduate student's third year.

Final exam not required. Formerly known as Linguistics 201.

LINGUIS 205 Advanced Cognitive Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 105. Graduate standing or consent of instructor.

This will be an advanced course in cognitive linguistics. Among the topics covered will be cognitive bases for aspects of grammatical structure, cognitive constraints on language change and grammaticalization, and motivations for linguistic universals (i.e., constraints on variability).

Final exam not required.

LINGUIS 210 Phonetic Theory 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 110. Graduate standing or consent of instructor.

A reading course focusing on theories of speech production, perception, and acoustics as they relate to phonetic and phonological patterns found in the languages of the world. Students write 5-8 "responses" to target articles, and the class as a whole reads background articles and books that place the target articles into their context.

Final exam not required.

LINGUIS 211A Advanced Phonological Theory 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110. Graduate standing or consent of instructor.

Introduction to phonological theory at the graduate level with an emphasis on cross-linguistic phonological patterns.

Final exam not required.

LINGUIS 211B Topics in Phonological Theory 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 211A.

Continuation of 211A focusing on topics of current interest in phonological theory.

Final exam not required.

LINGUIS 215 Advanced Morphology 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 211A. Graduate standing or consent of instructor.

Examination of complex morphological systems. Issues in the theory of word morphology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 220A Syntax and Semantics 1 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor. Graduate standing or consent of instructor.

This course aims at developing a solid conceptual, analytical, and empirical foundation for doing research in syntax and semantics. The emphasis is on gaining familiarity with the central empirical phenomena, as well as core theoretical notions, methodology, and argumentation. Final exam not required. Formerly known as 220. Instructor: Mikkelsen

LINGUIS 220B Syntax and Semantics II 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 220A.

This course continues 220A with an in-depth examination of selected syntactic and semantic phenomena and the methods of their analysis. The phenomena investigated varies with each offering of the course. Final exam not required.

LINGUIS 221 Advanced Logical Semantics 3 Units**Department:** Linguistics**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.

This course is designed to introduce graduate students to the core principles and empirical issues addressed by formal semantics and to familiarize them with the analytical tools involved in the investigation of this domain. The focus of this class is truth-conditional aspects of meaning and the compositional interpretation of phrases and sentences. Students will develop skills in semantic analysis and argumentation by focusing on semantic questions that arise in the analysis of a range of different phenomena, including quantification, the semantics of definite/indefinite descriptions, degree semantics, modality, and events.

Final exam not required. Instructor: Bochnak

LINGUIS 222 Linguistic Typology 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.

This course is a graduate level introduction to linguistic typology that covers quantitative, formal, and functional approaches to the typology of morphosyntactic and phonological phenomena. Students will be introduced to: 1) influential frameworks and tools for typological research including implicational hierarchies, semantic maps, and combinatorial typologies; 2) the status of universals in typology and formal, functional, and diachronic explanations for universals; 3) key topics in typology, including word order correlations and sampling methodology, grammatical relations typology, areal typology, and phonological typology. Final exam not required. Instructors: Jenks, Michael

LINGUIS 230 Historical Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110. Graduate standing or consent of instructor.

The scholarly tradition of historical and comparative linguistics. Methods of reconstruction.

Final exam not required.

LINGUIS 234 Indo-European Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** An introductory historical linguistics course or a good knowledge of an older Indo-European language.

A survey of Indo-European (IE) linguistics, intended for general linguists interested in learning about the most fully developed sub-area of historical linguistics and for language-area specialists interested in how specific language areas relate to IE as a whole. All areas of the field will be surveyed (phonology, morphology, syntax, lexical semantics, cultural reconstruction, and subgrouping and diversification), with special emphasis on issues of broad current research interest.

Final exam not required. Instructor: Garrett

LINGUIS 235 History of Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course surveys selected topics in the history of linguistics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 240A Field Methods 4 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 4 hours of Session per week for 15 weeks.

Prerequisites: Linguistics 211A and Linguistics 220A. Graduate standing or consent of instructor.

Training in elicitation and analysis of linguistic data in a simulated field setting. The same language is used throughout the year. Linguistics 240B is the continuation of 240A.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 240B Field Methods 4 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.

Hours and format: 4 hours of Session per week for 15 weeks.

Prerequisites: Linguistics 240A.

Training in elicitation and analysis of linguistic data in a simulated field setting. The same language is used throughout the year. Linguistics 240B is the continuation of 240A.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 245 Anthropological Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

Graduate level survey of anthropological linguistics which seeks to understand the role of culture in linguistic meaning, language use, and the development of linguistic form and, conversely, the role of linguistic form and structure in social action and in cultural practices.

Final exam not required. Instructor: Michael

LINGUIS 250A Sociolinguistic Analysis: Variation 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

This series of courses is designed to give graduate students in linguistics and related fields advanced training in current theories and methods in sociolinguistics. The five courses (Variation; Language Contact; Language and Gender; Conversation/Discourse Analysis; Endangered Languages) represent five major foci of current sociolinguistic interest. Students will be exposed to historical overviews, readings, discussions, and demonstrations of methods and will be expected to do original field research, the results of which are to be presented orally and in a 15- to 25-page research paper.

Final exam not required. Instructors: R. Lakoff, Michael

LINGUIS 250B Sociolinguistic Analysis: Language Contact 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

This series of courses is designed to give graduate students in linguistics and related fields advanced training in current theories and methods in sociolinguistics. LINGUIS 255 Introduction to Sociocultural Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course is a graduate-level introduction to the major traditions that have contributed to understanding the relationship between linguistic structure and the social and cultural contexts in which it is embedded. The course focuses on the sociolinguistic variationist tradition and on ethnographic and semiotic approaches to language that emerge from linguistic anthropology, and examines the emerging coalition of these two traditions in the field of sociocultural linguistics.

Final exam not required. Instructor: Michael

LINGUIS 270 Structure of a Particular Language 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Session per week for 15 weeks.**Prerequisites:** 211A and 220A.

An analysis of the language structure of a particular language. The language investigated changes from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 290A Topics in Linguistic Theory: Syntax 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290B Topics in Linguistic Theory: Semantics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290D Topics in Linguistic Theory: Pragmatics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290E Topics in Linguistic Theory: Phonology 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290F Topics in Linguistic Theory: Diachronic Linguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290H Topics in Linguistic Theory: Linguistic Reconstruction 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290L Additional Seminar on Special Topics to Be Announced 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Seminar or special lecture courses on linguistic topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 290M Topics in Linguistic Theory: Psycholinguistics 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 290R Topics in Linguistic Theory: Language and Thought 3 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Seminars or special lecture courses.

Final exam not required.

LINGUIS 297 Research Mentorship 1 - 2 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.

Mentor undergraduates in research on projects in the subfields of linguistics, sponsored by a faculty member; written report required.

Course may be repeated for credit when topic changes. Final exam required.

LINGUIS 298 Special Group Study 2 - 8 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** One full year of graduate study at Berkeley or consent of graduate adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 299 Special Individual Study 2 - 8 Units**Department:** Linguistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

LINGUIS 301 Teaching Practice and Instruction 2 or 4 Units**Department:** Linguistics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Course may be repeated for credit, but credit for the instructional training portion is to be given only once for each individual course taught by a T.A. For graduate students currently serving as T.A.s in the Department's undergraduate courses. Two units of credit are given for the teaching experience each time a student serving as T.A. enrolls in this course; two more units are given for teaching instruction, this taking the form of weekly consultations between instructors and their T.A.s.

Final exam not required.

LINGUIS 375 Training for Linguistics Teaching Assistants 2 Units**Department:** Linguistics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 90-minute sections per week.**Prerequisites:** 110, 120 and 130 or consent of instructor.

A teaching-methods "clinic" for first-time Linguistics GSI's. Sessions will deal with the presentation of linguistic concepts in each of the foundation courses, the creation of homework assignments and examination, policies and practices regarding correction of students' work, grading, and feedback.

Final exam not required. Formerly known as Linguistics 302.

LINGUIS 601 Individual Study for Master's Students 1 - 8 Units**Department:** Linguistics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Individual study for the comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

LINGUIS 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Linguistics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** One full year of graduate work at Berkeley or consent of graduate adviser.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Malay/Indonesian (MALAY/I)

MALAY/I 1A Introductory Indonesian 5 Units**Department:** Malay/Indonesian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Survey of grammar, graded exercises, and readings drawn from Indonesian texts, leading to a mastery of basic language patterns, essential vocabulary, and to achievement of basic reading, writing, and conversational competence. Emphasis on developing communicative skills.

Final exam required. Instructor: Lunde

MALAY/I 1B Introductory Indonesian 5 Units**Department:** Malay/Indonesian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Survey of grammar, graded exercises, and readings drawn from Indonesian texts, leading to a mastery of basic language patterns, essential vocabulary, and to achievement of basic reading, writing, and conversational competence. Emphasis on developing communicative skills.

Final exam required.

MALAY/I 100A Intermediate Indonesian 5 Units**Department:** Malay/Indonesian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 1A-1B.

Readings in Indonesian texts, including newspapers, journals, and literature exploring a variety of styles. Systematic study of grammatical and lexical problems arising from these readings. Advanced exercises in composition, oral and written communicative skills, and cultural competence.

Final exam required. Instructor: Lunde

MALAY/I 100B Intermediate Indonesian 5 Units**Department:** Malay/Indonesian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 1A-1B.

Readings in Indonesian texts, including newspapers, journals, and literature exploring a variety of styles. Systematic study of grammatical and lexical problems arising from these readings. Advanced exercises in composition, oral and written communicative skills, and cultural competence.

Final exam required.

MALAY/I 210A Seminar in Malay Letters and Oral Traditions 4 Units**Department:** Malay/Indonesian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar and 1 hour of Discussion per week for 15 weeks.

Various aspects of Malay language and literature, history and development of the language, classical literature, drama, oral literature, modern literature of Indonesia and Malaysia, and dialect studies. Applies various theoretical approaches to the study of the language and literature. Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

MALAY/I 210B Seminar in Malay Letters and Oral Traditions 4 Units**Department:** Malay/Indonesian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar and 1 hour of Discussion per week for 15 weeks.

Various aspects of Malay language and literature, history and development of the language, classical literature, drama, oral literature, modern literature of Indonesia and Malaysia, and dialect studies. Applies various theoretical approaches to the study of the language and literature. Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Tiwon

MALAY/I 232 Readings in Modern Indonesian and Malaysian**Literature 4 Units****Department:** Malay/Indonesian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Two years of Malay/Indonesian or consent of instructor.

This course will focus on the 20th century literatures of Indonesia and Malaysia. Emphasis will be on the socio-cultural matrix of such modern genres as the novel, the short story, and poetry. Lectures and most course work in Indonesian.

Final exam not required. Formerly known as 132.

Masters in Business Administration (MBA)

MBA 200C Leadership Communication 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 2 hours of discussion per week for 5 weeks.

Leadership Communication is a workshop in the fundamentals of public speaking in today's business environment. Through prepared and impromptu speeches aimed at moving others to action, peer coaching, and lectures, students will sharpen their authentic and persuasive communication skills, develop critical listening skills, improve abilities to give, receive, and apply feedback, and gain confidence as public speakers.

Final exam not required.

MBA 200P Problem Finding, Problem Solving 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.

Problem Finding, Problem Solving (PFPS) teaches basic skills drawn from the fields of critical thinking, design thinking and systems thinking that support innovation. Specifically, it covers ways of collecting information to characterize a problem, framing and re-framing that problem, coming up with a range of solutions and then gathering feedback to assess those solutions. Following Confucius's notion: "I hear and I forget. I see and I remember. I do and I understand." The class consists primarily of hands-on exercises to experiment with and learn the tools and techniques presented, applying them to the design and testing of alternative business models for start-up and other businesses.

Final exam not required.

MBA 200S Data and Decisions 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 1.5 hours of discussion per week for 7 weeks.

The objective of this core course is to make students critical consumers of statistical analysis using available software packages. Key concepts include interpretation of regression analysis, model formation and testing, and diagnostic checking.

Final exam not required. Formerly known as Business Administration 200S.

MBA 201A Economics for Business Decision Making 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.**Prerequisites:** Knowledge of calculus and algebra assumed.

Business success depends on the successful positioning of the firm and the management of its resources. The goal of this course is to think systematically about achieving competitive advantage through the management of the firm's resources. We will analyze management decisions concerning real options, cost determination, pricing, and market entry and exit. We will use readings and cases along with class discussion to develop practical insights into managing for competitive advantage.

Final exam not required.

MBA 201B Macroeconomics in the Global Economy 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.**Prerequisites:** 200S, 201A.

This course develops and applies models of the world's economies to explain long-run trends and short-run fluctuations in key macroeconomic variables, such as GDP, wage and profit rates, inflation, interest rates, employment and unemployment, budget deficits, exchange rates, and trade balances.

Final exam not required.

MBA 202 Financial Accounting 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 1.5 hours of discussion per week for 7 weeks.

This course examines accounting measurements for general-purpose financial reports. An objective of the course is to provide not only a working knowledge but also a clear understanding of the contents of published financial statements.

Final exam not required. Formerly known as Business Administration 202A.

MBA 203 Introduction to Finance 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.**Prerequisites:** 200S, 202.

This is an introductory MBA course in investments. Students learn how to value assets given forecasts of future cash flows and about the risk characteristics of different asset classes. The first part of the course focuses on the time value of money. The second part of the course deals with measuring and pricing risk. Finally, the course touches on derivative-basics and capital market efficiency. An effort will be made to tie the theoretical underpinnings of finance to real-world examples.

Final exam not required.

MBA 204 Operations 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.**Prerequisites:** 200S.

This course provides a broad overview of strategic, operational, and tactical issues facing manufacturing and service companies. Major topics include process analysis, quality management, project management, supply-chain management, service-systems management, and operations strategy. These issues are explored through lectures, case studies, and videos pertaining to a variety of industries, from fast food to fashion goods to automobile manufacturing to telephone call centers.

Final exam not required.

MBA 205 Leading People 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.

How can you motivate employees to go above and beyond the call of duty to get the job done? How can you be sure that your decisions are not biased? What influence tactics can you use when you do not have the formal authority to tell someone what to do? This course adds to your understanding of life in complex organizations by covering topics spanning the micro (individual level of analysis), the macro (organizational level of analysis), and also topics that integrate these two levels.

Final exam not required.

MBA 206 Marketing Management 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.

This course is designed for students who need to understand the basic concepts and techniques of marketing strategy as a foundation for more advanced study in the area. The course treats marketing from the perspective of strategic analysis and provides a framework for the decisions associated with the management of the marketing function in the modern organization focusing on customer analysis, competitive analysis and the analysis of marketing investments.

Final exam not required.

MBA 207 Ethics and Responsible Business Leadership 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 7 weeks.

This course provides students with the ability to anticipate, critically analyze, and appropriately respond to the social, ethical, and political challenges that face managers operating in a global economy.

Final exam not required. Formerly known as Business Administration 207A.

MBA 209F Fundamentals of Business 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

An introduction to business methods of analysis and terminology for nonbusiness graduate students. The course is taught in three five-week modules: (1) organizational behavior and management, (2) accounting and finance, and (3) marketing and strategy.

Final exam required.

MBA 210 Strategy, Structure, and Incentives 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 201A.

This course uses insights from economics to develop structure, tactics, and incentives to achieve the firm's goals. It develops a framework for analyzing organizational architecture, focusing on the allocation of decision rights, the measurement of performance, and the design of incentives. Includes managing the vertical chain of upstream suppliers and downstream distributors, design and operation of incentive and performance management systems, techniques for dealing with informational asymmetries.

Final exam not required.

MBA 211 Game Theory 2 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

A survey of the main ideas and techniques of game-theoretic analysis related to bargaining, conflict, and negotiation. Emphasizes the identification and analysis of archetypal strategic situations in bargaining. Goals of the course are to provide a foundation for applying game-theoretic analysis, both formally and intuitively, to negotiation and bargaining; to recognize and assess archetypal strategic situations in complicated negotiation settings.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MBA W211 Game Theory (Online Version) 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** unit(s):7 hours of web-based lecture per week; 3 unit(s):10 hours of web-based lecture per week for 8 weeks. This is an online course.

A survey of the main ideas and techniques of game-theoretic analysis related to bargaining, conflict, and negotiation. Emphasizes the identification and analysis of archetypal strategic situations in bargaining. Goals of the course are to provide a foundation for applying game-theoretic analysis, both formally and intuitively, to negotiation and bargaining; to recognize and assess archetypal strategic situations in complicated negotiation settings. This course is taught online.

Students will receive no credit for Masters in Business Administration W211 after taking Masters in Business Administration 211. Final exam not required.

MBA 212 Energy and Environmental Markets 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 201A or equivalent.

Business strategy and public issues in energy and environmental markets. Topics include development and effect of organized spot, futures, and derivative energy markets; political economy of regulation and deregulation; climate change and environmental policies related to energy production and use; cartels, market power and competition policy; pricing of exhaustible resources; competitiveness of alternative energy sources; and transportation and storage of energy commodities.

Final exam required. Formerly known as Business Administration 212.

MBA 212A Cleantech to Market 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

In this course, interdisciplinary teams of graduate students work with scientists from the Lawrence Berkeley National Laboratory and across the UCB campus to commercialize new solar, biofuel, battery, and smart grid/energy management technologies. Students are drawn from Business, Engineering, Science, Law, and the Energy and Resources Group. Students explore topics such as: Potential application in multiple markets; alignment with target or desired market(s); distinguishing advantages and disadvantages; customer and user profiles; top competitors; commercialization and scale-up challenges; relevant government policies; revenue potential and cost sensitivities; intellectual property issues; and multiple other related topics.

Final exam required.

MBA 215 Business Strategies for Emerging Markets: Management, Investment, and Opportunities 2 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course helps students to study the institutions of emerging markets that are relevant for managers, analyze opportunities presented by emerging markets, analyze the additional ethical challenges and issues of social responsibility common in emerging markets, and learn to minimize the risks in doing business in emerging markets. This course is a combination of lectures, class participation, and cases.

Final exam not required.

MBA 217 Topics in Economic Analysis and Policy 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** to 3 hours of Lecture per week for 15 weeks.

Advanced study in the field of economic analysis and policy. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MBA 222 Financial Information Analysis 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 202A or consent of instructor.

Issues of accounting information evaluation with special emphasis on the use of financial statements by decision makers external to the firm. The implications of recent research in finance and accounting for external reporting issues will be explored. Emphasis will be placed on models that describe the user's decision context.

Final exam required. Formerly known as Business Administration 222.

MBA 223 Corporate Financial Reporting 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week.**Prerequisites:** Business Administration 202A or consent of instructor.

This course examines the theory and practice of financial accounting and the issues involved in determining corporate financial reporting policies. It provides an in-depth knowledge of how financial statements are prepared but emphasizes the evaluation of accounting reports from a managerial perspective. Cases supplement lecture, discussion, and problem solving. Final exam required. Formerly known as Business Administration 220.

MBA 224A Managerial Accounting 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week for 10 weeks.**Prerequisites:** Business Administration 202A or equivalent.

This course emphasizes the use of accounting information throughout the planning, operation and control stages of managing an organization. The course is divided into three sections to reflect these three stages of management: 1) information for planning and decision making; 2) information received during operations (cost accounting); and 3) information for control and performance evaluation.

Final exam required. Formerly known as Business Administration 202B.

MBA 227B Taxes and Firm Strategy 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course will cover various topics in personal or corporate taxation or both. Topics will vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Business Administration 228.

MBA 231 Corporate Finance 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week.**Prerequisites:** Business Administration 203.

This course will study the principles underlying alternative financial arrangements and contracts and their application to corporate financial management. In particular, it will examine the impact of incentive, moral hazard, and principal-agent problems, that arise as a consequence of asymmetric information, government intervention, managerial incentives and taxes, on financial decisions regarding capital budgeting, dividend policy, capital structure and mergers.

Final exam required. Formerly known as Business Administration 234.

MBA 232 Financial Institutions and Markets 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week.**Prerequisites:** Business Administration 203.

This course will analyze the role of financial markets and financial institutions in allocating capital. The major focus will be on debt contracts and securities and on innovations in the bond and money markets. The functions of commercial banks, investment banks, and other financial intermediaries will be covered, and aspects of the regulation of these institutions will be examined.

Final exam required. Formerly known as Business Administration 232.

MBA 233 Investments 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week.**Prerequisites:** Business Administration 203.

This course will examine four different types of asset markets: equity markets, fixed income markets, futures markets and options markets. It will focus on the valuation of assets in these markets, the empirical evidence on asset valuation models, and strategies that can be employed to achieve various investment goals.

Final exam required. Formerly known as Business Administration 233.

MBA 236B Investment Strategies and Styles 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 203 plus one additional graduate finance course.

Introduction to alternative investment strategies and styles as practiced by leading money managers. A money manager will spend approximately half of the class discussing his general investment philosophy. In the other half, students, practitioner, and instructor will explore the investment merits of one particular company. Students will be expected to use the library's resources, class handouts, and their ingenuity to address a set of questions relating to the firm's investment value.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Business Administration 239.

MBA 236C Global Financial Services 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Survey of the forces changing and shaping global finance and intermediation, especially the effects of greater ease of communication, deregulation, and globalized disciplines expected to continue to be essential to corporate finance and intermediation, e.g., investment analysis, valuation, structured finance/securitization, and derivative applications. The case method is utilized with occasional additional assigned readings and text sources.

Final exam required.

MBA 236D Portfolio Management 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores the broad range of portfolio management in practice. The class will examine the assets, strategies, characteristics, operations, and concerns unique to each type of portfolio. Practitioners will present descriptions of their businesses as well as methods and strategies that they employ.

Final exam required.

MBA 236E Mergers and Acquisitions: A Practical Primer 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.**Prerequisites:** 203 or consent of instructor.

Survey of the day-to-day practices and techniques used in change of control transaction. Topics include valuation, financing, deal structuring, tax and accounting considerations, agreements, closing document, practices used in management buyouts, divestitures, hostile takeovers, and takeover defenses. Also covers distinctions in technology M&A, detecting corruption in cross border transaction attempts, and betting on deals through risk arbitrage. Blend of lecture, case study, and guest lectures.

Final exam required.

MBA 236F Behavioral Finance 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week for 15 weeks. 2 to 5.5 hours of lecture per week for 8 weeks.**Prerequisites:** 203

This course looks at the influence of decision heuristics and biases on investor welfare, financial markets, and corporate decisions. Topics include overconfidence, attribution theory, representative heuristic, availability heuristic, anchoring and adjustment, prospect theory, "Winner's Curse," speculative bubbles, IPOs, market efficiency, limits of arbitrage, relative mis-pricing of common stocks, the tendency to trade in a highly correlated fashion, investor welfare, and market anomalies.

Final exam not required.

MBA 236G Designing Financial Models that Work 1 or 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks. 14 hours of lecture per week for 4 weeks.**Prerequisites:** 203 or consent of instructor.

Spreadsheet financial models are often too big, complicated, and buggy to help people. In this course, students learn to design financial models that work because they're small (fit on a screen or two), straightforward (involve only basic math), clear (a non-MBA can follow them readily), and fast to build. These simple yet powerful representations of the cash flows for a new product/deal/venture help people share their vision, recognize tradeoffs, brainstorm possibilities, and make decisions. Final exam not required.

MBA 236H Financial Statement Modeling for Finance Careers 1 or 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: unit(s):1.5 hours of lecture per week; 2 unit(s):3 hours of lecture per week for 10 weeks. unit(s):2 hours of lecture per week; 2 unit(s):3.5 hours of lecture per week for 8 weeks. unit(s):2.5 hours of lecture per week; 2 unit(s):5 hours of lecture per week for 6 weeks. unit(s):1 hour of lecture per week; 2 unit(s):2 hours of lecture per week for 14 weeks.

Prerequisites: 203 or consent of instructor.

Spreadsheet financial models are often too big, complicated, and buggy to help people. In this course, students learn to design financial models that work because they're small (fit on a screen or two), straightforward (involve only basic math), clear (a non-MBA can follow them readily), and fast to build. These simple yet powerful representations of the cash flows for a new product/deal/venture help people share their vision, recognize tradeoffs, brainstorm possibilities, and make decisions. Final exam not required.

MBA 237 Topics in Finance 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** to 3 hours of Lecture per week for 15 weeks. 1.5 to 7.5 hours of Lecture per week for 6 weeks.

Advanced study in the field of finance. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MBA 240 Risk Management via Optimization and Simulation 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.**Prerequisites:** 200S, 203, and 204, or consent of instructor.

Survey of the formulation, solution, and interpretation of mathematical models to assist management of risk. Emphasis on applications from diverse businesses and industries, including inventory management, product distribution, portfolio optimization, portfolio insurance, and yield management. Two types of models are covered: optimization and simulation. Associated with each model type is a piece of software: Excel's Solver for optimization and Excel add-in Crystal Ball for simulation. Final exam not required.

MBA 243 Decisions, Games, and Strategies 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 200, 204 or equivalent.

The course considers two techniques for guiding a managerial decision maker who has to make a choice now but will only know later whether the choice was good. Decision analysis helps if the outcome of the choice depends on "nature"; game models help if the outcome depends on human opponents (e.g., competitors). Foundations of the two techniques, and a variety of applications, are studied.

Final exam required. Formerly known as Business Administration 243.

MBA 246A Service Strategy 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.**Prerequisites:** 204 or Evening and Weekend Master of Business Administration 204 or consent of instructor.

This course is designed to teach general management principles involved in the planning, execution, and management of service businesses. It covers both strategic and tactical aspects, including the development of a strategic service vision, building employee loyalty, developing customer loyalty and satisfaction, improving productivity and service quality, service innovation, and the role of technology in services. Blend of case studies, group projects, class discussions, and selected readings.

Final exam required.

MBA 247 Topics in Operations and Information Technology Management 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero to 3 hours of lecture per week. 1 to 7 hours of lecture per week for 6 weeks.

Advanced study in the field of manufacturing and operations. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Masters in Business Administration 247A.

MBA 248A Supply Chain Management 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.**Prerequisites:** 204 or Evening and Weekend Master of Business Administration 204 or equivalent.

Supply chain management concerns the flow of materials and information in multi-stage production and distribution networks. This course provides knowledge of organizational models and analytical decision support tools necessary to design, implement, and sustain successful supply chain strategies. Topics include demand and supply management, inventory management, supplier-buyer coordination via incentives, vendor management, and the role of information technology in supply chain management.

Final exam required.

MBA 252 Negotiations and Conflict Resolution 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.

The purpose of this course is for students to understand the theory and processes of negotiation so that they can negotiate successfully in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses in the MBA program.

Final exam not required.

MBA 254 Power and Politics in Organizations 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 205 or consent of instructor.

This course will provide students with a sense of "political intelligence."

After taking this course, students will be able to: (1) diagnose the true distribution of power in organizations, (2) identify strategies for building sources of power, (3) develop techniques for influencing others, (4) understand the role of power in building cooperation and leading change in organizations, and (5) make sense of others' attempts to influence them. These skills are essential for effective and satisfying career building.

Final exam required. Formerly known as Business Administration 257.

MBA W254 Power and Politics in Organizations 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 to 10 hours of Web-based lecture per week for 8 weeks. This is an online course.**Prerequisites:** Master of Business Administration 205.

This course will provide students with a sense of "political intelligence," enabling them to: 1) Diagnose the true distribution of power in organizations, 2) Identify strategies for building sources of power, 3) Develop techniques for influencing others, 4) Understand the role of power in building cooperation and leading change, and 5) Make sense of others' attempts to influence them. This is an online course, utilizing multiple media and providing flexibility in when and how students learn. Final exam not required. Instructor: Anderson

MBA 255 Leadership 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course will increase your awareness of your own strengths and opportunities for improvement while gaining an understanding of the qualities essential to being an extraordinary leader. By the end of the course, we are hoping that you will have: Increased your understanding of what distinguishes between more and less successful leaders and construct a plan for your own development as a leader; sharpened your ability to diagnose situations and determine how you can add value; gained experience and confidence in leadership situations, such as dealing with difficult people and inspiring others to accomplish shared team and organizational goals; and developed the ability to accept and leverage feedback and offer useful feedback to others.

Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of lecture per week.**Prerequisites:** Business Administration 205 or consent of instructor.

Analysis of recent literature and developments related to such topics as organization development, environmental determinants of organization structure and decision-making behavior, management of professionals and management in temporary structures, cross-cultural studies of management organizations, and industrial relation systems and practices are examined.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Business Administration 259.

MBA 260 Customer Insights 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 206 or equivalent.

Examines concepts and theories from behavioral science useful for the understanding and prediction of market place behavior and demand analysis. Emphasizes applications to the development of marketing policy planning and strategy and to various decision areas within marketing.

Final exam required. Formerly known as Business Administration 260.

MBA 261 Marketing Research: Tools and Techniques for Data Collection and Analysis 2 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 200 or comparable statistical course.

This course develops the skills necessary to plan and implement an effective market research study. Topics include research design, psychological measurement, survey methods, experimentation, statistical analysis of marketing data, and effective reporting of technical material to management. Students select a client and prepare a market research study during the course. Course intended for students with substantive interests in marketing.

Final exam required. Formerly known as Business Administration 261.

MBA 262 Strategic Brand Management 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 202B and 206, or equivalent.

The focus of this course is on developing student skills to formulate and critique complete marketing programs including product, price, distribution and promotion policies. There is a heavy use of case analysis. Course is primarily designed for those who will take a limited number of advanced marketing courses and wish an integrated approach.

Final exam required. Formerly known as Business Administration 262A.

MBA 263 Marketing Analytics 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 206.

Information technology has allowed firms to gather and process large quantities of information about consumers' choices and reactions to marketing campaigns. However, few firms have the expertise to intelligently act on such information. This course addresses this shortcoming by teaching students how to use customer information to better market to consumers. In addition, the course addresses how information technology affects marketing strategy.

Final exam not required. Formerly known as Business Administration 262B.

MBA 264 High Technology Marketing Management 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 206 or equivalent.

High technology refers to that class of products and services which is subject to technological change at a pace significantly faster than for most goods in the economy. Under such circumstances, the marketing task faced by the high technology firm differs in some ways from the usual. The purpose of this course is to explore these differences.

Final exam required. Formerly known as Business Administration 264.

MBA 265 Advertising Strategy 2 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206 or equivalent.

A specialized course in advertising, focusing on management and decision-making. Topics include objective-setting, copy decisions, media decisions, budgeting, and examination of theories, models, and other research methods appropriate to these decision areas. Other topics include social/economic issues of advertising by nonprofit organizations. Final exam required. Formerly known as Business Administration 265.

MBA 266 Channels of Distribution 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 202B, 206 or equivalent.

The success of any marketing program often weighs heavily upon its co-execution by members of the firm's distribution channel. This course seeks to provide an understanding of how the strategic and tactical roles of the channel can be identified and managed. This is accomplished, first, through studying the broad economic and social forces which govern the channel evolution. It is completed through the examination of tools to select, manage and motivate channel partners.

Final exam required. Formerly known as Business Administration 266.

MBA 267 Topics in Marketing 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. MBA 268C Social Media Marketing 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

The course covers the implications of the evolution of communication on marketing strategy in the new landscape where traditional and digital media coexist and interact. While advertising spending on traditional media has recently declined, increasing amounts are spent online in addition to unpaid media. These new communication channels, however, are presenting significant challenges to marketers in selecting the best strategies to maximize returns. The course covers a number of topics including, but not limited to: The differences and interaction between traditional and social media; two-sided markets and social media platforms; a basic theory of social networks online and offline; consumer behavior and digital media.

Final exam not required.

MBA 269 Pricing 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This three-module course aims to equip students with proven concepts, techniques, and frameworks for assessing and formulating pricing strategies. The first module develops the economics and behavioral foundations of pricing. The second module discusses several innovative pricing concepts including price customization, nonlinear pricing, price matching, and product line pricing. The third module analyzes the strengths and weaknesses of several Internet-based, buyer-determined pricing models.

Final exam not required.

MBA 270 Business and Public Policy 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Topic areas include advanced techniques for real estate financial analysis and structuring and evaluation; the securitization of real estate debt and equity; issues in international real estate; cyclical behavior of real estate markets; portfolio theory and real estate asset allocation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Business Administration 281.

MBA 290A Introduction to Management of Technology 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course gives students an overview of the main topics encompassed by management of technology. It includes the full chain of innovative activities beginning with R&D and extending through production and marketing. Why do many existing firms fail to incorporate new technology? What are the success factors at each stage of innovation? The course introduces students to Haas and College of Engineering faculty working in the relevant areas and student projects at leading high tech firms.

Final exam not required. Formerly known as Business Administration 290E.

MBA 290B Biotechnology Industry Perspectives and Business Development 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course is designed to examine the strategic issues that confront the management of the development-stage biotech company, i.e., after its startup via an initial capital infusion, but before it might be deemed successful (e.g., by virtue of a product launch), or otherwise has achieved "first-tier" status. The intention is to study the biotech organization during the process of its growth and maturation from an early-stage existence through "adolescence" into an "adult" company.

Final exam not required.

MBA 290D Design as Strategic Management Issue 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

This course is a study of product design, facilities design, and corporate identity design. It will cover how these design strategies are integral to product development and influence customer satisfaction, quality issues, manufacturing procedures, and marketing tactics.

Final exam not required. Formerly known as Business Administration 290K.

MBA 290E Innovation Strategies for Emerging Technologies 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Every successful entrepreneurial high tech venture has at its core individuals with mastery of two skill sets: marketing and management expertise, and technological skill. This course is intended to provide the marketing skills needed for the management of an entrepreneurial high technology venture, regardless of whether the individual's "home" skill set is technical or managerial. We examine in depth successful marketing approaches for entrepreneurial companies as a function of markets and technologies. Emphasis is placed on the special requirements for creating and executing marketing plans and programs in a setting of rapid technological change and limited resources.

Final exam not required.

MBA 290G International Trade and Competition in High Technology 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

This course looks at who is winning or losing and why in international competition in high technology industries. It will emphasize the interaction between business strategies and the economic and political variables that shape the development and diffusion of new technologies.

Final exam not required. Formerly known as Business Administration 290C.

MBA 290H Haas@Work 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

The primary objective of this course and the associated innovation consulting projects is for students to learn and apply the approaches, skills, and behaviors required to successfully initiate and drive innovation in a complex organization. Students taking the course will use concepts and tools from several other Haas courses, including Economic Analysis for Business Decisions, Strategic Leadership, Leading People, Finance, and Problem Finding Problem Solving. As important, the student teams are expected to deliver the highest quality work and deliverables, genuine insights, innovative solutions, and real value on mission-critical client projects.

Final exam not required.

MBA 290K Innovation in Services and Business Models 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course examines services innovation, first covering key concepts, including how services innovation differs from product innovation, the role of openness in services, the role of business models, and co-creation. The course then introduces several tools and frameworks to apply those concepts to specific services situations. These include process design, process mapping and improvement, business models, co-creation, and platform innovation.

Final exam not required. Instructor: Chesbrough

MBA 290N Managing the New Product Development Process 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

An operationally focused course that aims to develop the interdisciplinary skills required for successful product development. Through readings, case studies, guest speakers, applied projects, and student research, students discover the basic tools, methods, and organizational structures used in new product development management. Course covers process phases: idea generation, product definition, product development, testing and refinement, manufacturing ramp-up and product launch.

Final exam not required. Formerly known as Business Administration 290A.

MBA 290P Project Management Case Studies 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

This course presents case studies of projects that required intervention to avert catastrophic failure. Students will discuss case studies and review real management problems of major corporations. They will create strategic plans to alleviate problems and learn how to manage a large project to a successful completion.

Final exam not required. Formerly known as Business Administration 290L.

MBA 290S Strategy for the Information Technology Firm 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

This course is a strategy and general management course for students interested in pursuing careers in the global information technology industry. Students are taught to view the IT industry through the eyes of the general manager/CEO (whether at a start-up or an industry giant). They learn how to evaluate strategic options and their consequences, how to understand the perspectives of various industry players, and how to anticipate how they are likely to behave under various circumstances. These include the changing economics of production, the role network effects and standards have on adoption of new products and services, the tradeoffs among potential pricing strategies, and the regulatory and public policy context.

Final exam not required.

MBA 290T Special Topics in Innovation and Design 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero to 3 hours of lecture per week. 1 to 7 hours of lecture per week for 6 weeks.

Advanced study in the fields of innovation and design. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MBA 290V Corporate Strategy in Telecommunications and Media 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Business Administration 204.

This course is intended for students who wish to gain better understanding of one of the most important issues facing management today--designing, implementing, and managing telecommunication and distributed computer systems. The following topics are covered: a survey of networking technologies; the selection, design, and management of telecommunication systems; strategies for distributed data processing; office automation; and management of personal computers in organizations.

Students will receive no credit for Masters in Business Administration 290V after taking Masters in Business Administration 244D or 248D.
 Final exam required. Formerly known as 244D.

MBA 291C Active Communicating 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture per week for 15 weeks.

This course develops the basic building blocks of impactful communication--e.g., concentration, energy, voice, physical expressiveness, spontaneity, listening, awareness, and presence--by drawing upon expertise from theater arts. Active, participatory exercises allow for the development and embodiment of effective communication skills. Class readings, lectures, and discussions address participants' specific workplace applications.

Final exam not required.

MBA 291D Data Visualization for Discovery and Communication 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 2 weeks.

This course exposes the problems of poor data presentation and introduces design practices necessary to communicate quantitative business information clearly, efficiently, and powerfully. This course identifies what to look for in the data and describes the types of graphs and visual analysis techniques most effective for spotting what is meaningful and making sense of it.

Final exam not required.

MBA 291I Improvisational Leadership 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This class explores the broad principles of improvisation, a performing art form that has developed pedagogical methods to enhance individual spontaneity, listening and awareness, expressive skills, risk-taking, and one's ability to make authentic social and emotional connections. The ultimate aim of the course is to help students develop an innovative and improvisational leadership mindset, sharpening in-the-moment decision making and the ability to quickly recognize and act upon opportunities when presented. In practical terms, this course strives to enhance students' business communication skills and increase both interpersonal intuition and confidence.

Final paper.

MBA 291L Leader as Coach 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture per week.

This course focuses on the art and science of coaching including theory and practice. The curriculum will cover theory and practice for three aspects of the coaching process – knowledge-based (information and skills), motivation-based (inspiration and passion), and strategy-based (communication and integration). The curriculum will focus on primary coaching skills, tools, processes and behaviors that a coach uses. In addition, participants will learn facilitation skills as the preferred methodology in achieving successful coaching programs. Course participants will have the opportunity to utilize this material in practice coaching sessions with supervision and feedback from peers and the instructor.

Final exam not required.

MBA 291S Storytelling for Leadership 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.

This course will provide the student with specialized knowledge in some area of managerial communications. Topics include multimedia business presentations, personal leadership development, diversity management, and making meetings work. Topics will vary from semester to semester. Final exam not required.

MBA 291T Topics in Managerial Communications 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.

This course will provide the student with specialized knowledge in some area of managerial communications. Topics include multimedia business presentations, personal leadership development, diversity management, and making meetings work. Topics will vary from semester to semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Business Administration 291B.

MBA 292A Strategic Management of Nonprofit Organizations 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.

This course prepares students conceptually and practically to create, lead, and manage nonprofit organizations. Focuses on the centrality of the mission, governing board leadership, application of strategy and strategic planning, and strategic management of issues unique to or characteristic of the sector: performance measurement, program development, financial management, resource development, community relations and marketing, human resource management, advocacy, and management. Final exam required.

MBA 292B Nonprofit Boards 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture and 8 hours of Lecture per week for 2 weeks.

The purpose of this class is to acquaint Master of Business Administration students, many of whom will be asked to serve on nonprofit boards throughout their careers, with the nonprofit sector and the roles and responsibilities of nonprofit boards. Students will learn why nonprofit boards exist, how they are structured, how they differ from corporate boards, what their legal responsibilities are, how boards and chief executives relate to each other, and how boards contribute to the effectiveness of nonprofit organizations. Final exam not required.

MBA 292C Strategic CSR and Consulting Projects 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Discusses the field strategic of CSR through a series of lectures, guest speakers, and projects. It will examine best practices used by companies to engage in socially responsible practices. It will provide students with a flavor of the complex dilemmas one can face in business in trying to do both "good for society" and "well for shareholders." It looks at CSR from a corporate strategy perspective and how it supports core business objectives, core competencies, and bottom-line profits. Final exam not required. Formerly known as 292P.

MBA 292F Financial Management of Nonprofit Organizations 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture and 8 hours of Lecture per week for 2 weeks.**Prerequisites:** 203, financial experience, or equivalent.

The course focuses on financial management issues faced by board members and senior and executive managers in nonprofit organizations. Students learn tools and techniques for effective planning and budgeting and how to control, evaluate and revise plans. Use and development of internal and external financial reports are studied with an emphasis on using financial information in decision making. Tools and techniques of financial statement analysis, interpretation, and presentation are practiced.

Final exam not required.

MBA 292I Social Investing--Recent Findings in Management and Finance 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks or 8 hours of lecture per day for 2 Sundays.

This course introduces the field of social investment. The use of ESG (environmental, social, and governance) criteria is becoming increasingly prevalent among both high net worth individuals and institutions. Many ethical and religious traditions advocate altruism and community-mindedness in all dealings, while some economic and financial theorists argue for a narrow focus on risk and reward, with little regard for the impact of decisions on stakeholder groups or the environment.

Final exam required. Instructor: Kurtz

MBA 292J Haas Socially Responsible Investment Fund 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.**Prerequisites:** Masters in Business Administration 292I.

In this course, students manage a real investment fund (\$1.7 million +) focused on both social and financial returns. Through the Fund students have the opportunity to test the investment and corporate responsibility principles they have learned in the classroom, and to experience the complexities, challenges, and rewards of the investing world. Students have full responsibility for investment decisions, including conducting their own research on companies' environmental, social and governance (ESG) performance. Students receive guidance from both a faculty advisor and an advisory board. The faculty advisor provides regular input on portfolio management, understanding portfolio performance and ESG investing.

Course may be repeated for a maximum of 6 units. Final exam not required.

MBA 292N Topics in Nonprofit and Public Management 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1 to 2 hour of Independent study per week for 6 weeks.**Prerequisites:** Graduate standing.

Individually supervised study of subjects not available to the student in the regular schedule, approved by faculty adviser as appropriate for the student's program.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Business Administration 293.

MBA 293C Curricular Practical Training Internship 0 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** The course will be individually supervised and must be approved by the faculty adviser.

This is an independent study course for international students doing internships under the Curricular Practical Training program. Requires a paper exploring how the theoretical constructs learned in MBA courses were applied during the internship.

Course may be repeated. Course may be repeated for credit when topic changes. Final exam not required.

MBA 294 Selected Topics for MBA Students 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** MBA students.

The course focuses on a specific industry, field of management, or region of the world and is initiated and organized by students. It is usually a survey course. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for a maximum of 2 units. Course may be repeated for a maximum of 2 units. Final exam not required. Formerly known as Business Administration 294.

MBA 295A Entrepreneurship 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** All core courses or equivalents.

This course is about how to start a new business and how to write a business plan. Students are organized in teams of four around new venture ideas of their own choosing. They conduct research, consult with members of the business community, perform analysis, and write a formal business plan. They then present an appeal for funding to a panel consisting of the instructors and members of the investing community. Final exam required. Formerly known as Business Administration 295A.

MBA 295B Venture Capital and Private Equity 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 295A and 234 recommended.

This is an advanced case-based course intended to provide the background, tools, and themes of the venture capital industry. The course is organized in four modules of the private equity cycle: (1) fund raising -- examines how private equity funds are raised and structured, (2) investing -- considers the interactions between private equity investors and the entrepreneurs that they finance, (3) exiting -- examines the process through which private equity investors exit their investments; and (4) new frontiers -- reviews many of the key ideas developed in the course. Final exam not required.

MBA 295C Opportunity Recognition: Technology and Entrepreneurship in Silicon Valley 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is intended to provide the core skills needed for the identification of opportunities that can lead to successful, entrepreneurial high technology ventures, regardless of the individual's "home" skill set, whether technical or managerial. We examine in depth the approaches most likely to succeed for entrepreneurial companies as a function of markets and technologies. Emphasis is placed on the special requirements for creating and executing strategy in a setting of rapid technological change and limited resources. This course is particularly suited for those who anticipate founding or operating technology companies.

Final exam not required. Formerly known as 290O.

MBA 295D New Venture Finance 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** unit(s):2 hours of lecture per week; 3 unit(s):3 hours of lecture per week.**Prerequisites:** Business Administration 295A or consent of instructor.

This is a course about financing new entrepreneurial ventures, emphasizing those that have the possibility of creating a national or international impact or both. It will take two perspectives - the entrepreneur's and the investor's - and it will place a special focus on the venture capital process, including how they are formed and managed, accessing the public markets, mergers, and strategic alliances. Final exam not required.

MBA 295E Case Studies in Entrepreneurship 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course integrates the learnings from summer entrepreneurship into academic experience. Classes will include development of an analysis of cases based on the internship, and opportunities to meet with management of the host programs. By the end of the semester, students will better understand what it takes to run an entrepreneurial enterprise. Final exam not required.

MBA 295F The Lean Launch Pad 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.**Prerequisites:** Graduate standing.

This course provides real world, hands-on learning on what it's like to actually start a hightech company. This class is not about how to write a business plan. It's not an exercise on how smart you are in a classroom, or how well you use the research library to size markets. And the end result is not a PowerPoint slide deck for a VC presentation. And it is most definitely not an incubator where you come to build the "hot-idea" that you have in mind. This is a practical class: Our goal, within the constraints of a classroom and a limited amount of time, is to create an entrepreneurial experience for you with all of the pressures and demands of the real world in an early stage start up.

Final exam not required.

MBA 295G Investing in Entrepreneurial Opportunities: Building an Investment Screen, Methodology, and Process 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course will provide students with an education in to the complexities and unique problems of entrepreneurship in companies with great growth potential, but that are facing significant challenges to achieving that potential. This class is designed to provide students with the tools and skills most critical to successfully screening, investing in, and/or leading companies that have both a great set future growth opportunities and a great set of current problems. This class will use case studies, practical valuation and other exercises, and the energy, enthusiasm, and intellectual capacity of its students to create a great learning environment.

Final exam not required.

MBA 295H Top-Down Law 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Survey of legal and regulatory issues and problems that confront founders and CEOs of entrepreneurial ventures. The course is intended to broaden students' perspective and knowledge about the legal system/process so that they are prepared to (a) identify, analyze, and deal with legal issues, (b) understand and respond to legal and policy grounds for laws and regulations, and (c) work effectively and efficiently with inside and outside legal counsel to resolve legal problems and manage legal risk.

Final exam not required.

MBA 295I Entrepreneurship Workshop for Start-ups 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This workshop is intended for students who have their own experimental venture project under development. The business concept may be in the startup mode, or further along in its evolution. The pedagogy is one of "guided" entrepreneurship where students, often working in teams, undertake the real challenges of building a venture. Students must be willing to discuss their project with others in the workshop as group deliberation of the entrepreneurial challenges is a key component of the class.

Final exam not required.

MBA 295J Entrepreneurship in Biotechnology 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

An introduction to the complexities and unique problems of entrepreneurship in the life sciences and is designed for both entrepreneurs and students who may some day found or work in an emerging life science-based company. Students are exposed to the topics most critical to successfully founding, financing, and operating a life science company and are expected to perform many of the tasks which founders and early venture managers normally undertake.

Final exam not required.

MBA 295M Business Model Innovation and Entrepreneurial Strategy 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 10 weeks.

The class teaches how to characterize and analyze business models and how to efficiently construct and test new business models. The course examines businesses across industries and phases of a firm's growth. Critical entrepreneurial strategies are illuminated for new ventures or in building a new enterprise inside a corporation. The course provides students with the skills and knowledge to rapidly assess and shape business models to their advantage in constructing new enterprises.

Final exam not required. Instructor: Charron

MBA 295T Special Topics in Entrepreneurship 1 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** All core courses or equivalents.

Courses of this kind will cover issues in entrepreneurship that either appeal to a specialized interest by type of firm being started (e.g., new ventures in computer software) or in the aspect of the entrepreneurial process being considered (e.g., new venture funding). The courses typically will be designed to take advantage of the access offered by the University and the locale to knowledgeable and experienced members of the business community.

Final exam not required. Formerly known as Business Administration 295C.

MBA 296 Special Topics in Business Administration 0.5 - 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: to 3 hours of Lecture per week for 15 weeks. 1 to 5.5 hour of Lecture per week for 8 weeks. 2 to 7.5 hours of Lecture per week for 6 weeks.

Prerequisites: Graduate standing.

Advanced study in various fields of business administration. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Business Administration 296.

MBA 297A Healthcare in the 21st Century 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course gives a systematic overview of the U.S. health care system by providing students with an understanding of its structure, financing, and special properties. Applies social science theory, disciplinary contributions, and research findings to the understanding of health care delivery problems; examines current courses of data about health status, health services use, financing, and performance indicators; and analyzes the larger management and policy issues that drive reform efforts.

Final exam not required.

MBA 297B Health Care Finance 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Master's-level accounting and finance.

This course covers the strategic financial management in the health services industry, including provider organizations (e.g., hospitals and physician groups) and insurance firms. Cases are used to apply the financial analysis and planning skills learned in the course. Topic areas include financial statement analysis, cost behavior, pricing and service decisions, planning and budgeting, management control, debt and equity financing, risk and return, capital budgeting, and project risk assessment. Final exam not required.

MBA 297C Innovations in Healthcare 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

The purpose of this course is to provide students with insights into the newest innovations in healthcare service delivery, information technology, and medical devices. Through presentations by leading entrepreneurs in the field, students will be challenged to make investment decisions in those firms with the greatest promise. Students will also be asked to develop an investment philosophy that supports their commitments to specific companies.

Final exam not required.

MBA 298A International Business Development for MBAs 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 2 hours of lecture per week ex10ding for 3 weeks following the spring semester.

Prerequisites: First semester MBA core courses.

This course explores the issues of conducting business in an international context, including an analysis of project management, information resources, and cultural differences. The three-week project, typically in a developing economy, provides a real-life application of theories of this course and of the first-year MBA courses. The fall segment highlights the presentations of each returning team on their project findings and experiences.

Final exam not required. Formerly known as Business Administration 297A-297B.

MBA 298B International Business Development for MBAs 1 Unit**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** First semester MBA core courses.

This course explores the issues of conducting business in an international context, including an analysis of project management, information resources, and cultural differences. The three-week project, typically in a developing economy, provides a real-life application of theories of this course and of the first-year MBA courses. The fall segment highlights the presentations of each returning team on their project findings and experiences.

Final exam not required. Formerly known as Business Administration 297B.

MBA 298S Seminar in International Business 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 to 5.5 hours of fieldwork per week for 8 weeks.

This course involves a series of speaker and seminar-type classes in preparation for a two-week study tour of a specific country or region. Participants will visit companies and organizations and meet with top-level management to learn about the opportunities and challenges of operating in a specific country or region. Evaluation is based on student presentations, participation, and a research paper.

Final exam not required.

MBA 298X MBA Exchange Program 1 - 15 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 15 hour of Fieldwork per week for 15 weeks.**Prerequisites:** Successful completion of all core courses; good academic standing.

Students who participate in one of the Haas School's domestic or international exchange programs receive credit (usually 12 units) at Haas for the set of courses that they successfully complete at their host school. The courses that the students take at the host school are subject to review by the MBA Program office to ensure that they match course requirements at the Haas School.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MBA 299 Strategic Leadership 2 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 7 weeks.**Prerequisites:** 201A.

Course covers core topics in strategy, including selection of goals; the choice of products and services to offer; competitive positioning in product markets; decisions about scope and diversity; and the design of organizational structure, administrative systems, and other issues of control and internal regulation.

Final exam not required.

MBA 299B Global Strategy and Multinational Enterprise 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.**Prerequisites:** All core courses.

Identifies the management challenges facing international firms. Attention to business strategies, organizational structures, and the role of governments in the global environment. Special attention to the challenges of developing and implementing global new product development strategies when industrial structures and government policies differ. Efficacy of joint ventures and strategic alliances. Implications for industrial policy and global governance.

Final exam required. Formerly known as Business Administration 299E.

MBA 299E Competitive and Corporate Strategy 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** All core courses.

Examines optimal production and pricing policies for firms in competitive environments; optimal strategies through time; strategies in the presence of imperfect information. How differing market structures and government policies (including taxation) affect output and pricing decisions. Social welfare implications of decisions by competitive firms also explored.

Final exam required. Formerly known as Business Administration 299B.

MBA 299H Strategic Management and the Organization of Health Services 2 or 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 3 hours of Lecture per week for 10 weeks.**Prerequisites:** Business Administration 205 or Public Health 223A and 224A, or consent of instructor.

This is a course in strategic management of health services organizations. It systematically addresses system-wide, organization-wide, group-level, and individual-level issues in strategy formulation, content, implementation, and performance. It considers internal and external factors that affect organizational performance. Emphasis is on the development and implementation of strategies to meet stakeholders' demands, and total quality management approaches. This course covers a wide variety of health care organizations including providers, plans, systems, suppliers, pharmaceuticals, and biotech. The course builds on 205 and Public Health 223A.

Final exam not required. Formerly known as Business Administration 299G.

MBA 299M Marketing Strategy 3 Units**Department:** Masters in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** All core courses.

Strategic planning theory and methods with an emphasis on customer, competitor, industry, and environmental analysis and its application to strategy development and choice.

Final exam required. Formerly known as Business Administration 299D.

MBA 375 Teaching Business 0.5 Units**Department:** Masters in Business Administration**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 6 hours of lecture per week for 1 week.

This course will cover the important skills and resources necessary to be an effective graduate student instructor (GSI) in the Haas School of Business. GSIs are an integral part of instruction at Haas, supporting faculty teaching through administrative and pedagogical support. This course seeks to prepare MBA students for their first GSI positions, ensuring that they are ready for the many potential challenges that might await them in the ensuing semester. Students will learn effective teaching strategies from faculty and veteran GSIs, as well as resources available to them both through Haas and the Berkeley campus. This course will also teach MBA students the common pitfalls of any class--both in pedagogical style and in student interaction.

Final exam not required. Formerly known as Master of Business Administration 300.

Masters in Financial Engineering (MFE)

MFE 230A Investments and Derivatives 3 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 8 weeks.

The course discusses the basic theories of asset pricing. It begins with the standard discounted cash flow analysis, and generalizes this approach to develop the No Arbitrage Pricing Technique for security valuation. Topics will be fixed income securities, derivatives, contingent claims, basic principles of optimal portfolio theory, models of equilibrium asset pricing, including CAPM and related Factor Models.

Final exam not required. Formerly known as Business Administration 230A.

MFE 230E Empirical Methods in Finance 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture per week for 8 weeks.**Prerequisites:** Business Administration 230A-230B.

This course reviews probability and statistical techniques commonly used in quantitative finance. It includes a review of normal, lognormal, CEV distribution, estimation and nonparametric techniques commonly used in finance (MLE, GMM, GARCH). Students will be introduced to financial databases and estimation application software to estimate volatilities and correlations and their stability.

Final exam required. Formerly known as Business Administration 230E.

Instructor: Valkanov

MFE 230F The Design of Securities for Corporate Financing 1 Unit**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture per week for 8 weeks. 2 hours of lecture per week for 8 weeks. 2 hours of lecture per week for 8 weeks. 2 hours of lecture per week for 8 weeks.

Prerequisites: 230D.

The view of corporate finance presented in this course stems from an analysis of two related issues: 1) how firms create value, and 2) how corporate finance facilitates the process of value creation. As part of this process, we will examine the factors that help determine financial strategy, thereby putting the design of financial packages in perspective. In particular, the course focuses on how corporate financing needs lead to the need for financial engineering and spur financial innovation.

Final exam not required.

MFE 230G Equity and Currency Markets 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 4 hours of Lecture per week for 7.5 weeks.**Prerequisites:** Business Administration 230A-230B.

This course reviews various aspects of equity and currency markets and their relative importance. It provides models of and historical evidence on the average returns and volatility of returns on equities, on the trade-to-trade equity price behavior, on trading volume and patterns, and primary financial risks. Determination of spot and forward rates and volatility, volume, high frequency dynamics and dealer behavior are examined. Final exam not required. Formerly known as Business Administration 230G.

MFE 230H Financial Risk Measurement and Management 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 4 hours of Lecture per week for 7.5 weeks.**Prerequisites:** Business Administration 230A-230B.

This course examines risk measurement and management including market risk, credit risk, liquidity risk, settlement risk, volatility risk, kurtosis risk and other types of financial risks. Topics will include risk management techniques for different types of contracts and portfolios such as duration, portfolio beta, factor sensitivities, VAR, dynamic portfolio analysis and extreme value analysis and other risk management techniques. Final exam not required. Formerly known as Business Administration 230H.

MFE 230I Fixed Income Markets 2 or 3 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 or 4 hours of lecture per week for 8 weeks.**Prerequisites:** 230D.

This course provides a quantitative approach to fixed income securities and bond portfolio management. Topics include fixed income security markets, pricing and uses for portfolio management or for hedging interest rate risk, bond mathematics, term structure measurement and theory, immunization techniques, and the modern theory of bond pricing, and derivative instruments. Final exam not required.

MFE 230J Success and Failure in Financial Innovation 1 Unit**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 7.5 weeks. 2 hours of lecture per week for 7.5 weeks. 2 hours of lecture per week for 7.5 weeks.**Prerequisites:** Business Administration 230A-230B.

Students will participate in a series of case studies illustrating some of the major successes and failures of modern financial innovation. They will learn how to measure success and failure and discuss case studies in portfolio insurance, long-term capital management, mortgage-backed securitization, and corporate enterprise-wide risk control. Final exam not required. Formerly known as Business Administration 230J.

MFE 230K Dynamic Asset Management 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 4 hours of Lecture per week for 7.5 weeks.**Prerequisites:** Business Administration 230A-230B.

This course reviews portfolio theory and pricing models. It includes: risk models for international portfolio returns, models of optimal allocation of funds, exchange rate uncertainty and criteria for judging the performance of managers and models; different types of portfolios/instruments, different types of applications, and strategies to achieve various investment objectives. Final exam not required. Formerly known as Business Administration 230K.

MFE 230M Asset-Backed Security Markets 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 4 hours of Lecture per week for 7.5 weeks.**Prerequisites:** Business Administration 230D and 230I.

This course extends the study of fixed income securities to advanced topics on mortgage and other asset-backed securities. Topics will include basic mechanics of structuring deals for mortgage-related securities, credit cards, leases, and other debt markets and the risk management techniques employed in the securitization process for these assets. The valuation of pooled assets and derivative bonds using Monte Carlo and option pricing techniques, and trading strategies are also evaluated. Final exam not required. Formerly known as Business Administration 230M.

MFE 230N Applied Finance Project 0 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: Independent study. Independent study. Independent study.

Prerequisites: Participation requires prior approval of the supervising faculty.

Students will be required to complete an applied quantitative finance project that explores a quantitative finance problem that might be met in practice and involves the development or use of quantitative financial technique.

Final exam not required. Formerly known as Business Administration 230N-230O.

MFE 230O Applied Finance Project 1 - 3 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.

Hours and format: Independent study. Independent study. Independent study.

Prerequisites: Participation requires prior approval of the supervising faculty.

Students will be required to complete an applied quantitative finance project that explores a quantitative finance problem that might be met in practice and involves the development or use of quantitative financial technique.

Final exam not required. Formerly known as Business Administration 230N-230O.

MFE 230P Optimization Models in Finance 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of Lecture and 5 hours of Lecture per week for 6 weeks.

This course proposes a guided tour through optimization models arising in practical finance. These problems include ones that are traditionally associated with optimization, including asset and liability management, asset pricing, and portfolio optimization. We also describe optimization models arising in model calibration, predication and estimation, and risk analysis. The course includes some recent approaches to the analysis of other kinds of financial data, such as text (financial news) data.

Final exam required. Instructor: El Ghaoui

MFE 230Q Introduction to Stochastic Calculus 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of lecture per week for 8 weeks. 4 hours of lecture per week for 8 weeks.

The course introduces the students to techniques from stochastic analysis employed in mathematical finance. Topics include: stochastic processes, brownian motion, stochastic integral, differentials and Ito's formula; martingales.

Final exam not required. Formerly known as Business Administration 230Q.

MFE 230R Advanced Computational Finance 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 to 4 hours of lecture per week for 8 weeks. 2 to 4 hours of lecture per week for 8 weeks. 2 to 4 hours of lecture per week for 8 weeks.

Prerequisites: 230D.

This course builds on the techniques learned in 230D, Quantitative Methods for Derivative Pricing. The focus is to gain a deeper analysis of numerical and computational issues in pricing and calibration. The orientation of the course is hands-on, with heavy use of computational techniques applied to case projects. The primary objective of this course is to prepare students to tackle the latest challenges in quantitative pricing that they are likely to encounter in cutting-edge financial institutions.

Final exam not required.

MFE 230S Behavioral Finance 1 or 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Lecture, 4 hours of Lecture, 1 hour of Discussion, and 1 hour of Discussion per week for 8 weeks.

Prerequisites: 230D.

Over the last 25 years, psychologists have come to better understand the processes by which people make judgements and decisions. They have identified common judgement and decision heuristics and the biases associated with these. An understanding of one's own decision biases and those of others is an important tool for managers. Behavioral Decision Theory has also contributed to our understanding of financial markets.

This course will discuss the common biases and heuristics.

Final exam not required.

MFE 230T Topics in Financial Engineering 1 - 5 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 10 hours of lecture per week for 8 weeks. 2 to 10 hours of lecture per week for 8 weeks. 2 to 10 hours of lecture per week for 8 weeks. 2 to 10 hours of lecture per week for 8 weeks.

Advanced study in the field of finance engineering that will address current and emerging issues. Topics will vary with each offering and will be announced at the beginning of each term.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

MFE 230V Credit Risk Modeling 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 8 weeks. 4 hours of lecture per week for 8 weeks.

Focuses on the techniques currently used to model credit risk. The course will cover default probabilities, loss given default, correlation, credit portfolio analytics, bond valuation, loan valuation, and credit derivative valuation. Emphasis will be placed on model building, model validation, and interpreting model output. Students will be required to do some high-level programming in a package such as Matlab. Some empirical testing exercises will also be part of the project work.

Final exam not required.

MFE 230VA Credit Risk: Economic Concepts 1 Unit**Department:** Masters in Financial Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks. 3 hours of Lecture and 3 hours of Lecture per week for 6 weeks.

Introduction to credit risk modeling and conceptual overview of current techniques. Covers default probabilities, loss given default, correlation, credit portfolio analytics, bond valuation, loan valuation, and credit derivative valuation. Prepares students who are interested in a second course that will focus on model building. Students not interested in the technical details of modeling but who desire an understanding of how credit risk modeling is used in practice will benefit from taking this course. Final exam not required.

MFE 230VB Credit Risk: Quantitative Modeling 1 Unit**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Lecture per week for 6 weeks.

Focuses on the techniques currently used to model credit risk. The course will cover default probabilities, loss given default, correlation, credit portfolio analytics, bond valuation, loan valuation, and credit derivative valuation. Emphasis will be placed on model building, model validation, and interpreting model output. Students will be required to do some high-level programming in a package such as MATLAB. Some empirical testing exercises will also be part of the project work.

Final exam not required.

MFE 230W Accounting and Taxation of Derivatives 1 Unit**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Lecture and 2.5 hours of Lecture per week for 8 weeks.

This course provides a framework to allow students the understanding of the accounting and tax issues related to derivatives and hedging. It also fulfills the needs of students seeking jobs in the corporate sector and/or seeking securities-structuring assignments in the financial services sector. A basic understanding of financial accounting is required.

Final exam not required.

MFE 230X High Frequency Finance 1 or 2 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week per unit. 3 hours of lecture per week per unit. 3 hours of lecture per week per unit. 3 hours of lecture per week per unit.

This course introduces basic concepts of high frequency finance and discusses recent developments in market microstructure, electronic trading, and high frequency data modeling. Topics include trading basics and price discovery, distributional properties of financial time series, tick data analysis, trade direction algorithms, trading benchmarks, sources of risk, and trading strategies (including back-testing challenges, benchmark and hedging strategies, and arbitrage and program trading).

Final exam not required.

MFE 293 Individually Supervised Study for Graduate Students 1 - 5 Units**Department:** Masters in Financial Engineering**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 5 hour of Independent study and 1 to 5 hour of Independent study per week for 8 weeks.**Prerequisites:** Graduate standing.

Individually supervised study of subjects not available to students in the regular schedule, approved by faculty adviser as appropriate for the students' programs.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Materials Science and Engineering (MAT SCI)

MAT SCI 24 Freshman Seminar 1 Unit**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of lecture/discussion per week.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to 20 freshmen.

Final exam required.

MAT SCI 39A Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Sastry

MAT SCI 39B Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39C Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39D Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39E Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39F Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39G Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39H Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39I Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39J Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39K Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39L Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39M Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39N Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39O Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39P Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39Q Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39R Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39S Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39T Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39U Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39V Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39W Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39X Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39Y Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 39Z Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 14 weeks. 1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week for 8 weeks. 2.5 hours of seminar per week for 6 weeks.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollments limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 102 Bonding, Crystallography, and Crystal Defects 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 45.

Bonding in solids; classification of metals, semiconductors, and insulators; crystal systems; point, line, and planar defects in crystals; examples of crystallographic and defect analysis in engineering materials; relationship to physical and mechanical properties.

Final exam required. Instructors: Chrzan, Suzuki

MAT SCI 103 Phase Transformations and Kinetics 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 and Engineering 115.

The nature, mechanisms, and kinetics of phase transformations and microstructural changes in the solid state. Atom diffusion in solids. Phase transformations through the nucleation and growth of new matrix or precipitate phases. Martensitic transformations, spinodal decomposition. The use of phase transformations to control microstructure.

Final exam required. Instructor: Glaeser

MAT SCI 104 Materials Characterization 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 102

Physical and chemical characterization of materials: Diffraction, imaging, and spectroscopy using optical, electron, and X-ray methods for bulk and surface analysis. Measurement of mechanical and physical properties. Project laboratory focusing on mechanical, chemical, electrical, and magnetic properties of materials, and materials characterization. Field trips.

Final exam required. Instructor: Gronsky

MAT SCI 111 Properties of Electronic Materials 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Physics 7A-7B-7C or Physics 7A-7B and consent of instructor.

Introduction to the physical principles underlying the electric properties of modern solids with emphasis on semiconductors; control of defects and impurities through physical purification, bulk and thin film crystal growth and doping processes, materials basis of electronic and optoelectronic devices (diodes, transistors, semiconductor lasers) and optical fibers; properties of metal and oxide superconductors and their applications. Final exam required. Instructors: Dubon, Wu

MAT SCI 112 Corrosion (Chemical Properties) 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 45 and Engineering 115.

Electrochemical theory of corrosion. Mechanisms and rates in relation to physiochemical and metallurgical factors. Stress corrosion and mechanical influences on corrosion. Corrosion protection by design, inhibition, cathodic protection, and coatings.

Final exam required. Instructor: Devine

MAT SCI 113 Mechanical Behavior of Engineering Materials 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** C30/Mechanical Engineering C85 and Engineering 45.

This course covers elastic and plastic deformation under static and dynamic loads. Prediction and prevention of failure by yielding, fracture, fatigue, wear and environmental factors are addressed. Design issues pertaining to materials selection for load bearing applications are discussed. Case studies of engineering failures are presented. Topics include engineering materials, structure-property relationships, materials selection for design, mechanical behavior of polymers and design of plastic components, complex states of stress and strain, elastic deformation and multiaxial loading, plastic deformation and yield criteria, dislocation plasticity and strengthening mechanisms, creep, effects of stress concentrations, fracture, fatigue, and contact stresses.

Students will receive no credit for 113 after taking C113 or Mechanical Engineering C124. Deficiency in C113 or Mechanical Engineering C124 may be removed by taking 113. Final exam required. Instructor: Ritchie

MAT SCI 117 Properties of Dielectric and Magnetic Materials 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 7A-7B-7C or Physics 7A-7B and consent of instructor; 111 is recommended.

Introduction to the physical principles underlying the dielectric and magnetic properties of solids. Processing-microstructure-property relationships of dielectric materials, including piezoelectric, pyroelectric, and ferroelectric oxides, and of magnetic materials, including hard- and soft ferromagnets, ferrites and magneto-optic and -resistive materials. The course also covers the properties of grain boundary devices (including varistors) as well as ion-conducting and mixed conducting materials for applications in various devices such as sensors, fuel cells, and electric batteries.

Final exam required. Instructor: Suzuki

MAT SCI C118/BIO ENG C118 Biological Performance of Materials 4 Units**Department:** Materials Science and Engineering; Bioengineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Molecular and Cell Biology 102, 130 (recommended), and Engineering 45, 115 or equivalent.

This course is intended to give students the opportunity to expand their knowledge of topics related to biomedical materials selection and design. Structure-property relationships of biomedical materials and their interaction with biological systems will be addressed. Applications of the concepts developed include blood-materials compatibility, biomimetic materials, hard and soft tissue-materials interactions, drug delivery, tissue engineering, and biotechnology.

Final exam required. Instructor: Healy

MAT SCI 120 Materials Production 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: Engineering 115, Mechanical Engineering 40, Chemical Engineering 141, Chemistry 120B or equivalent thermodynamics course. Economic and technological significance of metals and other materials. Elementary geology (composition of lithosphere, mineralization). Short survey of mining and mineral processing techniques. Review of chemical thermodynamics and reaction kinetics. Principles of process engineering including material, heat, and mechanical energy balances. Elementary heat transfer, fluid flow, and mass transfer. Electrolytic production and refining of metals. Vapor techniques for production of metals and coatings.

Final exam required. Instructor: Doyle

MAT SCI 121 Metals Processing 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 45.

The principles of metals processing with emphasis on the use of processing to establish microstructures which impart desirable engineering properties. The techniques discussed include solidification, thermal and mechanical processing, powder processing, welding and joining, and surface treatments.

Final exam required. Instructor: Gronsky

MAT SCI 122 Ceramic Processing 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 45, 115.

Powder fabrication by grinding and chemical methods, rheological behavior of powder-fluid suspensions, forming methods, drying, sintering, and grain growth. Relation of processing steps to microstructure development.

Final exam required. Instructor: Glaeser

MAT SCI 123 Semiconductor Processing 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 111 or Physics 7A-7B-7C and consent of instructor. Semiconductor purification and crystal growth techniques; impurity doping by diffusion, ion implantation and alloy regrowth; contact formation, mechanical and chemical processing; semiconductor analysis.

Final exam required. Instructor: Wu

MAT SCI 125 Thin-Film Materials Science 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: Upper division or graduate standing in engineering, physics, chemistry, and chemical engineering; Engineering 45 required; 111 or Physics 141A recommended.

Deposition, processing, and characterization of thin films and their technological applications. Physical and chemical vapor deposition methods. Thin-film nucleation and growth. Thermal and ion processing. Microstructural development in epitaxial, polycrystalline, and amorphous films. Thin-film characterization techniques. Applications in information storage, integrated circuits, and optoelectronic devices. Laboratory demonstrations.

Final exam required. Instructor: Dubon

MAT SCI 130 Experimental Materials Science and Design 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Senior standing or consent of instructor.

This course provides a culminating experience for students approaching completion of the materials science and engineering curriculum.

Laboratory experiments are undertaken in a variety of areas from the investigations on semiconductor materials to corrosion science and elucidate the relationships among structure, processing, properties, and performance. The principles of materials selection in engineering design are reviewed.

Final exam required. Instructor: Dubon

MAT SCI 136 Materials in Energy Technologies 4 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Junior or above standing in Materials Science and Engineering or related field.

In many, if not all, technologies, it is materials that play a crucial, enabling role. This course examines potentially sustainable technologies, and the materials properties that enable them. The science at the basis of selected energy technologies are examined and considered in case studies.

Final exam required. Formerly known as Materials Science and Engineering 126.

MAT SCI 140 Nanomaterials for Scientists and Engineers 3 Units**Department:** Materials Science and Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2-1 and a half hours of lectures and 1 hour of discussion per week.**Prerequisites:** 102 or equivalent recommended; Physics 7C and Engineering 45 required.

This course introduces the fundamental principles needed to understand the behavior of materials at the nanometer length scale and the different classes of nanomaterials with applications ranging from information technology to biotechnology. Topics include introduction to different classes of nanomaterials, synthesis and characterization of nanomaterials, and the electronic, magnetic, optical, and mechanical properties of nanomaterials.

Final exam required. Instructor: Minor

MAT SCI C150/CHEM C150 Introduction to Materials Chemistry 3 Units

Department: Materials Science and Engineering; Chemistry

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 104A; 104B is recommended.

The application of basic chemical principles to problems in materials discovery, design, and characterization will be discussed. Topics covered will include inorganic solids, nanoscale materials, polymers, and biological materials, with specific focus on the ways in which atomic-level interactions dictate the bulk properties of matter.

Final exam required.

MAT SCI 151 Polymeric Materials 3 Units

Department: Materials Science and Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Chemistry 1A or Engineering 5. 103 is recommended.

This course is designed for upper division undergraduate and graduate students to gain a fundamental understanding of the science of polymeric materials. Beginning with a treatment of ideal polymeric chain conformations, it develops the thermodynamics of polymer blends and solutions, the modeling of polymer networks and gels, the dynamics of polymer chains, and the morphologies of thin films and other dimensionally-restricted structures relevant to nanotechnology.

Final exam required. Instructor: Xu

MAT SCI H194 Honors Undergraduate Research 1 - 4 Units

Department: Materials Science and Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Variable format.

Prerequisites: Upper division technical GPA of 3.3 or higher and consent of instructor and adviser.

Students who have completed a satisfactory number of advanced courses with a grade-point average of 3.3 or higher may pursue original research under the direction of one of the members of the staff. A maximum of 3 units of H194 may be used to fulfill technical elective requirements in the Materials Science and Engineering program or double majors (unlike 198 or 199, which do not satisfy technical elective requirements). Final report required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 195 Special Topics for Advanced Undergraduates 1 Unit

Department: Materials Science and Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of Directed group study per week for 15 weeks.

Prerequisites: Upper division standing and good academic standing. (2.0 gpa and above)

Group study of special topics in materials science and engineering.

Selection of topics for further study of underlying concepts and relevant literature, in consultation with appropriate faculty members.

Final exam required.

MAT SCI 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units

Department: Materials Science and Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks.

Prerequisites: Upper division standing in Engineering.

Group studies of selected topics.

Final exam not required.

MAT SCI 199 Supervised Independent Study 1 - 4 Units

Department: Materials Science and Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Individual conferences.

Prerequisites: Consent of instructor and major adviser.

Supervised independent study. Enrollment restrictions apply; see the Introduction to Courses and Curricula section of this catalog.

Course may be repeated for credit when topic changes. Course may be repeated for a maximum of four units per semester. Final exam not required.

MAT SCI 200A Survey of Materials Science 4 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

A survey of Materials Science at the beginning graduate level, intended for those who did not major in the field as undergraduates. Focus on the nature of microstructure and its manipulation and control to determine engineering properties. Reviews bonding, structure and microstructure, the chemical, electromagnetic and mechanical properties of materials, and introduces the student to microstructural engineering.

Final exam not required. Instructor: Asta

MAT SCI 201A Thermodynamics and Phase Transformations in Solids 4 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 102, 103, Engineering 115, or consent of instructor. 201A is prerequisite to 201B.

The laws of thermodynamics, fundamental equations for multicomponent elastic solids and electromagnetic media, equilibrium criteria. Application to solution thermodynamics, point defects in solids, phase diagrams. Phase transitions, Landau rule, symmetry rules. Interfaces, nucleation theory, elastic effects. Kinetics: diffusion of heat, mass and charge; coupled flows.

Final exam required.

MAT SCI 202 Crystal Structure and Bonding 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Regular, irregular arrays of points, spheres; lattices, direct, reciprocal; crystallographic point and space groups; atomic structure; bonding in molecules; bonding in solids; ionic (Pauling rules), covalent, metallic bonding; structure of elements, compounds, minerals, polymers.

Final exam required. Instructor: Chrzan

MAT SCI 204 Theory of Electron Microscopy and X-Ray Diffraction 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102, 103 or equivalent.

Basic principles of techniques used in the characterization of engineering materials by electron microscopy, diffraction, and spectroscopy; emphasis on detailed analysis of defects responsible for materials properties. Modern electrical, optical and particle beam techniques for characterization of bulk single crystals and their crystalline and amorphous layers. Examples Hall effect, Deep Level Transient Spectroscopy, IR-Spectroscopy.

Final exam not required. Instructor: Gronskey

MAT SCI 205 Defects in Solids 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 7C or consent of instructor.

Many properties of solid state materials are determined by lattice defects. This course treats in detail the structure of crystal defects, defect formation and annihilation processes, and the influence of lattice defects on the physical and optical properties of crystalline materials.

Final exam required. Instructor: Ramesh

MAT SCI C211/CIV ENG C231 Mechanics of Solids 3 Units**Department:** Materials Science and Engineering; Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Mechanical response of materials: Simple tension in elastic, plastic and viscoelastic members. Continuum mechanics: The stress and strain tensors, equilibrium, compatibility. Three-dimensional elastic, plastic and viscoelastic problems. Thermal, transformation, and dealloying stresses. Applications: Plane problems, stress concentrations at defects, metal forming problems.

Students will receive no credit for 231 after taking 231A or 231B prior to Fall 1992. Final exam not required. Instructor: Govindjee

MAT SCI C212/MEC ENG C225 Deformation and Fracture of Engineering Materials 4 Units**Department:** Materials Science and Engineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil Engineering 130, Engineering 45.

This course covers deformation and fracture behavior of engineering materials for both monotonic and cyclic loading conditions.

Final exam required. Instructors: Ritchie, Pruitt, Komvopoulos

MAT SCI 213 Environmental Effects on Materials Properties and Behavior 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** MSE 112 or equivalent.

Review of electrochemical aspects of corrosion; pitting and crevice corrosion; active/passive transition; fracture mechanics approach to corrosion; stress corrosion cracking; hydrogen embrittlement; liquid metal embrittlement; corrosion fatigue; testing methods.

Final exam required. Instructor: Devine

MAT SCI C214/CIV ENG C236 Micromechanics 3 Units

Department: Materials Science and Engineering; Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Consent of instructor.

Basic theories, analytical techniques, and mathematical foundations of micromechanics. It includes 1. physical micromechanics, such as mathematical theory of dislocation, and cohesive fracture models; 2. micro-elasticity that includes Eshelby's eigenstrain theory, comparison variational principles, and micro-crack/micro-cavity based damage theory; 3. theoretical composite material that includes the main methodologies in evaluating overall material properties; 4. meso-plasticity that includes meso-damage theory, and the crystal plasticity; 5. homogenization theory for materials with periodic structures.

Final exam required. Instructors: Govindjee, Li

MAT SCI 215 Computational Materials Science 3 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 3 hours of computer laboratory per week.

Prerequisites: Graduate standing in engineering or sciences, or consent of instructor.

Introduction to computational materials science. Development of atomic scale simulations for materials science applications. Application of kinetic Monte Carlo, molecular dynamics, and total energy techniques to the modeling of surface diffusion processes, elastic constants, ideal shear strengths, and defect properties. Introduction to simple numerical methods for solving coupled differential equations and for studying correlations.

Final exam not required. Instructor: Chrzan

MAT SCI C216/BIO ENG C216 Macromolecular Science in Biotechnology and Medicine 4 Units

Department: Materials Science and Engineering; Bioengineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Bioengineering 115 or equivalent; open to seniors with consent of instructor.

Overview of the problems associated with the selection and function of polymers used in biotechnology and medicine. Principles of polymer science, polymer synthesis, and structure-property-performance relationships of polymers. Particular emphasis is placed on the performance of polymers in biological environments. Interactions between macromolecular and biological systems for therapy and diagnosis. Specific applications will include drug delivery, gene therapy, tissue engineering, and surface engineering.

Final exam not required. Instructor: Healy

MAT SCI 223 Semiconductor Materials 3 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Physics 7C or consent of instructor.

Semiconductor purification and crystal growth techniques. Doping, radiation damage, and annealing. Metal-semiconductor interfaces and reactions. Interaction between defects and impurities during processing of devices. Major electronic and optical methods for the analysis of semiconductors.

Final exam required. Instructors: Dubon, Wu

MAT SCI 224 Magnetism and Magnetic Materials 3 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 111 or equivalent or consent of instructor; 117 recommended.

This course covers the fundamentals of magnetism and magnetic materials in the first two-thirds of the class. Topics include magnetic moments in classical versus quantum mechanical pictures, diamagnetism, paramagnetism, crystal field environments, dipolar and exchange interactions, ferromagnetism, antiferromagnetism, magnetic domains, magnetic anisotropy, and magnetostriction. Magnetic materials covered include transition metals, their alloys and oxides, rare earths and their oxides, organic and molecular magnets. Throughout the course, experimental techniques in magnetic characterization will be discussed. The second part of the course will focus on particular magnetic materials and devices that are of technological interest (e.g., magnetoresistive and magneto-optical materials and devices). Additional topics include biomagnetism and spin glasses.

Final exam required. Instructor: Suzuki

MAT SCI C225/AST C225 Thin-Film Science and Technology 3 Units

Department: Materials Science and Engineering; Applied Science and Technology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing in engineering, physics, chemistry, or chemical engineering.

Thin-film nucleation and growth, microstructural evolution and reactions. Comparison of thin-film deposition techniques. Characterization techniques. Processing of thin films by ion implantation and rapid annealing. Processing-microstructure-property-performance relationships in the context of applications in information storage, ICs, micro-electromechanical systems and optoelectronics.

Final exam not required. Instructor: Wu

MAT SCI C226/ENE,RES C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market 3 Units

Department: Materials Science and Engineering; Energy and Resources Group

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Material Science and Mineral Engineering 111 or 123 or equivalent. Should have a firm foundation in electronic and optical props of semiconductors and basic semiconductor device physics.

This technical course focuses on the fundamentals of photovoltaic energy conversion with respect to the physical principals of operation and design of efficient semiconductor solar cell devices. This course aims to equip students with the concepts and analytical skills necessary to assess the utility and viability of various modern photovoltaic technologies in the context of a growing global renewable energy market.

Final exam not required.

MAT SCI 241 Electron Microscopy Laboratory 2 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Laboratory per week for 15 weeks.

Prerequisites: 204 (can be taken concurrently).

Basic techniques and operations of transmission, and scanning, electron microscopy; x-ray microanalysis, energy loss spectroscopy; specimen preparation, interpretation of data; individual projects in materials science. Final exam not required. Instructors: Gronsky, Minor

MAT SCI 251 Polymer Surfaces and Interfaces 3 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Chemistry 1A or Engineering 5; Material Science and Engineering 151 recommended.

The course is designed for graduate students to gain a fundamental understanding of the surface and interfacial science of polymeric materials. Beginning with a brief introduction of the principles governing polymer phase behavior in bulk, it develops the thermodynamics of polymers in thin films and at interfaces, the characterization techniques to assess polymer behavior in thin films and at interfaces, and the morphologies of polymer thin films and other dimensionally-restricted structures relevant to nanotechnology and biotechnology. Field trips to national user facilities, laboratory demonstrations and hands-on experiments, and guest lectures will augment the courses lectures. Final exam not required. Instructor: Xu

MAT SCI 260 Surface Properties of Materials 3 Units

Department: Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Thermodynamics of surfaces and phase boundaries, surface tension of solids and liquids, surface activity, adsorption, phase equilibria, and contact angles, electrochemical double layers at interfaces, theory, and applications.

Final exam not required. Formerly known as Mineral Engineering 260.

Instructor: Salmeron

MAT SCI C261/BIO ENG C280/NSE C201/PHYSICS C201 Introduction to Nano-Science and Engineering 3 Units

Department: Materials Science and Engineering; Bioengineering;

Nanoscale Science and Engineering; Physics

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Major in physical science such as chemistry, physics, etc., or engineering; consent of advisor or instructor.

A three-module introduction to the fundamental topics of Nano-Science and Engineering (NSE) theory and research within chemistry, physics, biology, and engineering. This course includes quantum and solid-state physics; chemical synthesis, growth fabrication, and characterization techniques; structures and properties of semiconductors, polymer, and biomedical materials on nanoscales; and devices based on nanostructures. Students must take this course to satisfy the NSE Designated Emphasis core requirement.

Course may be repeated for credit when topic changes. Final exam not required. Instructors: Gronsky, S.W. Lee, Wu

MAT SCI C286/MEC ENG C201 Modeling and Simulation of Advanced Manufacturing Processes 3 Units

Department: Materials Science and Engineering; Mechanical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: An undergraduate course in strength of materials or 122.

This course provides the student with a modern introduction to the basic industrial practices, modeling techniques, theoretical background, and computational methods to treat classical and cutting edge manufacturing processes in a coherent and self-consistent manner.

Course Objectives: An introduction to modeling and simulation of modern manufacturing processes.

Final exam required. Instructor: Zohdi

MAT SCI C287/MEC ENG C202 Computational Design of Multifunctional/Multiphysical Composite Materials 3 Units**Department:** Materials Science and Engineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** An undergraduate degree in the applied sciences or engineering.

The course is self-contained and is designed in an interdisciplinary manner for graduate students in engineering, materials science, physics, and applied mathematics who are interested in methods to accelerate the laboratory analysis and design of new materials. Examples draw primarily from various mechanical, thermal, diffusive, and electromagnetic applications.

Final exam required. Instructor: Zohdi

MAT SCI 290A Special Topics in Materials Science 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

Lectures and appropriate assignments on fundamental or applied topics of current interest in materials science and engineering.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as 290M.

MAT SCI 290M Special Problems in Materials Science 3 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 201A-201B or consent of instructor.

Selected topics in the thermodynamic, kinetic or phase transformation behavior of solid materials. Topics will generally be selected based on student interest in Mat Sci 201A-201B. The course provides an opportunity to explore subjects of particular interest in greater depth. Course may be repeated for credit when topic changes. Final exam required. Instructor: Morris

MAT SCI 296A Independent Research for Five-Year BS/MS Program 1 - 2 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 2 hour of Independent study per week for 15 weeks.**Prerequisites:** Acceptance into the five year BS/MS program.

This is the first semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to formulate, develop and initiate an independent research project under the supervision of a research advisor. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as maintaining a lab notebook, effective oral communication, and writing a journal publication will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A progress report will be due at the end of Materials Science and Engineering 296A. Students will also be expected to give an oral presentation, describing their research project and progress toward their goals in front of their peers at the end of the semester.

Final exam not required.

MAT SCI 296B Independent Research for Five-Year BS/MS Program 1 - 2 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 2 hour of Independent study per week for 15 weeks.**Prerequisites:** 296A.

This is the second semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to complete an independent research project under the supervision of a research advisor initiated in Materials Science and Engineering 296A. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as data analysis and design of experiment will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A final report in journal publication form will be due at the end of the semester. Each student will also give a final presentation on his/her research project at the end of the semester.

Final exam not required.

MAT SCI 298 Group Studies, Seminars, or Group Research 1 - 8 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Seminar per week for 15 weeks.

Advanced study in various subjects through special seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems or group research on complete problems for analysis and experimentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 299 Individual Study or Research 1 - 12 Units**Department:** Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks. 1 to 12 hour of Independent study per week for 8 weeks. 1 to 12 hour of Independent study per week for 6 weeks.**Prerequisites:** Graduate standing in engineering.

Individual investigation of advanced materials science problems.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MAT SCI 375A Science and Engineering Pedagogy 2 Units**Department:** Materials Science and Engineering**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Fall**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 2 hours of seminar per week.**Prerequisites:** Graduate standing and appointment, or interest in appointment, as a graduate student instructor.

Discussion and research of pedagogical issues. Supervised practice teaching in materials science and engineering.

Final exam not required. Formerly known as Material Science and Engineering 300. Instructor: Gronskey

MAT SCI 375B Supervised Teaching of Materials Science and Engineering 1 Unit**Department:** Materials Science and Engineering**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of seminar per week.**Prerequisites:** Graduate standing and appointment, or interest in appointment, as a graduate student instructor.

Discussion and research of pedagogical issues. Supervised practice teaching in Materials and Science and Engineering.

Final exam not required. Formerly known as Material Science and Engineering 300.

MAT SCI 601 Individual Study for Master's Students 1 - 8 Units**Department:** Materials Science and Engineering**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Independent study per week for 15 weeks.**Prerequisites:** Graduate standing in engineering.

Individual study for the comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

MAT SCI 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Materials Science and Engineering**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Graduate standing in engineering.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Mathematics (MATH)

MATH 0N Algebra and Geometry 0 Units**Department:** Mathematics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and up to 8 hours of workshop per week.

This course is for students who must review algebra and geometry.

Topics include number sets, algebraic expressions, equations, inequalities, lines, linear systems of equations, functions, and graphing. Final exam required.

MATH 1A Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** Three and one-half years of high school math, including trigonometry and analytic geometry, plus a satisfactory grade in one of the following: CEEB MAT test, an AP test, the UC/CSU math diagnostic test, or 32. Consult the mathematics department for details. Students with AP credit should consider choosing a course more advanced than 1A.

This sequence is intended for majors in engineering and the physical sciences. An introduction to differential and integral calculus of functions of one variable, with applications and an introduction to transcendental functions.

Students will receive no credit for 1A after taking 16B and 2 units after taking 16A. Final exam required.

MATH 1B Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** 1A.

Continuation of 1A. Techniques of integration; applications of integration. Infinite sequences and series. First-order ordinary differential equations. Second-order ordinary differential equations; oscillation and damping; series solutions of ordinary differential equations.

Students will receive 2 units of credit for 1B after taking 16B. Final exam required.

MATH H1B Honors Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** 1A.

Honors version of 1B. Continuation of 1A. Techniques of integration; applications of integration. Infinite sequences and series. First-order ordinary differential equations. Second-order ordinary differential equations; oscillation and damping; series solutions of ordinary differential equations.

Students will receive 2 units of credit for H1B after taking 16B. Final exam required.

MATH 10A Methods of Mathematics: Calculus, Statistics, and Combinatorics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Discussion per week for 15 weeks. 5 hours of Lecture and 5 hours of Discussion per week for 8 weeks.**Prerequisites:** Three and one-half years of high school math, including trigonometry and analytic geometry.

This sequence is intended for majors in the life sciences. Introduction to differential and integral calculus of functions of one variable. Representation of data, elementary probability theory, statistical models, and testing.

Students will receive 2 units for 10A after taking 1A. Final exam required.

MATH 10B Methods of Mathematics: Calculus, Statistics, and Combinatorics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Discussion per week for 15 weeks. 5 hours of Lecture and 5 hours of Discussion per week for 8 weeks.**Prerequisites:** Continuation of 10A.

Elementary combinatorics and discrete probability theory. Introduction to graphs, matrix algebra, linear equations, difference equations, and differential equations.

Students will receive 2 units for 10B after taking 55. Final exam required.

MATH 16A Analytic Geometry and Calculus 3 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of discussion/workshop per week; at the discretion of the instructor, an additional 1 hour to 1.5 hours of lecture or discussion/workshop per week.**Prerequisites:** Three years of high school math, including trigonometry, plus a satisfactory grade in one of the following: CEEB MAT test, an AP test, the UC/CSU math diagnostic exam, or 32. Consult the mathematics department for details.

This sequence is intended for majors in the life and social sciences. Calculus of one variable; derivatives, definite integrals and applications, maxima and minima, and applications of the exponential and logarithmic functions.

Students will receive no credit for 16A after taking 1A. Two units of 16A may be used to remove a deficient grade in 1A. Final exam required.

MATH 16B Analytic Geometry and Calculus 3 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of discussion/workshop per week; at the discretion of the instructor, an additional hour of lecture or discussion/workshop per week.**Prerequisites:** 16A.

Continuation of 16A. Application of integration of economics and life sciences. Differential equations. Functions of many variables. Partial derivatives, constrained and unconstrained optimization.

Students will receive no credit for 16B after 1B, 2 units after 1A. Two units of 16B may be used to remove a deficient grade in 1A. Final exam required.

MATH 24 Freshman Seminars 1 Unit**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MATH 30 Concepts of Mathematics for Middle School Teachers 4 Units**Department:** Mathematics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 10 hours of lecture and 10 hours of workshop per week for 4 weeks.**Prerequisites:** Algebra II or equivalent.

Coordinates, functions and graphs, polynomial and exponential functions, trigonometric functions, the algebra of polynomials, mathematical induction.

Final exam required.

MATH 32 Precalculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 2 hours of discussion per week, plus, at the instructor's option, an extra hour of lecture/discussion per week. 5 hours of lecture and 5 hours of discussion per week for 8 weeks. 5 hours of lecture and 5 hours of discussion for 6 weeks, plus, at the instructor's option, an extra hour of lecture/discussion per week.

Prerequisites: Three years of high school mathematics, plus satisfactory score on one of the following: CEEB MAT test, math SAT, or UC/CSU diagnostic examination.

Polynomial and rational functions, exponential and logarithmic functions, trigonometry and trigonometric functions. Complex numbers, fundamental theorem of algebra, mathematical induction, binomial theorem, series, and sequences.

Students will receive no credit for 32 after taking 1A-1B or 16A-16B and will receive 3 units after taking 96. Final exam required.

MATH 39A Freshman/Sophomore Seminar 2 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MATH 49 Supplementary Work in Lower Division Mathematics 1 - 3 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Meetings to be arranged.**Prerequisites:** Some units in a lower division Mathematics class.

Students with partial credit in lower division mathematics courses may, with consent of instructor, complete the credit under this heading.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 53 Multivariable Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.

Prerequisites: 1B.

Parametric equations and polar coordinates. Vectors in 2- and 3-dimensional Euclidean spaces. Partial derivatives. Multiple integrals. Vector calculus. Theorems of Green, Gauss, and Stokes.

Students will receive 1 unit of credit for 53 after taking 50B and 3 units of credit after taking 50A. Final exam required.

MATH H53 Honors Multivariable Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.

Prerequisites: 1B.

Honors version of 53. Parametric equations and polar coordinates. Vectors in 2- and 3-dimensional Euclidean spaces. Partial derivatives. Multiple integrals. Vector calculus. Theorems of Green, Gauss, and Stokes.

Students will receive 1 unit for H53 after taking 50B and 3 units after taking 50A. Final exam required.

MATH W53 Multivariable Calculus 4 Units**Department:** Mathematics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of web-based lecture and 5 hours of web-based discussion per week for 8 weeks. This is an online course.**Prerequisites:** Math 1B or equivalent.

Parametric equations and polar coordinates. Vectors in 2- and 3-dimensional Euclidean spaces. Partial derivatives. Multiple integrals.

Vector calculus. Theorems of Green, Gauss, and Stokes.

Final exam required. Instructor: Hutchings

MATH 54 Linear Algebra and Differential Equations 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** 1B.

Basic linear algebra; matrix arithmetic and determinants. Vector spaces; inner product spaces. Eigenvalues and eigenvectors; linear transformations. Homogeneous ordinary differential equations; first-order differential equations with constant coefficients. Fourier series and partial differential equations.

Students will receive 1 unit of credit for 54 after taking 50A and 3 units of credit after taking Math 50B. Final exam required.

MATH H54 Honors Linear Algebra and Differential Equations 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** 1B.

Honors version of 54. Basic linear algebra: matrix arithmetic and determinants. Vector spaces; inner product spaces. Eigenvalues and eigenvectors; linear transformations. Homogeneous ordinary differential equations; first-order differential equations with constant coefficients. Fourier series and partial differential equations.

Students will receive 1 unit for H54 after taking 50A and 3 units after taking 50B. Final exam required.

MATH 55 Discrete Mathematics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion/workshop per week; at the discretion of the instructor, an additional hour of discussion/workshop or computer laboratory per week.**Prerequisites:** Mathematical maturity appropriate to a sophomore math class. 1A-1B recommended.

Logic, mathematical induction sets, relations, and functions. Introduction to graphs, elementary number theory, combinatorics, algebraic structures, and discrete probability theory.

Students will receive no credit for 55 after taking Computer Science 70.

Final exam required.

MATH 74 Transition to Upper Division Mathematics 3 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture and at the discretion of the instructor and additional 2 hours of discussion per week for 8 weeks.**Prerequisites:** 53 and 54.

The course will focus on reading and understanding mathematical proofs. It will emphasize precise thinking and the presentation of mathematical results, both orally and in written form. The course is intended for students who are considering majoring in mathematics but wish additional training. Final exam required.

MATH 91 Special Topics in Mathematics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 8 weeks. 3 hours of lecture/discussion per week.

Topics to be covered and the method of instruction to be used will be announced at the beginning of each semester that such courses are offered. See department bulletins.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MATH 96 College Algebra 2 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Workshop per week for 15 weeks. 10 hours of Workshop per week for 8 weeks. 10 hours of Workshop per week for 6 weeks.

Elements of college algebra. Designed for students who do not meet the prerequisites for 32. Offered through the Student Learning Center.

Students will receive no credit for 96 after taking P, PS, or 32. Course may be repeated for credit when topic changes. Final exam required.

MATH 98 Supervised Group Study 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks.

Directed Group Study, topics vary with instructor.

Course may be repeated for a maximum of 4 units. Final exam not required.

MATH 99 Supervised Independent Study 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Independent study, weekly meeting with faculty.

Independent study, weekly meeting with faculty.

Prerequisites: Restricted to freshmen and sophomores only. Consent of instructor.

Supervised independent study by academically superior, lower division students. 3.3 GPA required and prior consent of instructor who is to supervise the study. A written proposal must be submitted to the department chair for pre-approval.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

MATH C103/ECON C103 Introduction to Mathematical Economics 4 Units**Department:** Mathematics; Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Math 53 and 54.

Selected topics illustrating the application of mathematics to economic theory. This course is intended for upper-division students in Mathematics, Statistics, the Physical Sciences, and Engineering, and for economics majors with adequate mathematical preparation. No economic background is required.

Final exam required. Formerly known as 103.

MATH 104 Introduction to Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week. 6 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week.**Prerequisites:** 53 and 54.The real number system. Sequences, limits, and continuous functions in \mathbb{R} and \mathbb{C} . The concept of a metric space. Uniform convergence, interchange of limit operations. Infinite series. Mean value theorem and applications.

The Riemann integral.

Final exam required.

MATH H104 Honors Introduction to Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Honors section corresponding to 104. Recommended for students who enjoy mathematics and are good at it. Greater emphasis on theory and challenging problems.

Final exam required.

MATH 105 Second Course in Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104Differential calculus in \mathbb{R}^n : the derivative as a linear map; the chain rule; inverse and implicit function theorems. Lebesgue integration on the line; comparison of Lebesgue and Riemann integrals. Convergence theorems. Fourier series, L^2 theory. Fubini's theorem, change of variable.

Final exam required.

MATH 110 Linear Algebra 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and an additional 2 hours of discussion at the discretion of the instructor. 6 hours of lecture per week and an additional 2 hours of discussion at the discretion of the instructor.**Prerequisites:** 54 or a course with equivalent linear algebra content. Matrices, vector spaces, linear transformations, inner products, determinants. Eigenvectors. QR factorization. Quadratic forms and Rayleigh's principle. Jordan canonical form, applications. Linear functionals.

No credit allowed after completion of Math 112 or 113B. Final exam required.

MATH H110 Honors Linear Algebra 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 54 or a course with equivalent linear algebra content.

Honors section corresponding to course 110 for exceptional students with strong mathematical inclination and motivation. Emphasis is on rigor, depth, and hard problems.

No credit allowed after completion of Math 112 or 113B. Final exam required.

MATH 113 Introduction to Abstract Algebra 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week. 6 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week.**Prerequisites:** 54 or a course with equivalent linear algebra content. Sets and relations. The integers, congruences, and the Fundamental Theorem of Arithmetic. Groups and their factor groups. Commutative rings, ideals, and quotient fields. The theory of polynomials: Euclidean algorithm and unique factorizations. The Fundamental Theorem of Algebra. Fields and field extensions. Final exam required.**MATH H113 Honors Introduction to Abstract Algebra 4 Units****Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 54 or a course with equivalent linear algebra content. Honors section corresponding to 113. Recommended for students who enjoy mathematics and are good at it. Greater emphasis on theory and challenging problems. Final exam required.**MATH 114 Second Course in Abstract Algebra 4 Units****Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110 and 113, or consent of instructor.

Further topics on groups, rings, and fields not covered in Math 113. Possible topics include the Sylow Theorems and their applications to group theory; classical groups; abelian groups and modules over a principal ideal domain; algebraic field extensions; splitting fields and Galois theory; construction and classification of finite fields. Final exam required.

MATH 115 Introduction to Number Theory 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week, and at the discretion of the instructor, an additional 2 hours of discussion per week. 6 hours of lecture per week, and at the discretion of the instructor, an additional 4 hours of discussion per week.**Prerequisites:** 53 and 54.

Divisibility, congruences, numerical functions, theory of primes. Topics selected: Diophantine analysis, continued fractions, partitions, quadratic fields, asymptotic distributions, additive problems. Final exam required.

MATH 116 Cryptography 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week, and at the discretion of the instructor, an additional 2 hours of discussion per week. 6 hours of lecture per week, and at the discretion of the instructor, an additional 4 hours of discussion per week.**Prerequisites:** 55

Construction and analysis of simple cryptosystems, public key cryptography, RSA, signature schemes, key distribution, hash functions, elliptic curves, and applications.

Final exam required.

MATH 118 Fourier Analysis, Wavelets, and Signal Processing 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Introduction to signal processing including Fourier analysis and wavelets. Theory, algorithms, and applications to one-dimensional signals and multidimensional images.

Final exam required.

MATH 121A Mathematical Tools for the Physical Sciences 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Intended for students in the physical sciences who are not planning to take more advanced mathematics courses. Rapid review of series and partial differentiation, complex variables and analytic functions, integral transforms, calculus of variations. Final exam required.

MATH 121B Mathematical Tools for the Physical Sciences 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Intended for students in the physical sciences who are not planning to take more advanced mathematics courses. Special functions, series solutions of ordinary differential equations, partial differential equations arising in mathematical physics, probability theory. Final exam required.

MATH 123 Ordinary Differential Equations 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Existence and uniqueness of solutions, linear systems, regular singular points. Other topics selected from analytic systems, autonomous systems, Sturm-Liouville Theory.

Final exam required.

MATH 125A Mathematical Logic 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 113 or consent of instructor.

Sentential and quantificational logic. Formal grammar, semantical interpretation, formal deduction, and their interrelation. Applications to formalized mathematical theories. Selected topics from model theory or proof theory.

Final exam required. Instructor: 113A or consent of instructor.

MATH 126 Introduction to Partial Differential Equations 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Waves and diffusion, initial value problems for hyperbolic and parabolic equations, boundary value problems for elliptic equations, Green's functions, maximum principles, a priori bounds, Fourier transform.

Final exam required.

MATH 127 Mathematical and Computational Methods in Molecular Biology 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53, 54, and 55; Statistics 20 recommended.

Introduction to mathematical and computational problems arising in the context of molecular biology. Theory and applications of combinatorics, probability, statistics, geometry, and topology to problems ranging from sequence determination to structure analysis.

Final exam required.

MATH 128A Numerical Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. At the discretion of instructor, an additional hour of discussion/computer laboratory per week.**Prerequisites:** 53 and 54.

Programming for numerical calculations, round-off error, approximation and interpolation, numerical quadrature, and solution of ordinary differential equations. Practice on the computer.

Final exam required.

MATH 128B Numerical Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. At the discretion of the instructor, an additional hour of discussion/computer laboratory per week.**Prerequisites:** 110 and 128A.

Iterative solution of systems of nonlinear equations, evaluation of eigenvalues and eigenvectors of matrices, applications to simple partial differential equations. Practice on the computer.

Final exam required.

MATH 130 The Classical Geometries 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110 and 113.

A critical examination of Euclid's Elements; ruler and compass constructions; connections with Galois theory; Hilbert's axioms for geometry, theory of areas, introduction of coordinates, non-Euclidean geometry, regular solids, projective geometry.

Final exam required.

MATH 135 Introduction to the Theory of Sets 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 113 and 104.

Set-theoretical paradoxes and means of avoiding them. Sets, relations, functions, order and well-order. Proof by transfinite induction and definitions by transfinite recursion. Cardinal and ordinal numbers and their arithmetic. Construction of the real numbers. Axiom of choice and its consequences.

Final exam required.

MATH 136 Incompleteness and Undecidability 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53, 54, and 55.

Functions computable by algorithm, Turing machines, Church's thesis. Unsolvability of the halting problem, Rice's theorem. Recursively enumerable sets, creative sets, many-one reductions. Self-referential programs. Godel's incompleteness theorems, undecidability of validity, decidable and undecidable theories.

Final exam required.

MATH 140 Metric Differential Geometry 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Frenet formulas, isoperimetric inequality, local theory of surfaces in Euclidean space, first and second fundamental forms. Gaussian and mean curvature, isometries, geodesics, parallelism, the Gauss-Bonnet-Von Dyck Theorem.

Final exam required.

MATH 141 Elementary Differential Topology 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 or equivalent and linear algebra.

Manifolds in n -dimensional Euclidean space and smooth maps, Sard's Theorem, classification of compact one-manifolds, transversality and intersection modulo 2.

Final exam required.

MATH 142 Elementary Algebraic Topology 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 and 113.

The topology of one and two dimensional spaces: manifolds and triangulation, classification of surfaces, Euler characteristic, fundamental groups, plus further topics at the discretion of the instructor.

Final exam required.

MATH 143 Elementary Algebraic Geometry 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 113

Introduction to basic commutative algebra, algebraic geometry, and computational techniques. Main focus on curves, surfaces and Grassmannian varieties.

Final exam required.

MATH 151 Mathematics of the Secondary School Curriculum I 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hour of discussion per week.**Prerequisites:** 1A-1B, 53, or equivalent.

Theory of rational numbers based on the number line, the Euclidean algorithm and fractions in lowest terms. The concepts of congruence and similarity, equation of a line, functions, and quadratic functions.

Final exam required.

MATH 152 Mathematics of the Secondary School Curriculum II 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hour of discussion per week.**Prerequisites:** 151; 54, 113, or equivalent.

Complex numbers and Fundamental Theorem of Algebra, roots and factorizations of polynomials, Euclidean geometry and axiomatic systems, basic trigonometry.

Final exam required.

MATH 153 Mathematics of the Secondary School Curriculum III 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hour of discussion per week.**Prerequisites:** 151, 152.

The real line and least upper bound, limit and decimal expansion of a number, differentiation and integration, Fundamental Theorem of Calculus, characterizations of sine, cosine, exp, and log.

Final exam required.

MATH 160 History of Mathematics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53, 54, and 113.

History of algebra, geometry, analytic geometry, and calculus from ancient times through the seventeenth century and selected topics from more recent mathematical history.

Final exam required.

MATH 170 Mathematical Methods for Optimization 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 53 and 54.

Linear programming and a selection of topics from among the following: matrix games, integer programming, semidefinite programming, nonlinear programming, convex analysis and geometry, polyhedral geometry, the calculus of variations, and control theory.

Final exam required.

MATH 172 Combinatorics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 55

Basic combinatorial principles, graphs, partially ordered sets, generating functions, asymptotic methods, combinatorics of permutations and partitions, designs and codes. Additional topics at the discretion of the instructor.

Final exam required.

MATH 185 Introduction to Complex Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week. 6 hours of lecture per week; at the discretion of the instructor, an additional 2 hours of discussion per week.

Prerequisites: 104

Analytic functions of a complex variable. Cauchy's integral theorem, power series, Laurent series, singularities of analytic functions, the residue theorem with application to definite integrals. Some additional topics such as conformal mapping.

Final exam required.

MATH H185 Honors Introduction to Complex Analysis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Honors section corresponding to Math 185 for exceptional students with strong mathematical inclination and motivation. Emphasis is on rigor, depth, and hard problems.

Final exam required.

MATH 189 Mathematical Methods in Classical and Quantum Mechanics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104, 110, 2 semesters lower division Physics.

Topics in mechanics presented from a mathematical viewpoint: e.g., hamiltonian mechanics and symplectic geometry, differential equations for fluids, spectral theory in quantum mechanics, probability theory and statistical mechanics. See department bulletins for specific topics each semester course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MATH 191 Experimental Courses in Mathematics 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged. Hours to be arranged.**Prerequisites:** Consent of instructor.

The topics to be covered and the method of instruction to be used will be announced at the beginning of each semester that such courses are offered. See departmental bulletins.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MATH 195 Special Topics in Mathematics 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Lectures on special topics, which will be announced at the beginning of each semester that the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MATH 196 Honors Thesis 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Admission to the Honors Program; an overall GPA of 3.3 and a GPA of 3.5 in the major.

Independent study of an advanced topic leading to an honors thesis.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 197 Field Study 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 5.5 hours of work per week per unit. 3 hours of work per week per unit.**Prerequisites:** Upper division standing. Written proposal signed by faculty sponsor and approved by department chair.

For Math/Applied math majors. Supervised experience relevant to specific aspects of their mathematical emphasis of study in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required. Units will be awarded on the basis of three hours/week/unit.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 198 Directed Group Study 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group study. Group study.**Prerequisites:** Must have completed 60 units and be in good standing.

Topics will vary with instructor.

Final exam not required.

MATH 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** The standard college regulations for all 199 courses.

Course may be repeated for credit when topic changes. Final exam not required.

MATH 202A Introduction to Topology and Analysis 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104Metric spaces and general topological spaces. Compactness and connectedness. Characterization of compact metric spaces. Theorems of Tychonoff, Urysohn, Tietze. Complete spaces and the Baire category theorem. Function spaces; Arzela-Ascoli and Stone-Weierstrass theorems. Partitions of unity. Locally compact spaces; one-point compactification. Introduction to measure and integration. Sigma algebras of sets. Measures and outer measures. Lebesgue measure on the line and \mathbb{R}^n . Construction of the integral. Dominated convergence theorem. Final exam required.**MATH 202B Introduction to Topology and Analysis 4 Units****Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202A and 110.Measure and integration. Product measures and Fubini-type theorems. Signed measures; Hahn and Jordan decompositions. Radon-Nikodym theorem. Integration on the line and in \mathbb{R}^n . Differentiation of the integral. Hausdorff measures. Fourier transform. Introduction to linear topological spaces, Banach spaces and Hilbert spaces. Banach-Steinhaus theorem; closed graph theorem. Hahn-Banach theorem. Duality; the dual of L^p . Measures on locally compact spaces; the dual of $C(X)$. Weak and weak-* topologies; Banach-Alaoglu theorem. Convexity and the Krein-Milman theorem. Additional topics chosen may include compact operators, spectral theory of compact operators, and applications to integral equations.

Final exam required.

MATH 203 Asymptotic Analysis in Applied Mathematics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Asymptotic methods for differential equations, with emphasis upon many physical examples. Topics will include matched asymptotic expansions, Laplace's method, stationary phase, boundary layers, multiple scales, WKB approximations, asymptotic Lagrangians, bifurcation theory. Final exam not required.

MATH 204 Ordinary Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Rigorous theory of ordinary differential equations. Fundamental existence theorems for initial and boundary value problems, variational equilibria, periodic coefficients and Floquet Theory, Green's functions, eigenvalue problems, Sturm-Liouville theory, phase plane analysis, Poincare-Bendixon Theorem, bifurcation, chaos.

Final exam not required.

MATH 205 Theory of Functions of a Complex Variable 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

Normal families. Riemann Mapping Theorem. Picard's theorem and related theorems. Multiple-valued analytic functions and Riemann surfaces. Further topics selected by the instructor may include: harmonic functions, elliptic and algebraic functions, boundary behavior of analytic functions and HP spaces, the Riemann zeta functions, prime number theorem.

Final exam not required.

MATH 206 Banach Algebras and Spectral Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202A-202B.

Banach algebras. Spectrum of a Banach algebra element. Gelfand theory of commutative Banach algebras. Analytic functional calculus. Hilbert space operators. C^* -algebras of operators. Commutative C^* -algebras. Spectral theorem for bounded self-adjoint and normal operators (both forms: the spectral integral and the "multiplication operator" formulation). Riesz theory of compact operators. Hilbert-Schmidt operators. Fredholm operators. The Fredholm index. Selected additional topics.

Final exam not required.

MATH 208 C^* -algebras 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206

Basic theory of C^* -algebras. Positivity, spectrum, GNS construction. Group C^* -algebras and connection with group representations. Additional topics, for example, C^* -dynamical systems, K-theory.

Final exam not required.

MATH 209 Von Neumann Algebras 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206

Basic theory of von Neumann algebras. Density theorems, topologies and normal maps, traces, comparison of projections, type classification, examples of factors. Additional topics, for example, Tomita Takasaki theory, subfactors, group actions, and noncommutative probability.

Final exam not required.

MATH 212 Several Complex Variables 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 and 202A-202B or their equivalents.

Power series developments, domains of holomorphy, Hartogs' phenomenon, pseudo convexity and plurisubharmonicity. The remainder of the course may treat either sheaf cohomology and Stein manifolds, or the theory of analytic subvarieties and spaces.

Final exam not required.

MATH 214 Differentiable Manifolds 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 202A.

Smooth manifolds and maps, tangent and normal bundles. Sard's theorem and transversality, Whitney embedding theorem. Morse functions, differential forms, Stokes' theorem, Frobenius theorem. Basic degree theory. Flows, Lie derivative, Lie groups and algebras. Additional topics selected by instructor.

Final exam required.

MATH 215A Algebraic Topology 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 113 and point-set topology (e.g. 202A).

Fundamental group and covering spaces, simplicial and singular homology theory with applications, cohomology theory, duality theorem. Homotopy theory, fibrations, relations between homotopy and homology, obstruction theory, and topics from spectral sequences, cohomology operations, and characteristic classes. Sequence begins fall.

Final exam required. Instructors: 113C, 202A, and 214

MATH 215B Algebraic Topology 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 215A, 214 recommended (can be taken concurrently).

Fundamental group and covering spaces, simplicial and singular homology theory with applications, cohomology theory, duality theorem. Homotopy theory, fibrations, relations between homotopy and homology, obstruction theory, and topics from spectral sequences, cohomology operations, and characteristic classes. Sequence begins fall. Final exam not required. Instructors: 113C, 202A, and 214

MATH C218A/STAT C205A Probability Theory 4 Units**Department:** Mathematics; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

The course is designed as a sequence with Statistics C205B/ Mathematics C218B with the following combined syllabus. Measure theory concepts needed for probability. Expectation, distributions. Laws of large numbers and central limit theorems for independent random variables. Characteristic function methods. Conditional expectations, martingales and martingale convergence theorems. Markov chains. Stationary processes. Brownian motion. Final exam not required.

MATH C218B/STAT C205B Probability Theory 4 Units**Department:** Mathematics; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

The course is designed as a sequence with Statistics C205A/ Mathematics C218A with the following combined syllabus. Measure theory concepts needed for probability. Expectation, distributions. Laws of large numbers and central limit theorems for independent random variables. Characteristic function methods. Conditional expectations, martingales and martingale convergence theorems. Markov chains. Stationary processes. Brownian motion. Final exam not required.

MATH 219 Dynamical Systems 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 214

Diffeomorphisms and flows on manifolds. Ergodic theory. Stable manifolds, generic properties, structural stability. Additional topics selected by the instructor. Final exam not required.

MATH 220 Introduction to Probabilistic Methods in Mathematics and the Sciences 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Some familiarity with differential equations and their applications.

Brownian motion, Langevin and Fokker-Planck equations, path integrals and Feynman diagrams, time series, an introduction to statistical mechanics, Monte Carlo methods, selected applications. Final exam not required.

MATH 221 Advanced Matrix Computations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

Prerequisites: Consent of instructor.

Direct solution of linear systems, including large sparse systems: error bounds, iteration methods, least square approximation, eigenvalues and eigenvectors of matrices, nonlinear equations, and minimization of functions. Final exam required.

MATH 222A Partial Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 105 or 202A.

The theory of boundary value and initial value problems for partial differential equations, with emphasis on nonlinear equations. Laplace's equation, heat equation, wave equation, nonlinear first-order equations, conservation laws, Hamilton-Jacobi equations, Fourier transform, Sobolev spaces. Final exam not required.

MATH 222B Partial Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 105 or 202A.

The theory of boundary value and initial value problems for partial differential equations, with emphasis on nonlinear equations. Second-order elliptic equations, parabolic and hyperbolic equations, calculus of variations methods, additional topics selected by instructor. Final exam not required.

MATH C223A/STAT C206A Advanced Topics in Probability and Stochastic Process 3 Units**Department:** Mathematics; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Statistics C205A-C205B or consent of instructor.

The topics of this course change each semester, and multiple sections may be offered. Advanced topics in probability offered according to students demand and faculty availability.

Course may be repeated for credit with a different instructor. Course may be repeated for credit when topic changes. Final exam not required.

MATH C223B/STAT C206B Advanced Topics in Probability and Stochastic Processes 3 Units**Department:** Mathematics; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The topics of this course change each semester, and multiple sections may be offered. Advanced topics in probability offered according to students demand and faculty availability.

Course may be repeated for credit with a different instructor. Course may be repeated for credit when topic changes. Final exam not required.

MATH 224A Mathematical Methods for the Physical Sciences 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate status or consent of instructor.

Introduction to the theory of distributions. Fourier and Laplace transforms. Partial differential equations. Green's function. Operator theory, with applications to eigenfunction expansions, perturbation theory and linear and non-linear waves. Sequence begins fall.

Final exam required. Instructors: 112 or 113C; 104A and 185, or 121A-121B-121C, or 120A-120B-120C.

MATH 224B Mathematical Methods for the Physical Sciences 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate status or consent of instructor.

Introduction to the theory of distributions. Fourier and Laplace transforms. Partial differential equations. Green's function. Operator theory, with applications to eigenfunction expansions, perturbation theory and linear and non-linear waves. Sequence begins fall.

Final exam not required.

MATH 225A Metamathematics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 125B and 135.

Metamathematics of predicate logic. Completeness and compactness theorems. Interpolation theorem, definability, theory of models.

Metamathematics of number theory, recursive functions, applications to truth and provability. Undecidable theories. Sequence begins fall.

Final exam required. Instructor: 125B and 135.

MATH 225B Metamathematics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 125B and 135.

Metamathematics of predicate logic. Completeness and compactness theorems. Interpolation theorem, definability, theory of models.

Metamathematics of number theory, recursive functions, applications to truth and provability. Undecidable theories. Sequence begins fall.

Final exam required. Instructor: 125B and 135.

MATH 227A Theory of Recursive Functions 4 Units**Department:** Mathematics**Course level:** Graduate

Terms course may be offered: Fall and spring. A: (SP) B: Not offered 1984-85.

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 225B.

Recursive and recursively enumerable sets of natural numbers; characterizations, significance, and classification. Relativization, degrees of unsolvability. The recursion theorem. Constructive ordinals, the hyperarithmetical and analytical hierarchies. Recursive objects of higher type. Sequence begins fall.

Final exam required. Instructor: 225C.

MATH 228A Numerical Solution of Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 128A.

Ordinary differential equations: Runge-Kutta and predictor-corrector methods; stability theory, Richardson extrapolation, stiff equations, boundary value problems. Partial differential equations: stability, accuracy and convergence, Von Neumann and CFL conditions, finite difference solutions of hyperbolic and parabolic equations. Finite differences and finite element solution of elliptic equations.

Final exam required. Instructor: 128A-128B.

MATH 228B Numerical Solution of Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 128A.

Ordinary differential equations: Runge-Kutta and predictor-corrector methods; stability theory, Richardson extrapolation, stiff equations, boundary value problems. Partial differential equations: stability, accuracy and convergence, Von Neumann and CFL conditions, finite difference solutions of hyperbolic and parabolic equations. Finite differences and finite element solution of elliptic equations.

Final exam not required. Instructor: 128A-128B.

MATH 229 Theory of Models 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 225B.

Syntactical characterization of classes closed under algebraic operations. Ultraproducts and ultralimits, saturated models. Methods for establishing decidability and completeness. Model theory of various languages richer than first-order.

Final exam required.

MATH 235A Theory of Sets 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring. A: (SP) B: Not offered 1984-85.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 125A and 135.

Axiomatic foundations. Operations on sets and relations. Images and set functions. Ordering, well-ordering, and well-founded relations; general principles of induction and recursion. Ranks of sets, ordinals and their arithmetic. Set-theoretical equivalence, similarity of relations; definitions by abstraction. Arithmetic of cardinals. Axiom of choice, equivalent forms, and consequences. Sequence begins fall.

Final exam required. Instructor: 125A and 135.

MATH 236 Metamathematics of Set Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 225B and 235A.

Various set theories: comparison of strength, transitive, and natural models, finite axiomatizability. Independence and consistency of axiom of choice, continuum hypothesis, etc. The measure problem and axioms of strong infinity.

Final exam not required.

MATH 239 Discrete Mathematics for the Life Sciences 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Statistics 134 or equivalent introductory probability theory course, or consent of instructor.

Introduction to algebraic statistics and probability, optimization, phylogenetic combinatorics, graphs and networks, polyhedral and metric geometry.

Final exam not required.

MATH C239/MCELLBI C244 Discrete Mathematics for the Life Sciences 4 Units**Department:** Mathematics; Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to algebraic statistics and probability, optimization, phylogenetic combinatorics, graphs and networks, polyhedral and metric geometry.

Final exam not required.

MATH 240 Riemannian Geometry 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 214

Riemannian metric and Levi-Civita connection, geodesics and completeness, curvature, first and second variations of arc length. Additional topics such as the theorems of Myers, Synge, and Cartan-Hadamard, the second fundamental form, convexity and rigidity of hypersurfaces in Euclidean space, homogeneous manifolds, the Gauss-Bonnet theorem, and characteristic classes.

Final exam required.

MATH 241 Complex Manifolds 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 214 and 215A.

Riemann surfaces, divisors and line bundles on Riemann surfaces, sheaves and the Dolbeault theorem on Riemann surfaces, the classical Riemann-Roch theorem, theorem of Abel-Jacobi. Complex manifolds, Kahler metrics. Summary of Hodge theory, groups of line bundles, additional topics such as Kodaira's vanishing theorem, Lefschetz hyperplane theorem.

Final exam not required.

MATH 242 Symplectic Geometry 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 214

Basic topics: symplectic linear algebra, symplectic manifolds, Darboux theorem, cotangent bundles, variational problems and Legendre transform, hamiltonian systems, lagrangian submanifolds, Poisson brackets, symmetry groups and momentum mappings, coadjoint orbits, Kahler manifolds.

Final exam not required.

MATH C243/MCELLBI C243 Seq: Methods and Applications 3 Units**Department:** Mathematics; Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:**
Prerequisites: Graduate standing in Math, MCB, and Computational Biology; or consent of the instructor.

A graduate seminar class in which a group of students will closely examine recent computational methods in high-throughput sequencing followed by directly examining interesting biological applications thereof. Final exam not required. Instructor: Pachter

MATH 245A General Theory of Algebraic Structures 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Math 113.

Structures defined by operations and/or relations, and their homomorphisms. Classes of structures determined by identities. Constructions such as free objects, objects presented by generators and relations, ultraproducts, direct limits. Applications of general results to groups, rings, lattices, etc. Course may emphasize study of congruence- and subalgebra-lattices, or category-theory and adjoint functors, or other aspects.

Final exam not required.

MATH 249 Algebraic Combinatorics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A or consent of instructor.

(I) Enumeration, generating functions and exponential structures, (II) Posets and lattices, (III) Geometric combinatorics, (IV) Symmetric functions, Young tableaux, and connections with representation theory. Further study of applications of the core material and/or additional topics, chosen by instructor.

Final exam not required.

MATH 250A Groups, Rings, and Fields 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 114 or consent of instructor.

Group theory, including the Jordan-Holder theorem and the Sylow theorems. Basic theory of rings and their ideals. Unique factorization domains and principal ideal domains. Modules. Chain conditions. Fields, including fundamental theorem of Galois theory, theory of finite fields, and transcendence degree.

Final exam required.

MATH 250B Multilinear Algebra and Further Topics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A.

Tensor algebras and exterior algebras, with application to linear transformations. Commutative ideal theory, localization. Elementary specialization and valuation theory. Related topics in algebra.

Final exam not required.

MATH 251 Ring Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A.

Topics such as: Noetherian rings, rings with descending chain condition, theory of the radical, homological methods.

Final exam required.

MATH 252 Representation Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A.

Structure of finite dimensional algebras, applications to representations of finite groups, the classical linear groups.

Final exam not required.

MATH 253 Homological Algebra 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A.

Modules over a ring, homomorphisms and tensor products of modules, functors and derived functors, homological dimension of rings and modules.

Final exam not required.

MATH 254A Number Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring. A: Not offered 1984-85. B: (F)**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A for 254A; 254A for 254B.

Valuations, units, and ideals in number fields, ramification theory, quadratic and cyclotomic fields, topics from class field theory, zeta-functions and L-series, distribution of primes, modular forms, quadratic forms, diophantine equations, P-adic analysis, and transcendental numbers. Sequence begins fall.

254B may be repeated with consent of instructor. Course may be repeated for credit when topic changes. Final exam required. Instructor: 250A.

MATH 254B Number Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 254A.

Valuations, units, and ideals in number fields, ramification theory, quadratic and cyclotomic fields, topics from class field theory, zeta-functions and L-series, distribution of primes, modular forms, quadratic forms, diophantine equations, P-adic analysis, and transcendental numbers. Sequence begins fall.

Final exam not required. Instructor: 250A.

MATH 255 Algebraic Curves 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A-250B or consent of instructor.

Elliptic curves. Algebraic curves, Riemann surfaces, and function fields. Singularities. Riemann-Roch theorem, Hurwitz's theorem, projective embeddings and the canonical curve. Zeta functions of curves over finite fields. Additional topics such as Jacobians or the Riemann hypothesis. Final exam not required.

MATH 256A Algebraic Geometry 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A-250B for 256A; 256A for 256B.

Affine and projective algebraic varieties. Theory of schemes and morphisms of schemes. Smoothness and differentials in algebraic geometry. Coherent sheaves and their cohomology. Riemann-Roch theorem and selected applications. Sequence begins fall.

Final exam required. Instructor: 250A.

MATH 256B Algebraic Geometry 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 256A.

Affine and projective algebraic varieties. Theory of schemes and morphisms of schemes. Smoothness and differentials in algebraic geometry. Coherent sheaves and their cohomology. Riemann-Roch theorem and selected applications. Sequence begins fall.

Final exam not required. Instructor: 250A.

MATH 257 Group Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A.

Topics such as: generators and relations, infinite discrete groups, groups of Lie type, permutation groups, character theory, solvable groups, simple groups, transfer and cohomological methods.

Final exam not required.

MATH 258 Classical Harmonic Analysis 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 206 or a basic knowledge of real, complex, and linear analysis.

Basic properties of Fourier series, convergence and summability, conjugate functions, Hardy spaces, boundary behavior of analytic and harmonic functions. Additional topics at the discretion of the instructor.

Final exam required.

MATH 261A Lie Groups 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 214

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semi-simple Lie groups; classification theory and representation theory of semi-simple Lie algebras and Lie groups, further topics such as symmetric spaces, Lie transformation groups, etc., if time permits. In view of its simplicity and its wide range of applications, it is preferable to cover compact Lie groups and their representations in 261A. Sequence begins Fall.

Final exam required. Instructor: 214

MATH 261B Lie Groups 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 214

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semi-simple Lie groups; classification theory and representation theory of semi-simple Lie algebras and Lie groups, further topics such as symmetric spaces, Lie transformation groups, etc., if time permits. In view of its simplicity and its wide range of applications, it is preferable to cover compact Lie groups and their representations in 261A. Sequence begins Fall.

Final exam not required. Instructor: 214

MATH 265 Differential Topology 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: 214 plus 215A or some familiarity with algebraic topology. Approximations, degrees of maps, vector bundles, tubular neighborhoods. Introduction to Morse theory, handlebodies, cobordism, surgery. Additional topics selected by instructor from: characteristic classes, classification of manifolds, immersions, embeddings, singularities of maps.

Final exam not required.

MATH 270 Hot Topics Course in Mathematics 2 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

This course will give introductions to current research developments. Every semester we will pick a different topic and go through the relevant literature. Each student will be expected to give one presentation. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

MATH 273F Topics in Numerical Analysis: Topics in Computational Physics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit when topic changes. Final exam required.

MATH 273I Topics in Numerical Analysis: Approximation Theory 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit when topic changes. Final exam required.

MATH 274 Topics in Algebra 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit when topic changes. Final exam not required.

MATH 275 Topics in Applied Mathematics 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 276 Topics in Topology 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 277 Topics in Differential Geometry 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 278 Topics in Analysis 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 279 Topics in Partial Differential Equations 4 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MATH 290 Seminars 1 - 6 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Topics in foundations of mathematics, theory of numbers, numerical calculations, analysis, geometry, topology, algebra, and their applications, by means of lectures and informal conferences; work based largely on original memoirs.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 295 Individual Research 1 - 12 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Hours to be arranged.

Intended for candidates for the Ph.D. degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 299 Reading Course for Graduate Students 1 - 6 Units**Department:** Mathematics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Hours to be arranged.

Investigation of special problems under the direction of members of the department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 301 Undergraduate Mathematics Instruction 1 - 2 Units**Department:** Mathematics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Seminar and 4 hours of Tutorial per week for 15 weeks.**Prerequisites:** Permission of SLC instructor, as well as sophomore standing and at least a B average in two semesters of calculus. Apply at Student Learning Center.

May be taken for one unit by special permission of instructor. Tutoring at the Student Learning Center or for the Professional Development Program.

Course may be repeated once for credit. Course may be repeated for a maximum of 4 units. Final exam not required.

MATH 302 Teaching Workshop 1 Unit**Department:** Mathematics**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Lecture per week for 8 weeks.

Mandatory for all graduate student instructors teaching summer course for the first time in the Department. The course consists of practice teaching, alternatives to standard classroom methods, guided group and self-analysis, classroom visitations by senior faculty member. Final exam not required.

MATH 303 Professional Preparation: Supervised Teaching of Mathematics 2 - 4 Units**Department:** Mathematics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** No formal meetings.**Prerequisites:** 300, graduate standing and appointment as a Graduate Student Instructor.

Meeting with supervising faculty and with discussion sections. Experience in teaching under the supervision of Mathematics faculty.

Course may be repeated four times for credit. Course may be repeated for credit when topic changes. Final exam not required.

MATH 375 Teaching Workshop 4 Units**Department:** Mathematics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of lecture per week, plus class visits.**Prerequisites:** 300, graduate standing and appointment as a Graduate Student Instructor.

Mandatory for all graduate student instructors teaching for the first time in the Mathematics Department. The course consists of practice teaching, alternatives to standard classroom methods, guided group and self-analysis of videotapes, reciprocal classroom visitations, and an individual project.

Final exam not required. Formerly known as Mathematics 300.

MATH 600 Individual Study for Master's Students 1 - 6 Units**Department:** Mathematics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** For candidates for master's degree.

Individual study for the comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

MATH 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Mathematics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Independent study per week for 15 weeks.**Prerequisites:** For qualified graduate students.

Individual study in consultation with the major field adviser intended to provide an opportunity for qualified students to prepare themselves for the various examinations required for candidates for the Ph.D. Course does not satisfy unit or residence requirements for doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Mechanical Engineering (MEC ENG)

MEC ENG 24 Freshman Seminars 1 Unit**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MEC ENG 40 Thermodynamics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.**Prerequisites:** Chemistry 1A, Engineering 7, Mathematics 1B, and Physics 7B.

This course introduces the fundamentals of energy storage, thermophysical properties of liquids and gases, and the basic principles of thermodynamics which are then applied to various areas of engineering related to energy conversion and air conditioning.

Students will receive no credit for 40 after taking 105B. Final exam required.

MEC ENG C85/CIV ENG C30 Introduction to Solid Mechanics 3 Units**Department:** Mechanical Engineering; Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 4.5 hours of lecture and 1.5 hours of discussion per week for 10 weeks. 7.5 hours of lecture and 2.5 hours of discussion per week for 6 weeks.**Prerequisites:** Mathematics 53 and 54 (may be taken concurrently); Physics 7A.

A review of equilibrium for particles and rigid bodies. Application to truss structures. The concepts of deformation, strain, and stress. Equilibrium equations for a continuum. Elements of the theory of linear elasticity. The states of plane stress and plane strain. Solution of elementary elasticity problems (beam bending, torsion of circular bars). Euler buckling in elastic beams.

Final exam required. Instructors: Armero, Papadopoulos, Zohdi

MEC ENG 98 Supervised Independent Group Studies 1 - 4 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Organized group study on various topics under the sponsorship and direction of a member of the Mechanical Engineering faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG 101 High Mix/Low Volume Manufacturing 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Upper division standing in engineering or consent of instructor.

Fundamentals of high mix/low volume (HMLV) manufacturing systems including manufacturing fundamentals, unit operations and manufacturing line considerations for work in process (WIP), manufacturing lead time (MLT), economics, quality monitoring; HMLV systems fundamentals including just in time (JIT), kanban, buffers and line balancing; class project/case studies for design of competitive manufacturing systems. Final exam required. Instructors: Dornfeld, McMains

MEC ENG 102A Introduction to Mechanical Systems for Mechatronics 4 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Engineering 10 and 28, English R1A or equivalent course, Mechanical Engineering C85 and Electrical Engineering 100.

Design, rapid prototyping, assembly, test, and evaluation of mechanical components and sub-systems used in mechatronic systems. Laboratory and mechatronic instrumentation. Design and optimization of beams and chassis. Two- and three-position synthesis of positioning mechanisms. Planar indexing via mechanical linkages. Rotary motion-conversion via cam-follower mechanisms. Crank-slider mechanisms for function generation. Permanent and temporary fasteners. Fabrication of actual prototypical devices.

Final exam not required.

MEC ENG 102B Mechatronics Design 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 100 and Engineering 28.

Introduction to design and realization of mechatronics systems. Micro computer architectures. Basic computer IO devices. Embedded microprocessor systems and control, IO programming such as analogue to digital converters, PWM, serial and parallel outputs. Electrical components such as power supplies, operational amplifiers, transformers, and filters. Shielding and grounding. Design of electric, hydraulic, and pneumatic actuators. Design of sensors. Design of power transmission systems. Kinematics and dynamics of robotics devices. Basic feedback design to create robustness and performance.

Final exam not required.

MEC ENG 104 Engineering Mechanics II 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.**Prerequisites:** C85 and Engineering 7.

This course is an introduction to the dynamics of particles and rigid bodies. The material, based on a Newtonian formulation of the governing equations, is illustrated with numerous examples ranging from one-dimensional motion of a single particle to planar motions of rigid bodies and systems of rigid bodies.

Final exam required.

MEC ENG 106 Fluid Mechanics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** C85 and 104 (104 may be taken concurrently).

This course introduces the fundamentals and techniques of fluid mechanics with the aim of describing and controlling engineering flows.

Final exam required.

MEC ENG 107 Mechanical Engineering Laboratory 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 102A; senior standing.

Experimental investigation of engineering systems and of phenomena of interest to mechanical engineers. Design and planning of experiments. Analysis of data and reporting of experimental results.

Final exam not required.

MEC ENG 108 Mechanical Behavior of Engineering Materials 4 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** C85.

This course covers elastic and plastic deformation under static and dynamic loads. Failure by yielding, fracture, fatigue, wear, and environmental factors are also examined. Topics include engineering materials, heat treatment, structure-property relationships, elastic deformation and multiaxial loading, plastic deformation and yield criteria, dislocation plasticity and strengthening mechanisms, creep, stress concentration effects, fracture, fatigue, and contact deformation.

Final exam required.

MEC ENG 109 Heat Transfer 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks. 5.5 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks.**Prerequisites:** 40 and 106.

This course covers transport processes of mass, momentum, and energy from a macroscopic view with emphasis both on understanding why matter behaves as it does and on developing practical problem solving skills. The course is divided into four parts: introduction, conduction, convection, and radiation.

Final exam required.

MEC ENG 110 Introduction to Product Development 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 4.5 hours of Lecture per week for 10 weeks.**Prerequisites:** Junior or higher standing.

Provides project-based learning experience in innovative new product development, with a focus on mechanical engineering systems. Design concepts and techniques are introduced, and the student's design ability is developed in a design or feasibility study chosen to emphasize ingenuity and provide wide coverage of engineering topics. Relevant software will be integrated into studio sessions, including solid modeling and environmental life cycle analysis. Design optimization and social, economic, and political implications are included. All product ideas will be evaluated against the "triple bottom line": economic, societal, and environmental. Both individual and group oral presentations are made, and participation in a final tradeshow type presentation is required.

Final exam not required.

MEC ENG C115/BIO ENG C112 Molecular Cell Biomechanics 4 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

This course applies methods of statistical continuum mechanics to subcellar biomechanical phenomena ranging from nanoscale (molecular) to microscale (whole cell and cell population) biological processes at the interface of mechanics, biology, and chemistry.

Final exam not required. Instructor: Mofrad

MEC ENG C117/BIO ENG C117 Structural Aspects of Biomaterials 4 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A, Engineering 45, Civil and Environmental Engineering 130 or 130N or Bioengineering 102, and Engineering 190.

This course covers the structure and mechanical functions of load bearing tissues and their replacements. Natural and synthetic load-bearing biomaterials for clinical applications are reviewed. Biocompatibility of biomaterials and host response to structural implants are examined. Quantitative treatment of biomechanical issues and constitutive relationships of tissues are covered in order to design biomaterial replacements for structural function. Material selection for load bearing applications including reconstructive surgery, orthopedics, dentistry, and cardiology are addressed. Mechanical design for longevity including topics of fatigue, wear, and fracture are reviewed. Case studies that examine failures of devices are presented. This course includes a teaching/design laboratory component that involves design analysis of medical devices and outreach teaching to the public community. Several problem-based projects are utilized throughout the semester for design analysis. In addition to technical content, this course involves rigorous technical writing assignments, oral communication skill development and teamwork. Final exam not required. Instructor: Pruitt

MEC ENG 118 Introduction to Nanotechnology and Nanoscience 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Chemistry 1A and Physics 7B. Physics 7C and Engineering 45 (or the equivalent) recommended.

This course introduces engineering students (juniors and seniors) to the field of nanotechnology and nanoscience. The course has two components: (1) Formal lectures. Students receive a set of formal lectures introducing them to the field of nanotechnology and nanoscience. The material covered includes nanofabrication technology (how one achieves the nanometer length scale, from "bottom up" to "top down" technologies), the interdisciplinary nature of nanotechnology and nanoscience (including areas of chemistry, material science, physics, and molecular biology), examples of nanoscience phenomena (the crossover from bulk to quantum mechanical properties), and applications (from integrated circuits, quantum computing, MEMS, and bioengineering). (2) Projects. Students are asked to read and present a variety of current journal papers to the class and lead a discussion on the various works.

Final exam required. Instructors: Lin, Sohn

MEC ENG 119 Introduction to MEMS (Microelectromechanical Systems) 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Electrical Engineering 100, Physics 7B.

Fundamentals of microelectromechanical systems including design, fabrication of microstructures; surface-micromachining, bulk-micromachining, LIGA, and other micro machining processes; fabrication principles of integrated circuit device and their applications for making MEMS devices; high-aspect-ratio microstructures; scaling issues in the micro scale (heat transfer, fluid mechanics and solid mechanics); device design, analysis, and mask layout. Final exam required.

MEC ENG 120 Computational Biomechanics Across Multiple Scales 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Mechanical Engineering C85.

This course applies the methods of computational modeling and continuum mechanics to biomedical phenomena spanning various length scales ranging from molecular to cellular to tissue and organ levels. The course is intended for upper level undergraduate students who have been exposed to undergraduate continuum mechanics (statics and strength of materials.).

Final exam not required. Instructor: Mofrad

MEC ENG 122 Processing of Materials in Manufacturing 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mechanical Engineering 108 and Mechanical Engineering C85/Civil Engineering C30.

Fundamentals of manufacturing processes (metal forming, forging, metal cutting, welding, joining, and casting); selection of metals, plastics, and other materials relative to the design and choice of manufacturing processes; geometric dimensioning and tolerancing of all processes. Final exam required.

MEC ENG 127 Composite Materials--Analysis, Design, Manufacture 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: Civil and Environmental Engineering 130 or 130N or equivalent course in mechanics of materials; Engineering 36 and 45. Properties and microstructure of high-strength fiber materials (glass, carbon, polymer, ceramic fibers) and matrix materials (polymer, metal, ceramic, and carbon matrices). Specific strength and stiffness of high-performance composites. Stress, strain and stiffness transformations. Elastic properties of a single orthotropic ply. Laminated plate theory. Failure criteria. Short fiber composites. Manufacturing processes. Sandwich panels. Joints. Design of composite structures and components. Sustainability and recycling. Laboratory sessions on manufacturing processes and testing. Assigned class design projects on design and manufacturing of composites.

Final exam required. Instructor: Dharan

MEC ENG 128 Computer-Aided Mechanical Design 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Engineering 28, and Mathematics 53, 54, or consent of instructor.

Introduction to design (not drafting) via computers. Using MATLAB and other Finite Element software, students will be introduced to a variety of mechanical design techniques and apply those techniques to the design of beams, automobile engine components, planar machine elements, linkages, and flexure hinges. These techniques include ad-hoc methods, exhaustive enumeration, grid studies, and informal optimizations.

Final exam required. Instructor: Lin

MEC ENG 130 Design of Planar Machinery 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 104

Synthesis, analysis, and design of planar machines. Kinematic structure, graphical, analytical, and numerical analysis and synthesis. Linkages, cams, reciprocating engines, gear trains, and flywheels.

Final exam required. Instructor: Youssefi

MEC ENG 131 Vehicle Dynamics and Control 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Engineering 7, Math 53 and 54, and Physics 7A-7B.

Physical understanding of automotive vehicle dynamics including simple lateral, longitudinal, and ride quality models. An overview of active safety systems will be introduced including the basic concepts and terminology, the state-of-the-art development, and basic principles of systems such as ABS, traction control, dynamic stability control, and roll stability control. Passive, semi-active, and active suspension systems will be analyzed. Concepts of autonomous vehicle technology including drive-by-wire and steer-by-wire systems, adaptive cruise control, and lane keeping systems. Upon completion of this course, students should be able to follow the literature on these subjects and perform independent design, research, and development work in this field.

Final exam required. Instructor: Hedrick

MEC ENG 132 Dynamic Systems and Feedback 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Laboratory per week for 10 weeks.**Prerequisites:** Math 53, 54, Physics 7A-7B.

Physical understanding of dynamics and feedback. Linear feedback control of dynamic systems. Mathematical tools for analysis and design. Stability. Modeling systems with differential equations. Linearization. Solution to linear, time-invariant differential equations.

Final exam required.

MEC ENG 133 Mechanical Vibrations 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

An introduction to the theory of mechanical vibrations including topics of harmonic motion, resonance, transient and random excitation, applications of Fourier analysis and convolution methods. Multidegree of freedom discrete systems including principal mode, principal coordinates and Rayleigh's principle.

Final exam required. Instructor: Tongue

MEC ENG C134/EL ENG C128 Feedback Control Systems 4 Units**Department:** Mechanical Engineering; Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Analysis and synthesis of linear feedback control systems in transform and time domains. Control system design by root locus, frequency response, and state space methods. Applications to electro-mechanical and mechatronics systems.

Final exam required.

MEC ENG 135 Design of Microprocessor-Based Mechanical Systems 4 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 4.5 hours of Lecture and 4.5 hours of Laboratory per week for 10 weeks.**Prerequisites:** Engineering 7.

This course provides preparation for the conceptual design and prototyping of mechanical systems that use microprocessors to control machine activities, acquire and analyze data, and interact with operators. The architecture of microprocessors is related to problems in mechanical systems through study of systems, including electro-mechanical components, thermal components and a variety of instruments. Laboratory exercises lead through studies of different levels of software. Final exam not required. Instructor: Kazerooni

MEC ENG 138 Introduction to Micro/Nano Mechanical Systems Laboratory 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 100, Mechanical Engineering 106, Physics 7B.

This hands-on laboratory course focuses on the mechanical engineering principles that underlie the design, fabrication, and operation of micro/nanoscale mechanical systems, including devices made by nanowire/nanotube syntheses; photolithography/soft lithography; and molding processes. Each laboratory will have different focuses for basic understanding of MEMS/NEMS systems from prototype constructions to experimental testings using mechanical, electrical, or optical techniques. Students will receive no credit for Mechanical Engineering 238 after taking Mechanical Engineering 138. Final exam not required.

MEC ENG 140 Combustion Processes 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of demonstration laboratory.**Prerequisites:** 40, 106, and 109 (106 and 109 may be taken concurrently).

Fundamentals of combustion, flame structure, flame speed, flammability, ignition, stirred reaction, kinetics and nonequilibrium processes, pollutant formation. Application to engines, energy production and fire safety.

Final exam required. Instructors: Fernandez-Pello, Chen

MEC ENG 146 Energy Conversion Principles 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 40, 106, and 109 (106 and 109 may be taken concurrently).

This course covers the fundamental principles of energy conversion processes, followed by development of theoretical and computational tools that can be used to analyze energy conversion processes. The course also introduces the use of modern computational methods to model energy conversion performance characteristics of devices and systems. Performance features, sources of inefficiencies, and optimal design strategies are explored for a variety of applications, which may include conventional combustion based and Rankine power systems, energy systems for space applications, solar, wind, wave, thermoelectric, and geothermal energy systems.

Final exam required. Instructor: Carey

MEC ENG 150A Solar-Powered Vehicles: Analysis, Design and Fabrication 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week. 3 hours of lecture and 4.5 hours of laboratory per week for 10 weeks.**Prerequisites:** Math 54, Physics 7A; Upper division status in engineering. This course addresses all aspects of design, analysis, construction and economics of solar-powered vehicles. It begins with an examination of the fundamentals of photovoltaic solar power generation, and the capabilities and limitations that exist when using this form of renewable energy. The efficiency of energy conversion and storage will be evaluated across an entire system, from the solar energy that is available to the mechanical power that is ultimately produced. The structural and dynamic stability, as well as the aerodynamics, of vehicles will be studied. Safety and economic concerns will also be considered. Students will work in teams to design, build and test a functioning single-person vehicle capable of street use.**Course Objectives:** This course provides a structured environment within which students can participate in a substantial engineering project from start to finish. It provides the opportunity for students to engage deeply in the analysis, design and construction of a functioning vehicle powered by a renewable source. Through participation in this course, students should strengthen their understanding of how their engineering education can be used to address the multidisciplinary problems with creativity, imagination, confidence and responsibility. Students will recognize the importance of effective communication in effectively addressing such problems.**Student Learning Outcomes:** This course will strengthen students' abilities: to apply knowledge of mathematics, science, and engineering to real projects; to design a component or process that is part of a larger system; to function on multi-disciplinary teams; to identify, formulate, and solve engineering problems; to communicate effectively; to understand the impact of engineering solutions in a context beyond the classroom; to appreciate the importance of engaging in life-long learning and understanding contemporary issues; and to recognize and use the techniques, skills, and modern engineering tools necessary for successful project completion.

This is a project-based course. All students will be exposed to all aspects of the design, analysis, construction and economics of solar-powered vehicles through lectures and homework assignments, but their deep engagement in learning will involve focused effort addressing one or more specific elements of the vehicle. As such, a common final examination would not appropriately assess the knowledge that each student will have gained throughout the semester. A written exam would almost certainly be rather shallow and limited to the material covered in the lectures. The requirement of a final report will force students to synthesize their work in order to communicate it to a broader audience, an especially important skill that engineering students get too little of in the current exam-based curriculum.

MEC ENG 151 Advanced Heat Transfer 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 40, 106, and 109 (106 and 109 may be taken concurrently).

Basic principles of heat transfer and their application. Subject areas include steady-state and transient system analyses for conduction, free and forced convection, boiling, condensation and thermal radiation. Final exam required.

MEC ENG 163 Engineering Aerodynamics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 106

Introduction to the lift, drag, and moment of two-dimensional airfoils, three-dimensional wings, and the complete airplane. Calculations of the performance and stability of airplanes in subsonic flight.

Final exam required. Instructor: Savas

MEC ENG 164 Marine Statics and Structures 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 130 or 130N or consent of instructor.

Terminology and definition of hull forms, conditions of static equilibrium and stability of floating submerged bodies. Effects of damage on stability. Structural loads and response. Box girder theory. Isotropic and orthotropic plate bending and bucking.

Students will receive no credit for 164 after taking C164/Ocean Engineering C164; 2 units after taking 151. Final exam required. Formerly known as C164. Instructor: Mansour

MEC ENG 165 Ocean-Environment Mechanics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 106 or Civil and Environmental Engineering 100.

Ocean environment. Physical properties and characteristics of the oceans. Global conservation laws. Surface-waves generation. Gravity-wave mechanics, kinematics, and dynamics. Design consideration of ocean vehicles and systems. Model-testing techniques. Prediction of resistance and response in waves--physical modeling and computer models.

Students will receive no credit for 165 after taking C165/Ocean Engineering C165. Final exam required. Formerly known as C165. Instructor: Yeung

MEC ENG 167 Microscale Fluid Mechanics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 40, 106, 109, (106 and 109 may be taken concurrently) Physics 7B or equivalent.

Phenomena of physical, technological, and biological significance in flows of gases and liquids at the microscale. The course begins with familiar equations of Newtonian fluid mechanics, then proceeds to the study of essentially 1-D flows in confined geometries with the lubrication equations. Next is a study of the flow of thin films spreading under gravity or surface tension gradients. Lubrication theory of compressible gases leads to consideration of air bearings. Two- and 3-D flows are treated with Stokes' equations. Less familiar physical phenomena of significance and utility at the microscale are then considered: intermolecular forces in liquids, slip, diffusion and bubbles as active agents. A review of relevant aspects of electricity and magnetism precedes a study of electrowetting and electrokinetically driven liquid flows.

Final exam required. Instructors: Morris, Szeri

MEC ENG 168 Mechanics of Offshore Systems 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Mechanical Engineering 106 and Mechanical Engineering C85 (or Civil Engineering C30). Mechanical Engineering 165 is recommended.

This course covers major aspects of offshore engineering including ocean environment, loads on offshore structures, cables and mooring, underwater acoustics and arctic operations.

Course Objectives: To provide a basic to intermediate level of treatment of engineering systems that operate in coastal, offshore, and arctic environment. Students will acquire an understanding of the unique and essential character of the marine fields and the analysis tools to handle the engineering aspects of them.

Student Learning Outcomes: (a) an ability to apply knowledge of mathematics, science, and engineering

(c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability

(d) an ability to function on multi-disciplinary teams

(e) an ability to identify, formulate, and solve engineering problems

(j) a knowledge of contemporary issues

(k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Final exam required. Instructor: Alam

MEC ENG 170 Engineering Mechanics III 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 or consent of instructor.

This course builds upon material learned in 104, examining the dynamics of particles and rigid bodies moving in three dimensions. Topics include non-fixed axis rotations of rigid bodies, Euler angles and parameters, kinematics of rigid bodies, and the Newton-Euler equations of motion for rigid bodies. The course material will be illustrated with real-world examples such as gyroscopes, spinning tops, vehicles, and satellites. Applications of the material range from vehicle navigation to celestial mechanics, numerical simulations, and animations.

Final exam required. Instructors: O'Reilly, Tongue

MEC ENG 171 Dynamics of Charged Particulate Systems: Modeling, Theory and Computation 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 or equivalent.

Introduction to the dynamics of small-scale charged particle systems.

Final exam required. Instructor: Zohdi

MEC ENG 173 Fundamentals of Acoustics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104

Plane and spherical sound waves. Sound intensity. Propagation in tubes and horns. Resonators. Standing waves. Radiation from oscillating surface. Reciprocity. Reverberation and diffusion. Electro-acoustic loud speaker and microphone problems. Environmental and architectural acoustics. Noise measurement and control. Effects on man.

Final exam required.

MEC ENG 175 Intermediate Dynamics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 104 or equivalent.

This course introduces and investigates Lagrange's equations of motion for particles and rigid bodies. The subject matter is particularly relevant to applications comprised of interconnected and constrained discrete mechanical components. The material is illustrated with numerous examples. These range from one-dimensional motion of a single particle to three-dimensional motions of rigid bodies and systems of rigid bodies. Final exam required.

MEC ENG C176/BIO ENG C119 Orthopedic Biomechanics 4 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion/computer workshop per week.**Prerequisites:** Civil and Environmental Engineering 130 or 130N.

Statics, dynamics, optimization theory, composite beam theory, beam-on-elastic foundation theory, Hertz contact theory, and materials behavior. Forces and moments acting on human joints; composition and mechanical behavior of orthopedic biomaterials; design/analysis of artificial joint, spine, and fracture fixation prostheses; musculoskeletal tissues including bone, cartilage, tendon, ligament, and muscle; osteoporosis and fracture-risk predication of bones; and bone adaptation. MATLAB-based project to integrate the course material.

Final exam required. Instructor: Keaveny

MEC ENG C180/CIV ENG C133 Engineering Analysis Using the Finite Element Method 3 Units**Department:** Mechanical Engineering; Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Engineering 7 or 77 or Computer Science 61A; Mathematics 53 and 54; senior status in engineering or applied science.

This is an introductory course on the finite element method and is intended for seniors in engineering and applied science disciplines. The course covers the basic topics of finite element technology, including domain discretization, polynomial interpolation, application of boundary conditions, assembly of global arrays, and solution of the resulting algebraic systems. Finite element formulations for several important field equations are introduced using both direct and integral approaches. Particular emphasis is placed on computer simulation and analysis of realistic engineering problems from solid and fluid mechanics, heat transfer, and electromagnetism. The course uses FEMLAB, a multiphysics MATLAB-based finite element program that possesses a wide array of modeling capabilities and is ideally suited for instruction. Assignments will involve both paper- and computer-based exercises. Computer-based assignments will emphasize the practical aspects of finite element model construction and analysis.

Final exam required.

MEC ENG 185 Introduction to Continuum Mechanics 3 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Physics 7A; Mathematics 53, 54.

Kinematics of deformation, the concept of stress, conservation of mass and balance of linear momentum, angular momentum and energy. Mechanical constitutive equations for ideal fluid, linear elastic solid.

Final exam required.

MEC ENG 190A Rapid Prototyping of Mechanical Systems 2 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Engineering 10.

Design, optimization, rapid prototyping, assembly, test and evaluation of mechanical components and sub-systems used in mechanical systems.

Final exam not required. Instructor: Pisano

MEC ENG 190K Professional Communication for Mechanical Engineers 1 Unit**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

The course emphasizes understanding of and performance in professional speaking situations, including presentations, meetings, interviews, and informal business conversations. It emphasizes collaborative projects with distance partners. It combines theory and practice, integrating extensive speaking practice and individual critiques from instructor and students. The purpose is to advance students' ability to collaborate and communicate effectively in a variety of professional environments.

Final exam not required.

MEC ENG 190L Practical Control System Design: A Systematic Loopshaping Approach 1 Unit**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

Prerequisites: 132 or Electrical Engineering 128 (EI Engineering 20 may suffice) or similar introductory experience regarding feedback control systems.

After a review of basic loopshaping, we introduce the loopshaping design methodology of McFarlane and Glover, and learn how to use it effectively. The remainder of the course studies the mathematics underlying the new method (one of the most prevalent advanced techniques used in industry) justifying its validity.

Final exam required. Instructor: Packard

MEC ENG 190M Model Predictive Control 1 Unit**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** 132

Basics on optimization and polyhedra manipulation. Analysis and design of constrained predictive controllers for linear and nonlinear systems.

Final exam not required. Instructor: Borrelli

MEC ENG 190Y Practical Control System Design: A Systematic Optimization Approach 1 Unit

Department: Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of Lecture per week for 15 weeks.

Prerequisites: 132 or Electrical Engineering 128 (EE 20 may suffice) or similar introductory experience regarding feedback control systems. The Youla-parametrization of all stabilizing controllers allows certain time-domain and frequency-domain closed-loop design objectives to be cast as convex optimizations, and solved reliably using off-the-shelf numerical optimization codes. This course covers the Youla parametrization, basic elements of convex optimization, and finally control design using these techniques.

Final exam required. Instructor: Packard

MEC ENG 191AC Cases and Conflicts in Engineering Ethics 3 Units

Department: Mechanical Engineering

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture per week for 8 weeks.

Engineering is challenged by issues of security, poverty and under-development, and environmental sustainability. These issues intersect with those of race, class, and culture in U.S. society. This course focuses on engineering ethics case studies as they apply to issues of workplace diversity, sustainable practices, economic impacts on neighborhoods and nations, and issues of security and identity. The goal of this course is to broaden the understanding of engineering ethics from individual and business-based practices to those affecting communities and nations. This class cannot be used to satisfy any Engineering requirement (technical electives, engineering units, or courses).

Satisfies the American Cultures requirement

Final exam not required.

MEC ENG 191K Professional Communication 3 Units

Department: Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.

Prerequisites: English R1A-R1B or equivalent.

This course is designed to enhance students' written and oral communication skills. Written work consists of informal documents--correspondence, internal reports, and reviews--and formal work--proposals, conference papers, journal articles, and websites. Presentations consist of informal and formal reports, including job and media interviews, phone interviews, conference calls, video conferences, progress reports, sales pitches, and feasibility studies.

Final exam not required.

MEC ENG H194 Honors Undergraduate Research 2 - 4 Units

Department: Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 to 4 hours of Independent study per week for 15 weeks. 4 to 8 hours of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Prerequisites: 3.3 cumulative GPA or higher, consent of instructor and adviser, and senior standing.

Final report required. Students who have completed a satisfactory number of advanced courses may pursue original research under the direction of one of the members of the faculty. A maximum of three units of H194 may be used to fulfill technical elective requirements in the Mechanical Engineering program (unlike 198 or 199, which do not satisfy technical elective requirements). Students can use a maximum of three units of graded research units (H194 or 196) towards their technical elective requirement.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG 196 Undergraduate Research 2 - 4 Units

Department: Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Instructional format will vary depending on schedule.

Prerequisites: Consent of instructor and adviser; junior or senior standing.

Students who have completed a satisfactory number of advanced courses may pursue original research under the direction of one of the members of the staff. A maximum of three units of 196 may be used to fulfill technical elective requirements in the Mechanical Engineering program (unlike 198 or 199, which do not satisfy technical elective requirements). Students can use a maximum of three units of graded research units (H194 or 196) towards their technical elective requirement. Final report required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MEC ENG 197 Undergraduate Engineering Field Studies 1 - 4 Units

Department: Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 to 12 hours of internship per week. 5 to 8teen hours of internship per week for 10 weeks. 8 to thirty hours of internship per week for 6 weeks.

Supervised experience relative to specific aspects of practice in engineering. Under guidance of a faculty member, the student will work in industry, primarily in an internship setting or another type of short-time status. Emphasis is to attain practical experience in the field.

Student Learning Outcomes: (h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context

(j) a knowledge of contemporary issues

(k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units**Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 6 hours of Directed group study per week for 10 weeks.**Prerequisites:** Upper division standing and good academic standing. Group study of a selected topic or topics in Mechanical Engineering. Credit for 198 or 199 courses combined may not exceed 4 units in any single term. See College for other restrictions. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.**MEC ENG 199 Supervised Independent Study 1 - 4 Units****Department:** Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences.**Prerequisites:** Consent of instructor and major adviser. Supervised independent study. Enrollment restrictions apply; see the introduction to Courses and Curricula section of this catalog. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.**MEC ENG C201/MAT SCI C286 Modeling and Simulation of Advanced Manufacturing Processes 3 Units****Department:** Mechanical Engineering; Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** An undergraduate course in strength of materials or 122. This course provides the student with a modern introduction to the basic industrial practices, modeling techniques, theoretical background, and computational methods to treat classical and cutting edge manufacturing processes in a coherent and self-consistent manner.**Course Objectives:** An introduction to modeling and simulation of modern manufacturing processes.

Final exam required. Instructor: Zohdi

MEC ENG C202/MAT SCI C287 Computational Design of Multifunctional/Multiphysical Composite Materials 3 Units**Department:** Mechanical Engineering; Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** An undergraduate degree in the applied sciences or engineering.

The course is self-contained and is designed in an interdisciplinary manner for graduate students in engineering, materials science, physics, and applied mathematics who are interested in methods to accelerate the laboratory analysis and design of new materials. Examples draw primarily from various mechanical, thermal, diffusive, and electromagnetic applications.

Final exam required. Instructor: Zohdi

MEC ENG 203 Advanced Manufacturing Systems, AMS 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Graduate standing and consent of instructor.

This course is designed to prepare students for technical leadership in industry. The objective is to provide insight and understanding on the main concepts and practices involved in analyzing, managing manufacturing systems for high quality, cost effective, and sustainable manufacturing. This course is highly recommended for students on the Sustainable Engineering track in Mechanical Engineering. Students will receive no credit for Mechanical Engineering 203 after taking Mechanical Engineering 290R (Fall 2012, section 1). Final exam required. Formerly known as Mechanical Engineering 202.

MEC ENG C210/BIO ENG C209 Advanced Orthopedic Biomechanics 4 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** ME C85/CE C30 or Bio Eng 102; concurrent enrollment OK. Proficiency in MatLab or equivalent. Prior knowledge of biology or anatomy is not assumed.

Students will learn the application of engineering concepts including statics, dynamics, optimization theory, composite beam theory, beam-on-elastic foundation theory, Hertz contact theory, and materials behavior. Topics will include forces and moments acting on human joints; composition and mechanical behavior of orthopedic biomaterials; design/analysis of artificial joint, spine, and fracture fixation prostheses; musculoskeletal tissues including bone, cartilage, tendon, ligament, and muscle; osteoporosis and fracture-risk predication of bones; and bone adaptation. Students will be challenged in a MATLAB-based project to integrate the course material in an attempt to gain insight into contemporary design/analysis/problems.

Course Objectives: The purpose of this course is twofold:

- to learn the fundamental concepts of orthopaedic biomechanics;
- to enhance skills in mechanical engineering and bioengineering by analyzing the mechanical behavior of various complex biomedical problems.

Student Learning Outcomes: Working knowledge of various engineering concepts such as composite beam theory, beam-on-elastic-foundation theory, Hertz contact theory and MATLAB-based optimization design analysis. Understanding of basic concepts in orthopaedic biomechanics and the ability to apply the appropriate engineering concepts to solve realistic biomechanical problems, knowing clearly the assumptions involved.

Students will not receive credit for this course if they have taken ME C176/Bio E C119. Final exam required. Instructors: O'Connell, Keaveny

MEC ENG 211 The Cell as a Machine 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 54; Physics 7A; graduate standing.

This course offers a modular and systems mechanobiology (or "machine") perspective of the cell. Two vitally important components of the cell machinery will be studied in depth: (1) the integrin-mediated focal adhesions system that enables the cell to adhere to, and communicate mechano-chemical signals with, the extracellular environment, and (2) the nuclear pore complex, a multi-protein gateway for traffic in and out of the nucleus that regulates gene expression and affects protein synthesis. Final exam not required. Instructor: Mofrad

MEC ENG C212/BIO ENG C212 Heat and Mass Transport in Biomedical Engineering 3 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 106 and 109 (106 and 109 may be taken concurrently).

Fundamental processes of heat and mass transport in biological systems; organic molecules, cells, biological organs, whole animals. Derivation of mathematical models and discussion of experimental procedures. Applications to biomedical engineering.

Final exam not required. Formerly known as Mechanical Engineering 212.

MEC ENG C213/BIO ENG C213 Fluid Mechanics of Biological Systems 3 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 106 or equivalent; 265A or consent of instructor.

Fluid mechanical aspects of various physiological systems, the circulatory, respiratory, and renal systems. Motion in large and small blood vessels. Pulsatile and peristaltic flows. Other biofluidmechanical flows: the ear, eye, etc. Instrumentation for fluid measurements in biological systems and for medical diagnosis and applications. Artificial devices for replacement of organs and/or functions, e.g. blood oxygenators, kidney dialysis machines, artificial hearts/circulatory assist devices.

Final exam required. Instructors: Berger, Liepmann

MEC ENG C214/BIO ENG C214 Advanced Tissue Mechanics 3 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 102A, 176, 185; graduate standing or consent of instructor.

The goal of this course is to provide a foundation for characterizing and understanding the mechanical behavior of load-bearing tissues. A variety of mechanics topics will be introduced, including anisotropic elasticity and failure, cellular solid theory, biphasic theory, and quasi-linear viscoelasticity (QLV) theory. Building from this theoretical basis, we will explore the constitutive behavior of a wide variety of biological tissues. After taking this course, students should have sufficient background to independently study the mechanical behavior of most biological tissues. Formal discussion section will include a seminar series with external speakers.

Final exam not required.

MEC ENG C215/BIO ENG C222 Advanced Structural Aspects of Biomaterials 4 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

This course covers the structure and mechanical functions of load bearing tissues and their replacements. Biocompatibility of biomaterials and host response to structural implants are examined. Quantitative treatment of biomechanical issues and constitutive relationships of materials are covered in order to design implants for structural function. Material selection for load bearing applications including reconstructive surgery, orthopedics, dentistry, and cardiology are addressed.

Final exam not required.

MEC ENG C216/BIO ENG C215 Mechanobiology of the Cell: Dynamics of the Cytoskeleton and Nucleus 3 Units**Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open to bioengineering graduate students or consent of instructor.

This course develops and applies scaling laws and the methods of continuum and statistical mechanics to understand micro- and nano-scale mechanobiological phenomena involved in the living cell with particular attention the nucleus and the cytoskeleton as well as the interactions of the cell with the extracellular matrix and how these interactions may cause changes in cell architecture and biology, consequently leading to functional adaptation or pathological conditions.

Final exam not required. Instructor: Mofrad

MEC ENG C217/BIO ENG C217/INTEGBI C217 Biomimetic Engineering -- Engineering from Biology 3 Units

Department: Mechanical Engineering; Bioengineering; Integrative Biology
Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing in engineering or consent of instructor. Study of nature's solutions to specific problems with the aim of determining appropriate engineering analogs. Morphology, scaling, and design in organisms applied to engineering structures. Mechanical principles in nature and their application to engineering devices. Mechanical behavior of biological materials as governed by underlying microstructure, with the potential for synthesis into engineered materials. Trade-offs between redundancy and efficiency. Students will work in teams on projects where they will take examples of designs, concepts, and models from biology and determine their potential in specific engineering applications.

Final exam not required. Instructor: Dharan

MEC ENG C218/EL ENG C247B Introduction to MEMS Design 4 Units

Department: Mechanical Engineering; Electrical Engineering
Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Graduate standing in engineering or science; undergraduates with consent of instructor.

Physics, fabrication, and design of micro-electromechanical systems (MEMS). Micro and nanofabrication processes, including silicon surface and bulk micromachining and non-silicon micromachining. Integration strategies and assembly processes. Microsensor and microactuator devices: electrostatic, piezoresistive, piezoelectric, thermal, magnetic transduction. Electronic position-sensing circuits and electrical and mechanical noise. CAD for MEMS. Design project is required.

Final exam required. Instructors: Nguyen, Pister

MEC ENG C219/EL ENG C246 Parametric and Optimal Design of MEMS 3 Units

Department: Mechanical Engineering; Electrical Engineering
Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

Parametric design and optimal design of MEMS. Emphasis on design, not fabrication. Analytic solution of MEMS design problems to determine the dimensions of MEMS structures for specified function. Trade-off of various performance requirements despite conflicting design requirements. Structures include flexure systems, accelerometers, and rate sensors.

Final exam not required. Formerly known as 219. Instructors: Lin, Pisano

MEC ENG 220 Precision Manufacturing 3 Units

Department: Mechanical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 101, 102B, or consent of instructor.

Introduction to precision engineering for manufacturing. Emphasis on design and performance of precision machinery for manufacturing. Topics include machine tool elements and structure, sources of error (thermal, static, dynamic, process related), precision machining processes and process models (diamond turning and abrasive (fixed and free) processes), sensors for process monitoring and control, metrology, actuators, machine design case studies and examples of precision component manufacture.

Final exam not required. Instructor: Dornfeld

MEC ENG C223/BIO ENG C223 Polymer Engineering 3 Units

Department: Mechanical Engineering; Bioengineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Civil Engineering 130, Engineering 45.

A survey of the structure and mechanical properties of advanced engineering polymers. Topics include rubber elasticity, viscoelasticity, mechanical properties, yielding, deformation, and fracture mechanisms of various classes of polymers. The course will discuss degradation schemes of polymers and long-term performance issues. The class will include polymer applications in bioengineering and medicine.

Final exam required.

MEC ENG 224 Mechanical Behavior of Engineering Materials 3 Units

Department: Mechanical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Civil and Environmental Engineering 130 or 130N; Engineering 45.

This course covers elastic and plastic deformation under static and dynamic loads. Prediction and prevention of failure by yielding, fracture, fatigue, creep, corrosion, and wear. Basic elasticity and plasticity theories are discussed.

Final exam required.

MEC ENG C225/MAT SCI C212 Deformation and Fracture of Engineering Materials 4 Units

Department: Mechanical Engineering; Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Lecture per week for 15 weeks.

Prerequisites: Civil Engineering 130, Engineering 45.

This course covers deformation and fracture behavior of engineering materials for both monotonic and cyclic loading conditions.

Final exam required. Instructors: Ritchie, Pruitt, Komvopoulos

MEC ENG 226 Tribology 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102B, 104, 108.

Surface interactions. Fundamentals of contact mechanics. Friction theories. Types of measurement of wear. Response of materials to surface tractions. Plastic deformation, void/crack nucleation and crack propagation. Delamination wear. Microstructural effects in wear processes. Mechanics of layered media. Solid film and boundary liquid film lubrication. Friction and wear of polymers and fiber-reinforced polymeric composites. Brief introduction to metal cutting and tool wear mechanisms.

Final exam required. Instructor: Komvopoulos

MEC ENG 227 Mechanical Behavior of Composite Materials 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Response of composite materials (fiber and particulate-reinforced materials) to static, cyclic, creep and thermomechanical loading. Manufacturing process-induced variability, and residual stresses. Fatigue behavior, fracture mechanics and damage development. Role of the reinforcement-matrix interface in mechanical behavior. Environmental effects. Dimensional stability and thermal fatigue. Application to polymer, metal, ceramic, and carbon matrix composites.

Final exam required. Instructor: Dharan

MEC ENG 229 Design of Basic Electro-Mechanical Devices 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** EECS 100, graduate standing or consent of instructor.

Fundamental principles of magnetics, electro-magnetism, and magnetic materials as applied to design and operation of electro-mechanical devices. Type of device to be used in a particular application and dimensions of parts for the overall design will be discussed. Typical applications covered will be linear and rotary actuators, stepper motors, AC motors, and DC brush and brushless motors. A design project is required.

Final exam required.

MEC ENG 230 Real-Time Applications of Mini and Micro Computers 4 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing in engineering or consent of instructor for advanced undergraduates.

Mini and micro computers, operating in real time, have become ubiquitous components in engineering systems. The purpose of this course is to build competence in the engineering use of such systems through lectures stressing small computer structure, programming, and output/input operation, and through laboratory work with mini and micro computer systems.

Final exam required.

MEC ENG C231A/EL ENG C220B Experiential Advanced Control Design I 3 Units**Department:** Mechanical Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Experience-based learning in the design of SISO and MIMO feedback controllers for linear systems. The student will master skills needed to apply linear control design and analysis tools to classical and modern control problems. In particular, the participant will be exposed to and develop expertise in two key control design technologies: frequency-domain control synthesis and time-domain optimization-based approach.

Final exam required.

MEC ENG C231B/EL ENG C220C Experiential Advanced Control Design II 3 Units**Department:** Mechanical Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Experience-based learning in the design, analysis, and verification of automatic control systems. The course emphasizes the use of computer-aided design techniques through case studies and design tasks. The student will master skills needed to apply advanced model-based control analysis, design, and estimation to a variety of industrial applications. The role of these specific design methodologies within the larger endeavor of control design is also addressed.

Final exam not required.

MEC ENG C232/EL ENG C220A Advanced Control Systems I 3 Units**Department:** Mechanical Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. Input-output and state space representation of linear continuous and discrete time dynamic systems. Controllability, observability, and stability. Modeling and identification. Design and analysis of single and multi-variable feedback control systems in transform and time domain. State observer. Feedforward/preview control. Application to engineering systems.

Students will receive no credit for Electrical Engineering C220A after taking Mechanical Engineering 232. Course may be repeated for credit when topic changes. Final exam required. Instructors: Borrelli, Horowitz, Tomizuka, Tomlin

MEC ENG 233 Advanced Control Systems II 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 232

Linear Quadratic Optimal Control, Stochastic State Estimation, Linear Quadratic Gaussian Problem, Loop Transfer Recovery, Adaptive Control and Model Reference Adaptive Systems, Self Tuning Regulators, Repetitive Control, Application to engineering systems.

Final exam required. Instructors: Tomizuka, Horowitz

MEC ENG 234 Multivariable Control System Design 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 232 or EECS 221A, as well as firm foundation in classical control.

Analysis and synthesis techniques for multi-input (MIMO) control systems. Emphasis is on the effect that model uncertainty has on the design process.

Students may not take 234 for credit if they have taken 291C. Final exam required. Formerly known as 291C. Instructors: Packard, Poolla

MEC ENG 235 Design of Microprocessor-Based Mechanical Systems 4 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 4.5 hours of Lecture and 4.5 hours of Laboratory per week for 10 weeks.**Prerequisites:** 132, or C134/Electrical Engineering and Computer Science C128, or any basic undergraduate course in controls.

This course provides preparation for the conceptual design and prototyping of mechanical systems that use microprocessors to control machine activities, acquire and analyze data, and interact with operators. The architecture of microprocessors is related to problems in mechanical systems through study of systems, including electro-mechanical components, thermal components, and a variety of instruments. Laboratory exercises lead through studies of different levels of software. Students will receive no credit for 235 after taking 135. Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG C236/CIV ENG C291F/EL ENG C291 Control and Optimization of Distributed Parameters Systems 3 Units**Department:** Mechanical Engineering; Civil and Environmental Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 77, Mathematics 54 (or equivalent), or consent of instructor.

Distributed systems and PDE models of physical phenomena (propagation of waves, network traffic, water distribution, fluid mechanics, electromagnetism, blood vessels, beams, road pavement, structures, etc.). Fundamental solution methods for PDEs: separation of variables, self-similar solutions, characteristics, numerical methods, spectral methods. Stability analysis. Adjoint-based optimization. Lyapunov stabilization. Differential flatness. Viability control. Hamilton-Jacobi-based control.

Final exam not required.

MEC ENG 237 Control of Nonlinear Dynamic Systems 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 232

Fundamental properties of nonlinear systems. Stability of nonlinear systems. Controller Design via Lyapunov methods. Equivalent Linearization methods including limit cycle prediction.

Final exam required. Instructor: Hedrick

MEC ENG 238 Advanced Micro/Nano Mechanical Systems Laboratory 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 100, Mechanical Engineering 106, Physics 7B.

This hands-on laboratory course focuses on the mechanical engineering principles that underlie the design, fabrication, and operation of micro/nanoscale mechanical systems, including devices made by nanowire/nanotube syntheses; photolithography/soft lithography; and molding processes. Each laboratory will have different focuses for basic understanding of MEMS/NEMS systems from prototype constructions to experimental testings using mechanical, electrical, or optical techniques. Students will receive no credit for Mechanical Engineering 238 after taking Mechanical Engineering 138. Final exam not required.

MEC ENG 239 Advanced Design and Automation 4 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing in engineering or science and one course in Control.

This course will provide students with a solid understanding of smart products and the use of embedded microcomputers in products and machines. The course has two components: 1.) Formal lectures. Students receive a set of formal lectures on the design of smart machines and products that use embedded microcomputers. The materials cover machine components, actuators, sensors, basic electronic devices, embedded microprocessor systems and control, power transfer components, and mechanism design. 2.) Projects. Students will design and construct prototype products that use embedded microcomputers. Final exam not required. Instructor: Kazerooni

MEC ENG 240A Advanced Marine Structures I 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing; Statistics 25 or equivalent.

This course introduces a probabilistic description of ocean waves and wave loads acting on marine structures. These topics are followed with discussion of structural strength and reliability analysis. Students will receive no credit for 240A after taking C240A/Ocean Engineering C240A. Final exam not required. Formerly known as C240A. Instructor: Mansour

MEC ENG 240B Advanced Marine Structures II 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is concerned with the structural response of marine structures to environmental loads. Overall response of the structure as well as the behavior of its members under lateral and compressive loads are discussed.

Students will receive no credit for 240B after taking C240B/Ocean Engineering C240B. Final exam not required. Formerly known as C240B. Instructor: Mansour

MEC ENG 241A Marine Hydrodynamics I 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: Engineering 165 recommended or graduate standing. Navier-Stokes Equations. Boundary-layer theory, laminar, and turbulent. Frictional resistance. Boundary layer over water surface. Separated flow modeling. Steady and unsteady flow. Momentum theorems. Three-dimensional water-wave theory. Formulation of wave resistance of ships. Michell's solution. Wave patterns. Applications. Students will receive no credit for 241A after taking C241A/Ocean Engineering C241A. Final exam not required. Formerly known as C241A. Instructor: Yeung

MEC ENG 241B Marine Hydrodynamics II 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 260A or 241A recommended.

Momentum analysis for bodies moving in a fluid. Added-mass theory. Matched asymptotic slender-body theory. Small bodies in a current. Theory of motion of floating bodies with and without forward speed. Radiation and diffraction potentials. Wave forces. Hydro-elasticity formulation. Memory effects in time domain. Second-order effects. Impact hydrodynamics. Final exam not required. Formerly known as Naval Architecture 241B. Instructor: Yeung

MEC ENG 243 Advanced Methods in Free-Surface Flows 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 260A or Civil Engineering 200; 241B recommended.

Analytical and numerical methods in free-surface problems. Elements of inviscid external lifting and nonlifting flows. Analytical solutions in special coordinates systems. Integral-equation methods: formulations and implementations. Multiple-bodies interaction problems. Free-surface Green functions in two and three dimensions. Hybrid integral-equation methods. Finite-element formulations. Variational forms in time-harmonic flows. Finite-difference forms, stability, and accuracy. Boundary-fitted coordinates methods. Unsteady linearized wave-body interaction in time domain. Nonlinear breaking waves calculations. Particle dynamics. Extensive hands-on experience of microcomputers and/or workstations in developing solution.

Students will receive no credit for 243 after taking C243/Ocean Engineering C243. Final exam not required. Formerly known as C243. Instructor: Yeung

MEC ENG 245 Oceanic and Atmospheric Waves 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Mechanical Engineering 241A or 241B or 260A or Civil and Environmental Engineering 200A or equivalent courses. Covers dynamics of wave propagation in the ocean and the atmosphere. Specifically, formulation and properties of waves over the surface of a homogenous fluid, interfacial waves in a two-/multi-layer density stratified fluid, and internal waves in a continuous stratification will be discussed. Final exam required.

MEC ENG 246 Advanced Energy Conversion Principles 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Engineering 7, Mechanical Engineering 40, Mechanical Engineering 106, and Mechanical Engineering 109 or their equivalents. Covers the fundamental principles of energy conversion processes, followed by development of theoretical and computational tools that can be used to analyze energy conversion processes. Also introduces the use of modern computational methods to model energy conversion performance characteristics of devices and systems. Performance features, sources of inefficiencies, and optimal design strategies are explored for a variety of applications. Students will receive no credit for Mechanical Engineering 246 after taking Mechanical Engineering 146. Final exam required. Instructor: Carey

MEC ENG 251 Heat Conduction 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 151; Engineering 230A.

Analytical and numerical methods for the determination of the conduction of heat in solids. Final exam required.

MEC ENG 252 Heat Convection 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 151, 265A; Engineering 230A.

The transport of heat in fluids in motion; free and forced convection in laminar and turbulent flow over surfaces and within ducts. Final exam required. Instructor: Greif

MEC ENG 253 Thermal Radiation 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 151

Thermal radiation properties of gases, liquids, and solids; the calculation of radiant energy transfer. Final exam required. Instructors: Grigoropoulos, Majumdar

MEC ENG 254 Thermodynamics I 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 40

Axiomatic formulation of macroscopic equilibrium thermodynamics. Quantum mechanical description of atomic and molecular structure. Statistical-mechanical evaluation of thermodynamic properties of gases, liquids, and solids. Elementary kinetic theory of gases and evaluation of transport properties. Final exam required. Instructor: Carey

MEC ENG 256 Combustion 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 40, 106, and 109 (106 and 109 may be taken concurrently). 140 is recommended.

Combustion modeling. Multicomponent conservation equations with reactions. Laminar and turbulent deflagrations. Rankine-Hugoniot relations. Diffusion flames. Boundary layer combustion, ignition, and stability.

Final exam required. Instructor: Dibble

MEC ENG 257 Advanced Combustion 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 256

Critical analyses of combustion phenomenon. Conservation relations applied to reacting systems. Reactions are treated by both asymptotic and numerical methods. Real hydrocarbon kinetics are used; where available reduced kinetic mechanisms are introduced. Flame propagation theory and experiments are discussed in detail for both laminar and turbulent flows.

Final exam required.

MEC ENG 258 Heat Transfer with Phase Change 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 151

Heat transfer associated with phase change processes. Topics include thermodynamics of phase change, evaporation, condensation, nucleation and bubble growth, two phase flow, convective boiling and condensation, melting and solidification.

Final exam required. Instructor: Carey

MEC ENG 259 Microscale Thermophysics and Heat Transfer 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 151, 254, or consent of instructor.

This course introduces advanced statistical thermodynamics, nonequilibrium thermodynamics, and kinetic theory concepts used to analyze thermophysics of microscale systems and explores applications in which microscale transport plays an important role.

Final exam not required. Instructors: Carey, Majumdar

MEC ENG 260A Advanced Fluid Mechanics I 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 106; 185 (strongly recommended) or consent of instructor.

Introduces the foundations of fluid mechanics. Exact flow solutions are used to develop a physical insight of the fluid flow phenomena. Rigorous derivation of the equations of motion. Incompressible and compressible potential flows. Canonical viscous flows.

Final exam not required.

MEC ENG 260B Advanced Fluid Mechanics II 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 260A or consent of instructor.

Develops a working knowledge of fluid mechanics by identifying the essential physical mechanism in complex canonical flow problems which leads to simplified yet accurate formulation. Boundary layers, creeping flows, rotational flows, rotating flows. Stability and transition, introduction to turbulence.

Final exam required.

MEC ENG 262 Hydrodynamic Stability and Instability 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 and 106, or equivalents.

Discussions of linear and nonlinear instabilities in a variety of fluid flows: thermal convection, Rayleigh-Taylor flows, shearing flows, circular and cylindrical Couette flows (i.e., centrifugal instability). Use of the Landau equation, bifurcation diagrams, and energy methods for nonlinear flows.

Final exam required. Instructor: Marcus

MEC ENG 263 Turbulence 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 260A-260B or equivalent.

Physics of turbulence: Summary of stability and transition. Description of turbulence phenomena. Tools for studying turbulence. Homogeneous turbulence, shear turbulence, rotating turbulence. Summary of engineering models. Discussion of recent advances.

Final exam required. Instructor: Savas

MEC ENG 266 Geophysical and Astrophysical Fluid Dynamics 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate-level standing or consent of instructor.

This course examines high-Reynolds number flows, including their stability, their waves, and the influence of rotating and stratification as applied to geophysical and astrophysical fluid dynamics as well as to engineering flows. Examples of problems studies include vortex dynamics in planetary atmospheres and protoplanetary disks, jet streams, and waves (Rossby, Poincare, inertial, internal gravity, and Kelvin) in the ocean and atmosphere.

Final exam not required. Formerly known as 260C. Instructor: Marcus

MEC ENG C268/CHM ENG C268 Physicochemical Hydrodynamics 3 Units**Department:** Mechanical Engineering; Chemical Biomolecular Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** A first graduate course in fluid mechanics such as 260A-260B.

An introduction to the hydrodynamics of capillarity and wetting. Balance laws and short-range forces. Dimensionless numbers, scaling and lubrication approximation. Rayleigh instability. Marangoni effect. The moving contact line. Wetting and short-range forces. The dynamic contact angle. Dewetting. Coating flows. Effect of surfactants and electric fields. Wetting of rough or porous surfaces. Contact angles for evaporating systems.

Final exam not required. Instructor: Morris

MEC ENG 273 Oscillations in Linear Systems 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 and 133.

Response of discrete and continuous dynamical systems, damped and undamped, to harmonic and general time-dependent loading. Convolution integrals and Fourier and Laplace Transform methods. Lagrange's equations; Eigensolutions; Orthogonality; generalized coordinates; nonreciprocal and degenerate systems; Rayleigh quotient.

Final exam required. Instructor: Ma

MEC ENG 274 Random Oscillations of Mechanical Systems 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 and 133.

Random variables and random processes. Stationary, nonstationary, and ergodic processes. Analysis of linear and nonlinear, discrete and continuous, mechanical systems under stationary and nonstationary excitations. Vehicle dynamics. Applications to failure analysis. Stochastic estimation and control and their applications to vibratory systems. Final exam required. Instructor: Ma

MEC ENG 275 Advanced Dynamics 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 175

Review of Lagrangian dynamics. Legendre transform and Hamilton's equations, Cyclic coordinates, Canonical transformations, Hamilton-Jacobi theory, integrability. Dynamics of asymmetric systems. Approximation theory. Current topics in analytical dynamics. Final exam required.

MEC ENG 277 Oscillations in Nonlinear Systems 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 175

Oscillations in nonlinear systems having one or two degrees of freedom. Qualitative and quantitative methods: graphical, iteration, perturbation, and asymptotic methods. Self-excited oscillations, limit cycles, and domains of attraction.

Final exam required. Instructor: Szeri

MEC ENG C279/CIV ENG C235 Statistical Mechanics of Elasticity 3 Units**Department:** Mechanical Engineering; Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to statistical mechanics for engineers interested in the constitutive behavior of matter with a particular interest in continua. Systems of interest will be polymers and crystalline solids. Coverage includes introduction to statistical mechanics, ensembles, phase spaces, partition functions, free energy, polymer chain statistics, polymer networks, harmonic and quasi-harmonic crystalline solids, limitations of classical methods and quantum mechanical influences. Final exam not required. Instructors: Govindjee, Papadopoulos

MEC ENG 280A Introduction to the Finite Element Method 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion or computer laboratory per week.**Prerequisites:** Mathematics 50A-50B; some familiarity with elementary field theories of solid/fluid mechanics and/or thermal science.

Weighted-residual and variational methods of approximation. Canonical construction of finite element spaces. Formulation of element and global state equations. Applications to linear partial differential equations of interest in engineering and applied science.

Final exam required. Formerly known as 280. Instructors: Papadopoulos, Zohdi

MEC ENG 280B Finite Element Methods in Nonlinear Continua 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 280A or equivalent; background in continuum mechanics at the level of 185.

A brief review of continuum mechanics. Consistent linearization of kinematical variables and balance laws. Incremental formulations of the equations of motion. Solution of the nonlinear field equations by Newton's method and its variants. General treatment of constraints. Applications to nonlinear material and kinematical modeling on continua.

Final exam not required. Instructor: Papadopoulos

MEC ENG 281 Methods of Tensor Calculus and Differential Geometry 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematics 53 and 54.

Methods of tensor calculus and classical differential geometry. The tensor concept and the calculus of tensors, the Riemann-Christoffel tensor and its properties, Riemannian and Euclidean spaces. Geometry of a surface, formulas of Weingarten, and equations of Gauss and Codazzi.

Final exam required.

MEC ENG 282 Theory of Elasticity 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

Fundamentals and general theorems of the linear theory of elasticity (in three dimensions) and the formulation of static and dynamic boundary value problems. Application to torsion, flexure, and two-dimensional problems of plane strain, generalized plane stress, and bending of plates. Representation of basic field equations in terms of displacement potentials and stress functions. Some basic three-dimensional solutions. Final exam required. Instructors: Bogy, Steigmann

MEC ENG 283 Wave Propagation in Elastic Media 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

Propagation of mechanical disturbances in unbounded and bounded media. Surface waves, wave reflection and transmission at interfaces and boundaries. Stress waves due to periodic and transient sources. Some additional topics may vary with instructor.

Final exam required. Instructor: Bogy

MEC ENG 284 Nonlinear Theory of Elasticity 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 and 281.

Fundamentals of nonlinear theory of elasticity. Exact solutions in elastostatics by inverse and semi-inverse methods. The method of successive approximations. Small deformations superposed on finite deformations. Nonlinear oscillations, shocks and acceleration waves, progressive waves and standing waves of finite amplitude, waves in pre-stressed solids.

Students will receive no credit for 284 after taking 284A. Final exam required. Formerly known as 284A. Instructor: Casey

MEC ENG 285A Foundations of the Theory of Continuous Media 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

A general development of thermodynamics of deformable media, entropy production, and related entropy inequalities. Thermomechanical response of dissipative media, including those for viscous fluids and nonlinear elastic solids. A discussion of invariance, internal constraints, material symmetry, and other special topics.

Final exam required. Formerly known as 285. Instructor: Casey

MEC ENG 285B Surfaces of Discontinuity and Inhomogeneities in Deformable Continua 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

Finitely deforming thermo-mechanical media. Moving surfaces of discontinuity. Shock waves and acceleration waves in elastic materials. The Eshelby tensor and Eshelbian mechanics. Fracture. Microstructured continua.

Final exam not required. Instructor: Casey

MEC ENG 285C Electrodynamics of Continuous Media 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** A first course in continuum mechanics (such as 185 or Civil Engineering 231.)

This course presents the fundamentals of electromagnetic interactions in deformable continuous media. It develops the background necessary to understand various modern technologies involving MEMS devices, sensors and actuators, plasmas, and a wide range of additional phenomena. The emphasis of this course is on fundamentals, beginning with Maxwell's equations in vacuum, the ether relations and their extension to electromagnetic interactions in materials. The treatment is general within the limits of nonrelativistic physics and accommodates coupling with mechanical and thermal effects. The topics discussed are all developed at a general level including the effects of finite deformations. Various linear models, which are especially useful in applications, are developed through specialization of general theory. This course will be of interest to students in engineering, physics, and applied mathematics.

Final exam not required. Formerly known as 284B. Instructor: Steigmann

MEC ENG 285D Engineering Rheology 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** A basic background in continuum mechanics (as covered in ME 185).

Rheology is the study of the interaction between forces and the flow/deformation of materials. It deals with aspects of the mechanics of materials that are not covered in the standard curriculum, such as the response of viscoelastic fluids and solids, together with methods for modeling and simulating their response. Such materials exhibit a host of counterintuitive phenomena that call for nonlinear modeling and a close interaction between theory and experiment. This is a special-topics course for graduate students seeking advanced knowledge of these phenomena and associated modeling.

Course Objectives: To expose students to the theory and methods of modern rheology, including: the mechanics of flow in complex non-Newtonian fluids and the mechanics of viscoelastic solids.

Student Learning Outcomes: Skill in modeling and simulating rheological problems.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Steigmann

MEC ENG 286 Theory of Plasticity 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185

Formulation of the theory of plasticity relative to loading surfaces in both strain space and stress space and associated loading criteria. Nonlinear constitutive equations for finitely deformed elastic-plastic materials. Discussion of strain-hardening and special cases. Applications. Final exam required. Instructors: Casey, Papadopoulos

MEC ENG 288 Theory of Elastic Stability 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 and 273.

Dynamic stability of elastic bodies. Small motion on finite deformation. Classical treatments of buckling problems. Snapthrough and other global stability problems. Stability theory based upon nonlinear three-dimensional theory of elasticity.

Final exam required. Instructor: Steigmann

MEC ENG 289 Theory of Shells 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 and 281.

A direct formulation of a general theory of shells and plates based on the concept of Cosserat (or Directed) surfaces. Nonlinear constitutive equations for finitely deformed elastic shells. Linear theory and a special nonlinear theory with small strain accompanied by large or moderately large rotation. Applications.

Final exam required. Instructors: Johnson, Steigmann

MEC ENG 290C Topics in Fluid Mechanics 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Lectures on special topics which will be announced at the beginning of each semester that the course is offered. Topics may include transport and mixing, geophysical fluid dynamics, biofluid dynamics, oceanography, free surface flows, non-Newtonian fluid mechanics, among other possibilities.

Final exam not required. Instructors: Savas, Yeung

MEC ENG C290S/EL ENG C291E Hybrid Systems and Intelligent Control 3 Units**Department:** Mechanical Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Analysis of hybrid systems formed by the interaction of continuous time dynamics and discrete-event controllers. Discrete-event systems models and language descriptions. Finite-state machines and automata. Model verification and control of hybrid systems. Signal-to-symbol conversion and logic controllers. Adaptive, neural, and fuzzy-control systems. Applications to robotics and Intelligent Vehicle and Highway Systems (IVHS).

Final exam not required. Formerly known as 291E.

MEC ENG C290U/COMPSCI C294P Interactive Device Design 3 Units**Department:** Mechanical Engineering; Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Instructor consent.

This course teaches concepts and skills required to design, prototype, and fabricate interactive devices -- that is, physical objects that intelligently respond to user input and enable new types of interactions.

Course Objectives: To educate students in the hybrid design skills needed for today's electronic products. These combine mechanical devices, electronics, software, sensors, wireless communication and connections to the cloud. Students also learn scale up procedures for volume manufacturing.

Student Learning Outcomes: 3D printed prototypes, learned software, programming and design skills

Final exam required. Instructors: Hartmann, Wright

MEC ENG C290X/BIO ENG C290D Advanced Technical**Communication: Proposals, Patents, and Presentations 3 Units****Department:** Mechanical Engineering; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will help the advanced Ph.D. student further develop critically important technical communication traits via a series of lectures, interactive workshops, and student projects that will address the structure and creation of effective research papers, technical reports, patents, proposals, business plans, and oral presentations. One key concept will be the emphasis on focus and clarity--achieved through critical thinking regarding objectives and context. Examples will be drawn primarily from health care and bioengineering multidisciplinary applications.

Final exam not required. Instructors: Keaveny, Pruitt

MEC ENG 290G Laser Processing and Diagnostics 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or undergraduate elective upon completion of ME109.

The course provides a detailed account of laser interactions with materials in the context of advanced materials processing and diagnostics.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Grigoropoulos

MEC ENG 290H Green Product Development: Design for Sustainability 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week, plus optional discussion section.**Prerequisites:** Graduate standing in Engineering or Information, or consent of instructor.

The focus of the course is management of innovation processes for sustainable products, from product definition to sustainable manufacturing and financial models. Using a project in which students will be asked to design and develop a product or service focused on sustainability, we will teach processes for collecting customer and user needs data, prioritizing that data, developing a product specification, sketching and building product prototypes, and interacting with the customer/community during product development. The course is intended as a very hands-on experience in the "green" product development process. The course will be a Management of Technology course offered jointly with the College of Engineering and the Haas School of Business. In addition, it will also receive credit towards the new Certificate on Engineering Sustainability and Environmental Management program. We aim to have half MBA students and half Engineering students (with a few other students, such as from the School of Information) in the class. The instructors will facilitate students to form mixed disciplinary teams for the development of their "green" products.

Final exam not required. Instructors: Agogino, Beckmann

MEC ENG 290I Sustainable Manufacturing 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing, or consent of instructor, especially for students not in engineering, business, or other management of technology programs.

Sustainable design, manufacturing, and management as exercised by the enterprise is a poorly understood idea and one that is not intuitively connected to business value or engineering practice. This is especially true for the manufacturing aspects of most enterprises (tools, processes, and systems). This course will provide the basis for understanding (1) what comprises sustainable practices in for-profit enterprises, (2) how to practice and measure continuous improvement using sustainability thinking, techniques, and tools for product and manufacturing process design, and (3) the techniques for and value of effective communication of sustainability performance to internal and external audiences. Material in the course will be supplemented by speakers with diverse backgrounds in corporate sustainability, environmental consulting, non-governmental organizations, and academia.

Students will receive no credit for 290I after taking Engineering 290C.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Dornfeld

MEC ENG 290J Predictive Control for Linear and Hybrid Systems 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 232

Advanced optimization, polyhedra manipulation, and multiparametric programming. Invariant set theory. Analysis and design of constrained predictive controllers for linear systems. Computational oriented models of hybrid systems. Analysis and design of constrained predictive controllers for hybrid systems.

Final exam not required. Instructor: Borrelli

MEC ENG 290KA Innovation through Design Thinking 2 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per week for 8 weeks.

Prerequisites: Graduate level standing; Prior design course
Designed for professionally-oriented graduate students, this course explores key concepts in design innovation based on the human-centered design approach called "design thinking." Topics covered include human-centered design research, analysis of research to develop design principles, creativity techniques, user needs framing and strategic business modeling.

Student Learning Outcomes: The primary goal is to provide students with a set of innovation skills that will allow them to flourish in a climate of complex problem solving and design challenges. Students will develop expertise in innovation skills drawn from the fields of critical thinking, design thinking and systems thinking. Students should be able to apply the skills mastered to real world design problems.

Final exam not required. Instructor: Agogino

MEC ENG 290KB Life Cycle Thinking in Engineering Design 1 Unit**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.**Prerequisites:** Graduate level standing; Prior design course.

How do we design and manufacture greener products, and how do we know if they really are? This class both provides tools for sustainable design innovation and metrics to measure success. Students will use both creative and analytical skills, generating new ideas as well as evaluating designs with screening-level life cycle assessment.

Course Objectives: The objective of this course is to provide students with the tools to frame, analyze, and redesign their projects in terms of life cycle environmental impacts, to improve the sustainability of their projects.

Student Learning Outcomes: Students can expect to depart the course understanding the practice of basic life cycle assessment, including how to set boundaries, choose functional units, and use LCA software. Students will also learn how to integrate this practice into new product development in the context of the "triple bottom line" – economy, environment and society. Students should be able to apply the skills mastered to real world design and engineering problems.

Final exam not required. Instructor: Agogino

MEC ENG 290L Introduction to Nano-Biology 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course introduces graduate students in Mechanical Engineering to the nascent field of Nano-Biology. The course is comprised of both formal lectures and projects. Lectures will include an introduction to both molecular biology (components of cells, protein structure and function, DNA, gene regulation, etc.) and nanotechnology ("bottom up" and "top down" nanotechnologies), an overview of current instrumentation in biology, an in-depth description of the recent integration of molecular biology with nanotechnology (for sensing or labeling purposes, elucidating information on cells, etc.), and an introduction to Systems Biology (design principles of biological circuits). Students will read and present a variety of current journal papers to the class and lead a discussion on the various works.

Final exam not required. Instructor: Sohn

MEC ENG 290M Expert Systems in Mechanical Engineering 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102A and 102B or equivalent.

Introduction to artificial intelligence and decision analysis in mechanical engineering. Fundamentals of analytic design, probability theory, failure analysis, risk assessment, and Bayesian and logical inference. Applications to expert systems in probabilistic mechanical engineering design and failure diagnostics. Use of automated influence diagrams to codify expert knowledge and to evaluate optimal design decisions.

Final exam not required. Instructor: Agogino

MEC ENG 290N System Identification 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 232, Electrical Engineering and Computer Sciences 221A or consent of instructor.

This course is intended to provide a comprehensive treatment of both classical system identification and recent work in control-oriented system identification. Numerical, practical, and theoretical aspects will be covered. Topics treated include time and frequency domain methods, generalized parameter estimation, identification of structured non-linear systems, modeling uncertainty bounding, and state-space methods.

Final exam required. Instructor: Poolla

MEC ENG 290P New Product Development: Design Theory and Methods 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing, consent of instructor.

This course is aimed at developing the interdisciplinary skills required for successful product development in today's competitive marketplace. We expect students to be disciplinary experts in their own field (e.g., engineering, business). By bringing together multiple perspectives, we will learn how product development teams can focus their efforts to quickly create cost-effective products that exceed customers' expectations.

Final exam required. Instructor: Agogino

MEC ENG 290Q Dynamic Control of Robotic Manipulators 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week for 5 weeks, 1 hour of lecture per week for 10 weeks, 4 hours of laboratory per week for full term.**Prerequisites:** 230, 232, or consent of instructor.

Dynamic and kinematic analysis of robotic manipulators. Sensors (position, velocity, force and vision). Actuators and power transmission lines. Direct drive and indirect drive. Point to point control. Straight and curved path following. Industrial practice in servo control. Applications of optimal linear quadratic control, preview control, nonlinear control, and direct/indirect adaptive controls. Force control and compliance control. Collision avoidance. Utilization of dynamic controls.

Final exam required. Instructors: Horowitz, Kazerooni

MEC ENG 290R Topics in Manufacturing 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced topics in manufacturing research. Topics vary from year to year.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructors: Dornfeld, McMains, Wright

MEC ENG 290T Plasmonic Materials 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 110A or consent of instructor.

This course deals with fundamental aspects of plasmonic materials. The electromagnetic responses of those artificially constructed materials will be discussed. Physics of surface plasmons and dispersion engineering will be introduced. Resonant phenomena associated with the negative permittivity and permeability and the left-handed propagation will be presented. Methods of design, fabrication, and characterization of plasmonic materials will be discussed.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Zhang

MEC ENG 290U Interactive Device Design 3 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Instructor consent.

This course teaches concepts and skills required to design, prototype, and fabricate interactive devices -- that is, physical objects that intelligently respond to user input and enable new types of interactions.

Course Objectives: To educate students in the hybrid design skills needed for today's electronic products. These combine mechanical devices, electronics, software, sensors, wireless communication and connections to the cloud. Students also learn scale up procedures for volume manufacturing.

Student Learning Outcomes: 3D printed prototypes, learned software, programming and design skills

Final exam not required. Instructors: Hartmann, Wright

MEC ENG 297 Engineering Field Studies 1 - 12 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 12 hour of Independent study per week for 15 weeks. 1.5 to 18 hours of Independent study per week for 10 weeks. 2.5 to 20 hours of Independent study per week for 6 weeks.

Supervised experience relative to specific aspects of practice in engineering. Under guidance of a faculty member, the student will work in an internship in industry. Emphasis is to attain practical experience in the field.

Final exam not required.

MEC ENG 298 Group Studies, Seminars, or Group Research 1 - 8 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 to 8 hour of Independent study per week for 15 weeks. 1.5 to 12 hours of Independent study per week for 10 weeks. Advanced studies in various subjects through special seminars on topics to be selected each year. Informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG 299 Individual Study or Research 1 - 12 Units**Department:** Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 12 hour of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Prerequisites: Graduate standing in engineering, physics, or mathematics.

Investigations of advanced problems in mechanical engineering.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MEC ENG 375 Teaching of Mechanical Engineering at the University Level 1 - 6 Units**Department:** Mechanical Engineering**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

Weekly seminars and discussions on effective teaching methods. Educational objectives. Theories of learning. The lecture and alternative approaches. Use of media resources. Student evaluation. Laboratory instruction. Curricula in mechanical engineering. Practice teaching. This course is open to Teaching Assistants of Mechanical Engineering. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Mechanical Engineering 301.

Media Studies (MEDIAS)

MEDIAS 10 An Introduction to Mass Media in America 4 Units

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

This course, aims to promote a critical understanding of American mass media from social, historical, philosophical, cultural, and other perspectives. It is designed to foster a critical understanding of media, inviting students to question and critique the many multiple messages at work within the mass media and the media's role in our political, social, and cultural life. Course readings and lectures are designed to examine the history of the various media forms (such as newspapers, radio, photography, magazines, cinema, television, and advertising) and to introduce debates concerning their role in American society and culture. The course introduces students to key ideas and debates in the field of media studies.

Final exam required. Formerly known as Mass Communications 10.

Instructor: Levina

MEDIAS N10 Mass Communications in America: An Introduction 4 Units

Department: Media Studies

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture per week for 10 weeks. 8 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks. An introduction to the history, functions, and control of mass communication institutions in the United States, and to media content and effects.

Final exam required. Formerly known as Mass Communications N10.

MEDIAS 24 Freshman Seminar 1 Unit

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 24. Instructor: Steven Botterill

MEDIAS 39A Freshman/Sophomore Seminar 2 - 4 Units

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAS 39B Freshman/Sophomore Seminar 2 - 4 Units

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAS 39C Freshman/Sophomore Seminar 2 - 4 Units

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAS 39D Freshman/Sophomore Seminar 2 - 4 Units

Department: Media Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 39U Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 39V Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 39W Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 39X Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 39Y Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

MEDIAST 39Z Freshman/Sophomore Seminar 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 39.

MEDIAST 84 Sophomore Seminar 1 or 2 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.

Prerequisites: At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 24.

MEDIAST 101 Visual Communications 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Media Studies major or consent of instructor.

This course aims to promote a critical understanding of visual culture from a critical theory perspective. It is designed to foster a critical understanding of media images, inviting students to question and critique the many and multiple messages at work within visual culture. It is organized around the different cultural and social theoretical approaches used to analyze visual images and explain the role of visual media in today's society.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 101.

MEDIAST 102 Effects of Mass Media 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10 or consent of instructor.

This course examines the often contentious history of communication theory concerning media effects. At issue among scholars working within different research traditions are core disagreements about what should be studied (institutions, texts, audiences, technologies), how they should be studied, and even what constitutes an "effect." Course readings and lectures stress an understanding of different empirical and critical research traditions by focusing on the social, political, and historical contexts surrounding them, the research models and methods they employ, as well as the findings and conclusions they have reached. Course assignments and exams assess student understanding of course readings as well as the ability to apply mass media theory to new media texts.

Final exam required. Formerly known as Mass Communications 102. Instructor: Retzinger

MEDIAST C103/JOURN C141 Understanding Journalism 4 Units**Department:** Media Studies; Journalism**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 7 hours of Lecture per week for 8 weeks.**Prerequisites:** Media Studies major or consent of instructor.

In this course, students learn why sound journalism is so important to a healthy, working democracy. Journalism is rapidly changing. The class will give a context to those changes and provide an overview of contemporary journalistic institutions. Students will examine how news is made, who decides what news is, who makes it, who profits by it, and what rules guide how reporters and editors work. Central issues affecting journalism, such as bias and professionalism, will be discussed. The class is not specifically intended for future journalists, but students will learn why pursuing a career in journalism can be so fulfilling and thrilling, as well as becoming better consumers of the news.

Final exam required. Instructor: Goldstein

MEDIAST 104A Freedom of Speech and the Press 3 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Media Studies major or consent of instructor.

The course considers the history and contemporary meaning of the First Amendment guarantees of freedom of speech and the press. Emphasizing the real world implications of major Supreme Court decisions, the course examines restrictions on speech and press imposed by national security, libel, injurious speech, and privacy, as well as issues of access to information and government regulation of new media. Final exam required. Formerly known as Mass Communications 104.

MEDIAST 104B The History of Journalism 3 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10 or consent of instructor.

The history of journalism is a broad subject--far broader than can comprehensively be covered in a single course. So necessarily, this course takes an idiosyncratic approach. This course examines how news has been defined, discovered, and communicated from its early modern origins to the present. It will also focus on particular areas of journalism. The class will take a critical look at how wars get reported on, including the current war in Iraq. The class will examine the role of journalists in the rise of the Cold War more than half a century ago. It will also examine the importance of media barons, by studying two highly readable biographies, one of William Randolph Hearst, the other of Katherine Graham. And finally, the class will look at the role journalists played in unseating President Nixon.

Final exam required. Formerly known as Journalism 141. Instructor: Goldstein

MEDIAST C104C/COG SCI C103/HISTORY C192/INFO C103 History of Information 3 Units**Department:** Media Studies; Cognitive Science; History; Information**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Upper level undergraduates.

This course explores the history of information and associated technologies, uncovering why we think of ours as "the information age." We will select moments in the evolution of production, recording, and storage from the earliest writing systems to the world of Short Message Service (SMS) and blogs. In every instance, we'll be concerned with both what and when and how and why, and we will keep returning to the question of technological determinism: how do technological developments affect society and vice versa?.

Final exam required. Formerly known as Information Systems and Management C103. Instructors: Duguid, Nunberg

MEDIAST 104D Privacy in the Digital Age 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines issues of privacy in contemporary society, with an emphasis on how privacy is affected by technological change. After an introduction to features of the American legal system and the theoretical underpinnings of privacy law, we will consider privacy in the context of law enforcement investigations, national security, government records and databases, newsgathering torts, commercial databases and First Amendment limitations on privacy regulation.

Final exam required.

MEDIAST C118/AMERSTD C118/ISF C118 American Popular Culture 4 Units**Department:** Media Studies; American Studies; Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

An interdisciplinary approach to American popular culture, focusing on the social, economic, commercial, political, and historical construction of popular culture and American identities. This course will satisfy part of the core requirement for the American Studies major.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MEDIAST C125/AMERSTD C125/ISF C125 American Media and Global Politics 3 Units**Department:** Media Studies; American Studies; Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Public opinion about world events is largely shaped today by the mass media. How accurate is such coverage in the light of historical analysis? To what extent do systemic sources of bias or distortion affect our understanding of history? To approach these questions, we will analyze the role of the media in several specific case studies.

Final exam required.

MEDIAST 130 Research Methods in Media Studies 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 10 or permission of instructor.

This course is intended to familiarize students with some of the primary research methods used to study mass media texts and audiences (and the relationship between the two). Because the field of media studies has historical roots in both the social sciences and humanities, the course will cover both quantitative and qualitative approaches to communications research. Course readings will describe research methods, offer examples of research projects and findings, and present critiques of research studies and methods. Course assignments will involve designing and conducting a series of sample projects on a single topic of the student's choosing in order to gain a fuller understanding of various research methods and their limitations and strengths. There are five separate research projects on the syllabus; students must complete the first project and may conduct any three of the remaining four projects. Students must present and discuss their research findings for one project to the class.

Final exam required. Formerly known as Mass Communications 130.

Instructor: Retzinger

MEDIAST 140 Media and Politics 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Junior or senior standing in the Media Studies major.

This course will examine the influence of consumer marketing trends and techniques on presidential campaigns, and on political culture more broadly. How much truth is there to the idea that selling politicians is like "selling soap"? What is the difference between the psychology of the citizen and the psychology of the consumer? How are the political process and democratic discourse being transformed, for better or worse, by the use of such techniques?.

Final exam required.

MEDIAST 150 Topics in Film 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** 10 or consent of instructor.

Topics in film employs theory to examine different film genres, historical periods, and topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 190.

MEDIAST 160 International Media 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Media Studies major or consent of instructor.

Case studies of the foreign mass media. Focus may be on the press and publishing, broadcasting, documentaries, or new media. Possible topics: Pacific Rim press; mass media in China; Israeli and Palestinian media. Course may be repeated for credit as topic varies. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 160.

MEDIAST 170 Cultural History of Advertising 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Media Studies major or consent of instructor.

Introduction to the history of advertising and the roots of consumer culture in the United States. Presents contrasting approaches to the study of advertising and the analysis of advertising themes and images. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 170.

MEDIAST 180 Television Studies 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Media Studies major or consent of instructor.

This course examines contemporary approaches to the study of television, investigating television's social, political, commercial, and cultural dimensions. Readings and assignments require students to apply critical perspectives to television programming and to the analysis of individual television texts.

Course may be repeated for credit as topic varies. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 180.

MEDIAST 190 Special Topics in Media Studies 2 - 4 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 4 hours of seminar per week. 3 to 7 hours of seminar per week for 8 weeks. 5 to 10 hours of seminar per week for 6 weeks.**Prerequisites:** Media Studies major or consent of instructor.

Normally open only to Media Studies majors who have already completed 12 units of upper division work in the major. Advanced study in Media Studies with topics to be announced each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Mass Communications 190.

MEDIAST H195 Honors Colloquium 3 Units**Department:** Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Media Studies major.

Under the supervision of the instructor, students will work toward preparing scholarly theses in the field, basing their work on theoretical considerations and, where applicable, analyzing empirical data. Final exam not required. Formerly known as Mass Communications H195.

MEDIAST C196A/GWS C196A/HISTART C196A/HISTORY C196A/POL SCI C196A/POLECON C196A/SOCIOL C196A/UGIS C196A UCDC Core Seminar 4 Units

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

The graduate proseminar. Basic materials and resources in fields represented in the Medieval Studies program, and in some subjects involving expertise in more than one discipline (e.g., liturgy, codicology). Emphasis on methods of interdisciplinary research, research tools, and critical evaluation of their use.

Final exam not required.

MED ST 205 Medieval Manuscripts as Primary Sources 4 Units**Department:** Medieval Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course explores the use of medieval manuscripts as primary sources for contemporary scholarship and as evidence of book culture in the medieval West.

Final exam not required.

MED ST 210 Paleography and Codicology 4 Units**Department:** Medieval Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of Instructor required.

Instruction in Medieval Latin paleography and/or the paleography of one or more of the medieval vernacular languages of Western Europe, emphasizing the evolution of scripts as well as practice in reading them. Ancillary instruction in the principles of codicology with attention to the process of text-making and book manufacture.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MED ST 250 Seminar in Medieval Culture 2 - 4 Units**Department:** Medieval Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

Taught by the Distinguished Visiting Professor of Medieval Studies on a topic related to his or her specialty. In the event that the instructor is in residence for fewer than 15 weeks, the course will be offered for either 2 or 3 units of credit, in proportion to the number of actual contact hours. Course may be repeated for credit. Course may be repeated for credit when topic changes. Course may be taken for less than 4 units on a <satisfactory/unsatisfactory> basis with consent of instructor. Final exam not required.

Middle Eastern Studies (M E STU)**M E STU 20 Perspectives on the Middle East 2 Units****Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

A weekly seminar including guest speakers on (1) ethnic perspectives (Persians, Arabs, Turks, Israelis); (2) religious perspectives (Islam, Christianity, Judaism); and (3) disciplinary perspectives (anthropology, sociology, etc.). The seminar introduces students to the work of several major Berkeley Middle East scholars. The class has no prerequisites and admission preference is given to lower division students and prospective Middle Eastern majors.

Final exam required.

M E STU 24 Freshman Seminar 1 Unit**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks. 2 hours of Seminar per week for 8 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment is limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

M E STU 98 Directed Group Study for Lower Division Students 1 - 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hours of directed group study per week.**Prerequisites:** Consent of instructor.

Seminars in various fields of Middle East studies designed to introduce beginning undergraduates to problems of importance to students interested in the Middle East. Topics vary from semester to semester. Course may be repeated for credit with different instructor. Course may be repeated for credit when topic changes. Final exam not required.

M E STU 102 Scope and Methods of Research in Middle Eastern Studies 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division standing.

Required for all students majoring in Middle Eastern Studies, open to all students in International and Area Studies Teaching Program focusing on the Middle East interdisciplinary research strategies for the collection, interpretation, and analysis of data. Course integrates the study of the fundamental theories of social science, with the practical techniques of social science research methods.

Students will receive no credit for 102 after taking Political Economy of Industrial Societies 102, or International and Area Studies 102 or 118.

Final exam not required. Instructor: Gottreich

M E STU 109 Model Arab League 3 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of lecture per week, plus participation in the Model Arab League simulation.

The Model Arab League is a simulation of the League of Arab States similar to the Model United Nations. Class meetings will be for familiarization of relevant political perspectives within the context of the Arab world. Students learn parliamentary procedure and to prepare resolutions. Each student is assigned to a committee and is responsible for participating in the development of the committee's resolution and its presentation at the Model Arab League.

Final exam not required.

M E STU 120 Selected Topics--Middle Eastern Studies 3 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 14 hours of Lecture per week for 3 weeks.

Interdisciplinary study of selected topics in Middle Eastern studies. Each offering will focus on specific issues or topics concerning one or more areas of the Middle East. Through lectures, discussions, and multimedia presentations, students will explore a variety of perspectives relating to the subject matter of the course. Students will be expected to successfully complete various writing assignments or short projects, and written exam(s).

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

M E STU 130 Cross-Listed Topics 1 - 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed to accommodate cross-listed courses offered through other departments, the content of which is applicable to Middle Eastern Studies majors. Content and unit values vary from course to course.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

M E STU 150 Advanced Study in the Middle East 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 6 hours of Seminar per week for 8 weeks. 7.5 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

Advanced research in current issues of Middle Eastern Studies. Seminars will focus on specific areas or topics with appropriate comparative material included. A major research project is required as well as class presentations. Topics to vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

M E STU 190 Senior Thesis 1 - 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences. Individual conferences.

Prerequisites: Senior standing, one year of language in the major, at least fifteen upper division units in the major, Near Eastern Studies 10. With the guidance of a faculty member of the program, the preparation and presentation of a senior thesis pertaining to the student's individual area of concentration within the Middle Eastern Studies major. Final paper required. Units determined on consultation with instructor.

Final exam not required.

M E STU 194 On-Line Research and Digital Production for Middle Eastern Studies 3 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This workshop is intended for Middle Eastern Studies majors undertaking senior theses projects. It should be taken in the spring semester, while students are enrolled in MES 190/H195: "Senior Thesis in MES." Students in this workshop will explore online research tools and web-building techniques with an aim to complement their theses with multimedia websites that disseminate their findings and demonstrate their capacity for research to a wider audience. Moreover, the study of these tools, techniques, and publishing platforms will enable students to hone their digital literacy in an increasingly connected online world.

Course Objectives: Students will study the contemporary social, cultural, and media phenomena in the Middle East that are changing the processes of research and information production, along with the habits of information consumption, in this revolutionary media moment. Tools for the retrieval of information and sources are indispensable. Through regular and strategic social media activity, students will participate in global conversations regarding breaking news and events relevant to their theses topics. Students will learn how to weave traditional research and new publishing methods into cohesive, informative, and interactive web packages.

Student Learning Outcomes: By the end of this course, students will be able to:

- Build a multi-page website using a content management system (CMS) to design, publish and organize thesis activity
 - Write, photograph and edit scholarly content for academic and public consumption
 - Use the Internet (and social media) as a research tool for discovering information/resources, evaluate the legitimacy of sources, and attribute appropriately
 - Present information and research findings in digitally interactive and visual formats
- Launching of final project web site

M E STU H195 Honors in Middle Eastern Studies 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Weekly consultation with faculty thesis adviser.**Prerequisites:** 102 or consent of instructor.

This course is the second of a two-semester senior honors program and culminates in the completion of a senior thesis. The thesis project begins with 102, which must be successfully completed before enrollment in H195. During this semester, an honors thesis of approximately 50-75 pages is completed under the direct supervision of the instructor of the Honors seminar program in International and Area Studies and a faculty member appropriate to the student's interest.

Final exam not required.

M E STU 198 Directed Group Study for Upper Division Students 1 - 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hours of seminar per week.

Seminar for the group study of selected Middle Eastern related topics not covered by regularly scheduled courses. A written proposal must be approved by a Middle Eastern Studies faculty adviser. Final paper required. Units determined on consultation with instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

M E STU 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Middle Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences.

For students wishing to pursue an interest not represented in the curriculum by developing an individual program of study and research supervised by a faculty member. A written proposal must be approved by a Middle Eastern Studies faculty adviser. Final paper required. Units determined on consultation with instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Military Affairs (MIL AFF)

MIL AFF 1 Military Physical Fitness and Nutrition 1 Unit**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of physical training per week.**Prerequisites:** Consent of instructor.

This course teaches the fundamentals of physical fitness and nutrition employed by the U.S. military to condition R.O.T.C. cadets for the physical demands they will face as military officers. The course consists of rigorous physical training under the supervision of military officers and noncommissioned officers. The goal of this course is to not only enhance one's level of physical fitness, but to develop leadership qualities in the conduct and planning of physical fitness training. The course will include topics in leader responsibilities in fitness training, components of fitness, principles of exercise, physical fitness program development, phases of conditioning, environmental factors and nutrition. Physical training will include, but is not limited to: running up to five miles, foot marches up to six miles with a pack, swimming, team sports, weight training, aerobics, and other activities designed to develop an individual's components of fitness, teamwork, and aggressive competitive qualities.

Final exam not required.

MIL AFF 20 Evolution of Warfare 3 Units**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Progressive analysis of the evolution of warfare from the ancient world to the present. Emphasis placed on causes of continuity and/or change of methods, as well as the influence of economic, moral, political, and technological factors on strategic thought.

Final exam required.

MIL AFF 24 Freshman Seminars 1 Unit**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MIL AFF 145A National Security Forces in Contemporary American Society 3 Units**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Upper division standing and consent of instructor.

Conceptually examines the Armed Forces as an integral element of American society. Examines contemporary issues in civil-military relations and the national and international environment in which U.S. defense policy is formulated and implemented.

Final exam required.

MIL AFF 145B Preparation for Active Duty 3 Units**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and for cadets only, a 2-hour advanced leadership laboratory per week.**Prerequisites:** Upper division standing and consent of instructor.

This course focuses on commissioning of cadets and their transition to active duty. The primary focus of instruction is officership, professionalism, and leadership. Topics for specific discussion include the military justice system, military ethics, core values, military professionalism and current issues affecting the Air Force, and a general introduction to base functions designed to ease cadets' transition to active duty. This course combines lecture and discussion with increased emphasis on the students' written and oral communication skills.

Final exam required.

MIL AFF 154 The History of Littoral Warfare 3 Units**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

An analysis of the theory, origins, historical evolution, and impact of man's attempts to project seapower ashore. A case study approach is used to study major developments in amphibious warfare.

Final exam required.

MIL AFF 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Military Affairs**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conference to be arranged.**Prerequisites:** Upper division standing and consent of the instructor.

Supervised independent study and research for undergraduate students who desire to pursue topics of their own selection.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Military Science (MIL SCI)

MIL SCI 1 Leadership Laboratory 0 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of instruction and practical application in leadership and associated military skills.

The instruction includes organization and management of military units, physical training, drill and ceremonies, land navigation techniques, survival skills, and extensive first aid training.

Course may be repeated for credit when topic changes. The laboratory may be taken for eight semesters. Final exam not required.

MIL SCI 2 Foundations of Officership 1 Unit**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture/discussion per week.

The purpose of this one credit hour seminar style course is to introduce the student to issues and competencies that are central to a commissioned officer's responsibilities. These initial lessons establish a framework for understanding officership, leadership, and Army values. Additionally, the semester addresses "life skills" including fitness and time management. This course is designed to give accurate insight into the Army profession and the officer's role within the Army and to lay the foundation for further leadership development. This course is structured in modules. There are five modules containing 15 one-hour (50- minute) lessons, as follows: \n Module 1 - The Army Profession: Officership (what officers/leaders do, customs/courtesies). \n Module 2 - Personal Development (time/personal management). \n Module 3 - Physical Well-Being (physical fitness, stress management). \n Module 4 - Leadership (definition, AOR model, Army Be-Know-Do-model, character, and competence). \n Module 5 - Values and Ethics (morals vs. ethnics, ethical decision making, Army (Institutional) Values). Final exam required.

MIL SCI 3 Introduction to Tactical Leadership 1 Unit**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture/discussion per week.

This course overviews leadership fundamentals such as setting direction, problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. Students will explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises.

Final exam required. Instructor: Barnes

MIL SCI 100 Individual Leadership Studies 2 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.

The purpose of this two credit hour course is to develop students' knowledge of self, self-confidence, and individual leadership skills. Through experiential learning activities, students develop problem solving and critical thinking skills, and apply communication, feedback, and conflict resolution skills. This course is structured in modules. There are 4 modules encompassing 30 one-hour (50 minute) lessons as follows: \n Module 1 - Enhanced Skills Training Program - This web based program assesses individual student strengths and weaknesses in Mathematics and English and designs a program of self study to improve individual weak areas to meet or exceed, minimum capabilities. \n Module 2 - Physical Well Being - Nutrition, life style, stress management, techniques, and issues \n Module 3 - Individual Leadership Skills Development - Communications, Writing, Values, Ethics, confidence building \n Module 4 - Leadership/Team building - Group dynamics, Leadership case studies. Final exam required.

MIL SCI 101 Foundations of Leadership 2 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.

This course examines the challenges of leading tactical teams in the complex contemporary operating environment (COE). This course highlights dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations.

Final exam required. Instructor: Barnes

MIL SCI 131 Applied Team Leadership 3 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

This course is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, army values and ethics, personal development, and small unit tactics at the team and squad level.

Final exam not required. Formerly known as Military Science 431.

MIL SCI 132 Leadership and Ethics 3 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 11 and a quarter hours of lecture/discussion for 4 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

This course examines the role communications, values, and ethics play in effective leadership. Topics covered include ethical decision-making, consideration of others, spirituality in the military, and a survey Army leadership doctrine. There is also added emphasis on improving each student's oral and written communication abilities.

Final exam not required. Formerly known as Military Science 432.

MIL SCI 141 Leadership and Management 3 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course begins with a series of lessons designed to enable cadets to make informed career decisions as they prepare their accessions documents. The next lessons concentrate on Army operations and training management, communications and leadership skills, and support the beginning of the final transition from cadet to lieutenant. The course enables cadets to attain knowledge and proficiency in several critical areas that they will need to operate effectively as an Army officer, including the Army's training management system, coordinating activities with staff, and individual counseling skills. At the end of this semester, cadets should possess the fundamental skills, attributes, and abilities to operate as competent leaders and confidently shoulder the responsibilities entrusted to them. This course is structured in modules. There are six modules, as follows: \n Module 1 - The Army Profession: Officership. \n Module 2 - The Army Profession: Army Operations. \n Module 3 - Communications. \n Module 4 - Personal Development. \n Module 5 - Physical Well-Being. \n Module 6 - Leadership. Final exam required.

MIL SCI 142 Leadership in a Complex World 3 Units**Department:** Military Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

This course explores the dynamics of leading in the complex situations of current military operations in the contemporary operating environment (COE). Students will examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Students also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. Final exam required.

MIL SCI 431 Applied Team Leadership 3 Units**Department:** Military Science**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

This course is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, army values and ethics, personal development, and small unit tactics at the team and squad level. Final exam required.

MIL SCI 432 Leadership and Ethics 3 Units**Department:** Military Science**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 11 and a quarter hours of lecture/discussion for 4 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

This course examines the role communications, values, and ethics play in effective leadership. Topics covered include ethical decision-making, consideration of others, spirituality in the military, and a survey Army leadership doctrine. There is also added emphasis on improving each student's oral and written communication abilities. Final exam required.

Molecular and Cell Biology (MCELLBI)

MCELLBI 15 Current Topics in the Biological Sciences 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Suitable for freshmen who plan to major in a biological science.

Students in this course will critically examine modern methods of biological investigations and their social implications. Relevant literature will be used to present basic biological concepts that address the cultural, technological and health aspects of current topics in the biological sciences. Designing and evaluating scientific questions will be stressed. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Matsui

MCELLBI C31/L & S C30X Big Ideas in Cell Biology 3 Units**Department:** Molecular and Cell Biology; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An introduction for students who do not intend to major in biology but who wish to satisfy their breadth requirement in Biological Sciences. Some major concepts of modern biology, ranging from the role of DNA and the way cells communicate, to interactions of cells and creatures with their environment, will be discussed without jargon and with attention to their relevance in contemporary life and culture. Final exam required. Instructor: Wilt

MCELLBI 32 Introduction to Human Physiology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** One year high school or college chemistry.

A comprehensive introduction to human cell biology. The course will concentrate on basic mechanisms underlying human life processes, including cells and membranes; nerve and muscle function; cardiovascular, respiratory, renal, and gastrointestinal physiology; metabolism, endocrinology, and reproduction.

Final exam required.

MCELLBI 32L Introduction to Human Physiology Laboratory 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 3 hours of Laboratory per week for 15 weeks. 2 hours of Lecture and 6 hours of Laboratory per week for 8 weeks. 2 hours of Lecture and 8 hours of Laboratory per week for 6 weeks.**Prerequisites:** 32 or may be taken concurrently.

Experiments and demonstrations are designed to amplify and reinforce information presented in 32. Exercises include investigations into the structure and function of muscle, nerve, cardiovascular, renal, respiratory, endocrine, and blood systems.

Final exam not required.

MCELLBI N32L Introduction to Human Physiology Laboratory 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Laboratory and 1 hour of Lecture per week for 15 weeks. 3 hours of Laboratory and 1 hour of Lecture per week for 10 weeks.**Prerequisites:** 32 or may be taken concurrently.

Experiments and demonstrations are designed to amplify and reinforce information presented in 32. Exercises include investigations into the structure and function of muscle, nerve, cardiovascular, renal, respiratory, endocrine, and blood systems.

Final exam not required.

MCELLBI W32 Introductory Human Physiology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of web-lecture, 6 hours of web-discussion and 12 hours of study per week for 8 weeks. This is an online course.

Introductory physiology for non-majors. The course covers all the major organ systems of the human body, including biological molecules, cells and organelles, cell metabolism, endocrinology, nervous system, muscles, cardiovascular physiology, respiratory physiology, renal physiology, and gastrointestinal physiology. The content of this course is nearly identical to that of the course offering during the regular academic (fall) semester.

Students will receive no credit for W32 after taking 32, 136, or Integrative Biology 132. Final exam required. Instructor: Machen

MCELLBI 41 Genetics and Society 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Primarily for students not specializing in biology.

Basic communication of inheritance; gene mapping; gene expression and genetic disease in animals and humans; social inheritance of genetics. Students will receive two units for Molecular and Cell Biology 41 after taking 41X, Interdepartmental Studies 41X, or Plant Biology 41X.

Students will receive no credit after taking Biology 1A, Biology 1B, or Letters and Science 18. Final exam required.

MCELLBI C44/L & S C30Y Biology for Voters 3 Units**Department:** Molecular and Cell Biology; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This is a Discovery Course for non-Biology majors designed to introduce lower-division college students to biology through the lens of the contemporary problems facing people, the planet and the species of the planet. Modern genetic contributions will be presented on such issues as genetic engineering of plants and animals, the emergence of new pathogens, the role of genetic variation among individuals, and the extent to which DNA is and isn't destiny. Each week will close with the presentation and discussion of a defining biological challenge facing the world.

Student Learning Outcomes: The learning objectives will be, at one end, to understand what an experiment is, how is it controlled and what does one need to know about an experiment to be able to rely upon any conclusion. That is the fundamental issue in all science, and is frequently overlooked in many media accounts of science. A second objective is to learn enough of the language of biology to be able to ask the kind of informed questions that we would want all elected representatives to pay attention to. A third objective is for students to cultivate confidence that through non-specialized information sources they can become informed consumers of contemporary scientific thought, and to develop those habits of intellect to think about evidence in a scientific manner. A fourth objective is for students to enjoy the abundance of high quality books, articles and multimedia that will enable a lifetime of discovery outside the structure of a college course.

Final exam required. Instructors: Rine, Urnov

MCELLBI 50 The Immune System and Disease 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** High school chemistry or Chemistry 1A and high school biology or Biology 1A. Biology 1AL is not required.

Course will discuss how the immune system resolves, prevents, or causes disease. A general overview of the immune system will be covered in the first five weeks followed by five weeks discussing infectious diseases including anthrax, mad cow, herpes, malaria, tuberculosis, and HIV. In addition, other lectures will focus on current immunology topics including vaccines, autoimmunity, allergy, transplantation, and cancer.

Students will receive no credit for 50 after taking 102 or C100A/Chemistry C130. Final exam required. Instructor: Beatty

MCELLBI 55 Plagues and Pandemics 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Discussion of how infectious agents cause disease and impact society at large. We will examine historical and current examples of plagues and pandemics and consider the question of what we should do to ameliorate the impact of infectious disease in the future. The course is intended for non-majors and will begin by briefly providing necessary background in microbiology and immunology. The primary focus in each subsequent week, however, will be on discussing a particular infectious disease. The course will be broad in scope covering biological, historical, ethical and social implications of each disease.

Students will receive no credit for 55 after taking 100, C100A, 100B, 102, 103, C103, 150, Chemistry C130, Plant and Microbial Biology C103, and Public Health C102. Final exam required. Instructors: Beatty, Vance

MCELLBI 61 Brain, Mind, and Behavior 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.

Introduction to human brain mechanisms of sensation, movement, perception, thinking, learning, memory, and emotion in terms of anatomy, physiology, and chemistry of the nervous system in health and disease. Intended for students in the humanities and social sciences and others not majoring in the biological sciences.

Students will receive no credit for Molecular and Cell Biology 61 after taking Molecular and Cell Biology N61, W61, C61/Letters & Science C30W, C100A/Chemistry C130, 104, 110, 130A, 136, C160/Neuroscience C160, or Integrative Biology 132. A deficient grade in N61 or C61/Letters & Science C30W may be removed by taking 61. Final exam required. Instructor: Presti

MCELLBI C61/PSYCH C61 Brain, Mind, and Behavior 3 Units**Department:** Molecular and Cell Biology; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to human brain mechanisms of sensation, movement, perception, thinking, learning, memory, and emotion in terms of anatomy, physiology, and chemistry of the nervous system in health and disease. Intended for students in the humanities and social sciences and others not majoring in the biological sciences.

Students will receive no credit for C61 after taking 61, W61, or Psychology C61. A deficient grade in 61, W61, or Psychology C61 may be removed by taking C61. Final exam required. Instructor: Presti

MCELLBI W61 Brain, Mind, and Behavior 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 45 hours of web-based lecture and 14 hours of web-based discussion per summer term. This is an online course.

This course deals with the structure and function of the human nervous system, with an emphasis on how brain physiology and chemistry are related to human behavior. This is a comprehensive introduction to the exciting field of contemporary neuroscience for students of all backgrounds and interests, including those from the humanities and social sciences, as well as physical and biological sciences. The Final Examination will be administered in a proctored setting. See Schedule of Classes for meeting information. This course is web-based. Students will receive no credit for W61 after taking 61, C61, N61, or Letters and Science C30W. A deficient grade in 61, C61, N61, or Letters and Science C30W may be removed by taking W61. Final exam required. Formerly known as N61. Instructor: Presti

MCELLBI C62/L & S C30T/PSYCH C19 Drugs and the Brain 3 Units**Department:** Molecular and Cell Biology; Letters and Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture per week for 8 weeks.

The history, chemical nature, botanical origins, and effects on the human brain and behavior of drugs such as stimulants, depressants, psychedelics, analgesics, antidepressants, antipsychotics, steroids, and other psychoactive substances of both natural and synthetic origin. The necessary biological, chemical, and psychological background material for understanding the content of this course will be contained within the course itself.

Students will receive no credit for C62 after taking 62, C100A/Chemistry C130, 102, 104, 110, 130A, 136, C160/Neuroscience C160,
Integrative Biology 132, Letters and Science C30T, or Psychology C19.
 Final exam not required. Instructor: Presti

MCELLBI 63 Introduction to Functional Neuroanatomy 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture per week for 8 weeks. 7.5 hours of lecture per week for 6 weeks. 12 hours of lecture per week for 4 weeks.

This course emphasizes beginning anatomy of the brain and spinal cord to individuals interested in understanding the dynamics of motor and sensory functions in the human body. Students in the Departments of Education, Psychology, and Integrative Biology, as well as students interested in medicine and the life sciences, are especially encouraged to attend.

Final exam required. Instructor: Reyes

MCELLBI 63X Introduction to Functional Neuroanatomy 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

This course emphasizes beginning anatomy of the brain and spinal cord to individuals interested in understanding the dynamics of motor and sensory functions in the human body. Non-science majors, students interested in sports medicine, physical therapy, and human biodynamics, and athletes associated with university sports are encouraged to attend. Final exam required. Instructor: Reyes

MCELLBI 64 Exploring the Brain: Introduction to Neuroscience 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of mandatory discussion per week.**Prerequisites:** High school chemistry or Chemistry 1A; high school biology or Biology 1A. Biology 1AL is not required.

This course will introduce lower division undergraduates to the fundamentals of neuroscience. The first part of the course covers basic membrane properties, synapses, action potentials, chemical and electrical synaptic interactions, receptor potentials, and receptor proteins. The second part of the course covers networks in invertebrates, memory and learning behavior, modulation, vertebrate brain and spinal cord, retina, visual cortex architecture, hierarchy, development, and higher cortical centers.

Students will receive no credit for 64 after taking 61, 104, 100A/Chemistry C130, 110, 130A, 136, 160, C160/Neuroscience C160, or Integrative Biology 132. Final exam required.

MCELLBI C64/PSYCH C64 Exploring the Brain: Introduction to Neuroscience 3 Units**Department:** Molecular and Cell Biology; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of discussion per week.**Prerequisites:** High school chemistry or Chemistry 1A; high school biology or Biology 1A. Biology 1AL is not required.

This course will introduce lower division undergraduates to the fundamentals of neuroscience. The first part of the course covers basic membrane properties, synapses, action potentials, chemical and electrical synaptic interactions, receptor potentials, and receptor proteins. The second part of the course covers networks in invertebrates, memory and learning behavior, modulation, vertebrate brain and spinal cord, retina, visual cortex architecture, hierarchy, development, and higher cortical centers.

Students will receive no credit for Molecular and Cell Biology/Psychology C64 after taking Molecular and Cell Biology C61/Letters and Science C30W, 104, 100A/Chemistry C130, Molecular and Cell Biology 110, 130A, 136, 160, C160/Neuroscience C160, or Integrative Biology 132. Students may remove a deficient grade in Molecular and Cell Biology C64/Psychology C64 after Molecular and Cell Biology 64. Final exam required. Instructor: Caporale

MCELLBI 84B Sophomore Seminar 1 or 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** unit(s):1 hour of seminar per week; 2 unit(s):2 hours of seminar per week. unit(s):3 hours of seminar per week; 2 unit(s):4 hours of seminar per week for 8 weeks. unit(s):4 hours of seminar per week; 2 unit(s):6 hours of seminar per week for 6 weeks.**Prerequisites:** At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 90A Freshman Seminars: Biochemistry and Molecular Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen only.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 90B Freshman Seminars: Cell and Developmental Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen only.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 90C Freshman Seminars: Genetics and Development 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen only.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 90D Freshman Seminars: Immunology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen only.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 90E Freshman Seminars: Neurobiology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen only.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MCELLBI 91D Immunology 2 - 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 2 to 4 hours of Seminar per week for 15 weeks.**Prerequisites:** Open to freshmen and sophomores only.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam required.

MCELLBI C96/INTEGBI C96/PLANTBI C96 Studying the Biological Sciences 1 Unit

Department: Molecular and Cell Biology; Integrative Biology; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Prerequisites: Consent of instructor.

Freshmen will be introduced to the "culture" of the biological sciences, along with an in-depth orientation to the academic life and the culture of the university as they relate to majoring in biology. Students will learn concepts, skills, and information that they can use in their major course, and as future science professionals. Restricted to freshmen in the biology scholars program.

Final exam required. Instructor: Matsui

MCELLBI 98 Directed Group Study 1 - 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 1 hour of lecture per week per unit.

Prerequisites: Freshmen and sophomores only.

Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 99 Supervised Independent Study 1 - 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Supervised research.

Prerequisites: 3.3 GPA and consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. One unit of credit is given for every three hours of work in the lab per week to a maximum of 4 units. Final exam not required.

MCELLBI 100B Biochemistry: Pathways, Mechanisms, and Regulation 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: C100A/Chemistry C130.

We survey cellular metabolic pathways, with focus on the underlying chemistry, bioenergetics, and mechanisms. We discuss signaling in the context of a physical chemical understanding of diffusion, transport and molecular interactions. We will highlight the intertwining of signaling and dysregulation with metabolic disorders and cancer, and the production of renewable chemicals such as biofuels. The course is designed for majors in the biochemistry and molecular biology, genetics and development, or immunology emphases.

Students will receive 3 units for Molecular and Cell Biology 100B after taking Molecular and Cell Biology 102 and no credit after taking Chemistry 135. Final exam required. Instructors: Kuriyan, Savage, Alper

MCELLBI C100A/CHEM C130 Biophysical Chemistry: Physical Principles and the Molecules of Life 4 Units

Department: Molecular and Cell Biology; Chemistry

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks.

Prerequisites: Chemistry 3A or 112A, Mathematics 1A, Biology 1A and 1AL; Chemistry 3B or 112B recommended.

Thermodynamic and kinetic concepts applied to understanding the chemistry and structure of biomolecules (proteins, DNA, and RNA). Molecular distributions, reaction kinetics, enzyme kinetics. Bioenergetics, energy transduction, and motor proteins. Electrochemical potential, membranes, and ion channels.

Final exam required.

MCELLBI 102 Survey of the Principles of Biochemistry and Molecular Biology 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4 hours of Lecture and 2 hours of Discussion per week for 10 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.

Prerequisites: Biology 1A, 1AL, and Chemistry 3B (or equivalent courses). Recommended: a course in physical chemistry.

A comprehensive survey of the fundamentals of biological chemistry, including the properties of intermediary metabolites, the structure and function of biological macromolecules, the logic of metabolic pathways (both degradative and biosynthetic) and the molecular basis of genetics and gene expression.

Students will receive 2 units of credit for 102 after taking 100B or C100A/Chemistry C130. Students will receive no credit for 102 after taking 110 and any of 100B or C100A/Chemistry C130. No credit for 102 after taking Chemistry 135. Final exam required.

MCELLBI C103/PB HLTH C102/PLANTBI C103 Bacterial Pathogenesis 3 Units

Department: Molecular and Cell Biology; Plant and Microbial Biology; Public Health

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100, 102 or consent of instructor.

This course for upper division and graduate students will explore the molecular and cellular basis of microbial pathogenesis. The course will focus on model microbial systems which illustrate mechanisms of pathogenesis. Most of the emphasis will be on bacterial pathogens of mammals, but there will be some discussion of viral and protozoan pathogens. There will be an emphasis on experimental approaches. The course will also include some aspects of bacterial genetics and physiology, immune response to infection, and the cell biology of host-parasite interactions.

Final exam required. Instructor: Portnoy

MCELLBI 104 Genetics, Genomics, and Cell Biology 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 102

This course will introduce students to key concepts in genetic analysis, eukaryotic cell biology, and state-of-the-art approaches in genomic medicine. Lectures will highlight basic knowledge of cellular processes with the basis for human diseases, particularly cancer. Prerequisite courses will have introduced students to the concepts of cells, the central dogma of molecular biology, and gene regulation. Emphasis in this course will be on eukaryotic cell processes, including cellular organization, dynamics, and signaling.

Students will receive 1 unit for Molecular and Cell Biology 104 after completing Molecular and Cell Biology 140 or C142/Integrative Biology C163, or 3 units after completing Molecular and Cell Biology 110 or 130. Final exam required.

MCELLBI 110 Molecular Biology: Macromolecular Synthesis and Cellular Function 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C100A (may not be taken concurrently); Plan 1 Emphasis 1 (BMB) majors should take 100B prior to 110.

Molecular biology of prokaryotic and eukaryotic cells and their viruses. Mechanisms of DNA replication, transcription, translation. Structure of genes and chromosomes. Regulation of gene expression. Biochemical processes and principles in membrane structure and function, intracellular trafficking and subcellular compartmentation, cytoskeletal architecture, nucleocytoplasmic transport, signal transduction mechanisms, and cell cycle control.

Students will receive 3 units of credit for 110 after taking 104. Final exam required.

MCELLBI C110L/CHEM C110L General Biochemistry and Molecular Biology Laboratory 4 Units**Department:** Molecular and Cell Biology; Chemistry**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 to 8 hours of Laboratory per week for 15 weeks.**Prerequisites:** 110 (may be taken concurrently).

Experimental techniques of biochemistry and molecular biology, designed to accompany the lectures in Molecular and Cell Biology 100B and 110. Final exam not required.

MCELLBI 110L General Biochemistry and Molecular Biology Laboratory 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 to 8 hours of Laboratory per week for 15 weeks.**Prerequisites:** 110 (may be taken concurrently).

Experimental techniques of biochemistry and molecular biology, designed to accompany the lectures in 100B and 110.

Final exam not required.

MCELLBI C112/PLANTBI C112 General Microbiology 4 Units**Department:** Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.**Prerequisites:** Biology 1A and 1B.

This course will explore the molecular bases for physiological and biochemical diversity among members of the two major domains, Bacteria and Archaea. The ecological significance and evolutionary origins of this diversity will be discussed. Molecular, genetic, and structure-function analyses of microbial cell cycles, adaptive responses, metabolic capability, and macromolecular syntheses will be emphasized.

Final exam required. Instructors: Ryan, Wildermuth

MCELLBI C112L/PLANTBI C112L General Microbiology Laboratory 2 Units**Department:** Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of laboratory and 1 hour of discussion per week.**Prerequisites:** C112 (may be taken concurrently).

Experimental techniques of microbiology designed to accompany the lecture in C112 and C148. The primary emphasis in the laboratory will be on the cultivation and physiological and genetic characterization of bacteria. Laboratory exercises will include the observation, enrichment, and isolation of bacteria from selected environments.

Final exam not required. Instructors: Komeili, Taga

MCELLBI 113 Applied Microbiology and Biochemistry 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** C112 or consent of instructor.

A survey of modern developments emphasizing the application of the knowledge of fundamental microbiology to industrial processes. Topics include production of metabolites, enzymes, and single-cell proteins; genetic manipulation of microorganisms; recovery of minerals; and energy production.

Final exam required.

MCELLBI C114/ESPM C138/PLANTBI C114 Introduction to Comparative Virology 4 Units

Department: Molecular and Cell Biology; Environ Sci, Policy, and Management; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Introductory chemistry (Chemistry 1A or 3A-3B or equivalent) and introductory biology (Biology 1A, 1AL, and 1B or equivalent) and general biochemistry (Molecular and Cell Biology C100A or equivalent—preferably completed but may be taken concurrently). This course will provide a comparative overview of virus life cycles and strategies viruses use to infect and replicate in hosts. We will discuss virus structure and classification and the molecular basis of viral reproduction, evolution, assembly, and virus-host interactions. Common features used during virus replication and host cellular responses to infection will be covered. Topics also included are common and emerging virus diseases, their control, and factors affecting their spread. Final exam required. Instructors: Glaunsinger, Jackson

MCELLBI C116/PLANTBI C116 Microbial Diversity 3 Units

Department: Molecular and Cell Biology; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Upper-division standing. C112 or consent of instructor and organic chemistry (may be taken concurrently).

This course for upper-division and graduate students will broadly survey myriad types of microbial organisms, both prokaryote and eucaryote, using a phylogenetic framework to organize the concept of "biodiversity." Emphasis will be on the evolutionary development of the many biochemical themes, how they mold our biosphere, and the organisms that affect the global biochemistry. Molecular mechanisms that occur in different lineages will be compared and contrasted to illustrate fundamental biological strategies. Graduate students additionally should enroll in C216, Microbial Diversity Workshop. Final exam required. Formerly known as 116. Instructor: Coates

MCELLBI 118 The Cancer Karyotype: What it is and What it Does 1 Unit

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of Lecture per week for 15 weeks.

Prerequisites: 102. 104 recommended.

Mutational cancer theories do not explain why cancers: 1) have clonal individual karyotypes; 2) have polygenic transcriptomes and phenotypes; 3) have flexible karyotypes, which evolve progressive malignancy and drug resistance, but maintain autonomy and even immortality; and 4) Why carcinogens induce cancer only after conspicuously long latent periods of years to decades. To answer these questions, this course tests a new karyotypic theory, which postulates that cancers evolve much like new species.

Final exam not required. Instructor: Duesberg

MCELLBI 130A Cell and Systems Biology 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 102 and 104. Instructors may waive 104 prerequisite for non-Molecular and Cell Biology majors.

This course will provide a detailed discussion of a wide range of topics in cell biology emphasizing experimental approaches and key experiments that have provided important insights. The course is aimed at conveying an understanding of how cellular structure and function arise as a result of the properties of cellular macromolecules. An emphasis will be placed on the dynamic nature of cellular organization and will include a description of physical properties of cells (dimensions, concepts of free energy, diffusion, biophysical properties). Students will be introduced to quantitative aspects of cell biology and a view of cellular function that is based on integrating multiple pathways and modes of regulation (systems biology).

Students will receive no credit for 130A after taking 130. Final exam required.

MCELLBI N130L Cell and Developmental Biology Laboratory 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of lecture in lecture hall plus 1 hour of required lecture/discussion in teaching lab and 6 hours of laboratory per week.

Prerequisites: May be taken concurrently with 130.

Experimental analyses of central problems in cell biology using modern techniques, including biochemical analysis of DNA and proteins, fluorescence microscopy of the cytoskeleton and organelles, DNA transfection of cultured mammalian cells, analysis of organelle functions, reporter assays of signal transduction pathways, and analysis of cell cycle progression and apoptosis.

Final exam not required.

MCELLBI 132 Biology of Human Cancer 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 102 or 110 (may be taken concurrently); Biology 1A, 1AL, 1B.

The course is designed for students interested in learning about the molecular and cell biology of cancer and how this knowledge is being applied to the prevention, diagnosis and therapy of cancer. Topics covered include tumor pathology and epidemiology; tumor viruses and oncogenes; intracellular signaling; tumor suppressors; multi-step carcinogenesis and tumor progression; genetic instability in cancer; tumor-host interactions; invasion and metastasis; tumor immunology; cancer therapy.

Final exam required. Formerly known as 135G.

MCELLBI 133L Physiology and Cell Biology Laboratory 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 7 hours of Laboratory per week for 15 weeks.**Prerequisites:** 104

Experimental analyses of central problems in cell biology and physiology using modern techniques, including DNA cloning and protein biochemistry, fluorescence microscopy of the cytoskeleton and organelles, DNA transfection and cell cycle analysis of cultured mammalian cells, RNA interference and drug treatments to analyze ion channel function in cell contractility and intracellular signaling, and somatosensation.

Students will receive no credit for 133L after taking 130L. Final exam not required.

MCELLBI C134/PLANTBI C134 Chromosome Biology/Cytogenetics 3 Units**Department:** Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Survey of behavior, structure, and function of chromosomes with emphasis on behavior in model organisms. Topics include mitosis, meiosis, chromosome aberrations, genome function, dosage compensation, transposons, repetitive DNA, and modern cytological imaging.

Final exam required. Instructors: Cande, Hollick

MCELLBI 135A Topics in Cell and Developmental Biology: Molecular Endocrinology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Term course may be offered:** Fall. Offered every fall.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Molecular and Cell Biology 102, Biology 1A, 1AL, 1B, Chemistry 3A-3B or equivalent, or consent of instructor.

Molecular mechanisms by which hormones elicit specific responses and regulate gene expression; hormone-receptor interaction; synthesis, transport and targeting of hormones, growth factors and receptors.

Students will receive no credit for Molecular and Cell Biology 135A after taking Physiology 142. Final exam required. Instructor: Firestone

MCELLBI 136 Physiology 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A, 1AL, 1B, Physics 8A. Physics 8B recommended.

Principles of mammalian (primarily human) physiology emphasizing physical, chemical, molecular and cellular bases of functional biology. The following topics will be covered: cellular and membrane ion and nonelectrolyte transport; cell and endocrine regulation; autonomic nervous system regulation; skeletal, smooth and cardiac muscle; cardiovascular physiology; respiration; renal physiology; gastrointestinal physiology. Discussion section led by Graduate Student Instructor will review material covered in lecture.

Students will receive no credit for 136 after Integrative Biology 132. Final exam required.

MCELLBI 137 Computer Simulation in Biology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Modeling and computer simulation of dynamic biological processes using special graphical interfaces requiring very little mathematical or computer experience. Models are drawn from the current literature to teach concepts and technique. The later part of the course is a workshop for student-selected individual projects. Computer work may be done at home or in the university laboratory.

Final exam not required. Formerly known as 136L. Instructors: Macey, Oster

MCELLBI 140 General Genetics 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C100A/Chemistry C130 and 110 or consent of instructor (110 may be taken concurrently).

In-depth introduction to genetics, including mechanisms of inheritance; gene transmission and recombination; transposable DNA elements; gene structure, function, and regulation; and developmental genetics. Some exams may be given in the evening.

Course may be repeated for credit when topic changes. Students will receive 1 unit of credit for Molecular and Cell Biology 140 after completing either Molecular and Cell Biology 104, C142, or Integrative Biology C163. Final exam required.

MCELLBI 140L Genetics Laboratory 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 6 hours of Laboratory per week for 15 weeks.

Prerequisites: Molecular and Cell Biology 104 or 140. May be taken concurrently.

Experimental techniques in classical and molecular genetics.

Final exam not required.

MCELLBI 141 Developmental Biology 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 102 or C100A; Biology 1A, 1AL, and 1B; 110 or 130 recommended.

An introduction to principles and processes of embryonic and post-embryonic development, stressing mechanisms of cell and tissue interactions, morphogenesis and regulation of gene expression.

Final exam required. Formerly known as 131.

MCELLBI 143 Evolution of Genomes, Cells, and Development 3 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Biology 1A-1B and Molecular and Cell Biology C100A or 102; 104 or 140 recommended.

This course is intended for upper-division undergraduates seeking an interactive course based on modern concepts in evolution and comparative genomics. The course will emphasize the contribution of molecular evolution to a series of seminal events in life's history: origin of life; origin of cells; origin of eukaryotes; origin of multicellularity; evolution of animal development; human origins.

Student will receive no credit for 143 after taking Integrative Biology 163.

Final exam not required. Instructor: King

MCELLBI C148/PLANTBI C148 Microbial Genomics and Genetics 4 Units

Department: Molecular and Cell Biology; Plant and Microbial Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Molecular and Cell Biology C100A/Chemistry C130 or Molecular and Cell Biology 102.

Course emphasizes bacterial and archaeal genetics and comparative genomics. Genetics and genomic methods used to dissect metabolic and development processes in bacteria, archaea, and selected microbial eukaryotes. Genetic mechanisms integrated with genomic information to address integration and diversity of microbial processes. Introduction to the use of computational tools for a comparative analysis of microbial genomes and determining relationships among bacteria, archaea, and microbial eukaryotes.

Final exam required. Formerly known as Plant and Microbial Biology 118.

Instructors: Brenner, Glass

MCELLBI 149 The Human Genome 3 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Term course may be offered: Spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: MCB 140, MCB 104 or equivalent.

This is an upper division course for majors in MCB with an interest in an in-depth exploration of the forces that shape the human genome and the human population, as well as the ways that human genetic information can be used in medicine, ancestry and forensics. The course will combine lectures and discussion of research papers.

Students will receive 2 units for Molecular and Cell Biology 149 after taking Integrative Biology 164. A research paper will be required in lieu of a final exam. Instructors: Eisen, Meyer, Rokhsar

MCELLBI 150 Molecular Immunology 4 Units

Department: Molecular and Cell Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: C100A/Chemistry C130, or 102.

Fundamentals of immunology with emphasis on biochemical and molecular approaches to study of the immune system and its application in medicine and biotechnology. Topics covered include description of the immune system, antibody and T-cell receptor structure and function, genes of the immunoglobulin superfamily, cells and molecular mediators that regulate the immune response, allergy, autoimmunity, immunodeficiency, tissue and organ transplants, and tumor immunology. Final exam required.

MCELLBI 150L Immunology Laboratory 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Laboratory and 1 hour of Lecture per week for 15 weeks.

Prerequisites: 150 (may be taken concurrently); consent of instructor. Experimental techniques in mammalian molecular biology and cellular immunology. Molecular techniques covered include PCR and recombinant DNA procedures such as gene cloning, gene transfer, DNA sequencing, Southern blot, and restriction mapping. Immunological techniques covered include cell culture and monoclonal antibody production, flow cytometry, ELISA, immunoprecipitation, and western blot. Final exam not required. Formerly known as Microbiology 103L.

MCELLBI C160/NEUROSC C160 Introduction to Neurobiology 4 Units**Department:** Molecular and Cell Biology; Neuroscience**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 102 or 100, Biology 1A and 1AL, Physics 8A-8B. An introductory course designed to provide a general understanding of the nervous system including how it functions, how it develops, and how it changes with learning and memory. Analysis from the level of molecules to cells to simple circuits to complex networks to higher brain functions. Final exam required.

MCELLBI 160L Neurobiology Laboratory 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 8 hours of Laboratory per week for 15 weeks.

Prerequisites: Biology 1A, 1AL; Physics 8A-8B, Molecular and Cell Biology C100A/Chemistry C130 or 102; Molecular and Cell Biology C160/Neurobiology C160; or equivalent. Experimental analyses of properties and interactions of nerve cells and systems, illustrating principal features and current methods. Techniques employed include computer simulation of neuron properties, electrophysiological recording and stimulation of nerves and cells, digitally enhanced video imaging of outgrowth, fluorescence immunocytochemistry, analysis of sensory: CNS mapping, human-evoked potential recording, sensory psychophysics. Final exam required.

MCELLBI 163 Mammalian Neuroanatomy 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Prerequisites: Biology 1A. Biology 1AL is not required. Development, structure (gross and microscopic), and functional relationships of the mammalian nervous system. Final exam required.

MCELLBI 165 Molecular Neurobiology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: 102 or 110, 160. The molecular and biochemical aspects of the structure and function of the nervous system, including ion channels, neurotransmitters and their receptors, second messenger systems, and molecular mechanisms of development and plasticity. Final exam required. Instructor: Presti

MCELLBI 166 Biophysical Neurobiology 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: Biology 1A, 1AL, Physics 8A-8B, Chemistry 1A, 3A/3AL-3B, or consent of instructor.

Electrochemistry and ion transport phenomena, equivalent circuits, excitability, action potentials, voltage clamp and the Hodgkin-Huxley model. Biophysical properties of ion channels. Statistical and electrophysiological models of synaptic transmission, Quantitative models for dendritic structure and neuronal morphogenesis. Sensory transduction, cellular networks as computational devices, information processing and transfer.

Course Objectives: 1) Derive equations for Nernst and GHK membrane potential from fundamental physics concepts.
 2) Describe the experiments and theory underlying the Hodgkin-Huxley model.
 3) Understand biophysical properties of gating particles called ion channels.
 4) Apply and solve equivalent circuit models to describe resting and excitable cells, synaptic transmission and sensory transduction.
 5) Use Poisson, Gaussian and binomial distributions to analyze the gating of ion channels, synaptic transmission, and absolute sensitivity of vision.
 6) Model dendritic structure based on quantitative descriptors of shape and energy minimization theory.
 7) Explain experiments and models of sensory transduction, neuronal integration and lateral inhibition.

Final exam required. Instructors: Elul, Miller, A.

MCELLBI 167 Physiological and Genetic Basis of Behavior 3 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C160 and 102 or 110, or consent of instructor.

Genetic, cellular, and circuit-level analysis of how the nervous system generates behavior. Includes sensory processing, movement, and learning. Focus is on model systems for animal behavior. Principles, cellular and circuit specializations, and neural computations for behavior will be presented.

Final exam required.

MCELLBI 180 Undergraduate Teaching of Biology 1A Laboratory 1 or 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Conference with instructor and teaching hours as assigned per week. Conference with instructor and teaching hours as assigned per week.**Prerequisites:** Biology 1A, 1AL with a minimum grade of B. Appointment as a UGSI in biology by consent of instructor. Restricted to undergraduate students.

Course consists of a weekly three-hour training session that focuses on laboratory techniques, instructional aids, and problem solving, plus an additional three hour weekly laboratory where the UGSI is required to assist a GSI in the instruction of laboratory (answering questions, providing demonstrations, etc.).

Course may be repeated for a maximum of 4 units. Course may be repeated for a maximum of 4 units. Final exam not required.

MCELLBI 180C Undergraduate Teaching of Molecular and Cell Biology 32 Laboratory 1 - 2 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Conference with instructor and teaching hours as assigned per week. Conference with instructor and teaching hours as assigned per week.**Prerequisites:** 32, 136, or Integrative Biology 132 and Molecular and Cell Biology 32L or Integrative Biology 132L laboratory courses in physiology with minimum grades of B. Appointment as a UGSI in physiology by consent of instructor.

Course consists of a weekly three-hour training session that focuses on laboratory techniques, instructional aids, and problem solving, plus an additional three-hour weekly laboratory where the UGSI is required to assist a GSI in the instruction of laboratory (answering questions, providing demonstrations, etc.). Students will be graded on lecture and laboratory attendance and preparation of one quiz.

Course may be repeated for a maximum of 4 units. Course may be repeated for a maximum of 4 units. Final exam required.

MCELLBI H196A Honors Research 1 - 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual laboratory research and conferences. Laboratory research and conferences. Individual laboratory research and conferences. Laboratory research and conferences.**Prerequisites:** Senior honors status and consent of instructor.

Individual research and thesis preparation under the supervision of a faculty member. Acceptance to the Molecular and Cell Biology Honors Program is required. Contact the MCB Undergraduate Affairs Office, 2083 Valley Life Sciences Building, for application and details. Honor students must complete at least two semesters of research, taking a minimum of 4 units and a maximum of 8 units of H196A-196B. If desired, one semester of 199 can be used to replace H196A.

Course may be repeated for a maximum of 4 units. Final exam not required.

MCELLBI H196B Honors Research 1 - 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual laboratory research and conferences. Individual laboratory research and conferences. Individual laboratory research and conferences. Individual laboratory research and conferences.**Prerequisites:** Senior honors status and consent of instructor.

Individual research and completion of thesis under the supervision of a faculty member. This course satisfies the thesis requirement for the Molecular and Cell Biology Department Honors Program. Contact the MCB Undergraduate Affairs Office, 2083 Valley Life Sciences Building, for program details and an application. Honor students must complete at least two semesters of research, taking a minimum of 4 units and a maximum of 8 units of H196A-196B. One semester of H196B is required. Course may be repeated for a maximum of 4 units. Final exam not required.

MCELLBI 197 Supervised Internship 1 Unit**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of internship per week. 6 hours of internship per week for 8 weeks.**Prerequisites:** Consent of MCB Faculty, restricted to MCB majors and prospective majors only. Certification from supervisor that credit is required.

Supervised experience relevant to specific topics of biology in off-campus organizations. Written report and evaluation from internship supervisor required.

Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 198 Directed Group Study 1 - 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of lecture per week per unit.**Prerequisites:** Upper division standing.

Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Molecular and Cell Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Research.**Prerequisites:** Consent of instructor.

Enrollment restrictions apply; see the Introduction to Courses and Curricula section of this catalog.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 200A Fundamentals of Molecular and Cell Biology 3 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 6 hours of Lecture per week for 15 weeks.

Prerequisites: 200A and 200B must be taken concurrently. Combined course required and restricted to all MCB first-year graduate students.

The goal of this course is to provide graduate-level instruction on molecular and cellular biosciences from a highly-integrated systems perspective, rather than using a more classic, techniques-oriented format. A collection of approaches, and a focus on critical thinking and problem solving, will be used to show how fundamental, highly-significant biological problems are "cracked open." Reading will be assigned from a mix of classic and current peer-reviewed papers selected by the instructors.

Final exam required. Instructors: Marqusee, Rio, Drubin, Rine, Vance, Feller

MCELLBI 200B Fundamentals of Molecular and Cell Biology 3 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 6 hours of Lecture per week for 15 weeks.

Prerequisites: Must be taken concurrently. Combined course required for all MCB first-year graduate students.

The goal of this course is to provide graduate-level instruction on molecular and cellular biosciences from a highly-integrated systems perspective, rather than using a more classic, techniques-oriented format. A collection of approaches, and a focus on critical thinking and problem solving, will be used to show how fundamental, highly-significant biological problems are "cracked open." Reading will be assigned from a mix of classic and current peer-reviewed papers selected by the instructors.

Final exam not required. Instructors: Marqusee, Rio, Drubin, Rine, Vance, Feller

MCELLBI 206 Physical Biochemistry 3 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

Prerequisites: Year courses in organic chemistry and physical chemistry. 100 recommended.

Application of modern physical concepts and experimental methods to the analysis of the structure, function, and interaction of large molecules of biological interest.

Final exam required.

MCELLBI 210 Macromolecular Reactions and the Cell 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 1.5 hours of lecture and 1 hour of discussion per week.

Prerequisites: 110 or equivalent. Admission to the course requires formal consent of instructors, except for MCB graduate students and graduate students in the laboratories of MCB faculty.

General course for first-year graduate students. Covers our current understanding of, methodological approaches for analyzing, and recent advances in the function of cellular macromolecules and macromolecular complexes in DNA replication, recombination, transposition and repair, gene expression and its regulation, mRNA splicing, genome organization, noncoding RNAs, signal transduction, protein synthesis, folding and degradation, growth control, and other life processes.

Final exam required. Formerly known as 200.

MCELLBI C212A/CHEM C271A Chemical Biology I - Structure, Synthesis and Function of Biomolecules 1 Unit**Department:** Molecular and Cell Biology; Chemistry**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 5 weeks.

This course will present the structure of proteins, nucleic acids, and oligosaccharides from the perspective of organic chemistry. Modern methods for the synthesis and purification of these molecules will also be presented.

Final exam not required.

MCELLBI C212B/CHEM C271B Chemical Biology II - Enzyme Reaction Mechanisms 1 Unit**Department:** Molecular and Cell Biology; Chemistry**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 5 weeks.

This course will focus on the principles of enzyme catalysis. The course will begin with an introduction of the general concepts of enzyme catalysis which will be followed by detailed examples that will examine the chemistry behind the reactions and the three-dimensional structures that carry out the transformations.

Final exam not required.

MCELLBI C212C/CHEM C271C Chemical Biology III - Contemporary Topics in Chemical Biology 1 Unit**Department:** Molecular and Cell Biology; Chemistry**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 5 weeks.

This course will build on the principles discussed in Chemical Biology I and II. The focus will consist of case studies where rigorous chemical approaches have been brought to bear on biological questions. Potential subject areas will include signal transduction, photosynthesis, immunology, virology, and cancer. For each topic, the appropriate bioanalytical techniques will be emphasized.

Final exam not required.

MCELLBI C214/CHEM C230 Protein Chemistry, Enzymology, and Bio-organic Chemistry 2 Units**Department:** Molecular and Cell Biology; Chemistry**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** At the instructor's discretion, this course may be taught over a 10 week period with 3 hours of lecture per week or over a 15 week period with 2 hours of lecture per week.**Prerequisites:** Graduate standing or consent of instructor.

The topics covered will be chosen from the following: protein structure; protein-protein interactions; enzyme kinetics and mechanism; enzyme design. Intended for graduate students in chemistry, biochemistry, and molecular and cell biology.

Final exam not required.

MCELLBI C216/PLANTBI C216 Microbial Diversity Workshop 1 Unit**Department:** Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Workshop and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing; C112 or consent of instructor and organic chemistry (may be taken concurrently).

This workshop for graduate students will parallel C116, Microbial Diversity, which should be taken concurrently. Emphasis in the workshop will be on review of research literature and formulation of paper pertinent to research in microbial diversity.

Final exam not required. Instructor: Coates

MCELLBI 217A Selected Topics in Biochemistry and Molecular Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture per week for 5 weeks.**Prerequisites:** Consent of instructor.

Recent advances. Topics changed each year. 217A, 217B, 217C are three sections of five weeks each. The sections are taught in tandem and may be taken individually.

Course may be repeated for credit with change in contents. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 217B Selected Topics in Biochemistry and Molecular Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lectures per week for 5 weeks.**Prerequisites:** Consent of instructor.

Recent advances. Topics changed each year. 217A, 217B, 217C are three sections of five weeks each. The sections are taught in tandem and may be taken individually.

Course may be repeated with change in content. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 217.

MCELLBI 217C Selected Topics in Biochemistry and Molecular Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture per week for 5 weeks.**Prerequisites:** Consent of instructor.

Recent advances. Topics changed each year. 217A, 217B, 217C are three sections of five weeks each. The sections are taught in tandem and may be taken individually.

Course may be repeated for credit with change in content. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 217.

MCELLBI 218B Research Review in Biochemistry and Molecular Biology: Molecular and Cellular Engineering Approaches to Investigate Biomedical Problems 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor or consent of instructor.

The related areas of stem cell bioengineering, gene delivery systems, and molecular virology, with applications in regenerative medicine and tissue engineering.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Schaffer

MCELLBI 218C Research Review in Biochemistry and Molecular Biology: Synthetic Biology and Cellular Enzymology 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Synthetic biology, metabolic engineering, systems biology, enzyme mechanism, and gene discovery.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Chang

MCELLBI 218D Research Review in Biochemistry and Molecular Biology: Gene Regulation at the RNA Level 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

RNA elements involved in alternative splicing and other co-transcriptional mechanisms of regulation. Specific areas of interest include riboswitches and other structured RNA elements involved in gene regulation.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hammond

MCELLBI 218E Research Review in Biochemistry and Molecular Biology: Viruses as Models for Eukaryote Gene Expression and Replication 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Recent developments in eukaryote viral and cellular regulation. New concepts in transcription and RNA replication, with particular emphasis on virus-cell interactions.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Botchan

MCELLBI 218F Research Review in Biochemistry and Molecular Biology: Energy-dependent Proteases and Molecular Machines 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor or consent of instructor.

Our goals are to decipher the fundamental principles that govern substrate engagement, de-ubiquitylation, unfolding, and translocation by the proteasome.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Martin

MCELLBI 218G Research Review in Biochemistry and Molecular Biology: Myxobacterial Development 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Zusman

MCELLBI 218H Research Review in Biochemistry and Molecular Biology: Protein Synthesis in Bacteria and Mammals 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The mechanism of protein synthesis in bacteria and human cells. Specific areas of interest include the structure and function of the ribosome and the regulation of protein synthesis.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cate

MCELLBI 218I Research Review in Biochemistry and Molecular Biology: Chemical Biology and Inorganic Chemistry 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Research and literature topics in chemical biology and inorganic chemistry relevant to human health and disease and energy science will be discussed.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Chris Chang

MCELLBI 218J Research Review in Biochemistry and Molecular Biology: Advanced 20th Century Perspectives on Cancer Cell Genetics 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Transduction of cellular sequences and genetic regulation of transformation by oncogenic retroviruses as models for natural carcinogenesis, including a critical review of the current research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Duesberg

MCELLBI 218O Research Review in Biochemistry and Molecular Biology: Chemical Biology and Enzymology 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Topics at the interface of chemistry and biology with a particular focus on mechanisms of enzyme catalysis.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Marletta

MCELLBI 218P Chemical Biology and Neuroscience 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Fall**Grading:** Offered for satisfactory/unsatisfactory grade only.**Prerequisites:** Consent of instructor

Molecular approaches to designing and deploying tools for voltage imaging and brain mapping.

Course may be repeated for credit when topic changes. Final exam not required. Instructors: Miller, Evan

MCELLBI 218Q Research Review in Biochemistry and Molecular Biology: Single Molecular Imaging of Macromolecular Enzymes 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Yildiz laboratory combines molecular biology and single molecule biophysical techniques to understand mechanisms that underlie cellular organization and motility. Specific focuses of the lab are to dissect 1) the mechanism of cytoplasmic dynein motility, 2) the regulation of intraflagellar transport, and 3) the protection and maintenance of mammalian telomeres.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Yildiz

MCELLBI 218R Research Review in Biochemistry and Molecular Biology: The Protein Folding Problem 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Protein structure, stability, design, and the pathway of protein folding.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Marqusee

MCELLBI 218S Research Review in Biochemistry and Molecular Biology: Cryo-Electron Microscopy of Macromolecules 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Structure-function studies of the cytoskeleton and large molecular machines by cryo-electron microscopy and image reconstruction.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Nogales

MCELLBI 218U Research Review in Biochemistry and Molecular Biology: Protein Folding and Stability 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The connection between the sequence of a protein and its three-dimensional structure.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Alber

MCELLBI 218V Research Review in Biochemistry and Molecular Biology: Biophysics of Macromolecule Transport Across Membranes 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Krantz

MCELLBI 218W Research Review in Biochemistry and Molecular Biology: Enzyme Catalysis 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Fundamental aspects of enzyme catalysis, as probed by kinetic, spectroscopic, and molecular biological approaches.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Klinman

MCELLBI 218X Research Review in Biochemistry and Molecular Biology: Chemical Reactions of Metabolism 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Define how metabolic reactions function in the context of the cellular system in order to elucidate the so-called design principles of metabolic function.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Savage

MCELLBI 218Z Molecular and Cellular Mechanisms of Nutrient Sensing 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

In our laboratory, we study the molecular mechanisms of nutrient sensing and growth control. Specific areas of interest include the mTOR pathway, energy sensing, lysosomal biology and translational control.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Zoncu

MCELLBI 219A Structural Membrane Biology 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of seminar per week.

Prerequisites: Consent of instructor

The mechanisms by which protein complexes use their structures to bud, bend, and sever membranes will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hurley

MCELLBI 219B Regulation of Translation 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of seminar per week.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Understanding the molecular basis and physiological role of translational regulation in gene expression with an emphasis on global profiling and functional genomics.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Ingolia

MCELLBI 219F Research Review in Biochemistry and Molecular Biology: Eukaryotic Gene Expression 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Protein-DNA interactions and the control of gene expression in eukaryotes.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Tjian

MCELLBI 219H Research Review in Biochemistry and Molecular Biology: Molecular and Cell Biology of *Listeria monocytogenes* Pathogenesis 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Discussion of recent research on the genetics, cell biology, and immunology of the model facultative intracellular bacterial pathogen,. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Portnoy

MCELLBI 219J Research Review in Biochemistry and Molecular Biology: Structure and Function of RNA 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

RNA structure, folding, and function. Specific topics include ribozyme mechanisms, RNA-mediated translation initiation, and protein targeting and secretion.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Doudna

MCELLBI 219Q Research Review in Biochemistry and Molecular Biology: Structural Biology of Molecular Machines 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Crystallographic and biochemical studies of protein machines, focused on protein-nucleic acid interactions; analysis of chemomechanical function within multiprotein complexes will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Berger

MCELLBI 219S Research Review in Biochemistry and Molecular Biology: Structural Biology of Signaling and Replication 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Mechanisms and structure in DNA replication and eukaryotic cell signaling.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kuriyan

MCELLBI 219T Research Review in Biochemistry and Molecular Biology: Signal Transduction Mechanisms 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Discussion of recent research on various aspects of signal transduction mechanisms in eukaryotic cells, including G protein-coupled receptors, protein kinase cascades, synthesis and mobilization of lipid mediators, calcium sensing and response pathways, activation and inhibition of gene expression, and the biochemical basis of signal desensitization and physiological adaptation, with strong emphasis on genetic and molecular analysis of these systems, especially in the yeast.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Thorner

MCELLBI 219U Research Review in Biochemistry and Molecular Biology: Single Molecule Biophysics 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Methods of single molecule manipulation and visualization that are used to characterize the structure and mechanochemical properties of translocating DNA binding protein such as RNA polymerase and to investigate the mechanical denaturation of single protein molecules will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bustamante

MCELLBI 219X Research Review in Biochemistry and Molecular Biology: Cell Surface Glycoconjugate Interactions 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Investigations of cell surface glycoproteins as mediators of cell-cell interactions. Development of new methods for engineering cell surface structures.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bertozzi

MCELLBI 219Y Research Review in Biochemistry and Molecular Biology: Regulation of HIV Gene Expression 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Regulation of HIV gene expression by viral proteins and cellular cofactors will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Zhou

MCELLBI 219Z Research Review in Biochemistry and Molecular Biology: Telomere Synthesis and Dynamics 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Emphasizes a study of the replication of eukaryotic telomeric DNA. Special focus on techniques in protein biochemistry and molecular biology.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Collins

MCELLBI 230 Advanced Cell Biology 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** 130. Formal consent of instructors required, except for MCB graduate students and graduate students in the laboratories of MCB faculty.

Advanced treatment of topics in cell biology.

Final exam not required.

MCELLBI 230X Foundations in Cell Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing, 130 (must be taken concurrently), 102 or equivalent, and Biology 1A, 1AL, or their equivalents.

General course for first-year graduate students (except those in molecular and cell biology laboratories). The assembly of supramolecular structures; membrane structure and function; the cell surface; cytoplasmic membranes; the cytoskeleton and cell motility; the eukaryotic genome, chromatin, and gene expression; the cell cycle; organelle biogenesis differentiation; and morphogenesis.

Final exam not required.

MCELLBI 231 Advanced Developmental and Stem Cell Biology 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.**Prerequisites:** Previous course in development (131 or equivalent) or consent of instructor.

Principles of animal development will be set forth from the classical and recent experimental analysis of induction, localization, patterning mutants, axis formation, regional gene expression, and cell interactions. Early development of selected vertebrates and invertebrates will be examined, and emerging topics in microRNA and stem cell biology will be highlighted. A weekly discussion section with readings from the research literature is required.

Final exam not required.

MCELLBI 236 Advanced Mammalian Physiology 5 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor.

Principles of mammalian (primarily human) physiology emphasizing physical, chemical, molecular, and cellular bases of functional biology. The following topics will be covered: cellular and membrane ion and nonelectrolyte transport; cell and endocrine regulation; autonomic nervous system regulation; skeletal, smooth, and cardiac muscle; cardiovascular physiology; respiration; renal physiology; gastrointestinal physiology. Discussion section will study advanced physiological topics, including: presentations by the faculty; problem sets; discussion of the primary literature and of reviews; two presentations by each student on topics in current physiological research.

Final exam not required.

MCELLBI C237/BIO ENG C218 Stem Cells and Directed Organogenesis 3 Units**Department:** Molecular and Cell Biology; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/laboratory per week.

This course will provide an overview of basic and applied embryonic stem cell (ESC) biology. Topics will include early embryonic development, ESC laboratory methods, biomaterials for directed differentiation and other stem cell manipulations, and clinical uses of stem cells.

Final exam not required. Instructor: Conboy

MCELLBI 239B Research Review in Cell and Developmental Biology: Regulation of the Cell Cycle 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rape

MCELLBI 239BB Research Review in Cell and Developmental Biology: Mechanics and Dynamics of Cell Movements 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Research in our laboratory is focused on the mechanics and dynamics of cell movements on the purified protein, single cell, and tissue levels. For these studies, we are developing new instruments to quantify cell and molecular mechanics bases on optical microscopy, force microscopy, and microfabrication.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Fletcher

MCELLBI 239C The Regulation of Meiotic Gene Expression and Cellular Morphogenesis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

The mechanisms that link cellular differentiation programs and dynamic gene regulation in complex eukaryotic systems remain mysterious. Such programs drive diverse and central biological processes including organismal development, immune function, disease progression, and meiosis. This course is focused on the molecular basis for the cellular remodeling accompanying meiosis, the highly conserved process by which gametes are produced.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Brar

MCELLBI 239CC Research Review in Cell and Developmental Biology: Biological Spatial Organization and Normal and Dysplastic Cells and Tissues 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Our biophysics laboratory is focused on two intersecting research directions: (I) exploration of biological spatial organization on the mesoscale (10nm-10microns) and (II) characterization of the mechanics of normal and dysplastic cells and tissues. We also invent and refine tools for precision control and characterization of cells and tissues.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Liphardt

MCELLBI 239D Research Review in Cell and Developmental Biology: Epithelial Function, Structure, and Regulations 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Machen

MCELLBI 239EE Research Review in Cell and Developmental Biology: Cell Morphogenesis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Heald

MCELLBI 239F Research Review in Cell and Developmental Biology: Nucleocytoplasmic Transport 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Weis

MCELLBI 239FF Research Review in Cell and Developmental Biology: Signal Transduction and Tumor Suppressor Genes 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Luo

MCELLBI 239H Research Review in Cell and Developmental Biology: Cell Division 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cande

MCELLBI 239HH Research Review in Cell and Developmental Biology: Mechanisms of Control of Growth and Cell Proliferation 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Identifying pathways that restrict growth and cell proliferation in vivo.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hariharan

MCELLBI 239I Research Review in Cell and Developmental Biology: Cytoskeleton and Cell Motility 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Welch

MCELLBI 239J Research Review in Cell and Developmental Biology: Steroid Hormone and Growth Factor Action 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Firestone

MCELLBI 239K Secretion and Cell Membrane Assembly 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.Cell surface growth with emphasis on the unicellular eukaryote *S. cerevisiae*.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 219P. Instructor: Schekman

MCELLBI 239KK Research Review in Cell and Developmental Biology: Assembly and Subcellular Organization of Bacterial Organelles 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Komeili

MCELLBI 239M Research Review in Cell and Developmental Biology: MicroRNA Functions in Cancer Development, Mouse Tumor Models 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Malignant transformation represents the endpoint of successive genetic lesions that confer uncontrolled proliferation and survival, unlimited replicative potential, and invasive growth.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: He

MCELLBI 239N Research Review in Cell and Developmental Biology: Biophysics of Cell Motility and Morphogenesis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Oster

MCELLBI 239O Research Review in Cell and Developmental Biology: Cancer Biology 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Inheritance, chromatin structure, gene expression, and the organization of chromosomes in the nucleus.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Karpen

MCELLBI 239Q Research Review in Cell and Developmental Biology: Regulation of Cell Polarity in *Drosophila* 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Mechanisms underlying the establishment and maintenance of cellular organization in epithelia and other cell types.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bilder

MCELLBI 239R Research Review in Cell and Developmental Biology: Telomere Biology of Human Stem Cells 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The goal of our laboratory is to understand the key functions of telomeres and telomerase in tissue homeostasis, tumorigenesis, and aging. To this end, we generate genetically engineered human pluripotent and adult stem cell models to measure telomere and telomerase function during cellular differentiation and tumor formation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hockemeyer

MCELLBI 239T Research Review in Cell and Developmental Biology: The Cell Biology of Fertilization 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Research in our lab is focused on the cell biology of mammalian fertilization. Our lab uses biophysical, biochemical, and molecular genetics methods to study sperm ion channels and transporters that regulate sperm motility, chemotaxis, and the acrosome reaction. A better understanding of these processes will eventually lead to the development of effective tools to control and preserve male fertility, improve the reproductive health of human population worldwide, and advance family planning.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Lishko

MCELLBI 239U Research Review in Cell and Developmental Biology: The Cytoskeleton and Morphogenesis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 to Zero hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of current research.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 249Z.

MCELLBI 239V Research Review in Cell and Developmental Biology: Molecular Mechanisms of Transduction in Touch and Pain Receptors 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of current research.

Current research focuses on elucidating the molecular mechanisms of somatosensory mechanotransduction.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bautista

MCELLBI 239W Research Review in Cell and Developmental Biology: Leech Embryology and Development 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Weisblat

MCELLBI 239X Malignant Transformation 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Malignant transformation by retroviruses and the role of protein phosphorylation in growth regulation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 218C.

Instructor: Martin

MCELLBI 239Z Research Review in Cell and Developmental Biology: Chromosome Remodeling and Reorganization During Meiosis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

How chromosomes are reorganized during meiosis to accomplish the pairing, recombination, and segregation leading up to successful gamete production.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Demburg

MCELLBI 240 Advanced Genetic Analysis 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Graduate standing with 110 or 140 or consent of instructor.

Principles and practice of classical and modern genetic analysis as applied to eukaryotic organisms, including yeast, nematodes, mice and humans; isolation and analysis of mutations; gene mapping; suppressor analysis; chromosome structure; control of gene expression; and developmental genetics.

Final exam required. Instructors: Koshland, Meyer

MCELLBI 241 General Genetics Workshop 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is for Molecular and Cell Biology graduate students. It will teach in-depth introduction to genetics, including mechanisms of inheritance; gene transmission and recombination; transposable DNA elements; gene structure, function, and regulation; and developmental genetics. Some exams may be given in the evening. Courses 140 and 241 are taught concurrently. Students enrolled in 241 will also be required to participate in a one-hour specialized discussion section per week, led by the course instructor. This section will cover methodological background and will be based on the primary literature of the field. Final exam not required.

MCELLBI C243/MATH C243 Seq: Methods and Applications 3 Units**Department:** Molecular and Cell Biology; Mathematics**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:**
Prerequisites: Graduate standing in Math, MCB, and Computational Biology; or consent of the instructor.

A graduate seminar class in which a group of students will closely examine recent computational methods in high-throughput sequencing followed by directly examining interesting biological applications thereof. Final exam not required. Instructor: Pachter

MCELLBI C244/MATH C239 Discrete Mathematics for the Life Sciences 4 Units**Department:** Molecular and Cell Biology; Mathematics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to algebraic statistics and probability, optimization, phylogenetic combinatorics, graphs and networks, polyhedral and metric geometry.

Final exam not required.

MCELLBI 247 Genome Project Laboratory 4 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Laboratory per week for 15 weeks.

Prerequisites: Consent of instructor. The course will require the use of UNIX operating systems and simple computer scripting. Students without these skills will receive bootcamp training in the first week of class. This course will provide hands-on experience with the sequencing and interpretation of a complex genome. Students will be taught the conceptual underpinnings of genome assembly, annotation, and analysis. They will be provided with unassembled output of automated DNA sequencers, and will produce a fully assembled and annotated genome by the end of the semester. Preference will be given to Molecular and Cell Biology graduate students.

Final exam not required. Instructor: Pachter

MCELLBI 249A Research Review in Genetics and Development: Genetics of Regulatory Variation 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Work in my group will focus on transcriptional regulatory networks and their variation between members of a species.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Brem

MCELLBI 249BB Research Review in Genetics and Development: Aging and Protein Homeostasis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Central to the aging process is the unfolding of the proteome. Specific areas under study include cellular responses to protein misfolding and coordination of these responses across an organism.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Dillin

MCELLBI 249C Research Review in Genetics and Development: Nucleic Acid-Protein Interactions and Control of Gene Expression 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Biochemical and molecular genetic aspects of eukaryotic messenger RNA splicing and transposition, with an emphasis on as an experimental system.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rio

MCELLBI 249D Research Review in Genetics and Development: Mechanisms of Genetic Regulation in Yeast 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Genes, gene products and molecular mechanisms that control cell types in the unicellular eukaryote .

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rine

MCELLBI 249E Research Review in Genetics and Development: Molecular Genetics of Drosophila 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Gene regulation and developmental neurobiology.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: G. Rubin

**MCELLBI 249F Research Review in Genetics and Development:
Neuronal Development 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Molecular and genetic approaches to the problem of how neurons develop, with emphasis on and .

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Garriga

**MCELLBI 249G Research Review in Genetics and Development:
Developmental and Evolutionary Genetics 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

We study how genes control pattern formation during development and pattern modification during evolution.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Miller

**MCELLBI 249H Investigating Cellular Aging and Chromosome
Segregation during Gametogenesis 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

This course focuses on understanding 1) how cellular aging is affected during gametogenesis, the developmental program that produces gametes for sexual reproduction and 2) how chromosome segregation is regulated during meiosis, the specialized cell division that generates gametes.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Unal

**MCELLBI 249I Research Review in Genetics and Development:
Molecular Genetics of Insect Neuronal Development 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Cell adhesion, cell recognition, and cell determination during neuronal development in and other insects.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Goodman

**MCELLBI 249J Research Review in Genetics and Development:
Developmental and Molecular Genetics of *C. elegans* 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Molecular and genetical analysis of sex determination and dosage compensation in the nematode .

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Meyer

**MCELLBI 249K Research Review in Genetics and Development:
Animal Origins 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Evaluation of current research on choanoflagellates, sponges, and animal origins. Intended to complement ongoing research for graduate students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: King

**MCELLBI 249M Research Review in Genetics and Development:
Saccharomyces Cerevisiae Microtubule Cytoskeleton 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of current research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Barnes

**MCELLBI 249N Research Review in Genetics and Development:
Gene Regulation 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Current literature and research in gene regulation will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Levine

**MCELLBI 249O Research Review in Genetics and Development:
Genome Sequences 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Biochemistry, cancer biology and virology, cell biology, computational biology, genetics, microbiology, molecular and cell physiology. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Eisen**MCELLBI 249P Research Review in Genetics and Development:
Mesodermal Patterning and Segmentation 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Genetic, molecular, and embryological aspects of mesodermal patterning and segmentation, with emphasis on the vertebrate, zebrafish. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Amacher**MCELLBI 249Q Research Review in Genetics and Development:
Computational Genomics 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Recent developments in computational methods for genomics and their application for understanding the structure and function of genes encoded in completely sequenced genomes. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Brenner**MCELLBI 249R Research Review in Genetics and Development:
Mouse Development 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The molecular and cellular mechanisms that underlie early mouse development will be covered in research reports and reviews of the current literature and in discussion of current experiments in the field. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Skarnes

**MCELLBI 249S Research Review in Genetics and Development:
Evolution of Development Mechanisms 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Evolution of development mechanisms with a focus on the genes that regulate segmentation and regionalization of the body plan. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Patel**MCELLBI 249T Evolution of Genomes 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Comparative analysis of eukaryotic genomes to inform the origins and diversification of animals and plants. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rokhsar

**MCELLBI 249U Research Review in Genetics and Development:
Assembly of Eukaryotic Chromosomes 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. Biochemical and genetic characterization of proteins that assemble histones onto DNA. Analysis of the relationship of chromatin assembly to DNA replication and gene expression. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 219A. Instructor: Kaufman**MCELLBI 249V Research Review in Genetics and Development:
Induction in Vertebrate Development and ES Cell Differentiation 2 Units****Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor. The Roelink laboratory is interested in the mechanisms of embryonic induction, the phenomenon in which a group of cells changes the developmental fate of neighboring cells via the release of inducers. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Roelink

**MCELLBI 249X Research Review in Genetics and Development:
Comparative Genomics and Computational Biology 2 Units**

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

The fundamental problem of comparative genomics: the determination of the origins and evolutionary history of the nucleotides in all extant genomes. My work incorporates various aspects of genomics, including the reconstruction of ancestral genomes (paleogenomics), the modeling of genome dynamics (phylogenomics and systems biology), and the assignment of function of genome elements (functional genomics and epigenomics).

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Pachter

**MCELLBI 249Y Research Review in Genetics and Development:
Mechanisms of Gene Control in Vertebrate Animals 2 Units**

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

This course will focus on mechanisms of gene control in vertebrate animals, particularly in the area of vertebrate development. Amphibian egg formation, mesoderm induction, neural induction, and patterning of the nervous system at the molecular level. Control of transcription, post-transcriptional control of gene expression (including control of RNA turnover and RNA localization).

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 218Y. Instructor: Harland

**MCELLBI 249Z Research Review in Genetics and Development:
Chromosome Structure and Integrity, Genome Evolution 2 Units**

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

Use of genetic, cell biological, and biochemical approaches in budding yeast to understand genome integrity, genome evolution, and most recently desiccation tolerance.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Koshland

MCELLBI 250 Advanced Immunology 4 Units

Department: Molecular and Cell Biology

Course level: Graduate

Term course may be offered: Spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: 100, 110, 140, 150 or consent of instructor.

Molecular and cellular analysis of the immune response emphasizing concepts and methodology. Innate immunity, pathogen sensors, antibodies and T cell receptors, lymphocyte activation, tolerance and selection. Antigen processing, T cell subtypes, and T regulatory cells. NK cells, tumor surveillance, and AIDS.

Final exam required.

MCELLBI 251 The Regulation of Immune System Development and Function 1 Unit

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of lecture per week.

Prerequisites: 250 or consent of instructor.

This is an advanced seminar course which will consider current research questions and experimental approaches in molecular and cellular immunology. Each registrant will present a 30-minute research talk describing the problems they are studying, the approach they are taking, their preliminary data, and technical problems. Other course participants (including basic immunology faculty) will provide criticism and suggestions.

Final exam not required. Instructor: Winoto

MCELLBI 254 Cancer and Immunology 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring. Offered even-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture/discussion per week.

Prerequisites: Graduate standing or consent of instructor.

Emphasis will be on the treatment or prevention of cancer based on rational approaches derived from recent advances in tumor immunology. The course will examine the application of basic research in immune regulation to more applied studies in animal models and clinical trials. Introductory lectures by instructor followed by student presentations of original literature and lectures by invited speakers engaged in translational and clinical research in tumor immunotherapy.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Microbiology 233. Instructor: Sha

MCELLBI 259B Research Review in Immunology: Specificity of T Lymphocytes 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Mechanisms of immune surveillance by T lymphocytes.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Shastri

MCELLBI 259C Nuclear Receptor-Mediated Regulation of Neuroinflammation 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Prerequisites:** Enrollment is restricted to students conducting research in the laboratory of the instructor, or requires consent of instructor.

In this course we will discuss our research as well as recent literatures focusing on understanding of 1) How is homeostasis in the CNS regulated by innate immune functions of microglia? 2) How can we intervene in dysfunction of microglia-mediated immune functions using NRs signaling and transcription?.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Saijo

MCELLBI 259E Research Review in Immunology: Regulation of T Cell Receptor Genes Expression 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Molecular biology of T cell receptor genes and their transcription controlling proteins/genes. Programmed cell death during thymocyte differentiation.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Winoto

MCELLBI 259F Research Review in Immunology: Natural Killer (NK) Cell and T Cell Receptors 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Molecular and biological basis for recognition by natural killer cells and T cells.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Raulet

MCELLBI 259G Research Review in Immunology: T Cell Development 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Molecular and cellular aspects of thymocyte differentiation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Robey

MCELLBI 259H Research Review in Immunology: B Cell Differentiation 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Molecular basis of terminal B cell differentiation. Role of transcription factors in B cell activation.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Sha

MCELLBI 259J Immune Evasion by Viruses 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The mechanisms used by viruses to counteract the pressure of the immune system.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Coscoy

MCELLBI 259M Research Review in Immunology: Innate Immunity and Innate Control of Adaptive Immunity 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Innate immunity and innate control of adaptive immunity.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Barton

MCELLBI 259N Research Review in Immunology: Immunology, Microbiology, and Genetics of Bacterial Pathogenesis 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Role of innate host responses in defense against intracellular bacterial pathogens.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Vance

MCELLBI C260/NEUROSC C260 Introduction to Neurobiology 4 Units**Department:** Molecular and Cell Biology; Neuroscience**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An introductory course designed to provide a general understanding of the nervous system including how it functions, how it develops, and how it changes with learning and memory. Analysis from the level of molecules to cells to simple circuits to complex networks to higher brain functions. Final exam required.

MCELLBI C261/NEUROSC C261 Advanced Cellular Neurobiology 3 Units

Department: Molecular and Cell Biology; Neuroscience

Course level: Graduate

Terms course may be offered: Fall and spring. Offered even-numbered years. Offered even-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 160

Physical-chemical basis of membrane potentials, electrotonus, action potential generation and propagation, synaptic transmission, sensory receptor function, and volume conductor potentials.

Final exam not required.

MCELLBI C262/NEUROSC C262 Advanced Topics in Systems Neuroscience 3 Units

Department: Molecular and Cell Biology; Neuroscience

Course level: Graduate

Terms course may be offered: Fall and spring. Offered odd-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: 160 or equivalent.

Advanced coverage of current research problems in systems-level neuroscience, and experimental and computational techniques used for these studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as IDS 200B.

MCELLBI C263/NEUROSC C263 Advanced Developmental Neurobiology 3 Units

Department: Molecular and Cell Biology; Neuroscience

Course level: Graduate

Terms course may be offered: Fall and spring. Offered odd-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 162 or equivalent.

Advanced level coverage of current research problems in the embryonic and post-embryonic development of invertebrate and vertebrate nervous systems.

Final exam not required.

MCELLBI 269A Research Review in Neurobiology: Special Topics in Neuroplasticity 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Molecular and cellular studies of nerve growth, axon guidance, synaptic formation, and synaptic plasticity using electrophysiological and optical imaging techniques.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Poo

MCELLBI 269B Research Review in Neurobiology: Synaptic Transmission and Neuromodulation 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Zucker

MCELLBI 269C Molecular Mechanisms of Neuronal Plasticity 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of seminar per week.

Prerequisites: Consent of instructor

Research in our laboratory focuses on understanding how neurons use biochemical pathways to integrate diverse types of information in order to adjust synaptic strength and modulate neuronal excitability, and how these interactions go awry in disease. To investigate this we are taking a multi-disciplinary approach incorporating molecular, biochemical, imaging, and electrophysiological analyses in mouse and human cells.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bateup

MCELLBI 269D Research Review in Neurobiology: Signaling Within and Between Neurons 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Review of recent research in molecular mechanisms involved in intracellular and extracellular signaling in the nervous system.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kramer

MCELLBI 269H Research Review in Neurobiology: Recent Advances in Retinal Neurobiology 2 Units

Department: Molecular and Cell Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Werblin

MCELLBI 269J Research Review in Neurobiology: Taste Recognition in *Drosophila* 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The molecular and cellular basis of taste perception in the model organism .

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Scott

MCELLBI 269M Research Review in Neurobiology: Insect Neurophysiology 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Drosophila mutants that have behavioral abnormalities to unravel new and basic features of nervous system structure and function.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Tanouye

MCELLBI 269O Research Review in Neurobiology: Neural Circuits for Sensory Processing and Behavior 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Microcircuitry of the cerebral cortex that underlies sensory processing and adaptive behavior.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Adesnik

MCELLBI 269Q Research Review in Neurobiology: Sensory Processing and Plasticity in Cerebral Cortex 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

How the cerebral cortex processes sensory input and stores information about the sensory world. We focus on the rat's primary somatosensory (S1) cortex.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Feldman

MCELLBI 269R Research Review in Neurobiology: Potassium Channels and Synaptic Plasticity 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Isacoff

MCELLBI 269S Research Review in Neurobiology: Molecular Mechanisms of Olfaction 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Ngai

MCELLBI 269T Research Review in Neurobiology: Processing of Visual Information in the Mammalian Brain 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of current literature and discussion of original research.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Dan

MCELLBI 269U Research Review in Neurobiology 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Evaluation of current research in molecular mechanisms underlying diseases of the retina.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Flannery

MCELLBI 269W Research Review in Neurobiology: Neural Activity Affecting the Assembly of Neural Circuits 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

How neural activity affects the assembly of neural circuits.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Feller

MCELLBI 280A Selected Topics in Molecular and Cell Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 5 weeks.

Prerequisites: Graduate standing or consent of instructor.

The course will focus on fundamental principles, essential concepts, and recent advances in select topics in molecular and cell biology.

Topics include genomics and computational biology, molecular evolution, neurons and synapses, microbiology and immunology, macromolecular structure and function, and scientific writing. Courses are taught in tandem and maybe taken individually.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 280B Selected Topics in Molecular and Cell Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 280D Selected Topics in Molecular and Cell Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 5 weeks.

Prerequisites: Graduate standing or consent of instructor.

The course will focus on fundamental principles, essential concepts, and recent advances in select topics in molecular and cell biology.

Topics include genomics and computational biology, molecular evolution, neurons and synapses, microbiology and immunology, macromolecular structure and function, and scientific writing. Courses are taught in tandem and maybe taken individually.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 280E Selected Topics in Molecular and Cell Biology 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

MCELLBI 282 Tumor Biology Seminar 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Reviews and reports of current research in tumor biology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Interdepartmental Studies 282. Instructor: Firestone

MCELLBI 290 Graduate Seminar 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 2 hour of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in the department or consent of instructor.

Graduate student presentations on selected research topics in molecular and cell biology. Several sections covering different topics offered each semester. Concurrent enrollment in more than one section is permitted. List of topics to be announced before each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 291A Introduction to Research 2 - 12 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Laboratory research, conferences.**Prerequisites:** Consent of instructor.

Closely supervised experimental work under the direction of an individual faculty member; an introduction to experimental methods and research approaches in particular areas of molecular and cell biology. Final exam not required.

MCELLBI 291B Introduction to Research 2 - 12 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** Laboratory research, conferences.**Prerequisites:** Consent of instructor.

Closely supervised experimental work under the direction of an individual faculty member; an introduction to experimental methods and research approaches in particular areas of molecular and cell biology. Final exam not required.

MCELLBI 292 Research 3 - 12 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Laboratory research, conferences.

Individual research under the supervision of a faculty member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI N292 Research 3 - 6 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Laboratory research, conferences.**Prerequisites:** Consent of instructor.

Individual research under the supervision of a staff member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 293A Research Seminar 2 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Concurrent enrollment in 291A or 292.

Seminar on presentation and evaluation of results in area of student's individual research interests.

Final exam not required.

MCELLBI 293C Responsible Conduct of Research 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 to 2 hours of case history discussion per week.**Prerequisites:** Consent of instructor.

This course will cover topics in responsible conduct in research drawing from case studies of the Association of American Medical Colleges and the NIH. Students will review case studies in preparation for class discussion. Required of all MCB graduate and post doctoral students funded on NIH training grants. One session will probably feature a guest lecturer on a topic relevant to the course.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MCELLBI 295 Careers for Life Sciences Ph.D's 1 Unit**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Open to graduate and postdoctoral students.

This course is designed to assist graduate students in the biological sciences with planning their postgraduate careers. Weekly guest speakers will present their experiences on a variety of topics. Postdoctoral students are invited. Topics may include academia; job searches; setting up a laboratory; patent law/technology transfer; public policy/regulatory affairs; bioinformatics; science writing/technical support; forensic science; postdoctoral positions in industry; teaching, and other topics of interest. Final exam not required.

MCELLBI 297 Methods and Logic in Biology 3 Units**Department:** Molecular and Cell Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** MCB graduate students.

The focus of this course will be some of the papers in the scientific literature that provide the discoveries and methods critical to modern molecular and cell biology. Students will learn how to dissect published literature to evaluate precisely what constitutes an important paper. The themes for the methods and logics course will be broadly applicable to all students interested in modern experimental biology. Students will meet and discuss the themes of a series of papers first by themselves (with assistance of a faculty member) and then participate in an in-depth dissection lead by the staff.

Final exam not required.

MCELLBI 380 Teaching of Molecular and Cell Biology 1 - 2 Units**Department:** Molecular and Cell Biology**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Weekly conference with instructor and teaching hours as assigned.**Prerequisites:** Appointment as graduate student instructor or consent of instructor.

Teaching laboratories and/or discussions for Molecular and Cell Biology courses: analysis of specific format and problems. Two units of credit for those with 50% teaching appointment; one unit of credit for those with 25% teaching appointment.

Course may be repeated for a maximum of 4 units. Course may be repeated for a maximum of 4 units. Final exam not required.

MCELLBI 463 Neuroanatomy Review for Health Professionals 1 Unit**Department:** Molecular and Cell Biology**Course level:** Other professional**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 11.5 hours of lecture and 8.5 hours of laboratory for entire weekend.

This course is designed with the graduate student or practicing health professional in mind. The course provides a fast-paced but detailed review of functional neuroanatomy. Throughout the course, the latest research providing information on the physiology of each component will be discussed. Laboratory sections will provide microscopic, fresh tissue, radiographic, and plastic model demonstrations of structures mentioned in lecture. The instructor will provide demonstration dissections and lead discussions during each laboratory section. Participants are asked to bring a lab coat or a coverall for laboratory sections. This course qualifies for continuing education credit under the rules and regulations of the California Chapter of the American Physical Therapists Association (CAPTA.).

Final exam not required.

MCELLBI 481B Instrumentation in Molecular and Cell Biology:**Transmission Electron Microscopy 1 - 4 Units****Department:** Molecular and Cell Biology**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Tutorial.**Prerequisites:** Graduate standing; consent of instructor and sponsorship of a faculty member.

Individualized laboratory instruction.

Final exam not required. Instructor: Cande

MCELLBI 481C Instrumentation in Molecular and Cell Biology:**Scanning Electron Microscopy 1 - 4 Units****Department:** Molecular and Cell Biology**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Tutorial.**Prerequisites:** Graduate standing; consent of instructor and sponsorship of a faculty member.

Individualized laboratory instruction.

Final exam not required. Instructor: Cande

MCELLBI 601 Individual Study for Master's Students 1 - 8 Units**Department:** Molecular and Cell Biology**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Independent study per week for 15 weeks. 1.5 to 15 hours of Independent study per week for 8 weeks. Individual study for the comprehensive or language examinations in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

MCELLBI 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Molecular and Cell Biology**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Reading and conferences.**Prerequisites:** Restricted to Ph.D. candidates.

Individual study in consultation with the major field adviser. Intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Music (MUSIC)

MUSIC R1B Reading and Writing about Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.**Prerequisites:** UC Entry Level Writing Requirement and 1A or equivalent.

This course aims to help students improve their writing skills, taking a particular type of music as its central material. The goal of the course is to help students prepare for academic writing, develop analytical skills appropriate to the subject matter, and receive an introduction to college-level research papers. Depending on the topic the course may include a section of one to two hours for further listening to musical examples in a group setting.

Satisfies the second half of the Reading and Composition requirement
Final exam not required.

MUSIC 20A Basic Musicianship 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 20A is a prerequisite to 20B.

Fundamentals of music, including notation, sight singing, ear training, and beginning linear analysis. For general students.
Final exam required.

MUSIC 20B Basic Musicianship 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 20A.

Fundamentals of music, including notation, sight singing, ear training, and beginning linear analysis. For general students.

Final exam required.

MUSIC 24 Freshman Seminar 1 Unit**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment is limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

MUSIC 25A Introduction to Music Theory 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 20A or other basic musicianship course or consent of instructor.

A writing course based on traditional harmony. Beginning linear and vertical analysis. For general students. Emphasis on written exercises.
Final exam required.

MUSIC 25B Introduction to Music Theory 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 20A or consent of instructor.

A writing course based on traditional harmony. Beginning linear and vertical analysis. For general students. Emphasis on written exercises.
Final exam required.

MUSIC 26AC Music in American Culture 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture, 1 hour of Discussion, and 1 hour of Lecture per week for 15 weeks.

Two perspectives are developed: 1) diverse music of groups in America, and 2) American music as a unique phenomenon. Groups considered are African, Asian, European, Hispanic/Latino, and Native American. Lectures and musical examples are organized by topics such as music of socio-economic subgroups within large groups, survival of culture, pan-ethnicity, religious and concert music, and the folk-popular music continuum.

Satisfies the American Cultures requirement

Final exam required.

MUSIC N26AC Music in American Cultures 4 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

Two perspectives are developed: 1) diverse music of groups in America, and 2) American music as a unique phenomenon. Groups considered are African, Asian, European, Hispanic/Latino, and Native American. Lectures and musical examples are religious and concert music, and the folk-popular music continuum.

Satisfies the American Cultures requirement

Final exam not required.

MUSIC 27 Introduction to Western Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

Devoted to the development of listening skills, and a survey of major forms and types of Western art music.

Final exam required.

MUSIC N27 Introduction to Western Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

Devoted to the development of listening skills, and a survey of major forms and types of Western art music.

Students will receive no credit for Music N27 after taking Music 27. Final exam required.

MUSIC 28Y The Inner Workings of the Orchestra 2 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 3 weeks.

A seminar for lower division students. Instruments, the role of the conductor, major repertory, and a survey of the great orchestras and conductors of the world. Recordings, videos, and field trips to rehearsals or performances.

Final exam required. Instructor: Pak

MUSIC 29 Music Now 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 5.5 hours of Lecture and 2.5 hours of Laboratory per week for 6 weeks.

This course explores the basic materials and models that set the boundaries for various present-day musical experiences. Students are exposed to terminology and modes of engagement with the aim of inspiring new paradigms of listening (e.g., listening to silence, noise, space, and timbre). Composers and musicians of today continue to explore new ways of defining and organizing sounds into music. The course focuses on the most adventurous music of our time, but the concepts learned can be applied to any style of music. The course is designed to enrich and deepen the students' musical abilities through direct involvement with musical materials. Direct engagement through listening and participatory learning is accomplished in part with software created at the Center for New Music and Audio Technologies. The course does not require students to be able to read music nor to own a personal computer.

Final exam required. Instructors: Campion, Ueno

MUSIC 39M Freshman/Sophomore Seminar 2 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MUSIC 39N Freshman/Sophomore Seminar 2 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

MUSIC 40 Group Carillon Lessons for Beginning Students 1 Unit**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

A course designed for students who wish to attain a beginner's level of proficiency on the carillon. Prospective students must have a working knowledge of the keyboard, read treble and bass clefs fluently, be secure in key signatures through three sharps and flats, and be comfortable with common duple and triple meters.

May be repeated once for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Davis

MUSIC 41A Private Carillon Lessons for Beginning Students 1 Unit**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 half-hour lesson every week, plus participation in the student recital.**Prerequisites:** 40 or consent of instructor.

Private carillon lessons to develop a personal repertory. In this course, students will begin to learn different practice techniques.

Course may be repeated for a maximum of six units as long as B average is maintained. Course may be repeated for a maximum of 6 units. Final exam not required. Instructor: Davis

MUSIC 41B Private Carillon Lessons for Intermediate Students 1 Unit**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1-half hour lesson per week, 1 10-minute concert each week, plus participation in the student recital.**Prerequisites:** 41A or consent of instructor.

Private carillon lessons stressing musical questions and de-emphasizing technical and repertory issues. Composition and arranging may be included. Personal musicianship is examined and musical horizons are extended.

Course may be repeated for a maximum of 6 units as long as a B average is maintained. Course may be repeated for a maximum of 6 units. Final exam not required. Instructor: Davis

MUSIC 41C Private Carillon Lessons for Advanced Students 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of private lesson per week, 1 10-minute concert each week, a minimum of 3 Sunday recitals per semester, and participation in the student recital.**Prerequisites:** 41A, 41B, and/or consent of instructor.

This course is designed for students to reach an advanced level of proficiency. Students are required to play one ten-minute concert per week plus participate in the student recital.

Course may be repeated for a maximum of 6 units as long as a B average is maintained. Course may be repeated for a maximum of 12 units. Final exam not required. Formerly known as 42. Instructor: Davis

MUSIC 42 Carillon Lessons for Advanced Students 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of private lesson per week, 1 10-minute concert each week, a minimum of 3 Sunday recitals per semester, and participation in the student recital.**Prerequisites:** 41A, 41B, or consent of instructor.

This course is a requirement for those students who are studying for examination by the Guild of Carillonneurs in North America.

Course may be repeated for a maximum of 6 units as long as a B average is maintained. Course may be repeated for a maximum of 6 units. Final exam not required. Instructor: Davis

MUSIC 43 Introduction to Improvisation 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 20A or equivalent and audition.

This course will serve as an introduction to performance practices in contemporary improvisation. Several approaches to improvising will be presented including African American jazz and blues traditions, North Indian Raga, gaming strategies, graphic notation, and conducted improvisation or "sound painting." Class activities will include improvisation exercises and games and repertoire development.

Assignments will include listening to and analysis of recorded and live performances and the creation of student works.

Final exam not required. Instructor: Melford

MUSIC 44 Voice Class 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Studio per week for 15 weeks. 5 hours of Studio per week for 6 weeks.**Prerequisites:** Students must undergo an initial vocal assessment in the first class session before being admitted into the class.

Students will learn the fundamentals of healthy singing. The classical style will be learned and applied to other styles of singing. Students will receive group instruction and individual feedback throughout the semester. Singers will perform two solos: one in English and one in a foreign language. The course is open to all undergraduates. Students involved in campus vocal ensembles are encouraged to enroll. No prior music experience required.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Johnson

MUSIC 45 Beginning Piano Class 1 for Non-Music Majors 1 Unit**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of studio per week for 10 weeks. 2 hours of studio per week for 8 weeks.

Piano instruction includes music theory (musical notation, triads, scales and primary chords) at the keyboard. Repertoire draws from simple classical pieces and melodies accompanied with chords. Mastery of the material will be demonstrated at the keyboard and through three written assignments.

Weekly class attendance and daily practice (5 hours weekly) are expected.

Final performance in lieu of final exam. Instructor: Chew

MUSIC 49A Thinking about Music 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 5 hours of Lecture per week for 6 weeks.**Prerequisites:** Department placement exam; 49B-49C (to be taken concurrently).

As a complement to Music 49B and 49C, this course introduces current and intending majors to perspectives that are central to the music major curriculum. It is organized around themes such as music and meaning, the relationship between written and aural transmission of music, and the interpretation of musical traditions, repertoires, and practices in relation to particular socio-historical contexts. Topics and musics to be studied vary by instructor.

Final exam required.

MUSIC 49B Musicianship 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Music Placement Examination.

Diatonic sight singing, ear training, and keyboard harmony.

Final exam required. Formerly known as 50A.

MUSIC 49C Harmony 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Music Placement Examination.

Diatonic harmony, chorale harmonization, and analytical studies.

Emphasis on written exercises.

Final exam required. Formerly known as 60A.

MUSIC 50 Musicianship 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Advanced placement in Music Placement Exam, 49B, or 50A.

Continuation of diatonic sight singing and ear training, introduction to chromatic sight singing, ear training, keyboard harmony, and score reading.

Final exam required. Formerly known as 50B.

MUSIC 51 Musicianship 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Advanced placement in Music Placement Examination or 50.

Sight singing, ear training, keyboard harmony, and score reading involving increasing chromaticism.

Final exam required. Formerly known as 51A.

MUSIC 60 Harmony 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Advanced placement in Harmony Placement Exam, 49C, or 60A.

Advanced diatonic harmony, modulation, introduction to altered chords, chorale harmonization, and analytic studies. Emphasis on written exercises.

Final exam required. Formerly known as 60B.

MUSIC 61 Harmony 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Advanced placement in Harmony Placement Examination or 60.

Advanced diatonic harmony, advanced modulation, altered chords, chromatic harmony, and analytic studies. Emphasis on written exercises. Final exam required. Formerly known as 61A.

MUSIC 73 African American Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Focus on a variety of musical practices both historical and contemporary, including popular and religious forms. Content will vary and may include genres such as blues, jazz, gospel, and hip-hop, explored with attention to race, gender, and the working of the music industry.

Final exam not required. Instructor: Roberts

MUSIC 74 Introduction to Selected Musics of the World 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of performance laboratory per week.

Focus on performance practice, forms, styles, instruments, and meanings of particular musics from an ethnomusicological perspective. The musics to be studied vary; see offerings in the 130 series for specific course descriptions. Alternate lower division course numbering for lower division majors enrolling in the 130 series. This course will meet lower division major requirement.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructors: Brinner, Guilbault, Wade

MUSIC 75 History of Western Music: Music to 1700 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Department placement examination, 49C (may be taken concurrently).

Studies in Medieval and Renaissance music. An introduction to music history and criticism, and practice in analytical methods for music of all periods, with emphasis on listening, exercises, and papers.

Final exam required. Formerly known as 171A.

MUSIC 76 History of Western Music: The 18th and 19th Centuries 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 60 (may be taken concurrently).

Music of the 18th and 19th centuries. An introduction to music history and criticism, and practice in analytical methods for music of all periods, with emphasis on listening, exercises, and papers.

Final exam required. Formerly known as 70. Instructor: Taruskin

MUSIC 77 History of Western Music: The 20th Century 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 60

Music of the 20th century.

Final exam required. Formerly known as 170. Instructor: Taruskin

MUSIC 97 Field Studies 1 - 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Fieldwork per week for 15 weeks.

1.5 to 4.5 hours of Fieldwork per week for 10 weeks. 1.5 to 5.5 hours of Fieldwork per week for 8 weeks. 2.5 to 7.5 hours of Fieldwork per week for 6 weeks.

Prerequisites: Music major.

Department organized and supervised field programs involving experiences in tutoring and related activities. Students taking the course for the first time will be provided with training suitable to the subject matter being tutored.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 98 Directed Group Study for Freshmen and Sophomores 1 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 contact hours per unit per week.**Prerequisites:** Lower division standing and consent of instructor.

Group study in a field that may not coincide with that of any regular course. See the Introduction to Courses and Curricula section of the General Catalog for enrollment restrictions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

MUSIC 99 Independent Study for Freshmen and Sophomores 1 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 contact hours per unit per week.**Prerequisites:** Lower division standing and consent of instructor.

Directed individual study in a field that may not coincide with that of any regular course. See the Introduction to Courses and Curricula section of the General Catalog for enrollment restrictions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 101 New Music and the Arts 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

A study of recent musical works from the 20th century to the present, emphasizing collaborations and influences from other art forms including poetry, dance, visual art, theater, and film.

Open to all nonmajors. Final exam required.

MUSIC 101M New Music and the Arts 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Restricted to music majors.

A study of recent musical works from the 20th century to the present, emphasizing collaborations and influences from other art forms including poetry, dance, visual art, theater, and film.

Final exam required.

MUSIC 108 Music Perception and Cognition 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

A review of the sensory, perceptual, and cognitive foundations of listening, composing, and performing. Topics include relations among various acoustical and perceptual characterizations of sound; perception of pitch, temporal relations, timbre, stability conditions, and auditory space; auditory scene analysis and perceptual grouping mechanisms; perceptual principles for melodic, rhythmic, and harmonic organization; orchestration as spectral composition. A course research project is required.

Final exam required. Formerly known as 115. Instructor: Wessel

MUSIC 108M Music Perception and Cognition 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

A review of the sensory, perceptual, and cognitive foundations of listening, performing, and composing. Topics include relations among various acoustical and perceptual characterizations of sound; perceptions of pitch, time, temporal relations, timbre, stability conditions, and auditory space; auditory scene analysis and perceptual grouping mechanisms; perceptual principles for melodic, rhythmic, and harmonic organization; orchestration as spectral composition. The course research project should involve the analysis of musical examples or perceptual and cognitive issues in music theory or both.

Final exam required. Formerly known as 115. Instructor: Wessel

MUSIC 109 Music Cognition: The Mind Behind the Musical Ear 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The goal of this class is to interrogate and make explicit the powerful musical intuitions that are at work as you make sense of the music all around you. What is the nature of the knowledge that is guiding these intuitions? How does this knowledge develop in ordinary and extraordinary ways? To approach these questions, small composition-like projects aided by a specially designed computer music environment will function as a workplace. You will explore, experiment, question, and reflect on how and what you know how to do as you generate the musical coherence that you seem simply to find.

Final exam required. Instructor: Bamberger

MUSIC 109M Music Cognition: The Mind Behind the Musical Ear 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Music majors only.

Final exam required. Instructor: Mathew

MUSIC C128P/PHILOS C112 Music and Meaning 3 Units**Department:** Music; Philosophy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. This course may include 1 field trip to a local concert.

This course will explore the question of whether music has meaning, and if so, what kind. Can music represent, say, birdsong, or the sea, or merely imitate? If music expresses emotions, then whose--those of the listener? The composer? The performer? We will consider parallels and contrasts between linguistic and musical meaning, theories of how music can be expressive, and the question of whether music can convey political meaning.

Students will receive no credit for Music C128P/Philosophy C112 after taking Philosophy 112.
 There will be a final paper in lieu of a final exam. Instructors: Smart, Ginsborg

MUSIC 128D J. S. Bach 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 27 or consent of instructor.

An introduction to the music of J. S. Bach (1685-1750), a central figure in the history of Western Art Music. The course includes discussion of his organ music, harpsichord works, cantatas, Passion settings, and instrumental chamber music, discusses the relationship between Bach's biography and his compositions, and places study of the man and his music in its cultural and historical context. Required work will include one short paper and one longer paper. There will also be weekly reading and listening assignments.

Final exam required.

MUSIC 128DM J. S. Bach 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Restricted to music majors.

MUSIC 130B African American Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Historical and analytical study of African-American music in the 20th-century. Emphasis on the evolution of jazz and various forms of popular and religious music.

Final exam required. Instructor: Roberts

MUSIC N130B African American Music 4 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture per week for 6 weeks.

Historical and analytical study of African-American music in the 20th-century. Emphasis on the evolution of jazz and various forms of popular and religious music.

Course may be repeated for credit when topic changes. Final exam required.

MUSIC 132 Music of the Middle East 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of laboratory (devoted to playing Arabic music) per week.

Music of the Middle East, including folk, art, popular, and religious music of the Pan-Islamic and Israeli traditions.

Final exam required. Instructor: Brinner

MUSIC 133AX Music of Southeast Asia 3 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 12 hours of Lecture per week for 6 weeks.

Surveys the music of Indonesia (Java and Bali), Thailand, Cambodia, Laos, Malaysia, and the Philippines--cultures which share instrumental types but have developed distinctive musical types. Recommended that students also enroll in Javanese Gamelan.

Final exam required. Instructor: Brinner

MUSIC 133C Music and Theater in Southeast Asia 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of laboratory (devoted to playing Balinese and Javanese Gamelan) per week.

Surveys musical traditions of Indonesia and mainland Southeast Asia with special emphasis on Java and Bali and the central role of music in theater and dance in these countries.

Final exam required. Formerly known as 133A. Instructor: Gold

MUSIC 133D Music of Central Java 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of laboratory (devoted to playing the Javanese Gamelan) per week.

In-depth study of the Central Javanese gamelan tradition including performance contexts, repertoire, vocal and instrumental idioms, modal practice and improvisation in current practice and in historical perspective. Final exam required.

MUSIC 134A Music of the East Asia Tradition 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Surveys the musics of China, Tibet, Korea, Vietnam, and Japan--cultures which share instrument types but have developed distinctive musical styles.

Final exam required. Instructor: Wade

MUSIC 134B Music of Japan 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Traditional classical music of Japan: Shinto ritual music, the imperial court orchestral music and dance, biwa and shakuhachi forms, chamber music for shamisen and koto, theatrical genres of kabuki and noh. Reading in music and pertinent Japanese literature in translation.

Final exam required. Instructor: Wade

MUSIC 135A Musics of the Caribbean 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of laboratory per week.

Focus on the history, musical structure, and socio-political, economic, and cultural roles of selected traditional and popular music genres of the Caribbean.

Final exam required. Instructor: Guillbault

MUSIC 136 World Music: Power, Aesthetics, and Connections 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course focuses on selected "world musics" to examine how, through their soundings, they make audible their entanglements with particular locales, times, and spaces. In focusing on their soundings, we will examine not only the music technologies they use, but also the diasporic connections they establish. Issues of power relations will be central to our exploration of how these musics circulate and what values (social, economic, and aesthetic) they have acquired on specific markets. In so doing, we will situate these musics in relation to colonial legacies, the politics of labeling, globalization, and music industries.

Final exam required. Instructor: Guilbault

MUSIC 137AC Music of the Civil Rights Era 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Historical and political analysis of a variety of genres related to the New Social Movements of the mid-20th century. Includes African American, European American, Asian American, Latino, and Native American styles. Satisfies the American Cultures requirement

Final exam required. Instructor: Roberts

MUSIC 139 Topics in Musics of the World 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 8 hours of Lecture and 2 hours of Laboratory per week for 6 weeks.

Surveys the music of different world cultures. The particular culture to be studied will vary.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MUSIC 140 Javanese Gamelan 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 and 1 half hours of large ensemble per week for 6 weeks. 3 hours of large ensemble per week.

A performing course for the study and practice of Indonesian music and instruments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC N140 Javanese Gamelan 2 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 and 1 half hours of large ensemble per week for 6 weeks.

A performing course for the study and practice of Indonesian music and instruments.

Course may be repeated for credit when topic changes. Final performance in lieu of final exam. Instructor: Midiyanto

MUSIC 141 University Symphony Orchestra 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.**Prerequisites:** Audition.

May be taken for credit or audited.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Milnes

MUSIC 142 University Wind Ensemble 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.**Prerequisites:** Audition.

A performing course for the study and practice of traditional and contemporary wind band repertoire.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Calonico

MUSIC 143 Gospel Chorus 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of large ensemble and 1 hour of sectional per week.

A course that will focus on the performance of choral music of the African American gospel music tradition with a particular emphasis on contemporary performance techniques. The Gospel Chorus, as is the case with other formal University music performance ensembles, will prepare music to be presented to the public in at least two concerts each semester. Students will be selected for the chorus on the basis of individual auditions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Wilson

MUSIC 144 University Chorus 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of rehearsal and 1 hour of sectional rehearsal per week.**Prerequisites:** Audition.

The University Chorus performs music primarily from the 17th to the 20th centuries including works for chorus and orchestra.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kuzma

MUSIC 145 University Chamber Chorus 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.**Prerequisites:** Audition.

A smaller mixed chorus that aims at a professional standard of ensemble singing and explores the lesser-known choral repertory.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kuzma

MUSIC 146B Balinese Gamelan 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Studio per week for 15 weeks. 7.5 hours of Studio per week for 6 weeks.**Prerequisites:** by audition.

Learn to perform music suited to Balinese gamelan Semar Pagulingan, Pelegongan, Baleganjur, or Gender Wayang (emphasis may change from one semester to the next). Classes will consist of instruction on playing technique and memorization of pieces taught by ear, in the traditional Balinese manner. The course will culminate with a public performance. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Brinner

MUSIC 147 Contemporary Improvisation Ensemble 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of rehearsal and 1 hour of preparation per week.**Prerequisites:** 43, 116A, and 116AM, or equivalent, and audition.

This is an intermediate-advanced repertoire ensemble performing music that incorporates experimental practices in contemporary improvised music, encompassing several styles of music and a variety of approaches. We will work on traditionally notated scores as well as graphic notation and other structures. We will also look at game pieces such as John Zorn's *Cobra*, pieces by the graduate composers, and music using various conducting techniques for focusing ensembles of improvisers. All instruments welcome, including electronic and non-western.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Melford

MUSIC 148 African Music Ensemble 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.

Performance of West African music with particular emphasis on the music of Ghana. Practical instruction in traditional instrumental and vocal techniques.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Ladzekpo

MUSIC N148 African Music Ensemble 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.**Prerequisites:** An audition may be required.

Performance of West African music with particular emphasis on the music of Ghana. Practical instruction in traditional instrumental and vocal techniques.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Ladzekpo

MUSIC 149 University Baroque Ensemble 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of rehearsal per week.

Performance of Renaissance and Baroque music for voices and instruments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Moroney

MUSIC 150A Instrumental Performance 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Studio per week for 15 weeks.**Prerequisites:** Music majors only.

By audition, for experienced performers of orchestral instruments.

A directed program of study including participation in the University Symphony or other department-sponsored ensembles, in workshops, and in special projects. Will include instruction and/or coaching, individually or in groups. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Must be taken for a letter grade. Final exam not required. Instructor: Milnes

MUSIC 150B Vocal Performance 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Studio per week for 15 weeks.**Prerequisites:** Music majors only.

By audition for experienced vocalists. A comprehensive program of vocal studies including participation in University Choruses, vocal technique training, and ensemble work with other instrumentalists or vocalists. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Must be taken for a letter grade. Final exam not required. Instructor: Kuzma

MUSIC 150C Keyboard Performance 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Studio per week for 15 weeks.**Prerequisites:** Music majors only. By audition, for experienced performers of keyboard or related instruments.

The program will focus on the study of solo repertoire. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Mathew

MUSIC 150D Various Musical Practices Performance 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Studio per week for 15 weeks.**Prerequisites:** Music major only.

By audition. Intermediate or advanced instruction in musical practices not encompassed in 150A-150B-150C, within the context of a directed academic program of studies. Students must have experience on the instrument or have studied it in the 130 series. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Must be taken for a letter grade. Final exam not required. Instructor: Brinner

MUSIC 150E Jazz Performance 1 - 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 9 hours of practice/lessons/ensemble per week.**Prerequisites:** Open to music majors by audition only.

Intermediate or advanced instruction in the performance of jazz and improvisation. A directed program of study including participation in department-sponsored or UC Jazz ensembles, workshops, and special projects where applicable. Will include instruction and/or coaching, individually or in groups. Each student's studies will lead to some kind of public performance. The student's program will be worked out in consultation with the faculty in charge of the course. Units range from 1 to 3, depending on number of lessons and ensemble participation. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Melford

MUSIC 150G Guitar Performance 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Minimum of 2 hours of studio per week.**Prerequisites:** Music majors only. By audition, for experienced guitar performers.

The program will include ensemble work in addition to the study of solo repertoire. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bedrossian

MUSIC 150H Early Music Performance 1 - 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Minimum of 1 to 3 hours of studio per week.**Prerequisites:** Music majors only. By audition, for performers on early music instruments.

The program will include ensemble work in addition to the study of solo repertoire. The student's program will be worked out in consultation with the faculty in charge of the course. Each student's studies will lead to some kind of public performance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Moroney

MUSIC 151 Twentieth-Century Harmony 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Advanced placement in Harmony Placement Examination or 61.

Advanced chromatic harmony, early 20th-century harmony, and analytic studies. Emphasis on written exercises.

Final exam required. Formerly known as 61B.

MUSIC 152 Advanced Musicianship 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of class per week.**Prerequisites:** 51, 61, and 405D.

Continuation of the skills acquired in prerequisite courses, with an emphasis on score reading skills (including use of the voice) and the realization of Baroque figured bass lines. Increased emphasis on 20th-century and contemporary practice.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Rosenak

MUSIC 154A Counterpoint 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 50 and 60.

A study of species counterpoint. Regular exercises in two and three voices required. Group discussion and analysis.

Final exam required.

MUSIC 154B Counterpoint 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 50 and 60.

A study of 18th-century counterpoint. Regular exercises required. Analysis of chorale preludes, two- and three-part inventions, canons, and fugue expositions.

Final exam required.

MUSIC 155 Music Composition 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 50 and 60.

A study of formal problems using contemporary composition techniques. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MUSIC 156 Studies in Musical Analysis 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 50 and 60.

The study of various analytical techniques and their application to important works of music.

Final exam required.

MUSIC 157A Orchestration 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture plus considerable out of class work including some special workshop sections.**Prerequisites:** 50 and 60. 61; 151 recommended.

A study of instrumentation--the construction capabilities and idiomatic qualities of all of the individual instruments which comprise the contemporary symphony orchestra followed by a study of the 18th-, 19th-, and 20th-century orchestrational technique. Analysis of scores and assignments in scoring of selected instrumental combinations. Final exam required. Formerly known as 157.

MUSIC 157B Orchestration 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture plus considerable out of class work including some special workshop sections.**Prerequisites:** 50 and 60.

A study of instrumentation--the construction capabilities and idiomatic qualities of all of the individual instruments which comprise the contemporary symphony orchestra followed by a study of the 18th-, 19th-, and 20th-century orchestrational technique. Analysis of scores and assignments in scoring of selected instrumental combinations. Final exam required.

MUSIC 158 Musical Applications of Computers and Related Technologies 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 7.5 hours of lecture per week for 6 weeks.

Basic concepts and techniques of computer-based music research, composition, and performance. Essentials of digital audio signal processing, musical acoustics and psychoacoustics, sound analysis and synthesis, musical databases, use of MIDI, computer programming for music, and computer-aided music analysis. Works from the computer music repertoire will be examined.

Final exam required.

MUSIC 159 Computer Programming for Music Applications 4 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** Music 158 or permission of instructor.

Software engineering for musical applications covering programming concepts for live-performance real-time systems as well as cloud-based music information retrieval applications. Topics include the software representation of sound and music, real-time scheduling, analysis of gestures from systems of sensors, common design patterns, analysis and controlled synthesis, and machine learning applications for music understanding and creation. Behavior driven design and test driven development are core ideas that permeate the course.

The final exam will consist of a project and its presentation. Instructor: WESSEL

MUSIC 161A Instrumental Conducting 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of class per week for 6 weeks. 4 hours of class per week.**Prerequisites:** 51 and 61; 152 and 156 recommended.

A study of the basic elements of conducting: physical gesture, score reading, and score analysis. Development of skills with emphasis on conducting and rehearsal techniques applicable to orchestral literature in various languages and musical styles. Preparation of selected works for rehearsal and performance in class. Should be taken in a two-semester sequence.

Course may be repeated once for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as 160. Instructor: Milnes

MUSIC 161B Instrumental Conducting 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of class per week.**Prerequisites:** 51 and 61; 152 and 156 recommended.

A study of the basic elements of conducting: physical gesture, score reading, and score analysis. Development of skills with emphasis on conducting and rehearsal techniques applicable to orchestral literature in various languages and musical styles. Preparation of selected works for rehearsal and performance in class. Should be taken in a two-semester sequence.

Course may be repeated once for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as 161. Instructor: Milnes

MUSIC 162 Choral Conducting 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of class per week.**Prerequisites:** 160 or consent of instructor; 152 and 156 recommended.

Continued development of skills introduced in 160 with emphasis on conducting and rehearsal techniques applicable to choral literature in various languages and musical styles. Preparation of selected works for rehearsal and performance in class.

Final exam required. Instructor: Kuzma

MUSIC 163 Workshop in Choral Conducting 2 Units**Department:** Music**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Thirty hours of session for 1 week. 4 hours of class per week.

Prerequisites: Sight-singing proficiency and ability to read music scores. Daily classes in conducting technique and rehearsal technique, supplemented by sessions on various topics in conducting presented by guest speakers from the Bay Area music community. Technique classes will be offered at beginning and advanced levels. Advance consultation on placement recommended: contact Professor Kuzma in the Music Department.

Final exam required. Instructor: Kuzma

MUSIC 164 Current Trends in Jazz and Improvisation-Based Musics-- A Performance Workshop 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Session per week for 15 weeks.**Prerequisites:** 43, 116A, and 116B, or equivalent, and audition.

This is an intermediate-advanced level performance workshop in jazz-based improvisational music. Class participants will perform pieces from innovative jazz artists of the 60s and 70s up through and including music by contemporary composer/performer/improvisers who have come out of the jazz tradition. Course will also cover related theory and musicianship skills that enable the performer to improvise in this idiom.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Melford

MUSIC 165 Berkeley Nu Jazz Collective 2 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of rehearsal per week.**Prerequisites:** Music 116A, 116B, or 164 suggested, though admission is by invitation or audition.

This advanced small ensemble of improvisers (The Berkeley Nu Jazz Collective) will explore a range of repertoire including music by innovative jazz composers of the 1960s and 70s, as well as contemporary works and original student compositions and arrangements. Students will be expected to practice, compose, and arrange music for the bi-weekly rehearsals outside of class time, and will be given individual guidance on composing and arranging by appointment.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Melford

MUSIC 171D The Performance of Baroque Music 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60 and 76 (may be taken concurrently); experience playing an instrument or singing.

A study of music from ca. 1600-1750 with emphasis upon performance practices and styles.

Final exam required.

MUSIC 172A Mozart 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60 and 76 or consent of instructor.

Final exam required.

MUSIC 174C Stravinsky 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60 and 76 or consent of instructor; 61 recommended.

Final exam required.

MUSIC 179 Topics in History, Culture, and Analysis 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60 and 76 or consent of instructor.

A seminar for upper division music majors. Topics will change each semester but will always represent a fairly narrow focus on a single issue in the history, interpretation, or social meaning of music. The course provides students with an opportunity to go deeply into one subject, to discuss their ideas in a seminar setting, and to carry out a substantial independent research project.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MUSIC 189 Topics in Research and Performance 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60 and 76 or consent of instructor.

A seminar for upper division music majors. The primary purpose of this course is to create an environment in which students can combine the research and analysis of music with live performance. The specific topic covered will change each semester. Class time will be divided equally among (1) historical and analytical readings; (2) discussion and analysis of recorded and live performances; (3) in-class performance. The final project will combine scholarly work and performance in the form of a lecture-recital or collaborative creative project.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

MUSIC H195 Special Study for Honors Candidates in Music 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent study.**Prerequisites:** Restricted to seniors with a grade-point average of 3.3 overall and 3.5 in the major. Consent of instructor and Department Honors Committee.

Individual tutorials leading to the completion of a special honors project. Course may be repeated once for credit. Course may be repeated for a maximum of 8 units. Final exam not required.

MUSIC 197 Field Studies 1 - 3 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Fieldwork per week for 15 weeks. 1.5 to 4.5 hours of Fieldwork per week for 10 weeks. 1.5 to 5.5 hours of Fieldwork per week for 8 weeks. 2.5 to 7.5 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Music major.

Department organized and supervised field programs involving experiences in tutoring and related activities. Students taking the course for the first time will be provided with training suitable to the subject matter being tutored.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 198 Group Special Study for Advanced Undergraduates 1 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 10 hours of Directed group study per week for 6 weeks. Not to serve in lieu of regular courses of instruction.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

MUSIC 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Music**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Not to serve in lieu of regular courses of instruction. Enrollment restrictions apply; see the Introduction to Courses and Curricula section of this catalog.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 200A Music Scholarship I 2 - 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. Principles of music bibliography, techniques of library research, history of music printing and publishing. Presentation of results in written and oral forms. Students in Ethnomusicology will take the first half of the course for 2 units. Students in History and Literature will take the entire course for 4 units. Final exam not required.

MUSIC 200B Introduction to Music Scholarship II 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. Principles and methods of scholarly research in Western art music, especially history and criticism of music; use of documents, and design of projects. Presentation of results in written and oral forms. Final exam not required.

MUSIC 200C Introduction to Music Scholarship III 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. Introduction to issues and methods in ethnomusicology, from the perspectives of both the social sciences and music. Presentation of results in written and oral forms. Final exam not required.

MUSIC 201A Proseminar in Computer Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.

Prerequisites: Consent of instructor.

Overview of the field of computer music and its application to music composition. Practices, procedures, and aesthetics related to the application of newer technologies to music composition will be covered in tandem with contemporary research topics in computer music. Recent computer music repertoire with its related technologies will be examined. Students in this proseminar must have advanced musical training and knowledge of the history and repertoire of electro-acoustic music. Final exam not required. Instructor: Campion

MUSIC 202 Seminar in Contemporary Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. Studies in 20th-century music. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 203 Seminar in Composition 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Limited to advanced students of composition.

A study of relevant problems and compositional techniques of contemporary music. Original compositions required of students. Group discussion and criticism.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 204 Studies in Musical Analysis 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The application of analytical principles to a group of compositions and the intensive study of at least one major work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 207 Advanced Projects in Computer Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Designed for graduate students in music composition, but open to graduate students in related disciplines who can demonstrate thorough knowledge of the history of electro-acoustic music as well as significant experience with computer music practice and research. All projects are subject to approval of the instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Campion

MUSIC 208A Advanced Music Perception and Cognition 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Experimental studies in Music Perception and Cognition. Research projects required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 208B Music in Mind 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Research seminar dealing with "what goes on in your mind" when you make music. Topics include conceptualization, processes of learning, retention, and recall. In the context of interaction among musicians, variation and other forms of alteration (from relatively free improvisation to formulaic recomposition) with varying degrees of intentionality manifested in performances will be considered. Perception is implicated, but not a central issue.

Final exam not required. Instructor: Brinner

MUSIC 209 Advanced Topics in Computer Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Technical and musical issues in the design and development of computer-based music systems including digital signal processing for the analysis and synthesis of sound, scheduling of multiple musical control processes, perceptual and cognitive models, user-interface design, reactive real-time control, and the analysis and representation of musical structure.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 218 Seminar: Studies in Romantic Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A highly specialized study in Romantic music. The topic will change each time the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 219 Seminar: Jazz 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A highly specialized study of Jazz. The topic will change each time the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 220 Topics in Music History and Criticism 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A specialized course in musical criticism. The topic will change each time the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 230 Topics in Performance Studies 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Critical survey of performance theory as it relates to music. Readings combine key foundational texts with current scholarly works from disciplines including ethnomusicology, musicology, performance studies, anthropology, and cultural studies.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Roberts

MUSIC 241 Readings in American Musical Cultures 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Study of selected American musical cultures in relation to issues and theories pertinent to them.

Final exam not required. Formerly known as 231.

MUSIC 243 Transcription and Analysis in Ethnomusicology 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Methods and practice of transcription applied to selected musical practices in relation to specific analytical goals. Coursework includes use of software for sound analysis and notation.

Final exam not required. Formerly known as 234.

MUSIC 244A Tools of Ethnomusicological Research 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Collection and organization of research data. Introduction to audio and video recording, photography, database design, interviewing, and writing fieldnotes.

Final exam not required.

MUSIC 244B Research Design for Ethnomusicologists 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 244A or consent of instructor.

Instruction in designing a doctoral research project, writing a dissertation prospectus, and formulating a grant proposal. Focus also on issues such as representation and ethics. Students will normally take this course one semester prior to presenting the prospectus for their doctoral dissertation. Final exam not required.

MUSIC 246 Theory and Method in Popular Music Studies 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Critical survey of the major issues raised and methodologies used in the study of popular music. Selected readings from a wide range of disciplines, including sociology, anthropology, musicology, ethnomusicology, communication, history, political science, economics, and music journalism.

Final exam not required.

MUSIC 247 Topics in Ethnomusicology 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A highly specialized course in ethnomusicology. The topic will change each time the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 232.

MUSIC 248A Topics in Asian Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A highly specialized course focusing on aspects of music in Asia. The topic will change each time the course is offered.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 248.

MUSIC 249 Interpretive Theories and Music 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Readings on interpretive theories dealing with issues such as aesthetics, identity formation, and politics of representation, from the multiple disciplines informing the study of music. The selection of theoretical writings will change each time the course is offered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 250A Advanced Ethnomusicological Studies 2 - 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 4 hours of Seminar per week for 15 weeks.

Forum for advanced work in students' areas of specialization, with particular emphasis on addressing the integration of musical analysis with theoretical issues. Students set specific goals with faculty and meet as needed individually and as a group.

Final exam not required.

MUSIC 258 Musical Applications of Computers and Related Technologies 4 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 7.5 hours of lecture per week for 6 weeks.

This course is about digital sound. Specifically, it is about music created with digital sounds. As we explore music with a computational frame of mind, we will approach each topic with explicit expectations of artistic and musical applications. Topics in psychoacoustics, music perception and cognition will be introduced to facilitate our understanding of digital manipulations and their role in the shaping of the musical experience.

Final exam not required. Instructor: Campion

MUSIC 290 Colloquium 1 Unit**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** About 5 meetings per semester.

Meetings for the presentation of original work by faculty, visiting lecturers, and advanced graduate students. Assigned readings. In rotation members of the class will be appointed as respondents for the papers.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 296 Directed Dissertation Research - Music 1 - 12 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks. 1.5 to 15 hours of Independent study per week for 8 weeks. 2.5 to 20 hours of Independent study per week for 6 weeks.

Open to qualified students who have been advanced to candidacy for the Ph.D. and are directly engaged upon the doctoral dissertation.

Final exam not required.

MUSIC 298 Group Special Studies 1 - 8 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Meetings to be arranged according to units taken.

Open to qualified students for research or creative work on a particular topic. Not to serve in lieu of regular courses of instruction.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 299 Special Study 1 - 12 Units**Department:** Music**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Meetings to be arranged according to units taken.

Open to properly qualified graduate students for research or creative work, including work on the doctoral dissertation. Such work shall not serve in lieu of regular courses of instruction.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC N299 Special Study 2 - 5 Units**Department:** Music**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Meetings to be arranged according to units taken.

Open to properly qualified graduate students for research or creative work, including work on the doctoral dissertation. Such work shall not serve in lieu of regular courses of instruction.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 300 Professional Preparation for Teaching Assistants in Music 2 - 4 Units**Department:** Music**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Meetings to be arranged according to units taken.

Special study under the direction of a staff member with emphasis on the teaching of undergraduate courses in music.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 405 Elementary Piano 1 Unit**Department:** Music**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of Studio per week for 15 weeks.**Prerequisites:** Restricted to music majors by audition.

Two semesters are strongly recommended for music majors who lack the basic keyboard skills needed for musicianship and harmony classes.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

MUSIC 410 Vocal Technique 1 Unit**Department:** Music**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Studio per week for 15 weeks.**Prerequisites:** Restricted to music majors or those enrolled in the University Choruses and consent of instructor.

A course in basic vocal techniques, primarily for students in the University Choruses, covering techniques of breathing, pronunciation, and articulation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 410A-B.

MUSIC 601 Individual Study for Master's Students 1 - 8 Units**Department:** Music**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Meetings to be arranged according to units taken.**Prerequisites:** For candidates for master's degree.

Preparation for the comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

MUSIC 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Music**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Meetings to be arranged according to units taken.**Prerequisites:** For candidates for doctoral degree.

Study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Nanoscale Science and Engineering (NSE)

NSE C201/BIO ENG C280/MAT SCI C261/PHYSICS C201 Introduction to Nano-Science and Engineering 3 Units**Department:** Nanoscale Science and Engineering; Bioengineering;

Materials Science and Engineering; Physics

Course level: Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Major in physical science such as chemistry, physics, etc., or engineering; consent of advisor or instructor.

A three-module introduction to the fundamental topics of Nano-Science and Engineering (NSE) theory and research within chemistry, physics, biology, and engineering. This course includes quantum and solid-state physics; chemical synthesis, growth fabrication, and characterization techniques; structures and properties of semiconductors, polymer, and biomedical materials on nanoscales; and devices based on nanostructures. Students must take this course to satisfy the NSE Designated Emphasis core requirement.

Course may be repeated for credit when topic changes. Final exam not required. Instructors: Gronsky, S.W. Lee, Wu

NSE C203/EL ENG C235 Nanoscale Fabrication 4 Units**Department:** Nanoscale Science and Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course discusses various top-down and bottom-up approaches to synthesizing and processing nanostructured materials. The topics include fundamentals of self assembly, nano-imprint lithography, electron beam lithography, nanowire and nanotube synthesis, quantum dot synthesis (strain patterned and colloidal), postsynthesis modification (oxidation, doping, diffusion, surface interactions, and etching techniques). In addition, techniques to bridging length scales such as heterogeneous integration will be discussed. We will discuss new electronic, optical, thermal, mechanical, and chemical properties brought forth by the very small sizes.

Final exam not required. Instructor: Chang-Hasnain

NSE C237/CIV ENG C237 Computational Nano-mechanics 3 Units**Department:** Nanoscale Science and Engineering; Civil and

Environmental Engineering

Course level: Graduate**Terms course may be offered:** Fall and spring. Offered in even years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 1 hour of laboratory every 2 weeks.

Basic mathematics foundations, physical models, computational formulations and algorithms that are used in nanoscale simulations and modelings. They include (1) cohesive finite element methods and discontinuous Galerkin methods; (2) meshfree methods, partition of unity methods, and the eXtended finite element methods (X-FEM); (3) quasicontinuum method; (4) molecular dynamics; (5) multiscale simulations; (6) Boltzmann method.

Final exam not required. Instructor: Li

NSE C242/PHYSICS C203 Computational Nanoscience 3 Units**Department:** Nanoscale Science and Engineering; Physics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

A multidisciplinary overview of computational nanoscience for both theorists and experimentalists. This course teaches the main ideas behind different simulation methods; how to decompose a problem into "simulatable" constituents; how to simulate the same thing two different ways; knowing what you are doing and why thinking is still important; the importance of talking to experimentalists; what to do with your data and how to judge its validity; why multiscale modeling is both important and nonsense.

Final exam not required.

NSE 290 Special Topics in Nanoscale Science and Engineering 3 Units**Department:** Nanoscale Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Lectures and appropriate assignments on fundamental or applied topics of current interest in nanoscale science and engineering.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Subject to home department limitations. Final exam not required.

NSE 298 Group Studies, Seminars, or Group Research 1 Unit**Department:** Nanoscale Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Required for participants in Designated Emphasis.

Advanced studies in various subjects through special seminars on topics to be selected each year. Informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Native American Studies (NATAMST)

NATAMST R1A Native American Studies Reading and Composition 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture/writing workshop per week for 6 weeks. 3 hours of lecture and 1 hour of writing workshop per week for 15 weeks.**Prerequisites:** Satisfaction of UC Entry Level Writing Requirement.

This course introduces students to the genres of Native American literature (written and oral traditions), provides historical and cultural frameworks for understanding, appreciating, and interpreting Native American writings, and develops basic skills in expository and creative writing. Satisfies the first half of the Reading and Composition requirement.

Satisfies the first half of the Reading and Composition requirement

Final exam not required.

NATAMST R1B Native American Studies Reading and Composition 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture and 2 hours of writing workshop per week for 8 hours of lecture and 2 hours of writing workshop per week for 3 hours of lecture and 1 hour of writing workshop per week. 3 hours of lecture and 1 hour of writing workshop per week. 6 weeks. 6 weeks.**Prerequisites:** 1A.

Course examines Native American written and oral traditions in historical and cultural contexts. Emphasis on literary interpretation and creative and analytical writing, so that students increasingly write from positions of strength. Satisfies the second half of the Reading and Composition requirement.

Satisfies the second half of the Reading and Composition requirement

Final exam not required.

NATAMST 20A Introduction to Native American Studies 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Tutorial per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Tutorial per week for 6 weeks.

This course explores the interactions, from friendship treaties and land deals to contemporary American governmental policies, between America's original inhabitants with Europeans and Euro-Americans. Emphasis will be placed on how tribal peoples continue to react to the national myths and policies created by Europeans and Euro-Americans. Final exam required.

NATAMST 20B Introduction to Native American Studies II: Cultural Practice, Art, and Identity 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course explores Native American identity practices in written and oral traditions in literature, art, dance, theatre, ceremony, and song. The place of these traditions in the contemporary day will be emphasized as creative struggles for maintaining and elaborating on Indian identity in the context of colonialism.

Final exam required.

NATAMST 39A Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

NATAMST 71 Native Americans in North America to 1900 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An ethnohistorical analysis of America's original inhabitants and their interactions with Europeans and Euro-Americans emphasizing an Indian perspective.

Final exam required. Formerly known as 71A and 71B.

NATAMST 72 Native Americans in North America 1900-Present 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

A survey and analysis of issues affecting Native Americans in the 20th and 21st centuries. Course will explore political, economic, and social/cultural developments as they shape federal-Indian relations and tribal sovereignty.

Final exam required. Formerly known as 50 and 71B.

NATAMST C73AC/ETH STD C73AC Indigenous Peoples in Global Inequality 4 Units**Department:** Native American Studies; Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines the history of indigenous, aboriginal, native, or "tribal" peoples over the last five centuries. Particular attention is paid to how these groups were brought into relations with an expanding Europe, capitalist development, and modern nation-states. How have these peoples survived, what are the contemporary challenges they face, and what resources and allies have they drawn on in the present?.

Satisfies the American Cultures requirement

Final exam required. Instructor: Biolsi

NATAMST 90 Freshman Seminar--Myth, Memory and History 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Limited to Freshmen.

The course will introduce students to different ways of understanding the history of American Indians and to basic resources and research methods for studying the history of Indian tribes.

Final exam required.

NATAMST 97 Field Work in Native American Communities 1 - 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1.5 hours of fieldwork per week per unit for 10 weeks.**Prerequisites:** Consent of instructor and lower division standing.

Individual conferences to be arranged. Supervised experiences relevant to specific aspects of the Native American community in off-campus settings. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit as project varies. Course may be repeated for credit when topic changes. Final exam not required.

NATAMST 98 Supervised Group Study and Research 1 - 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor. Limited to freshmen and sophomores.

Supervised research by lower division students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

NATAMST 99 Supervised Independent Study and Research 1 - 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of work per week per unit.

Prerequisites: Lower division standing and consent of instructor.

Individual conferences to be arranged. The individual student, with consent and guidance of an instructor, researches an interest not covered in the courses offered in the Program.

Course may be repeated for credit as project varies. Course may be repeated for credit when topic changes. Final exam not required.

NATAMST 100 Native American Law 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 71, 72, or consent of instructor.

Historical background of the unique relationship between the United States government and Native American tribes, and examination of contemporary legislation, court cases, and federal, state, and local policies affecting Native American social, political, legal, and economic situations.

Final exam required.

NATAMST 101 Native American Tribal Governments 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 71, 72, or consent of instructor.

The roles of tribal governments in the formation of internal and external policies affecting the lives of Native American people, the basis for their political power historically and in contemporary society, and their structure and functions.

Final exam required. Formerly known as 103.

NATAMST 102 Critical Native American Legal and Policy Studies 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100, 101, or consent of instructor.

Key contemporary issues in the critical study of tribal and federal policy pertaining to American Indians and Alaska Natives in the U.S. Topics include political and cultural sovereignty; religious, gendered, sexual, racial, and other tribal minorities, and civil rights within tribes; Native legal identity and tribal enrollment; the role of violence against women in the history of colonialism, and the struggle for justice and healing; and the movement for traditional or other culturally appropriate forms for tribal self-governance.

Final exam required. Instructor: Biolsi

NATAMST 110 Theories and Methods in Native American Studies 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 71 or consent of instructor.

Overview of literary theory and criticism, historiography, and social sciences theories and methods useful in the study of Native American literature, history and contemporary tribal groups. Course will develop skills of information gathering and development of theories that structure information.

Final exam required.

NATAMST 120 Topics in Native American Arts 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 10 hours of lecture/discussion per week for 6 weeks. This course explores the practice of Native American art forms from the perspective of Native American Artists and scholars. Focused on specific art forms such as dance, music, film, crafts, and other traditions, this course provides a critique of conventional understandings of the relationships of Native American cultural traditions and their place in the world of "art."

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

NATAMST 120AC Photography and the American Indian: Manifest Destiny, American Frontier, and Images of American Indians 4 Units

Department: Native American Studies

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks.

This course explores the development of photography, historical photographs of Indigenous peoples, Black Indians, and the push to win the American West. Central to the course are research methods that deconstruct stereotypical representations of Native Americans, African Americans (who either married into Native nations, were owned by Native peoples, or who joined the military to fight Native peoples), and the theories and methods that influenced photography.

Satisfies the American Cultures requirement

Final exam required. Instructor: Pearson

NATAMST 145 Making History/Making "Indians" 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Seminar per week for 6 weeks.

This course explores the ways in which an invented, generic "Indian" has played a variety of roles in master narratives of United States history. We shall examine changes in images of key figures and events constituting "our" collective historical memory.

Final exam required.

NATAMST 149 Gender in Native American Society 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course examines gender roles from the period before the invasion to the present. An emphasis will be placed on the ways in which contact with European gender practices transformed those prevalent in Native North American before the conquest.

Final exam required.

NATAMST 150 Native American Narratives 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.**Prerequisites:** Junior or senior standing and completion of 1A-1B.

This workshop provides intensive study of the crafts of writing in relation to various Native American genres as well as writing and discussion of student work.

Final exam required.

NATAMST 151 Native American Philosophy 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 71 or consent of instructor.

A study of the philosophical and metaphysical aspects of Native American world views, with emphasis on systems of knowledge, explanations of natural phenomena, and relations of human beings to nature through ritual and ceremonial observances.

Final exam required.

NATAMST C152/AMERSTD C152 Native American Literature 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 151 is recommended but not required.

An analysis of the written and oral tradition developed by Native Americans. Emphasis will be placed on a multifaceted approach (aesthetic, linguistic, psychological, historical, and cultural) in examining American Indian literature.

Final exam required.

NATAMST 158 Native Americans and the Cinema 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course will analyze the sociological, psychological, and literary aspects of Hollywood moviemakers' stereotyping of the American Indian through the history of film. The format will include representative Indian films, lectures, and guest speakers from the movie industry.

Final exam required.

NATAMST N158 Native Americans and the Cinema 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 2 hours of film viewing per week.**Prerequisites:** 72 or consent of instructor.

This course will analyze the sociological, psychological, and literary aspects of Hollywood moviemakers' stereotyping of the American Indian through the history of film. The format will include representative Indian films, lectures, and guest speakers from the movie industry.

Final exam required. Instructor: Wilson

NATAMST 160 Maya Traditions 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course considers Maya traditions as performance, oral literature, and creative resource which informs the present and the future. The course will illustrate the ways Maya mythic narratives are tied and untied in Maya cultural histories and geographies with close attention to contemporary use of the 260-day sacred calendar, creation accounts, ceremony, and the publically emergent role of the AjQ'ijab, the spiritual leaders.

Final exam required. Instructor: Poz

NATAMST 161 Native American Art 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course is a survey of contemporary Native American Indian art from the 19th century to the present. The general philosophical foundations of traditional tribal arts and culture will be discussed in the first week of the course. The second and third week of the course contemporary art will be studied through selected readings, slide presentations, and other reproductions of painting and sculpture by Native American Indian artists. Final exam required. Instructor: LaPen

NATAMST 162 Native American Environments 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course is a general survey of competing environmental interests of Native American Indians. Sacred sites and stewardship of the environment will be discussed in the first week. The legacy of radioactive waste disposal on tribal land will be studied in the second week of the course. Lectures in the third week will consider mining and the pollution of air and water on treaty reservations.

Final exam required. Instructor: Biestman

NATAMST 163 Native American Ceremonies 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course will consider Native American Indian ceremonies through the introductory examination of diverse religious beliefs, practices, and performances. Among the topics discussed will be the role of healing practices, revitalization movements, and religious changes in tribal communities in North America. The lectures will compare various tribal philosophies and world views in the context of culture and history.

Final exam required. Instructor: Garcia

NATAMST 164 Native Americans of California 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This introductory course will compare the general cultural themes and political histories of Native American Indians in California. The lectures in the first week of the course will consider demographic studies and the diversity of tribal cultures. The second week will review colonial dominance, mission activities, assimilation policies, and relations with the United States government. In the third week discussions will focus on the general political issues of tribal casinos in California.

Final exam required. Instructor: Karr

NATAMST 165 Native American Images 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

Native American Indians have been the cultural objects of photographers and the exotic figures of filmmakers for more than a century. Lectures in the first week will critique the images of Native American Indians in photographs. The second week will focus on selected scenes in motion pictures. General theories of simulation, historical and ethnographic representations will be considered in the third week. Students will read selected essays and view slides and scenes from films.

Final exam required. Instructor: Vizenor

NATAMST C166/AMERSTD C168 Native American Novelists 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

Native American Indian literature is a distinctive collection of fiction, poetry, autobiographical narratives, and oral stories in translation.

This course will provide a general literary and historical context of this distinctive literature, consider narrative subjects and themes, and focus on critical readings of contemporary novels by Native American Indian authors.

Final exam required. Instructor: Vizenor

NATAMST 167 Plains Warriors 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course will compare the general cultural themes and political histories of Native American Indian warrior cultures of the North American Great Plains, with an emphasis on the diversity of traditional cultural roles.

Final exam required. Instructor: Karr

NATAMST C168/AMERSTD C186H Museums and Sacred Sites 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course considers the experiences, interpretations, and protections of Native American Indian cultural resources in museums and sacred sites. Creation stories, sacred geography, and ceremonies will be compared.

Final exam required. Instructor: Biestman

NATAMST C169/AMERSTD C186E Native American Philosophies 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course is a comparative discussion of Native American Indian philosophies, distinctive worldviews, and interpretations of sacred and secular ceremonies and stories. The Ghost Dance and other revitalization movements will be studied.

Final exam required. Instructor: Vizenor

NATAMST 170 Native American Sovereignty 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course will explore the unique legal status of Native American Indian tribes and reservation lands in the United States, including discussions of treaties, federal trust relationships, and the evolution of laws and policies that determine sovereignty.

Final exam required. Instructor: Myers

NATAMST C171/AMERSTD C186I Native American Poetry 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course will give an in-depth analysis to a selection of contemporary Native American Indian poetry. The issues of voice, cultural traditions, and sense of place, memory, imagery, and humor will be the focus of lectures.

Final exam required. Instructor: Lee

NATAMST 172 Medicine and Public Health 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course considers the health of Native American Indian communities past and present. The lectures will be comparative and explore medical public health issues in urban areas and on reservations.

Final exam required. Instructor: Ramsey

NATAMST 173 First Nations in Canada 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

This course will examine the cultural history and contemporary political dynamics of First Nations in Canada. The lectures will focus on early encounters with natives recorded in , and on recent land claims and the Nunavut treaty.

Final exam required. Instructor: Samson

NATAMST C174/AMERSTD C186J Imagining the Other 1 Unit**Department:** Native American Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 3 weeks.

European images of the exotic existed long before 1492. After Columbus, they were applied to people of the Americas who were thus turned into objects of fear and desire. While these images were modified over the centuries, basic elements of positive, and negative stereotyping connected with notions of race, gender, and environmental conditioning have persisted to the present day. This class will study a selection of European and North American literary texts from the late 18th century to the present, focusing on the discourse of culture, alterity, and identity as well as, on such aspects as the Romantic idealization of "natural man," savagism, natural nobility, communicational boundaries, and forms of cultural hybridity.

Final exam required.

NATAMST 175 History of Native Americans in California 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

History of the Native Americans of California with emphasis on the lifeways, mores, warfare, and relations with the United States government. Attention will be given to the background and evolution of acculturation up to the present.

Final exam required.

NATAMST 176 History of Native Americans in the Southwest 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

An historical analysis of the Native American Nations of the southwestern United States.

Final exam required.

NATAMST 178 Topics in Native American History 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 10 hours of Lecture per week for 6 weeks.

This course explores the history of Native Americans from the point of view of Native American historians and scholars. Focused on specific periods and regional case studies the course provides a rereading of much United States history as it has been conceived, set into periods, written, and taught. The chronological scope of the course begins before the European invasions and continues to the end of the 20th century. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

NATAMST 178AC Africans in Indian Country 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Seminar per week for 6 weeks.

This seminar will explore the intersections of Native American and African American histories and communities in the context of the United States which was formerly "Indian Country." We will read historical texts, first-person accounts, fiction, and primary documents primarily from the perspective of Native American, African American, and Black-Indian scholars and writers.

Satisfies the American Cultures requirement

Final exam required.

NATAMST 190 Seminar on Advanced Topics in Native American Studies 1 - 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Advanced seminar in Native American Studies with topics to be announced at the beginning of each semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

NATAMST 195 Senior Thesis 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent study.**Prerequisites:** Consent of instructor.

Writing of a thesis under the direction of member(s) of the faculty.

Final exam required.

NATAMST H195 Native American Studies Honors Course 4 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Prerequisites: Student must have junior standing; a 3.5 GPA overall; a 3.5 GPA in major; and have been admitted to the honors program by the faculty adviser.

The course will entail directed study and completion of an honors research project under the direction of a faculty committee. The project should have originated from a regularly scheduled course in the department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

NATAMST H195A Senior Honors Thesis for Native American Studies Majors 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: Seminar and individual meetings with faculty adviser.

Prerequisites: Senior standing. Approval of Faculty Advisor, 3.5 GPA on all University work, and a 3.5 GPA in courses in the major.

Course for senior Native American Studies majors designed to support and guide the writing of a senior honors thesis. For senior Native American Studies majors who have been approved for the honors program.

Final exam not required.

NATAMST H195B Senior Honors Thesis for Native American Studies Majors 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.

Hours and format: 3 hours of Independent study per week for 15 weeks.

Prerequisites: Senior standing. Approval of Faculty Advisor, 3.5 GPA on all University work, and a 3.5 GPA in courses in the major.

Course for senior Native American Studies majors designed to support and guide the writing of a senior honors thesis. For senior Native American Studies majors who have been approved for the honors program.

Final exam not required.

NATAMST 197 Field Work in the Native American Community 1 - 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1.5 hours of fieldwork per week per unit for 10 weeks.

Prerequisites: Consent of instructor and upper division standing preferred.

Individual conferences to be arranged. Supervised experiences relevant to specific aspects of the Native American community in off-campus settings. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit as project varies. Course may be repeated for credit when topic changes. Final exam not required.

NATAMST 198 Supervised Group Study 1 - 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Directed group study per week for 15 weeks.**Prerequisites:** Consent of the instructor and upper division standing preferred.

Individual conferences to be arranged. Group discussion, research, and reporting on topics by students.

Course may be repeated for credit as project varies. Course may be repeated for credit when topic changes. Final exam not required.

NATAMST 199 Supervised Independent Study and Research 1 - 3 Units**Department:** Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1 to 3 hour of Independent study per week for 8 weeks. 1 to 3 hour of Independent study per week for 6 weeks.**Prerequisites:** Upper division standing and consent of instructor. Individual conferences to be arranged. The individual student, with consent and guidance of an instructor, researches an interest not covered in the courses offered in the Program.

Course may be repeated for credit as project varies. Course may be repeated for credit when topic changes. Final exam not required.

Natural Resources (NAT RES)

NAT RES 24 Freshman Seminars 1 Unit**Department:** Natural Resources**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

NAT RES 39E Freshman/Sophomore Seminar 2 - 4 Units**Department:** Natural Resources**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

NAT RES 84 Sophomore Seminar 1 or 2 Units**Department:** Natural Resources**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 15 weeks.

1.5 hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.

Prerequisites: Consent of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

Naval Science (NAV SCI)

NAV SCI 1 Introduction to Naval Science 2 Units**Department:** Naval Science**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Lecture per week for 10 weeks.

This curriculum provides guidelines for introducing students to the organization of the Department of Defense and the naval service, the long-held customs and traditions of the service, basic leadership, ethics and character development, the duties of a junior officer, and basic information concerning shipboard procedures and safety. It is the intent of this course to stimulate the students' interest for study and investigation in future courses.

Final exam not required.

NAV SCI 2 Sea Power and Maritime Affairs 2 Units**Department:** Naval Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 3 hours of Lecture per week for 10 weeks.**Prerequisites:** Consent of instructor.

Traces the U.S. historical evolution of sea power, its concepts, theories and applications. Emphasizes the impact of world situation, U.S. national interest, changing technology, and naval leadership on the evolving concept of sea power. Relates historical developments to current trends. Examines briefly the U.S. Merchant Marine's and the former Soviet Navy's impact on sea power policy formulation.

Final exam required.

NAV SCI 3 Leadership and Management I 3 Units**Department:** Naval Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion/seminar per week for 10 weeks.

This course will cover basic management, decision making, and moral leadership. The student will learn to establish meaningful goals, prioritize among competing demands, and plan and forecast in a task-centered organization. The course includes exposure to measures of organizational effectiveness, methods to overcome resistance to change, effective communications, and techniques to aid in counseling, team building, and resolution of disciplinary and personnel matters. Final exam not required.

NAV SCI 10 Naval Ship Systems I 3 Units**Department:** Naval Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematics 1A or 16A.

Principles of design and operation of ships. Emphasis on description and analysis of major types of propulsion plants, both conventional and nuclear. Principles of thermodynamic cycles, electrical theory, power generation and distribution, auxiliary machinery systems. Ship construction, strength and stability in intact and damaged conditions. Factors and design criteria for seaworthiness, structural integrity, and operational employment.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

NAV SCI 12A Navigation and Naval Operations I 3 Units**Department:** Naval Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of laboratory per week for 10 weeks.

Theory, principles, and procedures of terrestrial and celestial navigation and piloting techniques. A study of coordinating systems, including the celestial coordinate system, nautical charts and publications, position fixing, dead reckoning, nautical astronomy, the theory and methods of celestial navigation, and the theory and prediction of tides and current. Final exam not required.

NAV SCI 12B Navigation and Naval Operations II 3 Units**Department:** Naval Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 12A or consent of instructor.

Introduction to the various aspects of ship operations at sea. Principles of terrestrial navigation including the rules of the road for prevention of collisions at sea, vector analysis of relative motion, ship behavior and characteristics in maneuvering, precise ship positioning, use of aids to navigation, meteorology, and electronic navigation.

Final exam required.

NAV SCI 400A Naval Laboratory 0 Units**Department:** Naval Science**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of instruction and practical application in leadership and associated military skills.**Prerequisites:** Consent of instructor.

Emphasis is placed on professional training not of an academic nature. The laboratory is intended for topics such as drill and ceremonies, physical fitness and swimming testing, cruise preparation, cruise evaluation, sail training, safety awareness, preparation for commissioning, personal finances, insurance, and applied exercises in naval ship systems, navigation, naval operations, naval administration, and military justice. Other topics and special briefings will be conducted as determined by the Chief of Naval Education and Training or the Professor of Naval Science.

Final exam not required.

NAV SCI 400B Naval Laboratory 0 Units**Department:** Naval Science**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of instruction and practical application in leadership and associated military skills.**Prerequisites:** Consent of instructor.

Emphasis is placed on professional training not of an academic nature. The laboratory is intended for topics such as drill and ceremonies, physical fitness and swimming testing, cruise preparation, cruise evaluation, sail training, safety awareness, preparation for commissioning, personal finances, insurance, and applied exercises in naval ship systems, navigation, naval operations, naval administration, and military justice. Other topics and special briefings will be conducted as determined by the Chief of Naval Education and Training or the Professor of Naval Science.

Final exam not required.

NAV SCI 400C Naval Laboratory 0 Units**Department:** Naval Science**Course level:** Other professional**Terms course may be offered:** Fall and spring

Grading: Offered for pass/not pass grade only. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of instruction and practical application in leadership and associated military skills.

Prerequisites: Consent of instructor.

Emphasis is placed on professional training not of an academic nature. Final exam not required.

NAV SCI 401 Naval Ship Systems II 3 Units**Department:** Naval Science**Course level:** Other professional**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week for 10 weeks.

An introduction to the physical theory of acoustic and electromagnetic wave generation and propagation; the design and use of electronic, electromechanical, and pneumatic systems; and the combination of these systems to perform detection and analysis of objects sharing and traversing common environments.

Final exam not required.

NAV SCI 412 Leadership and Ethics 3 Units**Department:** Naval Science**Course level:** Other professional**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion/seminar per week.

Prerequisites: Consent of instructor.

This course is the capstone leadership course. It is intended to provide the ethical foundation and tools required for success as a leader of a diverse work force, often under circumstances of substantial stress. The course is divided between the art of leadership and the technical aspects of integrating personnel development with the management of resources, although the emphasis is on leadership. It is designed to be given as a seminar or lecture/discussion in which principles, concepts, and concrete subjects are presented, discussed, and debated.

Final exam required.

Near Eastern Studies (NE STUD)

NE STUD R1A Reading and Composition in Near Eastern Studies 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of lecture and 1 hour of conference per week. 8 hours of lecture/conference per week for 6 weeks. 3 hours of lecture and 1 hour of conference per week. 8 hours of lecture/conference per week for 6 weeks.

Prerequisites: UC Entry Level Writing Requirement or UC Analytical Writing Placement Exam. 1A is prerequisite to 1B.

Expository writing based on analysis of selected texts or literatures in translation or writings interpreting the material culture of the ancient Near or modern Middle East. Specific topics vary with instructor. R1A satisfies the first half of the Reading and Composition requirement, and R1B satisfies the second half.

Satisfies the first half of the Reading and Composition requirement
Final exam not required.

NE STUD R1B Reading and Composition in Near Eastern Studies 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of lecture and 1 hour of conference per week. 8 hours of lecture/conference per week for 6 weeks. 3 hours of lecture and 1 hour of conference per week. 8 hours of lecture/conference per week for 6 weeks.

Prerequisites: UC Entry Level Writing Requirement or UC Analytical Writing Placement Exam. 1A is a prerequisite to 1B.

Expository writing based on analysis of selected texts or literatures in translation or writings interpreting the material culture of the ancient Near or modern Middle East. Specific topics vary with instructor. R1A satisfies the first half of the Reading and Composition requirement, and R1B satisfies the second half.

Satisfies the second half of the Reading and Composition requirement
Final exam not required.

NE STUD 10 Introduction to the Near East 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 10 hours of lecture/discussion per week for 6 weeks. The background and present status of the ethnic and religious groups in the Arab states, Turkey, Israel, and Iran.
Final exam required.

NE STUD 15 Introduction to Near Eastern Art and Archaeology 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

The ancient Near East (present-day Iran, Iraq, Syria, Jordan, Lebanon, Israel, and Turkey) is considered the cradle of civilization. Here in Mesopotamia and its neighboring regions, the first cities arose, writing was invented, armies forged the earliest empires, and complex religious beliefs were expressed in art and architecture. This course surveys the major archaeological sites and monuments from the earliest settlements to the conquest of the Near East by Alexander the Great in 330 BCE.

Final exam required. Instructor: Feldman

NE STUD N16 Introduction to Islamic Art 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 6.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

The art and architecture of the Islamic lands from the seventh to the seventeenth centuries.

Final exam not required.

NE STUD 18 Introduction to Ancient Egypt 4 Units

Department: Near Eastern Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 8 hours of illustrated lecture and 2 hours of museum section per week.

A general introduction to ancient Egypt, providing overview coverage of ancient Egyptian culture and society (history, art, religion, literature, language, social structure), Egyptian archaeology (pyramids, tombs, mummies, temples, cities, monuments, daily life), and the history and development of the modern discipline of Egyptology. Assumes no prior knowledge of subject. Almost all lectures are illustrated extensively by slides. Discussion sections are held in the Phoebe Hearst Museum of Anthropology, which has the best collection of ancient Egyptian artifacts west of Chicago.

Final exam required.
