Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CHICANO 110 Latina/o Philosophy and Religious Thought 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

For the last 30 years, the themes of identity and liberation have dominated the social ethic and religious thought of subaltern subjectivities in the Americas. The centrality of these ideas respond to the increasing awareness of and opposition to the legacies of the history of conquest, colonization, racism, and sexism in the region. In this course, we are going to study the intellectual production of various ethnic groups in the Americas, particularly Latinas and Latinos in the 20th century, in order to clarify the ties between concerns for cultural and religious identity and the articulation of alternative ethical and political visions.

Final exam required. Instructor: Maldonado-Torres

CHICANO 130 Mexican and Chicano Art History 3 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A survey of Mexican and Chicano art from Mesoamerican period to contemporary Chicano art. Special focus on the mural movements and the relationship between artistic production and the development of Chicano symbols and cultural production.

Final exam required. Formerly known as 30.

CHICANO 133 Chicano Music 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Seminar per week for 6 weeks.

What is Chicano music? When did it begin? Who are considered Chicano musicians? How has Chicano music changed in relationship to the historical changes in the Chicano community? How has Chicano music helped shape and been shaped by popular music and popular culture? How has Chicano music been a music accommodation and/or resistance? What role have Chicano artists/musicians played as cultural workers? Does Chicano music have a political agenda? How have Chicano artists and recording companies fared in the music industry? These are a few of the questions we will explore in this course. Course goals and objectives will be accomplished through readings, research, guest lectures, performance, film, and listening to Chicano music. Classroom discourse will be the key ingredient to the success of this course.

Final exam required.

CHICANO 135A Latino Narrative Film: to the 1980s 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines narrative films primarily of the 1970s and 1980s that deal with the Latino/Chicano experience and the influences that shaped the views reflected in those cinematic works. CHICANO 162 The U.S. Role in Central America 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A critical examination of the role played by the United States in Central America from the 19th Century to the present. The focus will be on trends in U.S. policy, including an assessment of current policy alternatives in Nicaragua, El Salvador, Guatemala, Honduras, and the impact of those policies in Latinos in the United States.

Final exam required. Instructor: Manz

CHICANO 163 Caribbean Migration to Western Europe and the United States 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The main goal of this course is to offer a broad and comprehensive understanding of the Caribbean migration experience to the United States. We will cover crucial issues such as the migration origins, modes of incorporation, racism, cultural/identity strategies, and the political-economic relationship between the country of origin and the metropolitan host society. To understand the specificity of Caribbean migrants to the USA, it is fundamental to understand the regional Caribbean migration circuits to Western Europe. Thus, the course will provide a comparative perspective with Caribbean migrations to Western Europe.

Final exam required. Instructor: Grosfoguel

CHICANO 165 Cuba, the United States and Cuban Americans 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course examines the contested formation of Cuban identity, where the questions of race and the relationship to the United States have constituted fundamental issues in the debate over the meaning of Cubanidad. The course will address the ways in which Cuba dealt with the issue of race and national identity after the revolution of 1959, as well as, for the Cuban emigre community in the United States. Issues of gender, class, and cultural expression will be crucial elements of analysis throughout the course.

Final exam required.

CHICANO 172 Chicanos and the Educational System 4 Units**Department:** Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 70 recommended.

Chinese (CHINESE)

CHINESE 1 Intensive Elementary Modern Chinese-Intensive 10 Units**Department:** Chinese**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of Lecture and 5 hours of Laboratory per week for 10 weeks. 19 hours of Lecture and 6 hours of Laboratory per week for 8 weeks.

This course is the equivalent of 1A-1B offered in the regular academic year.

Students will not receive credit for 1 after taking 1A-1B. Final exam not required. Formerly known as 8.

CHINESE 1A Elementary Chinese 5 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** A is prerequisite to B.

These courses are designed for students who are of non-Chinese origin and were not raised in a Chinese-speaking environment; or who are of Chinese origin but do not speak any dialect of Chinese and whose parents do not speak any dialect of Chinese. This series of courses provides elementary training in listening, speaking, reading, and writing in Modern Standard Chinese. It enables students to function adequately in Chinese-speaking places or communities.

Students will receive no credit for 1A after taking 1. Final exam not required.

CHINESE 1B Elementary Chinese 5 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** A is prerequisite to B.

These courses are designed for students who are of non-Chinese origin and were not raised in a Chinese-speaking environment; or who are of Chinese origin but do not speak any dialect of Chinese and whose parents do not speak any dialect of Chinese. This series of courses provides elementary training in listening, speaking, reading, and writing in Modern Standard Chinese. It enables students to function adequately in Chinese-speaking places or communities.

Students will receive no credit for 1B after taking 1, 1X, or 1Y. Final exam not required.

CHINESE 1X Elementary Chinese for Mandarin Speakers 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course is designed specifically for heritage Chinese students who possess speaking skill but little or no reading and writing skills in Chinese. It introduces functional vocabulary and provides a systemic review of grammar through various cultural related topics. The course teaches and uses pinyin and traditional/simplified characters.

Students will receive no credit for 1X after taking 1, 1A-1B, or 1Y. Final exam not required.

CHINESE 1Y Elementary Chinese for Dialect Speakers 5 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Tutorial per week for 15 weeks.**Prerequisites:** Consent of instructor.

Designed for students who have had exposure to a non-Mandarin Chinese dialect but cannot speak Mandarin and possess little or no reading and writing skills in Chinese. Students will gain fundamental knowledge of Mandarin Chinese. While there is training in listening, speaking, reading, and writing, prominence is given to listening and speaking. This course will help students meet their basic needs in functioning in Mandarin-speaking environments, while exploring aspects of their Chinese heritage.

Students will receive no credit for 1Y after taking 1, 1A-1B, or 1X. Final exam not required.

CHINESE 7A Introduction to Premodern Chinese Literature and Culture 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An introduction to Chinese literature in translation in a two-semester sequence. In addition to literary sources, a wide range of philosophical and historical texts will be covered, as well as aspects of visual and material culture. 7A covers early and premodern China up to and including the Yuan Dynasty (14th century); 7B will focus on late imperial, modern, and contemporary China. Course will focus on the development of sound writing skills for freshman/sophomore-level students. Students will receive no credit for 7A after taking 181A, but they can remove a deficient grade in 181A by taking 7A. Final exam required.

CHINESE 7B Introduction to Modern Chinese Literature and Culture 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

An introduction to Chinese literature in translation in a two-semester sequence. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Chinese language instruction per day, plus daily individual tutorial, 5 days per week for 8 weeks.**Prerequisites:** Huang Program Scholar and 10A, 10X, or 10Y.

Simplified characters are used in class. Instruction is offered through the Princeton-in-Beijing program.

Final exam required.

CHINESE 100XA Advanced Chinese for Heritage Learners 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 10X or 10Y or consent of instructor.

This course helps students to further develop their Chinese language competence. More sophisticated linguistic forms are used and reinforced while dealing with various socio-cultural topics. Close reading knowledge and skills, formal and informal registers, discourses in speaking and writing, and different genres of Chinese reading and writing are introduced and practiced. Students learn to recognize a second version of Chinese characters.

Students will receive no credit for 100XA-100XB after taking 100 or 100A-100B. Final exam not required.

CHINESE 100XB Advanced Chinese for Heritage Learners 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 100XA or consent of instructor.

This course continues to develop students' analytical skills, including advanced skills in interpreting texts and writing in different genres and styles. It guides students to use their linguistic knowledge and skills to survey portions of Chinese history and society and comprehend Chinese cultural heritage in contemporary and historical economic, social, and political contexts.

Students will receive no credit for 100XA-100XB after taking 100 or 100A-100B. Final exam not required.

CHINESE 101 Fourth-Year Readings: Literature 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or 100XB; consent of instructor.

This course is designed to elevate abilities in speaking, reading, listening, and writing. Students will read the works of famous Chinese writers.

Movie adaptations of these writings are also used. Students' writings will be circulated, and students will act in plays they write.

Course may be repeated for credit when topic changes. Final exam not required.

CHINESE 102 Fourth-Year Readings: Social Sciences and History 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100B or 100XB; consent of instructor.

This course is designed to further improve abilities in speaking, reading, listening, and writing. Students will read Chinese newspapers and other sources of social, political, and historical writings. They will circulate their works as part of the class requirements.

Course may be repeated for credit when topic changes. Final exam not required.

CHINESE 105 Business Chinese 6 Units**Department:** Chinese**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of lecture and 1 excursion per week for 6 weeks.

Daily topics of instruction will include media Chinese, reading business Chinese, and oral training. This courses will cover intensive instruction in third-year Chinese with an emphasis on business terminology and introduction to cultural knowledge specific to conducting business in the Chinese environment. Two afternoons per week will be devoted to field trips related to the topics of study including visits to banks and businesses, government units, museums, and guided tours of the city. Final exam required. Instructor: Li

CHINESE 110 Introduction to Literary Chinese 8 Units**Department:** Chinese**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Lecture per week for 10 weeks.**Prerequisites:** 10B or consent of instructor.

This ten-week course is an introduction to the core vocabulary and basic grammar of literary Chinese and is designed to provide students with the skills necessary for advanced reading in the various genres of literary Chinese. We will focus on reading skills through the introduction of basic grammatical features of the language and through the intensive study of actual texts. This course is the equivalent of Chinese 110A-110B offered in the regular academic year.

Students will receive partial or no credit for 110 after taking 110A or 110B. A deficient grade in 110A or 110B may be removed by taking 110. Final exam required.

CHINESE 110A Introduction to Literary Chinese 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10B is recommended but not required.

The first half of a one-year introductory course in literary Chinese, introducing key features of grammar, syntax, and usage, along with the intensive study of a set of readings in the language. Readings are drawn from a variety of pre-Han and Han-Dynasty sources.

Final exam required. Formerly known as 2A.

CHINESE 110B Introduction to Literary Chinese 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110A.

The second half of a one-year introductory course in literary Chinese, continuing the set of grammar review topics from the first semester, and giving basic coverage of more relevant issues in the history of the language and writing system, and the use of basic reference sources. Final exam required. Formerly known as 2B.

CHINESE 111 Fifth-Year Chinese A 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 and consent of instructor.

This course is designed to bring up the students to advanced-high competence in all aspects of modern Chinese; it aims to prepare students for research or employment in a variety of China-related fields. Materials are drawn from native-speaker target publications, including modern Chinese literature, film, intellectual history, and readings on contemporary issues. Radio and TV broadcasts will also be included among the teaching materials. Texts will be selected, in part, according to the students' interests. With the instructor's guidance, students will conduct their own research projects based on specialized readings in their own fields of study. The research projects will be presented both orally and in written form by the end of the semester.

Final exam required.

CHINESE 112 Fifth-Year Chinese B 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 and consent of instructor.

Final exam required.

CHINESE 120 Ancient Chinese Prose 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110A.

Readings in historical, religious, and philosophical texts of the Zhou, Han, and later periods from printed and manuscript sources.

Final exam required.

CHINESE 130 Topics in Taoism 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Readings in printed and manuscript sources.

Final exam required.

CHINESE 134 Readings in Classical Chinese Poetry 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110B or consent of instructor.

Introduction to the forms and subtypes of classical poetry, focusing on both learning to read poems in the original as well as developing the critical and analytical tools to discuss and respond to them in an informed way.

Course may be repeated for credit with consent of instructor as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CHINESE 136 Readings in Medieval Prose 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 110B or consent of instructor.

Thematic focus and range of readings will vary. The course will deal with readings from one or more genres of classical Chinese prose, such as essays, epigraphical materials, historical works, classical tales, administrative documents, scholars' notes, geographical treatises, or travel diaries.

Course may be repeated for credit with consent of instructor as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CHINESE C140/BUDDSTD C140 Readings in Chinese Buddhist Texts 4 Units**Department:** Chinese; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: 110A. One semester of classical Chinese. Prior background in Buddhist history and thought is helpful, but not required. This course is an introduction to the study of medieval Buddhist literature written in classical Chinese. We will read samples from a variety of genres, including early Chinese translations of Sanskrit and Central Asian Buddhist scriptures, indigenous Chinese commentaries, philosophical treatises, and sectarian works, including Chan (Zen koans). The course will also serve as an introduction to resource materials used in the study of Chinese Buddhist texts, and students will be expected to make use of a variety of reference tools in preparation for class. Readings in Chinese will be supplemented by a range of secondary readings in English on Mahayana doctrine and Chinese Buddhist history.

This course is intended for students who already have some facility in literary Chinese. Final exam required.

CHINESE 153 Reading Taiwan 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently).

This course is an intensive introduction to Taiwanese literature and media culture.

Final exam required.

CHINESE 155 Readings in Vernacular Chinese Literature 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently) or consent of instructor.

A critical study of pre-modern Chinese fiction.

Course may be repeated for credit with consent of instructor as topic varies. Course may be repeated for credit when topic changes. Final exam required. Instructor: Volpp

CHINESE 156 Modern Chinese Literature 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently).

This course will introduce students to selected works of modern Chinese literature produced in the first half of the 20th century, as well as their cultural and historical context. How did writers such as Lu Xun, Shen Congwen, Eileen Chang, and others attempt to make themselves "at home" in a world profoundly dislocated by the forces of colonialism, war, and revolution? We will examine the politics of literary style, questions of nationalism, representations of gender, and the problem of colonial modernity in these texts. All primary texts are presented in the original Chinese, supplemented by critical and biographical articles in English. Final exam required.

CHINESE 157 Contemporary Chinese Literature 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently).

This course explores popular, realist, and avant-garde literature from mainland China and Taiwan since 1949. We will consider how writers have engaged with the cultural dislocations of modernity by exploring questions such as the presentation of cultural and gender identities and the politics of memory and place. Central to our discussion will be the problem of how literature not only reflects but also critically engages with historical and cultural experience through a variety of genres. A crucial aspect of this course will be the development of skills in close, critical, and historically contextualized reading. Final exam required.

CHINESE 158 Reading Chinese Cities 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently).

Chinese cities are the sites of complicated global/local interconnections as the nation is increasingly incorporated into the world system. Understanding Chinese cities is the key to analyzing the dramatic transformation of Chinese society and culture. This course is designed to teach students to think about Chinese cities in more textured ways. How are urban forms and urban spaces produced through processes of social, political, and ideological conflict? How are cities represented in literary, cinematic, and various popular cultures? How has our imagination of the city been shaped and how are these spatial discourses influencing the making of the cities of tomorrow?. Final exam required.

CHINESE 159 Cities and the Country 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100XA (may be taken concurrently).

This course explores one of the most central and potent areas of cultural politics in modern China: the city and its relations to the countryside. We will explore how urban space and native soil became central places of imagination and desire in modernity; how Beijing and Shanghai become mediums of imagining differing meanings of "modernity" and "tradition," "Chinese" and "Western," and cultural authenticity; the repeated reformist and revolutionary desire to return from the city back to the countryside; as well as more recent mass migrations from the countryside during a time of (and as part of) drastic urban destruction and "renewal." Throughout the course, we will examine fiction, essays, photographs, films, and theoretical writings in order to consider a variety of ways in which people have sought to picture or narrate the shifting relations of cities and country.

Final exam required. Instructor: Schaefer

CHINESE 161 Structure of the Chinese Language 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100AX; Linguistics 5 or 100 recommended.

Chinese dialects, Mandarin phonology, and Mandarin grammar. Final exam required.

CHINESE 165 History of the Chinese Language 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100AX; Linguistics 5 or 100 recommended.

Writing system, early dictionaries, historical phonology, and classical grammar.

Final exam required.

CHINESE 172 Contemporary Chinese Language Cinema 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 to 2 hours of discussion per week. 8 hours of lecture and 2 hours of discussion per week for 6 weeks. This course introduces Chinese language cinema since the late 1970s across the geopolitical divides between Mainland, Taiwan, and Hong Kong. We will focus on the distinct new waves in the three regions, as cinematic engagement of their respective political and cultural history, but also examine to what extent these "New Cinemas" share similar concerns on questions of gender, politics, remembrance, and urbanization. Course may be repeated for credit when topic changes. Final paper.

Instructor: Bao

CHINESE 176 Bad Emperors: Fantasies of Sovereignty and Transgression in the Chinese Tradition 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

Ideals of good governance are a core concern of many brands of traditional Chinese thought. The image of the ruler whose authority is exercised in harmony with the desires and interests of the society at large plays a key role not only in theories of governance but also in thought about ethics and psychology. There is also a fascination with the bad ruler. In addition to serving as negative examples just as good rulers serve as positive examples, bad rulers also provide an imaginative space for thinking about extremes of human will, offering an outlet for fantasy and vicarious gratification of desires that normally remain taboo.

Final exam required. Instructor: Ashmore

CHINESE 179 Exploring Pre-modern Chinese Novels 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Vernacular fiction in late imperial China emerged at the margins of official historiography, traveled through oral storytelling, and reached sophistication in the hands of literati. Covering the major genres and masterpieces of traditional Chinese novels including military, martial arts, libertine, and romantic stories, this course investigates how shifting boundaries brought about significant transformations of Chinese narrative at the levels of both form and content.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Lam

CHINESE 181 Sex and Gender in Premodern Chinese Culture 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores Chinese cultures of sex and gender from antiquity to the eighteenth century. We will look at how sex and gender are treated in the political, moral, medical, and religious discourses. Through a variety of literary genres, we will see the complexity of gender differences, the fluidity of desire, and ultimately the plasticity of the human body. These texts reveal how Chinese writers imaginatively examined and reinvented what it meant to be men and women.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

Instructor: Lam

CHINESE 186 Confucius and His Interpreters 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 5 hours of lecture and 1 hour of discussion per week for 10 weeks. 8 hours of lecture and 2 hours of discussion per week for 6 weeks.

This course examines the development of Confucianism in pre-modern China using a dialogical model that emphasizes its interactions with competing viewpoints. Particular attention will be paid to ritual, conceptions of human nature, ethics, and to the way that varieties of Confucianism were rooted in more general theories of value. Final exam required.

CHINESE 187 Literature and Media Culture in Taiwan 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is an intensive introduction in English translation to the history, literature, and media culture of Taiwan.

Final exam required.

CHINESE 188 Popular Culture in 20th-Century China 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is an introduction to media culture in 20th-century China, with an emphasis on photography, cinema, and popular music. The course places these productions in historical and cultural context, examining the complex intertwinement of culture, technology, and politics in China, Hong Kong, and Taiwan from the turn of the last century to the beginning of the 21st. Students will also be introduced to a number of approaches to thinking about and analyzing popular cultural phenomena.

Final exam required.

CHINESE 189 Chinese Landscapes: Space, Place, and Travel 4 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One previous course in literature or cultural studies.

What do landscapes "do"? How do landscape images and travel narratives mediate experiences of land, nature, and other peoples? How do landscapes map one's place in the world, shaping both cultural identities and real geographic spaces? Can landscapes travel? This course explores such questions by examining one of the world's longest-running traditions of landscape representation. We will consider such landscape genres as poetry, prose description, fiction, travel narrative, maps, painting, and photography, and consider their work across China's long history of imperial expansion, colonization, and globalization. We will also consider China's places in thinking about landscape and travel in the West.

Final exam required. Instructor: Schaefer

CHINESE H195A Honors Course 2 - 5 Units**Department:** Chinese**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.

Special tutorial or seminar on selected topics not covered by available courses or seminars.

Final exam not required.

CHINESE 299 Thesis Preparation and Related Research 1 - 8 Units**Department:** Chinese**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of thesis supervisor and graduate adviser.

Final exam not required.

CHINESE 601 Individual Study for Master's Students 1 - 8 Units**Department:** Chinese**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of graduate adviser.

Individual study for the comprehensive or language requirements in consultation with the graduate adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Final exam not required.

CHINESE 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Chinese**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare for various examinations required of candidates for the Ph.D.

Final exam not required.

City and Regional Planning (CY PLAN)

CY PLAN 97 Field Studies in City and Regional Planning 1 - 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of field work per week per unit.

Supervised experiences in the study of off-campus organizations relevant to specific aspects of city planning. Regular individual meetings with faculty sponsor and written report required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 98 Special Group Study 1 - 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hours of lecture/discussion per week.

Group studies developed to meet specific needs of students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CY PLAN 110 Introduction to City Planning 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week, plus additional fieldwork. 5 hours of lecture/discussion per week, plus additional fieldwork per week for 8 weeks. 7.5 hours of lecture/discussion per week, plus additional fieldwork per week for 6 weeks.**Prerequisites:** Open to majors in all fields.

Survey of city planning as it has evolved in the United States since 1800 in response to physical, social, and economic problems; major concepts and procedures used by city planners and local governments to improve the urban environment.

Final exam required.

CY PLAN 111 Introduction to Housing: An International Survey 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 110 or Economics 1 or consent of instructor; open to majors in all fields.

Housing problems, government housing policy, and housing as a field of urban planning practice. Emphasis on critical International Issues in the Third World and the United States.

Final exam required. Instructor: AlSayyad

CY PLAN 113A Economic Analysis for Planning 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

Introduction to economic concepts and thinking as used in planning.

Micro-economic theory is reviewed and critiqued.

Final exam required.

CY PLAN 113B Community and Economic Development 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week. 6 hours of lecture/discussion per week for 8 weeks. 8 hours of lecture/discussion per week for 6 weeks.

Introduction to political, economic and social issues involved in theory and practice of community economic development. Focus on national economic and social policies, role of local community economic development corporations (CDCs), resolution of conflicts between private-sector profitability and public sector (community) accountability through critical use of the planning process.

Final exam required.

CY PLAN 114 Introduction to Urban and Regional Transportation 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course is designed to introduce students to the characteristics of urban transportation systems, the methods through which they are planned and analyzed, and the dimensions of key policy issues confronting decision makers.

Final exam required. Instructor: Chatman

CY PLAN 115 Urbanization in Developing Countries 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

The course covers issues of development and urbanization from the era of colonialism to the era of contemporary globalization. Themes include modernization, urban informality and poverty, transnational economies, and the role of international institutions and agencies.

Final exam required. Instructor: Roy

CY PLAN N115 Urbanization in Developing Countries 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 6 weeks. The course covers issues of development and urbanization from the era of colonialism to the era of contemporary globalization. Themes include modernization, urban informality and poverty, transnational economies, and the role of international institutions and agencies.

Final exam not required.

CY PLAN 116 Urban Planning Process--The Undergraduate Planning Studio 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week plus fieldwork.**Prerequisites:** Upper division standing; 110 or consent of instructor.

An intermediate course in the planning process with practicum in using planning techniques. Classes typically work on developing an area or other community plan. Some lectures, extensive field and group work, oral and written presentations of findings.

Final exam required.

CY PLAN 118AC The Urban Community 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar and 1 hour discussion per week.

This course looks at the idea and practice of community in cities and suburbs and at the dynamics of neighborhood and community formation.

Topics include urban social geography, ethnicity, and identity, residential choice behavior, the political economy of neighborhoods, planning for neighborhoods and civic engagement. Instructors emphasize different topics. Class size limits depend on the instructor.

Satisfies the American Cultures requirement

Final exam required. Instructor: Hutson

CY PLAN 119 Planning for Sustainability 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Open to majors in all fields.

This course examines how the concept of sustainable development applies to cities and urban regions and gives students insight into a variety of contemporary urban planning issues through the sustainability lens. The course combines lectures, discussions, student projects, and guest appearances by leading practitioners in Bay Area sustainability efforts. Ways to coordinate goals of environment, economy, and equity at different scales of planning are addressed, including the region, the city, the neighborhood, and the site.

Final exam required. Instructor: Acey

CY PLAN 120 Community Planning and Public Policy for Disability 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

This course reviews what society and local communities can do in terms of policies, programs, and local planning to address the needs of citizens with disabilities. Attention will be given to the economics of disability, to the politics of producing change, and to transportation, housing, public facilities, independent living, employment, and income policies. Options will be assessed from the varying perspectives of those with disabilities and the broader society.

Final exam required. Instructor: Dear

CY PLAN C139/POL SCI C139 Urban and Sub-national Politics in Developing Countries 4 Units**Department:** City and Regional Planning; Political Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.

Over half of the world's population is now urban. As urban populations swell, metropolitan areas in both the developed and the developing world struggle to provide basic services and address the negative externalities associated with rapid growth. Sanitation, transportation, pollution, energy services, and public safety typically fall to sub-national governments.

Yet local sub-national institutions face difficulties as they tackle these challenges because development tends to spill over political boundaries and resources are limited. Such difficulties are particularly acute in the developing world due to tighter resource constraints, weak institutions, and the comparative severity of the underlying problems. Moreover, democratization and decentralization suggest that urban governance and service delivery may have become more democratic, but present challenges with respect to priority setting, coordination, and corruption.

Final exam required. Instructor: Post

CY PLAN 140 Urban Design: City-Building and Place-Making 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The course is concerned with the multidisciplinary field and practice of urban design. It includes a review of historical approaches to urban design and current movements in the field, as well as discussion of the elements of urban form, theories of good city form, scales of urban design, implementation approaches, and challenges and opportunities for the discipline. Learning from cities via fieldwork is an integral part of the course.

Final exam required. Instructor: Macdonald

CY PLAN 180 Research Seminar in Urban Studies 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, discussion, and directed research per week.

A capstone course for urban studies majors; open to other majors by instructor approval. Topical focus varies by semester. The course involves student production of a high-quality research report from inception to completion. Lectures introduce a range of research skills typical in urban studies, and cover specific domain knowledge necessary for the completion of the research project. Students identify a research topic subject to instructor approval and prepare a formal research proposal, undertaking the analysis specified in the proposal, making public presentations of their findings, and producing a professional-quality research report.

Student Learning Outcomes: Conceptualizing, executing and completing an individual research project, including public presentations of findings, revision based on critical feedback, and the production of a final research report to the highest professional standards. ^Devising policy and practical solutions to address borderland planning problems. ^The fundamental principles of research project design, scheduling, and execution, as well as exposure to a variety of methodological approaches using visual, cartographic, quantitative and qualitative data sources. A written research report and presentation.

CY PLAN 190 Advanced Topics in Urban Studies 1 - 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of lecture/discussion per week per unit. 2 hours of lecture/discussion per week per unit for 8 weeks.**Prerequisites:** Upper division standing.

Analysis of selected topics in urban studies. Topics vary by semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 197 Field Studies 1 - 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of field work per week per unit.**Prerequisites:** Consent of instructor.

Supervised experiences in the study of off-campus organizations relevant to specific aspects of city planning. Regular individual meetings with faculty sponsor and a written report are required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CY PLAN 198 Special Group Study 1 - 3 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of lecture/discussion per week.

Group studies developed to meet specific needs of students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CY PLAN 199 Special Study for Advanced Undergraduates 1 - 4 Units**Department:** City and Regional Planning**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Flexible, at the discretion of the instructor.**Prerequisites:** Consent of instructor.

Regular meetings with faculty overseer.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CY PLAN 200 History of City Planning 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The history of city planning and the city planning profession in the context of urban history. Principal focus on the evolution of North American planning practice and theory since the late 19th century; some comparative and earlier material.

Final exam required. Instructor: Roy

CY PLAN 204A Analytic and Research Methods for Planners:**Methods of Planning Data Analysis 2 or 4 Units****Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Laboratory per week for 15 weeks.

Introduction to the use of quantitative reasoning and statistical techniques to solve planning and policy problems. Course focuses on (I) basic planning techniques for analyzing and presenting secondary data, preparing forecasts, and conducting regional economic analysis (weeks 1-8); (II) inferential statistics and sampling, as applied to planning problems; and (III) basic multivariate techniques such as chi-squared and linear regression and advanced multivariate techniques such as multiple regression (weeks 9-15). For the two-unit option, students may take the first half of the class (weeks 1-8).

Course may be repeated for credit when topic changes. Final exam required. Instructors: Chapple, Chatman

**CY PLAN 204B Analytic and Research Methods for Planners:
Research Methods for Planners 2 or 4 Units**

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week for 10 weeks (2 units). 3 hours of lecture/discussion per week for 15 weeks (4 units). Research methods for planning, including problem definition, observation, key informant interviewing, causal modeling, survey design and overall design of research, as well as memorandum writing and presentation skills. Students work in teams with clients on actual research problems and learn professional skills as well as practical ways of conducting usable research. With permission of the instructor, students who wish to complete only half of the assignments for their individual research may take the course for 2 units.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Caldeira

**CY PLAN 204C Analytic and Research Methods for Planners:
Introduction to GIS and City Planning 4 Units**

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of lecture/laboratory per week. 10 hours of lecture/laboratory per week for 6 weeks. 7.5 hours of lecture/laboratory per week for 8 weeks.

Introduction to the principles and practical uses of Geographic Information Systems (GIS). This course is intended for graduate students with exposure to using spreadsheets and database programs for urban and natural resource analysis, and who wish to expand their knowledge to include basic GIS concepts and applications. Prior GIS or desktop mapping experience not required.

Course may be repeated for credit when topic changes. Final exam required. Instructor: Radke

**CY PLAN 204D Analytic and Research Methods for Planners:
Multivariate Analysis in Planning 4 Units**

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of lecture/laboratory per week.

Prerequisites: 204A or equivalent.

Theory and application of advanced multivariate methods in planning. Emphasis on causal modeling of cross-sectional data. Topics include: multiple regression analysis; residual analysis; weighted least squares; non-linear models; path analysis; log-linear models; logit and probit analysis; principal components; factor and cluster analysis. Completion of two computer assignments, using several microcomputer statistical packages, is required.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cervero

CY PLAN 205 Introduction to Planning and Environmental Law 3 Units

Department: City and Regional Planning

Course level: Graduate

Term course may be offered: Fall

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

An introduction to the American legal process and legal framework within which public policy and planning problems are addressed. The course stresses legal methodology, the basics of legal research, and the common-law decisional method. Statutory analysis, administrative law, and constitutional interpretation are also covered. Case topics focus on the law of planning, property rights, land use regulation, and access to housing.

Final exam not required. Instructor: Etzel

CY PLAN 207 Land and Housing Market Economics 3 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: 113A or equivalent.

Using microeconomics as its platform, course explores the process and pattern of land utilization from a variety of perspectives: the neighborhood, the city, and the metropolis. The approach blends real estate, descriptive urban geography, and urban history with economics.

Final exam required. Instructor: Waddell

CY PLAN 208 Plan Preparation Studio 5 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar and 5 hours of Studio per week for 15 weeks. 4 hours of Seminar and 16 hours of Studio per week for 8 weeks.

An introductory laboratory experience in urban plan preparation, including the use of graphic communication techniques appropriate to city planning and invoking individual effort and that of collaborative student groups in formulating planning policies and programs for an urban area. Occasional Friday meetings are required.

Final exam not required. Instructor: Macdonald

**CY PLAN C213/CIV ENG C290U Transportation and Land Use
Planning 3 Units**

Department: City and Regional Planning; Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: 113A or equivalent.

Examination of the interactions between transportation and land use systems; historical perspectives on transportation; characteristics of travel and demand estimation; evaluation of system performance; location theory; models of transportation and urban structure; empirical evidence of transportation-land use impacts; case study examinations.

Final exam required. Instructors: Chatman, Cervero

CY PLAN C217/CIV ENG C250N Transportation Policy and Planning 3 Units

Department: City and Regional Planning; Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: 213 or consent of instructor.

Policy issues in urban transportation planning; measuring the performance of transportation systems; the transportation policy formulation process; transportation finance, pricing, and subsidy issues; energy and air quality in transportation; specialized transportation for elderly and disabled people; innovations in transportation policy. Final exam required.

CY PLAN 218 Transportation Planning Studio 4 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of studio laboratory per week.

Prerequisites: 213 or 217 or consent of instructor.

Studio on applying skills of urban transportation planning. Topics vary, focusing on specific urban sites and multi-modal issues, including those related to planning for mass transit and other alternatives to the private automobile. Recent emphasis given to planning and designing for transit villages and transit-based housing.

Final exam not required. Instructor: Deakin

CY PLAN 219 Comparative International Topics in Transportation 3 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Covers comparative planning and policy topics in urban, regional, and rural transportation that are transnational in nature. Builds policy lessons on planning for mobility, accessibility, and sustainability in different political and contextual settings. Case studies are drawn from both developed and developing countries.

Final exam not required. Instructor: Cervero

CY PLAN 220 The Urban and Regional Economy 3 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: 113A or equivalent.

Analysis of the urban, metropolitan, and regional economy for planning. Economic base and other macro models; impact analysis and projection of changing labor force and industrial structure; economic-demographic interaction; issues in growth, income distribution, planning controls; interregional growth and population distribution issues.

Final exam not required. Instructor: Chapple

CY PLAN 223 Economic Development Planning 3 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Strategy and tools for developing employment attracting investment and improving the standard of living in regional, state, and local economies. Organization of economic development activities, with a focus on current practices.

Final exam not required. Instructor: Chapple

CY PLAN 225 Workshop in Regional Analysis 3 or 4 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week, plus 5-week optional module.

Prerequisites: 204A or 220.

This course covers economic base analysis, shift share techniques, input-output analysis, regional accounting, impact analysis, cluster analysis, and qualitative sectoral studies. Includes an optional 1-unit applied module during the last five weeks of instruction.

Final exam not required. Instructor: Chapple

CY PLAN 228 Research Workshop on Metropolitan Regional Planning 4 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Studio and 2 hours of Seminar per week for 15 weeks.

Prerequisites: Relevant past coursework and consent of instructor.

Field problem in major phases of metropolitan or regional planning work. A collaborative student-group effort in formulating policy or plan recommendations within specific governmental framework.

Final exam not required.

CY PLAN 230 U.S. Housing, Planning, and Policy 3 Units

Department: City and Regional Planning

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Theory of housing markets and empirical methods for measuring market conditions and performance: housing consumption, housing supply and production, and market performance. Empirical analysis and applications to policy issues.

Final exam not required. Instructor: Reid

CY PLAN 231 Housing in Developing Countries 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course covers issues of housing policy and housing form in the urbanizing developing world from a comparative and cross-cultural perspective. Using case studies from Latin America, Asia, and the Middle East, it highlights the role of physical planners as community activists involved in practices like squatter development slum upgrading, sites and services, and self-help.

Final exam not required. Instructor: AlSayyad

CY PLAN 238 Development--Design Studio 4 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/seminar and 4 hours of studio per week.**Prerequisites:** 235

Studio experience in analysis, policy advising, and project design or general plan preparation for urban communities undergoing development, with a focus on site development and project planning.

Final exam not required. Instructor: Smith-Heimer

CY PLAN C240/LD ARCH C250 Theories of Urban Form and Design 3 Units**Department:** City and Regional Planning; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Theories and patterns of urban form throughout history are studied with emphasis on the role of planning and design in shaping cities and the relationship between urban form and social, economic, and geographic factors. Using a case study approach, cities are evaluated in terms of various theories and performance dimensions.

Final exam required. Instructor: Southworth

CY PLAN C241/LD ARCH C241 Research Methods in Environmental Design 4 Units**Department:** City and Regional Planning; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar and 2 hours of laboratory per week.

The components, structure, and meaning of the urban environment. Environmental problems, attitudes, and criteria. Environmental survey, analysis, and interview techniques. Methods of addressing environmental quality. Environmental simulation.

Final exam not required. Formerly known as Interdepartmental Studies 241. Instructor: Bosselmann

CY PLAN 248 Advanced Studio: Urban Design/Environmental Planning 5 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar and 5 hours of Studio per week for 15 weeks.**Prerequisites:** 208 or 240.

Advanced problems in urban design and land use, and in environmental planning. Occasional Friday meetings are required.

Final exam not required. Instructor: Bosselmann

CY PLAN 249 Urban Design in Planning 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week.**Prerequisites:** Consent of instructor.

This seminar will focus on urban design in the planning process, the role of environmental surveys, methods of community involvement, problem identification, goal formulation and alternatives generation, environmental media and presentation, design guidelines and review, environmental evaluation and impact assessment. Case studies.

Final exam not required. Formerly known as Interdepartmental Studies 249. Instructor: Macdonald

CY PLAN C251/LD ARCH C231 Environmental Planning and Regulation 3 Units**Department:** City and Regional Planning; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will examine emerging trends in environmental planning and policy and the basic regulatory framework for environmental planning encountered in the U.S. We will also relate the institutional and policy framework of California and the United States to other nations and emerging international institutions. The emphasis of the course will be on regulating "residuals" as they affect three media: air, water, and land.

Final exam not required. Instructor: Corburn

CY PLAN 252 Land Use Controls 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

An advanced course in implementation of land use and environmental controls. The theory, practice and impacts of zoning, growth management, land banking, development systems, and other techniques of land use control. Objective is to acquaint student with a range of regulatory techniques and the legal, administrative-political equity aspects of their implementation.

Final exam not required. Instructor: Etzel

CY PLAN 254 Sustainable Communities 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Graduate standing or consent of instructor.

This course examines and explores the concept of sustainable development at the community level. The course has three sections: (1) an introduction to the discourse on sustainable development; (2) an exploration of several leading attempts to incorporate sustainability principles into plans, planning, and urban design; (3) a comparative examination of several attempts to modify urban form and address the multiple goals (social, economic, environmental) of sustainable urbanism. Final exam not required. Instructor: Acey

CY PLAN 255 Urban Planning Applications of Geographic Information Systems 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course introduces students to the relatively new and rapidly expanding field of Geographical Information Systems (GIS). The course focuses on GIS and its application to both city and regional problems in the San Francisco Bay Area and offers students a toolkit for integrating spatial information into planning solutions. The laboratory sessions will mainly employ a vector model to solving problems. Topics include problem identification, data discovery, database design, construction, modeling, and analytical measurement. Final exam not required. Instructor: Radke

CY PLAN 256 Healthy Cities 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Exploration of common origins of urban planning and public health, from why and how the fields separated and strategies to reconnect them, to addressing urban health inequities in the 21st century. Inquiry to influences of urban population health, analysis of determinants, and roles that city planning and public health agencies - at local and international level - have in research, and action aimed at improving urban health. Measures, analysis, and design of policy strategies are explored. Final exam not required. Instructor: Corburn

CY PLAN C257/LD ARCH C237 The Process of Environmental Planning 3 Units**Department:** City and Regional Planning; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** C231/Landscape Architecture C251.

A review of the techniques used in environmental planning, and evaluation of alternate means of implementation in varying environmental and political circumstances. The class will examine and critique a number of well-known environmental planning programs and plans. Lectures and discussion will address recurrent planning problems, such as the limitations of available data, legal and political constraints on plans, conflicts among specialists. Final exam not required.

CY PLAN 260 Theory, History, and Practice of Community Development 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course will explore the theory, history, methods, and practice of local community development. The course will begin by examining the historical roots of community involvement and action. It will present alternative explanations for different paths of neighborhood and community change. Final exam not required. Formerly known as 268. Instructor: Hutson

CY PLAN C261/LD ARCH C242 Citizen Involvement in the City Planning Process 3 Units**Department:** City and Regional Planning; Landscape Architecture**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.

An examination of the roles of the citizens and citizen organizations in the city planning process. Models for citizen involvement ranging from advising to community control. Examination of the effectiveness of different organizational models in different situations. Students will not receive credit for C242 after taking City and Regional Planning 208, Interdepartmental Studies 206 Fall 1990, and Interdepartmental Studies 206 Fall 1991. Final exam not required. Formerly known as Interdepartmental Studies 223.

CY PLAN 268 Community Development Studio/Workshop 4 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 4 hours of Studio per week for 15 weeks.**Prerequisites:** 208 or 235.

Studio experience in analysis, policy advising, and implementation in an urban setting. Students will engage in group work for real clients (e.g., community-based organizations or local government agencies), culminating in a final report or proposal. Final exam not required. Formerly known as 258. Instructor: Hutson

CY PLAN 271 Development Theories and Practices 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course covers the theory and praxis of international development. It studies the project of development, from its Cold War launching to its metamorphosis into the current era of economic globalization and liberalization. And it examines the theoretical models and discursive debates that have accompanied each phase, including the recent critiques put forth by feminism and postcolonialism. The course also locates development in the industrialized world, "here" rather than "elsewhere," thereby unsettling the normalized hierarchy of First and Third Worlds.

Final exam required. Instructor: Roy

CY PLAN 275 Comparative Analysis of Urban Policies 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Graduate standing.

Description, analysis, and evaluation of urban policies in a variety of social and spatial contexts, with references to state-planned societies. Main topics: national and local public policies in regional development, housing, transportation, urban renewal, citizen participation, social services, and decentralized urban management.

Final exam not required. Formerly known as 262.

CY PLAN 280A Doctoral Seminars: Research Design for the Ph.D 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Ph.D. standing.

This course is designed for students working on their dissertation research plan and prospectus. Weekly writing assignments designed to work through each step of writing the prospectus from problem framing and theoretical framework to methodology. At least one oral presentation to the class is required of all students.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 280.

CY PLAN 280C Doctoral Seminars: Doctoral Colloquium 2 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Ph.D. standing.

Presentation and discussion of research by Ph.D. students and faculty. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 281 Theories of Planning Practice 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Prerequisites: Graduate standing. Suitable for graduate students in professional programs doing research on planning and policy practice issues.

Focuses on theory and practice of planning, with emphasis on the role of different types of knowledge in different kinds of practice. Compares positivist, interpretive, and critical theory views of knowledge and links these to policy analysis, interactive planning, group processes, and emerging models of critical planning practice.

Final exam not required.

CY PLAN 290 Topics in City and Metropolitan Planning 1 - 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week per unit for 8 weeks. 3 hours of lecture and discussion per week per module.**Prerequisites:** Consent of instructor.

Analysis of selected topics in city and metropolitan planning with emphasis on implications for planning practice and urban policy formation. In some semesters, optional five-week, 1-unit modules may be offered, taking advantage of guest visitors. Check department for modules at start of semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 291 Special Projects Studio in Planning 4 - 6 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of lecture and 6 to 9 hours of studio per week, depending on the number of units.**Prerequisites:** Graduate standing.

Studio on special projects in planning. Topics vary by semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 295 Supervised Research in City and Regional Planning 1 - 2 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Regular meeting to be arranged with faculty sponsor.**Prerequisites:** Graduate standing in department and consent of adviser and sponsor.

Supervised experience on a research project in urban or regional planning. Any combination of 295, 297 courses may be taken for a total of 6 units maximum towards the M.C.P. degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 297 Supervised Field Study in City and Regional Planning 1 - 2 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Regular meeting to be arranged with faculty sponsor.**Prerequisites:** Graduate standing in department and consent of adviser and sponsor.

Supervised experience relative to specific aspects of practice in city or regional planning. Any combination of 295, 297 courses may be taken for a total of 6 units maximum toward the M.C.P. degree. A maximum of 3 units of 297 can be used for degree requirements.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 298 Group Studies 1 - 3 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 3 hour of Independent study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Topics to be announced at beginning of each semester. No more than 3 units may be taken in one section.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 299 Individual Study or Research 1 - 12 Units**Department:** City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Regular meeting to be arranged with faculty sponsor.**Prerequisites:** Consent of instructor and graduate standing.

Individual study or research program; must be worked out with instructor in advance of signing up for credits. Maximum number of individual study units (295, 297, 299) counted toward the M.C.P. degree credits is 9.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN N299 Individual Study or Research 1 - 6 Units**Department:** City and Regional Planning**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Regular meeting to be arranged with faculty sponsor.**Prerequisites:** Consent of instructor and graduate standing.

Individual study or research program; must be worked out with instructor in advance of signing up for credits. Maximum number of individual study credits counted toward the MCP degree is 9.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CY PLAN 375 Supervised Teaching in City and Regional Planning 1 - 2 Units**Department:** City and Regional Planning**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Regular meeting to be arranged with faculty sponsor.**Prerequisites:** Graduate standing in department and appointment as a graduate student instructor.

Supervised teaching experience in courses related to planning. Course may not be applied toward the M.C.P. degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as City and Regional Planning 300.

CY PLAN 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** City and Regional Planning**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Regular meeting to be arranged.**Prerequisites:** Ph.D. students only.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. May not be used for unit or residence requirements for the doctoral degree. Students may earn 1-8 units of 602 per semester or 1-4 units per summer session. No student may accumulate more than a total of 16 units of 602.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Civil and Environmental Engineering (CIV ENG)

CIV ENG 11 Engineered Systems and Sustainability 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Chemistry 1A, Mathematics 1A.

An introduction to key engineered systems (e.g., energy, water supply, buildings, transportation) and their environmental impacts. Basic principles of environmental science needed to understand natural processes as they are influenced by human activities. Overview of concepts and methods of sustainability analysis. Critical evaluation of engineering approaches to address sustainability.

Final exam required. Formerly known as Engineering 11. Instructors: Harley, Horvath, Hunt, Nelson

CIV ENG 24 Freshman Seminars 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CIV ENG C30/MEC ENG C85 Introduction to Solid Mechanics 3 Units**Department:** Civil and Environmental Engineering; Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week. 4.5 hours of lecture and 1.5 hours of discussion per week for 10 weeks. 7.5 hours of lecture and 2.5 hours of discussion per week for 6 weeks.

Prerequisites: Mathematics 53 and 54 (may be taken concurrently); Physics 7A.

A review of equilibrium for particles and rigid bodies. Application to truss structures. The concepts of deformation, strain, and stress. Equilibrium equations for a continuum. Elements of the theory of linear elasticity. The states of plane stress and plane strain. Solution of elementary elasticity problems (beam bending, torsion of circular bars). Euler buckling in elastic beams.

Final exam required. Instructors: Armero, Papadopoulos, Zohdi

CIV ENG 60 Structure and Properties of Civil Engineering Materials 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Introduction to structure and properties of civil engineering materials such as asphalt, cements, concrete, geological materials (e.g. soil and rocks), steel, polymers, and wood. The properties range from elastic, plastic and fracture properties to porosity and thermal and environmental responses. Laboratory tests include evaluation of behavior of these materials under a wide range of conditions.

Students may receive two units of credit for 60 after taking Engineering 45. One unit of a deficient grade may be removed in Engineering 45 with 60. Course may be repeated for credit when topic changes. Final exam required. Instructors: Monteiro, Ostertag

CIV ENG 70 Engineering Geology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of laboratory per week. 6 hours of lecture and 4 hours of laboratory per week for 8 weeks.**Prerequisites:** Chemistry 1A (may be taken concurrently).

Principles of physical and structural geology; the influence of geological factors on engineering works and the environment. Field trip.

Final exam required. Instructors: Glaser, Sitar

CIV ENG 92 Introduction to Civil and Environmental Engineering 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

A course designed to familiarize the entering student with the nature and scope of civil and environmental engineering and its component specialty areas.

Final exam not required.

CIV ENG 93 Engineering Data Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 5 hours of Lecture and 7.5 hours of Laboratory per week for 6 weeks.

Prerequisites: Engineering 7.

Application of the concepts and methods of probability theory and statistical inference to CEE problems and data; graphical data analysis and sampling; elements of set theory; elements of probability theory; random variables and expectation; simulation; statistical inference. Applications to various CEE problems and real data will be developed by use of MATLAB and existing codes. The course also introduces the student to various domains of uncertainty analysis in CEE.

Students will receive no credit after taking Statistics 25. Final exam required. Instructors: Der Kiureghian, Hansen, Madanat, Rubin

CIV ENG 98 Supervised Group Study and Research 1 - 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Directed group study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Supervised group study and research by lower division students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CIV ENG 99 Supervised Independent Study and Research 1 - 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks.**Prerequisites:** Freshman or sophomore standing and consent of instructor. Minimum grade point average of 3.3 required. Supervised independent study by lower division students. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.**CIV ENG 100 Elementary Fluid Mechanics 4 Units****Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of recitation per week, plus individual laboratory experiments.**Prerequisites:** Physics 7A and Mathematics 53 required; concurrent enrollment in Engineering 7, Civil and Environmental Engineering C30/ Mechanical Engineering C85 recommended.

Fluid statics and dynamics, including laboratory experiments with technical reports. Fundamentals: integral and differential formulations of the conservation laws are solved in special cases such as boundary layers and pipe flow. Flow visualization and computation techniques are introduced using Matlab. Empirical equations are used for turbulent flows, drag, pumps, and open channels. Principles of empirical equations are also discussed: dimensional analysis, regression, and uncertainty. Final exam required. Instructors: Chow, Stacey, Variano

CIV ENG 101 Fluid Mechanics of Rivers, Streams, and Wetlands 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100 or Mechanical Engineering 106 or consent of instructor.

Analysis of steady and unsteady open-channel flow and application to rivers and streams. Examination of mixing and transport in rivers and streams. Effects of channel complexity. Floodplain dynamics and flow routing. Interaction of vegetation and fluid flows. Freshwater and tidal marshes. Sediment transport in rivers, streams, and wetlands. Implications for freshwater ecosystem function. Final exam required. Instructor: Variano

CIV ENG 103 Introduction to Hydrology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 2 hours of computer laboratory every 3 weeks.**Prerequisites:** 93 and 100.

Course addresses principles and practical aspects of hydrology. Topics in introduction to hydrology include hydrologic cycle, precipitation, evaporation, infiltration, snow and snowmelt, and streamflow; introduction to geomorphology, GIS (Geographic Information Systems) applications, theory of unit hydrograph, frequency analysis, flood routing through reservoirs and rivers; introduction to rainfall-runoff analyses, watershed modeling, urban hydrology, and introduction to groundwater hydrology. Final exam required. Instructor: Thompson

CIV ENG 105 Environmental Fluid Mechanics Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 100 or equivalent; two core courses, upper-division standing in science and engineering. Hands-on design course in applied fluid mechanics. Course goes beyond basic examples of fluid flow to include detailed discussion of real-world environmental engineering. Class team projects are used to explore real fluid mechanics, e.g., engineering for air quality or design for sea level rise mitigation. Specific project topics vary by offering and include interdisciplinary design issues from structural, geotechnical, environmental and/or transportation engineering. Final exam not required. Instructors: Chow, Stacey, Variano**CIV ENG C106/EPS C180/ESPM C180 Air Pollution 3 Units****Department:** Civil and Environmental Engineering; Earth and Planetary Science; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Chemistry 1A-1B, Physics 8A or consent of instructor. This course is an introduction to air pollution and the chemistry of earth's atmosphere. We will focus on the fundamental natural processes controlling trace gas and aerosol concentrations in the atmosphere, and how anthropogenic activity has affected those processes at the local, regional, and global scales. Specific topics include stratospheric ozone depletion, increasing concentrations of green house gasses, smog, and changes in the oxidation capacity of the troposphere. Final exam required. Instructor: Goldstein

CIV ENG 107 Climate Change Mitigation 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Upper division or graduate standing in engineering or physical science, or consent of instructor.

Assessment of technological options for responding to climate change.

Overview of climate-change science; sources, sinks, and atmospheric dynamics of greenhouse gases. Current systems for energy supply and use. Renewable energy resources, transport, storage, and transformation technologies. Technological opportunities for improving end-use energy efficiency. Recovery, sequestration, and disposal of greenhouse gases. Societal context for implementing engineered responses.

Final exam required. Instructor: Nazaroff

CIV ENG 108 Air Pollutant Emissions and Control 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 111 or consent of instructor.

Analysis of air pollution sources and methods for controlling emissions, with a focus on transportation-related air pollution. Combustion system fundamentals and pollutant formation mechanisms. Control of emissions from spark-ignition and compression-ignition engines.

Final exam required. Instructor: Harley

CIV ENG 111 Environmental Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Upper division standing in engineering or physical sciences, or consent of instructor.

Quantitative overview of air and water contaminants and their engineering control. Elementary environmental chemistry and transport. Reactor models. Applications of fundamentals to selected current issues in water quality engineering, air quality engineering, air quality engineering, and hazardous waste management.

Final exam required. Instructors: Alvarez-Cohen, Nazaroff, Nelson, Sedlak

CIV ENG 111L Water and Air Quality Laboratory 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 3 hours of laboratory per week.**Prerequisites:** Civil Engineering 111 (may be taken concurrently).

This laboratory course is designed to accompany the lecture topics in Civil Engineering 111. Each laboratory activity will provide an opportunity to understand key concepts in water and air quality through hands-on experimentation. Laboratory topics include phase partitioning, acid/base reactions, redox reactions, biochemical oxygen demand, absorption, gas transfer, reactor hydraulics, particle destabilization, disinfection, and combustion emissions.

Final exam required. Instructors: Alvarez-Cohen, Nazaroff, Nelson, Sedlak

CIV ENG 112 Environmental Engineering Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 100, 111.

Engineering design and project management of environmental systems.

Students will complete a design project focusing on pollution control in a selected environmental system. Lectures and project activities will address process design, economic optimization, legal and institutional constraints on design, and project management. Additional components of design (e.g., hydraulics, engineering sustainability, plant structures) will be included.

Final exam not required. Instructor: Hermanowicz

CIV ENG 113N Ecological Engineering for Water Quality Improvement 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 111 or consent of instructor.

Ecological engineering approaches for treating contaminated water using natural processes to improve water quality. Emphasis on combining basic science and engineering approaches to understand the fundamental processes that govern the effectiveness of complex natural treatment systems. Applications include constructed wetlands, waste stabilization ponds, stormwater bioretention, decentralized wastewater management, ecological sanitation. Laboratory sessions will consist of design and monitoring of laboratory and full-scale natural treatment systems, including a range of water quality measurements.

Final exam required. Instructor: Nelson

CIV ENG 114 Environmental Microbiology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Chemistry 1A-1B.

The scope of modern environmental engineering requires a fundamental knowledge of microbial processes with specific application to water, wastewater and the environmental fate of pollutants. This course will cover basic microbial physiology, biochemistry, metabolism, growth energetics and kinetics, ecology, pathogenicity, and genetics for application to both engineered and natural environmental systems. Final exam required. Instructor: Alvarez-Cohen

CIV ENG 115 Water Chemistry 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Upper division or graduate standing in engineering or physical science, or consent of instructor.

The application of principles of inorganic, physical, and dilute solution equilibrium chemistry to aquatic systems, both in the aquatic environment and in water and wastewater treatment processes.

Final exam required. Instructor: Sedlak

CIV ENG C116/ESPM C128 Chemistry of Soils 3 Units**Department:** Civil and Environmental Engineering; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil Engineering 111 or equivalent.

Chemical mechanisms of reactions controlling the fate and mobility of nutrients and pollutants in soils. Role of soil minerals and humus in geochemical pathways of nutrient bioavailability and pollutant detoxification. Chemical modeling of nutrient and pollutant soil chemistry. Applications to soil acidity and salinity.

Final exam required. Instructor: Sposito

CIV ENG 120 Structural Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5 hours of Lecture and 7.5 hours of Laboratory per week for 6 weeks.**Prerequisites:** Civil and Environmental Engineering C30/Mechanical Engineering C85 required; Civil and Environmental Engineering 60 (maybe taken concurrently).

Introduction to design and analysis of structural systems. Loads and load placement. Proportioning of structural members in steel, reinforced concrete, and timber. Structural analysis theory. Hand and computer analysis methods, validation of results from computer analysis. Applications, including bridges, building frames, and long-span cable structures.

Final exam required. Instructor: Moehle

CIV ENG 121 Advanced Structural Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 120

Theory and application of structural analysis. Stiffness and flexibility methods, with emphasis on the direct stiffness method. Equilibrium and compatibility. Virtual work. Response of linear and simple nonlinear structures to static loads. Use of computer programs for structural analysis. Modeling of two- and three-dimensional structures. Verification and interpretation of structural response.

Final exam required. Instructor: Filippou

CIV ENG 122L Structural Steel Design Project 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 122N.

Introduction to one or more comprehensive structural design problems. Design teams will conceive structural system; determine design loads; conduct preliminary and final design of structure and its foundation; prepare construction cost estimate; prepare final report containing project description, design criteria, cost estimate, structural drawings, and supporting calculations; and make "client" presentations as required. Students will receive no credit for Civil and Environmental Engineering 122L after taking Civil and Environmental Engineering 122 or 123L. Final exam not required. Instructors: Astaneh, Stojadinovic

CIV ENG 122N Design of Steel Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 120 or equivalent.

Introduction to materials and methods of steel construction; behavior and design of tension members, compression members, flexural members and beam-columns; design of welds, bolts, shear connections and moment connections; design of spread footings or other foundation elements, introduction to design of earthquake-resistant steel structures including concentrically braced frames and moment frames.

Final exam required. Formerly known as Civil and Environmental Engineering 122. Instructors: Astaneh, Stojadinovic

CIV ENG 123L Structural Concrete Design Project 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 123N.

Introduction to one or more comprehensive structural design problems. Design teams will conceive structural system; determine design loads; conduct preliminary and final design of structure and its foundation; prepare construction cost estimate; prepare final report containing project description, design criteria, cost estimate, structural drawings, and supporting calculations; make "client" presentations as required.

Students will receive no credit for Civil and Environmental Engineering 123L after taking Civil and Environmental Engineering 122L or 123. Final exam not required. Instructors: Mahin, Moehle, Mosalam, Panagiotou

CIV ENG 123N Design of Reinforced Concrete Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120 or equivalent.

Introduction to materials and methods of reinforced concrete construction; behavior and design of reinforced concrete beams and one-way slabs considering deflections, flexure, shear, and anchorage; behavior and design of columns; design of spread footings or other foundation elements; design of earthquake-resistant structures; introduction to prestressed concrete.

Final exam required. Formerly known as Civil and Environmental Engineering 123. Instructors: Mahin, Moehle, Mosalam, Panagiotou

CIV ENG 124 Structural Design in Timber 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 120

Characteristics and properties of wood as a structural material; design and detailing of structural elements and entire structures of wood. Topics include allowable stresses, design and detailing of solid sawn and glulam beams and columns, nailed and bolted connections, plywood diaphragms and shear walls. Case studies.

Final exam required. Instructors: Mahin, Filippou

CIV ENG 130N Mechanics of Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 3 hours of computer laboratory per week. 4 hours of lecture and 6 hours of computer laboratory per week for 8 weeks.

Prerequisites: C30/Mechanical Engineering C85, and either 60 or Engineering 45.

Elastic and plastic stress and deformation analysis of bars, shafts, beams, and columns; energy and variational methods; plastic analysis of structures; stability analysis of structures; computer-aided mathematical techniques for solution of engineering problems and modular computer programming methods.

Students will receive no credit for 130N after taking 130. Final exam required. Instructors: Filippou, Govindjee, Li

CIV ENG C133/MEC ENG C180 Engineering Analysis Using the Finite Element Method 3 Units**Department:** Civil and Environmental Engineering; Mechanical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Prerequisites: Engineering 7 or 77 or Computer Science 61A; Mathematics 53 and 54; senior status in engineering or applied science.

This is an introductory course on the finite element method and is intended for seniors in engineering and applied science disciplines. The course covers the basic topics of finite element technology, including domain discretization, polynomial interpolation, application of boundary conditions, assembly of global arrays, and solution of the resulting algebraic systems. Finite element formulations for several important field equations are introduced using both direct and integral approaches. Particular emphasis is placed on computer simulation and analysis of realistic engineering problems from solid and fluid mechanics, heat transfer, and electromagnetism. The course uses FEMLAB, a multiphysics MATLAB-based finite element program that possesses a wide array of modeling capabilities and is ideally suited for instruction. Assignments will involve both paper- and computer-based exercises. Computer-based assignments will emphasize the practical aspects of finite element model construction and analysis.

Final exam required.

CIV ENG 140 Failure Mechanisms in Civil Engineering Materials 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60

The failure mechanisms in civil engineering materials (cement-based materials, metallic- and polymer-based materials) are associated with processing, microstructure, stress states, and environmental changes. Fracture mechanics of brittle, quasi-brittle, and ductile materials; cracking processes in monolithic, particulate, and fiber reinforced materials; examples of ductile/brittle failure transitions in civil engineering structures; retrofitting of existing structures; non-destructive techniques for damage detection.

Final exam required. Instructor: Ostertag

CIV ENG 153 Transportation Facility Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 155

A capstone class with the objective to design transportation facilities based on operational capacity, site constraints, and environmental design considerations. Emphasis on airports, including landside and airside elements, and environmental assessment and mitigation techniques.

Final exam required. Instructor: Hansen

CIV ENG 155 Transportation Systems Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Sophomore standing in engineering or consent of instructor.

Operation, management, control, design, and evaluation of passenger and freight transportation systems. Their economic role. Demand analysis. Overall logistical structure. Performance models and modeling techniques: time-space diagrams, queuing theory, network analysis, and simulation. Design of control strategies for simple systems. Feedback effects. Paradoxes. Transportation impact modeling; noise; air pollution. Multi-criteria evaluation and decision making. Financing and politics. Final exam required. Instructors: Cassidy, Daganzo, Hansen, Kanafani, Madanat

CIV ENG 156 Infrastructure Planning and Management 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematics 1A-1B and Civil Engineering 93 (or equivalent).

This course focuses on physical infrastructure systems that support society, including transportation, communications, power, water, and waste. These are complex, large-scale systems that must be planned and managed over a long-term horizon. Economics-based, analytical tools are covered, including topics of supply, demand, and evaluation. Problem sets, case studies, and a class project provide for hands-on experience with a range of infrastructure systems, issues, and methods of analysis. Final exam required. Instructor: Walker

CIV ENG 165 Concrete Materials and Construction 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 60

Consideration of the broad aspects of use of concrete in construction; technical requirements; selection of materials; control of quality; types of concretes and construction methods used for buildings, highways, airfields, bridges, dams and other hydraulic structures. Laboratory demonstration on concrete testing and evaluation methods, field trip to construction sites. Group and individual projects on concrete construction. Final exam required. Instructor: Monteiro

CIV ENG 166 Construction Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory or fieldtrip per week.**Prerequisites:** Upper division standing, 167 recommended.

Introduction to construction engineering and field operations. The construction industry, construction methods and practice, productivity improvement, equipment selection, site layout formwork, erection of steel and concrete structures. Labs demonstrate the concepts covered. Field trips to local construction projects.

Final exam required. Instructor: Horvath

CIV ENG 167 Engineering Project Management 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 93 (can be taken concurrently) or equivalent.

Principles of economics, decision making, and law applied to company and project management. Business ownership, liability and insurance, cash flow analysis, and financial management. Project life-cycle, design-construction interface, contracts, estimating, scheduling, cost control. Students will receive 2 units of credit for 167 after taking Engineering 120. Final exam required. Instructors: Ibbs, Tommelein

CIV ENG 169C Visualization and Simulation for Engineering and Management 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture per week for 10 weeks.**Prerequisites:** Junior, senior, or graduate standing; 169A recommended before taking 169B or 169C.

A series of course modules on computer methods and tools for engineering and management, emphasizing the systems approach. Each 1 unit module will run for a segment of the semester, and will cover theory and hands-on laboratory exercises. Students may take 1-3 modules per semester. Representation and modeling, visualization, use of different graphic formats, and simulation in engineering and management research and practice. The course is a combination of lectures, readings, hands-on exercises, homework assignments, and a project. The project is an opportunity for students to develop a web-based application suitable to their own interests.

Final exam not required. Instructors: Horvath, Tommelein

CIV ENG 171 Introduction to Geological Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 70 or an introductory course in physical geology and upper division standing in Engineering.

Geological and geophysical exploration for structures in rock; properties and behavior of rock masses; rock slope stability; geological engineering of underground openings; evaluation of rock foundations, including dams. No final examination.

Final exam not required. Instructor: Glaser

CIV ENG 173 Groundwater and Seepage 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion/laboratory per week.**Prerequisites:** Senior standing in engineering or science, 100 recommended.

Introduction to principles of groundwater flow, including steady and transient flow through porous media, numerical analysis, pumping tests, groundwater geology, contaminant transport, and design of waste containment systems.

Final exam required. Instructors: Rubin, Sitar

CIV ENG 175 Geotechnical and Geoenvironmental Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 3 hours of laboratory and 1 hour of optional discussion per week.**Prerequisites:** Civil and Environmental Engineering C30/Mechanical Engineering C85, Civil and Environmental Engineering 100 (may be taken concurrently), Civil and Environmental Engineering 70 recommended.

Soil formation and identification. Engineering properties of soils. Fundamental aspects of soil characterization and response, including soil mineralogy, soil-water movement, effective stress, consolidation, soil strength, and soil compaction. Use of soils and geosynthetic materials in geotechnical and geoenvironmental applications. Introduction to site investigation techniques. Laboratory testing and evaluation of soil composition and properties.

Final exam required. Instructors: Bray, Pestana, Seed, Sitar

CIV ENG 176 Environmental Geotechnics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 175 required (or consent of instructor). 111 and 173 recommended.

Principles of environmental geotechnics applied to waste encapsulation and remediation of contaminated sites. Characterization of soils and wastes, engineering properties of soils and geosynthetic materials and their use in typical applications. Fate and transport of contaminants. Fundamental principles and practices in groundwater remediation. Application of environmental geotechnics in the design and construction of waste containment systems. Discussion of soil remediation and emerging technologies.

Final exam required. Instructors: Pestana, Sitar

CIV ENG 177 Foundation Engineering Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** CE 175 required, CE 120 recommended

Principles of foundation engineering. Shear strength of soil and theories related to the analysis and design of shallow and deep foundations, and retaining structures. Structural design of foundation elements; piles, pile caps, and retaining structures. The course has a group project that incorporates both geotechnical and structural components of different foundation elements.

Final exam not required. Instructors: Bray, Seed

CIV ENG C178/EPS C178 Applied Geophysics 3 Units**Department:** Civil and Environmental Engineering; Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory/field exercise per week.

The theory and practice of geophysical methods for determining the subsurface distribution of physical rock and soil properties. Measurements of gravity and magnetic fields, electrical and electromagnetic fields, and seismic velocity are interpreted to map the subsurface distribution of density, magnetic susceptibility, electrical conductivity, and mechanical properties.

Final exam required. Instructor: Rector

CIV ENG 179 Pavement Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** C30/Mechanical Engineering C85 required.

A first course in pavement engineering for highways and airfields, including failure mechanisms, design approaches, new pavement and rehabilitation design, effects of materials and construction on pavement performance. Emphasis on understanding of fundamental issues of pavement engineering, approaches to evaluation and design for new pavements and maintenance and rehabilitation design, practical lab experience with asphalt concrete materials and tools used for evaluation and design of pavements, understanding of construction issues, and effects on pavement performance.

Final exam required. Formerly known as 179N.

CIV ENG 180 Life-Cycle Design and Construction 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering 167.

Course encompasses two design aspects of a civil and environmental engineering system: 1) Design of whole system, component, or life-cycle phase, subject to engineering standards and constraints, and 2) production system design (e.g., cost estimation and control, scheduling, commercial and legal terms, site layout design). Students form teams to address real-life projects and prepare project documentation and a final presentation.

Final exam not required. Instructor: Horvath

CIV ENG 186 Design of Cyber-Physical Systems 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** 191

Design and prototype of large-scale technology intensive systems. Design project incorporating infrastructure systems and areas such as transportation and hydrology; for example, watershed sensor networks, robot networks for environmental management, mobile Internet monitoring, open societal scale systems, crowd-sources applications, traffic management. Design of sensing and control systems, prototyping systems, and measures of system performance. Modeling, software and hardware implementation.

Final exam not required. Instructors: Bayen, Glaser, Sengupta

CIV ENG 191 Civil and Environmental Engineering Systems Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of computer laboratory per week.**Prerequisites:** 93, Engineering 7 or 77.

This course is organized around five real-world large-scale CEE systems problems. The problems provide the motivation for the study of quantitative tools that are used for planning or managing these systems. The problems include design of a public transportation system for an urban area, resource allocation for the maintenance of a water supply system, development of repair and replacement policies for reinforced concrete bridge decks, traffic signal control for an arterial street, scheduling in a large-scale construction project.

Final exam required. Formerly known as 152. Instructors: Bayen, Madanat, Sengupta

CIV ENG 192 The Art and Science of Civil and Environmental Engineering Practice 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** Senior standing in civil and environmental engineering.

A series of lectures by distinguished professionals designed to provide an appreciation of the role of science, technology, and the needs of society in conceiving projects, balancing the interplay of conflicting demands, and utilizing a variety of disciplines to produce unified and efficient systems. Final exam not required.

CIV ENG 193 Engineering Risk Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division standing.

Applications of probability theory and statistics in planning, analysis, and design of civil engineering systems. Development of probabilistic models for risk and reliability evaluation. Occurrence models; extreme value distributions. Analysis of uncertainties. Introduction to Bayesian statistical decision theory and its application in engineering decision-making. Final exam required. Instructor: Der Kiureghian

CIV ENG H194 Honors Undergraduate Research 3 - 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 4 hours of Independent study per week for 15 weeks. 6 to 7.5 hours of Independent study per week for 8 weeks. 7.5 to 10 hours of Independent study per week for 6 weeks.**Prerequisites:** Upper division technical GPA 3.3, consent of instructor and faculty advisor.

Supervised research. Students who have completed 3 or more upper division courses may pursue original research under the direction of one of the members of the staff. A final report or presentation is required. A maximum of 4 units of H194 may be used to fulfill the technical elective requirement.

Course may be repeated once for credit only. Course may be repeated for a maximum of 8 units. Final exam required.

CIV ENG 197 Field Studies in Civil Engineering 1 - 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Fieldwork per week for 15 weeks. 1.5 to 6 hours of Fieldwork per week for 10 weeks. 1.5 to 7.5 hours of Fieldwork per week for 8 weeks. 2.5 to 10 hours of Fieldwork per week for 6 weeks. Supervised experience in off-campus companies relevant to specific aspects and applications of civil engineering. Written report required at the end of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.**Prerequisites:** Senior standing in engineering.

Group study of a selected topic or topics in civil engineering.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CIV ENG 199 Supervised Independent Study 1 - 4 Units**Department:** Civil and Environmental Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 1 to 4 hours of independent study per week. 1 to 4 hours of independent study per week for 10 weeks. 1 to 4 hours of independent study per week for 8 weeks. 1 to 5 hours of independent study per week for 6 weeks.

Prerequisites: Consent of instructor and major adviser. Enrollment is restricted; see the Course Number Guide for details.

Supervised independent study.

Course may be repeated for credit when topic changes. Course may be repeated for a maximum of four units per semester. Final exam not required.

CIV ENG 200A Environmental Fluid Mechanics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100; Mathematics 53, 54 or equivalents.

Fluid mechanics of the natural water and air environment. Flux equation analyses; unsteady free surface flow; stratified flow; Navier-Stokes equations; boundary layers, jets and plumes; turbulence, Reynolds equations, turbulence modeling; mixing, diffusion, dispersion, and contaminant transport; geophysical flows in atmosphere and ocean; steady and unsteady flow in porous media. Application to environmentally sensitive flows in surface and groundwater and in lower atmosphere.

Students will receive no credit for 200A after taking 105 before fall 1999.

Final exam required. Formerly known as 105. Instructors: Chow, Stacey

CIV ENG 200B Numerical Methods for Environmental Flow Modeling 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 200A or consent of instructor.

Introduction to numerical methods with application to environmental flows (atmospheric, surface water, and subsurface flows). Scalar advection/diffusion equations used to study finite difference schemes, numerical errors and stability. Methods introduced for solving Navier-Stokes equations and for turbulence modeling with Reynolds-averaging and large-eddy simulation. Basic programming skills required for hands-on exercises.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 204. Instructor: Chow

CIV ENG 200C Transport and Mixing in the Environment 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100, Math 53 and 54, or equivalent.

Application of fluid mechanics to transport and mixing in the environment. Fundamentals of turbulence, turbulent diffusion, and shear dispersion in steady and oscillatory flows and the effects of stratification. Application to rivers, wetlands, lakes, estuaries, the coastal ocean, and the lower atmosphere.

Final exam not required. Formerly known as 209A. Instructor: Stacey

CIV ENG 202A Vadose Zone Hydrology 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 173 or equivalent.

Course addresses fundamental and practical issues in flow and transport phenomena in the vadose zone, which is the geologic media between the land surface and the regional water table. A theoretical framework for modeling these phenomena will be presented, followed by applications in the areas of ecology, drainage and irrigation, and contaminant transport. Hands-on applications using numerical modeling and analysis of real-life problems and field experiments will be emphasized.

Students will receive no credit for 202A after taking 202 before fall 1998.

Final exam required. Formerly known as 202. Instructor: Rubin

CIV ENG 203A Graduate Hydrology 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Term course may be offered: Fall

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Hydrology is presented and analyzed in the context of a continuum extending from the atmosphere to the land surface to the subsurface to free water bodies. In this class, we develop the theoretical frameworks required to address problems that both lie within individual components and span these traditionally separate environments. Starting from a development of the fundamental dynamics of fluid motion, we examine applications within the subsurface, the atmosphere and surface water systems.

Final exam required. Instructors: Thompson, Rubin

CIV ENG 203N Surface Water Hydrology 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 103 or equivalent, or consent of instructor.

Course addresses topics of surface water hydrology, such as processes of water in the atmosphere, over land surface, and within soil; advanced representation and models for infiltration and evapotranspiration processes; partition of water and energy budgets at the land surface; snow and snowmelt processes; applications of remote sensing; flood and drought, and issues related to advanced hydrological modeling. Students will address practical problems and will learn how to use the current operational hydrologic forecasting model, and build hydrological models. Final exam not required. Formerly known as 203.

CIV ENG 205B Margins of Quality for Engineered Systems 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 125, 193 or equivalents and senior design experience.

Processes and procedures to define and determine the demands and capacities of the structures and hardware elements of engineered systems during their life-cycles: margins of quality. The objective of this course is to provide students with the knowledge and skills to define and evaluate system demands, capacities, and reliability targets to be used in design, requalification, construction, operation, maintenance, and decommissioning of engineered systems.

Final exam not required. Instructor: Bea

CIV ENG 209 Design for Sustainable Communities 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course provides conceptual and hands-on experience in design and implementation of innovative products or processes for improving the sustainability of resource-constrained communities (mostly poor ones in the developing countries). Teams of students will take on practical projects, with guidance from subject experts.

Final exam not required. Instructor: Gadgill

CIV ENG 210A Control of Water-Related Pathogens 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Basic course in microbiology recommended; graduate standing or consent of instructor.

Comprehensive strategies for the assessment and control of water-related human pathogens (disease-causing microorganisms). Transmission routes and life cycles of common and emerging organisms, conventional and new detection methods (based on molecular techniques), human and animal sources, fate and transport in the environment, treatment and disinfection, appropriate technology, regulatory approaches, water reuse. Final exam required. Instructor: Nelson

CIV ENG 211A Environmental Physical-Chemical Processes 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 111 or equivalent and course work in aquatic chemistry, or consent of instructor.

Fundamental concepts of physical-chemical processes that affect water quality in natural and engineered environmental systems. Focus is on developing a qualitative understanding of mechanisms as well as quantitative tools to describe, predict, and control the behavior of physical-chemical processes. Topics include reactor hydraulics and reaction kinetics, gas transfer, adsorption, particle characteristics, flocculation, gravitational separations, filtration, membranes, and disinfection.

Final exam required. Instructor: Nelson

CIV ENG 211B Environmental Biological Processes 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 111 or equivalent and course work in microbiology, or consent of instructor.

Fundamental concepts of biological processes that are important in natural and engineered environmental systems, especially those affecting water quality. Incorporates basic fundamentals of microbiology into a quantifiable engineering context to describe, predict, and control behavior of environmental biological systems. Topics include the stoichiometry, energetics and kinetics of microbial reactions, suspended and biofilm processes, carbon and nutrient cycling, and bioremediation applications. Final exam required. Instructor: Alvarez-Cohen

CIV ENG 213 Watersheds and Water Quality 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Overview of approaches used by engineers to preserve or improve water quality at the watershed scale. Characterization and modeling of nutrients, metals, and organic contaminants in watersheds. Application of ecosystem modification and pollutant trading to enhance water quality. The course emphasizes recent case studies and interdisciplinary approaches for solving water quality problems.

Students will receive no credit for 213 after taking 290C. Final exam not required. Instructor: Sedlak

CIV ENG 217 Environmental Chemical Kinetics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor; 115 or 214 or equivalent.

Kinetic aspects of chemical fate and transport in aquatic systems. Quantitative descriptions of the kinetics of intermedia transport and pollutant transformation by abiotic, photochemical, and biological reactions. Techniques for the estimation of environmental reaction rates. Development of models of pollutant behavior in complex natural systems. Final exam required. Instructor: Sedlak

CIV ENG 218A Air Quality Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing in engineering or consent of instructor.

Quantitative overview of the characterization and control of air pollution problems. Summary of fundamental chemical and physical processes governing pollutant behavior. Analysis of key elements of the air pollution system: sources and control techniques, atmospheric transformation, atmospheric transport, modeling, and air quality management.

Final exam required. Instructors: Nazaroff, Harley

CIV ENG 218B Atmospheric Aerosols 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Supplement per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor, Civil and Environmental Engineering 218A recommended.

Nature, behavior and significance of airborne particulate matter. Size distributions. Transport phenomena and deposition processes. Light scattering, visibility impairment, and climate consequences. Aerosol thermodynamics and kinetics of phase-change processes, including nucleation. Phase partitioning of semivolatile species. Coagulation. Atmospheric sources including primary and secondary particle formation. Loss mechanisms including wet and dry deposition. Technological controls.

Final exam required. Instructor: Nazaroff

CIV ENG 218C Air Pollution Modeling 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 218A.

Theory and practice of mathematical air quality modeling. Modeling atmospheric chemical transformation processes. Effects of uncertainty in model parameters on predictions. Review of atmospheric diffusion theory and boundary layer meteorology. Dispersion modeling. Combining chemistry and transport.

Final exam required. Instructor: Harley

CIV ENG 220 Structural Analysis Theory and Applications 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 121 or equivalent.

Theory and applications of modern structural analysis. Direct stiffness method. Matrix formulations. Virtual work principles. Numerical solution methods. Modeling and practical analysis of large frame structures. Elastoplastic analysis of frames. P-delta effects.

Final exam required. Instructor: Filippou

CIV ENG 221 Nonlinear Structural Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 220

Theory, modeling, and computation for analysis of structures with material and geometric nonlinearities. Sources of nonlinearity. Solution strategies for static and dynamic loads. Modeling of inelastic materials and members. P-delta and large deformation theory. Analysis of stability. Practical applications.

Final exam required. Instructor: Filippou

CIV ENG 222 Finite Element Methods 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** 220 or equivalent, 131 or 231.

Approximation theory for analysis of deformation and stress in solids.

Finite element formulations for frame, plane stress/strain, axisymmetric, torsion, and three-dimensional elastic problems. The isoparametric formulation and implementation. Plate and shell elements. Finite element modeling of structural systems.

Final exam required. Instructors: Filippou, Govindjee

CIV ENG 223 Earthquake Protective Systems 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 220, 225, or consent of instructor.

Conceptual basis for earthquake protective systems including seismic isolation and energy absorbing techniques. Design rules for seismic isolation, energy absorbing and self-centering systems. Characteristics of isolation bearings, frictional, metallic and energy absorbing devices, code provision for earthquake protective systems. Applications to new and existing structures.

Students will receive no credit for 223 after taking 290D. Final exam not required. Formerly known as 290D. Instructors: Mahin, Panagiotou

CIV ENG 225 Dynamics of Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 220 (may be taken concurrently) or equivalent.

Evaluation of deformations and forces in structures, idealized as single-degree of freedom or discrete-parameter multi-degree of freedom systems, due to dynamic forces. Evaluation of earthquake-induced deformations and forces in structures by linear response history analysis; estimation of maximum response by response spectrum analysis; effects of inelastic behavior. Laboratory demonstrations.

Final exam required. Instructor: Chopra

CIV ENG 226 Stochastic Structural Dynamics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 225

Introduction to the theory of probability and random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of single- and multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Time- and frequency-domain analyses; modal cross-correlations. Response to multi-support excitations. Level crossings, envelope process, first-excursion probability, and distributions of peaks and extremes. Introduction to nonlinear stochastic dynamic analysis. Applications in earthquake, wind, and ocean engineering.

Final exam required. Instructor: Der Kiureghian

CIV ENG 227 Earthquake-Resistant Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 220 and 225.

Design of structures to resist earthquakes and other dynamic excitations. Characterization of earthquakes for design. Development of design criteria for elastic and inelastic structural response. Seismic performance of various structural systems. Prediction of nonlinear seismic behavior. Basis for code design procedures. Preliminary design of steel and reinforced concrete structures. Evaluation of earthquake vulnerability of existing structures and rehabilitation of seismic deficiencies.

Final exam not required. Instructors: Mahin, Moehle

CIV ENG 228 Advanced Earthquake Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 225

Advanced topics in time-domain dynamic analysis of structures. Frequency-domain analysis of dynamic response; discrete Fourier transform methods. Earthquake analysis of structures including structural-foundation-soil interaction, and of structures interacting with fluids. Final exam required. Instructor: Chopra

CIV ENG 229 Structural System Reliability 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

Review of probability theory. Multivariate distribution models. Review of classical methods for characterization of systems and assessment of system reliability. Formulation of structural reliability for components and systems. Exact solutions for special cases. Computational reliability methods, including first- and second-order reliability methods (FORM and SORM), response surface, Monte Carlo simulation, and importance sampling. Bounds on system reliability. Reliability sensitivity and importance measures. Bayesian updating and reliability analysis under statistical and model uncertainties. Introductions to reliability-based optimal design, time- and space-variant reliability analysis, and finite-element reliability methods.

Final exam required. Instructor: Der Kiureghian

CIV ENG C231/MAT SCI C211 Mechanics of Solids 3 Units**Department:** Civil and Environmental Engineering; Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Mechanical response of materials: Simple tension in elastic, plastic and viscoelastic members. Continuum mechanics: The stress and strain tensors, equilibrium, compatibility. Three-dimensional elastic, plastic and viscoelastic problems. Thermal, transformation, and dealloying stresses. Applications: Plane problems, stress concentrations at defects, metal forming problems.

Students will receive no credit for 231 after taking 231A or 231B prior to Fall 1992. Final exam not required. Instructor: Govindjee

CIV ENG 232 Structural Mechanics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 231 or consent of instructor.

The goal of this course is to study the theories of structural mechanics within the framework of nonlinear continuum mechanics of solids.

Finite elasticity; invariance. Energy principles: principles of virtual and complementary virtual work; primary and mixed variational principles.

Theory of stability: Euler method; stability under follower loads. Classical theories of beams: planar, torsional, and lateral buckling. Plate theories.

Invariant theories of structural mechanics: directed continua; Cosserat theories of rods.

Final exam required. Instructor: Armero

CIV ENG 233 Computational Mechanics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Students will no credit for 233 after taking 233A prior to Fall 1993. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 222, or consent of instructor.

Computational methods for solution of problems in structural mechanics.

Finite-element methods for displacement and mixed variational solutions of problems in elasticity and inelasticity. Treatment of constraints arising from near incompressibility in solids, transverse shear effects in beams, plates, and shells, and/or contact between structures. Programming methods for finite-element implementations.

Final exam required. Instructor: Armero

CIV ENG 234 Computational Inelasticity 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 231 or Materials Science and Engineering 211 or Mechanical Engineering 185.

Computational methods applied to inelastic deformations of solids; 1, 2, and 3-D large and small-deformation continuum plasticity and viscoelasticity models and their algorithmic approximations; viscoplastic regularizations and softening; thermodynamics and its relationship to algorithmic stability; return mappings, closest-point projections and operator splits; application to metals, soils, concrete, and polymers and incorporation into finite element codes.

Final exam not required. Instructors: Armero, Govindjee

CIV ENG C235/MEC ENG C279 Statistical Mechanics of Elasticity 3 Units**Department:** Civil and Environmental Engineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to statistical mechanics for engineers interested in the constitutive behavior of matter with a particular interest in continua.

Systems of interest will be polymers and crystalline solids. Coverage includes introduction to statistical mechanics, ensembles, phase spaces, partitions functions, free energy, polymer chain statistics, polymer networks, harmonic and quasi-harmonic crystalline solids, limitations of classical methods and quantum mechanical influences.

Final exam not required. Instructors: Govindjee, Papadopoulos

CIV ENG C236/MAT SCI C214 Micromechanics 3 Units**Department:** Civil and Environmental Engineering; Materials Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Basic theories, analytical techniques, and mathematical foundations

of micromechanics. It includes 1. physical micromechanics, such as mathematical theory of dislocation, and cohesive fracture models; 2. micro-elasticity that includes Eshelby's eigenstrain theory, comparison variational principles, and micro-crack/micro-cavity based damage theory; 3. theoretical composite material that includes the main methodologies in evaluating overall material properties; 4. meso-plasticity that includes meso-damage theory, and the crystal plasticity; 5. homogenization theory for materials with periodic structures.

Final exam required. Instructors: Govindjee, Li

CIV ENG C237/NSE C237 Computational Nano-mechanics 3 Units**Department:** Civil and Environmental Engineering; Nanoscale Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered in even years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 1 hour of laboratory every 2 weeks.

Basic mathematics foundations, physical models, computational formulations and algorithms that are used in nanoscale simulations and modelings. They include (1) cohesive finite element methods and discontinuous Galerkin methods; (2) meshfree methods, partition of unity methods, and the eXtended finite element methods (X-FEM); (3) quasicontinuum method; (4) molecular dynamics; (5) multiscale simulations; (6) Boltzmann method.

Final exam not required. Instructor: Li

CIV ENG 240 Civil Engineering Materials 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** An undergraduate course in civil engineering materials. Microstructures of concrete, wood, and steel. Differences and similarities in response to loading and environmental effects on these materials, with emphasis on strength, elastic properties, creep, shrinkage, thermal stresses, and failure mechanisms.

Final exam not required. Instructors: Monteiro, Ostertag

CIV ENG 241 Concrete Technology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 165 or equivalent.

Properties of fresh and hardened concrete; strength, elastic behavior, creep, shrinkage, and durability to chemical and physical attacks. New concrete-making materials. Recent advancements in concrete technology: high-strength, high-workability, and high-performance concrete; fiber-reinforced concrete, and roller-compacted concrete.

Final exam required. Instructor: Monteiro

CIV ENG 244 Reinforced Concrete Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 123

Analysis and design of reinforced concrete elements and systems that are common in building and bridge structures, with an emphasis on seismic response and design; structural design methods; reinforced concrete materials; confined concrete; line elements under axial, flexural, and shear loadings; bond, anchorage, and development; seismic design principles; earthquake-resistant building frames, walls, diaphragms, and foundations; earthquake-resistant bridges.

Final exam required. Instructor: Moehle

CIV ENG 245 Behavior of Reinforced Concrete 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 123 and 220.

Advanced topics in reinforced concrete construction, including inelastic flexural behavior; applications of plastic analysis to reinforced concrete frames; behavior in shear and torsion; yield-line analysis of slabs; behavior under cyclic and reversed loading; seismic rehabilitation.

Final exam required. Instructor: Moehle

CIV ENG 246 Prestressed Concrete Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 244 or consent of instructor.

Behavior and design of statically determinate prestressed concrete structures under bending moment, shear, torsion and axial load effects. Design of continuous prestressed concrete beams, frames, slabs, and shells. Time-dependent effects and deflections of prestressed concrete structures. Applications to the design and construction of bridges and buildings.

Final exam required. Instructors: Filippou, Moehle

CIV ENG 247 Design of Steel and Composite Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 122 or equivalent.

Behavior and design of steel plate girders and shear walls. Design of bracings for stability. Design of members subjected to torsion. Design of composite beams, columns, and beam-columns. Behavior and design of shear, semi-rigid and moment connections. Concepts used in design of gusset plates and base plates. Selection and design of steel and composite systems.

Final exam required. Instructors: Astaneh, Mahin

CIV ENG 248 Behavior and Plastic Design of Steel Structures 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 122 or equivalent.

Topics related to inelastic behavior and plastic design of steel members and structures. Behavior of plastic hinge in members subjected to bending moment, axial force, shear, and their combinations. Collapse mechanisms of steel members and structures such as moment frames and braced systems. Inelastic cyclic behavior of steel components. Introduction to fracture and fatigue of steel components.

Final exam required. Instructors: Astaneh, Mahin, Stojadinovic

CIV ENG 249 Experimental Methods in Structural Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course covers the following topics: similitude laws, design of structural models, instrumentation and measurement techniques; use of computers to acquire data and control tests; pseudo-dynamic testing method; standard proof-testing for capacity assessment; non-destructive testing for condition assessment, and virtual experimentation. Upon completing this course, the students will be able to use experimental methods to investigate the behavior of a structure and to evaluate its condition.

Final exam not required. Instructors: Stojadinovic, Mahin

CIV ENG C250N/CY PLAN C217 Transportation Policy and Planning 3 Units**Department:** Civil and Environmental Engineering; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 213 or consent of instructor.

Policy issues in urban transportation planning; measuring the performance of transportation systems; the transportation policy formulation process; transportation finance, pricing, and subsidy issues; energy and air quality in transportation; specialized transportation for elderly and disabled people; innovations in transportation policy. Final exam required.

CIV ENG 251 Operation of Transportation Facilities 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

The management of vehicle flows and fleets. Traffic stream properties and their measurement. Theories of traffic flow. Capacity analysis and queueing. Flow control and fleet scheduling.

Final exam required. Instructors: Cassidy, Daganzo

CIV ENG 252 Systems Analysis in Transportation 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The systems approach and its application to transportation planning and engineering. Prediction of flows and level of service. Production functions and cost minimization. Utility theory and demand modeling. Transportation network analysis and equilibrium assignment. Decision analysis and evaluation of transportation projects.

Final exam required. Instructor: Madanat

CIV ENG 253 Intelligent Transportation Systems 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

The use of advanced surveillance, navigation, communication, and computer technology to monitor, analyze, and improve the performance of transportation systems. Enabling technologies. Application to monitoring, analysis, evaluation, and prediction of transportation system performance and behavior. Intervention strategies. Feasibility studies. Human factors and institutional issues. Case studies. In the laboratory, students carry out a term project under the supervision of an ITS researcher.

Final exam not required. Instructors: Sengupta, Skabardonis

CIV ENG 254 Transportation Economics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 252 or consent of instructor.

Application of micro- and macro-economic concepts to transportation systems. Urban and interregional travel demand analysis. Freight demand. Project and program evaluation. Social welfare theory. Analysis of social cost. Investment analysis and pricing theory. Economic impact analysis. Role of economic analysis in decision making.

Final exam not required. Instructors: Hansen, Kanafani

CIV ENG 255 Highway Traffic Operations 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 251 or consent of instructor.

Operational planning and management of the highway transportation system. The highway system is presented as a set of operating environments with each having its unique analytical framework. Major topics to be covered include policy and institutional issues, selection of strategies and tactics, evaluation of objectives and measures of effectiveness.

Final exam not required. Instructor: Cassidy

CIV ENG 256 Transportation Sustainability 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This multi-disciplinary course is intended to introduce students to the fundamentals of sustainable transportation, with an emphasis on: 1) current trends, climate and energy science, and the policy context; 2) methodological and analysis techniques; 3) vehicle technology, fuels, and intelligent transportation systems (ITS) solutions (supply side); and 4) land use, public transportation, and demand management.

Final exam not required. Instructor: Horvath

CIV ENG 258 Logistics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Vehicle routing. Transportation-inventory-production interrelationships, physical distribution networks, many-to-many networks (airlines, postal, etc.), the role of transshipments and terminals in logistic systems for the transportation of goods and passengers, public and private transportation system design. Relevant methodologies.

Final exam not required. Instructor: Daganzo

CIV ENG C258/IND ENG C253 Supply Chain and Logistics Management 3 Units**Department:** Civil and Environmental Engineering; Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

Supply chain analysis is the study of quantitative models that characterize various economic trade-offs in the supply chain. The field has made significant strides on both theoretical and practical fronts. On the theoretical front, supply chain analysis inspires new research ventures that blend operations research, game theory, and microeconomics.

These ventures result in an unprecedented amalgamation of prescriptive, descriptive, and predictive models characteristic of each subfield. On the practical front, supply chain analysis offers solid foundations for strategic positioning, policy setting, and decision making.

Final exam required. Instructor: Shen

CIV ENG 259 Public Transportation Systems 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of optional discussion per week.**Prerequisites:** 251, 252, and 262 (or equivalent course).

Analysis of mass transit systems, their operation, and management. Technology of transit vehicles and structures. Public policy and financing. Final exam not required. Instructors: Cassidy, Daganzo, Madanat

CIV ENG 260 Air Transportation 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Nature of civil aviation; structure of the airline industry; aircraft characteristics and performance; aircraft noise; navigation and air traffic control; airport planning and design; airline operations; aviation system planning.

Final exam not required. Instructors: Hansen, Kanafani

CIV ENG 261 Infrastructure Systems Management 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 252 or equivalent, 262 or equivalent.

Integrated treatment of quantitative and analytical methods for the management of infrastructure facilities over their life. The focus of the course is on statistical modeling and numerical optimization methods and their application to managing systems of civil infrastructure, with an emphasis on transportation facilities.

Final exam not required. Instructor: Madanat

CIV ENG 262 Analysis of Transportation Data 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Session per week for 15 weeks.**Prerequisites:** College calculus or consent of instructor.

Probabilistic models in transportation. The use of field data. Data gathering techniques, sources of errors, considerations of sample size. Experiment design for demand forecasting and transportation operations analysis. Analysis techniques.

Final exam not required. Instructors: Daganzo, Hansen, Madanat

CIV ENG 263 Operations of Transportation Terminals 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Session per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Characteristics of terminals on a mode by mode basis (sea ports, railyards, airports, parking lots, etc.). Methodologies used to study terminal operations and the management of congestion. (Chronographs, input-output diagrams, pricing, simulation). Studies illustrating the use of the methodologies for different modes.

Final exam not required. Instructor: Daganzo

CIV ENG 264 Behavioral Modeling for Engineering, Planning, and Policy Analysis 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262 or City and Regional Planning 204 or equivalent.

Many aspects of engineering, planning, and policy involve a human element, be it consumers, businesses, governments, or other organizations. Effective design and management requires understanding this human response. This course focuses on behavioral theories and the use of quantitative methods to analyze human response. A mix of theory and practical tools are covered, with applications drawn from infrastructure investment and use, urban growth and design, health, and sustainability.

Final exam required. Instructor: Walker

CIV ENG C265/PB HLTH C285 Traffic Safety and Injury Control 3 Units

Department: Civil and Environmental Engineering; Public Health

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

This course applies principles of engineering, behavioral science, and vision science to preventing traffic collisions and subsequent injury. A systematic approach to traffic safety will be presented in the course, and will include (1) human behavior, vehicle design, and roadway design as interacting approaches to preventing traffic crashes and (2) vehicle and roadway designs as approaches to preventing injury once a collision has occurred. Implications of intelligent transportation system concepts for traffic safety will be discussed throughout the course.

Final exam not required. Instructor: Ragland

CIV ENG 268A Lean Construction Concepts and Methods 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing in Civil and Environmental Engineering.

Inspired by the "lean" resolution in manufacturing, production management concepts and methods are woven into a lean project delivery system. Key concepts include flow, value, variability, and waste. Key methods include proecution system design, target costing, value stream mapping, and work flow control. Student teams apply concepts and methods in field studies of real project management processes and construction operations. The course includes a tour of the NUMMI Auto Plant in Fremont.

Final exam required. Formerly known as 290M. Instructor: Ballard

CIV ENG 268B Lean Construction and Supply Chain Management 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Principles and practices of "lean" production are applied to project delivery in the AEC industry. Case studies illustrate the concepts. Project delivery is viewed holistically with a focus on work structuring and supply chain management. Topics include systems dynamics, uncertainty, and variation; materials management; logistics; e-commerce; building information modeling (BIM); and integrated product and process design. Students use process simulation to assess performance of different system configurations and develop a case study applying concepts on a real project.

Final exam not required. Formerly known as 290N. Instructor: Tommelein

CIV ENG 268D Law for Engineers 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Engineering involves many parties with diverse interests. Legal principles form the framework for their interaction. Contracts for engineering services establish both risk allocation and reciprocal liabilities. Issues of contract formation, performance, breach, and remedy are covered in detail. Standard of care and professional negligence are emphasized during the discussion of tort law. Other topics include regulation, legal relationships, litigation, and alternative dispute resolution.

Final exam not required. Formerly known as 290L.

CIV ENG 268E Civil Systems and the Environment 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 166 or 167 or equivalent.

Methods and tools for economic and environmental analysis of civil engineering systems. Focus on construction, transportation, and operation, and maintenance of the built infrastructure. Life-cycle planning, design, costing, financing, and environmental assessment. Industrial ecology, design for environment, pollution prevention, external costs. Models and software tools for life-cycle economic and environmental inventory, impact, and improvement analysis of civil engineering systems. Final exam not required. Instructor: Horvath

CIV ENG 268H Advanced Project Planning and Control 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 167

Cost and time estimating and controlling techniques for projects. Evaluation of labor, material, equipment, and subcontract resources, scheduling techniques, earned value concepts. Measuring project percent complete. Contractual risk allocation. Project investment analysis techniques.

Final exam not required. Instructor: Ibbs

CIV ENG 268I Business Fundamentals for Engineers 3 Units

Department: Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 167 or equivalent.

This course will provide a broad survey of management practices critical to starting and managing a business in the engineering and construction industries. Topics that are covered include the entrepreneurial process; organizing and staffing; establishing and applying production control systems; means of protecting products and services from competitive threat; and financial management.

Final exam not required. Instructor: Ibbs

CIV ENG 268K Human and Organizational Factors: Quality and Reliability of Engineered Systems 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Graduate standing.

This course addresses human and organizational factors in development of desirable quality and reliability in engineered systems during their life-cycles (concept development through decommissioning). Applications tested and verified proactive, reactive, and interactive approaches are developed and illustrated.

Final exam not required. Formerly known as 290A. Instructor: Bea

CIV ENG 270 Advanced Geomechanics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 175 or equivalent.

Advanced treatment of topics in soil mechanics, including state of stress, consolidation and settlement analysis, shear strength of cohesionless and cohesive soils, and slope stability analysis.

Final exam required. Formerly known as 270A. Instructors: Bray, Pestana, Seed

CIV ENG 271 Sensors and Signal Interpretation 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

An introduction to the fundamentals of sensor usage and signal processing, and their application to civil systems. In particular, the course focuses on how basic classes of sensors work, and how to go about choosing the best of the new MEMS-based devices for an application.

The interpretation of the data focuses on analysis of transient signals, an area typically ignored in traditional signal processing courses. Goals include development of a critical understanding of the assumptions used in common sensing and analysis methods and their implications, strengths, and limitations.

Final exam not required. Instructor: Glaser

CIV ENG 272 Numerical Modelling in Geomechanics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.**Prerequisites:** Graduate standing or consent of instructor.

Constitutive laws for geotechnical materials including inelastic hyperbolic and elasto-plastic Cam-clay; soil behavior and critical-state soil mechanics; application of the finite element method to static analysis of earth structures; the Discontinuous Deformation Analysis method.

Final exam required. Instructors: Bray, Pestana

CIV ENG 273 Advanced GeoEngineering Testing and Design 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 270 or consent of instructor.

Field and laboratory testing of soils to support analysis and design of earth structures. In situ field testing, including SPT, CPT, and vane shear, undisturbed sampling of soil, and laboratory testing of soil, including advanced equipment, instrumentation, data acquisition, and measurement techniques. Consolidation and static and cyclic triaxial and simple shear testing under stress- and strain-control with pore pressure measurements. Preparation of an engineering report.

Final exam not required. Formerly known as 270L. Instructors: Bray, Pestana, Seed

CIV ENG 275 Geotechnical Earthquake Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 175 or equivalent, or consent of instructor.

Seismicity, influence of soil conditions on site response, seismic site response analysis, evaluation and modelling of dynamic soil properties, analysis of seismic soil-structure interaction, evaluation and mitigation of soil liquefaction and its consequences, seismic code provisions and practice, seismic earth pressures, seismic slope stability and deformation analysis, seismic safety of dams and embankments, seismic performance of pile foundations, and additional current topics.

Final exam required. Instructors: Bray, Seed

CIV ENG C276/EPS C276 Seismic Hazard Analysis and Design Ground Motions 3 Units**Department:** Civil and Environmental Engineering; Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Deterministic and probabilistic approaches for seismic hazard analysis. Separation of uncertainty into aleatory variability and epistemic uncertainty. Discussion of seismic source and ground motion characterization and hazard computation. Development of time histories for dynamic analyses of structures and seismic risk computation, including selection of ground motion parameters for estimating structural response, development of fragility curves, and methods for risk calculations.

Final exam required. Instructor: Abrahamson

CIV ENG 277 Advanced Foundation Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 270 or consent of instructor.

Advanced treatment of topics in foundation engineering, including earth pressure theories, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations.

Final exam required. Formerly known as 270B. Instructors: Bray, Pestana, Seed

CIV ENG 281 Engineering Geology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** A course in physical geology.

Influence of geologic origin and history on the engineering characteristics of soils and rocks. Application of geology in exploration, design, and construction of engineering works.

Final exam required. Instructor: Sitar

CIV ENG 285C Seismic Methods in Applied Geophysics 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 2 field trips.**Prerequisites:** C178 or equivalent (introductory course in applied geophysics); Engineering 7 or 77 or equivalent (introductory course in computer programming).

This course gives an overview of seismic methods used to image the subsurface. Acquisition, processing, and interpretation of seismic data are discussed, with application to petroleum production, environmental site characterization, earthquake engineering, and groundwater.

Students will receive no credit for 285C after taking Mineral Engineering 236 before Fall 2001. Final exam not required. Formerly known as Mineral Engineering 236. Instructor: Rector

CIV ENG 286 Digital Data Processing 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Considerations for digital signal processing and data analysis. Fourier Transforms, convolution and correlation. Discrete linear systems, Z transforms. Digital processing of seismic reflection data, deconvolution and migration. Introduction to 3-D seismic data.

Students will receive no credit for 286 after taking Mineral Engineering 240 taken before Fall 2001. Final exam not required. Formerly known as Mineral Engineering 240. Instructor: Rector

CIV ENG C289/EL ENG C249 Embedded System Design: Modeling, Analysis, and Synthesis 4 Units**Department:** Civil and Environmental Engineering; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks.

Principles of embedded system design. Focus on design methodologies and foundations. Platform-based design and communication-based design and their relationship with design time, re-use, and performance. Models of computation and their use in design capture, manipulation, verification, and synthesis. Mapping into architecture and systems platforms. Performance estimation. Scheduling and real-time requirements. Synchronous languages and time-triggered protocols to simplify the design process.

Final exam not required. Instructor: Sangiovanni-Vincentelli

CIV ENG 290 Advanced Special Topics in Civil and Environmental Engineering 1 - 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course covers current topics of interest in civil and environmental engineering. The course content may vary from semester to semester depending upon instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG C290U/CY PLAN C213 Transportation and Land Use Planning 3 Units**Department:** Civil and Environmental Engineering; City and Regional Planning**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 113A or equivalent.

Examination of the interactions between transportation and land use systems; historical perspectives on transportation; characteristics of travel and demand estimation; evaluation of system performance; location theory; models of transportation and urban structure; empirical evidence of transportation-land use impacts; case study examinations.

Final exam required. Instructors: Chatman, Cervero

CIV ENG 290F Advanced Topics in Seismology 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory course in seismology; 286 or Mineral Engineering 240.

Active areas of research in applied seismology. Subjects include: anisotropic and viscoelastic wave propagation, borehole seismology, crosswell seismology, including crosswell seismic tomography, vertical seismic profiling, reservoir monitoring including passive seismic methods. Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Mineral Engineering 290C. Instructor: Rector

CIV ENG 290I Civil Systems: Control and Information Management 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Mathematical methods and information technologies for controlling CEE systems. Emphasizes designing component organizations that interact with the world in real-time to control a large system. Methods applied to transportation operations, supply chains, and structures. Management of design complexity by hierarchical specification, systematic use of simulation and verification tools, semantics, polymorphism, information management services, and compilation from high-level design languages. Final exam not required. Instructor: Sengupta

CIV ENG 290J Advanced Topics in Geotechnical Engineering 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Advanced graduate standing in Geoengineering.

Advanced treatment of developing areas of geomechanics and geotechnical earthquake engineering, including the development of generalized nonlinear soil constitutive models, new developments in soil dynamics and geotechnical earthquake engineering, soil improvement, geosynthetics and earth structures, and case studies of geotechnical problems.

Final exam not required. Instructors: Bray, Pestana, Seed

CIV ENG 290T Advanced Topics in Transportation Theory 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Selected topics in the mathematical analysis of transportation systems.

Topics will vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Cassidy, Daganzo

CIV ENG C291F/EL ENG C291/MEC ENG C236 Control and Optimization of Distributed Parameters Systems 3 Units**Department:** Civil and Environmental Engineering; Electrical Engineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 77, Mathematics 54 (or equivalent), or consent of instructor.

Distributed systems and PDE models of physical phenomena (propagation of waves, network traffic, water distribution, fluid mechanics, electromagnetism, blood vessels, beams, road pavement, structures, etc.). Fundamental solution methods for PDEs: separation of variables, self-similar solutions, characteristics, numerical methods, spectral methods. Stability analysis. Adjoint-based optimization. Lyapunov stabilization. Differential flatness. Viability control. Hamilton-Jacobi-based control.

Final exam not required.

CIV ENG 291G Advanced Estimation, Control, and Optimization of Partial Differential Equations 3 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil and Environmental Engineering C291F/Electrical Engineering C291/Mechanical Engineering C236 or equivalent, or consent of instructor.

This course will cover advanced methods in estimation, control, and optimization of distributed parameter systems (partial differential equations in particular). The course builds on 291 and covers discrete methods relying on finite differencing such as quadratic programming for optimal control and variational data assimilation, (ensemble, extended) Kalman filtering. The course covers distributed transfer function analysis and frequency responses of PDEs, and characteristics-based stability analysis.

Final exam not required. Instructor: Bayen

CIV ENG 292A Technologies for Sustainable Societies 1 Unit**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of seminar/discussion per week.**Prerequisites:** Graduate standing or consent of instructor.

Exploration of selected important technologies that serve major societal needs, such as shelter, water, food, energy, and transportation, and waste management. How specific technologies or technological systems do or do not contribute to a move toward sustainability. Specific topics vary from year to year according to student and faculty interests. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Horvath, Nazaroff

CIV ENG 297 Field Studies in Civil and Environmental Engineering 1 - 12 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 12 hour of Fieldwork per week for 15 weeks. 1.5 to 18 hours of Fieldwork per week for 10 weeks. 1.5 to 20-2.5 hours of Fieldwork per week for 8 weeks. 2.5 to Thirty hours of Fieldwork per week for 6 weeks.

Prerequisites: Graduate standing.

Supervised experience in off-campus companies relevant to specific aspects and applications of civil and environmental engineering. Written report required at the end of the semester. Course does not satisfy unit or residence requirements for a master's or doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 298 Group Studies, Seminars, or Group Research 1 - 6 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Prerequisites: Graduate standing.

Advanced studies in various subjects through special seminars on annually selected topics, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 299 Individual Research 1 - 12 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Forty-5 hours of work per unit per term.**Prerequisites:** Graduate standing.

Research or investigation in selected advanced subjects.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 301 Workshop for Future Civil and Environmental Engineering Teachers 1 - 3 Units**Department:** Civil and Environmental Engineering**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Teaching assistant or graduate student status.

The course will include supervised teaching of laboratory sections of civil engineering courses, group analysis of videotapes, reciprocal classroom visitations, and an individual project.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 601 Individual Study for Master's Students 1 - 6 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Individual study for the comprehensive or language requirements in consultation with the major field adviser. Units may not be used to meet either unit or residence requirements.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CIV ENG 602 Individual Study for Doctoral Students 1 - 6 Units**Department:** Civil and Environmental Engineering**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare for the various examinations required of candidates for doctoral degrees. May not be used for unit or residence requirements.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Classics (CLASSIC)

CLASSIC 10A Introduction to Greek Civilization 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Study of the major developments, achievements, and contradictions in Greek culture from the Bronze Age to the 4th century BCE. Key works of literature, history, and philosophy (read in English translation) will be examined in their political and social context, and in relation both to other ancient Mediterranean cultures and to subsequent developments in Western civilization.

Final exam required.

CLASSIC 10B Introduction to Roman Civilization 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week; 1 hour of discussion may be added.

Investigation of the main achievements and tensions in Roman culture from Romulus to the High Empire. Key sources for literature, history, and material culture are studied in order to reveal Roman civilization in its political and social context. All materials are read in English. Final exam required.

CLASSIC 17A Introduction to the Archaeology of the Greek World 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The physical remains of the Greek world from the Bronze Age to 323 BCE will be studied, with emphasis on its artistic triumphs, as a means of understanding the culture of ancient Greece. Final exam required.

CLASSIC 17B Introduction to the Archaeology of the Late Greek and Roman World 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 17A is not prerequisite to 17B.

The physical remains of the Hellenistic and Roman worlds from 323 BCE to the advent of Christianity will be studied as a means of understanding the culture of ancient Rome. Final exam required.

CLASSIC 24 Freshman Seminars 1 Unit**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 28 The Classic Myths 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week. The society, culture, values and outlook on life of the ancient Greeks as expressed in their mythology; their views on life, birth, marriage, death, sex and sexuality; on culture and civilization, the origin and meaning of the world. Their use of myth to think about, and give order to human experience. The course includes some of the most important works of Western literature in English translation (the 'Odyssey', the 'Theogony', twelve plays by leading Greek dramatists (Aeschylus, Sophocles and Euripides), along with their historical and religious context, as well as drawing on material evidence (vase paintings, sculpture, archaeological sites). Final exam required.

CLASSIC S28X The Classic Myths 4 Units**Department:** Classics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 6 weeks.

A study of Greek and Roman myths with emphasis on the universal meanings of myths. The interaction of myths, religion and philosophy as a source of understanding of ancient and present cultures. Final exam not required.

CLASSIC 29 Introduction to Greco-Roman Magic 3 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Study of magical practices in the Greek and Roman worlds during the historical period (c. 750 BCE through 500 CE) as attested in literary, epigraphic, and papyrological sources. Attention is paid to the overall Mediterranean context and, in particular, Egyptian and Near Eastern influences on Greco-Roman traditions. Consideration is given to ways of analyzing and understanding magical practices, and the relationship between magic, religion, philosophy, and science. Final exam required.

CLASSIC 34 Epic Poetry: Homer and Vergil 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. A discussion section may be added.

Greek and Roman epics including the , , . Final exam required.

CLASSIC 35 Greek Tragedy 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week. 3 hours of lecture/discussion per week. 8 hours of lecture/discussion per week for 6 weeks. 6 hours of lecture/discussion per week for 8 weeks. 8 hours of lecture/discussion per week for 6 weeks. 6 hours of lecture/discussion per week for 8 weeks.

Greek tragedy with readings of Aeschylus, Sophocles, and Euripides.

Final exam required.

CLASSIC 36 Greek Philosophy 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week. 3 hours of lecture/discussion per week. 8 hours of lecture/discussion per week for 6 weeks. 6 hours of lecture/discussion per week for 8 weeks. 8 hours of lecture/discussion per week for 6 weeks. 6 hours of lecture/discussion per week for 8 weeks.

Introduction to the philosophies of Socrates, Plato and Aristotle.

Final exam required.

CLASSIC 39H Freshman/Sophomore Seminar 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar Format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 39I Freshman/Sophomore Seminar 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar Format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 39J Freshman/Sophomore Seminar 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar Format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC R44 Roots of Western Civilization 5 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Completion of UC Entry Level Writing Requirement.

This course covers Homeric and Classical Greece, Rome in its transition from republic to empire, and the world of the Old Testament. Lectures, discussions, and reading assignments will involve interdisciplinary approaches with an emphasis on the development of skill in writing. Satisfies either half of the Reading and Composition requirement plus one of the following Letters and Science breadth requirements: Arts and Literature, Historical Studies, or Social and Behavioral Sciences. Satisfies the first or second half of the Reading and Composition requirement.

Final exam not required. Formerly known as Letters and Science R44.

CLASSIC 98 Directed Group Study for Freshmen and Sophomores 1 - 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.**Prerequisites:** Restricted to freshmen and sophomores; consent of instructor; 3.3 overall GPA.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CLASSIC 99 Supervised Independent Study and Research 1 - 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Restricted to freshmen and sophomores; consent of instructor; 3.3 overall GPA.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CLASSIC 110 Ancient Metrics 2 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Greek 2 or 10.

The principles of ancient metre of all types.

Final exam required.

CLASSIC 121 Ancient Religion 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The religious practices, beliefs and mentality of Ancient Greece c. 1650 BC to c. 400 AD., as expressed in cult, ritual and festival, and their social function, based on the evidence of primary texts (literary and documentary), and material remains (sanctuaries, monuments, sculpture, mosaics, painting, vase-painting). Explores how Greek religion addressed notions of history, community, identity, science, creativity, sexuality, spirituality, and the complex roles and relationships of male and female in society.

No previous knowledge or experience of the ancient Greek world expected; students of all levels and backgrounds welcome.

Course may be repeated with consent of instructor as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 124 Classical Poetics 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Study of a selection (in English translation) of the most important works of classical antiquity that theorize about literature and of the works of some post-classical authors who wrote on similar themes under the influence of their classical predecessors. Authors studied may include Plato, Aristotle, Horace, Longinus, Augustine, Sidney, Pope, and Lessing.

Final exam required.

CLASSIC 130 Topics in Ancient Greek and Roman Culture 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division status.

Topic to vary from year to year. No knowledge of Greek or Latin required; but provision will be made for students who wish to study some of the readings in the original language. Enrollment limited.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 161 Gender, Sexuality, and Culture in the Ancient World 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Study of topics in gender, feminism, and sexuality in ancient cultures.

Topics vary from year to year.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 163 Topics in Greek Philosophy 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 36 or Philosophy 25A or consent of instructor.

The course is designed to deal with a single topic or selection of topics in Greek philosophy studied in translation. Possible topics are: the close study of one or more of Plato's or Aristotle's texts, Hellenistic philosophy, neo-Platonism.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 170A Classical Archaeology: Greek Vase Painting 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 170C Classical Archaeology: Greek Architecture 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 170D Classical Archaeology: Roman Art and Architecture 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 172 Art and Archaeology of the Aegean Bronze Age 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introductory overview of the art and archaeology of ancient civilizations of the Bronze Age (3000-1100 BCE) Aegean: Crete, Cyclades, Mainland Greece, and Western Anatolia. Intended to expose to the sites, monuments, art, and artifacts of these cultures and understand the way a variety of evidence is used to reconstruct history. Emphasis also is placed on comparison of enigmatic and evocative cultures and material evidence to see how each evolved and to define similarities and differences. Final exam required. Instructor: Shelton

CLASSIC N172A Archaeological Field School in Nemea, Greece 4 Units**Department:** Classics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 weeks of field work and museum activities in Nemea, Greece. 4 weeks of field work and museum activities in Nemea, Greece.**Prerequisites:** Consent of instructor or director.

Through this field school students will participate in archaeological excavation and museum study in Greece at the site of Nemea and the Classical Sanctuary of Zeus. Through extensive travel and hands-on work, students will learn all major elements of methodology and analysis currently used in classical archaeology. The goal is to teach practical skills in a real research environment and an understanding of the material culture of Greece throughout various periods of its prehistory and history. Students will participate in a variety of field techniques and research methodologies.

Final exam not required. Instructor: Shelton

CLASSIC N172B Archaeological Field School in Mycenae, Greece 4 Units**Department:** Classics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 weeks of field work and museum activities in Mycenae, Greece. 4 weeks of field work and museum activities in Mycenae, Greece.**Prerequisites:** Consent of instructor or director. N172A is not a prerequisite to N172B and may be taken concurrently.

Through this field school students will participate in archaeological excavation and museum study in Greece at the Bronze Age site of Mycenae (Petsas House). Through extensive travel and hands-on work, students will learn all major elements of methodology and analysis currently used in classical archaeology. The goal is to teach practical skills in a real research environment and an understanding of the material culture of Greece throughout various periods of its prehistory and history. Students will participate in a variety of field techniques and research methodologies.

Final exam not required. Instructor: Shelton

CLASSIC 175A Topography and Monuments: Athens 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 175D Topography and Monuments: Pompeii and Herculaneum 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 175F Topography and Monuments: Roman Wall Painting 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 175G Topography and Monuments: Ptolemaic and Roman Egypt 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit when topic changes. Final exam required.

CLASSIC H195 Honors Course in Classical Civilization 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Appropriate preparation and eligibility for admission to the honors program.

Largely independent study for one semester building on work in a previous upper division course used in fulfillment of the Classical Languages or Classical Civilizations major; the work will result in the writing of a thesis, to be evaluated by an honors committee of three members. Written thesis due the Monday of the 13th week of the semester in which the course is taken.

Final exam not required.

CLASSIC 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 10 hours of Directed group study per week for 6 weeks.**Prerequisites:** Restricted to senior honor students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CLASSIC 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Classics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.**Prerequisites:** Restricted to senior honor students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

CLASSIC 200 Proseminar 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

An introduction to the general literature of classical philology, to methods of research, and to textual criticism.

Final exam not required.

CLASSIC 201A Survey of Greek Literature 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A sequence of readings and lectures on Greek literature.

Final exam not required.

CLASSIC 201B Survey of Greek Literature 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A sequence of readings and lectures on Greek literature.

Final exam not required.

CLASSIC 202A Survey of Latin Literature 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A sequence of readings and lectures on Latin literature.

Final exam not required.

CLASSIC 202B Survey of Latin Literature 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A sequence of readings and lectures on Latin literature.

Final exam not required.

CLASSIC 203 Approaches to Classical Literature 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200 or consent of instructor.

Introduction to basic methods of literary analysis and interpretation, and study of particular critical approaches of significance for the understanding of Classical literature. Close reading of selected passages of Greek and Latin will be emphasized. The critical approaches that are to be studied may vary from year to year. The course will be team taught.

Final exam not required.

CLASSIC C204/HISTART C204 Proseminar in Classical Archaeology and Ancient Art 2 or 4 Units**Department:** Classics; History of Art**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Working knowledge of Latin, Greek, and German or French or Italian.

This seminar is intended to introduce graduate students--both archaeologists and non-archaeologists--to the discipline of classical archaeology, history, and evolution, and its research tools and bibliography. Since it is both impossible and undesirable to attempt to cover the entire discipline in one semester, after two introductory lectures on the history of the field, we will address a selection of topics that seems representative of its concerns.

Final exam not required. Instructors: Hallett, Stewart

CLASSIC 211 Archaic Greek Poetry 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

. Topics in iambic, elegiac, and lyric poets from Archilochus to Pindar.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 213 Hellenistic Poetry 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

. Study of Callimachus, Theocritus, Apollonius, or other topics in Hellenistic poetry and poetics.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 214 Greek Drama 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

. Study of Aeschylus, Sophocles, Euripides, Aristophanes, Menander, or other topics in Greek drama and dramatic theory.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 218 Greek Philosophers 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Seminar per week for 6 weeks.**Prerequisites:** 200

Study of PreSocratics, Plato, Aristotle, Hellenistic Philosophy, or other topics in ancient Greek philosophy through Plotinus.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 219 Ancient Novel 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

Study of Greek novelists, Petronius, Apuleius, or other topics in Greco-Roman romance or novel.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 220A Greek and Latin Epigraphy 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 200

Greek epigraphy.

Final exam not required. Instructor: 200A-200B.

CLASSIC 224 Classical Poetics and Rhetoric 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Ancient views of literature; theories and practice of criticism, scholarship, and education, from Homer to Byzantium.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 225 Papyrology 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of lecture/discussion per week.

The course introduces students to Greek papyrology. Its principal aim is to develop the skills necessary to edit and interpret papyrological texts. Sessions are devoted to learning the techniques of papyrology and to investigating historical issues to which the papyrological corpus has much to contribute (the ancient economy, gender in antiquity, education, etc.). Extensive use will be made of Berkeley's outstanding collection of papyri from Tebtunis.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 226 Myth and Literature 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

A study of the interplay of mythical thinking and formal literary expression in texts of all kinds in the Greco-Roman world.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 228 Ancient Society and Law 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

. Study of social, legal, or administrative structures of the Greek or Roman world.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

CLASSIC 230 Latin Poetry of the Republic and Early Empire 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

. Study of Lucretius, Vergil, Horace, Ovid, or other topics in Latin poetry from Ennius to Juvenal.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 239 Topics in Greek or Roman Literature, History, and Culture 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 200

Select issues in ancient Greek and/or Roman literature or history or culture.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 250 Advanced Greek Composition 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Greek 40 or equivalent.

Advanced instruction in the writing of Greek prose.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 260 Advanced Latin Composition 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Latin 40 or equivalent.

Advanced instruction in the writing of Latin prose.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 270 Seminar in Classical Archaeology 2 or 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Advanced study of ancient Greek art objects and sites.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 298 Special Study 2 - 12 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Completion of qualifying examination for the Ph.D. degree. Normally reserved for students writing the doctoral dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 299 Special Study 1 - 4 Units**Department:** Classics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks. 1.5 to 7.5 hours of Independent study per week for 8 weeks.

Special individual study for qualified graduate students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 302 Teaching Practicum 3 - 6 Units**Department:** Classics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 to 6 hours of Independent study per week for 15 weeks.**Prerequisites:** Graduate standing.

Supervised teaching of lower division Greek, Latin, or Classics or of discussion sections in Classics. Two semesters normally required for Ph.D. candidates.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 375 Teaching of Classics: Methods and Problems 3 Units**Department:** Classics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 4 2-hour seminars per term plus individual conferences.**Prerequisites:** Graduate standing or GSI status.

Seminar in problems of teaching. Required for all new graduate student instructors.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Classics 300.

CLASSIC 601 Individual Study for Master's Candidates 1 - 12 Units**Department:** Classics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.

Individual study for the comprehensive or language requirements in consultation with the graduate adviser or personal adviser. Units may not be used to meet either unit or residence requirements for a master's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CLASSIC 602 Individual Study for Doctoral Candidates 1 - 12 Units**Department:** Classics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.

Individual study in consultation with the graduate adviser or personal adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. May not be used for unit or residence requirements for the doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Cognitive Science (COG SCI)

COG SCI 1 Introduction to Cognitive Science 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

This course introduces the interdisciplinary field of cognitive science. Lectures and readings will survey research from artificial intelligence, psychology, linguistics, philosophy, and neuroscience, and will cover topics such as the nature of knowledge, thinking, remembering, vision, imagery, language, and consciousness. Sections will demonstrate some of the major methodologies.

Students will receive no credit for Cognitive Science 1 after taking Cognitive Science C1/Education C1. Final exam required.

COG SCI N1 Introduction to Cognitive Science 3 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course introduces the interdisciplinary field of cognitive science. Lectures and readings will survey research in such fields as artificial intelligence, psychology, linguistics, philosophy, and neuroscience, and will cover topics such as the nature of knowledge, thinking, remembering, vision, imagery, language, and consciousness. Sections will demonstrate some of the major methodologies.

Students will receive no credit for N1 after taking Education C1. Final exam not required. Formerly known as C1.

COG SCI 98 Directed Group Study 1 - 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Seminar for the group study of selected topics. Topics may be initiated by students subject to the approval of the major advisor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COG SCI 99 Supervised Independent Study and Research 1 - 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.

Prerequisites: Restricted to freshmen and sophomores; consent of instructor.

Independent study and research by arrangement with faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COG SCI 100 Basic Issues in Cognitive Science 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks.

Theoretical foundations and current controversies in cognitive science will be discussed. Basic issues in cognition--including perception, imagery, memory, categorization, thinking, judgment, and development will be considered from the perspectives of philosophy, psychology, computer science, and physiology. Particular emphasis will be placed on the nature, implications, and limitations of the computational model of mind.

Students will receive no credit for Cog Sci C100 after taking Psychology 120A. Final exam required.

COG SCI C100/PSYCH C120 Basic Issues in Cognition 3 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3.5 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Theoretical foundations and current controversies in cognitive science will be discussed. Basic issues in cognition—including perception, imagery, memory, categorization, thinking, judgment, and development—will be considered from the perspectives of philosophy, psychology, computer science, and physiology. Particular emphasis will be placed on the nature, implications, and limitations of the computational model of mind. Students will receive no credit for C120 after taking 120A. Final exam required.

COG SCI C101/LINGUIS C105 The Mind and Language 4 Units**Department:** Cognitive Science; Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks.

Conceptual systems and language from the perspective of cognitive science. How language gives insight into conceptual structure, reasoning, category-formation, metaphorical understanding, and the framing of experience. Cognitive versus formal linguistics. Implications from and for philosophy, anthropology, literature, artificial intelligence, and politics. Final exam not required. Formerly known as 105. Instructors: G. Lakoff, E. Sweetser

COG SCI C102/PSYCH C129 Scientific Approaches to Consciousness 3 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 1 or Cognitive Science C1; or 120A or C120B or Cognitive Science C100.

This course will examine the nature of human consciousness from the interdisciplinary perspective of cognitive science. It will cover topics from the philosophy of mind, cognitive linguistics, neuroscience, psychology, and computational models. Final exam required.

COG SCI C103/HISTORY C192/INFO C103/MEDIAST C104C History of Information 3 Units**Department:** Cognitive Science; History; Information; Media Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Upper level undergraduates.

This course explores the history of information and associated technologies, uncovering why we think of ours as "the information age." We will select moments in the evolution of production, recording, and storage from the earliest writing systems to the world of Short Message Service (SMS) and blogs. In every instance, we'll be concerned with both what and when and how and why, and we will keep returning to the question of technological determinism: how do technological developments affect society and vice versa?.

Final exam required. Formerly known as Information Systems and Management C103. Instructors: Duguid, Nunberg

COG SCI C104/LINGUIS C104 The Mind, Language, and Politics 4 Units**Department:** Cognitive Science; Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An analysis of contemporary liberal and conservative thought and language, in terms of the basic mechanisms of mind: frames, prototypes, radial categories, contested concepts, conceptual metaphor, metonymy, and blends. The framing of political discourse. The logic of political thought. The purpose of the course is to provide students interested in political and social issues with the tools to analyze the framing of, and logic behind, contemporary political discourse.

Final exam not required. Instructor: G. Lakoff

COG SCI C124/PSYCH C124 Psycholinguistics 3 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to psycholinguistics, emphasizing effects of psychological variables on the learning and use of language, influence of language behavior on psychological processes; special attention to psychological applicability of modern linguistic theory and to social psychological aspects of language behavior. Final exam required.

COG SCI C126/PSYCH C126 Perception 3 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor. 101 recommended.

An introduction to principal theoretical constructs and experimental procedures in visual and auditory perception. Topics will include psychophysics; perception of color, space, shape, and motion; pattern recognition and perceptual attention.

Final exam required.

COG SCI C127/PSYCH C127 Cognitive Neuroscience 3 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 110 or 120A or C120B, or Cog Sci C100.

This course will examine research investigating the neurological basis of cognition. Material covered will include the study of brain-injured patients, neurophysiological research in animals, and the study of normal cognitive processes in humans with non-invasive behavioral and physiological techniques such as functional Magnetic Resonance Imaging (fMRI), electroencephalography (EEG), and transcranial magnetic stimulation (TMS). Topics to be covered include perception, attention, memory, language, motor control, executive control, and emotion.

Final exam required.

COG SCI 131 Computational Models of Cognition 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Calculus, discrete mathematics, C1, Computer Science 61A, or equivalents.

This course will provide advanced students in cognitive science and computer science with the skills to develop computational models of human cognition, giving insight into how people solve challenging computational problems, as well as how to bring computers closer to human performance. The course will explore three ways in which researchers have attempted to formalize cognition -- symbolic approaches, neural networks, and probability and statistics -- considering the strengths and weaknesses of each.

Student will receive no credit for Cognitive Science 131 after taking Cognitive Science C131/Psychology C123. A deficient grade in Cognitive C131/Psychology C123 may be removed by taking Cognitive Science 131. Final exam not required.

COG SCI C131/PSYCH C123 Computational Models of Cognition 4 Units**Department:** Cognitive Science; Psychology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Calculus, discrete mathematics, C1, Computer Science 61A, or equivalents.

This course will provide advanced students in cognitive science and computer science with the skills to develop computational models of human cognition, giving insight into how people solve challenging computational problems, as well as how to bring computers closer to human performance. The course will explore three ways in which researchers have attempted to formalize cognition -- symbolic approaches, neural networks, and probability and statistics -- considering the strengths and weaknesses of each.

Final exam not required.

COG SCI C140/LINGUIS C160 Quantitative Methods in Linguistics 4 Units**Department:** Cognitive Science; Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or graduate student standing.

An introduction to research using quantitative analysis in linguistics and cognitive science. Students will learn how to use the R programming environment for statistical analysis and data visualization.

Final exam required. Instructor: Gahl

COG SCI C142/LINGUIS C142 Language and Thought 3 Units**Department:** Cognitive Science; Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar explores the relation of language and thought. Is language uniquely human, and if so, what does this reveal about the human mind? Does the particular language you speak affect the way you think, or do human languages reflect a universal conceptual repertoire? The goal of this class is to familiarize you with a set of classic arguments on these themes, together with current research that evaluates these arguments, through weekly reading and discussion.

Final exam not required. Instructor: Regier

COG SCI C147/LINGUIS C147 Language Disorders 3 Units**Department:** Cognitive Science; Linguistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

An introduction to experimental and theoretical research on language disorders, particularly acquired aphasia in adults. Major course themes include the relationship between normal and pathological language, and the usefulness of linguistic analysis for empirical research. Topics include phonetic, phonological, morphological, semantic, syntactic, and pragmatic aspects of language disorders in mono- and multilingual speakers of typologically diverse languages.

Final exam required. Instructor: Gahl

COG SCI 190 Special Topics in Cognitive Science 3 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Selected topics in the study of Cognitive Science.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

COG SCI H195A Special Study for Honors Candidates 1 - 3 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individual conferences.**Prerequisites:** Open only to senior cognitive science majors in the honors program.

Independent study and preparation of an honors thesis under the supervision of a faculty member.

Course may be repeated for a maximum of 6 units. Course may be repeated for a maximum of 6 units. Final exam not required.

COG SCI H195B Special Study for Honors Candidates 1 - 3 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individual conferences.**Prerequisites:** Open only to senior cognitive science majors in the honors program.

Independent study and preparation of an honors thesis under the supervision of a faculty member.

Course may be repeated for a maximum of 6 units. Course may be repeated for a maximum of 6 units. Final exam not required.

COG SCI 198 Directed Group Study 1 - 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.**Prerequisites:** Upper division standing and consent of instructor.

Seminar for the group study of selected topics. Topics may be initiated by students subject to the approval of the major advisor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COG SCI 199 Supervised Independent Study 1 - 4 Units**Department:** Cognitive Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks. 1.5 to 7.5 hours of Independent study per week for 8 weeks.**Prerequisites:** Restricted to juniors and seniors.

Independent study and research by arrangement with faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COG SCI 201 Graduate Seminar on the Mind and Language 4 Units**Department:** Cognitive Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Thought appears to be grounded in the sensorimotor system, and to grow out of the nature of the physical brain and body; human reason also makes extensive and fundamental use of imaginative mechanisms such as metaphor and metonymy. The readings in this course review that evidence, much of which comes from the study of how people categorize and reason using categories. The course will include both discussions and research projects appropriate to students in each of the disciplines.

Final exam not required.

COG SCI 300 Teaching Cognitive Science 1 - 2 Units**Department:** Cognitive Science**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Seminar format.

This course will provide training in a variety of teaching techniques, will review relevant pedagogical issues, and will assist undergraduate students in mastering their initial teaching experiences.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

College Writing Program (COLWRIT)

COLWRIT 1 Grammar and Vocabulary of Written English 2 Units

Department: College Writing Program

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: 2 hours of lecture/workshop per week.

Prerequisites: Self-selected non-native speakers of English.

This course is intended to serve as a course for students who are non-native speakers of English and who wish to work on their written English.

The purpose of the course is to develop students' ability to edit their own writing and to identify high frequency non-idiomatic uses of English.

Intensive, individualized practice will be provided for students from different language backgrounds.

Final exam required.

COLWRIT N1 Writing in the University 2 Units

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of lecture/discussion/workshop per week for 6 weeks.

Prerequisites: Summer Bridge student status.

This course is intended to serve students enrolled in the Summer Bridge Program. In keeping with this parent program, it provides students a bridge from high school to university writing. Offering students instruction in the specialized writing that will be required of them in the university, N1 gives students practice with a range of thematically-linked writing and reading tasks and demands, including composing expository and narrative essays and analyzing works of fiction and nonfiction representing multicultural perspectives. Students must take the course for a letter grade. Completion with a grade of C or better satisfies the University-wide Subject A requirement. Students who do not earn a C but who complete all the required work may be given a C- and would then enroll in a section of 1A in the fall.

Satisfies the UC Entry Level Writing requirement

Final exam required.

COLWRIT N1A Accelerated Reading and Composition 5 Units

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture and 3 hours of Tutorial per week for 10 weeks.

Prerequisites: Placement by Subject A examination.

An intensive, accelerated course satisfying concurrently the requirements of Subject A and the first half of Reading and Composition. Readings will include imaginative, expository, and argumentative texts representative of the range of those encountered in the undergraduate curriculum and will feature authors from diverse social and cultural backgrounds and perspectives. Instruction in writing a range of discourse forms and in the revision of papers.

Satisfies the UC Entry Level Writing and first half of the Reading and Composition requirements.

Final exam required.

COLWRIT R1A Accelerated Reading and Composition 6 Units

Department: College Writing Program

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of lecture/discussion and 1 hour of workshop per week.

Prerequisites: Placement by UC Analytical Writing Placement Exam.

An intensive, accelerated course satisfying concurrently the requirements of the UC Entry Level Writing Requirement and the first half of Reading and Composition. Readings will include imaginative, expository and argumentative texts representative of the range of those encountered in the undergraduate curriculum and will feature authors from diverse social and cultural backgrounds and perspectives. Instruction in writing a range of discourse forms and in the revision of papers.

Satisfies the UC Entry Level Writing and first half of the Reading and Composition requirements.

Final exam not required. Formerly known as 1A.

COLWRIT N2 Writing the Bridge: From High School to the University 3 Units

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 6 hours of lecture/discussion/workshop per week for 6 weeks.

This 3-unit course is intended to serve students enrolled in the Summer Bridge Program. In this course, students will explore their educational experience as they read essays, poetry, and fiction on issues of language, culture, and identity. In their journals and in their essays, students will examine ways in which these forces interact to create a student identity.

Final exam not required.

COLWRIT R4A Reading and Composition 4 Units

Department: College Writing Program

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 7.5 hours of seminar/discussion per week for 6 weeks. 3 hours of seminar/discussion per week.

Prerequisites: Enrollment is limited to students who have satisfied the UC Entry Level Writing Requirement.

This writing seminar satisfies the first half of the Reading and Composition requirement. The course is designed to offer students structured, sustained, and highly articulated practice in the recursive processes entailed in reading, critical analysis, and composing. Students will read five thematically related book-length texts, or the equivalent, drawn from a range of genres, in addition to various non-print sources. In response to these materials, they will craft several short pieces leading up to three longer essays--works of exposition and argumentation.

Satisfies the first half of the Reading and Composition requirement

Final exam not required.

COLWRIT R4B Reading, Composition, and Research 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week.**Prerequisites:** Satisfaction of the UC Entry Level Writing Requirement and the first half of the Reading and Composition requirement.

This writing seminar satisfies the second half of the Reading and Composition requirement. It is designed to offer students structured, sustained, and highly articulated practice in the recursive processes entailed in reading, critical analysis, and composing. In like manner, the seminar affords students guided practice through the stages involved in creating a research paper. Students will read five thematically related book-length texts, or the equivalent, drawn from a range of genres, in addition to various non-print sources. In response to these materials, they will craft several short pieces leading up to two longer essays--works of exposition and/or argumentation. Students will also draft a research paper, developing a research question, gathering, evaluating, and synthesizing information from texts and other sources. Elements of the research process, such as a proposal, an annotated bibliography, an abstract, a "work cited" list, and the like, will be submitted, along with the final report, in a research portfolio. Students will write a minimum of 32 pages of expository prose during the semester.

Satisfies the second half of the Reading and Composition requirement
Final exam not required.

COLWRIT 6A English Language Studies: Academic Speaking 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

This course is designed to give students intensive practice in spoken English for academic purposes, preparing international students for the college experience. The course focuses on main areas of content: speaking in academic situations, giving oral presentations, and participating in small-group and whole-class discussions.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6B English Language Studies: Academic Vocabulary 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

This course aims to increase students' active command of the most common words used in academic contexts. Using material from a variety of disciplines, the course practices vocabulary through all four skills of listening, speaking, reading, and writing, with an emphasis on speaking and small-group discussion. In addition, students learn strategies for recording, remembering, and reviewing important vocabulary.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6C English Language Studies: Business Vocabulary 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

This course aims to help English language learners improve their command of vocabulary used in a variety of general business contexts. Students will read short articles, watch videos, and discuss topics of general interest from the world of business. Strategies for identifying, recording, and remembering vocabulary will be discussed.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6E English Language Studies: Grammar and Editing 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

This course aims to help students improve their grammatical accuracy in speaking and writing English. Through practice and feedback, this course introduces students to resources for grammar development, presents grammar rules, and focuses on developing editing strategies and on improving sentence structure and variety.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6F English Language Studies: Listening and Speaking 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 15 weeks. 10 hours of Session per week for 3 weeks.

The aim of this course is to provide students with practice in intensive and extensive listening, as well as practice in speaking. Speaking activities will include pronunciation practice, short presentations, and impromptu speaking activities. In this course, students will learn how to use listening texts more effectively for self study in both listening and speaking by identifying, analyzing, and then producing features of the text.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6G English Language Studies: Writing for New Media 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

In this interactive course, students will develop their reading, writing, and speaking skills by analyzing, discussing and crafting blog posts, digital stories, and other new media selections. Course assignments will focus on vocabulary, grammar and sentence structure, pronunciation, and overall writing structure and organization.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 6H English Language Studies: Writing Creative Non-Fiction 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Session per week for 3 weeks.

This course provides students practice in drafting creative non-fiction--memoir, travel/place essays, and the personal essay. Students will focus on creating vivid details and description, using imagery and figurative language, and ordering information for impact. Through these exercises and essays, students will have the opportunity to improve their critical reading, vocabulary, grammar, and writing skills.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

COLWRIT 6I English Language Studies: Conflict Resolution Skills 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture per week for 3 weeks.

This intensive course helps students improve speaking, listening, grammar, and vocabulary/idioms skills while learning practical skills to resolve conflicts with people from different cultures. Students will act as mediators and disputants in mediation role-plays involving American culture topics based on business, law, culture, politics, and the environment. Course goal: achieve more natural fluency and listening comprehension in English for academic and professional purposes.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as College Writing Program 7F.

COLWRIT 7A English Language Studies: American Language and Culture: English Language Studies: American Culture through the Media 1 Unit**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This course focuses on building English skills while exploring American culture through the media. Students will listen to lectures, watch and discuss film clips, and read current news magazines. In addition, students will actively participate in large and small group discussions and debates. The course requires students to focus on and create interesting, well-organized informative speeches, and convincing persuasive written and oral responses.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7B English Language Studies: American Language and Culture: English Language Studies: The Beat Generation 1 Unit**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This English as a Second Language (ESL) course is designed to improve listening, speaking, reading, and writing in English. The starting point of the course is to examine the Beat Generation writers, specifically Allen Ginsberg and Jack Kerouac, looking at their relevance to the 50's and 60's and how their ideas led to and shaped the counterculture movements of the 60's and 70's. Through readings and video and audio clips, students will have the opportunity to explore the Beat Generation's impact in Berkeley and San Francisco.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7C English Language Studies: American Language and Culture: English Language Studies: Business and Social Entrepreneurship 1 Unit**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This course explores debates concerning the role of business in addressing social issues, while providing support for English reading, listening, note-taking, and speaking skills. Social entrepreneurship has gained popularity and sparked debate in the United States and throughout the world as individual entrepreneurs have found more efficient ways to provide medicine, social services, education, and environmentally sustainable consumer products.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7D English Language Studies: American Language and Culture: English Language Studies: Food Politics and Production in the U.S. 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This course examines how industrial food and media corporations cooperate to influence government policy and individual choices regarding food. The course focuses on the wonders and horrors of food production, distribution, and marketing--as well as local community responses--through a wide variety of sources: readings, films, music, guest speakers, lectures, video clips, panel discussions, individual research, and personal experience. These tasks will help to improve students' English skills. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7E Language, Culture & Environmental Issues in the U.S. 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of lecture per week for 6 weeks. 6 hours of lecture per week for 3 weeks.

This course challenges students to use their English language reading, listening/speaking, note-taking, and research skills while focusing on environmental issues. Students will listen to lectures, watch and critique video and film clips, conduct research, and examine conflicting beliefs based on articles in the media and journals. The course requires students to participate in discussions and debates while reflecting on personal views.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7G English Language Studies: American Language and Culture: English Language Studies: City and Community 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

People around the globe are confronting limitations to freedom, health, and safety. In this class, we will study real examples of how people in different places across the U.S. and the globe are discovering and leveraging creativity and community as powerful tools to confront problems. Content goals: defining community and critically assessing local initiatives. Language goals: improving listening and speaking skills through videos, lectures, discussion, role plays, debates, and presentations.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7H English Language Studies: American Language and Culture: English Language Studies: Popular Music in the U.S. 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This course provides an introductory study of popular music in the U.S. and its influence on American culture. Through this course, students will (a) increase their understanding of American cultural history by studying the significant trends and messages of its popular music and (b) develop and apply analytical and linguistic skills for close listening, interpretation, oral presentation, and synthesis.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7I English Language Studies: American Language and Culture: English Language Studies: California History 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

Using a variety of sources including video and written primary and secondary sources, students are introduced to key events in the history of California. Students will listen to lectures, watch videos and movie extracts, and read articles and listen to songs about the California experience to develop their vocabulary, listening, speaking, and reading skills.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 7J English Language Studies: American Language and Culture: English Language Studies: California Culture 1 Unit

Department: College Writing Program

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 3 hours of Lecture per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

California remains a leader in cultural change. This class will focus on English listening and speaking skills while exploring the progressive style of California culture. Students will listen to short lectures and influential music, view and discuss featured video clips, read about California icons, and actively participate in discussions, group presentations, and fieldwork to increase fluency and learn about local culture.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 8 English As a Second Language 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of Lecture per week for 6 weeks. 20 hours of Lecture per week for 3 weeks.**Prerequisites:** Placement by examination.

This course offers intensive instruction in reading, writing, listening, and speaking. Students will improve English conversation, discuss current events, and learn about cultural issues. Students are assigned to sections based on placement scores.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9A English as a Second Language: English for Specific Purposes: Academic Research 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

This course introduces the basic terminology, techniques, and strategies necessary for academic research in American universities. Students will refine topics; evaluate/use outside sources to support claims; practice citation, summary, and paraphrasing skills; and write multiple drafts. Each section will craft literature reviews and research on a specific theme; each student can approach the theme within the framework of his or her discipline or interest. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9B English as a Second Language: English for Specific Purposes: Academic Vocabulary 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Academic writing and speaking require a wide understanding of vocabulary. In this course, students are introduced to numerous online and paper resources and learn strategies for improving vocabulary development, including effective ways to build vocabulary and recall new vocabulary through a series of readings, writings and other class activities. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9C English for Specific Purposes: Academic Writing 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.**Prerequisites:** Enrollment in CW 9C: ESP- Academic Writing is restricted to international students and other multilingual student writers.

In this class, students learn about the content, structure, and organization of academic essays. Through in- and out-of-class writing, students work on focusing topics, organizing arguments, and supporting claims with evidence and reasoning. Sentence structures, summarizing, paraphrasing, correct use of citations, and editing skills will also be addressed.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9D English as a Second Language: English for Specific Purposes: Broadway Musicals 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Through the medium of Broadway musicals, this course will help students improve their vocabulary, reading, writing, listening comprehension, note-taking, and oral communication. Students will view musicals (video and live); learn about their plots, songs, and lyrics; examine the historical context represented in each piece; write reviews/critiques; and work on oral presentation skills. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9E English as a Second Language: English for Specific Purposes: Business English 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

In this course, students will have the opportunity to improve communication skills in order to do business in English. The following topics will be covered: negotiating; writing business letters, memos, and resumes; developing business vocabulary; improving business social skills; reading and discussing case studies; and exploring Internet business. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9F English as a Second Language: English for Specific Purposes: Business Speaking 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

This course focuses on oral language in business contexts, including meetings, negotiations, presentations, debates, interviews, and informal social settings. Students learn appropriate phrases and topics for business conversation and improve their abilities through practice both in and out of class. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9G English for Specific Purposes: Speaking About Consumer Culture 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

Focusing on conversation skills in and outside of academic settings, this course challenges students to use their English language critical listening, speaking, and note-taking skills while focusing on sociological and economic issues related to shopping and consumerism. Students will listen to lectures; learn new vocabulary; watch and critique video and film clips; examine articles in the media and journals; and participate in debates and presentations. Fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9H English as a Second Language: English for Specific Purposes: California History and Immigration 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Throughout its history, California has been a destination for fortune seekers, refugees and displaced people, artists, and those interested in alternative lifestyles. This course introduces English as a Second Language (ESL) students to the many groups that come to California and how their presence has shaped its history. Preparing ESL students for the academic language needed in college classrooms, this course requires students to read, write, and present on course texts and themes. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9I English for Specific Purposes: Communication Skills for Conflict Resolution 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

This course is an introduction to conflict resolution for intermediate-advanced level ESL students. It includes interactive mediation role-plays requiring students to develop a complex set of English skills (grammatical accuracy; speaking and listening; pronunciation; and new vocabulary and idioms) and sociolinguistic skills (body language, formality, and tone). Course includes a fieldwork component to help students improve problem-solving and communication skills.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Instructor may choose to administer a final exam or base the course grade on projects and presentations.

COLWRIT 9J English for Specific Purposes: English Grammar and Academic Writing Style 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

Aimed at intermediate-advanced multilingual students, the goal of this course is to help students improve and expand their knowledge of grammar rules, editing and proofreading strategies, and sentence structure and variety to achieve an academic style. Using their own and professional writers' work, students will expand their repertoire of grammatical structures and improve the clarity and sophistication of their writing. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9K English as a Second Language: English for Specific Purposes: International Human Rights 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

This course, designed to introduce current international human rights issues to non-native English speakers, helps students improve their critical listening, vocabulary, oral communication, and note-taking skills--the skills needed for participation in university courses and in the fields of international human rights, business, and law. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9L English as a Second Language: English for Specific Purposes: English Through Film 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Students will have the opportunity to practice critical thinking, listening, speaking, reading, writing, and vocabulary skills by studying contemporary issues and learning about how the elements of film--script, cinematography, sound, lighting, and more--work together to help build a film's story and themes. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9M English as a Second Language: English for Specific Purposes: English Through Literature 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Literature offers wonderful opportunities to understand societal and interpersonal conflicts, develop vocabulary, and refine analytical skills. Designed for non-native English speakers, this course engages students in close reading and discussions of conflicts in the literature. Students are expected to read, write, and speak about the texts and themes covered in class. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9N English as a Second Language: English for Specific Purposes: Legal English and U.S. Law 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Designed for non-native speakers of English, this course introduces the basics of U.S. federal and state court systems, judge and jury trials, case law method, and selected areas of law based on student interest. The course requires students to use new vocabulary and idioms; read and analyze judges' decisions; organize, write, and edit arguments about legal issues; give oral presentations; and participate in formal and informal discussions and role-plays. Course includes a fieldwork component. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9O English as a Second Language: English for Specific Purposes: English for Specific Purposes: Legal Writing 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 6 hours of Lecture per week for 3 weeks.

This course helps international lawyers and law students understand how to communicate effectively in writing in an American legal context. In this course, students will learn a brief overview of the American legal system; strategies for reading legal cases; and strategies for legal writing, research, and analysis. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9P English for Specific Purposes: Conflict Resolution for Business, Law, and International Relations 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

Introducing negotiation and mediation to intermediate-advanced academic or professional ESL students. The course focuses on strategies to prevent and resolve conflicts, including cross-cultural ones, in business, law, and international relations. Tasks include interactive negotiation and mediation simulations requiring students to develop a complex set of language (grammar, speaking/listening, pronunciation, vocabulary/idioms) and sociolinguistic skills (body language, formality, and tone). Course may be repeated for credit when topic changes. Instructor may choose to administer a final exam or base the course grade on projects and presentations.

COLWRIT 9Q English for Specific Purposes: English through Playwriting 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

Open to all levels, this course explores the language and rhetoric of playwriting. Students use plays, film, television, current events, controversial issues, and their own experience as source material to write and perform plays. Course activities include character, storyline and dialogue exercises and close reading, analysis, and written responses to academic readings. Course goals: learn academic conventions for writing, improve critical /analytical reading skills, and hone oral skills for university success.

Course may be repeated for credit when topic changes. No final exam -- course grade based on final project and presentation.

COLWRIT 9R English as a Second Language: English for Specific Purposes: Oral Presentation 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

In this course, English as a Second Language (ESL) students learn, practice, and evaluate the rhetorical skills needed to deliver effective presentations in U.S. academic settings. The course focuses on organizing/delivering appropriate content, designing presentation for varied purposes and audiences, constructing/defending arguments, and fielding critical questions. Also emphasized are clarity of speech and relevant cultural issues such as formality, body language, and eye contact. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9S English as a Second Language: English for Specific Purposes: Pronunciation 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

This course is designed to help students improve their ability to communicate effectively in social and academic settings by means of a detailed, systematic study of the sounds and patterns of spoken American English. Audio journals and in-class assignments provide in-depth practice with individual sound production as well as stress, rhythm, and intonation. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9T English for Specific Purposes: English through Sports and Games 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Based on the theme of sports and games, this course is designed to improve students' English skills for university work: critical reading, clear and accurate writing, note-taking, and participation in class discussions and presentations. The course will introduce students to sports and other recreational activities that are somewhat unique to the US, ethnographic theories and practices, and strategies for class participation based on course assignments. Course includes a fieldwork component.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9U English as a Second Language: English for Specific Purposes: Television, Culture, and Communication 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

Students will practice critical listening vocabulary, oral communication, and note-taking skills by studying American culture and social institutions as portrayed in television programs and advertisements. Assignments attempt to prepare students for seminar-style university classes. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9V English as a Second Language: English for Specific Purposes: English for Science and Engineering 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Session per week for 6 weeks. 10 hours of Session per week for 3 weeks.

This course is designed to help students improve English speaking and writing skills essential for functioning well in academic and professional science and engineering activities. A significant portion of the course is devoted to developing the style, vocabulary, and grammar used most frequently in technical communication. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment of interests and needs.

Course may be repeated for credit when topic changes. Final exam not required.

COLWRIT 9W English for Specific Purposes: English for Speech and Debate 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of session per week for 6 weeks. 10 hours of session per week for 3 weeks.

Aimed at intermediate-advanced multilingual students, this course presents the basics of speech and debate. Students will learn to construct basic arguments, work on speaking style, watch sample speeches and debates, write speeches, and participate in Parliamentary-style debates. In completing course assignments, students will have the opportunity to practice and improve all aspects of their oral skills in English. Course includes a fieldwork component. Multiple sections: placement based on Day 1 assessment.

Course may be repeated for credit when topic changes. Instructor will base the final course grade on a final presentation.

COLWRIT 10A Introduction to Public Speaking 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week. 8 hours of lecture/discussion per week for 6 weeks. 6 hours of lecture/discussion per week for 8 weeks.

This is a strictly introductory course. It presumes no formal training of any kind on the part of the students. Emphasis will be on organization and delivery with goals of improving control over speaking habits and enunciation. Part of the intent of the course is to introduce students to the rudiments of the rhetorical theory which lies behind the practice of public speaking.

Final exam required.

COLWRIT 10B Advanced Public Speaking 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 10A or equivalent.

This is an advanced course that presumes introductory training in public speaking. Emphasis will be on real-world speaking situations. The course combines both theory and practice: it incorporates extensive speaking performance and individualized critiques from instructor and students, as well as analysis of advanced speaking models, and it explores theories, speech genres, and rhetorical processes beyond those in the introductory course. The intent of the course is to advance students' ability to deliver polished and informed public speeches adapted to a wide range of audiences and speaking situations.

Final exam required.

COLWRIT 20 Communicating in Class: Advanced Listening and Speaking for International Students 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This advanced oral communication course for multilingual international students offers opportunities to practice listening to lectures and taking notes, participating in discussions and taking on various roles, and devising strategies for success when presenting orally in different formats.

The course focuses on authentic language use in the U.S. university classroom--in terms of the lecture students will view, projects students will complete, and in-class interactions students will participate in.

Final exam required. Instructors: Baptiste, Crisp, Wald, Sokolik

COLWRIT 21 Advanced Listening and Speaking for International Students: Conflict Management for Academic Success at the University 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

This advanced oral communications course is reserved for first-year international students who speak a first language other than English. Students learn and practice university level cross-cultural communication strategies to help them fully participate in academic life. Applying Alternative Dispute Resolution (ADR) theories and methods used in business and law, students develop strategies for resolving communication problems, misunderstandings, and conflicts that can arise in academic settings and beyond.

CW 21 is designed to improve class participation skills, including understanding lectures and instructions; contributing to and leading group discussions; speaking up in class; and asking for and using feedback from professors.

Recitations scheduled for RRR Week: Oral presentations and role-play scenarios constitute the final assessment.

COLWRIT 25AC Reading in and about U.S. Education Institutions 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7 hours of Lecture per week for 6 weeks.

In this course, we will read, discuss, and write about the expectations of the American educational system, especially within a multicultural context. The goal is to deepen the understanding of the history and diversity of American educational institutions, while strengthening reading and seminar participation skills through critique and analysis of communication patterns. This course is intended for international students.

Satisfies the American Cultures requirement

Final exam not required. Instructor: Sokolik

COLWRIT 50AC Researching Water in the West: Its Presence, Its Absence, and Its Consequences for the Peoples of California 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Fulfillment of first half of the reading and composition requirement.

Examines the subject of water in California, drawing upon scholarly articles, essays, memoir, film, photographs, legislation. In collaboration with the Teaching Library, 50 explores techniques for conducting online archival research and using primary sources. Considers a variety of players in the story of water rights in California, including federal and state representatives, conservationists, Native Americans, and Japanese Americans.

Satisfies the American Cultures requirement

Students will receive no credit for 50AC after taking 150AC. Final exam not required. Instructor: Steenland

COLWRIT 98 Directed Group Study 1 - 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Supervised seminar for group study of selected topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COLWRIT 99 Supervised Independent Study 1 - 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Tutorial per week for 15 weeks. 1.5 to 7.5 hours of Tutorial per week for 8 weeks.**Prerequisites:** Consent of instructor, lower division standing.

Independent study in topics not covered by regularly scheduled courses. Student must initiate topic and present a written proposal.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COLWRIT 105 Intermediate Writing: Finding Your Voice with Others 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture and 1.5 hours of Web-based lecture per week for 15 weeks. This is an online course.**Prerequisites:** Fulfillment of both halves of Reading and Composition requirement.

Engaging with issues of authorial voice, the writing process, and technology, students hone the ability to read and write academic prose. A hybrid composition course, this course meets in the classroom and online. Students use Web 2.0 writing tools and think critically about how such tools affect writing processes. Further, this course offers students opportunities to collaborate on projects, as is often required for academic and workplace writing, and which Web 2.0 writing tools are designed to support.

Final exam required. Instructor: Hammons

COLWRIT 106 Intermediate Composition: Argument in the Disciplines 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7 hours of Lecture per week for 6 weeks.**Prerequisites:** Fulfillment of both halves of the Reading and Composition Requirement (Parts A and B).

This course prepares students to write and analyze arguments in a range of academic disciplines, from the humanities and liberal arts, to the sciences and social sciences. The course emphasizes the rhetorical strategies, reasoning, and conventions that characterize persuasive arguments in each field. This course does not include instruction in the research process.

Final exam required.

COLWRIT 108 Advanced Composition: New Media 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Fulfillment of the Reading and Composition requirement up to and including 1B or consent of instructor.

This advanced nonfiction writing course offers an opportunity to explore the definition of text in a digital era. It offers students an opportunity to read and write about how contemporary uses of social media influence how we think, act, interact, and learn.

Final exam not required.

COLWRIT 110 Advanced Composition: Challenging Writing 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Completion of reading and composition requirement (1A-1B) or consent of instructor.

This writing workshop will offer students an opportunity to write essays and other nonfiction prose that speak both personally and politically to the issues and audiences they wish to address. The readings will focus on the rhetorical strategies of writers who have used the essay as a cultural form to challenge the norms of the time and place in which they live(d).

Final exam not required.

COLWRIT 121 Issues in Teaching English Internationally 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course offers students an opportunity to consider relevant academic and professional issues related to the teaching of English internationally. Through readings, discussions, and assigned projects, students learn about principles of language policy and planning, linguistics, methodology, and assessment. These topics contribute to students' understanding of the theoretical and practical aspects of effective English language teaching abroad, leading to responsible engagement in the international community of English language teachers and learners.

Final exam not required. Instructor: Erickson

COLWRIT 130 Introduction to the Craft of Creative Writing 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** Completion of Reading and Composition sequence (1A/1B).

This course in creative writing focuses on three genres: the personal essay, the short story, and the one-act play. The course emphasizes an introduction to craft--how these types of writing are generated, what their elements are, and how the finished pieces work--which students will explore through careful study of models by published writers and through writing and revising their own short pieces.

Final exam required. Instructors: Larkin, Levine, Oakes

COLWRIT 140A Readings on Creative Writing 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 hours of Lecture per week for 6 weeks.**Prerequisites:** Completion of both parts of the Reading and Composition sequence for UC students; equivalent proficiency for non-UC students.

Corequisite: enrollment in 140B: Seminar-Workshop in Creative Writing.

Before we write, we must read. This course will offer the opportunity for careful examination and discussion of masterworks--many of them recent--in creative writing, with special focus on the craft of the writing. Students will enroll in a section of the course corresponding to the genre they would like to study: creative nonfiction, short fiction, poetry, or one-act playwriting. 140A must be taken concurrently with a section of 140B in the same genre.

Final exam required.

COLWRIT 140B Seminar-Workshop in Creative Writing 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 hours of Lecture per week for 6 weeks.**Prerequisites:** Completion of both parts of the Reading and Composition sequence for UC students; equivalent proficiency for non-UC students.

Corequisite: enrollment in 140A: Readings in Creative Writing.

This seminar will offer students the opportunity to craft several pieces of creative writing, and to consider the formal aspects of creative writing. Students' writing will be critiqued by the class and the instructor with special focus on the formal elements of each piece. Students will enroll in one of four sections of the course: creative nonfiction, short fiction, poetry, or one-act playwriting. 140B must be taken concurrently with a section of 140A in the same genre.

Final exam required.

COLWRIT 141 Seminar-Workshop on Creative Writing: The Novel 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 hours of Lecture per week for 6 weeks.**Prerequisites:** Fulfillment of both halves of the Reading and Composition requirement.

This course offers opportunities to craft several works of creative writing in service of the production of a novel, and to consider formal aspects of the novel with reference to assigned readings. Students consider the general principles governing the form, and the wide latitude the writer has in addressing these principles. Students will develop skill at analyzing a work, presenting descriptive feedback, and identifying the possibilities for revision suggested by the draft itself.

Final exam not required.

COLWRIT 150AC Researching Water in the West: Its Presence, Its Absence, and Its Consequences for the Peoples of California 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Fulfillment of first half of the reading and composition requirement.

Examines the subject of water in California, drawing upon scholarly articles, essays, memoir, film, photographs, legislation. In collaboration with the Teaching Library, 50 explores techniques for conducting online archival research and using primary sources. Considers a variety of players in the story of water rights in California, including federal and state representatives, conservationists, Native Americans, and Japanese Americans.

Satisfies the American Cultures requirement

Students will receive no credit for 150AC after taking 50AC. Final exam not required. Instructor: Steenland

COLWRIT 151 Introduction to Principles of Professional Communication 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Reading and Composition 1A-1B, junior or senior standing.

This course introduces students to key principles and rhetorical strategies of writing texts in non-academic settings. Although the course may address issues of oral communication, the primary focus will be on learning and practicing strategies to generate written documents in a business context.

Final exam required. Formerly known as C151 and Business Administration C196W. Instructor: Cole

COLWRIT 152 Advanced Professional Communication 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 151

In this course, students build upon introductory coursework in professional communication to develop and refine their proficiency in non-academic writing. Students, in teams of three to four, propose and generate authentic workplace documents for a local organization or business; the course culminates in formal presentations. Discussions and activities regarding workplace genres, rhetorical techniques and strategies, and context-specific discourse conventions throughout term.

Final exam not required.

COLWRIT 180 Travel Writing 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 3 hours of Lecture per week for 8 weeks.**Prerequisites:** Fulfillment of both halves of the Reading and Composition requirement.

This course focuses on European travel writing in the modern period, bracketed on one end by imperial exploration and expansion and on the other by the experience of contemporary tourism. Students will write academic essays reflecting on the political, historical, and cultural meanings of travel writing.

Final exam required. Instructor: Lang

COLWRIT W180 Writing on Travel 1 - 2 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 2 hour of Web-based lecture per week for 15 weeks. This is an online course.**Prerequisites:** Fulfillment of both halves of the Reading and Composition requirement; 180.

This course is a writing seminar for students traveling abroad and enrolled in the Education Abroad Program and summer sessions. Students will write academic essays and/or travelogues reflecting on the political, historical, and cultural meanings of travel based on their own experience of travel.

Final exam required. Instructor: Lang

COLWRIT 192AC Advanced Composition: Community-Based Ethics 3 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Successful completion of the first semester of Reading and Composition.

Communities are challenged by issues of security, poverty, and environmental sustainability. These issues intersect with those of race, class, and culture in U.S. society. This course focuses on ethical decisions as they apply to issues of diversity, sustainable practices, economic impacts on neighborhoods and nations, and issues of security and identity. This course focuses on writing and research skills.

Satisfies the American Cultures requirement

Final exam not required. Instructor: Sokolik

COLWRIT 198 Directed Group Study 1 - 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Supervised seminar for group study of selected topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COLWRIT 199 Supervised Independent Study 1 - 4 Units**Department:** College Writing Program**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Tutorial per week for 15 weeks. 1.5 to 7.5 hours of Tutorial per week for 8 weeks.**Prerequisites:** Consent of instructor, upper division standing.

Independent study in topics not covered by regularly scheduled courses. Student must initiate topic and present a written proposal.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COLWRIT 310 Practicum in Teaching English as a Second Language 3 Units**Department:** College Writing Program**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 6 hours of lecture plus 1.5 hours of discussion, and a minimum of 13 hours of classroom teaching/assisting per week for 6 weeks, supervised by 1 or more lead teachers.**Prerequisites:** One year of graduate study in a TESL/TEFL or related program. Appropriate course work in theory and methods of teaching ESL; instructor permission.

This course will allow qualified graduate students an opportunity to teach ESL in both an intensive ESL program and a community-based adult ESL course.

Course may be repeated once for credit. Course may be repeated for a maximum of 6 units. Final exam not required.

COLWRIT 375 Introduction to Theories and Practices of Teaching College Composition 2 Units**Department:** College Writing Program**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of lecture/discussion per week.**Prerequisites:** Appointment as GSI or consent of instructor.

The course will focus on teaching philosophies, course designs, instructional methods, and assessment issues in relation to teaching composition in a pluralistic setting.

Final exam not required. Formerly known as College Writing 300.

Comparative Biochemistry (COMPBIO)

COMPBIO 294 Comparative Biochemistry Seminar 1 Unit**Department:** Comparative Biochemistry**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The objective of this course is to provide an overview of the research activities conducted by faculty members of the Graduate Group in Comparative Biochemistry. The lectures will cover a wide range of interdisciplinary research topics reflecting the breadth of the Group. An important goal of this course is to enhance intellectual and collaborative interactions between students and faculty of the Graduate Group by increasing awareness of the range of research projects. The course will be conducted in a seminar format and is required for students new to the Graduate Group. It is also recommended for advanced students currently in the Group.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPBIO 299 Graduate Research 1 - 12 Units**Department:** Comparative Biochemistry**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Final exam not required.

COM LIT 232 Studies in Near Eastern-Western Literary Relations 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in a Near Eastern or a European language. Undergraduates may be admitted with consent of the instructor.

Comparative investigation of a literary topic requiring the study of both Near Eastern and Western documents.

Final exam not required.

COM LIT 240 Studies in the Relations Between Literature and the Other Arts 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages.

Comparative study of the historical and systematic relations between literature and other arts such as the visual arts, music, and film.

Final exam not required.

COM LIT 250 Studies in Literary Theory 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages.

Comparative investigation of a topic in the theory of literature.

Final exam not required.

COM LIT 254 Studies in East-West Literary Relations 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages, one of which must be an East Asian language.

Comparative investigation of a literary topic requiring the study of both East Asian and Western documents.

Final exam not required. Formerly known as C254.

COM LIT 258 Studies in Philosophy and Literature 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages.

Comparative investigation of a topic in the relationship between philosophy and literature.

Final exam not required.

COM LIT 260 Problems in Literary Translation 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages or permission of the instructor.

Theory and practice of translation. Students will complete a project in literary translation.

Final exam not required.

COM LIT 265 Gender, Sexuality, and Culture 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Comparative investigation of a topic related to the study of gender and/or sexuality in literature and culture.

Final exam not required.

COM LIT 266 Nationalism, Colonialism, and Culture 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Preparation in two foreign languages.

Comparative investigation of a topic in ideology, politics, and identity and its relation to the formation of national, colonial, and/or post-colonial literatures and cultures.

Final exam not required.

COM LIT 298 Special Study 1 - 4 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing.

Primarily for students engaged in preliminary exploration of a restricted field, involving the writing of a report. May not be substituted for available seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COM LIT N298 Special Study 2 - 4 Units**Department:** Comparative Literature**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing.

Primarily for students engaged in preliminary exploration of a restricted field, involving the writing of a report. May not be substituted for available seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COM LIT 299 Directed Research 1 - 12 Units**Department:** Comparative Literature**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Satisfactory completion of the Qualifying Examination. Writing of the doctoral dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COM LIT 300 Supervised Teaching in Comparative Literature 1 - 4 Units**Department:** Comparative Literature**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Regular meetings to be arranged with supervising instructor.**Prerequisites:** Appointment as a graduate student instructor in the department. Consent of graduate advisor.

Course credit for experience gained in academic teaching through employment as a graduate student instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COM LIT 375 Methods of Teaching Literature and English Composition-Comparative Literature 2 Units**Department:** Comparative Literature**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of lecture/discussion per week.**Prerequisites:** Appointment as a graduate student instructor or consent of instructor.

Discussion of the theory and practice of teaching composition at the college level in a department of comparative literature.

Final exam not required. Formerly known as Comparative Literature 360S.

COM LIT 601 Individual Study for Master's Students 1 - 8 Units**Department:** Comparative Literature**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Graduate standing.

Individual study for the comprehensive or language requirements in consultation with the Graduate Adviser. Units may not be used to meet either unit or residence requirements for the master's degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COM LIT 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Comparative Literature**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Satisfactory completion of the Master's examination.

Individual study in consultation with the Graduate Adviser intended to provide opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. May not be used for unit or residence requirements for the doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Computational Biology (CMPBIO)

CMPBIO 201 Classics in Computational Biology 3 Units**Department:** Computational Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Acceptance in the Computational Biology PhD program; consent of instructor.

Research project and approaches in computational biology. An introduction to the diverse ways biological problems are investigated computationally through critical evaluation of the classics and recent peer-reviewed literature. This is the core course required of all Computational Biology graduate students.

Final exam not required.

CMPBIO 294A Introduction to Research in Computational Biology 2 - 12 Units**Department:** Computational Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 to 20 hours of Laboratory per week for 15 weeks.**Prerequisites:** Standing as a Computational Biology graduate student.

Closely supervised experimental or computational work under the direction of an individual faculty member; an introduction to methods and research approaches in particular areas of computational biology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CMPBIO 294B Introduction to Research in Computational Biology 2 - 12 Units**Department:** Computational Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 to 20 hours of Laboratory per week for 15 weeks.**Prerequisites:** Standing as a Computational Biology graduate student.

Closely supervised experimental or computational work under the direction of an individual faculty member; an introduction to methods and research approaches in particular areas of computational biology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CMPBIO 295 Individual Research for Doctoral Students 1 - 12 Units**Department:** Computational Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 20 hour of Laboratory per week for 15 weeks.**Prerequisites:** Acceptance in the Computational Biology PhD program; consent of instructor.

Laboratory research, conferences. Individual research under the supervision of a faculty member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Computer Science (COMPSCI)

COMPSCI 3L Introduction to Symbolic Programming 4 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of lecture and 6 hours of laboratory per week and approximately 5 hours of self-scheduled programming laboratory. 2 hours of lecture and 12 hours of laboratory per week for 8 weeks and approximately 10 hours of self-scheduled programming laboratory.

Prerequisites: High school algebra.

Introduction to computer programming, emphasizing symbolic computation and functional programming style. Students will write a project of at least 200 lines of code in Scheme (a dialect of the LISP programming language).

Students may remove a deficiency in 3 by taking 3L. Final exam required.

Instructor: Clancy

COMPSCI 3S Introduction to Symbolic Programming (Self-Paced) 1 - 4 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hours of discussion and 3 to 9 hours of laboratory per week.

Prerequisites: High school algebra.

The same material as 3 but in a self-paced format; introduction to computer programming, emphasizing symbolic computation and functional programming style, using the Scheme programming language. Units assigned depend on amount of work completed. The first two units must be taken together.

Course may be repeated for a maximum of 4 units. Refer to computer science service course restrictions. Course may be repeated up to 4 units. Final exam required. Instructor: Garcia

COMPSCI 9A Matlab for Programmers 2 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Self-paced.

Prerequisites: Programming experience equivalent to that gained in Computer Science 10; familiarity with applications of matrix processing. Introduction to the constructs in the Matlab programming language, aimed at students who already know how to program. Array and matrix operations, functions and function handles, control flow, plotting and image manipulation, cell arrays and structures, and the Symbolic Mathematics toolbox.

Course may be repeated for a maximum of 4 units. Refer to computer science service course restrictions. Final exam required. Instructor: Garcia

COMPSCI 9C C for Programmers 2 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Self-paced.

Prerequisites: Programming experience with pointers (or addresses in assembly language) and linked data structures equivalent to that gained in Computer Science 9B or 61A, or Engineering 7.

Self-paced course in the C programming language for students who already know how to program. Computation, input and output, flow of control, functions, arrays, and pointers, linked structures, use of dynamic storage, and implementation of abstract data types.

Refer to computer science service course restrictions. Final exam required. Instructor: Garcia

COMPSCI 9D Scheme and Functional Programming for Programmers 2 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Self-paced.

Prerequisites: Programming experience similar to that gained in Computer Science 10 or Engineering 7.

Self-paced course in functional programming, using the Scheme programming language, for students who already know how to program. Recursion; higher-order functions; list processing; implementation of rule-based querying.

Refer to computer science service course restrictions. Final exam required. Instructor: Garcia

COMPSCI 9E Productive Use of the UNIX Environment 2 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Self-paced.

Prerequisites: Programming experience similar to that gained in Computer Science 61A or Engineering 7; DOS or UNIX experience. Use of UNIX utilities and scripting facilities for customizing the programming environment, organizing files (possibly in more than one computer account), implementing a personal database, reformatting text, and searching for online resources.

Refer to computer science service course restrictions. Final exam required. Instructor: Garcia

COMPSCI 9F C++ for Programmers 2 Units

Department: Computer Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Self-paced.

Prerequisites: Programming experience equivalent to that gained in Computer Science 9B or 61A, or Engineering 7.

Self-paced introduction to the constructs provided in the C++ programming language for procedural and object-oriented programming, aimed at students who already know how to program.

Refer to computer science service course restrictions in the <General Catalog>. Final exam required. Instructor: Garcia

COMPSCI 9G JAVA for Programmers 2 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Self-paced.**Prerequisites:** 9C or 9F or 61A plus experience with object-oriented programming or C-based language.

Self-paced course in Java for students who already know how to program. Applets; variables and computation; events and flow of control; classes and objects; inheritance; GUI elements; applications; arrays, strings, files, and linked structures; exceptions; threads.

Final exam required. Instructor: Garcia

COMPSCI 9H Python for Programmers 2 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Self-paced.**Prerequisites:** Programming experience equivalent to that gained in Computer Science 10.

Introduction to the constructs provided in the Python programming language, aimed at students who already know how to program. Flow of control; strings, tuples, lists, and dictionaries; CGI programming; file input and output; object-oriented programming; GUI elements.

Refer to computer science service course restrictions. Final exam required. Instructor: Garcia

COMPSCI 10 The Beauty and Joy of Computing 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture, 4 hours of Laboratory, and 1 hour of Discussion per week for 15 weeks. 4 hours of Lecture, 8 hours of Laboratory, and 2 hours of Discussion per week for 8 weeks.

An introduction to the beauty and joy of computing. The history, social implications, great principles, and future of computing. Beautiful applications that have changed the world. How computing empowers discovery and progress in other fields. Relevance of computing to the student and society will be emphasized. Students will learn the joy of programming a computer using a friendly, graphical language, and will complete a substantial team programming project related to their interests.

Final exam required. Instructors: Garcia, Harvey

COMPSCI W10 The Beauty and Joy of Computing 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of web-based lecture, 4 hours of web-based laboratory, and 1 hour of web-based discussion per week. 4 hours of web-based lecture, 8 hours of web-based laboratory, and 2 hours of web-based discussion per week for 8 weeks. This is an online course.

This course meets the programming prerequisite for 61A. An introduction to the beauty and joy of computing. The history, social implications, great principles, and future of computing. Beautiful applications that have changed the world. How computing empowers discovery and progress in other fields. Relevance of computing to the student and society will be emphasized. Students will learn the joy of programming a computer using a friendly, graphical language, and will complete a substantial team programming project related to their interests.

Students will receive no credit for W10 after taking 10. A deficient grade in 10 may be removed by taking W10. Final exam required. Instructors: Garcia, Harvey

COMPSCI 39J Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39K Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39M Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39N Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39P Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39Q Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 39R Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 47A Completion of Work in Computer Science 61A 1 Unit**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Self-paced.**Prerequisites:** 61B or equivalent, 9D, and consent of instructor.

Implementation of generic operations. Streams and iterators. Implementation techniques for supporting functional, object-oriented, and constraint-based programming in the Scheme programming language. Together with 9D, 47A constitutes an abbreviated, self-paced version of 61A for students who have already taken a course equivalent to 61B. Students will receive no credit for 47A after taking 61A. Final exam required. Instructor: Garcia

COMPSCI 47B Completion of Work in Computer Science 61B 1 Unit**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Self-paced.**Prerequisites:** A course in data structures, 9G or equivalent, and consent of instructor.

Iterators. Hashing, applied to strings and multi-dimensional structures.

Heaps. Storage management. Design and implementation of a program containing hundreds of lines of code. Students with sufficient partial credit in 61B may, with consent of instructor, complete the credit in this self-paced course.

Students will receive no credit for 47B after taking 61B. Final exam required. Instructor: Garcia

COMPSCI 47C Completion of Work in Computer Science 61C 1 Unit**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Self-paced.**Prerequisites:** Experience with assembly language including writing an interrupt handler, 9C or equivalent, and consent of instructor.

MIPS instruction set simulation. The assembly and linking process.

Caches and virtual memory. Pipelined computer organization. Students with sufficient partial credit in 61C may, with consent of instructor, complete the credit in this self-paced course.

Students will receive no credit for 47C after taking 61C. Final exam required. Instructor: Garcia

COMPSCI 61A The Structure and Interpretation of Computer Programs 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1.5 hours of laboratory and 1.5 hours of discussion per week. 6 hours of lecture and 3 hours of laboratory and 3 hours of discussion per week for 8 weeks.**Prerequisites:** Mathematics 1A (may be taken concurrently); programming experience equivalent to that gained in 3 or the Advanced Placement Computer Science A course.

Introduction to programming and computer science. This course exposes students to techniques of abstraction at several levels: (a) within a programming language, using higher-order functions, manifest types, data-directed programming, and message-passing; (b) between programming languages, using functional and rule-based languages as examples. It also relates these techniques to the practical problems of implementation of languages and algorithms on a von Neumann machine. There are several significant programming projects.

Students will receive no credit for 61A after taking 47A. Final exam required. Instructors: Garcia, Hilfinger

COMPSCI 61AS The Structure and Interpretation of Computer Programs (Self-Paced) 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Laboratory per week for 15 weeks. 11 hours of Laboratory per week for 8 weeks. 15 hours of Laboratory per week for 6 weeks.**Prerequisites:** Mathematics 1A (may be taken concurrently).

Programming experience equivalent to that gained in 10 or the Advanced Placement Computer Science A course is recommended, but is not essential; students without this experience will begin at an earlier point in the online course.

Introductory programming and computer science. Abstraction as means to control program complexity. Programming paradigms: functional, object-oriented, client/server, and declarative (logic). Control abstraction: recursion and higher order functions. Introduction to asymptotic analysis of algorithms. Data abstraction: abstract data types, type-tagged data, first class data types, sequences implemented as lists and as arrays, generic operators implemented with data-directed programming and with message passing. Implementation of object-oriented programming with closures over dispatch procedures. Introduction to interpreters and compilers. There are several significant programming projects. Course may be completed in one or two semesters. Students must complete a minimum of two units during their first semester of 61AS.

Course may be repeated for a maximum of 4 units. Course may be repeated for a maximum of 4 units. Students will receive no credit for Computer Science 61AS after taking 47A, 61A. A deficiency in Computer Science 61A may be removed by taking 61AS. Final exam required. Instructors: Garcia, Harvey, Hilfinger

COMPSCI 61B Data Structures 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks. 6 hours of Lecture, 2 hours of Discussion, and 4 hours of Laboratory per week for 8 weeks.**Prerequisites:** 61A or Engineering 7.

Fundamental dynamic data structures, including linear lists, queues, trees, and other linked structures; arrays strings, and hash tables. Storage management. Elementary principles of software engineering. Abstract data types. Algorithms for sorting and searching. Introduction to the Java programming language.

Students will receive no credit for 61B after taking 47B or 61BL.

Deficiency in 61BL may be removed by taking 61B. Final exam required. Instructors: Hilfinger, Shewchuk

COMPSCI 61BL Data Structures and Programming Methodology 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 6 hours of Laboratory per week for 15 weeks. 2 hours of Lecture and 12 hours of Laboratory per week for 8 weeks.**Prerequisites:** 61A or Engineering 7.

The same material as in 61B, but in a laboratory-based format.

Students will receive no credit for 61BL after taking 47B or 61B.

Deficiency in 61B may be removed by taking 61BL. Final exam required.

Instructor: Hilfinger

COMPSCI 61C Machine Structures 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 hour of discussion, and an average of 6 hours of self-scheduled programming laboratory per week.**Prerequisites:** 61A, along with either 61B or 61BL, or programming experience equivalent to that gained in 9C, 9F, or 9G.

The internal organization and operation of digital computers. Machine architecture, support for high-level languages (logic, arithmetic, instruction sequencing) and operating systems (I/O, interrupts, memory management, process switching). Elements of computer logic design. Tradeoffs involved in fundamental architectural design decisions.

Students will receive no credit for 61C after taking 47C or 61CL.

Deficiency in 61C may be removed by taking 61CL. Final exam required.

Instructors: Garcia, Franklin, Katz, Patterson

COMPSCI 61CL Machine Structures (Lab-Centric) 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 hour of discussion, and an average of 6 hours of self-scheduled programming laboratory per week.**Prerequisites:** 61A, along with 61B or 61BL, or programming experience equivalent to that gained in 9C, 9F, or 9G.

The same material as in 61C but in a lab-centric format.

Students will receive no credit for 61CL after taking 47C or 61C.

Deficiency in 61C may be removed by taking 61CL. Final exam required.

Instructors: Garcia, Patterson

COMPSCI 70 Discrete Mathematics and Probability Theory 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week, or 3 hours of lecture and 2 hours of discussion per week.**Prerequisites:** Sophomore mathematical maturity, and programming experience equivalent to that gained in 3 or the Advanced Placement Computer Science A course.

Logic, infinity, and induction; applications include undecidability and stable marriage problem. Modular arithmetic and GCDs; applications include primality testing and cryptography. Polynomials; examples include error correcting codes and interpolation. Probability including sample spaces, independence, random variables, law of large numbers; examples include load balancing, existence arguments, Bayesian inference.

Students will receive no credit for 70 after taking Mathematics 55. Final exam required. Instructors: Papadimitriou, Rao, Sinclair, Trevisan, Vazirani, Wagner

COMPSCI C79/POL SCI C79/STAT C79 Societal Risks and the Law 3 Units**Department:** Computer Science; Political Science; Statistics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Defining, perceiving, quantifying and measuring risk; identifying risks and estimating their importance; determining whether laws and regulations can protect us from these risks; examining how well existing laws work and how they could be improved; evaluating costs and benefits.

Applications may vary by term. This course cannot be used to complete engineering unit or technical elective requirements for students in the College of Engineering.

Final exam not required.

COMPSCI 97 Field Study 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Fieldwork per week for 15 weeks. 2 to 7.5 hours of Fieldwork per week for 8 weeks. 2.5 to 10 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Consent of instructor (see department adviser).

Students take part in organized individual field sponsored programs with off-campus companies or tutoring/mentoring relevant to specific aspects and applications of computer science on or off campus. Note Summer CPT or OPT students: written report required. Course does not count toward major requirements, but will be counted in the cumulative units toward graduation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 98 Directed Group Study 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of lecture per week per unit.**Prerequisites:** Consent of instructor.

Seminars for group study of selected topics, which will vary from year to year. Intended for students in the lower division.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 99 Individual Study and Research for Undergraduates 1 - 2 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Prerequisites: GPA of 3.4 or better.

A course for lower division students in good standing who wish to undertake a program of individual inquiry initiated jointly by the student and a professor. There are no other formal prerequisites, but the supervising professor must be convinced that the student is able to profit by the program.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI C149/EL ENG C149 Introduction to Embedded Systems 4 Units**Department:** Computer Science; Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 20N; Computer Science 61C; Computer Science 70 or Math 55.

This course introduces students to the basics of models, analysis tools, and control for embedded systems operating in real time. Students learn how to combine physical processes with computation. Topics include models of computation, control, analysis and verification, interfacing with the physical world, mapping to platforms, and distributed embedded systems. The course has a strong laboratory component, with emphasis on a semester-long sequence of projects.

Students will receive no credit for Electrical Engineering C149/Computer Science C149 after taking Electrical Engineering C249M/Computer Science C249M. Students may remove a deficient grade in Electrical Engineering C149/Computer Science C149 after taking Electrical Engineering 124. Final exam required. Instructors: Lee, Seshia

COMPSCI 150 Components and Design Techniques for Digital Systems 5 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: Computer Science 61C, Electrical Engineering 40. Basic building blocks and design methods to construct synchronous digital systems, such as general purpose processors, hardware accelerators, and application specific processors. Representations and design methodologies for digital systems. Logic design using combinatorial and sequential circuits. Digital system implementation considering hardware descriptions languages, computer-aided design tools, field-programmable gate array architectures, and CMOS logic gates and state elements. Interfaces between peripherals, processor hardware, and software. Formal hardware laboratories and substantial design project. Final exam required. Instructors: Katz, Pister, Wawrzynek

COMPSCI 152 Computer Architecture and Engineering 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion per week.**Prerequisites:** 61C.

Instruction set architecture, microcoding, pipelining (simple and complex). Memory hierarchies and virtual memory. Processor parallelism: VLIW, vectors, multithreading. Multiprocessors.

The course is organized into five modules, with each module having a problem set, a lab, and a quiz. Ongoing mastery with each module building upon the previous content is designed to promote overall mastery of the subject areas covered in the entire class. The final project (module 5) is an architectural analysis that requires students to draw on material learned in the entire class and to draw on a comprehensive understanding of the course material. Instructors: Asanovic, Culler, Kubiawicz, Wawrzynek

COMPSCI 160 User Interface Design and Development 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and 4 hours of self-scheduled programming laboratory per week.**Prerequisites:** Computer Science 61B or 61BL.

The design, implementation, and evaluation of user interfaces. User-centered design and task analysis. Conceptual models and interface metaphors. Usability inspection and evaluation methods. Analysis of user study data. Input methods (keyboard, pointing, touch, tangible) and input models. Visual design principles. Interface prototyping and implementation methodologies and tools. Students will develop a user interface for a specific task and target user group in teams.

Students will receive no credit for Computer Science 160 after taking Computer Science 260A. Final exam required. Instructors: Agrawala, Canny, Hartmann

COMPSCI 161 Computer Security 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** 61C (Machine Structures), plus either 70 (Discrete Mathematics) or Mathematics 55.

Introduction to computer security. Cryptography, including encryption, authentication, hash functions, cryptographic protocols, and applications. Operating system security, access control. Network security, firewalls, viruses, and worms. Software security, defensive programming, and language-based security. Case studies from real-world systems.

Final exam required. Instructors: Paxson, Song, Tygar, Wagner

COMPSCI 162 Operating Systems and System Programming 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and 4 hours of programming laboratory per week.**Prerequisites:** Computer Science 61B, 61C, and 70.

Basic concepts of operating systems and system programming.

Utility programs, subsystems, multiple-program systems. Processes, interprocess communication, and synchronization. Memory allocation, segmentation, paging. Loading and linking, libraries. Resource allocation, scheduling, performance evaluation. File systems, storage devices, I/O systems. Protection, security, and privacy.

Final exam required. Instructors: Joseph, Kubiawicz

COMPSCI 164 Programming Languages and Compilers 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 61B and 61C.

Survey of programming languages. The design of modern programming languages. Principles and techniques of scanning, parsing, semantic analysis, and code generation. Implementation of compilers, interpreters, and assemblers. Overview of run-time organization and error handling.

Final exam required. Instructors: Bodik, Hilfinger, Necula

COMPSCI 169 Software Engineering 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 61B and 61C, and either Computer Science 70 or Mathematics 113.

Ideas and techniques for designing, developing, and modifying large software systems. Function-oriented and object-oriented modular design techniques, designing for re-use and maintainability. Specification and documentation. Verification and validation. Cost and quality metrics and estimation. Project team organization and management. Students will work in teams on a substantial programming project.

Final exam required. Instructors: Brewer, Fox, Necula, Sen

COMPSCI 170 Efficient Algorithms and Intractable Problems 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 61B and 70.

Concept and basic techniques in the design and analysis of algorithms; models of computation; lower bounds; algorithms for optimum search trees, balanced trees and UNION-FIND algorithms; numerical and algebraic algorithms; combinatorial algorithms. Turing machines, how to count steps, deterministic and nondeterministic Turing machines, NP-completeness. Unsolvability and intractable problems.

Final exam required. Instructors: Demmel, Papadimitriou, Rao, Wagner, Vazirani

COMPSCI 172 Computability and Complexity 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 170

Finite automata, Turing machines and RAMs. Undecidable, exponential, and polynomial-time problems. Polynomial-time equivalence of all reasonable models of computation. Nondeterministic Turing machines. Theory of NP-completeness: Cook's theorem, NP-completeness of basic problems. Selected topics in language theory, complexity and randomness.

Final exam required. Instructors: Papadimitriou, Seshia, Sinclair, Vazirani

COMPSCI 174 Combinatorics and Discrete Probability 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 170

Permutations, combinations, principle of inclusion and exclusion, generating functions, Ramsey theory. Expectation and variance, Chebychev's inequality, Chernov bounds. Birthday paradox, coupon collector's problem, Markov chains and entropy computations, universal hashing, random number generation, random graphs and probabilistic existence bounds.

Final exam required. Instructors: Bartlett, Papadimitriou, Sinclair, Vazirani

COMPSCI 176 Algorithms for Computational Biology 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 70 and 170. Experience programming in a language such as C, C++, Java, or Python.

Algorithms and probabilistic models that arise in various computational biology applications: suffix trees, suffix arrays, pattern matching, repeat finding, sequence alignment, phylogenetics, genome rearrangements, hidden Markov models, gene finding, motif finding, stochastic context free grammars, RNA secondary structure. There are no biology prerequisites for this course, but a strong quantitative background will be essential.

Final exam required. Instructor: Song

COMPSCI 184 Foundations of Computer Graphics 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 61B or 61BL; programming skills in C, C++, or Java; linear algebra and calculus.

Techniques of modeling objects for the purpose of computer rendering: boundary representations, constructive solids geometry, hierarchical scene descriptions. Mathematical techniques for curve and surface representation. Basic elements of a computer graphics rendering pipeline; architecture of modern graphics display devices. Geometrical transformations such as rotation, scaling, translation, and their matrix representations. Homogeneous coordinates, projective and perspective transformations. Algorithms for clipping, hidden surface removal, rasterization, and anti-aliasing. Scan-line based and ray-based rendering algorithms. Lighting models for reflection, refraction, transparency. Students will receive no credit for Comp Sci 184 after taking Comp Sci 284A. Final exam required. Instructors: O'Brien, Sequin, Barsky, Ramamoorthi, Agrawala

COMPSCI 186 Introduction to Database Systems 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 61B and 61C.

Access methods and file systems to facilitate data access. Hierarchical, network, relational, and object-oriented data models. Query languages for models. Embedding query languages in programming languages. Database services including protection, integrity control, and alternative views of data. High-level interfaces including application generators, browsers, and report writers. Introduction to transaction processing. Database system implementation to be done as term project. Students will receive no credit for Comp Sci 186 after taking Comp Sci 286A. Final exam required. Instructors: Franklin, Hellerstein

COMPSCI 188 Introduction to Artificial Intelligence 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Computer Science 61A or 61B and consent of instructor; Computer Science 70.

Basic ideas and techniques underlying the design of intelligent computer systems. Topics include heuristic search, problem solving, game playing, knowledge representation, logical inference, planning, reasoning under uncertainty, expert systems, learning, perception, language understanding.

Final exam required. Instructors: Klein, Malik

COMPSCI 189 Introduction to Machine Learning 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 53 and 54; Computer Science 70; Computer Science 188 or consent of instructor.

Theoretical foundations, algorithms, methodologies, and applications for machine learning. Topics may include supervised methods for regression and classification (linear models, trees, neural networks, ensemble methods, instance-based methods); generative and discriminative probabilistic models; Bayesian parametric learning; density estimation and clustering; Bayesian networks; time series models; dimensionality reduction; programming projects covering a variety of real-world applications.

Students will receive no credit for Comp Sci 189 after taking Comp Sci 289A. Final exam required. Instructors: Abbeel, Bartlett, Darrell, El Ghaoui, Jordan, Klein, Malik, Russell

COMPSCI C191/CHEM C191/PHYSICS C191 Quantum Information Science and Technology 3 Units**Department:** Computer Science; Chemistry; Physics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This multidisciplinary course provides an introduction to fundamental conceptual aspects of quantum mechanics from a computational and informational theoretic perspective, as well as physical implementations and technological applications of quantum information science. Basic sections of quantum algorithms, complexity, and cryptography, will be touched upon, as well as pertinent physical realizations from nanoscale science and engineering.

Final exam required. Instructors: Crommie, Vazirani, Whaley

COMPSCI 194 Special Topics 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4s hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

Topics will vary semester to semester. See the Computer Science Division announcements.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

COMPSCI 195 Social Implications of Computer Technology 1 Unit**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of lecture/discussion per week.

Topics include electronic community; the changing nature of work; technological risks; the information economy; intellectual property; privacy; artificial intelligence and the sense of self; pornography and censorship; professional ethics. Students will lead discussions on additional topics.

Students will receive no credit for 195 after taking C195/Interdisciplinary Field Study C155 or H195. Final exam not required. Instructor: Harvey

COMPSCI H195 Honors Social Implications of Computer Technology 3 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1.5 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

Topics include electronic community; the changing nature of work; technological risks; the information economy; intellectual property; privacy; artificial intelligence and the sense of self; pornography and censorship; professional ethics. Students may lead discussions on additional topics.

Student will receive no credit for H195 after taking 195 or C195. Final exam not required. Instructor: Harvey

COMPSCI H196A Senior Honors Thesis Research 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individual research.**Prerequisites:** Open only to students in the computer science honors program.

Thesis work under the supervision of a faculty member. To obtain credit the student must, at the end of two semesters, submit a satisfactory thesis to the Electrical Engineering and Computer Science department archive.

A total of four units must be taken. The units may be distributed between one or two semesters in any way. H196A-H196B count as graded technical elective units, but may not be used to satisfy the requirement for 27 upper division technical units in the College of Letters and Science with a major in Computer Science.

Final exam required.

COMPSCI H196B Senior Honors Thesis Research 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individual research.**Prerequisites:** Open only to students in the computer science honors program.

Thesis work under the supervision of a faculty member. To obtain credit the student must, at the end of two semesters, submit a satisfactory thesis to the Electrical Engineering and Computer Science department archive.

A total of four units must be taken. The units may be distributed between one or two semesters in any way. H196A-H196B count as graded technical elective units, but may not be used to satisfy the requirement for 27 upper division technical units in the College of Letters and Science with a major in Computer Science.

Final exam required.

COMPSCI 197 Field Study 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Fieldwork per week for 15 weeks. 2 to 7.5 hours of Fieldwork per week for 8 weeks. 2.5 to 10 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Consent of instructor (see department adviser).

Students take part in organized individual field sponsored programs with off-campus companies or tutoring/mentoring relevant to specific aspects and applications of computer science on or off campus. Note Summer CPT or OPT students: written report required. Course does not count toward major requirements, but will be counted in the cumulative units toward graduation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Course format varies with section.**Prerequisites:** 2.0 GPA or better; 60 units completed.

Group study of selected topics in Computer Sciences, usually relating to new developments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 199 Supervised Independent Study 1 - 4 Units**Department:** Computer Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences.**Prerequisites:** Consent of instructor and major adviser.

Supervised independent study. Enrollment restrictions apply.

Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

COMPSCI C219D/EL ENG C219D Concurrent Models of Computation 3 Units**Department:** Computer Science; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Theory and practice of concurrent models of computation (MoCs) with applications to software systems, embedded systems, and cyber-physical systems. Analysis for boundedness, deadlock, and determinacy; formal semantics (fixed point semantics and metric-space models); composition; heterogeneity; and model-based design. MoCs covered may include process networks, threads, message passing, synchronous/reactive, dataflow, rendezvous, time-triggered, discrete events, and continuous time.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Lee

COMPSCI C249A/EL ENG C249A Introduction to Embedded Systems 4 Units**Department:** Computer Science; Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

This course introduces students to the basics of models, analysis tools, and control for embedded systems operating in real time. Students learn how to combine physical processes with computation. Topics include models of computation, control, analysis and verification, interfacing with the physical world, mapping to platforms, and distributed embedded systems. The course has a strong laboratory component, with emphasis on a semester-long sequence of projects.

Students will receive no credit for El Eng/Comp Sci C249A after taking El Eng/Comp Sci C149. Final exam required. Formerly known as Electrical Engineering C249M/Computer Science C249M. Instructors: Lee, Seshia

COMPSCI 250 VLSI Systems Design 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 4 hours design laboratory per week.

Prerequisites: 150

Unified top-down and bottom-up design of integrated circuits and systems concentrating on architectural and topological issues. VLSI architectures, systolic arrays, self-timed systems. Trends in VLSI development. Physical limits. Tradeoffs in custom-design, standard cells, gate arrays. VLSI design tools.

Final exam not required. Instructor: Wawrzynek

COMPSCI 252 Graduate Computer Architecture 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 152

Graduate survey of contemporary computer organizations covering: early systems, CPU design, instruction sets, control, processors, busses, ALU, memory, I/O interfaces, connection networks, virtual memory, pipelined computers, multiprocessors, and case studies. Term paper or project is required.

Final exam not required. Instructors: Culler, Kubiawicz, Patterson

COMPSCI 260A User Interface Design and Development 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 61B, 61BL, or consent of instructor.

The design, implementation, and evaluation of user interfaces. User-centered design and task analysis. Conceptual models and interface metaphors. Usability inspection and evaluation methods. Analysis of user study data. Input methods (keyboard, pointing, touch, tangible) and input models. Visual design principles. Interface prototyping and implementation methodologies and tools. Students will develop a user interface for a specific task and target user group in teams. Students will receive no credit for Computer Science 260A after taking Computer Science 160. Final exam not required. Instructors: Agrawala, Canny, Hartmann

COMPSCI 260B Human-Computer Interaction Research 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Computer Science 160 recommended, or consent of instructor.

This course is a broad introduction to conducting research in Human-Computer Interaction. Students will become familiar with seminal and recent literature; learn to review and critique research papers; re-implement and evaluate important existing systems; and gain experience in conducting research. Topics include input devices, computer-supported cooperative work, crowdsourcing, design tools, evaluation methods, search and mobile interfaces, usable security, help and tutorial systems. Final exam not required. Instructor: Hartmann

COMPSCI 261 Security in Computer Systems 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 162

Graduate survey of modern topics in computer security, including protection, access control, distributed access security, firewalls, secure coding practices, safe languages, mobile code, and case studies from real-world systems. May also cover cryptographic protocols, privacy and anonymity, and/or other topics as time permits.

Final exam not required. Instructors: D. Song, Wagner

COMPSCI 261N Internet and Network Security 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Electrical Engineering 122 or equivalent; Computer Science 161 or familiarity with basic security concepts.

Develops a thorough grounding in Internet and network security suitable for those interested in conducting research in the area or those more broadly interested in security or networking. Potential topics include denial-of-service; capabilities; network intrusion detection/prevention; worms; forensics; scanning; traffic analysis; legal issues; web attacks; anonymity; wireless and networked devices; honeypots; botnets; scams; underground economy; attacker infrastructure; research pitfalls. Final exam not required. Instructor: Paxson

COMPSCI 262A Advanced Topics in Computer Systems 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 162 and entrance exam.

Graduate survey of systems for managing computation and information, covering a breadth of topics: early systems; volatile memory management, including virtual memory and buffer management; persistent memory systems, including both file systems and transactional storage managers; storage metadata, physical vs. logical naming, schemas, process scheduling, threading and concurrency control; system support for networking, including remote procedure calls, transactional RPC, TCP, and active messages; security infrastructure; extensible systems and APIs; performance analysis and engineering of large software systems. Homework assignments, exam, and term paper or project required.

Final exam not required. Formerly known as 262. Instructors: Brewer, Hellerstein

COMPSCI 262B Advanced Topics in Computer Systems 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 262A.

Continued graduate survey of large-scale systems for managing information and computation. Topics include basic performance measurement; extensibility, with attention to protection, security, and management of abstract data types; index structures, including support for concurrency and recovery; parallelism, including parallel architectures, query processing and scheduling; distributed data management, including distributed and mobile file systems and databases; distributed caching; large-scale data analysis and search. Homework assignments, exam, and term paper or project required.

Final exam not required. Instructors: Brewer, Culler, Hellerstein, Joseph

COMPSCI 263 Design of Programming Languages 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 164

Selected topics from: analysis, comparison, and design of programming languages, formal description of syntax and semantics, advanced programming techniques, structured programming, debugging, verification of programs and compilers, and proofs of correctness.

Final exam not required. Instructor: Necula

COMPSCI 264 Implementation of Programming Languages 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and 6 hours programing laboratory per week.**Prerequisites:** 164, 263 recommended.

Compiler construction. Lexical analysis, syntax analysis. Semantic analysis code generation and optimization. Storage management. Run-time organization.

Final exam not required. Instructor: Bodik

COMPSCI 265 Compiler Optimization and Code Generation 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 164

Table-driven and retargetable code generators. Register management. Flow analysis and global optimization methods. Code optimization for advanced languages and architectures. Local code improvement. Optimization by program transformation. Selected additional topics. A term paper or project is required.

Final exam not required. Instructor: Sen

COMPSCI 266 Introduction to System Performance Analysis 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 162 and Statistics 5.

Performance indices. Evaluation techniques. Measurement: instrumentation, design of experiments, interpretation of results. Simulation modeling: simulator design, model calibration, statistical analysis of output data. Introduction to analytic modeling. Workload characterization. Tuning, procurement, and capacity planning application. Program performance evaluation. File and I/O system optimization. CPU Scheduling and architecture performance analysis.

Final exam not required. Formerly known as 267 and 268.

COMPSCI C267/ENGIN C233 Applications of Parallel Computers 3 Units**Department:** Computer Science; Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Models for parallel programming. Fundamental algorithms for linear algebra, sorting, FFT, etc. Survey of parallel machines and machine structures. Exiting parallel programming languages, vectorizing compilers, environments, libraries and toolboxes. Data partitioning techniques. Techniques for synchronization and load balancing. Detailed study and algorithm/program development of medium sized applications.

Course may be repeated for credit when topic changes. Final exam not required. Instructors: Demmel, Yelick

COMPSCI 268 Computer Networks 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 162

Distributed systems, their notivations, applications, and organization. The network component. Network architectures. Local and long-haul networks, technologies, and topologies. Data link, network, and transport protocols. Point-to-point and broadcast networks. Routing and congestion control. Higher-level protocols. Naming. Internetworking. Examples and case studies.

Final exam not required. Formerly known as 292V. Instructors: Joseph, Katz, Stoica

COMPSCI 270 Combinatorial Algorithms and Data Structures 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 170

Design and analysis of efficient algorithms for combinatorial problems. Network flow theory, matching theory, matroid theory; augmenting-path algorithms; branch-and-bound algorithms; data structure techniques for efficient implementation of combinatorial algorithms; analysis of data structures; applications of data structure techniques to sorting, searching, and geometric problems.

Final exam not required. Instructors: Papadimitriou, Rao, Sinclair, Vazirani

COMPSCI 271 Randomness and Computation 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 170 and at least one course numbered 270-279.

Computational applications of randomness and computational theories of randomness. Approximate counting and uniform generation of combinatorial objects, rapid convergence of random walks on expander graphs, explicit construction of expander graphs, randomized reductions, Kolmogorov complexity, pseudo-random number generation, semi-random sources.

Final exam not required. Instructor: Sinclair

COMPSCI 273 Foundations of Parallel Computation 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 170, or consent of instructor.

. Fundamental theoretical issues in designing parallel algorithms and architectures. Shared memory models of parallel computation. Parallel algorithms for linear algebra, sorting, Fourier Transform, recurrence evaluation, and graph problems. Interconnection network based models. Algorithm design techniques for networks like hypercubes, shuffle-exchanges, trees, meshes and butterfly networks. Systolic arrays and techniques for generating them. Message routing.

Final exam required. Instructor: Rao

COMPSCI 274 Computational Geometry 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 170 or equivalent.

. Constructive problems in computational geometry: convex hulls, triangulations, Voronoi diagrams, arrangements of hyperplanes; relationships among these problems. Search problems: advanced data structures; subdivision search; various kinds of range searches. Models of computation; lower bounds.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Shewchuk

COMPSCI 276 Cryptography 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 170

Graduate survey of modern topics on theory, foundations, and applications of modern cryptography. One-way functions; pseudorandomness; encryption; authentication; public-key cryptosystems; notions of security. May also cover zero-knowledge proofs, multi-party cryptographic protocols, practical applications, and/or other topics, as time permits.

Final exam not required. Instructors: Trevisan, Wagner

COMPSCI C280/VIS SCI C280 Computer Vision 3 Units**Department:** Computer Science; Vision Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Knowledge of linear algebra and calculus. Mathematics 1A-1B, 53, 54 or equivalent.

Paradigms for computational vision. Relation to human visual perception. Mathematical techniques for representing and reasoning, with curves, surfaces and volumes. Illumination and reflectance models. Color perception. Image segmentation and aggregation. Methods for bottom-up three dimensional shape recovery: Line drawing analysis, stereo, shading, motion, texture. Use of object models for prediction and recognition.

Final exam required. Instructor: Malik

COMPSCI C281A/STAT C241A Statistical Learning Theory 3 Units**Department:** Computer Science; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Classification regression, clustering, dimensionality, reduction, and density estimation. Mixture models, hierarchical models, factorial models, hidden Markov, and state space models, Markov properties, and recursive algorithms for general probabilistic inference nonparametric methods including decision trees, kernel methods, neural networks, and wavelets. Ensemble methods.

Final exam not required. Instructors: Bartlett, Jordan, Wainwright

COMPSCI C281B/STAT C241B Advanced Topics in Learning and Decision Making 3 Units**Department:** Computer Science; Statistics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Recent topics include: Graphical models and approximate inference algorithms. Markov chain Monte Carlo, mean field and probability propagation methods. Model selection and stochastic realization. Bayesian information theoretic and structural risk minimization approaches. Markov decision processes and partially observable Markov decision processes. Reinforcement learning.

Final exam not required. Instructors: Bartlett, Jordan, Wainwright

COMPSCI 283B Computer-Aided Geometric Design and Modeling 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematical skill in calculus and linear algebra. Mathematical techniques for curve and surface representation, including: Hermite interpolation, interpolatory splines, tensed splines, Bezier curves and surfaces, B-splines, Beta-splines, Coons patches, tensor product forms, as well as subdivision end/bounding conditions, and computational considerations.

Final exam not required. Formerly known as Computer Science 284.

Instructors: Barsky, Sequin

COMPSCI 284A Foundations of Computer Graphics 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Computer Science 61B or 61BL; programming skills in C, C++, or Java; linear algebra and calculus; or consent of instructor. Techniques of modeling objects for the purpose of computer rendering: boundary representations, constructive solids geometry, hierarchical scene descriptions. Mathematical techniques for curve and surface representation. Basic elements of a computer graphics rendering pipeline; architecture of modern graphics display devices. Geometrical transformations such as rotation, scaling, translation, and their matrix representations. Homogeneous coordinates, projective and perspective transformations.

Students will receive no credit for Computer Science 284A after taking 184. Final exam required. Instructors: Agrawala, Barsky, O'Brien, Ramamoorthi, Sequin

COMPSCI 284B Advanced Computer Graphics Algorithms and Techniques 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 184 or equivalent.

This course provides a graduate-level introduction to advanced computer graphics algorithms and techniques. Students should already be familiar with basic concepts such as transformations, scan-conversion, scene graphs, shading, and light transport. Topics covered in this course include global illumination, mesh processing, subdivision surfaces, basic differential geometry, physically based animation, inverse kinematics, imaging and computational photography, and precomputed light transport. Final exam not required. Formerly known as Computer Science 283. Instructors: O'Brien, Ramamoorthi

COMPSCI 285 Solid Free-Form Modeling and Fabrication 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 184

From shape design to computer-based descriptions suitable for manufacturing or rapid prototyping. Solid modeling techniques and procedural shape generation. Effective data structures and unambiguous part description formats. Algorithms for dealing with Boolean operations and for machine tool path planning. Problems of finite-precision geometry and machining tolerances. Introduction to some rapid prototyping techniques based on Solid Free-Form Fabrication and NC machining. Other advanced topics and recent developments in the field. Final exam not required. Instructor: Sequin

COMPSCI 286A Introduction to Database Systems 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Computer Science 61B and 61C.

Access methods and file systems to facilitate data access. Hierarchical, network, relational, and object-oriented data models. Query languages for models. Embedding query languages in programming languages. Database services including protection, integrity control, and alternative views of data. High-level interfaces including application generators, browsers, and report writers. Introduction to transaction processing. Database system implementation to be done as term project. Students will receive no credit for CS 286A after taking CS 186. Final exam required. Instructors: Franklin, Hellerstein

COMPSCI 286B Implementation of Data Base Systems 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Computer Science 162 and 186 or 286A .

Implementation of data base systems on modern hardware systems. Considerations concerning operating system design, including buffering, page size, prefetching, etc. Query processing algorithms, design of crash recovery and concurrency control systems. Implementation of distributed data bases and data base machines.

Final exam required. Instructors: Franklin, Hellerstein

COMPSCI 287 Advanced Robotics 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Electrical Engineering 125.

Advanced topics related to current research in robotics. Planning and control issues for realistic robot systems, taking into account: dynamic constraints, control and sensing uncertainty, and non-holonomic motion constraints. Analysis of friction for assembly and grasping tasks. Sensing systems for hands including tactile and force sensing. Environmental perception from sparse sensors for dextrous hands. Grasp planning and manipulation.

Final exam not required. Instructor: Abbeel

COMPSCI 288 Artificial Intelligence Approach to Natural Language Processing 3 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week plus programming assignment.**Prerequisites:** 164

Representation of conceptual structures, language analysis and production, models of inference and memory, high-level text structures, question answering and conversation, machine translation.

Final exam not required. Instructor: Klein

COMPSCI 289A Introduction to Machine Learning 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 53, 54; Computer Science 70; Computer Science 188 or consent of instructor.

This course provides an introduction to theoretical foundations, algorithms, and methodologies for machine learning, emphasizing the role of probability and optimization and exploring a variety of real-world applications. Students are expected to have a solid foundation in calculus and linear algebra as well as exposure to the basic tools of logic and probability, and should be familiar with at least one modern, high-level programming language.

Students will receive no credit for Comp Sci 289A after taking Comp Sci 189. Final exam not required. Instructors: Abbeel, Bartlett, Darrell, El Ghaoui, Jordan, Klein, Malik, Russell

COMPSCI 294 Special Topics 1 - 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture per week for standard offering.

In some instances, condensed special topics classes running from 2-10 weeks may also be offered usually to accommodate guest instructors.

Total works hours will remain the same but more work in a given week will be required.

Topics will vary from semester to semester. See Computer Science Division announcements.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI C294P/MEC ENG C290U Interactive Device Design 3 Units**Department:** Computer Science; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Instructor consent.

This course teaches concepts and skills required to design, prototype, and fabricate interactive devices -- that is, physical objects that intelligently respond to user input and enable new types of interactions.

Course Objectives: To educate students in the hybrid design skills needed for today's electronic products. These combine mechanical devices, electronics, software, sensors, wireless communication and connections to the cloud. Students also learn scale up procedures for volume manufacturing.

Student Learning Outcomes: 3D printed prototypes, learned software, programming and design skills

Final exam required. Instructors: Hartmann, Wright

COMPSCI 297 Field Studies in Computer Science 1 - 12 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent study. Independent study.

Supervised experience in off-campus companies relevant to specific aspects and applications of electrical engineering and/or computer science. Written report required at the end of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 298 Group Studies Seminars, or Group Research 1 - 4 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hours per unit.

Advanced study in various subjects through seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 299 Individual Research 1 - 12 Units**Department:** Computer Science**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent study. Forty-5 hours of work per unit per term.

Investigations of problems in computer science.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 300 Teaching Practice 1 - 6 Units**Department:** Computer Science**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 to 20 hours of discussion and consulting per week. Supervised teaching practice, in either a one-on-one tutorial or classroom discussion setting.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 302 Designing Computer Science Education 3 Units**Department:** Computer Science**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Computer Science 301 and two semesters of GSI experience.

Discussion and review of research and practice relating to the teaching of computer science: knowledge organization and misconceptions, curriculum and topic organization, evaluation, collaborative learning, technology use, and administrative issues. As part of a semester-long project to design a computer science course, participants invent and refine a variety of homework and exam activities, and evaluate alternatives for textbooks, grading and other administrative policies, and innovative uses of technology.

Final exam not required. Instructor: Garcia

COMPSCI 375 Teaching Techniques for Computer Science 2 Units**Department:** Computer Science**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of discussion per week for 10 weeks. 4 hours of discussion per week for 8 weeks.**Prerequisites:** Consent of instructor.

Discussion and practice of techniques for effective teaching, focusing on issues most relevant to teaching assistants in computer science courses. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Barsky, Garcia, Harvey

COMPSCI 399 Professional Preparation: Supervised Teaching of Computer Science 1 or 2 Units**Department:** Computer Science**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of meeting with instructor plus 10 hours (1 unit) or 20 hours (2 units) of teaching per week. 1 hour of meeting with instructor plus 20 hours (1 unit) or 40 hours (2 units) of teaching per week.**Prerequisites:** Appointment as graduate student instructor.

Discussion, problem review and development, guidance of computer science laboratory sections, course development, supervised practice teaching.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

COMPSCI 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Computer Science**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Forty-5 hours of work per unit per term. Independent study, consultation with faculty member. Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Critical Theory Graduate Group (CRIT TH)

CRIT TH 200 Critique in 19th-Century Thought 4 Units**Department:** Critical Theory Graduate Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to the critical theory designated emphasis or consent of instructor.

This course will examine various formulations of critique in 19th-century theory. Thinkers who may be studied include Kant, Hegel, Marx, Nietzsche, and Weber, though the selection will vary by instructor. This is the "foundations" course for the Designated Emphasis in Critical Theory.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Brown

CRIT TH 205 The Classical Frankfurt School: The First Generation of Critical Theory 4 Units**Department:** Critical Theory Graduate Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to the critical theory designated emphasis or consent of instructor.

This course will explore the founding texts of the Frankfurt School's first generation: Horkheimer, Adorno, Benjamin, Marcuse, Lowenthal, and their circle. It will follow the development of critical theory through its Weimer years, American exile, and return to postwar Germany.

Final exam not required. Instructor: Jay

CRIT TH 240 Contemporary Critique and Critical Theory 4 Units**Department:** Critical Theory Graduate Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to the critical theory designated emphasis or consent of instructor.

This course will explore various contemporary engagements with the foundations of critical theory in relation to other histories and locations. Topics will vary by instructor but may include: post-continental political theory, critique and the problem of political dissent and citizenship, gender and race in relation to critical practices, psychoanalysis, and literary and art theory and criticism.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

CRIT TH 290 Critical Theory Elective 4 Units**Department:** Critical Theory Graduate Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.**Prerequisites:** Admission to the Critical Theory Designated Emphasis or consent of the instructor.

Critical Theory electives are taught by core and affiliated faculty in the Critical Theory program and offer important treatments of theoretical materials significant to the intellectual traditions of the program's course of study in nineteenth-century social theory and philosophy, Frankfurt School and related currents in theory and criticism, and contemporary critical theory. In a typical Critical Theory elective, theoretical materials are presented in dialogue with an anthropological, artistic/aesthetic, economic, educational, historical, philosophical, political, rhetorical, sociological, or other disciplinary matrix that constitutes the course's primary materials for study and inquiry.

Course may be repeated for credit when topic changes. Final exam not required.

Cuneiform (CUNEIF)**CUNEIF 100A Elementary Akkadian 5 Units****Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended. Introduction to cuneiform script and grammar, reading of selected cuneiform texts. Sequence begins in fall.

Final exam required.

CUNEIF 100B Elementary Akkadian 5 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended. Introduction to cuneiform script and grammar, reading of selected cuneiform texts. Sequence begins in fall.

Final exam required.

CUNEIF 101A Selected Readings in Akkadian 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A-100B or consent of instructor.

In each semester of this course, the student who has completed the first year of the study of Akkadian will read a variety of texts in the cuneiform script either of the Old Babylonian or the Neo-Assyrian periods. In any semester, the texts to be read may be drawn from a variety of text genres: legal, mythological, historical, prayer, etc., but each semester will focus on only one genre.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

Instructor: 100A-100B-100C.

CUNEIF 101B Selected Readings in Akkadian 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Sequence begins (F).**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A-100B or consent of instructor.

In each semester of this course, the student who has completed the first year of the study of Akkadian will read a variety of texts in the cuneiform script either of the Old Babylonian or the Neo-Assyrian periods. In any semester, the texts to be read may be drawn from a variety of text genres: legal, mythological, historical, prayer, etc., but each semester will focus on only one genre.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required. Instructor: 100A-100B-100C.

CUNEIF 102A Elementary Sumerian 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended.

Introduction to Sumerian grammar and writing.

Final exam required.

CUNEIF 102B Elementary Sumerian 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended.

Introduction to Sumerian grammar and writing.

Final exam required.

CUNEIF 103A Selected Readings in Sumerian 3 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102A-102B.

Reading of texts selected for clarity of script, simplicity of vocabulary, and historical and cultural significance.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 103B Selected Readings in Sumerian 3 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102A-102B.

Reading of texts selected for clarity of script, simplicity of vocabulary, and historical and cultural significance.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 106A Elementary Hittite 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Sequence begins (F).**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended.

Introduction to Cuneiform Hittite language and grammar with reading of selected historical and religious texts.

Final exam not required.

CUNEIF 106B Elementary Hittite 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Sequence begins (F).**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Background in German and French recommended.

Introduction to Cuneiform Hittite language and grammar with reading of selected historical and religious texts.

Final exam not required.

CUNEIF H195 Senior Honors 2 - 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Limited to senior honors candidates.

Directed study centered upon preparation of an honors thesis.

Course may be repeated for a maximum of 4 units. Final exam not required.

CUNEIF 198 Directed Group Study for Upper Division Students 1 - 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Instruction in areas not covered by regularly scheduled courses.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Cuneiform**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.

Enrollment is restricted by regulations shown in the .

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 200A Advanced Akkadian 3 Units**Department:** Cuneiform**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 101A-101B.

Reading of a variety of genres of Akkadian documents and literature.

Texts selected are based on the individual needs of participating students.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 200B Advanced Akkadian 3 Units**Department:** Cuneiform**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 101A-101B.

Reading of a variety of genres of Akkadian documents and literature.

Texts selected are based on the individual needs of participating students.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

CUNEIF 298 Seminar 1 - 4 Units**Department:** Cuneiform**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Special topics in Cuneiform. Topics vary and are announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Demography (DEMOG)**DEMOG 5 Fundamentals of Population Science 3 Units****Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course provides an accessible introduction to the social science of demography. The course is organized around cases in which population issues raise policy or ethical dilemmas (example: China's one child policy). Through these cases, students will learn how demographers use models and data to acquire knowledge about population. Throughout the course, students will also learn to read, interpret, evaluate, and produce tabular and graphical representations of population data.

Final exam required. Instructor: Johnson-Hanks

DEMOG 98 Directed Group Study 1 - 4 Units**Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Tutorial per week for 15 weeks.

Undergraduate research by small groups.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 110 Introduction to Population Analysis 3 Units**Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Measures and methods of Demography. Life tables, fertility and nuptiality measures, age pyramids, population projection, measures of fertility control.

Final exam required. Instructor: Wachter

DEMOG C126/SOCIOL C126 Social Consequences of Population Dynamics 4 Units**Department:** Demography; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 1 or 3 or 3AC or consent of instructor.

Introduction to population issues and the field of demography, with emphasis on historical patterns of population growth and change during the industrial era. Topics covered include the demographic transition, resource issues, economic development, the environment, population control, family planning, birth control, family and gender, aging, intergenerational transfers, and international migration.

Final exam required.

DEMOG 145AC/HISTORY C139B The American Immigrant**Experience 4 Units****Department:** Demography; History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of self-paced laboratory and 1 hour of optional discussion section per week.

The history of the United States is the history of migration. The course covers the evolution of the American population from about 20,000 BC with the goal of understanding the interdependent roles of history and demography. As an American cultures class, special attention is given to the experiences of 18th- and 19th-century African and European immigrants and 20th- and 21st-century Asian and Latin American immigrants. Two substantial laboratory assignments; facility with a spreadsheet program is assumed.

Satisfies the American Cultures requirement

Final exam required. Instructor: Mason

DEMOG 160 Special Topics in Demography 3 Units**Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Special topics in demography. Topics may include the demography of specific world regions, race and ethnicity, population and policy, and population and environment and similar specialized or new topics in the field of demography will be covered.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

DEMOG C164/PUB POL C164 Impact of Government Policies on Poor Children and Families 4 Units**Department:** Demography; Public Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Examination of the impact of policies of state intervention and public benefit programs on poor children and families. Introduction to child and family policy, and study of specific issue areas, such as income transfer programs, housing, health care, and child abuse.

This course may be applied to the Demography major. Final exam required. Instructor: Mauldon

DEMOG C165/SOCIOL C184 Family and Household in Comparative Perspective 3 Units**Department:** Demography; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Sociology 1, 3, 3AC or consent of instructor.

How are families and households organized around the world? Which aspects of household and family vary, and which are constant? What are the relationships between household and family on the one hand and the political, economic, or broad social patterns on the other? This course examines all of these questions, taking historical and contemporary examples from Africa, Asia, Europe, and the Americas.

Final exam required.

DEMOG C175/ECON C175 Economic Demography 3 Units**Department:** Demography; Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Economics 1 or 2.

A general introduction to economic demography, addressing the following kinds of questions: What are the economic consequences of immigration to the U.S.? Will industrial nations be able to afford the health and pension costs of the aging populations? How has the size of the baby boom affected its economic well being? Why has fertility been high in Third World countries? In industrial countries, why is marriage postponed, divorce high, fertility so low, and extramarital fertility rising? What are the economic and environmental consequences of rapid population growth?.

Final exam required. Formerly known as 175. Instructor: Lee

DEMOG 198 Directed Group Study 1 - 4 Units**Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 to 6 hours of tutorial per week for 8 weeks. 1 to 3 hours of tutorial per week.**Prerequisites:** 60 units; good academic standing.

Undergraduate research by small groups. Enrollment is restricted by regulations governing 198 courses.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 199 Supervised Independent Study 1 - 4 Units**Department:** Demography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 to 6 hours of tutorial per week for 8 weeks. 1 to 3 hours of tutorial per week.**Prerequisites:** Consent of instructor.

Supervised independent study and research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 210 Demographic Methods: Rates and Structures 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Population models, multiple decrement life tables, hazard functions, stable population theory, projection matrices, projection programs, population waves, dual system estimation, computer-based exercises and simulations. Required course for Demography M.A. and Ph.D. students. Final exam not required. Instructor: Wachter

DEMOG 211 Advanced Demographic Analysis 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 210, Population Studies 110, or consent of instructor.

This course is designed to provide an overview of quantitative techniques commonly used in demography, sociology, economics, and other social sciences. Methods are described in both words and formulas, and students are encouraged to learn to move freely between verbal and mathematical representations of data.

Final exam not required. Instructor: Wilmoth

DEMOG 213 Practical Computer Applications for Demographic Analysis 2 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/laboratory per week.

An introductory course for first year Demography graduate students in the use of the Demography laboratory. Covers Unix based tools for manipulating computer programs and data files, and the R, SPlus, and SAS statistical packages. The course introduces the proportional hazard model and methods of estimating it. The final project for this course is use of the 1995 Current Population Survey (fertility supplement) to compute Total Fertility Rates for the U.S.

Final exam not required. Instructor: Mason

DEMOG 215 Current Research Topics in Demography 2 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** 213

The goals of this course are 1) to familiarize graduate students with active research projects in Demography and 2) to improve skills in R and Stata. Topics covered include demographic micro-simulation with SOCSIM, the Human Mortality Database, stochastic simulation/forecasting, GIS for Demographers, and mortality forecasting. Two-thirds of class time will be spent in the computer laboratory. Students will present results. Final exam not required.

DEMOG 220 Human Fertility 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course offers a critical, graduate-level introduction to the social science of reproduction, drawing especially on models and theories from demography, sociology, and anthropology. Among the topics are parity specific control and the calculus of conscious choice, below-replacement fertility, and the political economy of stratified reproduction.

Final exam not required. Instructor: Johnson-Hanks

DEMOG 230 Human Mortality 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 210 or consent of instructor.

Measurement of mortality by age and cause. Traditional, transitional, and modern mortality patterns in European and non-European areas. Current trends and differentials by age, sex, race, occupation and marital status. Consequences of mortality declines for fertility change and development. Final exam not required. Instructor: Wilmoth

DEMOG 240 Human Migration 2 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 7.5 weeks.

Human populations analyzed from the stand point of their spatial distribution and movement. Special attention to rural-urban migration, metropolitan structure, inter-regional movement, and demographic aspects of land-use, the collection and analysis of emigration and immigration data and statistics, migration policies.

Final exam not required.

DEMOG 260 Special Topics in Demography Seminar 1 - 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.**Prerequisites:** Consent of instructor.

Special topics in demography, such as anthropological and evolutionary approaches, kinship and family structure, race and ethnicity, and similar specialized or new topics in the field of demography will be covered. Seminar will be offered according to student demand.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG C275A/ECON C275A Economic Demography 3 Units**Department:** Demography; Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Economic consequences of demographic change in developing and developed countries including capital formation, labor markets, and intergenerational transfers. Economic determinants of fertility, mortality and migration.

Final exam required. Instructor: Lee

DEMOG 296 Advanced Research Techniques 4 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 295 and consent of instructor.

Problems in data acquisition, analysis, and presentation of technical demographic research. Required of graduate students in the Ph.D. program in Demography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 298 Directed Reading 1 - 12 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Intended to provide directed reading in subject matter not covered in available course offerings.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 299 Directed Research 1 - 12 Units**Department:** Demography**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 12 hour of Independent study per week for 15 weeks. 1.5 to 20-2.5 hours of Independent study per week for 8 weeks.**Prerequisites:** Consent of instructor.

Intended to provide supervision in the preparation of an original research paper or dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 301 GSI Training 1 - 6 Units**Department:** Demography**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar or private consultation with instructor. 2 hours of seminar or private consultation with instructor.**Prerequisites:** Appointment as a graduate student instructor in department.

Course credit for experience gained in academic teaching through employment as a graduate student instructor.

Final exam not required.

DEMOG 601 Individual Study 1 - 8 Units**Department:** Demography**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Independent study per week for 15 weeks.**Prerequisites:** Graduate standing.

Individual study, in consultation with the graduate adviser, intended for qualified students to do necessary work to prepare themselves for language examinations, and the comprehensive examination.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEMOG 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Demography**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 8 hour of Independent study per week for 15 weeks.**Prerequisites:** For qualified graduate students.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Development Practice (DEVP)

DEVP 220 Climate Change and Energy 3 Units

Department: Development Practice

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate student standing or consent of instructor.

The first segment of the course provides an overview of the conceptual science of climate change. The second segment of the course will review energy management concepts. The third segment will present economic and policy perspectives to assess evolution of energy policies and to analyze the political economy of climate change policies and their implications.

Final exam not required. Instructors: Baldocchi, Nazaroff, Traeger, Rhew, Chiang, Roland-Holst, Kammen, Fisher, Rajagopal

DEVP C221/ENE,RES C221/PUB POL C221 Climate, Energy and Development 3 Units

Department: Development Practice; Energy and Resources Group; Public Policy

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

Prerequisites: Graduate student standing or consent of instructor.

Graduate seminar examining the role of energy science, technology, and policy in

international development. The course will look at how changes in the theory and practice

of energy systems and of international development have co-evolved over the past half-

century, and what opportunities exist going forward.

A focus will be on rural and decentralized energy use, and the issues of technology, culture,

and politics that are raised by both current trajectories, and potential alternative energy

choices. We will explore the frequently divergent ideas about energy and development that

have emerged from civil society, academia, multinational development agencies, and the

private and industrial sector.

Final exam required. Instructor: Kammen

DEVP 222 Economics of Sustainable Resource Development 3 Units

Department: Development Practice

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate student standing or consent of instructor.

This course will introduce the basic concepts including economic welfare, externality, public good, global commons, policy approaches for dealing with externality, and techniques for quality analysis. It will include case studies where groups will design economic incentives and policy solutions to major problems. It will have sections on particular problems including climate change, water and air quality, animal waste, toxic contamination, forestry and fishery policy.

Final exam required. Instructors: Zilberman, Sunding, Roland-Holst, Norgaard

DEVP 225 Innovation, Product Development, and Marketing 3 Units

Department: Development Practice

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Graduate student standing or consent of instructor.

This course will introduce the basic concepts of innovation, product development, and marketing in developing countries. Students will analyze alternative knowledge and innovation systems, and the role of public and private sector interactions. The course will also introduce models of technology transfers, adoption, and diffusion of technology, as well as introduce students to basic principles of marketing, assessment of consumer choices, and the challenge of bringing to market efficient solutions to meet customer needs.

Final exam required. Instructor: Villas-Boas

DEVP 227 Principles of Natural Resource Management 2 Units

Department: Development Practice

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate student standing or consent of instructor.

This course will introduce concepts in natural resource management. Segment 1 will cover basic modeling, techniques, and methodology in natural resource management and sustainability. Segment 2 will address genetic resources and agriculture. Segment 3 will cover principles of natural resource management, namely water and air, in the development context. Segment 4 provides an overview of major concepts in the conservation of biodiversity. Students are expected to present research reports based on case studies.

Final exam not required. Instructors: Resh, Kremmen, Feldman, Lemaux

DEVP 228 Strategic Planning and Project Management 3 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate student standing or consent of instructor.

A pragmatic, interdisciplinary introduction to strategic planning and project management, introducing students to a portfolio of models, tools, and techniques drawn from the private, nonprofit, and public sectors. It will offer an opportunity through case studies, simulations and class projects to apply those approaches in settings relevant to the development field.

Final exam required. Instructors: Horvath, Agogino, Danner, Scharffenberger

DEVP 229 Quantitative Methods and Impact Evaluation 3 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate student standing or consent of instructor.

This course is designed to introduce students to the basic concepts of estimation, prediction, and hypothesis testing. The course will focus on impact evaluation theory and methods and will explore the variety of tools available for rigorously measuring the impact of development programs on poverty.

Final exam required. Instructors: Auffhammer, Miguel

DEVP C232/PB HLTH C253 Foundations of Public Health 2 Units**Department:** Development Practice; Public Health**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

The seminar will introduce core disciplines and concepts in public health, using a case-based, integrated approach. Examples of cases discussed include: respiratory disease and air pollution; tobacco control and prevention of smoking-related conditions; disease elimination or eradication via childhood immunization; environmental control and prevention of schistosomiasis; behavior change and prevention of HIV/AIDS; and novel economic approaches to improving healthcare delivery to impoverished groups.

Final exam not required. Instructors: Reingold, Smith

DEVP 233 Law, Politics, and Policymaking 3 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate student standing or consent of instructor.

Law, Politics, and Policymaking will introduce students to principles of law, the mechanisms of politics, political economy, and policymaking delving into fundamentals of business, as well as environmental, international, and human rights law in the context of development. This course will provide students with insights into real-world contexts in which sustainable development practice takes place. It will consist of case studies of political economic and legal analysis.

Final exam required. Instructors: Farber, Rausser

DEVP 235 Economic Development and Policy 3 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Microeconomics and econometrics at the undergraduate upper-division or Master's level.

Learn to apply the tools of economic analysis to problems of growth, poverty, and environmental sustainability in developing countries and to understand what can be done to promote development through policies and investment projects, and learn to analyze the economic, social, and environmental impacts of specific initiatives. This course will teach students to use data to conduct development analyses and learn to prepare the corresponding reports for international development agencies and policymakers.

Final exam required. Instructors: de Janvry, Roland-Holst, Raphael

DEVP 237 Leadership, Conflict Resolution, and Community Development 3 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate student standing or consent of instructor.

This three-segment course starts with critical evaluation of literature and methods for communal natural resource management, followed by a segment that emphasizes leadership skills and conflict resolution approaches for development. The third segment will address issues of conflict and policymaking in a global context and provide the institutional perspective of development organizations and strategies.

Final exam required. Instructors: Ray, Carpenter, Barclay

DEVP 299 Independent Study 2 Units**Department:** Development Practice**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences with Instructor

Supervised Independent Study and Research.

Course may be repeated a maximum of 2 times. Final exam not required.

Instructor: Zilberman

DEVP 300 Interactive/Multidisciplinary Seminar 2 Units**Department:** Development Practice**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate student standing or consent of instructor.

This course provides an opportunity for Master of Development Practice students to interact with a diverse group of invited guest speakers, including academics and practitioners. It will also provide opportunities for group discussion of basic questions, and it will provide opportunities to present ideas and discuss research and internship plans and experiences. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Zilberman, Scharffenberger, Marsh

Development Studies (DEV STD)

DEV STD C10/GEOG C32 Introduction to Development 4 Units**Department:** Development Studies; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture per week for 8 weeks. 10 hours of lecture per week for 6 weeks.

This course is designed as an introduction to comparative development. The course will be a general service course, as well as a prerequisite for the upper division 100 series. It is assumed that students enrolled in 10 know little about life in the Third World countries and are unfamiliar with the relevant theory in political economy of development and underdevelopment. The course will be structured around three critical concepts: land, labor, and work.

Final exam required. Instructor: Watts

DEV STD 24 Freshman Seminar 1 Unit**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks. 2 hours of Seminar per week for 8 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment is limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

DEV STD C100/GEOG C112 History of Development and Underdevelopment 4 Units**Department:** Development Studies; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Historical review of the development of world economic systems and the impact of these developments on less advanced countries. Course objective is to provide a background against which to understand and assess theoretical interpretations of development and underdevelopment. Final exam required. Instructor: Hart

DEV STD 150 Advanced Studies in Development Studies 4 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Advanced multidisciplinary research in current issues and topics of development. Seminars will focus on specific geographical areas with appropriate comparative material included. A major research project is required as well as class presentations. Topics change each semester. Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

DEV STD 192 Senior Thesis 3 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual weekly meetings.**Prerequisites:** Upper division standing and consent of instructor.

This course is designed to provide a vehicle for undergraduate students interested in writing a major paper on a development topic. The paper should be approximately 30 pages in length. The student and faculty sponsor should agree upon the topic in advance.

Final exam required.

DEV STD H195 Senior Honors Thesis Seminar 4 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar plus 1 hour of consultation per week. 5 hours of seminar plus 2.5 hours of consultation per week for 6 weeks.**Prerequisites:** International and Area Studies 102 and consent of instructor; senior standing.

Honors students are required to research and write a thesis based on the prospectus developed in International and Area Studies 102. The thesis work is reviewed by the honors instructor and a second reader to be selected based on the thesis topic. Weekly progress reports required. Final exam not required.

DEV STD 197 Field Studies 1 - 4 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings.**Prerequisites:** Upper division standing and consent of instructor.

Supervised experience relevant to specific aspects of Development Studies in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEV STD 198 Directed Group Study 1 - 4 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings to be announced.**Prerequisites:** Upper division standing and consent of instructor.

Directed group study (upper division).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DEV STD 199 Supervised Independent Study and Research for Undergraduates 1 - 4 Units**Department:** Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings.**Prerequisites:** Written proposal must be approved by a faculty advisor.

Enrollment is restricted by regulations of the College.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Dutch (DUTCH)

DUTCH 1 Elementary Dutch 5 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of lecture/laboratory per week for 6 weeks.

Dutch language course for beginners. Focus of the course is on acquiring basic communicative competence in the language, i.e., developing the ability to appropriately use the language (spoken as well as written) in authentic situations.

Final exam required.

DUTCH 2 Elementary Dutch 5 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 1 or equivalent.

In this course, one reinforces and expands knowledge of grammar and vocabulary, increases fluency through oral and written exercises, and builds on the knowledge and skills acquired in 1.

Final exam required.

DUTCH 39A Cultural History of the Low Countries (Belgium, the Netherlands, Luxembourg) 3 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course offers a general survey on the cultural history of Belgium, the Netherlands, and Luxembourg. Through written texts, audiovisual materials, and discussions, we will study important historical, social, political, and cultural aspects of these three countries that represent European history in a nutshell. All readings and discussions in English. Course may be repeated for credit when topic changes. Final exam required.

DUTCH 100 Dutch for Reading and Translation Knowledge 3 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Dutch 1.

This is a two-track course, designed for 1) research scholars/graduate students who need to learn how to translate Dutch texts in their area of expertise, and 2) Dutch Studies majors and minors who are interested in the professional field of translation (Dutch to English). While some knowledge of Dutch and/or German is required, a Dutch 1 class prior to this class is a prerequisite.

Students will receive no credit for Dutch 100 after taking Dutch 10. Final exam required. Instructor: Hollander

DUTCH 107 The Structure of Modern Dutch 3 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A basic course on the structural properties of modern Dutch, including phonetics and phonology, morphology, and syntax. Comparison with English and German.

Final exam required.

DUTCH 110 Advanced Dutch 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 2 or equivalent.

Includes a grammar review with exercises (Jenneke Osterhoff, Intermediate Dutch). Conversation is taken to a higher plane, role playing becomes increasingly important, newspaper articles of the more difficult papers are read, and radio programs and television programs are listened to and watched. These activities provide material for short essay assignments. Problems in the essays create occasions for more grammar review.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

DUTCH 125 Conversation and Composition 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 110 or consent of instructor.

This course is designed to improve both the oral and written style of the student in Dutch, employing a variety of sources ranging from the newspaper to the essay to the creative forms (poetry, short story). The art of correspondence, both formal and informal, will be taught as well as the widely-varying spoken styles.

Course may be repeated once for credit. Course may be repeated for a maximum of 6 units. Final exam required.

DUTCH 140 Topics in Dutch Literature 3 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 2 or equivalent.

While the focus will be on some of the major novels in the Dutch language, relevant works of poetry will be included too, and to give this class the widest exposure possible, the class will consist of an English track and a Dutch track (the latter will accommodate our Dutch majors and minors who will read and reflect on these works in Dutch).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

DUTCH C164/SEASIAN C164 The Indonesian Connection: Dutch Literature About the Indies in English Translation 4 Units**Department:** Dutch; Southeast Asian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

In postcolonial thought on European claims to cultural supremacy, the case of the "Dutch East-Indies" (the future Indonesia) still arouses questions like: What made the Dutch colonial policy different from that of other European powers? What were the main characteristics of the "Dutch East-Indies"? How did a small country like the Netherlands manage to rule a territory that was fifty-two times its own in scale? And how can we explain that 350 years of Dutch domination left so few traces in contemporary Indonesia?.

Final exam required.

DUTCH 166 Anne Frank and After: Dutch Literature of the Holocaust in English Translation 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of consultation per week.

Post-War Dutch literature is replete with works dealing with the Holocaust, by both victims and survivors. The course will focus on literary as well as historical documents, examine the history of anti-Semitism in the Lowlands, and compare a number of literary genres from the Diary to ego-documents and fiction.

Final exam required.

DUTCH 170 Dutch Culture and Society 3 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The course will focus on the culture of the Low Countries, including both the Netherlands and Belgium. Through reading, audiovisual materials, the World Wide Web, guest lectures, and discussions, we will cover the major social, political, and cultural aspects of modern Dutch society. The course is organized around five larger themes: water management and environmental issues; language and education; art, literature, and culture; politics, religion, and social welfare; and social issues.

Final exam required.

DUTCH C170/HISTORY C194/SOCIOL C189 Dutch Culture and Society: Amsterdam and Berkeley in the Sixties 4 Units**Department:** Dutch; History; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course will focus on the cultural aspects of protest- and youth cultures in two cities that were influential in the sixties: Amsterdam and Berkeley. Particular attention will be paid to how American popular culture was perceived in a European context. All readings and discussions in English.

Final exam required.

DUTCH 171AC From New Amsterdam to New York: Race, Culture, and Identity in New Netherland 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 to 8 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

What would it mean to begin modern American history on the island of Manhattan instead of New England? We intend to question the Anglo-American perspective on the representation of cultural identity, national identity, ethnicity, and race by contrasting the traditional foundation story of the United States with that of the 17th-century Dutch colony on Manhattan. Readings will include historical and ethnographic writings, self-representations of the different ethnic groups, and fictional accounts. Satisfies the American Cultures requirement

Final exam required. Instructor: Dewulf

DUTCH 173 Dutch Post-Colonial Studies 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Selected topics in Dutch or Flemish/Belgian colonial literature and/or history. See departmental description for current topic. All readings and discussions in English.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructor: Dewulf

DUTCH 174 Brussels: A Global Study of a European Capital City 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course aims at a comprehensive study of Brussels, capital of the European Union: its historical richness, institutional complexity of Belgium, cultural diversity, linguistic contradictions, globalizing economy, and its rapidly transforming social divisions. Taught in English; no knowledge of French or Dutch is required.

Final exam required.

DUTCH 177 The Amsterdam-Brussels Connection: The Art, History, and Literature of the Netherlands and Flanders 6 Units**Department:** Dutch**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture and 10 hours of field trips and guided tours per week for 5 weeks.

With the 17th-century "Golden Age" as its starting point, the course traces the important cultural developments in Holland and Belgium (Flanders) up to the present. The interdisciplinary curriculum provides a clear picture of these two contrasting monarchies. The historical, cultural, and linguistic relationship is a constant focus of the course. The literature (documentary and fiction) concentrates on the Holocaust in the Low Countries. Students will engage with their subject matter not only in daily lectures, but also as eyewitnesses through regular field trips to museums and historical sites in Amsterdam, The Hague, Haarlem, Delft, Antwerp, Bruges, Ghent, Brussels, and other cities. Visits to the Royal Palace in Amsterdam, the House of Representatives, an interactive criminal trial, attendance at the International Court of Arbitration in The Hague, and the European Parliament in Brussels are included in the course.

Final exam required. Instructor: Snapper

DUTCH C178/AFRICAM C178/SPANISH C178 Cultural Studies 4 Units**Department:** Dutch; African American Studies; Spanish**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Although the Caribbean has been recognized in recent years as being one of the most compelling areas in regard to questions of interculturality, hybridity, and miscegenation, the Dutch-speaking part of it has somehow been neglected. This course intends to give an opportunity to those who do not necessarily have a command of Dutch language, but wish to complete their knowledge of Latin-American and Caribbean history, culture, and literature.

Final exam required.

DUTCH 179 Cultural Studies 3 or 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week. 1 additional hour of discussion per week, depending on the topic.

Selected topics in cultural studies. Offerings vary. See departmental descriptions for current topic. All readings and discussions in English. Final exam required.

DUTCH 190 Senior Thesis 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 2-hour consultation per week.

A major research paper in the areas of Dutch literature, culture, or the area of linguistics. Required of all majors.

Final exam required.

DUTCH H196 Honors Studies in Dutch 1 - 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks. 1.5 to 6 hours of Independent study per week for 10 weeks. 1.5 to 7.5 hours of Independent study per week for 8 weeks. 2.5 to 10 hours of Independent study per week for 6 weeks.**Prerequisites:** Advanced standing.

Supervised independent study and research course for honors students. Course may be repeated for a maximum of 4 units. Course may be repeated for a maximum of 4 units. Final exam not required.

DUTCH 198 Directed Group Study 1 - 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DUTCH 199 Special Studies in Dutch 1 - 4 Units**Department:** Dutch**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conference.**Prerequisites:** Overall G.P.A. of 3.0.

Enrollment is restricted by regulations in .

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

DUTCH 299 Individual Studies in Dutch for Graduate Students 1 - 8 Units**Department:** Dutch**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conference.

For graduate students engaged in exploration of a restricted field, involving the writing of a research paper.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Earth and Planetary Science (EPS)**EPS 3 The Water Planet 2 Units****Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 8 weeks.

An overview of the processes that control water supply to natural ecosystems and human civilization. Hydrologic cycle, floods, droughts, groundwater. Patterns of water use, threats to water quality, effects of global climate change on future water supplies. Water issues facing California.

Final exam required. Formerly known as Geology 3.

EPS 8 Geologic Record of Climate Change 3 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course will review the geologic record of climate change emphasizing how such knowledge can constrain present day thinking about (and predictive models of) future climate change. We will cover the entire spectrum of climate variations, from the formation of the Earth's early atmosphere 4.6 billion years ago to the ice ages to the development of instrumental records.

Final exam required. Formerly known as Geology 8.

EPS C12/ASTRON C12/L & S C70T The Planets 3 Units

Department: Earth and Planetary Science; Astronomy; Letters and Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

A tour of the mysteries and inner workings of our solar system. What are planets made of? Why do they orbit the sun the way they do? How do planets form, and what are they made of? Why do some bizarre moons have oceans, volcanoes, and ice floes? What makes the Earth hospitable for life? Is the Earth a common type of planet or some cosmic quirk? This course will introduce basic physics, chemistry, and math to understand planets, moons, rings, comets, asteroids, atmospheres, and oceans. Understanding other worlds will help us save our own planet and help us understand our place in the universe. Final exam required.

EPS W12/ASTRON W12 The Planets 3 Units

Department: Earth and Planetary Science; Astronomy

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Web-based lecture per week for 8 weeks. This is an online course.

A tour of the mysteries and inner workings of our solar system. What are planets made of? Why do they orbit the sun the way they do? How do planets form, and what are they made of? Why do some bizarre moons have oceans, volcanoes, and ice floes? What makes the Earth hospitable for life? Is the Earth a common type of planet or some cosmic quirk? This course will introduce basic physics, chemistry, and math to understand planets, moons, rings, comets, asteroids, atmospheres, and oceans. Understanding other worlds will help us save our own planet and help us understand our place in the universe. This course is web-based. Final exam required. Instructors: Marcy, Militzer

EPS 20 Earthquakes in Your Backyard 3 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture per week and 1 or more field trips. Introduction to earthquakes, their causes and effects. General discussion of basic principles and methods of seismology and geological tectonics, distribution of earthquakes in space and time, effects of earthquakes, and earthquake hazard and risk, with particular emphasis on the situation in California.

Final exam required. Formerly known as Geophysics 20.

EPS C20/L & S C70Y Earthquakes in Your Backyard 3 Units

Department: Earth and Planetary Science; Letters and Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture per week and 1 or more field trips. Introduction to earthquakes, their causes and effects. General discussion of basic principles and methods of seismology and geological tectonics, distribution of earthquakes in space and time, effects of earthquakes, and earthquake hazard and risk, with particular emphasis on the situation in California.

Final exam required.

EPS 24 Freshman Seminar in Earth and Planetary Sciences 1 Unit

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture per week, plus 1-day field trip.

The freshman seminar in earth and planetary science is designed to provide new students with an opportunity to explore a topic in geology or earth sciences with a faculty member in a small seminar setting. Topics will vary from semester to semester but will include such possible topics as great voyages of geologic discovery and the role of atmospheric sciences in geologic study.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Geology 24.

EPS 39A Freshman/Sophomore Seminar 2 - 4 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: Seminar format.

Prerequisites: Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required. Formerly known as Geology 39.

EPS 50 The Planet Earth 4 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 7.5 hours of Laboratory per week for 8 weeks.

An introduction to the physical and chemical processes that have shaped the earth through time, with emphasis on the theory of plate tectonics. Laboratory work will involve the practical study of minerals, rocks, and geologic maps and exercises on geological processes.

Final exam required. Formerly known as Geology 50.

EPS 51 Big History--Cosmos, Earth, Life, and Humanity 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Sophomore standing, except for freshmen who have previously taken 50.

This course explores all four major regimes of history--cosmic history, Earth history, life history, and human history. Bringing together these normally unrelated topics, it seeks to understand the character of history by examining longterm trends and critical chance events, by looking for common causes underlying historical change in all four regimes, and by identifying the novelties that have made each regime unique. It offers a broad perspective for students interested in any one of the historical disciplines, helping them cross the barriers between fields of historical study.

Students will receive no credit for 51 after taking C51 or Letters and Science C70X. A deficient grade in C51 or Letters and Science C70X maybe removed by taking 51. Final exam required.

EPS C51/L & S C70X Big History -- Cosmos, Earth, Life, and Humanity 4 Units**Department:** Earth and Planetary Science; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Sophomore standing, except for freshmen who have previously taken 50.

This course explores all four major regimes of history -- cosmic history, Earth history, life history, and human history. Bringing together these normally unrelated topics, it seeks to understand the character of history by examining longterm trends and critical chance events, by looking for common causes underlying historical change in all four regimes, and by identifying the novelties that have made each regime unique. It offers a broad perspective for students interested in any one of the historical disciplines, helping them cross the barriers between fields of historical study.

Final exam required. Instructor: Alvarez

EPS N51 Big History--Cosmos, Earth, Life, and Humanity 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Sophomore standing, except for freshmen who have previously taken 50.

This course explores all four major regimes of history--cosmic history, Earth history, life history, and human history. Bringing together these normally unrelated topics, it seeks to understand the character of history by examining longterm trends and critical chance events, by looking for common causes underlying historical change in all four regimes, and by identifying the novelties that have made each regime unique. It offers a broad perspective for students interested in any one of the historical disciplines, helping them cross the barriers between fields of historical study.

Students will receive no credit for N51 after taking 51, C51, or Letters and Science C70X. A deficient grade in 51, C51 or Letters and Science C70X maybe removed by taking N51. Final exam not required.

EPS 80 Environmental Earth Sciences 2 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 5 hours of Lecture per week for 6 weeks.

The course describes geologic processes active on and in the earth and man's interactions with them. Geologic aspects of use of the land and oceans based on an understanding of earth's environmental processes. Students will receive no credit for 80 after taking Integrative Biology 80 or Paleontology 15. Final exam required. Formerly known as Geology 80.

EPS C82/GEOG C82/INTEG BI C82 Oceans 3 Units**Department:** Earth and Planetary Science; Geography; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 8 weeks. 5 hours of Lecture per week for 6 weeks.

This course offers multidisciplinary approach to begin answering the question "Why are oceans important to us?" Upon a physical, chemical, and geologic base, we introduce the alien world of sea life, the importance of the ocean to the global carbon cycle, and the principles of ecology with a focus on the important concept of energy flow through food webs. Lectures expand beyond science to include current topics as diverse as music, movies, mythology, biomechanics, policy, and trade. Final exam required.

EPS N82 Introduction to Oceans 2 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks. 5 hours of Lecture per week for 6 weeks.

The geology, physics, chemistry, and biology of the world oceans.

The application of oceanographic sciences to human problems will be explored through special topics such as energy from the sea, marine pollution, food from the sea, and climate change.

Students will receive no credit for Earth and Planetary Science N82 after taking Earth and Planetary Science/Integrative Biology/Geography C82.

Final exam not required.

EPS 84 Sophomore Seminar 1 or 2 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.**Prerequisites:** At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

EPS 98 Directed Group Study 1 - 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings of various lengths.

Group studies of selected topics which vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology and Geophysics 98.

EPS 100A Minerals: Their Constitution and Origin 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Laboratory per week for 15 weeks.**Prerequisites:** Some background in chemistry and physics.

Introduction to structural, compositional, and physical properties of minerals, their analogs and related substances, their genesis in various geological and synthetic processes, and laboratory techniques to identify and investigate minerals. One field trip to selected mineral deposits and visits to laboratories.

Final exam required. Formerly known as Geology 100A.

EPS 100B Genesis and Interpretation of Rocks 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 4 hours of laboratory per week, plus 1 weekend field trip.**Prerequisites:** 100A.

Introduction to the principal geologic environments where rocks are formed and displayed. Igneous, sedimentary, and metamorphic processes discussed in the context of global tectonics.

Final exam required. Formerly known as Geology 100B.

EPS C100/GEOG C146/INTEGBI C100 Communicating Ocean Science 4 Units**Department:** Earth and Planetary Science; Geography; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.**Prerequisites:** One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science; junior, senior, or graduate standing; consent of instructor required for sophomores.

For undergraduates interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam required. Instructor: Ingram

EPS 101 Field Geology and Digital Mapping 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 hours of field work and 2 hours of lecture per week, and additional field trips.**Prerequisites:** 50 or equivalent introductory course in Earth and Planetary Science.

Geological mapping, field observation, and problem-solving in the Berkeley hills and environs leading to original interpretation of geological processes and history from stratigraphic, structural, and lithological investigations. Integration of the Berkeley hills geology into the Coast Ranges and California as a whole through field trips to key localities. Training in digital field mapping, global positioning systems, and laser surveying. Interdisciplinary focus encourages participation by nonmajors. Final exam not required. Formerly known as Geology 101.

EPS 102 History and Evolution of Planet Earth 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 50

Formation and evolution of the earth. Nucleosynthesis; formation of the solar system; planetary accretion; dating the earth and solar system; formation of the core, mantle, oceans, and atmosphere; plate tectonics; heat transfer and internal dynamics; stratigraphic record of environment, and evolution; climate history and climate change.

Final exam required.

EPS 103 Introduction to Aquatic and Marine Geochemistry 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and a field trip.**Prerequisites:** Chemistry 1A, Mathematics 1A or 16A. C82 recommended.

Introduction to marine geochemistry: the global water cycle; processes governing the distribution of chemical species within the hydrosphere; ocean circulation; chemical mass balances, fluxes, and reactions in the marine environment from global to submicron scales; carbon system equilibrium chemistry and biogeochemistry of fresh and salt water; applications of natural and anthropogenic stable and radioactive tracers; internal ocean processes.

Final exam required. Instructor: Bishop

EPS 104 Mathematical Methods in Geophysics 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of computer laboratory per week.**Prerequisites:** Mathematics 53-54.

Linear systems. Linear inverse problems, least squares; generalized inverse, resolution; Fourier series, integral transforms; time series analysis, spherical harmonics; partial differential equations of geophysics; functions of a complex variable; probability and significance tests, maximum likelihood methods. Intended for students in geophysics and other physical sciences.

Final exam required. Formerly known as Geophysics 104.

EPS 108 Geodynamics 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 60, Physics 7A, or Mathematics 53, 54.

Basic principles in studying the physical properties of earth materials and the dynamic processes of the earth. Examples are drawn from tectonics, mechanics of earthquakes, etc., to augment course material.

Final exam required. Formerly known as Geophysics 108.

EPS 109 Computer Simulations in Earth and Planetary Sciences 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 2 hours of computer laboratory exercises per week.**Prerequisites:** Math 1A or equivalent.

Introduction to modern computer simulation methods and their application to selected Earth and Planetary Science problems. In hands-on computer labs, students will learn about numerical algorithms, learn to program and modify provided programs, and display the solution graphically. This is an introductory course and no programming experience is required. Examples include fractals in geophysics, properties of materials at high pressure, celestial mechanics, and diffusion processes in the Earth. Topics range from ordinary and partial differential equations to molecular dynamics and Monte Carlo simulations.

Final exam required.

EPS 111 Petroleum Geology 3 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory course in geology.

Basin development related to plate tectonics. Origin of petroleum: quality, quantity, thermal maturation of organic matter in source rock. Primary and secondary migration. Petroleum composition. Reservoir rock: stratigraphy and geometry. Traps: structural, stratigraphic or combination. Reservoir fluids and energy. Oil provinces, individual fields.

Final exam required. Formerly known as Geology 111.

EPS 115 Stratigraphy and Earth History 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 5-day field trip and 2 1-day field trips.**Prerequisites:** 50, 100A, 100B, or consent of instructor.

Collecting, analyzing, and presenting stratigraphic data; dating and correlating sedimentary rocks; recognizing ancient environments and reconstructing Earth history; seismic and sequence stratigraphy; event stratigraphy and neocatastrophism; applications of stratigraphy to climate change, petroleum geology, and archaeology.

Final exam required. Formerly known as Geology 115. Instructor: Alvarez

EPS 116 Structural Geology and Tectonics 3 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 2 hours of laboratory, several 1- to 2-day field trips.**Prerequisites:** 50

Introduction to the geometry and mechanics of brittle and ductile geologic structures; their origins and genetic relation to stress fields and their use as kinematic indicators; case histories of selected regions to elucidate tectonic evolution in different plate tectonic settings. Laboratory exercises will focus on analysis of hand specimens and structural relations portrayed on geologic maps. Several trips to observe geologic structures in the field to supplement laboratory exercises.

Final exam required. Formerly known as Geology 116. Instructor: Burgmann

EPS 117 Geomorphology 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory per week, plus weekend field trips.**Prerequisites:** Consent of instructor.

Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.

Final exam required. Formerly known as Geology 117.

EPS 118 Advanced Field Course 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of discussion per week, plus 2-day field trip. 4 weeks in the field, 6 days a week.**Prerequisites:** 50, 100A-100B, 101, or consent of instructor; 119 is strongly recommended.

Advanced geological mapping, intensive field observation, and problem solving in the field areas selected by instructors. Includes preparation of final reports.

Final exam not required. Formerly known as Geology 118. Instructor: Brimhall

EPS 119 Geologic Field Studies 2 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Fieldwork per week for 15 weeks.**Prerequisites:** 101 and consent of instructor.

Two to four weekend field trips to localities of geological interest.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 119.

EPS 122 Physics of the Earth and Planetary Interiors 3 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 105.

Gravity field, density distribution, and internal structure of the Earth and planets. Constitution, composition, temperature distribution, and energetics of the Earth's interior. The geomagnetic field, paleomagnetism, the geodynamo, and concepts in geophysical fluid dynamics.

Final exam required. Formerly known as Geophysics 122.

EPS 124 Isotopic Geochemistry 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Chemistry 1A-1B, Mathematics 1A-1B.

An overview of the use of natural isotopic variations to study earth, planetary, and environmental problems. Topics include geochronology, cosmogenic isotope studies of surficial processes, radiocarbon and the carbon cycle, water isotopes in the water cycle, and radiogenic and stable isotope studies of planetary evolution, mantle dynamics, volcanoes, groundwater, and geothermal systems. The course begins with a short introduction to nuclear processes and includes simple mathematical models used in isotope geochemistry.

Final exam required. Instructor: DePaolo

EPS C129/ESPM C129 Biometeorology 3 Units

Department: Earth and Planetary Science; Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

This course describes how the physical environment (light, wind, temperature, humidity) of plants and soil affects the physiological status of plants and how plants affect their physical environment. Using experimental data and theory, it examines physical, biological, and chemical processes affecting transfer of momentum, energy, and material (water, CO₂, atmospheric trace gases) between vegetation and the atmosphere. Plant biometeorology instrumentation and measurements are also discussed.

Final exam required. Instructor: Baldocchi

EPS 130 Strong Motion Seismology 3 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Mathematics 54, or equivalent and consent of instructor.

Generation of seismic waves. Synthetic accelerograms. Instrumentation to measure strong ground motion. Estimation of seismic motion at a site. Ground motion spectra. Influence of soils and geologic structures. Seismic risk mapping.

Final exam required. Formerly known as Geophysics 130.

EPS 131 Geochemistry 4 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 100A-100B, Chemistry 1A-1B.

Chemical reactions in geological processes. Thermodynamic methods for predicting chemical equilibria in nature. Isotopic and chemical tracers of transport processes in the earth. Chemistry of the solid earth, oceans, and atmosphere.

Final exam required. Formerly known as Geology 131.

EPS C146/GEOG C145 Geological Oceanography 4 Units

Department: Earth and Planetary Science; Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

The tectonics and morphology of the sea floor, the geologic processes in the deep and shelf seas, and the climatic record contained in deep-sea sediments. The course will cover sources and composition of marine sediments, sea-level change, ocean circulation, paleoenvironmental reconstruction using fossils, imprint of climatic zonation on marine sediments, marine stratigraphy, and ocean floor resources.

Final exam required. Formerly known as Geology C145. Instructor: Ingram

EPS 150 Case Studies in Earth Systems 2 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Prerequisites: 50, senior standing or consent of instructor.

Analysis and discussion of three research problems on the interactions of solid earth, hydrologic, chemical, and atmospheric processes. Emphasis is on the synthesis and application of the student's disciplinary knowledge to a new integrative problem in the earth sciences.

Final exam not required.

EPS C162/ASTRON C162 Planetary Astrophysics 4 Units

Department: Earth and Planetary Science; Astronomy

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Mathematics 53, 54; Physics 7A-7B-7C.

Physics of planetary systems, both solar and extra-solar. Star and planet formation, radioactive dating, small-body dynamics and interaction of radiation with matter, tides, planetary interiors, atmospheres, and magnetospheres. High-quality oral presentations may be required in addition to problem sets and a final exam.

Final exam required. Formerly known as C149. Instructors: Chiang, de Pater, Marcy

EPS 170AC/L & S 170AC Crossroads of Earth Resources and Society 4 Units

Department: Earth and Planetary Science; Letters and Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week, plus 2-day field trip.

Intersection of geological processes with American cultures in the past, present, and future. Overview of ethnogeology including traditional knowledge of sources and uses of earth materials and their cultural influences today. Scientific approach to study of tectonic controls on the genesis and global distribution of energy fuels, metals, and industrial minerals. Evolution and diversity of opinion in attitudes about resource development, environmental management, and conservation on public, private, and tribal lands. Impending crisis in renewable energy and the imperative of resource literacy.

Satisfies the American Cultures requirement

Final exam required. Instructor: Brimhall

EPS C178/CIV ENG C178 Applied Geophysics 3 Units

Department: Earth and Planetary Science; Civil and Environmental Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 3 hours of laboratory/field exercise per week.

The theory and practice of geophysical methods for determining the subsurface distribution of physical rock and soil properties. Measurements of gravity and magnetic fields, electrical and electromagnetic fields, and seismic velocity are interpreted to map the subsurface distribution of density, magnetic susceptibility, electrical conductivity, and mechanical properties.

Final exam required. Instructor: Rector

EPS C180/CIV ENG C106/ESPM C180 Air Pollution 3 Units

Department: Earth and Planetary Science; Civil and Environmental Engineering; Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Chemistry 1A-1B, Physics 8A or consent of instructor.

This course is an introduction to air pollution and the chemistry of earth's atmosphere. We will focus on the fundamental natural processes controlling trace gas and aerosol concentrations in the atmosphere, and how anthropogenic activity has affected those processes at the local, regional, and global scales. Specific topics include stratospheric ozone depletion, increasing concentrations of green house gasses, smog, and changes in the oxidation capacity of the troposphere.

Final exam required. Instructor: Goldstein

EPS C181/GEOG C139 Atmospheric Physics and Dynamics 3 Units

Department: Earth and Planetary Science; Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: Mathematics 53, 54; Physics 7A-7B-7C.

This course examines the processes that determine the structure and circulation of the Earth's atmosphere. The approach is deductive rather than descriptive: to figure out the properties and behavior of the Earth's atmosphere based on the laws of physics and fluid dynamics. Topics will include interaction between radiation and atmospheric composition; the role of water in the energy and radiation balance; governing equations for atmospheric motion, mass conservation, and thermodynamic energy balance; geostrophic flow, quasigeostrophic motion, baroclinic instability and dynamics of extratropical cyclones.

Final exam not required. Formerly known as 144. Instructors: Chiang, Fung

EPS C182/CHEM C182 Atmospheric Chemistry and Physics Laboratory 3 Units

Department: Earth and Planetary Science; Chemistry

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of Lecture and 5 hours of Laboratory per week for 15 weeks.

Prerequisites: College-level calculus, chemistry, and physics, or consent of instructor.

Fluid dynamics, radiative transfer, and the kinetics, spectroscopy, and measurement of atmospherically relevant species are explored through laboratory experiments, numerical simulations, and field observations. Students will receive 1 unit of credit for C182 after taking 125. Final exam required.

EPS C183/ESPM C170 Carbon Cycle Dynamics 3 Units

Department: Earth and Planetary Science; Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

The focus is the (unsolved) puzzle of the contemporary carbon cycle. Why is the concentration of atmospheric CO₂ changing at the rate observed? What are the terrestrial and oceanic processes that add and remove carbon from the atmosphere? What are the carbon management strategies under discussion? How can emission protocols be verified? Students are encouraged to gain hands-on experience with the available data, and learn modeling skills to evaluate hypotheses of carbon sources and sinks.

Final exam not required. Instructor: Fung

EPS 185 Marine Geobiology 2 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Interrelationships between marine organisms and physical, chemical and geological processes in oceans.

Final exam required. Formerly known as Geology 185. Instructor: Berry

EPS H195 Senior Honors Course 3 Units

Department: Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Individual conferences.

Prerequisites: Limited to honors candidates.

Original research and preparation of an acceptable thesis. May be taken during two consecutive semesters of senior year and may be substituted for six units of the upper division requirement with consent of major adviser.

Final exam not required. Formerly known as Geology H195.

EPS 197 Field Study 1 - 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of fieldwork per unit per week.**Prerequisites:** Upper division standing and declared major in Earth and Planetary Science.

Written proposal signed by faculty sponsor and approved by major faculty advisor. Supervised experience relevant to specific aspects of students' EPS specialization in off-campus organization. Regular meetings with faculty sponsor and written report required.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EPS 198 Directed Group Study 1 - 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings of various lengths.

Group studies of selected topics which vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 198.

EPS 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences.

Enrollment is restricted by regulations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 199.

EPS 200 Problems in Hydrogeology 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 7A-7B, Chemistry 1A-1B, Math 53 and 54; open to senior undergraduates with appropriate prerequisites.

Current problems in fluid flow, heat flow, and solute transport in the earth. Pressure- and thermal-driven flow, instability, convection, interaction between fluid flow and chemical reactions. Pore pressure; faulting and earthquakes; diagenesis; hydrocarbon migration and trapping; flow-associated mineralization; contaminant problems.

Final exam required. Formerly known as Geophysics C200 and Geology C200.

EPS 203 Introduction to Aquatic and Marine Geochemistry 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and a field trip.**Prerequisites:** Chemistry 1A, Mathematics 1A, or 16A. C82 recommended.

Introduction to marine geochemistry: the global water cycle; processes governing the distribution of chemical species within the hydrosphere; ocean circulation; chemical mass balances, fluxes, and reactions in the marine environment from global to submicron scales; carbon system equilibrium chemistry and biogeochemistry of fresh and salt water; applications of natural and anthropogenic stable and radioactive tracers; internal ocean processes.

Final exam required. Instructor: Bishop

EPS 204 Elastic Wave Propagation 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 104 or equivalent; 121; Physics 105.

Wave propagation in elastic solids; effects of anelasticity and anisotropy; representation theorems; reflection and refraction; propagation in layered media; finite-difference and finite-element methods.

Final exam not required. Formerly known as Geophysics 204.

EPS 207 Laboratory in Observational Seismology 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 121 or 130 or 204 or consent of instructor.

Group problem solving of current seismological topics. Analysis, inversion, and numerical modeling of seismic waveform data to investigate questions regarding the physics of the earthquake source and seismic wave propagation. Application of current developments and techniques in seismological research.

Final exam not required. Formerly known as Geophysics 207.

EPS 209 Matlab Applications in Earth Science 2 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 1 hour of computing laboratory per week.**Prerequisites:** Some programming experience in any language.

Introduction to Matlab programming with toolboxes. Applications come from Earth sciences and related fields including biology. Topics range from image processing, riverbed characterization, landslide risk analysis, signal processing, geospatial and seismic data analysis, and machine learning to parallel computation. Designed for beginning graduate students.

Final exam not required.

EPS 210 Exploration, Ore Petrology, and Geochemistry 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory per week plus 6 days of field trips.**Prerequisites:** 101 or 271; 100A-100B; 118 recommended.

Overview of geological, petrological, and geochemical analysis of ore forming processes including sedimentary, magmatic, hydrothermal, and geothermal resources. Geochemical rock buffers and hydrothermal phase equilibria. Electro-geochemistry of near surface oxidation of primary ores related to climate change, hydrological evolution, and tectonics. Exploration for earth materials for conventional and sustainable technologies including multiple junction semiconductor photo-voltaic cells. Mass balance modeling of ore-forming systems and soils. Environmental management of exploration sites. Lab includes macroscopic and X-ray identification of ore and alteration minerals and ore microscopy. Field trips use digital GIS mapping methods for rock type, structure, mineralization, and wall rock alteration. Integration interpretation of geophysics with geology.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 205. Instructor: Brimhall

EPS 212 Advanced Stratigraphy and Tectonics 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Evolution of the earth in response to internal, surficial and extraterrestrial processes.

Final exam not required. Formerly known as Geology 212.

EPS 216 Active Tectonics 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 116 or equivalent, Physics 7A or equivalent, or consent of instructor.

This course is a graduate course designed to introduce students in the earth sciences to the geology of earthquakes, including tectonic geomorphology, paleoseismology and the analysis and interpretation of geodetic measurements of active deformation. While the focus will be primarily on seismically active faults, we will also discuss deformation associated with landslides, regional isostatic rebound, and volcanoes, as well as measurements of global plate motions. We will address methods and applications in paleoseismology, tectonic geomorphology, and geodesy. The course will address measurement techniques (e.g., GPS, leveling, etc.), data analysis and inversion, and subsequent modeling and interpretation of the data. The integration of geodetic measurements with geologic and seismologic data allows an improved understanding of active processes.

Final exam not required. Formerly known as Geology 207.

EPS 217 Fluvial Geomorphology 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of laboratory per week; some fieldwork is assigned.**Prerequisites:** Consent of instructor.

Application of fluid mechanics to sediment transport and development of river morphology. Form and process in river meanders, the pool-riffle sequence, aggradation, grade, and baselevel.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 217.

EPS 220 Advanced Concepts in Mineral Physics 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

A combined seminar and lecture course covering advanced topics related to mineral physics. The interface between geophysics with the other physical sciences is emphasized. Topics vary each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geophysics 220.

EPS 224 Isotopic Geochemistry 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Chemistry 1A-1B, Mathematics 1A-1B.

An overview of the use of natural isotopic variations to study earth, planetary, and environmental problems. Topics include geochronology, cosmogenic isotope studies of surficial processes, radiocarbon and the carbon cycle, water isotopes in the water cycle, and radiogenic and stable isotope studies of planetary evolution, mantle dynamics, volcanoes, groundwater, and geothermal systems. The course begins with a short introduction to nuclear processes and includes simple mathematical models used in isotope geochemistry.

Final exam required. Instructor: DePaolo

EPS 225 Topics in High-Pressure Research 2 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Analysis of current developments and techniques in experimental and theoretical high-pressure research, with applications in the physical sciences. Topics vary each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geophysics 225.

EPS C229/INTEGBI C229 Introduction to Climate Modeling 3 Units**Department:** Earth and Planetary Science; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course emphasizes the fundamentals of the climate system via a hierarchy of climate models. Topics will include energy balance, numerical techniques, climate observations, atmospheric and oceanic circulation and heat transports, and parameterizations of eddy processes. The model hierarchy will also explore nonlinear and stochastic processes, and biogeochemistry. Students will build computational models to investigate climate feedbacks, climate sensitivity, and response times.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required.

Instructors: Fung, Powell

EPS 230 Radiation and Its Interactions with Climate 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week, plus some laboratory work.**Prerequisites:** Physics 105, 110A, 110B.

Introduction to role of radiative processes in structure and evolution of the climate system. Electromagnetism; solar and terrestrial radiation; interactions of radiation with Earth's atmosphere, ocean, and land surface; greenhouse and runaway greenhouse effects; radiative balance of the climate system; energy-balance climate models; effects of clouds and aerosols; interactions of radiation with atmospheric and oceanic dynamics; radiative processes and paleoclimate; radiative processes and anthropogenic global warming.

Final exam required. Instructor: Collins

EPS 236 Geological Fluid Mechanics 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Continuum/fluid mechanics at the level of 108 or consent of instructor.

An advanced course in the application of fluid mechanics in the earth sciences, with emphasis on the design and scaling of laboratory and numerical models. Principals of inviscid and viscous fluid flow; dynamic similarity; boundary layers; convection; instabilities; gravity currents; mixing and chaos; porous flow. Applications to mantle convection, magma dynamics, atmosphere and ocean dynamics, sediment/debris flows, and hydrogeology. Topics may vary from year to year.

Final exam not required. Formerly known as Geophysics 238.

EPS C241/ESPM C220/INTEGBI C227 Stable Isotope Ecology 5 Units**Department:** Earth and Planetary Science; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing.

Course focuses on principles and applications of stable isotope chemistry as applied to the broad science of ecology. Lecture topics include principles of isotope behavior and chemistry, and isotope measurements in the context of terrestrial, aquatic, and marine ecological processes and problems. Students participate in a set of laboratory exercises involving preparation of samples of choice for isotopic analyses, the use of the mass spectrometer and optical analysis systems, and the analysis of data. Final exam not required. Instructors: Amundson, Dawson, Mambelli

EPS C242/GEOG C241 Glaciology 4 Units**Department:** Earth and Planetary Science; Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of consultation per week.**Prerequisites:** Graduate standing or consent of instructor.

A review of the mechanics of glacial systems, including formation of ice masses, glacial flow mechanisms, subglacial hydrology, temperature and heat transport, global flow, and response of ice sheets and glaciers. We will use this knowledge to examine glaciers as geomorphologic agents and as participants in climate change.

Final exam not required. Formerly known as 241. Instructor: Cuffey

EPS C249/ASTRON C249 Solar System Astrophysics 3 Units**Department:** Earth and Planetary Science; Astronomy**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 149, 169, C160A or consent of instructor.

The physical foundations of planetary sciences. Topics include planetary interiors and surfaces, planetary atmospheres and magnetospheres, and smaller bodies in our solar system. The physical processes at work are developed in some detail, and an evolutionary picture for our solar system, and each class of objects, is developed. Some discussion of other (potential) planetary systems is also included.

Final exam not required. Instructors: Chiang, de Pater

EPS 250 Advanced Topics in Earth and Environmental Sciences 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Review of recent literature and discussion of ongoing research at the interface between earth science and environmental science.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 250.

EPS 251 Carbon Cycle Dynamics 3 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 15 weeks.

In this course, we will focus on the (unsolved) puzzle of the contemporary carbon cycle. Why is the concentration of atmospheric CO₂ changing at the rate observed? What are the terrestrial and oceanic processes that add and remove carbon from the atmosphere? What are the processes responsible for long-term storage of carbon on land and in the sea? Emphasis will be placed on the observations and modeling needed to evaluate hypotheses about carbon sources and sinks. Past records will be examined for clues about sensitivity of carbon processes to climate variations.

Final exam not required. Formerly known as Geology 219.

EPS 254 Advanced Topics in Seismology and Geophysics 1 Unit**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

Lectures on various topics representing current advances in seismology and geophysics, including local crustal and earthquake studies, regional tectonics, structure of the earth's mantle, and core and global dynamics. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geophysics 250.

EPS 255 Advanced Topics in Earth and Planetary Science 1 Unit**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

Lectures on various topics representing current advances in all aspects of earth and planetary science.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EPS 256 Earthquake of the Week 2 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Discussion per week for 15 weeks.

Each week, the seismicity of the previous week, in California and worldwide, is reviewed. Tectonics of the region as well as source parameters and waveforms of interest are discussed and placed in the context of ongoing research in seismology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geophysics 255.

EPS 260 Research in Earth Science 2 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Weekly presentations to introduce new graduate students and senior undergraduates to current research conducted in the Department of Earth and Planetary Science.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 260.

EPS 271 Field Geology and Digital Mapping 4 Units**Department:** Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 hours of Fieldwork and 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 50 or equivalent introductory course for majors.

Geological mapping, field observation, and problem solving in the Berkeley hills and environs leading to original interpretation of geological processes and history from stratigraphic, structural, and lithological investigations. Integration of the Berkeley hills geology into the tectonic and paleo-climatic record of the Coast Ranges and California as a whole through systematic field mapping in key localities and reading of original literature. Training in digital field mapping, use of digital base maps, and use of global positioning systems.

Students will receive no credit for 271 after taking 101. Final exam not required. Instructor: Brimhall

EPS C276/CIV ENG C276 Seismic Hazard Analysis and Design Ground Motions 3 Units

Department: Earth and Planetary Science; Civil and Environmental Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. Deterministic and probabilistic approaches for seismic hazard analysis. Separation of uncertainty into aleatory variability and epistemic uncertainty. Discussion of seismic source and ground motion characterization and hazard computation. Development of time histories for dynamic analyses of structures and seismic risk computation, including selection of ground motion parameters for estimating structural response, development of fragility curves, and methods for risk calculations. Final exam required. Instructor: Abrahamson

EPS 280 Research 2 - 12 Units

Department: Earth and Planetary Science

Course level: Graduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Zero hours of Independent study per week for 15 weeks. Thirty to hours of Independent study per week for 8 weeks. Individual conferences to be arranged. Provides supervision in the preparation of an original research paper or dissertation. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 280.

EPS 290 Seminar 2 - 6 Units

Department: Earth and Planetary Science

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 to 6 hours of lecture/discussion per week. Topics will be announced each semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 290.

EPS C292/ASTRON C292 Planetary Science Seminar 1 Unit

Department: Earth and Planetary Science; Astronomy

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Participants will be required to give at least 1 30-minute presentation, either on their own research or on recent results from the literature

The departments of Astronomy and Earth and Planetary Science offer a joint research seminar in advanced topics in planetary science, featuring speakers drawn from graduate students, postdoctoral researchers, faculty, and visiting scholars. Topics will span planetary interiors; surface morphology; atmospheres; dynamics; planet formation; and astrobiology. Speakers will vary from semester to semester. Meetings will be held once a week for 1 hour each, and the schedule of speakers will be determined on the first day of class. To pass the class, participants will be required to give a 30-minute presentation, either on their own research or on recent results from the literature.

Course may be repeated for credit when topic changes. Final exam not required.

EPS C295Z/CHEM C236/CHM ENG C295Z Energy Solutions: Carbon Capture and Sequestration 3 Units

Department: Earth and Planetary Science; Chemical Biomolecular Engineering; Chemistry

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Chemistry 4B or 1B, Mathematics 1B, and Physics 7B, or equivalents.

After a brief overview of the chemistry of carbon dioxide in the land, ocean, and atmosphere, the course will survey the capture and sequestration of CO₂ from anthropogenic sources. Emphasis will be placed on the integration of materials synthesis and unit operation design, including the chemistry and engineering aspects of sequestration. The course primarily addresses scientific and engineering challenges and aims to engage students in state-of-the-art research in global energy challenges.

Final exam not required. Instructors: Bourg, DePaolo, Long, Reimer, Smit

EPS 298 Directed Group Study for Graduates 1 - 9 Units

Department: Earth and Planetary Science

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: Occasional group meetings and individual conferences.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Geology 298.

EPS C301/GEOG C301/INTEGBI C215 Communicating Ocean Science 4 Units

Department: Earth and Planetary Science; Geography; Integrative Biology

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.

Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science. For graduate students interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam not required. Instructor: Ingram

EPS 375 Professional Preparation: Supervised Teaching of Geology and Geophysics 1 - 6 Units

Department: Earth and Planetary Science

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 hour of Discussion per week for 15 weeks.

Prerequisites: Graduate standing and appointment as graduate student instructor.

Discussion, curriculum, class observation, and practice teaching in geology, geophysics, and earth science.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Earth and Planetary Science 300.

East Asian Languages and Cultures (EA LANG)

EA LANG 24 Freshman Seminar 1 Unit

Department: East Asian Languages and Cultures

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week for 15 weeks. 1.5 hours of seminar per week for 10 weeks. 2 hours of seminar per week for 8 weeks. 3 hours of seminar per week for 6 weeks. 3 hours of seminar per week for 5 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and topics vary from department to department and semester to semester. Enrollment limited to fifteen freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

EA LANG 39A Freshman/Sophomore Seminar 1.5 - 4 Units

Department: East Asian Languages and Cultures

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.

Prerequisites: Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39B Freshman/Sophomore Seminar 1.5 - 4 Units

Department: East Asian Languages and Cultures

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.

Prerequisites: Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39C Freshman/Sophomore Seminar 1.5 - 4 Units

Department: East Asian Languages and Cultures

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.

Prerequisites: Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39D Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39E Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39F Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39G Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39H Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39I Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39J Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39K Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39L Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39M Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39N Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39S Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39T Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39U Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39V Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39W Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39X Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39Y Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG 39Z Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1.5 to 4 hours of seminar per week. 2.5 to 6 hours of seminar per week for 10 weeks. 3 to 8 hours of seminar for 8 weeks. 3.5 to 10 hours of seminar per week for 6 weeks. 4.5 to 12 hours of seminar per week for 5 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Final exam not required.

EA LANG C50/BUDDSTD C50/S,SEASN C52 Introduction to the Study of Buddhism 4 Units

Department: East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies

Course level: Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This introduction to the study of Buddhism will consider materials drawn from various Buddhist traditions of Asia, from ancient times down to the present day. However, the course is not intended to be a comprehensive or systematic survey; rather than aiming at breadth, the course is designed around key themes such as ritual, image veneration, mysticism, meditation, and death. The overarching emphasis throughout the course will be on the hermeneutic difficulties attendant upon the study of religion in general, and Buddhism in particular.

Final exam required. Formerly known as Buddhism C50.

EA LANG 84 Sophomore Seminar 1 or 2 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.**Prerequisites:** At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

EA LANG 98 Directed Group Study for Lower Division Students 1 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Lower division standing, 3.5 GPA.

Small group instruction in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EA LANG 101 Catastrophe, Memory, and Narrative: Comparative Responses to Atrocity in the Twentieth Century 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

This course will examine Japanese, Jewish, and African responses to and representations of violent conflict. We will pay attention to how catastrophic events are productive of new forms of expression--oral, written, and visual--as well as destructive of familiar ones. We will examine the ways in which experience and its representation interact during and in the aftermath of extreme violence. Our empirical cases will be drawn from our research on comparative Japanese and Jewish responses to WWII atrocities, and on the post-Cold War civil wars in Africa.

Final exam required. Instructor: Tansman

EA LANG 103 Writing, Visuality, and the Powers of Images 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines how fictional and historical texts from Asia and the West explore beliefs in the powers of images and their implication in questions of knowledge and power, the borders of life and death, and the politics of gender, history, memory, and culture. We'll track how such beliefs change, persist, and are re-appropriated across historical time and cultural space, and consider the critical light "premodern" texts from our "modern" world of images project upon each other.

Final exam required. Instructor: Schaefer

EA LANG 105 Dynamics of Romantic Core Values in East Asian Premodern Literature and Contemporary Film 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course explores the representation of romantic love in East Asian cultures in both premodern and post-modern contexts. Students develop a better understanding of the similarities and differences in traditional values in three East Asian cultures by comparing how canonical texts of premodern China, Japan and Korea represent romantic relationship. They explore how these values sometimes provide a given framework for a narrative and sometimes provide the definition of transgressive acts. This is followed by the study of several contemporary East Asian films, giving the student the opportunity to explore how traditional values persist, change, or become nexus points of resistance in the complicated modern and post-modern milieu of East Asian cultures maintaining a national identity while exercising an international presence.

Final exam not required.

EA LANG 106 Expressing the Ineffable in China and Beyond: The Making of Meaning in Poetic Writing 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will explore how the Chinese and English-language literary traditions (broadly defined) delineate the realm of the ineffable, and how cultural notions of the inexpressible shape the writing and reading of poems, songs, and a selection of prose pieces, from the uses of figurative language and prosody to genre and canon formation. In addition, in order to deepen our understanding of how writing achieves its aims, some attention will be given to nonverbal modes of expression, including calligraphy and painting--and attempts to render them in writing. Over this course of study, students will not only refine their sensitivity to the power of artistic modes of indirection, but will also hone their skills in close reading, analytical writing, and oral expression. All readings will be in English.

Final exam required. Instructor: Varsano

EA LANG 107 War, Empire, and Literature in East Asia 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will examine war, empire, and the writing and memorialization of history through an eclectic group of literary, graphic, and cinematic texts from China, Japan, Europe, and the U.S. We will begin by examining crucial issues of imperial power, violence, and historical representation through the lens of the Han dynasty historian Sima Qian's classic accounts of "terrorism" in the Warring States period, the rise of the Han empire, and its conflicts with the Hsiung-nu "barbarians" to the north.

With these earlier examples in mind, we will turn our focus to two crucial conflicts in modern history - the Boxer Uprising of 1899-1900, and the Sino-Japanese War of 1937-1945 - and their diverse representations in a number of different times, places, and media.

Final exam required. Instructor: Jones

EA LANG 109 History of the Culture of Tea in China and Japan 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

The course takes the traditions of tea in China and Japan as a way of viewing cultural similarities and differences between the two countries. It explores aesthetic, religious, and social aspects of China and Japan by showing how religion, philosophy, and the arts stimulated and were stimulated by the practice of the consumption of tea in social and ritualized contexts. Understanding the tea culture of these countries informs students of important and enduring aspects of both cultures, provides an opportunity to discuss the role of religion and art in social practice (and vice versa), provides a forum for cultural comparison and provides as well an example of the relationship between the two countries and Japanese methods of importing and naturalizing another country's social practice.

Final exam required.

EA LANG 110 Bio-Ethical Issues in East Asian Thought 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

This course will explore some of the most difficult bioethical issues confronting the world today from the perspective of traditional values embedded in the cultural history of India, China, and Japan as evidenced in their religions, legal codes, and political history. Possible topics include population control, abortion, sex-selection, euthanasia, suicide, genetic manipulation, brain-death, and organ transplants.

Final exam required. Instructor: Blum

EA LANG 112 The East Asian Sixties 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

The 1960s were a time of historical transformation and upheaval in East Asia. It saw the overthrow of political regimes, the consolidation of communism, unprecedented capitalist expansion, and the emergence of new technologies that affected aesthetic production and consumption. This course explores the multiple aspects of culture, aesthetics, and politics that defined this moment. It asks how and why we can define the 1960s as a period, while considering the significance of defining East Asia (a term which denotes an imagined space of relations) as a particular region at this time.

Course may be repeated for credit when topic changes. Final paper.

EA LANG C120/BUDDSTD C120 Buddhism on the Silk Road 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 8 hours of Lecture per week for 6 weeks.

This course is both an historical introduction to the Silk Road, understood as an ever-changing series of peoples, places, and traditions, as well as an introduction to the study of those same peoples, places, and traditions in the modern period. In this way, the class is intended both as a guide to the extant textual, archaeological, and art historical evidence from the Silk Road, but also as a framework for thinking about what it means to study Asia and Asian religions in the context of a contemporary American classroom. All readings will be in English.

Final exam required.

EA LANG C126/BUDDSTD C126 Buddhism and the Environment 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One lower-division course in Buddhist Studies or consent of instructor.

A thematic course on Buddhist perspectives on nature and Buddhist responses to environmental issues. The first half of the course focuses on East Asian Buddhist cosmological and doctrinal perspectives on the place of the human in nature and the relationship between the salvific goals of Buddhism and nature. The second half of the course examines Buddhist ethics, economics, and activism in relation to environmental issues in contemporary Southeast Asia, East Asia, and America.

Final exam required. Instructor: Williams

EA LANG C128/BUDDSTD C128/S,SEASN C145 Buddhism in Contemporary Society 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.

A study of the Buddhist tradition as it is found today in Asia. The course will focus on specific living traditions of East, South, and/or Southeast Asia. Themes to be addressed may include contemporary Buddhist ritual practices; funerary and mortuary customs; the relationship between Buddhism and other local religious traditions; the relationship between Buddhist institutions and the state; Buddhist monasticism and its relationship to the laity; Buddhist ethics; Buddhist "modernism," and so on.

Final exam required.

EA LANG C130/BUDDSTD C130 Zen Buddhism 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Prerequisites: One lower division course in Asian religion recommended. This course will introduce students to the Zen Buddhist traditions of China and Japan, drawing on a variety of disciplinary perspectives (history, anthropology, philosophy, and so on). The course will also explore a range of hermeneutic problems (problems involved in interpretation) entailed in understanding a sophisticated religious tradition that emerged in a time and culture very different from our own.

Final exam required. Formerly known as Buddhism 130.

EA LANG C132/BUDDSTD C132 Pure Land Buddhism 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 8 hours of lecture per week for 6 weeks.

This course will discuss the historical development of the Pure Land school of East Asian Buddhism, the largest form of Buddhism practiced today in China and Japan. The curriculum is divided into India, China, and Japan sections, with the second half of the course focusing exclusively on Japan where this form of religious culture blossomed most dramatically, covering the ancient, medieval, and modern periods. The curriculum will begin with a reading of the core scriptures that form the basis of the belief system and then move into areas of cultural expression. The course will follow two basic trajectories over the centuries: doctrine/philosophy and culture/society.

Research Paper Instructor: Blum

EA LANG C135/BUDDSTD C135/S,SEASN C135 Tantric Traditions of Asia 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The emergence of the tantras in seventh and eighth-century India marked a watershed for religious practice throughout Asia. These esoteric scriptures introduced complex new ritual technologies that transformed the religious traditions of India, from Brahmanism to Jainism and Buddhism, as well as those of Southeast Asia, Tibet, Mongolia, China, Korea, and Japan. This course provides an overview of tantric religion across these regions.

Final exam required.

EA LANG 180 East Asian Film: Directors and their Contexts 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 to 2 hours of discussion/film viewing per week.**Prerequisites:** Upper division or graduate standing.

A close analysis of the oeuvre of an East Asian director in its aesthetic, cultural, and political contexts.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EA LANG 181 East Asian Film: Special Topics in Genre 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 to 2 hours of discussion/film viewing per week.

The study of East Asian films as categorized either by industry-identified genres (westerns, horror films, musicals, film noir, etc.) or broader interpretive modes (melodrama, realism, fantasy, etc).

Final exam required.

EA LANG 198 Directed Group Study 1 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Junior or senior standing.

Small group instruction in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EA LANG 199 Independent Study 1 - 4 Units**Department:** East Asian Languages and Cultures**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Junior or senior standing.

Independent study in topics not covered by regularly scheduled courses.

Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EA LANG 200 Proseminar: Approaches to East Asian Studies 2 or 4 Units**Department:** East Asian Languages and Cultures**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course is a pro-seminar required for all entering graduate students in the Department of East Asian Languages and Cultures no matter their particular areas of interest. Its purpose is to introduce graduate students in the program to the major theoretical concerns, academic issues, and interpretive methodologies relevant to humanistic studies more generally and to the study of East Asian literature, thought, religion, and culture in particular. Supervising faculty change from year to year, as does the focus of the seminar.

Final exam not required.

EA LANG 202 Close Reading Area Studies: China and Japan in the World 2 or 4 Units**Department:** East Asian Languages and Cultures**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course will consider alternative strategies and modes of close reading that can be relevant to the study of East Asia with a focus on China and Japan. As we concentrate on the historical role of philological research, translation studies, interdisciplinary scholarship and ask how "knowledge" about East Asia is produced in our fields, our readings on "close reading" will help us question the common sense of "civilization," culture," and "tradition," and explore new ways of asking questions about text and context, aesthetics and politics, cultural memory, historical narratives, and regimes of knowledge.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: O'Neill

EA LANG C220/BUDDSTD C220/S,SEASN C220 Seminar in Buddhism and Buddhist Texts 2 or 4 Units**Department:** East Asian Languages; East Asian Languages and Cultures; Group in Buddhist Studies; South and Southeast Asian Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** unit(s):3 hours of seminar per week; 4 unit(s):3 hours of seminar per week.

Content varies with student interests. The course will normally focus on classical Buddhist texts that exist in multiple recensions and languages, including Chinese, Sanskrit, and Tibetan.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

East European Studies (EAEURST)

EAEURST 1A Introductory Hungarian 3 or 4 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of lecture per week plus language laboratory.**Prerequisites:** 1A is prerequisite to 1B; consent of instructor.

Practical instruction in the Hungarian language. The course can be taken for either 3 or 4 units; the additional unit involves language laboratory work and additional written reading assignments.

Final exam required.

EAEURST 1B Introductory Hungarian 3 or 4 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of lecture per week plus language laboratory.**Prerequisites:** 1A is prerequisite to 1B; consent of instructor.

Practical instruction in the Hungarian language. The course can be taken for either 3 or 4 units; the additional unit involves language laboratory work and additional written reading assignments.

Students who have taken 5 units of 10A will receive no credit for 1A.

Students who have taken 10 units of 10A will receive no credit for 1B.

Final exam required.

EAEURST 2A Introductory Romanian 3 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 2A: None. 2B: 2A is prerequisite to 2B or consent of instructor.

The course will focus on reading and comprehension, elementary speaking and writing, providing fundamental grammatical and lexical competence for further language acquisition in Romanian.

Final exam required.

EAEURST 2B Introductory Romanian 3 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 2A or consent of instructor.

The course will focus on reading and comprehension, elementary speaking and writing, providing fundamental grammatical and lexical competence for further language acquisition in Romanian.

Final exam required.

EAEURST 100 Readings in Hungarian 2 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.**Prerequisites:** East European Studies 1A and 1B or consent of instructor, based on in-person assessment.

The purpose of this course is to further develop the student's language proficiency in reading, speaking and writing by using interpersonal, interpretive, and presentational communicative modes. Exploration of fascinating aspects of Hungarian culture including elements of literature, contemporary and historical events, pop-culture, and folklore. Students will be able to influence topic selections according to their personal goals and interests.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final paper.

EAEURST 102A Continuing Romanian 3 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 2B is prerequisite to 102A, or consent of instructor. 102A is prerequisite to 102B, or consent of instructor.

The purpose of this course is to further develop students' Romanian proficiency in all four language skills, using discussion, oral presentations, written assignments, and a variety of readings (literature, non-fiction, folklore, newspaper articles, etc.) chosen partly for their cultural significance and partly based on student needs and interests. Emphasis on particular skills (e.g., reading) depending on student needs and interests.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

EAEURST 102B Continuing Romanian 3 Units**Department:** East European Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102A or consent of instructor.

The purpose of this course is to further develop students' Romanian proficiency in all four language skills, using discussion, oral presentations, written assignments, and a variety of readings (literature, non-fiction, folklore, newspaper articles, etc.) chosen partly for their cultural significance and partly based on student needs and interests. Emphasis on particular skills (e.g., reading) depending on student needs and interests.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

Economics (ECON)

ECON 1 Introduction to Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 4 hours of Lecture and 4 hours of Discussion per week for 8 weeks.

A survey of economics designed to give an overview of the field. Students will receive 2 units of credit for 1 after taking Economics 3 or Environmental Economics and Policy 1; no credit after taking Economics 2. Final exam required.

ECON 2 Introduction to Economics--Lecture Format 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The course provides a survey of economics principles and methods. It covers both microeconomics, the study of consumer choice, firm behavior, and market interaction, and macroeconomics, the study of economic growth, unemployment, and inflation. Special emphasis is placed on the application of economic tools to contemporary economic problems and policies. Economics 2 differs from Economics 1 in that it has an additional hour of lecture per week and can thus cover topics in greater depth. It is particularly appropriate for intended economics majors.

Students will receive no credit for 2 after taking 1; 2 units after taking 3 or Environmental Economics and Policy 1. Final exam required.

ECON C3/ENVECON C1 Introduction to Environmental Economics and Policy 4 Units**Department:** Economics; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 32.

Introduction to microeconomics with emphasis on resource, agricultural, and environmental issues.

Students will receive 2 units of credit for 1 after taking Economics 1. Final exam required.

ECON 24 Freshman Seminar 1 Unit**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments. Topics vary from department to department and semester to semester. Enrollment limited to 15 freshman.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ECON 84 Sophomore Seminar 1 or 2 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.

Prerequisites: At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ECON 98 Directed Group Study 1 - 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.

Written proposal must be approved by Department Chair. Seminars for the group study of selected topics, which will vary from year to year.

Topics may be initiated by students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ECON 100A Economic Analysis--Micro 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 to 4 hours of Discussion per week for 8 weeks.

Prerequisites: 1 or 2 or C3, or Environmental Economics and Policy 1, and Mathematics 1A or 16A, and Mathematics 1B or 16B, or equivalent. Resource allocation and price determination.

Students will receive no credit for 100A after taking 101A or Undergraduate Business Administration 101A. A deficient grade in Undergraduate Business Administration 101A may be repeated by taking 100A. Final exam required.

ECON 100B Economic Analysis--Macro 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 to 4 hours of Discussion per week for 8 weeks.**Prerequisites:** 1 or 2, and Mathematics 1A or 16A.

A study of the factors which determine national income, employment, and price levels, with attention to the effects of monetary and fiscal policy.

Students will receive no credit for 100B after taking 101B or

Undergraduate Business Administration 101B. A deficient grade in

Undergraduate Business Administration 101B may be repeated by taking

100B. Final exam required.

ECON 101A Economic Theory--Micro 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.**Prerequisites:** 1 or 2, Mathematics 53 or equivalent or consent of instructor.

Theory of resource allocation and price determination with an emphasis on microeconomic principles.

Students will not receive credit for 101A after taking 100A or

Undergraduate Business Administration 101A. A deficient grade in

Undergraduate Business Administration 101A may be repeated by taking

101A. Final exam required.

ECON 101B Economic Theory--Macro 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 to 2 hour of Discussion per week for 15 weeks.**Prerequisites:** 1 or 2, and Mathematics 1A and 1B.

A study of theories of the determination of national income, employment, and price levels, with attention to the effects of monetary and fiscal policy.

Students will not receive credit for 101B after taking 100B or

Undergraduate Business Administration 101B. A deficient grade in

Undergraduate Business Administration 101B may be repeated by taking

101B. Final exam required.

ECON C102/ENVECON C102 Natural Resource Economics 4 Units**Department:** Economics; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100, or Economics 100A or 100B.

Introduction to the economics of natural resources. Land and the concept of economic rent. Models of optimal depletion of nonrenewable resources and optimal use of renewable resources. Application to energy, forests, fisheries, water, and climate change. Resources, growth, and sustainability.

Final exam required. Instructor: Sunding

ECON C103/MATH C103 Introduction to Mathematical Economics 4 Units**Department:** Economics; Mathematics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Math 53 and 54.

Selected topics illustrating the application of mathematics to economic theory. This course is intended for upper-division students in Mathematics, Statistics, the Physical Sciences, and Engineering, and for economics majors with adequate mathematical preparation. No economic background is required.

Final exam required. Formerly known as 103.

ECON 104 Advanced Microeconomic Theory 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 101A or consent of instructor.

This course explores some issues in advanced microeconomic theory, with special emphasis on game-theoretic models and the theory of choice under uncertainty. Specific applications will vary from year to year, but will generally include topics from information economics and models of strategic interaction.

Final exam required.

ECON 105 History of Economic Thought 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

A survey of the theories of major economists from Adam Smith to Keynes. Final exam required.

ECON C110/POL SCI C135 Game Theory in the Social Sciences 4 Units**Department:** Economics; Political Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

A non-technical introduction to game theory. Basic principle, and models of interaction among players, with a strong emphasis on applications to political science, economics, and other social sciences.

Students will receive no credit for C135 after taking Economics 104. Final exam required. Formerly known as 135.

ECON N110 Game Theory in the Social Sciences 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.

A non-technical introduction to game theory. Basic principle, and models of interaction among players, with a strong emphasis on applications to political science, economics, and other social sciences.

Students will receive no credit for N110 after taking 104, C110, or Political Science C135. Final exam not required. Formerly known as 135.

ECON 113 American Economic History 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks.**Prerequisites:** 1 or 2 or C3, or Environmental Economics C1.

A survey of trends in the American economy; emphasis on factors explaining economic growth and on the changing distribution of the gains and losses associated with growth.

Final exam required.

ECON N113 American Economic History 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 8 weeks.**Prerequisites:** 1 or 2.

A survey of trends in the American economy; emphasis on factors explaining economic growth and on the changing distribution of the gains and losses associated with growth.

Final exam not required.

ECON 115 The World Economy in the Twentieth Century 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 1 or 2.

Development of the world economic system with particular reference to world-wide trading relationships. This course is equivalent to History 160; students will not receive credit for both courses.

Final exam required.

ECON 119 Psychology and Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A or 101A.

This course presents psychological and experimental economics research demonstrating departures from perfect rationality, self-interest, and other classical assumptions of economics and explores ways that these departures can be mathematically modeled and incorporated into mainstream positive and normative economics. The course will focus on the behavioral evidence itself, especially on specific formal assumptions that capture the findings in a way that can be incorporated into economics. The implications of these new assumptions for theoretical and empirical economics will be explored.

Final exam required.

ECON 121 Industrial Organization and Public Policy 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 1.5 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A or 101A.

The organization and structure of production in the U.S. economy. Determinants of market structure, business behavior, and economic performance. Implications for antitrust policy.

Final exam required.

ECON 122 Industrial Organization Seminar 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 121 and/or consent of instructor.

Seminar on problems in the field of industrial organization. Seminar paper is required.

Final exam not required.

ECON 123 Government Regulation of Industry 3 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 121

Problems of public policy in the field of industrial organization. Analysis of regulatory consequences with particular attention to economic performance.

Final exam required.

ECON 124 Special Topics in Industrial Organization 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 121

Analysis of market structure, conduct and performance in selected industries. See course announcement for current topics.

Final exam required.

ECON C125/ENVECON C101 Environmental Economics 4 Units**Department:** Economics; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100, Mathematics 16A-16B, or Economics 100A or 101A.

Theories of externalities and public goods applied to pollution and environmental policy. Trade-off between production and environmental amenities. Assessing nonmarket value of environmental amenities. Remediation and clean-up policies. Environment and development. Biodiversity management.

Final exam required. Instructor: Zilberman

ECON 131 Public Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

This course focuses on the role of the government in the economy from a theoretical and empirical perspective. The aim of the course is to provide an understanding of the reasons for government intervention in the economy, analyzing the merits of possible government policies, and the response of economic agents to the government's actions. The course covers the analysis of tax policy, social insurance programs, public goods, environmental protection, and the interaction between different levels of government. Special emphasis is set on current government policy issues such as social security reform, income tax reform, and budget deficits.

Final exam required.

ECON 132 Seminar in Public Sector Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 131 and/or consent of instructor.

Enrollment will be limited. A seminar paper is required.

Final exam required.

ECON 134 Macroeconomic Policy from the Great Depression to Today 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100B or 101B.

This course will analyze the macroeconomic challenges and policy responses in the United States over the past century. Among the key topics studied are the Great Depression and the New Deal; boom and bust monetary and fiscal policy in the early post-World War II period; the Volcker disinflation and the Great Moderation; and the 2008 financial crisis and the Great Recession.

Final exam required. Instructor: Romer

ECON 136 Financial Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and Zero to 2 hours of Discussion per week for 6 weeks.**Prerequisites:** 100A or 101A, and one semester of statistics.

Analysis of financial assets and institutions. The course emphasizes modern asset valuation theory and the role of financial intermediaries, and their regulation, in the financial system.

Students will receive no credit for 136 after taking Undergraduate Business Administration 103. Students intending on majoring in Business should not take 136. Final exam required.

ECON N136 Financial Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A or 101A, and one semester of statistics.

Analysis of financial assets and institutions. The course emphasizes modern asset valuation theory and the role of financial intermediaries, and their regulation, in the financial system.

Final exam not required.

ECON 138 Financial and Behavioral Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** 100A or 101A, and Statistics 20, 21, or 25 or any upper division statistics course.

This course is an advanced class in Financial Economics. Topics include moral hazard (principal-agent problems, free cash flow), asymmetric Information (security issuance, dividends), mergers and acquisitions (theory, managerial incentives), corporate governance (separation of ownership and control, internal capital markets, superstar CEOs), corporate fraud (earnings manipulations). This class emphasizes the economic underpinning of financial decision-making and is mathematically and technically demanding. You will be required to do some empirical homework using STATA.

Final exam required.

ECON 140 Economic Statistics and Econometrics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 3 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B or equivalent and Statistics 20, 21, 25, or 131A or equivalent.

Introduction to problems of observation, estimation, and hypothesis testing in economics. This course covers the linear regression model and its application to empirical problems in economics.

Students will not receive credit for 140 after taking 141. Final exam required.

ECON 141 Econometric Analysis 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks. 4 hours of Lecture and 3 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B or equivalent; Statistics 20, 21, 25, or 131A, or equivalent; and Mathematics 53 and 54, or equivalent.

Introduction to problems of observation, estimation, and hypothesis testing in economics. This course covers the statistical theory for the linear regression model and its variants, with examples from empirical economics.

Students will not receive credit for 141 after taking 140. Final exam required.

ECON C142/POL SCI C131A/PUB POL C142 Applied Econometrics and Public Policy 4 Units**Department:** Economics; Political Science; Public Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hour of discussion/laboratory per week.**Prerequisites:** 140 or 141 or consent of instructor.

This course focuses on the sensible application of econometric methods to empirical problems in economics and public policy analysis. It provides background on issues that arise when analyzing non-experimental social science data and a guide for tools that are useful for empirical research.

By the end of the course, students will have an understanding of the types of research designs that can lead to convincing analysis and be comfortable working with large scale data sets.

Final exam required.

ECON 151 Labor Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 100A or 101A, or consent of instructor.

This course will analyze the economic forces that shape labor markets, institutions, and performance in the U.S., Japan, and at least one European country (usually Germany). Institutions examined include trade unions, legal regulations, and social conventions.

Final exam required.

ECON 152 Wage Theory and Policy 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 2 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A or 101A.

This course focuses on theoretical and empirical analysis of wage and employment determination in the labor market. In addition, the role of public policy in affecting wage and employment outcomes in the U.S. labor market is examined. Topics include labor supply, labor demand, minimum wages, the economics of education and training, discrimination and the impact of antidiscrimination programs, changes in wage inequality over time, immigration, unions, unemployment, and poverty.

Final exam required.

ECON N152 Wage Theory and Policy 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

This course focuses on theoretical and empirical analysis of wage and employment determination in the labor market. In addition, the role of public policy in affecting wage and employment outcomes in the U.S. labor market is examined. Topics include labor supply, labor demand, minimum wages, the economics of education and training, discrimination and the impact of antidiscrimination programs, changes in wage inequality over time, immigration, unions, unemployment, and poverty.

Final exam not required.

ECON 153 Labor Economics Seminar 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 140 or 141, and 151 or 152 and consent of instructor.

Topics in labor economics. Seminar paper required.

Final exam not required.

ECON 154 Economics of Discrimination 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 140 or 141.

Starting from Becker's classic book on the economics of discrimination, this course will focus on issues of difference and discrimination associated with race, gender, or nation of birth, focusing particularly on credit and housing markets, education, and health care. The course looks carefully at the ways in which econometrics is used to address questions of discrimination.

Final exam not required.

ECON 155 Urban Economics 3 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 100A or 101A.

Application of economic theory to urban problems. Topics covered include location theory, housing, transportation, and the fiscal problems of city government.

Final exam required.

ECON 157 Health Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A or 101A.

An economic analysis of policies and institutions in the U.S. health care sector. Topics covered include the supply and demand for health services, conceptual and policy issues relating to the provision of health insurance, and economic analysis of efficient regulatory policies toward the health care sector.

Final exam required.

ECON 161 Economics of Transition: Eastern Europe 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A or 101A.

Economic behavior under socialism; socialism vs. capitalism. Transition challenges. Stylized facts of transition. Political economy of reform strategies. Liberalization and the macroeconomic environment. Privatization policies and enterprise restructuring. Legal reform, institutional change, and variation in economic performance across countries. Foreign trade and enlargement of the European Union to transition countries. The Washington consensus, transition, and the institutions of capitalism.

Final exam required.

ECON 162 The Chinese Economy 3 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

The Chinese economy, its institutions, reform and transition to the market, and development.

Final exam required.

ECON C171/ENVECON C151 Economic Development 4 Units**Department:** Economics; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.**Prerequisites:** 100, Economics 100A or 101A.

Problems of underdevelopment and poverty, policy issues, and development strategy.

Final exam required. Instructor: de Janvry

ECON N171 Economic Development 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 8 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A or 101A or Environmental Economics and Policy 100.

Problems of underdevelopment and poverty, policy issues, and development strategy.

Final exam not required.

ECON 172 Case Studies in Economic Development 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hours of discussion per week. 6 hours of lecture and zero to 2 hours of discussion per week for 8 weeks.**Prerequisites:** 100A.

A detailed study of the problems of development in a selected geographical area in Asia or Africa or Latin America.

Course may be repeated for credit when topic changes. Final exam required.

ECON 173 Economic Development Seminar 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 171 or 172 and consent of instructor.

A seminar paper will be required.

Final exam not required.

ECON 174 Global Poverty and Impact Evaluation 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** At least one prior term of intermediate economics (i.e., 100A or 100B) and some prior coursework in statistics.

Rather than simply describing the causes and symptoms of global poverty, this course will explore the variety of tools available for rigorously measuring the impact of development programs. Through weekly case studies of field research, the course will cover impact evaluation theory and methods. The course will culminate with a final project in which each student will design an impact evaluation of a policy or intervention.

Final exam required. Instructor: Miguel

ECON C175/DEMOG C175 Economic Demography 3 Units**Department:** Economics; Demography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** Economics 1 or 2.

A general introduction to economic demography, addressing the following kinds of questions: What are the economic consequences of immigration to the U.S.? Will industrial nations be able to afford the health and pension costs of the aging populations? How has the size of the baby boom affected its economic well being? Why has fertility been high in Third World countries? In industrial countries, why is marriage postponed, divorce high, fertility so low, and extramarital fertility rising? What are the economic and environmental consequences of rapid population growth?. Final exam required. Formerly known as 175. Instructor: Lee

ECON N175 Economic Demography 3 Units**Department:** Economics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture per week for 8 weeks.**Prerequisites:** Economics 1 or 2.

A general introduction to economic demography, addressing the following kinds of questions: What are the economic consequences of immigration to the U.S.? Will industrial nations be able to afford the health and pension costs of the aging populations? How has the size of the baby boom affected its economic well being? Why has fertility been high in Third World countries? In industrial countries, why is marriage postponed, divorce high, fertility so low, and extramarital fertility rising? What are the economic and environmental consequences of rapid population growth?. Students will receive no credit for Economics N175 after taking Economics C175/Demography C175; Economics 175/Demography 175. A deficient grade in Economics C175/Demography C175 may be removed by taking Economics N175. Final exam required.

ECON C181/ENVECON C181 International Trade 4 Units**Department:** Economics; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

The theory of international trade and its applications to tariff protection.

This course is equivalent to UGBA 118; students will not receive credit for both courses.

Final exam required.

ECON N181 International Trade 4 Units**Department:** Economics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

The theory of international trade and its applications to tariff protection.

Final exam not required.

ECON 182 International Monetary Economics 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7 and 1 half hours of lecture/discussion per week for 8 weeks.**Prerequisites:** 100A-100B or 101A-101B.

The balance of payments, the determination of the trade balance and income under fixed and floating exchange rates, money and prices in open economies, the internationalization of financial markets and its implications, international macroeconomic interdependence, capital flows, and the determination of the exchange rate.

Final exam required.

ECON 191 Topics in Economic Research 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100A or 100B.

This course discusses recent research and policy developments. The core objective is to expose students to different aspects of research in economics. A sequence of five different frontier research topics are studied in depth each semester. Each topic lasts three weeks, during which students will familiarize themselves with cutting-edge economic research and methodology. Students will then develop their own research ideas and write two medium- size research papers.

Final exam not required.

ECON H195A Senior Honors Thesis 1 - 3 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Senior honors candidates only (students with major GPA of 3.50 or better or permission of instructor.)

Preparation for writing a thesis, finding and organizing a topic, gathering data and getting started. H195A is not prerequisite to H195B.

Final exam not required.

ECON H195AS Senior Honors Thesis 1 - 3 Units**Department:** Economics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Independent study per week for 15 weeks.**Prerequisites:** Senior honors candidates only, with major GPA of 3.5 or better. Permission of undergraduate adviser.

Preparation and writing of an honors thesis under the supervision of a member of the faculty. H195AS is not a prerequisite to H195BS.

Final exam required.

ECON H195B Senior Honors Thesis 1 - 3 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged.**Prerequisites:** Senior honors candidates only (students with major GPA of 3.50 or better or permission of undergraduate adviser).

Writing a thesis under the supervision of a faculty member. Applications and details through the departmental undergraduate office. H195A is not prerequisite to H195B.

Final exam not required.

ECON H195BS Senior Honors Thesis 1 - 3 Units**Department:** Economics**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged, dependent upon unit value. Seminar.**Prerequisites:** Senior honors candidates only, with major GPA of 3.5 or better. Permission of undergraduate adviser.

Preparation and writing of an honors thesis under the supervision of a member of the faculty.

Final exam required.

ECON 196 Special Topics in Economics 1 - 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Lecture per week for 15 weeks. 1.5 to 7.5 hours of Lecture per week for 8 weeks. 2.5 to 10 hours of Lecture per week for 6 weeks.**Prerequisites:** Upper division standing or consent of instructor.

Study in various fields of economics. Topics will vary from semester to semester and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ECON 197 Field Studies 1 - 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Upper-division standing.

Written proposal must be approved by Department Chair. Supervised field studies in economics. Projects may be initiated by the students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 198 Directed Group Study 1 - 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Upper-division standing and consent of instructor.

Written proposal must be approved by Department Chair. Seminars for the group study of selected topics, which will vary from year to year.

Topics may be initiated by students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ECON 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Economics**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Upper-division standing.

Written proposal must be approved by Department Chair. Enrollment is restricted.

Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ECON 201A Economic Theory 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

Prerequisites: 101A-101B, 204, Mathematics 53 and 54; or equivalent. Basic preparation for the Ph.D. program including theory of the firm and the consumer, game theory. Final exam not required.

ECON 201B Economic Theory 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

Prerequisites: 101A-101B, 201A, 204, Mathematics 53 and 54; or equivalent.

Basic preparation for the Ph.D. program including agency theory and mechanism design, general equilibrium theory.

Final exam required.

ECON 202A Macroeconomic Theory 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

Prerequisites: 100A-100B or 101A-101B or equivalent. Mathematics 53 and 54 or equivalent.

Basic preparation for the Ph.D. program including aggregation theory, national accounting and index problems, survey of major short-term models, implications of various expectations hypotheses, wage price determination, the role of money and financial assets, theories of consumption and investment, disequilibrium theory, dynamic systems, and international considerations.

Final exam required.

ECON 202B Macroeconomic Theory 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

Prerequisites: 100A-100B or 101A-101B or equivalent. Mathematics 50A or equivalent.

Basic preparation for the Ph.D. program including aggregation theory, national accounting and index problems, survey of major short-term models, implications of various expectations hypotheses, wage price determination, the role of money and financial assets, theories of consumption and investment, disequilibrium theory, dynamic systems, and international considerations.

Final exam required.

ECON 204 Mathematical Tools for Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 10 hours of Lecture and 5 hours of Discussion per week for 3 weeks.**Prerequisites:** Mathematics 53 and 54 or equivalent and consent of instructor.

The course provides a rigorous abstract treatment of the elements of real analysis and linear algebra central to current research in economics. The course develops in the students the ability to read mathematical proofs and to compose simple proofs on their own.

Final exam not required.

ECON 206 Mechanism Design and Agency Theory 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 201B and 209A or consent of instructor.

This course will study the optimal design of mechanisms in the presence of incomplete information and imperfect observability. The course will begin with the "classic" principal-agent problem and will then develop its applications to the "implicit contracts" theory of agency and to the choice of government policies for regulated industries. The second half of the course will treat the design of auctions, regulation with costly or imperfect monitoring, mechanism design with limited contracts.

Final exam not required. Formerly known as 209B.

ECON 207A Mathematical Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of lecture per week. 12 hours per week including class time and preparation.**Prerequisites:** Math 104 and 110 and Statistics 101.

Mathematical analysis of economic theory. The problems treated involve as wide a range of mathematical techniques and of economic topics as possible, including theories of preference, utility, demand, personal probability, games and general equilibrium. Also listed as IDS 213A-213B and Math 213A-213B.

Final exam required.

ECON 207B Mathematical Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of lecture per week. 12 hours per week including class time and preparation.**Prerequisites:** Math 104 and 110 and Statistics 101.

Mathematical analysis of economic theory. The problems treated involve as wide a range of mathematical techniques and of economic topics as possible, including theories of preference, utility, demand, personal probability, games and general equilibrium. Also listed as IDS 213A-213B and Math 213A-213B.

Final exam required.

ECON 208 Microeconomic Theory Seminar 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 209A Theory and Application of Non-Cooperative Games 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course will study both pure game theory and its application to such problems as oligopoly pricing, non-cooperative bargaining, predatory pricing, and optimal auctions. The focus will be on game theory as a modelling process as opposed to a body of known results.

Final exam required.

ECON 209B Theory and Application of Non-Cooperative Games: II 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 209A or consent of instructor.

The course will cover basic topics not covered in 209A; will provide a more thorough treatment of topics covered in 209A; will cover a selection of advanced topics.

Final exam required.

ECON 210A Introduction to Economic History 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.Survey of some central themes in world economic history. Required of all Ph.D. candidates in economics.
Final exam required.**ECON 210B Topics in European Economic History 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 210A.A survey of some central themes in European economic history.
Final exam required.**ECON 210C Topics in American Economic History 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 210A.A survey of some central themes in American economic history.
Final exam required.**ECON 211 Seminar in Economic History 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 215A Political Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 215A is a prerequisite to 215B.Tools of political economics: preferences and institutions, electoral competition, agency, partisan politics. Redistributive politics: general interest politics, special interest politics. Comparative politics: electoral rules, separation of powers, political regimes. Dynamic politics: fiscal policy, growth.
Final exam not required. Instructor: Roland**ECON 215B Political Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 215A is a prerequisite to 215B.Tools of political economics: preferences and institutions, electoral competition, agency, partisan politics. Redistributive politics: general interest politics, special interest politics. Comparative politics: electoral rules, separation of powers, political regimes. Dynamic politics: fiscal policy, growth.
Final exam required. Instructor: Roland**ECON C215A/POL SCI C237A Political Economics 3 Units****Department:** Economics; Political Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.Tools of political economics: preferences and institutions, electoral competition, agency, partisan politics. Redistributive politics: general interest politics, special interest politics. Comparative politics: electoral rules, separation of powers, political regimes. Dynamic politics: fiscal policy, growth.
Final exam not required.**ECON C215B/POL SCI C237B Political Economics 3 Units****Department:** Economics; Political Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** ECON C215A is a prerequisite to ECON C215B, and POL SCI C237A is a prerequisite to POL SCI C237B.Tools of political economics: preferences and institutions, electoral competition, agency, partisan politics. Redistributive politics: general interest politics, special interest politics. Comparative politics: electoral rules, separation of powers, political regimes. Dynamic politics: fiscal policy, growth.
Final exam not required.**ECON 218 Seminar in Psychology and Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

A graduate seminar in the field of behavioral economics.

Final exam not required. Instructors: Della Vigna, Koszegi, Rabin

ECON 219A Foundations of Psychology and Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 201A-201B or consent of instructor.

This course presents psychological and experimental economics research demonstrating departures from perfect rationality, self-interest, and other classical assumptions of economics and explores ways that these departures can be mathematically modeled and incorporated into mainstream positive and normative economics. The course will focus on the behavioral evidence itself, especially on specific formal assumptions that capture the findings in a way that can be used by economists. Economic applications will be used for illustrative purposes, but the course will emphasize formal theory.

Final exam not required.

ECON 219B Applications of Psychology and Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 219A, 240A-240B or consent of instructor.

This course will build off of the material presented in 219A. It will expand on the psychological and experimental economic research presented there, but will emphasize a range of economic applications and especially empirical research.

Final exam not required.

ECON 220A Industrial Organization 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 201A.

Market structure, conduct and performance in the unregulated sector of the American economy. Public policies related to the promotion or restriction of competition.

Final exam not required.

ECON 220B Industrial Organization 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 220A.

Continuation of 220A. The characteristics of regulated industries and the consequences of regulation for economic performance.

Final exam required.

ECON 220C Special Topics in Industrial Organization 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 220A.

See course announcement for current topics.

Final exam required.

ECON 221 Seminar in Industrial Organization: Regulation and Public Enterprise 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON C222/PHDBA C279I Economics of Innovation 3 Units**Department:** Economics; Ph.D. in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Study of innovation, technical change, and intellectual property, including the industrial organization and performance of high-technology industries and firms; the use of economic, patent, and other bibliometric data for the analysis of technical change; legal and economic issues of intellectual property rights; science and technology policy; and the contributions of innovation and diffusion to economic growth. Methods of analysis are both theoretical and empirical, econometric and case study.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 224 Economics of Institutions 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course develops the proposition that institutions have pervasive ramifications for understanding economic organization. A comparative institutional approach is employed whereby the transaction is made the basic unit of analysis and alternative modes of organization are assessed with respect to their comparative contracting properties.

Final exam required.

ECON C225/PHDBA C270 Workshop in Institutional Analysis 2 Units**Department:** Economics; Ph.D. in Business Administration**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Economics 100 or 101; Business Administration 110 or equivalent; or consent of instructor.

This seminar features current research of faculty, from UC Berkeley and elsewhere, and of advanced doctoral students who are investigating the efficacy of economic and non-economic forms of organization. An interdisciplinary perspective--combining aspects of law, economics, and organization--is maintained. Markets, hierarchies, hybrids, bureaus, and the supporting institutions of law and politics all come under scrutiny. The aspiration is to progressively build toward a new science of organization. Final exam not required.

ECON 230A Public Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

The economic and policy analysis of government expenditures, taxes, and intergovernmental fiscal relations. 230A is not a prerequisite for 230B. Final exam required.

ECON 230B Public Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Government intervention changes opportunities and incentives for firms, families, individuals, service providers, and state and local government. This course considers the incentive effects of government expenditure programs. The primary emphasis will be in the examination of the effect of social expenditure programs on individuals and families. Most of the papers will be empirical. The course will not contain an explicit section on methodology and econometric techniques; instead, relevant econometric techniques (e.g., discrete choice, duration analysis) will be discussed in the context of the empirical literature. Final exam required.

ECON 230C Public Sector Microeconomics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

The economic and policy analysis of government expenditures, taxes, and intergovernmental fiscal relations. Final exam required.

ECON 231 Seminar in Public Sector Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 234A Macroeconomic Finance 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Introduction to macroeconomic finance. Course covers static portfolio choice, capital asset pricing model (CAPM), consumption based models, dynamic equilibrium asset pricing theories, and current issues in behavioral finance. Strong emphasis on household finance and risk-sharing. Course is both theoretical and empirical. Final exam not required. Formerly known as 236D.

ECON 234C Financial Decision-Making in Firms 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 240A-240B or equivalent.

This course provides a theoretical and empirical treatment of the core topics in corporate finance including internal corporate investment; external corporate investment (mergers and acquisitions); capital structure and financial contracting; bankruptcy; corporate governance. Final exam not required.

ECON 235 Financial Economics Seminar 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of seminar per week for 8 weeks.

This course presents speakers who work on the boundary of economics and finance, on topics including asset pricing, behavioral finance, and corporate finance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 236A Aggregate Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** For 236A: 201A-201B and 202A-202B. For 236B: 236A. Macroeconomic models; theory and practice of aggregate economics; rational expectations models; finance theory integrated with macro. Final exam required.**ECON 236B Aggregate Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** For 236A: 201A-201B and 202A-202B. For 236B: 236A. Macroeconomic models; theory and practice of aggregate economics; rational expectations models; finance theory integrated with macro. Final exam not required.**ECON 237 Seminar in Advanced Macroeconomics and Money 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 240A Econometrics 5 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** 100A or 101A or equivalent; 100B or 101B or equivalent; Mathematics 53 and 54, or equivalent; Statistics 131A or equivalent. Basic preparation for the Ph.D. program including probability and statistical theory and the classical linear regression model. Final exam required. Formerly known as 240.**ECON 240B Econometrics 4 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** 240A or equivalent.

Basic preparation for the Ph.D. program including generalized least squares; instrumental variables estimation; generalized method of moments; time series analysis; and nonlinear models. Final exam required.

ECON 241A Econometrics 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Statistics 200A-200B or equivalent and a course in linear algebra. Recommended: Math 112.

Intended for students specializing in econometrics and others with strong mathematical backgrounds. Linear and nonlinear statistical models and their applications in economics. Special problems in analyzing data from non-controlled experiments.

Final exam required.

ECON 241B Econometrics 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 241A.

Simultaneous equations and time-series models.

Final exam not required.

ECON 242 Seminar in Econometrics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** 240A-240B.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 244 Applied Econometrics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 240A-240B.

Methods of applied econometrics, with emphasis on alternative modelling strategies and problems met in practice. Intended for doctoral students conducting empirical research.

Final exam not required.

ECON 250A Labor Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A is prerequisite to 250B. Consent of instructor.
Analysis of labor market behavior.
Final exam required.**ECON 250B Labor Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 250A is prerequisite to 250B. Consent of instructor.
Analysis of labor market behavior.
Final exam required.**ECON 250C Labor Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 250B.
Analysis of labor market behavior.
Final exam required.**ECON 251 Seminar in Labor Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.
Seminar for students at the doctoral dissertation level.
Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.**ECON 260A Comparative Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 260A is prerequisite to 260B.
New issues raised by transition for economics. Political economy of reform: speed, sequencing, reform design, political economy of privatization. Allocative changes: speed of sectoral reallocation, price liberalization, output fall and macroeconomic dynamics, law enforcement, dynamics of institutional change.
Final exam required. Instructor: Roland**ECON 270B Development Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.Problems of underdevelopment and poverty, policy issues and development strategies.
Final exam required.**ECON 270C Development Economics 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.
Basic macro-policy planning with investment project analysis.
Final exam not required.**ECON C270A/A, RESEC C251 Microeconomics of Development 3 Units****Department:** Economics; Agricultural and Resource Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.
Theoretical and empirical analyses of poverty and inequality, household and community behavior, and contract and institutions in the context of developing countries.
Final exam not required.**ECON 271 Seminar in Economic Development and Planning 3 Units****Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.
Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 274 Global Poverty and Impact Evaluation 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** At least one prior term of intermediate economics (i.e., 100A or 100B) and some prior coursework in statistics.

Rather than simply describing the causes and symptoms of global poverty, this course will explore the variety of tools available for rigorously measuring the impact of development programs. Through weekly case studies of field research, the course will cover impact evaluation theory and methods. The course will culminate with a final project in which each student will design an impact evaluation of a policy or intervention.

Final exam required. Instructor: Miguel

ECON C275A/DEMOG C275A Economic Demography 3 Units**Department:** Economics; Demography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Economic consequences of demographic change in developing and developed countries including capital formation, labor markets, and intergenerational transfers. Economic determinants of fertility, mortality and migration.

Final exam required. Instructor: Lee

ECON 280A International Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

The world economy as a general equilibrium system. The theory of international economics, trade policy.

Final exam required.

ECON 280B International Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 280A is not prerequisite to 280B.

This course develops basic theoretical models for studying issues in open-economy macroeconomics. The current account and the trade balance, international capital market integration, developing country debt problems, the real exchange rate, fiscal policy in the open economy, and international policy coordination.

Final exam required.

ECON 280C International Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 280B.

This course is an empirical treatment of open-economy macroeconomics and finance. Topics include trade elasticities, the determination of the trade balance and income under fixed and floating exchange rates, purchasing power parity, devaluation in small open economies, quantifying the degree of international capital mobility, implications for the effectiveness of monetary and fiscal policy, international interdependence and coordination, models of exchange rate determination.

Final exam required.

ECON 281 Seminar in International Trade and Finance 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 291 Departmental Seminar 1 Unit**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of seminar every other week.**Prerequisites:** 201B, 202B.

A general interest seminar featuring speakers and topics of broad interest whose work will be important for all areas of economics.

Final exam not required.

ECON 295 Survey of Research in Economics 1 Unit**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Presentations by departmental faculty of new research directions in different subfields of economics.

Final exam not required.

ECON 296 Special Topics in Economics 3 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Topics of different sections to be announced annually.

Course may be repeated for credit when topic changes. Final exam not required.

ECON 298 Directed Group Study for Graduates 1 - 4 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Seminars for the group of selected topics, which will vary from year to year.

Final exam not required.

ECON 299 Supervised Independent Study and Research 1 - 12 Units**Department:** Economics**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. Zero hours of Independent study per week for 8 weeks. Zero hours of Independent study per week for 6 weeks.

Open to candidates for the Ph.D. degree who have passed the qualifying examination and who are engaged in research for the thesis, and in special cases, with consent of the instructor in charge, to graduate students who desire to do special work in a particular field.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ECON 301 GSI Practicum 4 Units**Department:** Economics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Prerequisites: Appointment as graduate student instructor in department, consent of graduate advisor.

Course credit for experience gained in academic teaching through employment as a graduate student instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Olney

ECON 375 GSI Practicum 4 Units**Department:** Economics**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Prerequisites: Appointment as graduate student instructor in department, consent of graduate advisor.

Course credit for experience gained in academic teaching through employment as a graduate student instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Olney

ECON 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Economics**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Individual study in consultation with the major field advisor, intended to provide an opportunity for qualified graduate students to prepare themselves for the various examinations required of candidates for the Ph.D. A student will be permitted to accumulate a maximum of 16 units of 602.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Education (EDUC)

EDUC 24 Freshman Seminar 1 Unit**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Freshman and Sophomore Seminar program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman Seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Limited to 15 freshmen. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 30AC Race and Ethnicity inside Schools 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of lecture/discussion per week.

Racial and ethnic minorities in American schools and colleges through case studies of Native Americans, Italian Americans, and Mexican Americans. Policies, practices, ideologies, experiences, and outcomes from the perspective of both the dominant and minority groups. Satisfies the American Cultures requirement

Final exam required. Formerly known as 40AC taken before fall 2004.

EDUC 39D Freshman/Sophomore Seminar 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting.

Course may be repeated for credit when topic changes. Final exam required.

EDUC 40AC Experiencing Education: Diversity and (In)Equality in and Beyond Schools 5 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.

Explores the complex relationship among diversity, equality, inequality, and educational systems by focusing on the conceptual categories of race, class, and gender in the organization of educational opportunity. Explores the ways in which these categories intersect in people's lives. Incorporates a semester-long project that enables students to develop research skills as they apply their new understandings to the educational challenges facing local districts and communities. Satisfies the American Cultures requirement. Final exam required.

EDUC N40AC Experiencing Education: Race and Ethnicity Inside Schools 3 Units**Department:** Education**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 7.5 hours of lecture/discussion per week for 6 weeks.
5.5 to 6 hours of lecture/discussion per week for 8 weeks. Racial and ethnic minorities in American schools and colleges through case studies of African Americans, Mexican Americans, Native Americans, and selected Asian American groups. Policies, practices, ideologies, experiences, and outcomes will be analyzed and compared. Satisfies the American Cultures requirement. Final exam required.

EDUC 52 Understanding Language in Society 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course explores how language is influenced by social factors. The topics include dialects and standard English, slang, and the influence of gender, identity, and bilingualism on language use, highlighting the diverse ways in which people use language to communicate with one another. A secondary objective is to teach strategies that are proven effective for successful and efficient reading, writing, learning, and studying. These strategies will be applied to the content of this class and be useful in students' other classes.

Final exam required. Instructor: Van Rheenen

EDUC 75AC American Sports, Culture, and Education 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

American sports and athletes have come to signify a complex of variegated meanings that include desire, but also disdain. Through the work of a variety of scholars, researchers, and journalists, this course explores the nature and motives of societal structures and practices (embodied in both institutions and individuals) to illuminate the intersections and reciprocal influences of society and sports. The central framework of this course draws on the notion that the space of sports is defined by highly structured societal practices and consumptions. By critically analyzing a variety of these practices, this course attempts to ground a partial reading of other societal forces in American culture. In particular, the course examines the nuanced intersections of sport, race, ethnicity, social class and gender, highlighting the ways in which American sports provide a potential vehicle for social mobility and integration while simultaneously reproducing existing cultural stereotypes and structures of inequality.

Satisfies the American Cultures requirement

Final exam required. Instructor: Van Rheenen

EDUC 97 Field Studies 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Field study.

Prerequisites: Restricted to freshman and sophomores. Consent of instructor.

University organized and supervised field programs involving experiences in schools and school-related activities.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 98 Directed Group Study 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Group meetings to be arranged.

Prerequisites: Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EDUC 99 Supervised Independent Study 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Tutorial.**Prerequisites:** Consent of instructor, lower division standing.

Supervised independent study or research on topics relevant to Education that are not covered in depth by other courses. Topics to be initiated by students.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EDUC 112 Reforms in Elementary Education: Psychological and Sociocultural Foundations 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture, 1 hour of structured discussion, and 1 hour of group work per week.**Prerequisites:** Background in psychology. Consent of instructor.

The course introduces students to relationships between research on cognitive development and reforms in elementary teaching. The syllabus is organized in modules that link research and classroom practice. For example, in a module on children's mathematics, we analyze research on children's strategies for solving math problems and consider how this research has reformed teaching practices. Students complete a project for each module that links research and observations in elementary classrooms through concurrent enrollment in one unit of 197.

Final exam required. Instructor: Gearhart

EDUC 114A Early Development and Education 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Fieldwork per week for 15 weeks. 5 hours of Lecture and 5 hours of Discussion per week for 8 weeks.

Theory and research on psychological development from birth through childhood with special attention to relations between developmental theory and educational practice. Directed field observation of developmental phenomena and educational practices.

Final exam required. Instructor: Holloway

EDUC 114D Practicum in Early Development and Education, Children Birth to Age 5 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Fieldwork per week for 15 weeks.**Prerequisites:** 114A recommended.

This course will provide students with an understanding of theories and practices in early care and education, specifically focused on children from infancy to age 5. It will also provide an opportunity for students to apply knowledge and reflect upon experiences teaching in a high-quality environment for young children. Course topics will span infant, toddler, and preschool early care and education programs and the age groups for whom such programs are designed. Special attention will be given to 1) curriculum approaches and theories in early care and education programs, 2) educational practices related to culturally, linguistically, and economically diverse student populations, and 3) child observation and classroom organization and practices. In addition, the course will cover changing expectations for children and their teachers, programming for children with special needs, teacher relations with children, parents and other staff, peer relationships, managing challenging child behaviors and identifying quality. Field experience will include working with young children in an infant, toddler or preschool quality program on the UC Berkeley campus or in the surrounding area.

Final exam required.

EDUC 130 Knowing and Learning in Mathematics and Science 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Fieldwork per week for 15 weeks.**Prerequisites:** Any one of the following: Undergraduate Interdisciplinary 81A, 81B, 82.

This course offers a sequence of collaborative problem-solving and reflection activities through which students will be able to appreciate and develop a coherent, effective approach to the teaching and learning of any mathematical or scientific conceptual domain. Issues of cognition, culture, and pedagogy will emerge from participants' struggles to explain their own reasoning. In-class problem solving experiences will provide grist for reflection. Extensive readings are discussed in a bSpace forum. Students are placed in, and do course projects in, local classrooms. Course may be repeated for credit when topic changes. Final exam required. Instructor: Abrahamson

EDUC 131 Classroom Interactions in Science and Mathematics: A Focus on Equity and Urban Schools 3 Units

Department: Education

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Education 130.

This course continues the process of preparing students to teach science and mathematics in secondary schools by providing opportunities to evaluate challenges they face in instructional settings. We will explore frameworks for thinking about equity issues in the classroom and beyond school settings, learn strategies for teaching students of diverse backgrounds, and consider how classroom interactions enable students to develop a deep conceptual understanding of the subject matter.

Final exam not required. Instructor: Nasir

EDUC 140AC Literacy: Individual and Societal Development 3 Units

Department: Education

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion and workshops per week. 8 hours of lecture/discussion and workshops per week for 6 weeks.

This course combines theory and practice in the study of literacy and development. It will introduce sociocultural educational theory and research focused especially on literacy teaching and learning, and this literature will be examined in practice through participation in computer-based after-school programs. In addition, the course will contribute to understanding of race, culture, and ethnicity in the United States. We will develop a view of literacy, not as a neutral skill, but as embedded within culture and as depending for its meaning and its practice upon social institutions and conditions.

Satisfies the American Cultures requirement

Final exam required. Instructor: Hull

EDUC N140 Literacy: Individual and Societal Development 4 Units

Department: Education

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 8 hours of lecture/discussion per week for 6 weeks, and 7 hours of fieldwork per week for 6 weeks.

This course combines theory and practice in the study of literacy and development, while simultaneously introducing students to socio-cultural educational theory and research. This research perspicaciously and critically analyzes extant literature on literacy teaching and learning. This literature will be examined in practice through participation in tutoring and technology-oriented summer programs. In addition, this course satisfies the American Cultures requirement and will contribute to understanding of race, cultures, and ethnicity in the United States. We will develop a view of literacy, not as a neutral skill, but as embedded within culture and as depending for its meaning and its practice upon social institutions and conditions. In addition to lecture, students are to participate in field work hours.

Satisfies the American Cultures requirement

Final exam not required. Instructor: Hull

EDUC 142 Education in a Global World 3 Units

Department: Education

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

What is globalization? What are the implications of living in a "global world" for education? How can education be used as a tool to promote global social justice and prosperity? In this course, we will address these and other related questions through collective reading assignments, class discussions, and online collaboration through our learning platform (bSpace or other).

Final exam not required. Instructor: Murphy-Graham

EDUC 143 Introduction to the Teaching of English 3 Units

Department: Education

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 3 hours of Fieldwork per week for 15 weeks.

Prerequisites: Upper division standing or consent of instructor.

Exploration of issues confronting English and English language arts teachers today; curriculum trends and teaching practices; influence or reform efforts since the 1950s on English and language arts curriculum and practice; course assignments to include field work, interviews, reading and reports.

Final exam required. Instructor: Sterling

EDUC C145/GERMAN C106 Literacy through Literature 3 Units

Department: Education; German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Exploration of the role that literature can play in the acquisition of literacy in a first and second language. Linguistic and psycholinguistic issues: orality and literacy, discourse text, schema theory, and reading research. Literary issues: stylistics and critical reading, reader response, structure of narratives. Educational issues: the literary text in the social context of its production and reception by intended and non-intended readers.

Final exam required. Instructor: Kramsch

EDUC 149 Foundations for Teaching Language Arts 2 Units

Department: Education

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 4 hours of Lecture per week for 8 weeks.

Prerequisites: Admission to Developmental Teacher Education program or consent of instructor.

Lectures and workshops on curriculum, instructional theory, and methods for teaching language arts in elementary schools. Incorporates competencies for Reading Instruction Competency Assessment (RICA) and for teaching children whose primary language is not English.

Final exam not required. Instructor: Pearson

EDUC 158 Foundations for Teaching Reading in Grades K-8 2 - 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 6 hours of Lecture and 6 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Admission to a teaching credential program (summer session excluded).

Introduction to reading and writing instruction in elementary school settings, basic literacy skills, instructional methods and approaches, assessment procedures, and reading and writing theories.

Final exam not required. Formerly known as 258A-258B. Instructor: Cunningham

EDUC 160 Foundations for Teaching Social Studies 2 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 10 weeks.**Prerequisites:** Admission to a teaching credential program.

Lectures and workshops on curriculum, instructional theory, and methods for teaching social studies methods in elementary schools.

Final exam not required. Instructor: Perlstein

EDUC 162A Teachers' Work 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course is offered as part of the undergraduate education minor, examines the multiple dimensions of teachers' work by drawing on theories of teacher socialization and teacher professional learning, and exploring representations of teachers in the media and popular culture, as well as in relevant academic literature. Students will be introduced to the current policy, social, cultural, historical, professional, employment and legal context of teachers' professional lives in the United States. Students will have the opportunity to examine these aspects of teachers' work by interacting with teachers in the field.

Final exam required. Instructor: Little

EDUC 180 Logic of Inquiry 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

An analysis of the logical and epistemological foundations of empirical research with the aim of developing a critical and vigorous approach to empirical inquiry, deductive and inductive logic, the structure of scientific theories, justification, falsification, the role of values, prediction and the nature of causality.

Final exam not required.

EDUC C181/AFRICAM C133A Race, Identity, and Culture in Urban Schools 3 Units**Department:** Education; African American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week.

This course will focus on understanding urban schools as a part of a broader system of social stratification and the process by which students in urban schools come to a sense of themselves as students, as members of cultural and racial groups, and as young people in America. Topics include racial identity; race/ethnicity in schools; urban neighborhood contexts; and schooling in the juvenile justice system. Students will also integrate course readings with their own first-hand experience working in one of several off-campus sites. This course has a mandatory community engagement component for which students will earn 1 unit of field study (197) credit.

Final exam not required. Instructor: Suad-Bakari

EDUC 182AC The Politics of Educational Inequality 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course explores the state of U.S. public education, particularly how success within that system varies by race, class, and gender. It explores educational attainment across different groups within the U.S. and then looks at how the structure of educational policymaking affects different types of students. It concludes by investigating the varied impact of different approaches to reform, with an eye toward identifying how best to reduce educational inequality in the United States.

Satisfies the American Cultures requirement

Final exam required. Instructor: Garcia Bedolla

EDUC 183 High School, The Movie 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 3 hours of Discussion per week for 8 weeks.

High school plays a pivotal role in American life. It both serves as a gatekeeper of educational and economic success and embodies hopes of transcending social divisions. Like high school itself, movies about it have fostered youth culture and helped Americans make sense of the intersection of democratic aspirations and social divisions. This course examines how the reality and representation of high schools combine to reflect and define American society and the lives of American youth.

Final exam required. Instructor: Perlstein

EDUC 184 Philosophical Foundations of Education 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Systematic survey of educational thought with emphasis on the epistemological, logical and ethical foundations of the major philosophies of education.

Final exam required.

EDUC 185 Gender and Education: International Perspectives 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.

This course is designed to provide an overview of the major discussions and debates in the area of gender and education, from a global perspective. Examines theoretical understandings of gender, and the intersection of gender, schooling, global poverty, and social justice. Explores strategies to "undo" gender, including the role of international donor agencies, the state, NGOs, popular education, the media, sport, and innovative curricula.

Final exam required. Instructor: Murphy-Graham

EDUC 186AC/ETH STD 159AC/GEOG 159AC The Southern Border 4 Units**Department:** Education; Ethnic Studies; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.**Prerequisites:** Upper division standing.

The southern border--from California to Florida--is the longest physical divide between the First and Third Worlds. This course will examine the border as a distinct landscape where North-South relations take on a specific spatial and cultural dimension, and as a region which has been the testing ground for such issues as free trade, immigration, and ethnic politics.

Satisfies the American Cultures requirement

Final exam required. Instructors: Manz, Shaiken

EDUC 188 Latinas/os and Education: Critical Issues and Perspectives 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

The course engages a selection of themes examining the academic achievement of Latinas/os in K-12 and in higher education. The course aims to foster an awareness of the complex issues influencing the education of Latinas/os and of ways to work towards supporting and advancing the educational experiences of Latinas/os in schools and society.

Final research paper and project.

EDUC 189 Democracy and Education 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Junior standing or consent of instructor.

Education as a vehicle for furthering the ideals of democratic societies--critical study of principles, philosophies, theories, and practices designed to develop understanding, commitment, and skills to empower a citizenry dedicated to achieving equality, justice, and peace in the world.

Final exam required. Instructor: Hurst

EDUC 190 Critical Studies in Education 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week. 6 hours of lecture per week for 6 weeks.

This course examines how learning environments can empower and disempower individuals and explores the role of education in the social construction of hierarchy, inequality, difference, identity, and power. It embodies a democratic philosophy and practice, creating a learning community that encourages students to take responsibility for their own education and learn through theory, experience, and dialogue. They must engage in a community project equivalent to 1 field unit (credit optional). Final Paper and Course Project Instructor: Hull

EDUC 190B Unraveling Education: A Participatory Inquiry 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 190

Course builds upon 190. Through dialogue, students will further explore critical issues and their connections. Students will form small working groups to identify, develop, investigate, and teach a topic of their choice. We will develop and emphasize multiple perspectives.

Final exam required. Instructor: Hurst

EDUC 191B Gender Issues in Education 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.

This course will examine the role of gender in education and the influences on classroom discourse, curriculum, and teaching and learning styles. We will also look at current trends in school reform, how schools and alternative programs address issues of gender bias. This course will provide an opportunity to consider the experiences of students and teachers as "gendered" beings in the educational system.

Final exam required. Instructor: Woody

EDUC C193A/ESPM C193A Environmental Education 3 Units**Department:** Education; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture/discussion and 6 hours of fieldwork per week.

Theory and practice of translating ecological knowledge, environmental issues, and values into educational forms for all age levels and all facets of society, including schools. Concentrated experience in participatory education.

Final exam required. Instructor: Hurst

EDUC 195B Special Topics in the Foundations of Teaching 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Reading and language arts.

Course may be repeated for credit when topic changes. Final exam required.

EDUC 195C Special Topics in the Foundations of Teaching 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Mathematics and science.

Course may be repeated for credit when topic changes. Final exam required.

EDUC 197 Field Studies 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Fieldwork per week for 15 weeks. 1 to 4 hour of Fieldwork per week for 8 weeks. 1 to 5 hour of Fieldwork per week for 6 weeks.**Prerequisites:** Consent of instructor.

University organized and supervised field programs involving experiences in schools and school-related activities.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC S197 Field Studies 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Field study.**Prerequisites:** Consent of instructor.

University organized and supervised field programs involving experiences in schools and school-related activities.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 198 Directed Group Study 1 - 3 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 3 hour of Directed group study per week for 15 weeks. 1.5 to 4.5 hours of Directed group study per week for 10 weeks. 2 to 6 hours of Directed group study per week for 8 weeks. 2.5 to 7.5 hours of Directed group study per week for 6 weeks.**Prerequisites:** Consent of instructor, upper division standing.

Group discussion, research, and reporting on selected topics. Student initiation in choice of subjects is solicited and welcomed.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EDUC 199 Supervised Independent Study and Research for Undergraduates 1 - 4 Units**Department:** Education**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Independent study.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EDUC 200A Cognitive Development 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Development of cognition from birth to maturity. Piagetian and information processing theories and research. Vygotsky's theory. Primary emphasis on normal human development; secondary emphasis on atypical and animal cognition. Infant perception and cognition, early childhood competencies, memory and problem solving in middle childhood and adolescence. Cognitive underpinnings of academic skills. Relations between cognitive development and children's home and school environments.

Final exam not required.

EDUC 200B Social Development 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

An examination of theory and research on social development from childhood to early adulthood. Review of different theoretical orientations to social cognition, morality, psychosexual development, and the role of social-environmental factors.

Final exam not required. Instructor: Turiel

EDUC 200C Culture and Cognitive Development 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 200A and consent of instructor.

This course explores advanced topic in Piaget's and Vygotsky's frameworks for the analysis of cognition development. Of particular concern is the representation of cultural processes in each treatment. Reading will include primary sources from these authors and contemporary writers who extend and critique the treatment of culture in each.

Final exam not required. Instructor: Saxe

EDUC 200D Psychosocial Development: Identity, Culture, and Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One course in statistics.

This course is a doctoral seminar in developmental psychology, with a broad focus on psychosocial development and its impact on children in educational contexts. The course begins with a discussion of Erikson's psychosocial theory and the sociocultural perspectives of Vygotsky and other theorists. We then review some of the major psychosocial variables related to educational achievement, including competence, motivation, self-concept, self-efficacy, self-regulation, and volition. We touch briefly on moral development and values as psychosocial factors affecting correlates. We examine (a) how social and personal identity factors are used to explain underachievement (e.g., cultural ecological theory and stereotype threat), (b) the role of identity in different cultural groups, (c) the impact of these factors on teacher and student behavior, and (d) the role that identity plays in helping students develop a sense of future.

Final exam not required. Instructor: Worrell

EDUC 201A Psychology of Reading 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Comparison and analysis of the psychological and linguistic evidence underlying whole language and skills methods of reading instruction. Topics include reading readiness, emergent literacy, the English spelling system and decoding, vocabulary development, models of reading, individual differences, and comprehension and schema theory.

Final exam not required. Instructor: Cunningham

EDUC 201B Seminars in Intellectual Development 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Relevant courses from the 200 sequence and consent of instructor.

Intensive examination of advanced topics, which will vary from year to year in the areas denoted by the titles of the following sections: # (1) Cognitive Development # (2) Learning and Memory Development # (3) Language.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cunningham or Gearhart

EDUC 202D Seminars in Social and Personality Development 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Relevant courses from the 200 sequence and consent of instructor.

Intensive examination of advanced topics, which will vary from year to year (1) Social Development # (2) Motivation # (3) Personality Development.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Turiel

EDUC 204C Research Seminars: Inquiry in Educational Psychology 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

The doctoral program in Educational Psychology requires that students complete extensive projects of documentary and empirical research. As they engage in these projects, students will enroll (ordinarily during alternate years) in appropriate sections of this seminar. At each meeting, participants will present their own projects, and analyze those presented by others.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Worrell

EDUC 205 Instruction and Development 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** consent of instructor.

An examination of cognitive developmental approaches to instruction. Review of different theoretical orientations to learning and memory, metacognition, emergent literacy, reading, writing, mathematics, science, computer literacy, motivation, self regulated learning, and classroom organization.

Final exam not required. Instructor: Metz

EDUC 207B Individual Appraisal of Intelligence 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Consent of instructor.

Theories of intelligence as applied to the assessment of intelligence, measurement concepts applied to intelligence tests, development, administration and interpretation of the WISC-R, Stanford-Binet, and other issues pertaining to intelligence testing. Current controversial issues in testing, including issues pertaining to test bias and legal aspects of testing.

Final exam not required.

EDUC 207C Diagnosis of Human Handicaps 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 6 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Consent of instructor.

Reviews current criteria for eligibility for programs for the handicapped and evaluates available procedures for making diagnostic decisions. Special topics may include diagnosis of learning disabilities, mental retardation, neurological handicaps, emotional and behavioral disorders.

Final exam not required.

EDUC 207D Assessment and Education of Exceptional Pupils in Regular Classes 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week for 8 weeks.

Methods for assessment of handicapped children and implication for their education in regular classes. Such topics as nondiscriminating testing, least restrictive environments, alternative programs, parent communication, interpersonal relationships, characteristics, behavior of exceptional pupils are covered in studies of individual exceptional children in regular classes.

Final exam not required.

EDUC 211A Development, Learning, and Instruction in Cultural Contexts 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to Developmental Teacher Education program or consent of instructor.

Introduction to theories of human development and their application to elementary and preschool education. Topics include cognitive development, moral and social development, language acquisition, psycho-social perspectives on social-emotional development and a developmental analysis of classroom organization. Also supervised child study, individual and small group tutoring, and field experiences.

Final exam not required. Instructor: Gearhart

EDUC 211B Social and Emotional Development 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5 hours of Lecture per week for 8 weeks.**Prerequisites:** Admission to Developmental Teacher Education program or consent of instructor.

Introduction to theories of human development and their application to elementary and preschool education. Topics include cognitive development, moral and social development, language acquisition, psycho-social perspectives on social-emotional development and a developmental analysis of classroom organization. Also supervised child study, individual and small group tutoring, and field experiences.

Final exam not required. Instructor: Gearhart

EDUC 211C Advanced Human Development and Education 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture/discussion and 3 hours of fieldwork per week.**Prerequisites:** Admission to Developmental Teacher Education Program or consent of instructor.

Advanced principles of human development and their application to teaching and learning school subjects. Also supervised child study, individual and small group tutoring, field experiences.

Final exam not required. Instructor: Saxe

EDUC 211D Advanced Human Development and Education 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of lecture/discussion and 3 hours of fieldwork per week.**Prerequisites:** Admission to Developmental Teacher Education Program or consent of instructor.

Advanced principles of human development and their application to teaching and learning school subjects. Also supervised child study, individual and small group tutoring, field experiences.

Final exam not required. Instructor: Saxe

EDUC 212 Adolescent Development and the Teaching of Secondary English 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Enrollment in the Multicultural Urban Secondary English Teaching Credential Program.

This graduate seminar relates the goals of secondary English teaching to three major themes in the study of adolescent development: rationality, morality, and identity. These themes are then explored with reference to urban youth, along with other themes emerging from research in urban settings. The theme of identity is pursued further through a consideration of adolescents' "self-theories" and their motivational consequences. Students write papers on related topics for a class anthology.

EDUC 213A Theoretical and Scientific Bases for School Psychology, Part I: Childhood 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Fieldwork per week for 15 weeks.

Historical and contemporary overview of the professional specialty of school psychology. Examines the empirical evidence for developmental and learning models in relation to the school curriculum and school organization for birth through pre-adolescence.

Final exam not required. Instructor: Perry

EDUC 213B Theoretical and Scientific Bases for School Psychology, Part II: Adolescence 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Fieldwork per week for 15 weeks.

Historical and contemporary overview of the professional specialty of school psychology. Examines the empirical evidence for developmental and learning models in relation to the school curriculum and school organization for birth through pre-adolescence.

Final exam not required. Instructor: Donohue

EDUC 213C School-Based Consultation 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Theories of consultation, consultation methods, and research on consultation applicable to primary and secondary prevention of school failure and school psychology practice.

Final exam not required. Instructor: Worrell

EDUC 213D Educational Interventions for the School Psychologist 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Theories and procedures for individual and group assessment of children's learning and behavior problems as applied to the design of individual and group programs in the classroom.

Final exam not required.

EDUC 213L Laboratory for School Psychology 1 Unit**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Discussion and 6 hours of Fieldwork per week for 15 weeks.

Laboratory section to evaluate field work records and for supervision of school assignment. Must be taken concurrently with 213A-213B-213C-213D.

Final exam not required.

EDUC 214 Human Development and Education Seminar 1 Unit**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing and consent of instructor.

Reports and discussion of original research in the area of human development and education. Not all participants are required to report in any given semester, but all are expected to attend and to enter into the discussions. Strongly recommended for all students in the graduate program in human development and education.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Holloway

EDUC 215 Socialization Processes Within the Family 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course provides an overview of theoretical perspectives on family socialization. We review the literature on parental beliefs and child-rearing practices and study how families affect children's social development. We also examine families in the context of culture and social class. The course concludes by focusing on the relationship between families and schools. Course requirements: class participation, three short papers, reaction notebook.

Final exam not required. Instructor: Holloway

EDUC 221A Towards Ambitious Instruction in Mathematics: Research Into Practice 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

In this course, students learn to turn mathematics education research into practice through the vehicle of lesson design. Students work in collaborative teams consisting of one beginning mathematics teacher in a teaching credential program and one or more doctoral student researchers. Together each team is responsible for designing, justifying, implementing, researching, and re-designing a lesson that seeks to embody one key aspect of the teacher's vision of effective mathematics instruction.

Final exam not required. Instructor: Engle

EDUC 221C Scientific Cognition: Development, Learning, and Instructional Design 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Examination of the relation between development, learning, and instruction of scientific cognition, from the perspective of the cognitive developmental and cognition and instruction research literatures.

The course project takes the form of the design, implementation and microgenetic analysis of a short-term educational design experiment. Emphasis on K-8.

Final exam not required. Instructor: Metz

EDUC 223B Special Problems in Mathematics, Science and Technology Education 2 - 6 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 6 hours of lecture/discussion per week.

Study of special problems and issues in education related to mathematics, science and technology. Sections may vary from semester to semester. Consent of instructor required. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 224A Mathematical Thinking and Problem Solving 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores contemporary research on mathematical cognition, with a particular emphasis on "higher order thinking skills" and mathematical problem solving. We discuss various frameworks for characterizing mathematical behavior and various methodologies for examining it. As an "action oriented" course in the EMST curricular sequence, this course includes a major course project. In their project, students engage in research incorporating the main ideas studied in the course.

Final exam not required. Instructor: Schoenfeld

EDUC 224B Paradigmatic Didactical Mathematical Problematic Situations 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar per week.

Paradigmatic Didactical Mathematical Problematic Situations are contexts for collaborative inquiry into the practice, epistemology, and pedagogy of mathematics. Building on the Learning Sciences literature, the course creates opportunities for students to engage in interesting mathematical problems from secondary-school content. Final projects include design, implementation, and analysis of a lesson. Meets the "Discipline" programmatic requirement of graduate students in EMST and MACSME.

Final exam not required. Instructor: Abrahamson

EDUC 224C Gender, Mathematics and Science 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The course explores commonly asked questions concerning gender, mathematics, and science. We will discuss whether these are appropriate questions and examine evidence related to the questions. This course will also consider whether policies and practices concerning gender, mathematics, and science should be changed and, if so, identify some of the steps that could be taken to improve the current situation.

Final exam required. Instructor: Linn

EDUC 224D Survey of Current Research and Issues in Mathematics Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course builds foundational knowledge of important contemporary issues and research in mathematics education. The seminar is designed around readings, discussion, and course activities aimed at developing a comprehensive grounding in the literature on current research and innovations in mathematics education as well as historical debates surrounding student achievement, curriculum, teaching practice, and teacher preparation.

Final exam not required. Instructor: Suad-Bakari

EDUC 226 Constructive Epistemology 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Many approaches to education take the knowledge to be taught as fixed, and the manipulable objects to be things like methods. By focusing on knowledge per se: what is it; how is it organized and encoded in humans, we are led to questions about what should be taught, based on principles of learnability, etc., rather than just "effective methods." This tactic is valuable in view of the radical changes information technology may have on what we need to teach and what general areas are teachable.

Final exam not required. Instructor: diSessa

EDUC 228A Qualitative Methodology 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The course will be organized by principal activities: group readings, book reports, expert and novice methodology presentations, in-class research and analysis, and student research. For each activity, we will look at the full breadth of methodology, from "how-to" methods and specific areas of concern to general questions including: what constitutes objective data, what are strengths and weaknesses of methods in regard to various issues, and what are the relations between theory and data?.

Final exam not required. Instructors: Metz, Saxe

EDUC C229A/PSYCH C223 Proseminar: Problem Solving and Understanding 3 Units**Department:** Education; Psychology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Students will examine problem solving in children and adults, from a predominantly cognitive science perspective, beginning with an examination of thinking involved in diverse problem types. Students will then analyze the literature concerning cognitive issues that transcend problem types, including representation, "understanding," access and availability of knowledge, access to one's own cognitive processing, categorization, the architecture of knowledge, and the control of cognition.

Final exam not required.

EDUC 229D Discourse and Learning in Math and Science Classrooms 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing, or advanced major in Linguistics, Cognitive Science, or related field with consent of instructor.

This seminar is an introduction to research on how language and other forms of communication influence what and how people learn. Students are introduced to influential theories of discourse from sociolinguistics, psycholinguistics, and the philosophy of language and learn about how they have been used to understand learning, especially in math and science classrooms. Students take turns helping lead discussion and complete a project relevant to the topic and their own research interests. Final exam not required. Instructor: Engle

EDUC 229F Conceptual Change 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

"Conceptual change" concerns broad and deep changes in a person's knowledge about a domain. This opposes it, for example, to the learning of facts and skill acquisition. The course emphasizes recent cognitive science-oriented approaches to: defining "broad and deep" learning; understanding its properties. It draws on diverse other approaches including developmental psychology; analogies to the history of science; "misconceptions;" computational and epistemological approaches. Final exam not required. Instructor: di Sessa

EDUC 231 Introduction to Secondary School 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to a credential program.

Seminars, lectures, workshops to meet requirements for the single subject credential. Subject areas include educational psychology; instructional strategies; learning processes; and secondary school mathematics, science, and technology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 235 Elementary Teaching in Mathematics and Science 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to Developmental Teacher Education Program or consent of instructor.

Curriculum, instructional theory, and methods for teaching mathematics and science in elementary schools.

Final exam not required.

EDUC 236A Science Education for Elementary School Children 2 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks.**Prerequisites:** Admission to Developmental Teacher Education program.

This course examines how to effectively teach science to elementary school children through analyses of what it means to think scientifically, the goals of science instruction, the nature of children's scientific reasoning and its relation to instructional opportunities, critical study and revision of different curricula, and examination of excellent instruction. Final exam not required. Instructor: Metz

EDUC 236B Elementary Teaching in Mathematics 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** 211A, 236A, and 390C.

This course is designed to strengthen methods for students' mathematical development. Students will gain facility with methods that support the learning of children with diverse instructional needs. The course emphasizes an inquiry-based approach that includes the use of rich problems, appropriate tools and representations, various discourse formats, and ongoing assessment.

Final exam not required. Instructor: Gearhart

EDUC 240A Language Study for Educators 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

This course will introduce students to the broad areas of language study and explore the implications of such study for teaching and learning. Among course topics are: the nature of language, the meanings of "grammar," the varieties of English, the development of language in the preschool and school years. This course will be required for all Ed.D. students and recommended as an introductory course to all students who have had no formal coursework in linguistics.

Final exam not required. Instructor: Baquedano-Lopez

EDUC 240B Theoretical Issues in the Study of Literacy 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Students will review trends in literacy theory, and then will examine current theories of written language acquisition and literacy learning. Connections will be made between research, theory, and practice.

Final exam not required. Formerly known as 242. Instructors: Hull, Mahiri

EDUC 240C Issues in First and Second Language Acquisition 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Course in linguistics or language acquisition.

This course deals with issues related to language learning and development in school-age children. How do they acquire the language skills needed for literacy and academic development? How do children make the transition from home to school language use? How do children learn a second language? What happens when learning a second language results in the loss of the first language? We will consider the educational, social and cognitive implications of these issues.

Final exam not required. Formerly known as 254C.

EDUC 240D Foundations of Curriculum Theory in the United States: A Survey 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores the development of curriculum theory and the role of the curriculum specialist in the United States since the Progressive Period. Emphasizing a survey of classic texts and key figures, the course covers the development of three schools of thought: social efficiency approaches, child-centered approaches, and social reconstructionist approaches. It concludes with a study of curriculum theory since the Reconceptualists.

Final exam not required.

EDUC 241B Language Socialization 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Throughout the lifespan we are socialized through language to become competent participants and members of various groups and communities, including schooling institutions. For the past 20 years, this theory and method for analyzing human development has made important contribution to our understanding of how we learn to become competent members of community, how we learn through language, and how we are socialized into language. This course will provide opportunities to overview the theoretical cornerstones of language socialization as a field of study, as well as review current studies and chart future research trajectories. Course participants are expected to collect and analyze audio/video data from any educational and other learning context where language socialization might be taking place.

Final exam not required. Instructor: Baquedano-Lopez

EDUC 241C Narrative across Learning Contexts 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The study of narrative has solidified into an important body of literature that is of particular relevance to educators. Across learning contexts, narrative is a ubiquitous literacy tool, and as such, it underlies many learning activities. We tell narratives for their potency to explain, rationalize, and delineate past, present, and possible experience. This narrative act is a collaborative undertaking, co-told and designed with the audience's input, addressing an audience's present and future concerns. Narrative can thus potentially create shared understandings and community among those participating in narrative activity, yet narratives can become sites for rejection and contestation. Narrative is also a socializing tool. The course will also address methodological approaches to the study of narrative that are relevant to the field of education. Students enrolled in this course are expected to collect narrative samples from naturally occurring interactions (video and audio-taped conversation, classroom interaction), written narrative texts, or other.

Final exam not required. Instructor: Baquedano-Lopez

EDUC 241D Perspectives on Classroom Discourse 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 2 hours of Discussion per week for 15 weeks.

This course is designed to provide opportunities for students to observe and analyze classroom talk and interaction, and the language of classroom material and ideological artifacts. In this course we will survey the classic literature on classroom discourse and we explore new orientations to the study of classroom talk. We will draw from literature from interrelated disciplinary perspectives that include linguistics, language socialization, linguistic anthropology, conversation analysis, ethnomethodology, and the ethnography of speaking.

Final exam not required. Instructor: Baquedano-Lopez or Sterponi

EDUC 241E Design, Practice, and Policy in Educational Settings for English Language Learners 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.**Prerequisites:** Good standing in LEEP.

We will examine the instructional design, practice, and policies that shape educational contexts for English Language Learners (ELLs) in urban schools. The topics address the relationship between language policy, immigration, language development, and the intersections of race and ethnicity. The course will also survey key research on language use, bilingualism, and second language acquisition and how the findings of this research are reflected on educational practices and policies.

Final exam not required. Instructor: Baquedano-Lopez

EDUC 244B Methods for Teaching English in the Secondary Schools 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Enrollment in CLAD/Secondary Schools credential program.

This methods course introduces the teaching of secondary English. It focuses on theories for grounding classroom decisions and connects theory and practice. The course models effective approaches to teaching English and introduces issues in constructing a secondary English curriculum. Students gain a foundation for developing plans for lessons and units of instruction as well as a sense of how to build academic communities of diverse learners, including non-native speakers of English. Final exam not required. Instructors: Freedman, Cziko

EDUC 244C Methods for Teaching English in the Secondary Schools 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Enrollment in CLAD/Single Subject English Credential Program and 244B.

The second semester of the methods course is designed to continue introducing the teaching of English, with a focus on strategies grounded in an understanding of theories of teaching and learning. Besides considering the English curriculum in general, the course focuses special attention on several topics, such as second language learners and the uses of technology in the English classroom. It also explores the uses of portfolios for tracking student learning and for assessing teachers' growth. By the end of the term, students will have a repertoire of theoretically grounded strategies to use to meet the learning needs of diverse student populations.

Final exam not required. Instructors: Freedman, Cziko

EDUC 245A Approaches in Teaching English as a Second Language 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week plus field work assignment. 7.5 hours of lecture per week for 6 weeks plus fieldwork assignment. 6 hours of lecture per week for 8 weeks plus field work assignment.**Prerequisites:** Applied linguistics course or a course in second language acquisition.

This course is primarily concerned with methods of teaching English as a second language (ESL) to K-12 students and adults. Traditional methods emphasizing the development of structural knowledge, and new methods focused on the development of communications skills, will be examined. Topics include teaching English through content instruction, "structured English immersion," syllabus and curriculum design, second language reading, and language testing for placement and evaluation.

Final exam not required. Formerly known as 243B.

EDUC 246A Teaching Linguistic and Cultural Minority Students 1 - 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture/discussion per week depending on unit value.**Prerequisites:** Admission in a teaching credential program.

The objective of this course is to prepare teachers to work with linguistic minority students. We will consider ways in which different groups socialize children for learning and ways in which learning patterns acquired in the home can conflict with the culture of school. Student teachers will consider instructional approaches for working with linguistically and culturally diverse students in their classrooms. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 247C New Literacies of Digital Youth 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course explores new practices of literacy by contemporary youth enabled by digital technologies in places beyond schools. It also assesses how these practices work to enhance or impede literacy and social development in schools. It develops a New Literacy Studies conceptual framework and an ethnography of communications methodological framework for students to understand and analyze these new literacy practices.

Final exam not required. Instructor: Mahiri

EDUC 249A Strategies for Teaching Students with Reading/Language Arts Difficulties 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture and 8 hours of Fieldwork per week for 6 weeks.

249A is closely related to and dependent upon 249B. 249A examines the development of curricula in reading and the language arts that addresses the strengths and weaknesses determined in the assessment process developed in 249B. Emphases include: formal and informal assessment procedures in reading for majority/minority populations, diagnostic teaching (including issues of cultural diversity,) individual and group instructional strategies for scaffolding learning, including cooperative learning/interactivae strategies, and thematic instruction, content area reading strategies, and parent involvement. The class explores theoretical models of language acquisition and models of bilingual education.

Final exam not required. Formerly known as 246.

EDUC 249B Evaluation and Assessment in Reading and Literacy Instruction 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of Lecture per week for 6 weeks.

Explores both formal (e.g., standardized measures) and informal (e.g., reading inventories, portfolios) measures of assessing reading and writing ability. The course is designed to familiarize students with the most widely used reading measures, to develop competency in administering and interpreting these measures, and to develop an understanding of current issues in the assessment of reading comprehension. Students will explore the issues of cultural bias in testing, the organization and display of student knowledge in different formats, and expectations for the achievement of cultural and linguistic minority students.

Final exam not required. Formerly known as 257.

EDUC 249C Foundations in Reading (Learning from Text) for Secondary Schools 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Fieldwork per week for 15 weeks. 6 hours of Lecture and 2 hours of Fieldwork per week for 8 weeks. 8 hours of Lecture and 3 hours of Fieldwork per week for 6 weeks. Introduction to reading and writing in secondary school settings, basic literacy skills, instructional materials and approaches, and assessment procedures appropriate for use in secondary content area courses. Learning from text theory to practice.

Final exam not required.

EDUC 250A Qualitative Research in Language/Literacy Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 241A (formerly 244B) or 240A (formerly 245B); or consent of instructor.

Focuses on students' and teachers' use of language from interrelated perspectives, particularly developmental, sociolinguistic, and ethnographic. Designed to provide students with a view of the classroom as a unique setting whose aims are fostered or rendered problematic by the nature of language use. Students conduct small-scale studies in classroom settings.

Final exam not required. Formerly known as 256B. Instructor: Baquedano-Lopez

EDUC 250B Second Language Acquisition: Concepts and Theories 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Psycholinguistic theory and research on the acquisition of second languages by learners at secondary and post-secondary institutions. How do adults learn languages other than their own in instructional settings? What skills can they transfer from their native languages, and literacy in L1 transfer to the way the L2 is used in its spoken and written forms? Exploration of various hypotheses and theories that consider language learning from a linguistic, cognitive and discourse perspective. Topics include: interlanguage hypothesis, input, transfer and variation in second language acquisition, interlanguage strategies, affective and cultural variable, schema theory, speech act and discourse theory, and cross-cultural pragmatics.

Final exam not required. Formerly known as 253A. Instructor: Kramsch

EDUC 250C Discourse Analysis 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Examination of the major linguistic, psycho- and sociolinguistic concepts and theories of discourse and their application to the analysis of spoken and written texts in education. Topics include: coherence and cohesion, deixis, speech acts, genres, systematics of conversation and ritual constraints, scripts and frames, information structure, narrative structure. Final exam not required. Instructor: Kramsch

EDUC 250D Language and Identity 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Relationship between language as social practice and the construction of individual and collective identity, and its significance in educational contexts. Topics covered include language as embodied practice, language and subjectivity, pedagogy and symbolic control, language learning as mediated action and as the social symbolic construction of identity, writing and textual identity, authorship and voice, language learning memoirs as acts of identity, the politics of recognition, linguistic human rights.

Final exam not required. Instructor: Kramsch

EDUC 250E Multilingualism 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Many people today grow up, live and work in different languages and cultures. How do they experience the superdiversity of today's world?

This course gives a multidisciplinary overview of individual and societal multilingualism with particular focus on: language standardization, linguistic diversity and hybridity, language rights and ideologies, the challenges presented by heteroglossia, multimodality, multiliteracy and the multilingual identity of the multilingual individual.

Final exam not required. Instructor: Kramersch

EDUC 252A Reading Research: Sociocognitive Perspective 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

An examination of selected topics on reading research including historical aspects of reading research, word recognition, reading comprehension, the relationship between decoding and comprehension, attitudes toward reading, and models of the reading process.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 251.

Instructor: Cunningham

EDUC 252B The Ethnography of Reading 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course approaches reading as a socio-cultural activity and considers recent ethnographic work on reading practices in different educational settings, communities, and historical epochs. By considering how reading is differently conceived and realized in a wide range of contexts, this course will shed light on reading as a historically contingent, ideologically shaped, and socio-culturally organized practice. More specifically, this course has a twofold aim: 1) to introduce students to recent ethnographic research on reading practices; 2) to familiarize them with ethnographic methodology. To this scope, in addition to reading exemplary studies of reading practices, students will also conduct a small-scale ethnographic research project in settings of their choice.

Final exam not required. Instructor: Sterponi

EDUC 253A Research in Writing 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 240B (formerly 242) or consent of instructor.

Critical examination of major theories and approaches to research in writing. Preparation for designing and conducting research projects on the written language.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 252.

Instructor: Freedman

EDUC 257 Theoretical Foundations for the Cultural Study of Sport in Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The cultural study of sport examines the ways in which institutionalized physical activity embodies and reflects social meanings and identities.

The social practice of sport provides a space in which dominant discourses of race, gender, and social class are reproduced and resisted.

As these physical activities become institutionalized, commercialized, and embedded within educational institutions themselves, individuals must navigate a nuanced and often conflicted terrain in their respective participation and performance. This course, then, examines the role of sport in society broadly and the relationship of sport and education more specifically. The curriculum reviews the writing and research on sport and education from a sociological, psychological, and philosophical perspective, with a particular focus on the constructed divide of mind and body, as manifested in the institutional conflicts between school and sport. Final exam not required. Instructor: Van Rhee

EDUC 258 Academic Support Services for Student Athletes 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The increased institutionalization and regulation of intercollegiate athletics have created a new and specialized career field composed of counselors, academic advisers, learning specialists, tutors, and technological and administrative support staff. This course will investigate the historical, philosophical, and ethical foundation of these services, focusing in particular on the analysis of an academic advising and tutorial program for student athletes.

Final exam not required. Instructor: Van Rhee

EDUC 260A Issues in Educational Administration and Policy 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

(Required of all students in the Division of Educational Administration and Evaluation.) Concepts, theories, and issues related to administration and evaluation. Application is made to governmental policy for school systems.

Final exam not required. Instructor: Fuller

EDUC 260C Issues in Urban Educational Leadership I 1 Unit**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Seminar per week for 6 weeks.

This course gives candidates an opportunity to pull together the four concentration areas of the master's program: Teaching and Learning (TI), Educational Organizational Leadership and Management (EOLM), Education Change and Reform (ECR), and Issues in Urban Education (IUE). Graduate candidates will deepen their inquiry through the use of problem-solving and reflection as they apply the theory of course work to the daily reality of becoming leaders in schools.

Final exam not required. Instructor: Treadway

EDUC 260D Issues in Urban Educational Leadership 1 Unit**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Seminar per week for 6 weeks.**Prerequisites:** Admission to the Principal Leadership Program.

This course will provide students the opportunity to make connections between theory and practice as candidates look forward to positions as site-based leaders.

Final exam not required. Instructor: Tredway

EDUC 260E Good Schools for All Children 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The course brings together three bodies of knowledge, developed by people who often work quite separately in the academy: philosophical discourses on the aims of education; research on effective schools and instruction; socio-cultural critiques of schooling inequities. Our quest in this course is to derive from these bodies of theory a conceptualization of the good school around the aims of performance, understanding, and justice.

Final exam not required. Instructor: Mintrop

EDUC 261A Organization Theory in Education and Other Social Services 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Concepts of power, authority, legitimacy, professions, controls, incentives, etc., as they apply to education or other social services.

Final exam not required. Instructor: Fuller

EDUC 262A Urban School Leadership and Management 1 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture per week for 6 weeks.**Prerequisites:** Admission to the Principal Leadership Institute Program.

The purpose of this course is to ground aspiring urban leaders in the essential ideas and values that guide their work in schools and their studies in the Principal Leadership Institute. It provides opportunities for future school leaders to deepen their notions of what socially just schools look like, and why; to analyze the challenges to creating socially just schools in urban centers; and to imagine the possible actions that leaders can take to promote such schools.

Final exam not required. Instructor: Trujillo

EDUC 262B School Supervision: Theory and Practice 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Concepts and practices associated with the analysis of teaching and clinical supervision of teachers in urban systems. The role of the urban school leader in supervising teachers.

Final exam not required. Instructor: Tredway

EDUC 262C Personnel Administration in School Systems and Social Organizations 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Concepts and practices related to the administration of personnel services in urban school systems and social organizations.

Final exam not required. Instructor: Tredway

EDUC 262D Research Group on the Working Lives of Teachers 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Research group for graduate students specializing in research on teachers' work and organizational and policy contexts of teaching. Complements but does not substitute for foundational course work in research methods or substantive areas of specialization. Strengthens preparation for research through (a) consultation and feedback on research design, data collection, analysis, and writing; and (b) reading and discussion on selected topics related to teachers' work. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Little

EDUC 262F Organizational Policy and Teachers' Work 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Students will examine the ways in which state, district, and workplace policy bears upon various aspects of teachers' work. Special emphasis is given to the way in which policy choices--at whatever level--shape the experience of teaching and the organization of schooling. Among the policy areas considered are those governing membership in the teaching occupation, teaching assignments, classroom autonomy regarding curriculum and instruction, performance evaluation, and opportunities for professional development. This course is a requirement for students in educational administration and those students completing the Professional Administration Services Credential. It is open to all other interested students.

Final exam not required. Instructor: Little

EDUC 262G Research on the Education of Teachers 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The course focuses on research on the education of prospective and practicing teachers, and on the institutional, organizational and policy contexts in which that research has been pursued. It is designed for students who are interested in doing research in this field or in becoming teacher educators, and is built on several organizing questions. What is the work (and workplace) for which teachers are being prepared? What is the occupational conception of teaching that underpins practice, policy, and research? What is the significance of teacher education's fluctuating fortunes and shifting institutional forms? What is the field's capacity for research on teacher education? By comparison with research on teaching and learning, research on the education of teachers has been under-developed both conceptually and methodologically. Throughout the course, we will be judging the accomplishments and limitations of this field of practice and study, and locating opportunities for future research and development.

Final exam not required. Instructor: Little

EDUC 262H Urban School Leadership and Management 2 2 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

The purpose of this course is to build on the essential ideas and values discussed in EDUC 262A: Urban School Leadership and Management I by focusing on effective teaching. This instructional vision guides the work of leaders in schools. It provides opportunities for future school leaders to deepen their notions of what socially just schools look like, and why; to analyze the challenges to creating socially just schools in urban centers; and to imagine the possible actions that leaders can take to promote such schools. The course will be framed by one major question. Goals have been listed under each question.

Students will receive no credit for Education 262H after taking Education 262A. Final exam not required. Instructor: Cheung

EDUC 263A Legal Issues in Educational Practice 1 - 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week. 5 weeks per unit.

Legal structures and practices in Education for teachers and counselors. Teacher, pupil, counselor rights and responsibilities.

Final exam not required.

EDUC 263B Legal and Policy Issues in Urban Educational Leadership 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Admission to the Principal Leadership Institute Program.

This course will explore the statutory and judicial constraints upon local decision making as well as the areas in which site decision making is permitted and required.

Final exam not required.

EDUC 265A Economics of Education and Other Social Services 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour conference per week. Topics to be considered include the following: alternative methods of assessing the contribution of education to economic growth, demand for education services, education production functions, cost analysis and sectorial planning, economic aspects of innovation.

Final exam not required. Instructor: Grubb

EDUC C265C/AFRICAM C265 Research Advances in Race, Diversity, and Educational Policy 3 Units**Department:** Education; African American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This introductory graduate seminar will engage the research literature on race, diversity, and educational policy to provide a foundation for examining contemporary issues in American public schooling. We will examine research on race, culture, and learning alongside more policy driven research on school structures, governance, finance, politics, and policy. In doing so, we will blend micro level examinations of teaching and learning with macro level considerations of politics and policy.

Final exam not required. Instructors: Nasir, Perry, Scott, J.

EDUC 266B School Site Finance and Resources 1 1 Unit**Department:** Education**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture per week.**Prerequisites:** Admission to the Principal Leadership Institute Program.

The purpose of this course is to ground aspiring urban school leaders in the essential concepts, skills, and demands related to managing school finance and resources at the site level. Specifically, it will focus on resource allocations and concepts of equity with resources allocations. Final exam not required. Instructor: Cheung

EDUC 269B Citizenship, Democracy, and Education Research Group 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Research group for graduate students whose work focuses on the role of schools in impeding or promoting social, economic, cultural, and political democracy. Provides extensive feedback on all phases of research and its application to the democratization of education. Topics range depend on students' interests and range from curriculum and pedagogy to the evolution of social movements for racial justice in education.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Perlstein

EDUC 270B BEAR Center Seminar 2 or 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar and 1 hour of Discussion per week for 15 weeks.

This seminar constitutes one of the ways in which the Berkeley Evaluation and Assessment Research (BEAR) Center fulfills its role of supporting student research. The topic of the seminar will change from semester to semester, following themes chosen by the instructor and the participants. The seminar is an opportunity for students and faculty to present their recent and ongoing work for in-depth review and commentary. In addition, visitors to the campus with expertise relevant to the topic(s) under examination will be invited to present at the seminar and join in the discussion. Students taking this course for two units will make a presentation of a current research interest to the seminar. Students taking this course for three units will also be required to attend a one-hour discussion following each presentation and will write a critique of one other student's presentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Wilson

EDUC 271B Introduction to Qualitative Research Methods 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Introduces principles and methods commonly associated with qualitative field research in the social sciences. Includes assigned readings on basic methodological topics; structured activities related to research design, research ethics and human subjects protection, data collection, data organization and reduction, data analysis; and field research experience through individual or team projects. Course satisfies the qualitative methods requirement for students in the Policy, Organization, Measurement, and Evaluation (POME) program.

Final exam not required. Formerly known as 288B. Instructor: Little

EDUC 271E Issues in Teaching and Learning for Educational Leaders I 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** Admission to the Principal Leadership Institute.

This course explores the educational contexts and experiences of teachers and students in urban schools. The topics that we will cover include issues of race and privilege, the relationship between good teaching and learning in the context of immigration, desegregation efforts, and educational policies towards linguistic and culturally diverse students. We will discuss the politics of access and inclusion, in particular we will examine issues affecting the performance of language learners.

Final exam not required. Instructor: Cheung

EDUC 271F Issues in Teaching and Learning for Educational Leaders II 2 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture per week for 6 weeks.

Prerequisites: Admission to the Principal Leadership Institute Program. In this course we will build on the topics discussed in EDUC 271E: Issues in Teaching and Learning for Educational Leaders I by exploring the issues of personal identity and vision related to school contexts. To this end, the readings provide theoretical approaches to help you develop and support claims about your personal identity as well as the interplay of personal identity in schools. The assignments are designed to help you develop and refine a personal vision for working in diverse educational settings.

Students will receive no credit for Education 271F after taking Education 271E. Final exam not required. Instructor: Kendall

EDUC 271G Research Methods in Educational Leadership: Qualitative Methods 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Good standing in the LEEP Program.

This course introduces future educational leaders to the world of qualitative research so that they will be able to read qualitative studies intelligently, and learn to design and conduct qualitatively oriented studies themselves. Beginning with an overview of the epistemological assumptions behind different kinds of research, the course will explore various types of qualitative research approaches and the kinds of topics and queries they support. Students will read and critique examples of published research of various kinds, partially chosen for the interests and inputs of course participants. Next, students will investigate topic development, the various methods of collecting and analyzing qualitative data, and writing the report. The class is designed so that students simultaneously read about and discuss qualitative research, and conduct research themselves.

Final exam not required. Instructor: Coburn

EDUC 272B School Data Analysis for Principals 1 - 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Average of 5 hours of lecture per week for 6 weeks. The course focuses on preparing future school leaders for leading school improvement by using statistical analysis, understanding the use of formative assessments, evaluating and using educational research particularly related to instructional materials and best practices, creating an effective PowerPoint presentation, and understanding different types of classroom grading and grade reporting practices. Term assessments include keys to quality assessment audit, best practice case study, research-based instructional materials analysis, educational research presentation, grading policy, and several reflection pieces.

Course may be repeated for a maximum of 3 units. Course may be repeated for a maximum of 3 units. Final exam not required. Instructor: Cheung

EDUC 273B Research Group on Policy Implementation 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

This year-long research and writing group is intended for graduate students who plan to specialize in studying educational policy implementation. In the course, we will investigate what happens from the time a policy is enacted until the policy is actually implemented in classrooms, schools, and districts. The centerpiece of the research group is reviewing and providing feedback to members on their works-in-progress related to policy implementation. The goal is to strengthen participants' preparation for research in this area through a combination of consultation and feedback on specific problems related to conceptualizing and enacting high quality research, including but not limited to the formulation of research questions, theory development, research design, data collection, analysis, writing, and publication. We will supplement this activity by reading research together to help build a shared understanding of the different theoretical perspectives that can potentially inform the study of policy implementation, including institutional theory, social movements analysis, conflict perspectives, and organizational learning theory.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Coburn

EDUC 273C Decision Making Based on Data Evidence 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Good Standing in LEEP.

This course builds on the premise that data evidence is one of the powerful tools that can help us make informed decisions. The course plans to examine and practice effective and thoughtful use of data for educational improvement at all levels of a school district. Main topics include: evaluating policy, programs, and interventions; understanding assessment and key accountability indicators; and becoming a critical consumer of research and evaluation.

Final exam not required. Instructor: Newton

EDUC 273D Decision Making II 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture per week for 8 weeks.**Prerequisites:** Good standing in LEEP; 273C.

This course is about decision making in the real world. It reviews research on how decision making actually unfolds in schools and school districts and the range of factors that shape it. We begin with cognitive factors, move on to investigate social and organizational factors, and then investigate political factors that influence decision making.

Final exam not required. Instructor: Coburn

EDUC 274A Measurement in Education and the Social Sciences I 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

Students will learn good measurement practice by constructing an instrument and investigating its measurement properties (specifically, validity, and reliability). The act of measuring will be positioned as a link between qualitative observations and quantitative measures, and this will be discussed in a variety of contexts, such as interviewing, standardized testing, and performance assessment. We will discuss both classical and modern testing approaches from conceptual and practical points of view. Final exam not required. Formerly known as Educational Psychology 208A. Instructor: Wilson

EDUC 274B Measurement in Education and the Social Sciences II 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 274A or sufficient background to follow the mathematical development.

An introduction to classical test theory and item response theory from a theoretical viewpoint. Application of these techniques to a practical measurement situation will be studied. Topics such as test bias, computerized and polytomous response modes will be discussed. Final exam not required. Formerly known as Educational Psychology 208B. Instructor: Wilson

EDUC 274C Research Seminar in Measurement 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** 274A or equivalent.

The seminar will address a current research issue in the area of educational and psychological measurement. Topics will vary from year to year. Some examples are polytomous item response theory, measurement of cognitive processes and learning, and assessment issues in evaluation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Educational Psychology 208C. Instructor: Wilson

EDUC 274D Multidimensional Measurement 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

Exploratory factor analysis, confirmatory factor analysis, and multidimensional item response theory.

Final exam not required. Formerly known as Educational Psychology 208D. Instructor: Wilson

EDUC 275B Data Analysis in Educational Research II 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 293A and 293L or equivalent recommended or consent of instructor.

A second course in educational statistics and data analysis. Emphasis is on using and interpreting multiple regression, loglinear models, and the analysis of variance for a variety of data sets and with a variety of analytic objectives. Must be taken concurrently with the computer laboratory Education 275L.

Final exam not required. Formerly known as Educational Psychology 209B.

EDUC 275G Hierarchical and Longitudinal Modeling 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Linear and logistic regression, 275B or equivalent.

The course introduces hierarchical linear and generalized linear models for longitudinal or clustered data. Such models are important in education research where longitudinal development such as learning is of interest and where students are clustered in classes or schools. Other examples of clustering are people nested in neighborhoods, hospitals, or firms. Students will practice formulating and estimating hierarchical models using either educational data sets provided or their own data sets. Final exam not required. Instructor: Rabe-Hesketh

EDUC 275H Research Group in Multilevel Modeling 1 or 2 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week every other week.**Prerequisites:** Linear and logistic regression, equivalent to 275B.

Multilevel models are useful when the units of observation are grouped in clusters such as students in schools, patients in hospitals, or prisoners in prisons. The research group is for students who wish to analyze such data or who have an interest in the methodology. In each meeting, we will either discuss students' ongoing research projects, or a methodological topic of interest. Readings (papers, chapters, drafts of student projects) will be distributed a week in advance.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Rabe-Hesketh

EDUC 275L Educational Data Analysis Laboratory II 1 Unit**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** 293A and 293L recommended or equivalent.

Students use the program SYSTAT to do intermediate and advanced data analysis projects using a variety of educational data sets in conjunction with 275B. Assumes basic familiarity with the statistical program SYSTAT. Must be taken concurrently with 275B.

Final exam not required. Formerly known as 209L. Instructor: Rabe Hesketh

EDUC 276A Introduction to Program Evaluation 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course provides an introduction to the field of program evaluation ("programs" might be curriculum innovations, school reorganizations, teacher training reforms, instructional methods innovations, funding programs, or programs in the health or welfare areas). It will give an overview of issues of concern to practicing evaluators, researchers, program managers, and academics interested in field-based research. Those taking the course will be introduced to the history of the field, the basic concepts and intellectual disputes, the major methodological issues, and to some common "models" of how an evaluation ought to be conducted. Based on the understandings of the topics and issues discussed in this course, participants will be asked to conceptualize and design an evaluation in their area of personal and/or professional interests. The purpose of this exercise is for participants to develop skills for framing evaluation questions, designing, and describing an evaluation plan.

Final exam not required. Formerly known as 293C. Instructor: Newton

EDUC 276C Practicum in Evaluation 2 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar biweekly, alternating with 4-hour laboratories.**Prerequisites:** 293A, 293L.

For students involved in an evaluation or assessment project as graduate student researchers or part of a practicum or apprenticeship experience. The purpose of this course is to integrate practical experiences with evaluation theory and research literatures relevant to specific evaluation questions or methods. Also provides additional instructional support to students using project data in courses, position papers, dissertations. Readings relate to evaluation topics (e.g., evaluation of professional development programs, use of student data to evaluate teaching) and discussions focus on design, methodology, and research questions of specific projects being conducted by the students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 293F.

EDUC 276D Theoretical Issues in Evaluation 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 276A.

In this seminar, we will engage in a critical examination of various scholars' theoretical perspectives on some of the fundamental issues in evaluation practice, understand why we should care about these issues and what theorists have to say, how theorists' perspectives reflect their disciplinary training, methodological preferences, and/or their personal evaluation experiences, and the extent to which their theoretical perspectives are or are not connected with evaluation practice.

Final exam not required. Instructor: Newton

EDUC 276E Research Design and Methods for Program and Policy Evaluation 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 276A or consent of instructor.

This course, designed to graduate students with some prior training to quantitative research methods, will introduce students to a toolkit of methods to enable them to address issues related to "what works" in program and policy evaluation. In addition, the course intends to help students understand the assumptions implicit in each of these approaches. Topics include (1) validity, threats to validity, and causal inference framework; (2) randomized experiments and quasi-experiment designs (regression discontinuity and propensity score matching); (3) multilevel modeling technique used in multi-site evaluation and longitudinal intervention studies; (4) mixed-methods approach; (5) meta-analysis for synthesizing evaluation/empirical studies; and (6) power and sample size in designing new evaluation studies.

Final exam not required. Instructor: Newton

EDUC 277A Systemic Educational Reform I 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 8 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Admission to the Joint Doctoral Program or consent of instructor.

At the conclusion of this course you should be able to understand the history of and core concepts associated with accountability and systemic reform, especially those associated with No Child Left Behind and California accountability policy; analyze the strengths and weaknesses of various accountability schemes, particularly in terms of their likely effect on student academic achievement, teacher effectiveness, and organizational flexibility and responsiveness; forge closer connections among your personal experiences as a successful professional educator, your practice-derived theories of education reform, and your readings, presentations, and other activities related to this course to create your own formal, evidence-based theory of systemic educational change; think strategically and systemically about how districts can support schools in increasing student learning and achievement; develop an understanding of initial processes that are essential for undertaking systemic reform at the district level; and frame questions for further inquiry on key topics in the course based on a review of existing literature.

Final exam not required. Instructors: Coburn, Love

EDUC 277B Systemic Educational Reform II 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Seminar per week for 8 weeks.**Prerequisites:** Second-year students and good standing in the joint doctoral program.

This is the second of three courses connected to the thematic area Systemic Educational Reform: theory, policy, and practice, and is intended for second-year students in the UC Berkeley/CSU Joint Doctoral Program on Leadership for Educational Equity (JDP). The purpose of this course is to examine the theoretical assumptions and empirical evidence related to the capacity of school districts to promote educational effectiveness across geographically distributed educational settings, including schools, after-school educational interventions, professional development programs, and the like.

Final exam not required. Instructors: Gifford, Hollingsworth

EDUC 278A Excellence and Equity in Education I: Inequality and Equity 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 8 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Good standing in LEEP or consent of instructor.

The issues of inequality, of various kinds, and of equity, again with many different conceptions, have been central to debates over American schooling, particularly in urban areas. This course provides a conceptual framework to begin understanding the different dimensions of inequality and equity. As part of the theme in the Joint Doctoral Program of "Achieving Excellence and Equity in Practice," it will be followed by additional courses that examine certain topics in greater depth.

Final exam not required. Instructor: Grubb

EDUC 278B Excellence and Equity 2: The Dynamics of Improving Schools and Districts 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Good standing in LEEP.

The design of this course starts from the assumption that the question of "what works" in schools is not easily answered. Much of it depends on what sorts of outcomes educators value and hinges on specific conditions schools and districts face. The course aims at developing and refining judgment by looking in-depth at improvement strategies, interventions, or levers for change employed by urban school districts. Given that the theme of the course is school improvement and, given LEEP students' administrative and leadership expertise, the course is envisioned as an opportunity for deep reflection and exchange among knowledgeable actors.

Final exam not required. Instructor: Mintrop

EDUC 278C Milestone 2: Mapping the Professional Knowledge Base 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 294E. Good standing in LEEP.

This second milestone course picks up on the work from the fall. In the fall, students began to identify a field of interest in which they most likely will conduct their research and write their dissertation. Also beginning in the fall, students familiarized themselves with templates for types of dissertations suggested for LEEP students. The second course in the milestone sequence assumes that students have made a selection of a field of interest and are ready to explore its knowledge base. The purpose of the course is to make this exploration fruitful and research-based, and for students to take first steps in applying their new knowledge to a dissertation project of a specific type. At the end of the course, students should be ready to pass the first milestone towards the dissertation: a paper mapping the professional knowledge base in their field of interest. At a later date, this paper will be submitted as one of three qualifying papers to the oral exam committee.

Final exam not required. Instructors: Mintrop, Rodriguez

EDUC 278D Milestone 4: Research Design and Methodology 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 278C. Good standing in LEEP.

The fourth course in the LEEP milestone sequence moves students from the exploration of the professional knowledge base to the design of their dissertation study. The main course objective is the completion of milestone 2: the writing of a paper on the design and methodology of the dissertation study. Together with the first milestone paper (Exploring the Knowledge Base) and the third milestone paper (Dissertation Prospectus), this paper should qualify students to participate in the qualifying exam, the prerequisite for dissertation research.

Final exam not required. Instructor: Mintrop

EDUC 279A Resource Management 1 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Good standing in LEEP or consent of instructor.

This course examines management tools and financial methods of effective leadership of school districts in California. The course will present strategies from both business and educational perspectives and will challenge conventional financial management practices in California school systems. Specific areas of emphasis will be on maximizing the effective use of educational resources (e.g., financial analyses, budget techniques, cost analyses, management information systems), understanding the constraints that influence public school expenditures (e.g., state and federal legislation), and accomplishing the educational objectives of the school system through financial application (cost analysis and project management techniques). The underlying assumption of the course is that informed financial leadership can improve the opportunity to achieve educational achievement and equity in public school organizations.

Final exam not required. Instructor: Chan

EDUC 279B Resource Management 2 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 8 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** 279A or consent of instructor.

In general, the purpose of this course is to prepare a new generation of superintendents. This course will expand on the foundation laid in the Budgeting 1 class, which serves as a "bootcamp" for fundamental management skills and concepts used in business and nonprofit organizations. The topics covered will be more focused on developing knowledge and skills needed by superintendents and educational leaders in the present.

Final exam not required. Instructor: Gifford

EDUC 280A Proseminar: Sociocultural Critique of Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

These interdisciplinary seminars address a series of questions. In what ways can philosophical, sociological, anthropological, historical, and psychological forms of inquiry be brought together to bear on the analysis of learning, on schooling, and on education more generally? What do we mean by critical and interpretive theories, and what are their relations with social practice? How can education come to constitute itself otherwise than in its current form?

Final exam not required. Instructor: Leonardo

EDUC 280B Proseminar: Sociocultural Critique of Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

These interdisciplinary seminars address a series of questions. In what ways can philosophical, sociological, anthropological, historical, and psychological forms of inquiry be brought together to bear on the analysis of learning, on schooling, and on education more generally? What do we mean by critical and interpretive theories, and what are their relations with social practice? How can education come to constitute itself otherwise than in its current form?.

Final exam not required. Instructor: Leonardo

EDUC 280C Research Apprenticeship and Qualitative Methodology Seminar I 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 280A or consent of instructor.

The emphasis in this course is on the practice of research. Each student, ordinarily in the second year of graduate study, develops a research project with a faculty mentor and carries it out under direction. At the same time, students work together in this seminar. Short written assignments during the first eight weeks result in a research proposal to be carried out by the end of the semester. Students spend about 50 hours on the field research.

Final exam required. Instructor: Shaiken

EDUC 280D Research Apprenticeship and Qualitative Methodology Seminar II 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 280C or consent of instructor.

This is the second in a sequence of courses on the practice of research. In the first semester students work with faculty mentors and in the seminar to carry out a field research project. Continuing both apprenticeship and seminar, this semester is devoted to analyzing the field materials and preparing a paper on the research.

Final exam not required. Instructor: Shaiken

EDUC 283B Historical Perspectives on American Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

Public schooling today reflects a long evolution, producing an institution that embodies social inequalities as well as democratic aspirations. Politicians, teachers, school reformers, and others interested in education invoke elements of this history to justify their efforts. This course examines the relationship of the changing goals, organization, and practices of American schools to broader social, economic, political, and intellectual developments.

Final exam required. Instructor: Perlstein

EDUC 283C The African American Tradition of Critical Educational Thought and Practice 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

Educational projects of asserting and reconstructing African American humanity, of claiming a place in American life, or of building separate Black institutions and culture have been central concerns of Black intellectuals. While this course surveys the history of African American education and the evolving forms of white supremacy in schooling, it is primarily an engagement with the ways that African Americans have conceptualized education and its transformation.

Final exam not required. Instructor: Perlstein

EDUC 283D Popular Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

The empowerment of adults through democratically structured cooperative study and action directed toward achieving more just and peaceful societies within a life-sustaining global environment. The historical development of theory and practice as well as the current state of this major international educational movement and its associated research model--participatory research--will be examined using case studies and theoretical works. Our principal method will be dialogue.

Final exam not required. Instructor: Hurst

EDUC 283F Urban Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 8 hours of Seminar per week for 6 weeks.

This course will explore the relationship between macroeconomic and political trends and public education in inner city schools. The impact of these larger societal phenomena upon drop-out rates, school climate, teacher morale, and academic achievement will be investigated through a combination of reading and field research in Oakland and Berkeley schools. An examination and evaluation of current proposals for reform of urban schools will also be included.

Final exam not required. Instructor: Mahiri

EDUC 284A Philosophy of Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Philosophical analysis applied to current educational problems and key concepts.

Final exam not required. Instructor: Tredway

EDUC 285 Globalization and International Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

What is globalization? What are the implications of living in a "global world" for educational systems? In this course, we explore these questions by first examining various theoretical perspectives on globalization. We will then discuss several major developments associated with globalization that are affecting different levels of education (from primary to university) including the rise in accountability and testing, skills for the "knowledge" economy, and immigration. We will consider the role of international organizations such as the World Bank and the United Nations in shaping international policy and programs. We will also examine the role that the state, local communities, and non-governmental agencies play in providing and improving the quality of education. In the final part of the course, we examine topics including language policy, technology, and strategies to combat educational inequality. To explore these topics, we will read and discuss case studies from Asia, Africa, Latin America, and the United States to provide concrete examples of how global forces are changing the context and content of education internationally.

Final exam not required. Instructor: Murphy-Graham

EDUC C286/AFRICAM C286 The Education of African-American Students 3 Units**Department:** Education; African American Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar will examine a wide range of perspectives on the education of African American children and adolescents in the United States. Readings will support students in understanding some of the key issues and tensions in African American education and school achievement, including the roles that culture, identity, parents, families, and communities play in the education and schooling of African American students; systemic issues in educational improvement and the perpetuation of "achievement gaps"; and language and power.

Final exam not required. Instructor: Suad-Bakari

EDUC 287 Race, Gender, and Immigration: Citizenship and Education 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

U.S. citizenship has been defined in racialized and gendered terms since the nation's founding. This course explores how those definitions have affected the historical development of U.S. public schooling, particularly the unequal educational opportunities available to racial minorities and women, and how they have affected American approaches to civic education.

Final exam not required. Instructor: Garcia Bedolla

EDUC 288 Intersectionality in Education Research 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course is designed to explore the theoretical and methodological questions raised by the concept of intersectionality - the idea that human beings possess multiple identities simultaneously. Most of the work in this area has been theoretical. This course acquaints students with that theoretical literature and helps them apply these theories in their empirical work. The goal is to provide students with the background necessary to incorporate intersectionality into their future research.

Final exam not required. Instructor: Garcia Bedolla

EDUC W289 Comprehensive Health Education for Teachers 1 Unit**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Web-based lecture and 2 hours of Web-based discussion per week for 5 weeks. This is an online course.**Prerequisites:** For students admitted to teacher education programs only.

This course addresses California's requirements for comprehensive school health education; finding and presenting reliable, trustworthy health information. Elementary teachers will focus on their responsibilities as primary health instructors. Secondary teachers will focus on the meaning and application of health education in their domain. Using a wiki online format the teachers will create one lesson plan, and a rubric for evaluating online health tools. This course is web-based.

Final exam not required. Formerly known as 289.

EDUC 290A Special Topics Seminars: Policy, Organization, Measurement, and Evaluation 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 16 hours of seminar per week for 7 weeks.**Prerequisites:** Consent of instructor.

Topics to vary from semester to semester and section to section.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 290B Special Topics Seminars: Education in Language, Literacy, and Culture 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Topics to vary from semester to semester and section to section.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 290C Special Topics Seminars: Cognition and Development 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Topics to vary from semester to semester and section to section.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 290D Special Topics Seminars: Special Topic Seminar 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Topics to vary from semester to semester and section to section.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 290E Special Topics Seminars: Special Topics Seminar 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week per unit.**Prerequisites:** Consent of instructor.

Topics to vary from semester to semester and section to section.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 291 Purposes and Values in Urban Educational Leadership 3 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/discussion per week for 8 weeks.**Prerequisites:** Admission to the Joint Doctoral Program in Urban Educational Leadership.

This course examines the relationships among multiple and often competing purposes of public education, dilemmas rooted in a history of persistent race- and class-linked inequities in American schools, and the possibilities and challenges of educational leadership. It highlights the pursuit of educational quality and equity in urban school systems as the organizing problem for educational leadership. Students will use research to analyze leadership practices to strengthen urban education.

Final exam not required. Instructor: Grubb

EDUC 291A The Educational System of the United States 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/presentation and 1 hour of discussion per week.**Prerequisites:** Graduate standing.

Historical development and contemporary status of principal features of American schooling and major issues of policy and practice. The course will focus primarily upon public elementary and secondary schools. The course will stress relationships between education and other sectors of society.

Final exam not required. Instructor: Grubb

EDUC 293A Data Analysis in Education Research 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks. 10 hours of Lecture per week for 6 weeks.**Prerequisites:** Consent of instructor.

Introduces students to quantitative statistical methods for educational research. Emphasizes parameter estimation and hypothesis testing, in particular of group differences based on means, medians, proportions and correlation coefficients. Section 1 takes a conceptual and heuristic approach and includes a module on distribution free statistics. Section 2 takes an algebraic approach and includes a module on multiple regression. High school algebra is strongly recommended for section 2. Final exam not required.

EDUC 293L Educational Data Analysis Laboratory 1 Unit**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Must be taken concurrently with 293A.

Exercises and computer programs are presented and discussed.

Final exam not required.

EDUC 293V Video-Analysis Seminar 1 - 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This ongoing seminar is for anyone devoting a significant portion of a given semester to analyzing videotaped records as part of their research. Video-based data are now ubiquitous in educational research and this group is designed to help us all become more savvy at analyzing them. Strands of the seminar, each worth 1 unit of credit, are devoted to participating in video-analysis sessions, reading about video-analysis methods, and completing a paper on your own video-analysis project. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Engle

EDUC 294A Thesis Seminar: Policy, Organization, Measurement, and Evaluation (POME) 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar and 4 hours of independent research per week.

Recommended for M.A. students working on seminar papers or theses, and doctoral students preparing dissertation proposals. Topic varies with instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 294.

EDUC 294B Thesis Seminar--ELLC 1 - 6 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of seminar per week. Additional units earned by completing 4 hours of independent research per week per unit.**Prerequisites:** Consent of instructor.

Recommended for students working on seminar papers, qualifying papers, theses, and dissertation proposals in language and literacy studies. # Section 1: Recommended for Ed.D. students and M.A. students working on curriculum projects. # Section 2: Recommended for Ph.D. students and M.A. students working on research studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Education in Language and Literacy 294.

EDUC 294C Seminar on Formulation of Educational Research 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 4 hours of seminar per week.

Discussion of criteria for useful educational research. Emphasis is on applying these criteria while developing plans for research on topics of interest to the participants.

Course may be repeated once for credit. Course may be repeated for a maximum of 8 units. Final exam not required. Formerly known as Education in Mathematics, Science, and Technology 294.

EDUC 294E Thesis Seminar 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of discussion per unit per week.**Prerequisites:** Good standing in the LEEP.

Recommended for M.A. students working on seminar papers or theses, and doctoral students preparing dissertation proposals.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Educational Psychology 294E.

EDUC 295B Technology, Curriculum, and Instruction 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

To explore the cognitive consequences of technology in instruction and learning, the promise of technology in education will be examined, and exemplary instructional software will be explored. A model of knowledge acquisition and knowledge change incorporating technological delivery of instruction will be developed.

Final exam not required. Formerly known as Education in Mathematics, Science, and Technology 291B. Instructor: Linn

EDUC 295C Integrating Technology into Secondary English**Instruction 4 Units****Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3.5 hours of Lecture and hours of Laboratory per week for 15 weeks.**Prerequisites:** Admission into the MUSE Credential/MA Program.

This course will cover (a) basic skills in using computer hardware and software, (b) knowledge of the legal and ethical issues surrounding the use of computers in classroom instruction, (c) communicating through a variety of electronic media, (d) designing, adapting, and using lessons to promote information literacy for lifelong learning, (e) optimizing lessons based upon the technological resources available in the classroom or school setting, (f) contributing to planning the use of technological resources in the school setting.

Final exam not required.

EDUC 298A Group Study for Graduate Students--POME 1 - 5 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 5 hours of lecture/seminar per week. 1 hour of lecture per week per unit. 2 and 1 half hours to 12 hours of lecture/discussion per week. 2 and 1 hours of work per week per unit. Research on special problems and topics not covered by regular courses or seminars. Topics will vary in different semesters. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 298B Group Study for Graduate Students--LLSC 1 - 3 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture/seminar per week per unit. 1 hour of lecture/seminar per week per unit. 1 hour of lecture/seminar per week per unit. 1 hour of lecture/seminar per week per unit.

Prerequisites: Consent of instructor.

Research on special problems and topics not covered by courses or seminars.

Final exam not required. Formerly known as Education in Language and Literacy 298.

EDUC 298C Group Studies, Seminars, or Group Research--DCEMST 1 - 4 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hours of lecture/seminar per week. 1.5 hours to 10 hours of lecture/seminar per week for 6 weeks. 1.5 hours to 6 hours of lecture/seminar per week for 10 weeks.

Advanced group study in education. Topics vary from semester to semester. May consist of organized lectures or seminar discussions, related chiefly to the research area in which the group is working.

Final exam not required. Formerly known as Education in Mathematics, Science, and Technology 298.

EDUC 298E Group Study and Research 1 - 6 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 2.5 hours of seminar per week per unit, for 6 weeks. 2.5 hours of seminar per week per unit, for 6 weeks. 2.5 hours of seminar per week per unit, for 6 weeks. 2.5 hours of seminar per week per unit, for 6 weeks.

Group study and research on special problems and topics.

Final exam not required. Formerly known as Educational Psychology 298.

EDUC 299 Special Study and Research 1 - 12 Units**Department:** Education**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conference and independent study.**Prerequisites:** Consent of instructor.

Special study or research under direction of a faculty member. One unit of credit for every four hours of conference and independent research time per week.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC N299 Special Study and Research 1 - 6 Units**Department:** Education**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conference and independent study.**Prerequisites:** Consent of instructor.

Special study or research under direction of a faculty member. One unit of credit for every 8 hours of conference and independent research time per week.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 301A The Teaching of Writing 4 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20-4 hours of lecture/discussion per week for 5 weeks.

Prerequisites: 301B or equivalent. Enrollment limited to educators invited to participate in BAWP Consultant Training Program.

A study of recent research and trends in the teaching of composition in secondary schools. In this class, teacher participants are trained to be Bay Area Writing Project (BAWP) Teacher/Consultants who conduct workshops in schools and districts.

Final exam not required. Instructor: Smith

EDUC 305 California Literature Project Seminar 3 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Thirty hours of workshop/seminar per week for 2 weeks.

This workshop/seminar introduces teachers to literature-based, student-centered literacy instruction. The course is designed to help K-12 teachers apply the California English/Language Arts Framework, the K-8 Model Curriculum Guidelines, and the 9-12 Model Curriculum Standards. Participants will develop a literature-based curriculum plan for their own classrooms.

Final exam not required. Formerly known as Summer Program for Educators 305.

EDUC 375 Teaching Assistants Practicum 1 - 6 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 half-hour lecture, 1 3/4-hour discussion and 1 hour field work per unit per week.

Consultation and analysis for teaching assistants.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Education 380.

EDUC 390A Supervised Teaching for Secondary English 7 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 1 hour of Lecture and 20-4 to 20-8 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Admission to a teaching credential program.

Twenty-four to twenty-eight hours of supervised teaching in public school classrooms and one hour of lecture per week. Sequence begins with the fall semester.

Final exam not required. Formerly known as Education in Language and Literacy 390A-390B. Instructor: Cziko

EDUC 390B Supervised Teaching for Secondary English 8 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 1 hour of Lecture and 20-4 to 20-8 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Admission to a teaching credential program.

Twenty-four to twenty-eight hours of supervised teaching in public school classrooms and one hour of lecture per week. Sequence begins with the fall semester.

Final exam not required. Instructor: Cziko

EDUC 390C Supervised Teaching in Elementary Education 1 - 8 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture and 2 to 20 hours of Fieldwork per week for 15 weeks. 2 to 6 hours of Lecture and 6 to 40 hours of Fieldwork per week for 8 weeks.**Prerequisites:** Admission to a teaching credential program.

Fieldwork for teaching credential. Supervised teaching may begin with the opening of the public schools in the fall and extend through the spring semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Educational Psychology 390. Instructor: Salasin

EDUC 390D Supervised Teaching in Mathematics and Science for Secondary Schools 2 - 6 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 to 10 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Admission to credential program.

Fieldwork for teaching credential. Supervised teaching may begin with the opening of the public schools in the fall and extend through the spring semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Education in Mathematics, Science, and Technology 390. Instructor: Zimmerlin

EDUC 391A Technology, Curriculum, and Instruction 1 Unit**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and supplementary activity per week for 8 weeks.**Prerequisites:** Admission to the Developmental Teacher Education Program.

Meets level 1 technology for the California Multiple Subject Credential. Introduction to basic computer skills and applications.

Final exam not required. Instructor: Eslinger

EDUC 392C Arts in the Elementary Classroom 1 Unit**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and supplementary activity per week.**Prerequisites:** Admission to Developmental Teacher Education Program.

This course provides an introductory understanding of the role, value, and issues of arts integration. The readings, discussions, and activities are concerned with promoting engagement and critical thinking through creativity, basic concepts related to children's creative production, perceiving and responding to the arts, teacher creative identity, and planning for arts integration instruction.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 393 Preparation for Completion of the Elementary Mathematics Performance Assessment 1 Unit**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Completion of required first year course work and field placements in the Developmental Teacher Education Program.

This course is designed to support candidates as they prepare for and complete the Elementary Mathematics Performance Assessment for CA teachers (PACT). The PACT is required for all credential candidates prior to recommendation for credentialing as designated by the state of California. Candidates will become familiar with the requirements for the PACT, begin planning their teaching event, view, share, and critique "work in progress," read and respond to relevant articles, review guidelines for preparing video records of teaching practice, and design scoring criteria for assessing student work.

Final exam not required.

EDUC 399 Special Study for Educators 1 - 4 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conference and special study for 5 weeks. Individual conference and special study for 5 weeks.**Prerequisites:** Consent of instructor.

Special study of professional topics under direction of a faculty member. One unit of credit for ever 7 hours of consultation and special study per week.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 399S Special Study for Educators 1 - 4 Units**Department:** Education**Course level:** Professional course for teachers or prospective teachers**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conference and special study for 5 weeks. Special study of professional topics under direction of a faculty member. One unit of credit for ever 7 hours of consultation and special study per week.

Course may be repeated for credit when topic changes. Final exam not required.

EDUC 413A Community-Based Internship in School Psychology 2 - 7 Units**Department:** Education**Course level:** Other professional**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 to 7 hours of lecture/discussion and at least 2 days of fieldwork per week.

Supervised assignment to a community mental health agency in the capacity of school psychologist.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Crovetti

EDUC 413B Community-Based Internship in School Psychology 2 - 7 Units**Department:** Education**Course level:** Other professional**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of lecture/discussion and 2 days of fieldwork per week.

Supervised assignment to a community mental health agency in the capacity of school psychologist.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Crovetti

EDUC 413C School-Based Internship in School Psychology 2 - 8 Units**Department:** Education**Course level:** Other professional**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 to 8 hours of lecture/discussion and at least 2 and 1 half days of fieldwork per week.

Supervised assignment to a school district in the capacity of school psychologist.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Yabrove

EDUC 413D School-Based Internship in School Psychology 2 - 8 Units**Department:** Education**Course level:** Other professional**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of lecture/discussion and 2 and 1 half days of fieldwork per week.

Supervised assignment to a school district in capacity of school psychologist.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 413L Consultation for School Psychology Students 1 Unit**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour consultation on campus and 6 hours of field work per week.**Prerequisites:** Must be taken concurrently with 213C-213D and 413C-413D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 460A Practicum in School Site Management I 3 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Admission to Administrative Services Credential program.

Supervised field experience, conferences, and colloquium.

Final exam not required.

EDUC 460B Practicum in School Site Management 1 or 2 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 to 6 hours of Fieldwork per week for 15 weeks. 7.5 to 15.5 hours of Fieldwork per week for 6 weeks.**Prerequisites:** 460B.

Supervised field experience, conferences, and colloquium.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EDUC 460C Research Practicum in Administration 1 - 3 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 3 to 6 hours of Fieldwork per week for 15 weeks. 2 hours of Lecture and 6 to 12 hours of Fieldwork per week for 8 weeks. 2.5 hours of Lecture and 7.5 to 15 hours of Fieldwork per week for 6 weeks.**Prerequisites:** 294A.

During the fall semester, students complete 294A in which the preliminary Leadership Action Research Project is designed - a summative assessment for the Principal Leadership Institute and the MA program at Berkeley. Through the LARP process, students engage in a cycle of inquiry about a problem or concern that matters to their overall leadership agenda and creates more equitable spaces in urban schools. In this course, students solidify the design of their LARP, take leadership action to implement their action plan, reflect on the action plan, revise the action plan - and make changes as appropriate - thus, engaging actively in the cycle of inquiry.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cheung

EDUC 470A Residency: Introduction to School Districts 3 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week, plus 6 hours of residency in a local school district and 2 hours of individual research preparation for a case study.**Prerequisites:** Good standing in LEEP.

This course is designed to expose students to the role and purpose of school systems. It addresses the school district as service centers for schools as well as leaders of education reform, and explores the relationship between the district and its schools and why and how each serves as a collaborative function to improve and facilitate education excellence.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Love

EDUC 470B Residency: Excellence and Equity and Systemic Reform 3 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week, plus 6 hours of residency in a local school district and 2 hours of individual research preparation.**Prerequisites:** 470A, Good standing in LEEP.

Students will meet weekly for one hour with a residency adviser at one of the following campuses: San Francisco State University; California State University, East Bay; or San Jose State University. The residency will require six hours weekly at a school district site to conduct research on curriculum, instruction, assessment, and professional development topics selected by students in conjunction with their faculty counselors and residency advisers in collaboration with the district consultant. An additional two hours weekly will be dedicated to preparation of case study materials from the residency assignment. Students will be expected to present the results of their residency research to the faculty and students of the Joint Doctoral Program.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Mintrop

EDUC 470C Residency: Decision Making and Resource Management 3 Units**Department:** Education**Course level:** Other professional**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of seminar per week, plus 6 hours of residency in a local school district and 2 hours of individual research preparation.**Prerequisites:** 470A, Good standing in LEEP.

Residencies are a central part of the LEEP curriculum. The goals of the residencies are to give students a first-hand experience of the workings of district or system level administration and encourage them to conduct systematic inquiries in this setting; help them make the transition from school-based actors to district-based actors with an appreciation for systemic and political aspects of that role; anchor theoretical knowledge acquired in campus-based seminars in the practice of management and leadership; and prepare for their dissertation projects.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Coburn

EDUC 601 Individual Study for Master's Students 1 - 8 Units**Department:** Education**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Consent of instructor.

Individual study for the master's examination in consultation with a faculty adviser. One unit of credit for each four hours of conference and independent research per week.

Course may be repeated for a maximum of 16 units. Course may be repeated for a maximum of 16 units. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

EDUC 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Education**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conference and independent study.**Prerequisites:** Consent of instructor.

Individual study in preparation for the doctoral qualifying examination. One unit of credit for each four hours of conference and independent research per week.

Course may be repeated for a maximum of 16 units. Course may be repeated for a maximum of 16 units. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Education in Language and Literacy (EDUC-LL)

EDUC-LL N246A Teaching Linguistic and Cultural Minority Students 3 Units**Department:** Education in Language and Literacy**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Seminar per week for 8 weeks. 8 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

This course will focus on the reality of linguistic minority students from the perspective of parents, community members, and the students themselves. It will consider models of bilingual education including foundations, organizational models and instructional strategies. It will examine Specially Designed Academic Instruction in English and working with paraprofessionals in the classroom. Students will participate in evening workshops and a one-day conference on models for linguistic minority and other urban students.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as S243C.

EDUC-LL 249A Strategies for Teaching Students with Reading/Language Arts Difficulties 3 Units**Department:** Education in Language and Literacy**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 8 weeks. 6 hours of Lecture per week for 6 weeks.

249A is closely related to and dependent upon 249B. 249A examines the development of curricula in reading and the language arts that addresses the strengths and weaknesses determined in the assessment process developed in 249B. Emphases include: formal and informal assessment procedures in reading for majority/minority populations, diagnostic teaching (including issues of cultural diversity,) individual and group instructional strategies for scaffolding learning, including cooperative learning/interactivae strategies, and thematic instruction, content area reading strategies, and parent involvement. The class explores theoretical models of language acquisition and models of bilingual education. Final exam not required. Formerly known as 246.

EDUC-LL 249B Evaluation and Assessment in Reading and Literacy Instruction 3 Units

Department: Education in Language and Literacy

Course level: Graduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of Lecture per week for 8 weeks. 9 hours of Lecture per week for 6 weeks.

Explores both formal (e.g., standardized measures) and informal (e.g., reading inventories, portfolios) measures of assessing reading and writing ability. The course is designed to familiarize students with the most widely used reading measures, to develop competency in administering and interpreting these measures, and to develop an understanding of current issues in the assessment of reading comprehension. Students will explore the issues of cultural bias in testing, the organization and display of student knowledge in different formats, and expectations for the achievement of cultural and linguistic minority students. Final exam not required. Formerly known as 257.

EDUC-LL 291M Acquisition & Development of Reading & Writing 3 Units

Department: Education in Language and Literacy

Course level: Graduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 8 hours of Lecture and 12 hours of Discussion per week for 4 weeks.

This course will explore recent research and theory that support the concept of "whole language learning" and will examine the nature of acquisition and development of reading and writing as they relate to teaching and learning.

EDUC 315. Final exam not required.

Educational Administration (EDUC-AE)

EDUC-AE 263B Education and Professional-Client Law 3 Units

Department: Educational Administration

Course level: Graduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of Lecture per week for 8 weeks.

Facets of the law important for educational and social service professionals who have frequent contact with students in a client capacity.

Emphasis on such topics as civil liberties, due process, classification, compulsory attendance, school exclusion, regulatory provisions for the handicapped, and legal claims to the fulfillment of educational needs.

Final exam not required.

Egyptian (EGYPT)

EGYPT 100A Elementary Egyptian 5 Units

Department: Egyptian

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to Middle Egyptian grammar and texts.

Final exam required.

EGYPT 100B Elementary Egyptian 5 Units

Department: Egyptian

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to Middle Egyptian grammar and texts.

Final exam required.

EGYPT 101A Intermediate Egyptian 3 Units

Department: Egyptian

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100A-100B.

Readings in Middle Egyptian hieroglyphic and hieratic texts.

Final exam required.

EGYPT 101B Intermediate Egyptian 3 Units

Department: Egyptian

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 100A-100B.

Readings in Middle Egyptian hieroglyphic and hieratic texts.

Final exam required.

EGYPT H195 Senior Honors 2 - 4 Units**Department:** Egyptian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Limited to senior honors candidates.

Directed study centered upon preparation of an honors thesis.

Course may be repeated for a maximum of 4 units. Final exam not required.

EGYPT 198 Directed Group Study for Upper Division Students 1 - 4 Units**Department:** Egyptian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Instruction in areas not covered by regularly scheduled courses.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EGYPT 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Egyptian**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks.

Enrollment is restricted by regulations shown in the .

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EGYPT 201A Later Stages of Egyptian 3 Units**Department:** Egyptian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 101A-101B and 102A-102B.

Introduction to late Egyptian and Demotic.

Final exam not required.

EGYPT 202B Egyptian Texts 3 Units**Department:** Egyptian**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Concurrent or previous enrollment in 201A-201B or consent of instructor.

Philological analysis of texts of a single genre and period.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Electrical Engineering (EL ENG)

EL ENG 20 Structure and Interpretation of Systems and Signals 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory per week.**Prerequisites:** Mathematics 1B.

Mathematical modeling of signals and systems. Continuous and discrete signals, with applications to audio, images, video, communications, and control. State-based models, beginning with automata and evolving to LTI systems. Frequency domain models for signals and frequency response for systems, and sampling of continuous-time signals. A Matlab-based laboratory is an integral part of the course.

Final exam required. Formerly known as Electrical Engineering 20N.

Instructor: Ayazifar

EL ENG 24 Freshman Seminar 1 Unit**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics may vary from department to department and semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

EL ENG 25 What Electrical Engineers Do--Feedback from Recent Graduates 1 Unit**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

A Berkeley Electrical Engineering and Computer Sciences degree opens the door to many opportunities, but what exactly are they? Graduation is only a few years away and it's not too early to find out. In this seminar students will hear from practicing engineers who recently graduated. What are they working on? Are they working in a team? What do they wish they had learned better? How did they find their jobs?.

Final exam not required. Instructor: Boser

EL ENG 40 Introduction to Microelectronic Circuits 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 3 hours of Laboratory, and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture, 2 hours of Discussion, and 6 hours of Laboratory per week for 8 weeks.**Prerequisites:** Mathematics 1B.

Fundamental circuit concepts and analysis techniques in the context of digital electronic circuits. Transient analysis of CMOS logic gates; basic integrated-circuit technology and layout.

Students will receive one unit of credit for 40 taking 42 and no credit after taking 100. Final exam required.

EL ENG 42 Introduction to Digital Electronics 3 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** Mathematics 1B.

This course serves as an introduction to the principles of electrical engineering, starting from the basic concepts of voltage and current and circuit elements of resistors, capacitors, and inductors. Circuit analysis is taught using Kirchhoff's voltage and current laws with Thevenin and Norton equivalents. Operational amplifiers with feedback are introduced as basic building blocks for amplification and filtering. Semiconductor devices including diodes and MOSFETs and their IV characteristics are covered. Applications of diodes for rectification, and design of MOSFETs in common source amplifiers are taught. Digital logic gates and design using CMOS as well as simple flip-flops are introduced. Speed and scaling issues for CMOS are considered. The course includes as motivating examples designs of high level applications including logic circuits, amplifiers, power supplies, and communication links. Students will receive no credit for 42 after taking 40 or 100. Final exam required.

EL ENG 43 Introductory Electronics Laboratory 1 Unit**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3.5 hours of laboratory/discussion per week for 8 weeks.**Prerequisites:** 42 (may be taken concurrently) or equivalent or consent of instructor.

Using and understanding electronics laboratory equipment such as oscilloscope, power supplies, function generator, multimeter, curve-tracer, and RLC-meter. Includes a term project of constructing and testing a robot or other appropriate electromechanical device.

Final exam not required.

EL ENG 97 Field Study 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Fieldwork per week for 15 weeks. 2 to 7.5 hours of Fieldwork per week for 8 weeks. 2.5 to 10 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Consent of instructor (see department adviser).

Students take part in organized individual field sponsored programs with off-campus companies or tutoring/mentoring relevant to specific aspects and applications of computer science on or off campus. Note Summer CPT or OPT students: written report required. Course does not count toward major requirements, but will be counted in the cumulative units toward graduation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 98 Directed Group Study for Undergraduates 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Course format varies.

Group study of selected topics in electrical engineering, usually relating to new developments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 99 Individual Study and Research for Undergraduates 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.**Prerequisites:** Freshman or sophomore standing and consent of instructor. Minimum GPA of 3.4 required.

Supervised independent study and research for students with fewer than 60 units completed.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EL ENG 100 Electronic Techniques for Engineering 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 3 hours of Laboratory, and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture, 2 hours of Discussion, and 3 hours of Laboratory per week for 8 weeks.**Prerequisites:** Mathematics 1B.

This course serves as an introduction to the principles of electrical engineering, starting from the basic concepts of voltage and current and circuit elements of resistors, capacitors, and inductors. Circuit analysis is taught using Kirchhoff's voltage and current laws with Thevenin and Norton equivalents. Operational amplifiers with feedback are introduced as basic building blocks for amplification and filtering. Semiconductor devices including diodes and MOSFETs and their IV characteristics are covered. Applications of diodes for rectification, and design of MOSFETs in common source amplifiers are taught. Digital logic gates and design using CMOS as well as simple flip-flops are introduced. Speed and scaling issues for CMOS are considered. The course includes as motivating examples designs of high level applications including logic circuits, amplifiers, power supplies, and communication links. Students will receive one unit of credit for 100 after taking 42 and no credit after taking 40. Final exam required.

EL ENG 105 Microelectronic Devices and Circuits 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 40

This course covers the fundamental circuit and device concepts needed to understand analog integrated circuits. After an overview of the basic properties of semiconductors, the p-n junction and MOS capacitors are described and the MOSFET is modeled as a large-signal device. Two port small-signal amplifiers and their realization using single stage and multistage CMOS building blocks are discussed. Sinusoidal steady-state signals are introduced and the techniques of phasor analysis are developed, including impedance and the magnitude and phase response of linear circuits. The frequency responses of single and multi-stage amplifiers are analyzed. Differential amplifiers are introduced. Final exam required.

EL ENG 113 Power Electronics 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 105 or consent of instructor.

Power conversion circuits and techniques. Characterization and design of magnetic devices including transformers, reactors, and electromagnetic machinery. Characteristics of bipolar and MOS power semiconductor devices. Applications to motor control, switching power supplies, lighting, power systems, and other areas as appropriate. Final exam required.

EL ENG 117 Electromagnetic Fields and Waves 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 1.5 hours of Laboratory per week for 15 weeks.**Prerequisites:** 40, Mathematics 53, 54, knowledge of phasor analysis (e.g. as taught in 105).

Review of static electric and magnetic fields and applications; Maxwell's equations; transmission lines; propagation and reflection of plane waves; introduction to guided waves, microwave networks, and radiation and antennas. Minilabs on statics, transmission lines, and waves.

Final exam required. Formerly known as 117A-117B.

EL ENG 118 Introduction to Optical Engineering 3 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Fundamental principles of optical systems. Geometrical optics and aberration theory. Stops and apertures, prisms, and mirrors. Diffraction and interference. Optical materials and coatings. Radiometry and photometry. Basic optical devices and the human eye. The design of optical systems. Lasers, fiber optics, and holography. Students will receive no credit for Electrical Engineering 118 after taking Electrical Engineering 218A. A deficient grade in Electrical Engineering 119 may be removed by taking Electrical Engineering 118. Final exam required. Formerly known as Electrical Engineering 119. Instructor: Waller

EL ENG 120 Signals and Systems 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 1 hour of Recitation per week for 15 weeks.**Prerequisites:** 20N, Mathematics 53, 54.

Continuous and discrete-time transform analysis techniques with illustrative applications. Linear and time-invariant systems, transfer functions. Fourier series, Fourier transform, Laplace and Z-transforms. Sampling and reconstruction. Solution of differential and difference equations using transforms. Frequency response, Bode plots, stability analysis. Illustrated by analysis of communication systems and feedback control systems. Final exam required.

EL ENG 121 Introduction to Digital Communication Systems 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 120, 126.

Introduction to the basic principles of the design and analysis of modern digital communication systems. Topics include source coding, channel coding, baseband and passband modulation techniques, receiver design, and channel equalization. Applications to design of digital telephone modems, compact disks, and digital wireless communication systems. Concepts illustrated by a sequence of MATLAB exercises.

Final exam required.

EL ENG 122 Introduction to Communication Networks 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** Computer Science 61B, Mathematics 53 or 54.

This course is an introduction to the design and implementation of computer networks. We will focus on the concepts and fundamental design principles that have contributed to the Internet's scalability and robustness and survey the underlying technologies--e.g., Ethernet, 802.11, DSL, optical links--that have led to the Internet's phenomenal success. Topics include layering, congestion/flow/error control, routing, addressing, multicast, packet scheduling, switching, internetworking, network security, and networking/programming interfaces.

Final exam required.

EL ENG 123 Digital Signal Processing 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 120

Discrete time signals and systems: Fourier and Z transforms, DFT, 2-dimensional versions. Digital signal processing topics: flow graphs, realizations, FFT, chirp-Z algorithms, Hilbert transform relations, quantization effects, linear prediction. Digital filter design methods: windowing, frequency sampling, S-to-Z methods, frequency-transformation methods, optimization methods, 2-dimensional filter design.

Final exam required.

EL ENG C125/BIO ENG C125 Introduction to Robotics 4 Units**Department:** Electrical Engineering and Computer Sciences;

Bioengineering

Course level: Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 120 or equivalent, consent of instructor.

An introduction to the kinematics, dynamics, and control of robot manipulators, robotic vision, and sensing. The course covers forward and inverse kinematics of serial chain manipulators, the manipulator Jacobian, force relations, dynamics, and control. It presents elementary principles on proximity, tactile, and force sensing, vision sensors, camera calibration, stereo construction, and motion detection. The course concludes with current applications of robotics in active perception, medical robotics, and other areas.

Final exam required. Instructor: Bajcsy

EL ENG 126 Probability and Random Processes 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 20

This course covers the fundamentals of probability and random processes useful in fields such as networks, communication, signal processing, and control. Sample space, events, probability law. Conditional probability. Independence. Random variables. Distribution, density functions. Random vectors. Law of large numbers. Central limit theorem. Estimation and detection. Markov chains.

Final exam required.

EL ENG 127 Optimization Models in Engineering 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Math 54 or equivalent or consent of instructor.

This course offers an introduction to optimization models and their applications, ranging from machine learning and statistics to decision-making and control, with emphasis on numerically tractable problems, such as linear or constrained least-squares optimization.

Students will receive no credit for Electrical Engineering 127 after taking Electrical Engineering 227A. Final exam not required.

EL ENG C128/MEC ENG C134 Feedback Control Systems 4 Units

Department: Electrical Engineering and Computer Sciences; Mechanical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Analysis and synthesis of linear feedback control systems in transform and time domains. Control system design by root locus, frequency response, and state space methods. Applications to electro-mechanical and mechatronics systems.

Final exam required.

EL ENG 129 Neural and Nonlinear Information Processing 3 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 120 or consent of instructor.

Principles of massively parallel real-time computation, optimization, and information processing via nonlinear dynamics and analog VLSI neural networks, applications selected from image processing, pattern recognition, feature extraction, motion detection, data compression, secure communication, bionic eye, auto waves, and Turing patterns.

Final exam not required. Instructor: Chua

EL ENG 130 Integrated-Circuit Devices 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 40 or 100.

Overview of electronic properties of semiconductor. Metal-semiconductor contacts, pn junctions, bipolar transistors, and MOS field-effect transistors. Properties that are significant to device operation for integrated circuits. Silicon device fabrication technology.

Students will receive no credit for El Eng 130 after taking El Eng 230A.

Final exam required.

EL ENG 134 Fundamentals of Photovoltaic Devices 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 40 or 100 or Engineering 45.

This course is designed to give an introduction to, and overview of, the fundamentals of photovoltaic devices. Students will learn how solar cells work, understand the concepts and models of solar cell device physics, and formulate and solve relevant physical problems related to photovoltaic devices. Monocrystalline, thin film and third generation solar cells will be discussed and analyzed. Light management and economic considerations in a solar cell system will also be covered.

Final exam required. Instructor: Arias

EL ENG 137A Introduction to Electric Power Systems 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Physics 7B; Electrical Engineering 40, 100, or Engineering 45; or consent of instructor.

Overview of conventional electric power conversion and delivery, emphasizing a systemic understanding of the electric grid with primary focus at the transmission level, aimed toward recognizing needs and opportunities for technological innovation. Topics include aspects of a.c. system design, electric generators, components of transmission and distribution systems, power flow analysis, system planning and operation, performance measures, and limitations of legacy technologies.

Final exam required. Instructor: von Meier

EL ENG 137B Introduction to Electric Power Systems 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Electrical Engineering 137A and 194 or consent of instructor.

Overview of recent and potential future evolution of electric power systems with focus on new and emerging technologies for power conversion and delivery, primarily at the distribution level. Topics include power electronics applications, solar and wind generation, distribution system design and operation, electric energy storage, information management and communications, demand response, and microgrids.

Final exam required. Instructor: von Meier

EL ENG 140 Linear Integrated Circuits 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: Electrical Engineering 105.

Single and multiple stage transistor amplifiers. Operational amplifiers. Feedback amplifiers, 2-port formulation, source, load, and feedback network loading. Frequency response of cascaded amplifiers, gain-bandwidth exchange, compensation, dominant pole techniques, root locus. Supply and temperature independent biasing and references. Selected applications of analog circuits such as analog-to-digital converters, switched capacitor filters, and comparators. Hardware laboratory and design project.

Students will receive no credit for El Eng 140 after taking El Eng 240A.

Final exam required. Instructors: Alon, Sanders

EL ENG 141 Introduction to Digital Integrated Circuits 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 40; Electrical Engineering 105 and Computer Science 150 recommended.

CMOS devices and deep sub-micron manufacturing technology.

CMOS inverters and complex gates. Modeling of interconnect wires.

Optimization of designs with respect to a number of metrics: cost, reliability, performance, and power dissipation. Sequential circuits, timing considerations, and clocking approaches. Design of large system blocks, including arithmetic, interconnect, memories, and programmable logic arrays. Introduction to design methodologies, including hands-on experience.

Students will receive no credit for Electrical Engineering 141 after taking Electrical Engineering 241A. Final exam required. Instructors: Alon, Rabaey

EL ENG 142 Integrated Circuits for Communications 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** El Eng 20 and El Eng 140.

Analysis and design of electronic circuits for communication systems, with an emphasis on integrated circuits for wireless communication systems.

Analysis of noise and distortion in amplifiers with application to radio receiver design. Power amplifier design with application to wireless radio transmitters. Radio-frequency mixers, oscillators, phase-locked loops, modulators, and demodulators.

Students will receive no credit for El Eng 142 after taking El Eng 242A. Final exam required.

EL ENG 143 Microfabrication Technology 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 40 and Physics 7B.

Integrated circuit device fabrication and surface micromachining technology. Thermal oxidation, ion implantation, impurity diffusion, film deposition, epitaxy, lithography, etching, contacts and interconnections, and process integration issues. Device design and mask layout, relation between physical structure and electrical/mechanical performance. MOS transistors and poly-Si surface microstructures will be fabricated in the laboratory and evaluated.

Final exam required.

EL ENG 144 Fundamental Algorithms for Systems Modeling, Analysis, and Optimization 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** 20; Computer Science 70 or consent of instructor.

The modeling, analysis, and optimization of complex systems requires a range of algorithms and design software. This course reviews the fundamental techniques underlying the design methodology for complex systems, using integrated circuit design as example. Topics include design flows, discrete and continuous models and algorithms, and strategies for implementing algorithms efficiently and correctly in software. Laboratory assignments and a class project will expose students to state-of-the-art tools.

Final exam required. Instructors: Keutzer, Lee, Roychowdhury, Seshia

EL ENG C145B/BIO ENG C165 Medical Imaging Signals and Systems 4 Units**Department:** Electrical Engineering and Computer Sciences;

Bioengineering

Course level: Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Electrical Engineering 120; basic programming ability in C or FORTRAN.

Biomedical imaging is a clinically important application of engineering, applied mathematics, physics, and medicine. In this course, we apply linear systems theory and basic physics to analyze X-ray imaging, computerized tomography, nuclear medicine, and MRI. We cover the basic physics and instrumentation that characterizes medical image as an ideal perfect-resolution image blurred by an impulse response. This material could prepare the student for a career in designing new medical imaging systems that reliably detect small tumors or infarcts.

Final exam required. Instructor: Conolly

EL ENG C145L/BIO ENG C145L Introductory Electronic Transducers Laboratory 3 Units**Department:** Electrical Engineering and Computer Sciences;

Bioengineering

Course level: Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Laboratory exercises exploring a variety of electronic transducers for measuring physical quantities such as temperature, force, displacement, sound, light, ionic potential; the use of circuits for low-level differential amplification and analog signal processing; and the use of microcomputers for digital sampling and display. Lectures cover principles explored in the laboratory exercises; construction, response and signal to noise of electronic transducers and actuators; and design of circuits for sensing and controlling physical quantities.

Final exam required. Instructor: Derenzo

EL ENG C145M/BIO ENG C145M Introductory Microcomputer Interfacing Laboratory 3 Units

Department: Electrical Engineering and Computer Sciences; Bioengineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: 40, CompSci 61B or a working knowledge of ANSI C programming or consent of instructor.

Laboratory exercises constructing basic interfacing circuits and writing 20-100 line C programs for data acquisition, storage, analysis, display, and control. Use of the IBM PC with microprogrammable digital counter/timer, parallel I/O port. Circuit components include anti-aliasing filters, the S/H amplifier, A/D and D/A converters. Exercises include effects of aliasing in periodic sampling, fast Fourier transforms of basic waveforms, the use of the Hanning filter for leakage reduction, Fourier analysis of the human voice, digital filters, and control using Fourier deconvolution. Lectures cover principles explored in the lab exercises and design of microcomputer-based systems for data acquisitions, analysis and control. Final exam required. Instructor: Derenzo

EL ENG C145O/BIO ENG C136L/INTEGBI C135L Laboratory in the Mechanics of Organisms 3 Units

Department: Electrical Engineering and Computer Sciences; Bioengineering; Integrative Biology

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of laboratory and 1 hour of discussion per week, plus 1 field trip.

Prerequisites: Integrative Biology 135 or consent of instructor; for Electrical Engineering and Computer Science students, Electrical Engineering 105, 120 or Computer Science 184.

Introduction to laboratory and field study of the biomechanics of animals and plants using fundamental biomechanical techniques and equipment. Course has a series of rotations involving students in experiments demonstrating how solid and fluid mechanics can be used to discover the way in which diverse organisms move and interact with their physical environment. The laboratories emphasize sampling methodology, experimental design, and statistical interpretation of results. Latter third of course devoted to independent research projects. Written reports and class presentation of project results are required.

Students will receive no credit for C135L after taking 135L. Final exam required. Formerly known as Integrative Biology 135L.

EL ENG 147 Introduction to Microelectromechanical Systems (MEMS) 3 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Prerequisites: Electrical Engineering 40 or 100 or consent of instructor.

This course will teach fundamentals of micromachining and microfabrication techniques, including planar thin-film process technologies, photolithographic techniques, deposition and etching techniques, and the other technologies that are central to MEMS fabrication. It will pay special attention to teaching of fundamentals necessary for the design and analysis of devices and systems in mechanical, electrical, fluidic, and thermal energy/signal domains, and will teach basic techniques for multi-domain analysis. Fundamentals of sensing and transduction mechanisms including capacitive and piezoresistive techniques, and design and analysis of micromachined miniature sensors and actuators using these techniques will be covered. Students will receive no credit for El Eng 147 after taking El Eng 247A. Final exam required. Instructors: Maharbiz, Nguyen, Pister

EL ENG C149/COMPSCI C149 Introduction to Embedded Systems 4 Units

Department: Electrical Engineering and Computer Sciences

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: 20N; Computer Science 61C; Computer Science 70 or Math 55.

This course introduces students to the basics of models, analysis tools, and control for embedded systems operating in real time. Students learn how to combine physical processes with computation. Topics include models of computation, control, analysis and verification, interfacing with the physical world, mapping to platforms, and distributed embedded systems. The course has a strong laboratory component, with emphasis on a semester-long sequence of projects.

Students will receive no credit for Electrical Engineering C149/Computer Science C149 after taking Electrical Engineering C249M/Computer Science C249M. Students may remove a deficient grade in Electrical Engineering C149/Computer Science C149 after taking Electrical Engineering 124. Final exam required. Instructors: Lee, Seshia

EL ENG 192 Mechatronic Design Laboratory 4 Units

Department: Electrical Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1.5 hours of Lecture and 10 hours of Laboratory per week for 15 weeks.

Prerequisites: 120, Computer Science 61B or 61C, 150 or equivalent. Design project course, focusing on application of theoretical principles in electrical engineering to control of a small-scale system, such as a mobile robot. Small teams of students will design and construct a mechatronic system incorporating sensors, actuators, and intelligence. Final exam required. Instructor: Fearing

EL ENG 194 Special Topics 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

Topics will vary semester to semester. See the Electrical Engineering announcements.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

EL ENG H196A Senior Honors Thesis Research 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Individual research.**Prerequisites:** Open only to students in the Electrical Engineering and Computer Science honors program.

Thesis work under the supervision of a faculty member. A minimum of four units must be taken; the units may be distributed between one and two semesters in any way. To obtain credit a satisfactory thesis must be submitted at the end of the two semesters to the Electrical and Engineering and Computer Science Department archive. Students who complete four units and a thesis in one semester receive a letter grade at the end of H196A. Students who do not, receive an IP in H196A and must enroll in H196B.

Final exam required.

EL ENG H196B Senior Honors Thesis Research 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** Individual research.**Prerequisites:** Open only to students in the Electrical Engineering and Computer Science honors program.

Thesis work under the supervision of a faculty member. A minimum of four units must be taken; the units may be distributed between one and two semesters in any way. To obtain credit a satisfactory thesis must be submitted at the end of the two semesters to the Electrical and Engineering and Computer Science Department archive. Students who complete four units and a thesis in one semester receive a letter grade at the end of H196A. Students who do not, receive an IP in H196A and must enroll in H196B.

Final exam required.

EL ENG 197 Field Study 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Fieldwork per week for 15 weeks. 2 to 7.5 hours of Fieldwork per week for 8 weeks. 2.5 to 10 hours of Fieldwork per week for 6 weeks.**Prerequisites:** Consent of instructor (see department adviser).

Students take part in organized individual field sponsored programs with off-campus companies or tutoring/mentoring relevant to specific aspects and applications of computer science on or off campus. Note Summer CPT or OPT students: written report required. Course does not count toward major requirements, but will be counted in the cumulative units toward graduation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** To vary with section.**Prerequisites:** 2.0 GPA or better; 60 units completed.

Group study of selected topics in electrical engineering, usually relating to new developments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 199 Supervised Independent Study 1 - 4 Units**Department:** Electrical Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences.**Prerequisites:** Consent of instructor and major adviser.

Supervised independent study. Enrollment restrictions apply.

Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

EL ENG 210 Applied Electromagnetic Theory 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 117, or Physics 110A, 110B.

Advanced treatment of classical electromagnetic theory with engineering applications. Boundary value problems in electrostatics. Applications of Maxwell's Equations to the study of waveguides, resonant cavities, optical fiber guides, Gaussian optics, diffraction, scattering, and antennas.

Final exam not required. Formerly known as 210A-210B.

EL ENG C213/AST C210 Soft X-rays and Extreme Ultraviolet Radiation 3 Units

Department: Electrical Engineering and Computer Sciences; Applied Science and Technology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Physics 110, 137, and Mathematics 53, 54 or equivalent.

This course will explore modern developments in the physics and applications of soft x-rays. It begins with a review of electromagnetic radiation at short wavelengths including dipole radiation, scattering and refractive index, using a semi-classical atomic model. Subject matter will include the generation of x-rays with laboratory tubes, synchrotron radiation, laser-plasma sources, x-ray lasers, and black body radiation. Concepts of spatial and temporal coherence will be discussed. Final exam not required. Formerly known as EI Engineering 290G.

EL ENG 215A Introduction to Robotics 4 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.

Prerequisites: 120 or equivalent, or consent of instructor.

An introduction to the kinematics, dynamics, and control of robot manipulators, robotic vision, and sensing. The course will cover forward and inverse kinematics of serial chain manipulators, the manipulator Jacobian, force relations, dynamics and control-position, and force control. Proximity, tactile, and force sensing. Network modeling, stability, and fidelity in teleoperation and medical applications of robotics. Students will receive no credit for 215A after taking C125/Bioengineering C125. Final exam required. Instructor: Bajcsy

EL ENG 218A Introduction to Optical Engineering 3 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week.

Fundamental principles of optical systems. Geometrical optics and aberration theory. Stops and apertures, prisms, and mirrors. Diffraction and interference. Optical materials and coatings. Radiometry and photometry. Basic optical devices and the human eye. The design of optical systems. Lasers, fiber optics, and holography. Students will receive no credit for Electrical Engineering 218A after taking Electrical Engineering 118 or 119. Final exam required. Instructor: Waller

EL ENG 219A Numerical Simulation and Modeling 4 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4 hours of Lecture per week for 15 weeks.

Prerequisites: Consent of instructor; a course in linear algebra and on circuits is very useful.

Numerical simulation and modeling are enabling technologies that pervade science and engineering. This course provides a detailed introduction to the fundamental principles of these technologies and their translation to engineering practice. The course emphasizes hands-on programming in MATLAB and application to several domains, including circuits, nanotechnology, and biology.

Final exam required. Instructor: Roychowdhury

EL ENG 219B Logic Synthesis 4 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Consent of instructor.

The course covers the fundamental techniques for the design and analysis of digital circuits. The goal is to provide a detailed understanding of basic logic synthesis and analysis algorithms, and to enable students to apply this knowledge in the design of digital systems and EDA tools. The course will present combinational circuit optimization (two-level and multi-level synthesis), sequential circuit optimization (state encoding, retiming), timing analysis, testing, and logic verification.

Final exam not required.

EL ENG 219C Computer-Aided Verification 3 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring. Offered alternate years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Consent of instructor; Computer Science 170 is recommended.

Introduction to the theory and practice of formal methods for the design and analysis of systems, with a focus on automated algorithmic techniques. Covers selected topics in computational logic and automata theory including formal models of reactive systems, temporal logic, model checking, and automated theorem proving. Applications in hardware and software verification, analysis of embedded, real-time, and hybrid systems, computer security, synthesis, planning, constraint solving, and other areas will be explored as time permits.

Final exam not required. Instructor: Seshia

EL ENG C219D/COMPSCI C219D Concurrent Models of Computation 3 Units**Department:** Electrical Engineering and Computer Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Theory and practice of concurrent models of computation (MoCs) with applications to software systems, embedded systems, and cyber-physical systems. Analysis for boundedness, deadlock, and determinacy; formal semantics (fixed point semantics and metric-space models); composition; heterogeneity; and model-based design. MoCs covered may include process networks, threads, message passing, synchronous/reactive, dataflow, rendezvous, time-triggered, discrete events, and continuous time.

Course may be repeated for credit with consent of instructor. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Lee

EL ENG C220A/MEC ENG C232 Advanced Control Systems I 3 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week. Input-output and state space representation of linear continuous and discrete time dynamic systems. Controllability, observability, and stability. Modeling and identification. Design and analysis of single and multi-variable feedback control systems in transform and time domain. State observer. Feedforward/preview control. Application to engineering systems.

Students will receive no credit for Electrical Engineering C220A after taking Mechanical Engineering 232. Course may be repeated for credit when topic changes. Final exam required. Instructors: Borrelli, Horowitz, Tomizuka, Tomlin

EL ENG C220B/MEC ENG C231A Experiential Advanced Control Design I 3 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Experience-based learning in the design of SISO and MIMO feedback controllers for linear systems. The student will master skills needed to apply linear control design and analysis tools to classical and modern control problems. In particular, the participant will be exposed to and develop expertise in two key control design technologies: frequency-domain control synthesis and time-domain optimization-based approach. Final exam required.

EL ENG C220C/MEC ENG C231B Experiential Advanced Control Design II 3 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Experience-based learning in the design, analysis, and verification of automatic control systems. The course emphasizes the use of computer-aided design techniques through case studies and design tasks. The student will master skills needed to apply advanced model-based control analysis, design, and estimation to a variety of industrial applications. The role of these specific design methodologies within the larger endeavor of control design is also addressed.

Final exam not required.

EL ENG 221A Linear System Theory 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Recitation per week for 15 weeks.**Prerequisites:** 120; Mathematics 110 recommended.

Basic system concepts; state-space and I/O representation. Properties of linear systems. Controllability, observability, minimality, state and output-feedback. Stability. Observers. Characteristic polynomial. Nyquist test.

Final exam required.

EL ENG 222 Nonlinear Systems--Analysis, Stability and Control 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 221A (may be taken concurrently).

Basic graduate course in non-linear systems. Second Order systems. Numerical solution methods, the describing function method, linearization. Stability - direct and indirect methods of Lyapunov. Applications to the Lure problem - Popov, circle criterion. Input-Output stability. Additional topics include: bifurcations of dynamical systems, introduction to the "geometric" theory of control for nonlinear systems, passivity concepts and dissipative dynamical systems.

Final exam not required.

EL ENG 223 Stochastic Systems: Estimation and Control 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 226A (which students are encouraged to take concurrently).

Parameter and state estimation. System identification. Nonlinear filtering. Stochastic control. Adaptive control.

Final exam required.

EL ENG 224A Digital Communications 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 120 and 126, or equivalent.

Introduction to the basic principles of the design and analysis of modern digital communication systems. Topics include source coding; channel coding; baseband and passband modulation techniques; receiver design; channel equalization; information theoretic techniques; block, convolutional, and trellis coding techniques; multiuser communications and spread spectrum; multi-carrier techniques and FDM; carrier and symbol synchronization. Applications to design of digital telephone modems, compact disks, and digital wireless communication systems are illustrated. The concepts are illustrated by a sequence of MATLAB exercises.

Final exam not required. Formerly known as 224.

EL ENG 224B Fundamentals of Wireless Communication 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 121, 226A, or equivalent.

Introduction of the fundamentals of wireless communication. Modeling of the wireless multipath fading channel and its basic physical parameters. Coherent and noncoherent reception. Diversity techniques over time, frequency, and space. Spread spectrum communication. Multiple access and interference management in wireless networks. Frequency reuse, sectorization. Multiple access techniques: TDMA, CDMA, OFDM. Capacity of wireless channels. Opportunistic communication. Multiple antenna systems: spatial multiplexing, space-time codes. Examples from existing wireless standards.

Final exam not required. Instructor: Tse

EL ENG 225A Digital Signal Processing 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 123 and 126 or solid background in stochastic processes.

Advanced techniques in signal processing. Stochastic signal processing, parametric statistical signal models, and adaptive filterings. Application to spectral estimation, speech and audio coding, adaptive equalization, noise cancellation, echo cancellation, and linear prediction.

Final exam required. Instructors: Gastpar, Bahai

EL ENG 225B Digital Image Processing 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 123

2-D sequences and systems, separable systems, projection slice thm, reconstruction from projections and partial Fourier information, Z transform, different equations, recursive computability, 2D DFT and FFT, 2D FIR filter design; human eye, perception, psychophysical vision properties, photometry and colorimetry, optics and image systems; image enhancement, image restoration, geometrical image modification, morphological image processing, halftoning, edge detection, image compression: scalar quantization, lossless coding, huffman coding, arithmetic coding dictionary techniques, waveform and transform coding DCT, KLT, Hadamard, multiresolution coding pyramid, subband coding, Fractal coding, vector quantization, motion estimation and compensation, standards: JPEG, MPEG, H.xxx, pre- and post-processing, scalable image and video coding, image and video communication over noisy channels.

Final exam required. Instructor: Zakhor

EL ENG C225E/BIO ENG C265 Principles of Magnetic Resonance Imaging 4 Units**Department:** Electrical Engineering and Computer Sciences; Bioengineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory and 1 hour of discussion per week.**Prerequisites:** Either Electrical Engineering 120 or Bioengineering C165/ Electrical Engineering C145B or consent of instructor.

Fundamentals of MRI including signal-to-noise ratio, resolution, and contrast as dictated by physics, pulse sequences, and instrumentation. Image reconstruction via 2D FFT methods. Fast imaging reconstruction via convolution-back projection and gridding methods and FFTs. Hardware for modern MRI scanners including main field, gradient fields, RF coils, and shim supplies. Software for MRI including imaging methods such as 2D FT, RARE, SSFP, spiral and echo planar imaging methods.

Course Objectives: Graduate level understanding of physics, hardware, and systems engineering description of image formation, and image reconstruction in MRI. Experience in Imaging with different MR Imaging systems. This course should enable students to begin graduate level research at Berkeley (Neuroscience labs, EECS and Bioengineering), LBNL or at UCSF (Radiology and Bioengineering) at an advanced level and make research-level contribution

Students will receive no credit for Bioengineering C265/EI Engineering C225E after taking EI Engineering 265. Final exam not required.

Instructors: Lustig, Conolly

EL ENG 225D Audio Signal Processing in Humans and Machines 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 123 or equivalent; Statistics 200A or equivalent; or graduate standing and consent of instructor.

Introduction to relevant signal processing and basics of pattern recognition. Introduction to coding, synthesis, and recognition. Models of speech and music production and perception. Signal processing for speech analysis. Pitch perception and auditory spectral analysis with applications to speech and music. Vocoder and music synthesizers. Statistical speech recognition, including introduction to Hidden Markov Model and Neural Network approaches.

Final exam not required. Instructor: Morgan

EL ENG 226A Random Processes in Systems 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 120 and Statistics 200A or equivalent.

Probability, random variables and their convergence, random processes. Filtering of wide sense stationary processes, spectral density, Wiener and Kalman filters. Markov processes and Markov chains. Gaussian, birth and death, poisson and shot noise processes. Elementary queueing analysis. Detection of signals in Gaussian and shot noise, elementary parameter estimation.

Final exam required. Formerly known as 226. Instructor: Anantharam

EL ENG 226B Applications of Stochastic Process Theory 2 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 226A.

Advanced topics such as: Martingale theory, stochastic calculus, random fields, queueing networks, stochastic control.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Instructors: Anantharam, Varaiya

EL ENG 227AT Optimization Models in Engineering 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 54 or equivalent or consent of instructor.

This course offers an introduction to optimization models and their applications, ranging from machine learning and statistics to decision-making and control, with emphasis on numerically tractable problems, such as linear or constrained least-squares optimization.

Students will receive no credit for Electrical Engineering 227AT after taking Electrical Engineering 127. Final exam required. Instructor: El Ghaoui

EL ENG 227BT Convex Optimization 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Mathematics 54 and Statistics 2 or equivalents.

Convex optimization is a class of nonlinear optimization problems where the objective to be minimized, and the constraints, are both convex. The course covers some convex optimization theory and algorithms, and describes various applications arising in engineering design, machine learning and statistics, finance, and operations research. The course includes laboratory assignments, which consist of hands-on experiments with the optimization software CVX, and a discussion section.

Final exam not required. Formerly known as Electrical Engineering 227A. Instructors: El Ghaoui, Wainwright

EL ENG C227A/IND ENG C227A Introduction to Convex Optimization 4 Units**Department:** Electrical Engineering and Computer Sciences; Industrial Engin and Oper Research**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks.

Convex optimization is a class of nonlinear optimization problems where the objectives to be minimized, and the constraints, are both convex. Contrary to the more classical linear programming framework, convex programs often go unrecognized, and this is a pity since a large class of convex optimization problems can now be efficiently solved. In addition, it is possible to address hard, non-convex problems (such as "combinatorial optimization" problems) using convex approximations that are more efficient than classical linear ones. The course covers some convex optimization theory and algorithms, and describes various applications arising in engineering design, machine learning and statistics, finance, and operations research. The course includes laboratory assignments, which consist of hands-on experience.

Final exam not required. Instructors: El Ghaoui, Wainwright

EL ENG C227B/IND ENG C227B Convex Optimization and Approximation 3 Units

Department: Electrical Engineering and Computer Sciences; Industrial Engin and Oper Research

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 227A or consent of instructor.

Convex optimization as a systematic approximation tool for hard decision problems. Approximations of combinatorial optimization problems, of stochastic programming problems, of robust optimization problems (i.e., with optimization problems with unknown but bounded data), of optimal control problems. Quality estimates of the resulting approximation. Applications in robust engineering design, statistics, control, finance, data mining, operations research.

Final exam required. Instructor: El Ghaoui

EL ENG C227C/IND ENG C227B Convex Optimization and Approximation 3 Units

Department: Electrical Engineering and Computer Sciences; Industrial Engin and Oper Research

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

Prerequisites: 227A or consent of instructor.

Convex optimization as a systematic approximation tool for hard decision problems. Approximations of combinatorial optimization problems, of stochastic programming problems, of robust optimization problems (i.e., with optimization problems with unknown but bounded data), of optimal control problems. Quality estimates of the resulting approximation. Applications in robust engineering design, statistics, control, finance, data mining, operations research.

Final exam required. Instructor: El Ghaoui

EL ENG 228A High Speed Communications Networks 3 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 122, 226A (may be taken concurrently).

Descriptions, models, and approaches to the design and management of networks. Optical transmission and switching technologies are described and analyzed using deterministic, stochastic, and simulation models.

FDDI, DQDB, SMDS, Frame Relay, ATM, networks, and SONET.

Applications demanding high-speed communication.

Final exam not required.

EL ENG 229A Information Theory and Coding 3 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring. Offered alternate years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 226 recommended, Statistics 200A or equivalent.

Fundamental bounds of Shannon theory and their application. Source and channel coding theorems. Galois field theory, algebraic error-correction codes. Private and public-key cryptographic systems.

Final exam required. Formerly known as 229. Instructors: Anantharam, Tse

EL ENG 229B Error Control Coding 3 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 126 or equivalent (some familiarity with basic probability).

Prior exposure to information theory not necessary.

Error control codes are an integral part of most communication and recording systems where they are primarily used to provide resiliency to noise. In this course, we will cover the basics of error control coding for reliable digital transmission and storage. We will discuss the major classes of codes that are important in practice, including Reed Muller codes, cyclic codes, Reed Solomon codes, convolutional codes, concatenated codes, turbo codes, and low density parity check codes. The relevant background material from finite field and polynomial algebra will be developed as part of the course. Overview of topics: binary linear block codes; Reed Muller codes; Galois fields; linear block codes over a finite field; cyclic codes; BCH and Reed Solomon codes; convolutional codes and trellis based decoding, message passing decoding algorithms; trellis based soft decision decoding of block codes; turbo codes; low density parity check codes.

Final exam required. Instructor: Anatharam

EL ENG 230A Integrated-Circuit Devices 4 Units

Department: Electrical Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: 40 or 100.

Overview of electronic properties of semiconductors. Metal-semiconductor contacts, pn junctions, bipolar transistors, and MOS field-effect transistors. Properties that are significant to device operation for integrated circuits. Silicon device fabrication technology.

Students will receive no credit for Electrical Engineering 230A after taking Electrical Engineering 130. Final exam required. Formerly known as Electrical Engineering 230M.

EL ENG 230B Solid State Devices 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 130 or equivalent.

Physical principles and operational characteristics of semiconductor devices. Emphasis is on MOS field-effect transistors and their behaviors dictated by present and probable future technologies. Metal-oxide-semiconductor systems, short-channel and high field effects, device modeling, and impact on analog, digital circuits.

Final exam not required. Formerly known as Electrical Engineering 231.

Instructors: Subramanian, King Liu, Salahuddin

EL ENG 230C Solid State Electronics 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 131; Physics 137B.

Crystal structure and symmetries. Energy-band theory. Cyclotron resonance. Tensor effective mass. Statistics of electronic state population. Recombination theory. Carrier transport theory. Interface properties. Optical processes and properties.

Final exam required. Formerly known as Electrical Engineering 230.

Instructors: Bokor, Salahuddin

EL ENG W230A Integrated-Circuit Devices 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. 4.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 10 weeks. This is an online course.**Prerequisites:** MAS-IC students only.

Overview of electronic properties of semiconductors. Metal-semiconductor contacts, pn junctions, bipolar transistors, and MOS field-effect transistors. Properties that are significant to device operation for integrated circuits. Silicon device fabrication technology.

Students will receive no credit for Electrical Engineering W230A after taking Electrical Engineering 130, Electrical Engineering W130 or Electrical Engineering 230A. Final exam required. Formerly known as Electrical Engineering W130. Instructors: Javey, Subramanian, King Liu

EL ENG W230B Solid State Devices 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. 4.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 10 weeks. This is an online course.**Prerequisites:** EE W230A or equivalent; MAS-IC students only.

Physical principles and operational characteristics of semiconductor devices. Emphasis is on MOS field-effect transistors and their behaviors dictated by present and probable future technologies. Metal-oxide-semiconductor systems, short-channel and high field effects, device modeling, and impact on analog, digital circuits.

Students will receive no credit for EE W230B after taking EE 230B. Final exam not required. Formerly known as Electrical Engineering W231.

Instructors: Subramanian, King Liu, Salahuddin

EL ENG 232 Lightwave Devices 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Electrical Engineering 130 or equivalent; Physics 137A and Electrical Engineering 117 recommended.

This course is designed to give an introduction and overview of the fundamentals of optoelectronic devices. Topics such as optical gain and absorption spectra, quantization effects, strained quantum wells, optical waveguiding and coupling, and hetero p-n junction will be covered. This course will focus on basic physics and design principles of semiconductor diode lasers, light emitting diodes, photodetectors and integrated optics. Practical applications of the devices will be also discussed.

Final exam required. Instructor: Wu

EL ENG C235/NSE C203 Nanoscale Fabrication 4 Units**Department:** Electrical Engineering and Computer Sciences; Nanoscale Science and Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course discusses various top-down and bottom-up approaches to synthesizing and processing nanostructured materials. The topics include fundamentals of self assembly, nano-imprint lithography, electron beam lithography, nanowire and nanotube synthesis, quantum dot synthesis (strain patterned and colloidal), postsynthesis modification (oxidation, doping, diffusion, surface interactions, and etching techniques). In addition, techniques to bridging length scales such as heterogeneous integration will be discussed. We will discuss new electronic, optical, thermal, mechanical, and chemical properties brought forth by the very small sizes.

Final exam not required. Instructor: Chang-Hasnain

EL ENG 236A Quantum and Optical Electronics 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 117A, Physics 137A or equivalent.

Interaction of radiation with atomic and semiconductor systems, density matrix treatment, semiclassical laser theory (Lamb's), laser resonators, specific laser systems, laser dynamics, Q-switching and mode-locking, noise in lasers and optical amplifiers. Nonlinear optics, phase-conjugation, electrooptics, acoustooptics and magneto-optics, coherent optics, stimulated Raman and Brillouin scattering.

Final exam required.

EL ENG C239/AST C239 Partially Ionized Plasmas 3 Units**Department:** Electrical Engineering and Computer Sciences; Applied Science and Technology**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Forty-5 hours of lecture per term.**Prerequisites:** An upper division course in electromagnetics or fluid dynamics.

Introduction to partially ionized, chemically reactive plasmas, including collisional processes, diffusion, sources, sheaths, boundaries, and diagnostics. DC, RF, and microwave discharges. Applications to plasma-assisted materials processing and to plasma wall interactions.

Final exam required. Formerly known as 239.

EL ENG 240A Analog Integrated Circuits 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 105.

Single and multiple stage transistor amplifiers. Operational amplifiers. Feedback amplifiers, 2-port formulation, source, load, and feedback network loading. Frequency response of cascaded amplifiers, gain-bandwidth exchange, compensation, dominant pole techniques, root locus. Supply and temperature independent biasing and references. Selected applications of analog circuits such as analog-to-digital converters, switched capacitor filters, and comparators. Hardware laboratory and design project.

Students will receive no credit for Electrical Engineering 240A after taking Electrical Engineering 140. Final exam required. Instructors: Sanders, Nguyen

EL ENG 240B Advanced Analog Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 140

Analysis and optimized design of monolithic operational amplifiers and wide-band amplifiers; methods of achieving wide-band amplification, gain-bandwidth considerations; analysis of noise in integrated circuits and low noise design. Precision passive elements, analog switches, amplifiers and comparators, voltage reference in NMOS and CMOS circuits, Serial, successive-approximation, and parallel analog-to-digital converters. Switched-capacitor and CCD filters. Applications to codecs, modems. Final exam required. Formerly known as Electrical Engineering 240.

EL ENG 240C Analysis and Design of VLSI Analog-Digital Interface Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Electrical Engineering 140.

Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS and BiCMOS VLSI technology. Analog-digital converters, digital-analog converters, sample/hold amplifiers, continuous and switched-capacitor filters. RF integrated electronics including synthesizers, LNA's, and baseband processing. Low power mixed signal design. Data communications functions including clock recovery. CAD tools for analog design including simulation and synthesis.

Final exam required. Formerly known as Electrical Engineering 247.

Instructor: Boser

EL ENG W240A Analog Integrated Circuits 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. 4.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 10 weeks. This is an online course.**Prerequisites:** MAS-IC students only.

Single and multiple stage transistor amplifiers. Operational amplifiers. Feedback amplifiers, 2-port formulation, source, load, and feedback network loading. Frequency response of cascaded amplifiers, gain-bandwidth exchange, compensation, dominant pole techniques, root locus. Supply and temperature independent biasing and references. Selected applications of analog circuits such as analog-to-digital converters, switched capacitor filters, and comparators.

Students will receive no credit for EE W240A after taking EE 140 or EE 240A. Final exam required. Instructors: Alon, Sanders, Nguyen

EL ENG W240B Advanced Analog Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture per week for 15 weeks. 4.5 hours of Web-based lecture per week for 10 weeks. This is an online course.**Prerequisites:** EE W240A; MAS-IC students only.

Analysis and optimized design of monolithic operational amplifiers and wide-band amplifiers; methods of achieving wide-band amplification, gain-bandwidth considerations; analysis of noise in integrated circuits and low noise design. Precision passive elements, analog switches, amplifiers and comparators, voltage reference in NMOS and CMOS circuits, Serial, successive-approximation, and parallel analog-to-digital converts. Switched-capacitor and CCD filters. Applications to codecs, modems.

Students will receive no credit for EE W240B after taking EE 240B. Final exam not required. Formerly known as Electrical Engineering W240.

EL ENG W240C Analysis and Design of VLSI Analog-Digital Interface Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture per week for 15 weeks. 4.5 hours of Web-based lecture per week for 10 weeks. This is an online course.**Prerequisites:** EE W240A; MAS-IC students only.

Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in modern CMOS and BiCMOS VLSI technology. Analog-digital converters, digital-analog converters, sample/hold amplifiers, continuous and switched-capacitor filters. Low power mixed signal design techniques. Data communications systems including interface circuitry. CAD tools for analog design for simulation and synthesis.

Students will receive no credit for EE W240C after taking EE 240C. Final exam not required. Formerly known as Electrical Engineering W247.

Instructor: Boser

EL ENG 241A Introduction to Digital Integrated Circuits 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Electrical Engineering 40; Electrical Engineering 105 and Computer Science 150 recommended.

CMOS devices and deep sub-micron manufacturing technology. CMOS inverters and complex gates. Modeling of interconnect wires. Optimization of designs with respect to a number of metrics: cost, reliability, performance, and power dissipation. Sequential circuits, timing considerations, and clocking approaches. Design of large system blocks, including arithmetic, interconnect, memories, and programmable logic arrays. Introduction to design methodologies, including hands-on laboratory experience.

Students will receive no credit for Electrical Engineering 241A after taking Electrical Engineering 141. Final exam required. Instructors: Alon, Rabaey, Nikolic

EL ENG 241B Advanced Digital Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 141

Analysis and design of MOS and bipolar large-scale integrated circuits at the circuit level. Fabrication processes, device characteristics, parasitic effects static and dynamic digital circuits for logic and memory functions. Calculation of speed and power consumption from layout and fabrication parameters. ROM, RAM, EEPROM circuit design. Use of SPICE and other computer aids.

Final exam not required. Formerly known as Electrical Engineering 241. Instructors: Nikolic, Rabaey

EL ENG W241A Introduction to Digital Integrated Circuits 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** F/Sp: 3 hours of web-based lecture, 1 hour of web-based discussion, and 3 hours of web-based laboratory per week. Su: 4.5 hours of web-based lecture, 1.5 hours of web-based discussion, and 4.5 hours of web-based laboratory per week for 10 weeks. This is an online course.**Prerequisites:** MAS-IC students only.

CMOS devices and deep sub-micron manufacturing technology. CMOS inverters and complex gates. Modeling of interconnect wires. Optimization of designs with respect to a number of metrics: cost, reliability, performance, and power dissipation. Sequential circuits, timing considerations, and clocking approaches. Design of large system blocks, including arithmetic, interconnect, memories, and programmable logic arrays. Introduction to design methodologies, including laboratory experience.

Students will receive no credit for W241A after taking EE 141 or EE 241A. Final exam required. Instructors: Alon, Rabaey, Nikolic

EL ENG W241B Advanced Digital Integrated Circuits 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture per week for 15 weeks. 4.5 hours of Web-based lecture per week for 10 weeks. This is an online course.**Prerequisites:** EE W241A; MAS-IC students only.

Analysis and design of MOS and bipolar large-scale integrated circuits at the circuit level. Fabrication processes, device characteristics, parasitic effects static and dynamic digital circuits for logic and memory functions. Calculation of speed and power consumption from layout and fabrication parameters. ROM, RAM, EEPROM circuit design. Use of SPICE and other computer aids.

Students will receive no credit for EE W241B after taking EE 241B. Final exam not required. Formerly known as Electrical Engineering W241.

Instructors: Nikolic, Rabaey

EL ENG 242A Integrated Circuits for Communications 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 20N and 140 or equivalent.

Analysis and design of electronic circuits for communication systems, with an emphasis on integrated circuits for wireless communication systems.

Analysis of noise and distortion in amplifiers with application to radio receiver design. Power amplifier design with application to wireless radio transmitters. Radio-frequency mixers, oscillators, phase-locked loops, modulators, and demodulators.

Students will receive no credit for Electrical Engineering 242A after taking Electrical Engineering 142. Final exam required. Formerly known as Electrical Engineering 242M.

EL ENG 242B Advanced Integrated Circuits for Communications 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 142, 240.

Analysis, evaluation and design of present-day integrated circuits for communications application, particularly those for which nonlinear response must be included. MOS, bipolar and BICMOS circuits, audio and video power amplifiers, optimum performance of near-sinusoidal oscillators and frequency-translation circuits. Phase-locked loop ICs, analog multipliers and voltage-controlled oscillators; advanced components for telecommunication circuits. Use of new CAD tools and systems.

Final exam required. Formerly known as Electrical Engineering 242.

Instructor: Niknejad

EL ENG W242A Integrated Circuits for Communications 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. 4.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 10 weeks. EL ENG 243 Advanced IC Processing and Layout 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 143 and either 140 or 141.

The key processes for the fabrication of integrated circuits. Optical, X-ray, and e-beam lithography, ion implantation, oxidation and diffusion. Thin film deposition. Wet and dry etching and ion milling. Effect of phase and defect equilibria on process control.

Final exam required.

EL ENG 244 Fundamental Algorithms for Systems Modeling, Analysis, and Optimization 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

The modeling, analysis, and optimization of complex systems requires a range of algorithms and design software. This course reviews the fundamental techniques underlying the design methodology for complex systems, using integrated circuit design as example. Topics include design flows, discrete and continuous models and algorithms, and strategies for implementing algorithms efficiently and correctly in software. Laboratory assignments and a class project will expose students to state-of-the-art.

Final exam not required. Instructors: Keutzer, Lee, Roychowdhury, Seshia

EL ENG W244 Fundamental Algorithms for System Modeling, Analysis, and Optimization 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Web-based lecture per week for 15 weeks. 4.5 hours of Web-based lecture per week for 10 weeks. This is an online course.

Prerequisites: MAS-IC students only.

The modeling, analysis, and optimization of complex systems require a range of algorithms and design tools. This course reviews the fundamental techniques underlying the design methodology for complex systems, using integrated circuit design as an example. Topics include design flows, discrete and continuous models and algorithms, and strategies for implementing algorithms efficiently and correctly in software. Students will receive no credit for W244 after taking 144 and 244. Final exam not required. Instructors: Keutzer, Lee, Roychowdhury, Seshia

EL ENG C246/MEC ENG C219 Parametric and Optimal Design of MEMS 3 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Parametric design and optimal design of MEMS. Emphasis on design, not fabrication. Analytic solution of MEMS design problems to determine the dimensions of MEMS structures for specified function. Trade-off of various performance requirements despite conflicting design requirements. Structures include flexure systems, accelerometers, and rate sensors. Final exam not required. Formerly known as 219. Instructors: Lin, Pisano

EL ENG 247A Introduction to Microelectromechanical Systems (MEMS) 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Electrical Engineering 40 or 100 or consent of instructor required.

This course will teach fundamentals of micromachining and microfabrication techniques, including planar thin-film process technologies, photolithographic techniques, deposition and etching techniques, and the other technologies that are central to MEMS fabrication. It will pay special attention to teaching of fundamentals necessary for the design and analysis of devices and systems in mechanical, electrical, fluidic, and thermal energy/signal domains, and will teach basic techniques for multi-domain analysis. Fundamentals of sensing and transduction mechanisms including capacitive and piezoresistive techniques, and design and analysis of micromachined miniature sensors and actuators using these techniques will be covered. Students will receive no credit for EE 247A after taking EE 147. Final exam not required. Instructors: Maharbiz, Nguyen, Pister

EL ENG C247B/MEC ENG C218 Introduction to MEMS Design 4 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing in engineering or science; undergraduates with consent of instructor.

Physics, fabrication, and design of micro-electromechanical systems (MEMS). Micro and nanofabrication processes, including silicon surface and bulk micromachining and non-silicon micromachining. Integration strategies and assembly processes. Microsensor and microactuator devices: electrostatic, piezoresistive, piezoelectric, thermal, magnetic transduction. Electronic position-sensing circuits and electrical and mechanical noise. CAD for MEMS. Design project is required. Final exam required. Instructors: Nguyen, Pister

EL ENG W247B Introduction to MEMS Design 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture and 1 hour of Web-based discussion per week for 15 weeks. 4.5 hours of Web-based lecture and 1.5 hours of Web-based discussion per week for 10 weeks. This is an online course.**Prerequisites:** MAS-IC students only.

Physics, fabrication and design of micro electromechanical systems (MEMS). Micro and nano-fabrication processes, including silicon surface and bulk micromachining and non-silicon micromachining. Integration strategies and assembly processes. Microsensor and microactuator devices: electrostatic, piezoresistive, piezoelectric, thermal, and magnetic transduction. Electronic position-sensing circuits and electrical and mechanical noise. CAD for MEMS. Design project is required. Students will receive no credit for EE W247B after taking EE C247B or Mechanical Engineering C218. Final exam not required. Formerly known as Electrical Engineering W245. Instructors: Nguyen, Pister

EL ENG C249/CIV ENG C289 Embedded System Design: Modeling, Analysis, and Synthesis 4 Units**Department:** Electrical Engineering and Computer Sciences; Civil and Environmental Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 2 hours of Laboratory per week for 15 weeks.

Principles of embedded system design. Focus on design methodologies and foundations. Platform-based design and communication-based design and their relationship with design time, re-use, and performance. Models of computation and their use in design capture, manipulation, verification, and synthesis. Mapping into architecture and systems platforms. Performance estimation. Scheduling and real-time requirements. Synchronous languages and time-triggered protocols to simplify the design process.

Final exam not required. Instructor: Sangiovanni-Vincentelli

EL ENG C249A/COMPSCI C249A Introduction to Embedded Systems 4 Units**Department:** Electrical Engineering and Computer Sciences**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

This course introduces students to the basics of models, analysis tools, and control for embedded systems operating in real time. Students learn how to combine physical processes with computation. Topics include models of computation, control, analysis and verification, interfacing with the physical world, mapping to platforms, and distributed embedded systems. The course has a strong laboratory component, with emphasis on a semester-long sequence of projects.

Students will receive no credit for El Eng/Comp Sci C249A after taking El Eng/Comp Sci C149. Final exam required. Formerly known as Electrical Engineering C249M/Computer Science C249M. Instructors: Lee, Seshia

EL ENG 290A Advanced Topics in Electrical Engineering: Advanced Topics in Computer-Aided Design 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290B Advanced Topics in Electrical Engineering: Advanced Topics in Solid State Devices 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290C Advanced Topics in Electrical Engineering: Advanced Topics in Circuit Design 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290D Advanced Topics in Electrical Engineering: Advanced Topics in Semiconductor Technology 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290F Advanced Topics in Electrical Engineering: Advanced Topics in Photonics 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290N Advanced Topics in Electrical Engineering: Advanced Topics in System Theory 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290O Advanced Topics in Electrical Engineering: Advanced Topics in Control 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290P Advanced Topics in Electrical Engineering: Advanced Topics in Bioelectronics 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290Q Advanced Topics in Electrical Engineering: Advanced Topics in Communication Networks 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290S Advanced Topics in Electrical Engineering: Advanced Topics in Communications and Information Theory 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 290T Advanced Topics in Electrical Engineering: Advanced Topics in Signal Processing 1 - 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG W290C Advanced Topics in Circuit Design 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Web-based lecture per week for 15 weeks. 4.5 hours of Web-based lecture per week for 10 weeks. This is an online course.**Prerequisites:** MAS-IC students only.

Seminar-style course presenting an in-depth perspective on one specific domain of integrated circuit design. Most often, this will address an application space that has become particularly relevant in recent times. Examples are serial links, ultra low-power design, wireless transceiver design, etc.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Students will receive no credit for W290C after taking 290C. Final exam not required.

EL ENG 290Y Advanced Topics in Electrical Engineering: Organic Materials in Electronics 3 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 130; undergraduate general chemistry.

Organic materials are seeing increasing application in electronics applications. This course will provide an overview of the properties of the major classes of organic materials with relevance to electronics. Students will study the technology, physics, and chemistry of their use in the three most rapidly growing major applications--energy conversion/generation devices (fuel cells and photovoltaics), organic light-emitting diodes, and organic transistors.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Subramanian

EL ENG C291/CIV ENG C291F/MEC ENG C236 Control and Optimization of Distributed Parameters Systems 3 Units**Department:** Electrical Engineering and Computer Sciences; Civil and Environmental Engineering; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Engineering 77, Mathematics 54 (or equivalent), or consent of instructor.

Distributed systems and PDE models of physical phenomena (propagation of waves, network traffic, water distribution, fluid mechanics, electromagnetism, blood vessels, beams, road pavement, structures, etc.). Fundamental solution methods for PDEs: separation of variables, self-similar solutions, characteristics, numerical methods, spectral methods. Stability analysis. Adjoint-based optimization. Lyapunov stabilization. Differential flatness. Viability control. Hamilton-Jacobi-based control.

Final exam not required.

EL ENG C291E/MEC ENG C290S Hybrid Systems and Intelligent Control 3 Units**Department:** Electrical Engineering and Computer Sciences; Mechanical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Analysis of hybrid systems formed by the interaction of continuous time dynamics and discrete-event controllers. Discrete-event systems models and language descriptions. Finite-state machines and automata. Model verification and control of hybrid systems. Signal-to-symbol conversion and logic controllers. Adaptive, neural, and fuzzy-control systems. Applications to robotics and Intelligent Vehicle and Highway Systems (IVHS).

Final exam not required. Formerly known as 291E.

EL ENG 298 Group Studies, Seminars, or Group Research 1 - 4 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 4 hours of lectures per unit.

Advanced study in various subjects through special seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 299 Individual Research 1 - 12 Units**Department:** Electrical Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent, individual study or investigation.

Independent, individual study or investigation. Forty-5 hours of work per unit per term.

Investigation of problems in electrical engineering.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EL ENG 375 Teaching Techniques for Electrical Engineering 1 Unit**Department:** Electrical Engineering**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

Weekly seminars and discussions of effective teaching techniques. Use of educational objectives, alternative forms of instruction, and special techniques for teaching key concepts and techniques in electrical engineering. Student and self-evaluation. Course is intended to orient new graduate student instructors to teaching in the Electrical Engineering Department at Berkeley.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Electrical Engineering 301.

EL ENG 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** Electrical Engineering**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Forty-5 hours of work per unit per term. Independent study, in consultation with faculty member.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

Energy and Resources Group (ENE,RES)

ENE,RES 24 Freshman Seminar 1 Unit

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman Seminars are offered in all campus departments, and topics may vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ENE,RES 98 Directed Group Study for Lower Division Students 1 - 4 Units

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Hours to be arranged.

Lectures and small group discussions focusing on topics of interest that vary from semester to semester.

Course may be repeated with consent of department. Course may be repeated with consent of department. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENE,RES 99 Supervised Independent Studies for Freshmen and Sophomores 1 - 4 Units

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Offered for pass/not pass grade only.

Hours and format: Independent study.

Prerequisites: Consent of faculty adviser directing research; lower division standing (3.3 GPA or better).

Supervised research on specific topics related to energy and resources. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENE,RES C100/PUB POL C184 Energy and Society 4 Units

Department: Energy and Resources; Energy and Resources Group; Public Policy

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture and 1 hour of discussion per week, plus 8 hours of outside readings, research, papers, and work.

Energy sources, uses, and impacts: an introduction to the technology, politics, economics, and environmental effects of energy in contemporary society. Energy and well-being; energy in international perspective, origins, and character of energy crisis.

Final exam required. Instructor: Kammen

ENE,RES 101 Ecology and Society 3 Units

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: One college level course, or high school Advanced Placement, in either physics or biology; introductory calculus.

This course introduces students to the many ways in which our lives are intertwined with the ecosystems around us. Topics will include ecological limits to growth, climate change and other threats to biodiversity, the value of ecosystem goods and services, the ecology of disease, ecotoxicology, the evolution of cooperation in ecosystems, industrial ecology, and the epistemology of ecology. Offered alternate years.

Final exam required. Instructor: Harte

ENE,RES 102 Quantitative Aspects of Global Environmental Problems 4 Units

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: Upper division standing; calculus (Math 1A-1B or 16A-16B); physics (7A-7B or 8A-8B), chemistry (1A or 4A), biology (1B or 11), or consent of instructor.

Human disruption of biogeochemical and hydrological cycles; causes and consequences of climate change and acid deposition; transport and health impacts of pollutants; loss of species; radioactivity in the environment; epidemics.

Final exam required. Instructor: Harte

ENE,RES 170 Environmental Classics 3 Units

Department: Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Upper division standing.

Motivation: What is the history and evolution of environmental thinking and writing? How have certain "environmental classics" shaped the way in which we think about nature, society, and development? This course will use a selection of 20th-century books and papers that have had a major impact on academic and wider public thinking about the environment and development to probe these issues. The selection includes works and commentaries related to these works that have influenced environmental politics and policy in the U.S. as well as in the developing world. Through the classics and their critiques, reviews, and commentaries, the class will explore the evolution of thought on these transforming ideas.

Final exam required. Instructors: Kammen, Ray

ENE,RES 175 Water and Development 4 Units**Department:** Energy and Resources Group**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** Upper division standing or consent of instructor.

This course introduces students to water policy in developing countries. It is a course motivated by the fact that over one billion people in developing countries have no access to safe drinking water, three billion do not have sanitation facilities, and many millions of small farmers do not have reliable water supplies to ensure a healthy crop. Readings and discussions will cover: the problems of water access and use in developing countries; the potential for technological, social, and economic solutions to these problems; the role of institutions in access to water and sanitation; and the pitfalls of the assumptions behind some of today's popular "solutions."

Final exam not required. Instructor: Ray

ENE,RES C180/ENVECON C180 Ecological Economics in Historical Context 3 Units**Department:** Energy and Resources; Energy and Resources Group; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Economists through history have explored economic and environmental interactions, physical limits to growth, what constitutes the good life, and how economic justice can be assured. Yet economists continue to use measures and models that simplify these issues and promote bad outcomes. Ecological economics responds to this tension between the desire for simplicity and the multiple perspectives needed to understand complexity in order to move toward sustainable, fulfilling, just economies. Final exam required. Instructor: Norgaard

ENE,RES 190 Seminar in Energy, Environment, Development and Security Issues 3 Units**Department:** Energy and Resources Group**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks. 15 hours of Lecture per week for 3 weeks.**Prerequisites:** Upper division standing and consent of instructor.

Critical, cross disciplinary analysis of specific issues or general problems of how people interact with environmental and resource systems. More than one section may be given each semester on different topics depending on faculty and student interest. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ENE,RES 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units**Department:** Energy and Resources Group**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Upper division standing, plus particular courses to be specified by instructor.

Group studies of selected topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Energy and Resources Group**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Enrollment restricted by regulations in General Catalog. Individual conferences.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES C200/PUB POL C284 Energy and Society 4 Units**Department:** Energy and Resources; Energy and Resources Group; Public Policy**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week, plus 8 hours of outside readings, research, papers, and work.

Energy sources, uses, and impacts; an introduction to the technology, politics, economics, and environmental effects of energy in contemporary society. Energy and well-being; energy international perspective, origins, and character of energy crisis.

Final exam not required. Instructor: Kammen

ENE,RES 201 Interdisciplinary Analysis in Energy and Resources 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open to ERG graduate students only or consent of instructor.

Introduction to interdisciplinary analysis as it is practiced in the ERG. Most of the course consists of important perspectives on energy and resource issues, introduced through a particularly influential book or set of papers. The course also provides an introduction to the current research activities of the ERG faculty as well as practical knowledge and skills necessary to successfully complete graduate school in an interdisciplinary program. Final exam not required. Instructors: Harte, Kammen, Ray

ENE,RES C202/ESPM C211 Modeling Ecological and Meteorological Phenomena 3 Units

Department: Energy and Resources; Energy and Resources Group; Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Integrative Biology 102 or consent of instructor.

Modeling methods in ecology and meteorology; stability analysis; effects of anthropogenic stress on natural systems. Offered alternate years.

Final exam not required. Instructor: Harte

ENE,RES C205/ESPM C205/INTEGBI C205 Quantitative Methods for Ecological and Environmental Modeling 3 Units

Department: Energy and Resources; Energy and Resources Group; Environ Sci, Policy, and Management; Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Consent of instructor.

This course will review the background mathematical and statistical tools necessary for students interested in pursuing ecological and environmental modeling. Topics include linear algebra; difference equation, ordinary differential equation, and partial differential equation models; stochastic processes; parameter estimation; and a number of statistical techniques. This course will be recommended as a prerequisite for advanced modeling courses in Integrative Biology, Energy and Resources Group, and Environmental Science, Policy, and Management. Final exam not required.

ENE,RES C221/DEVP C221/PUB POL C221 Climate, Energy and Development 3 Units

Department: Energy and Resources; Development Practice; Energy and Resources Group; Public Policy

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

Prerequisites: Graduate student standing or consent of instructor.

Graduate seminar examining the role of energy science, technology, and policy in international development. The course will look at how changes in the theory and practice of energy systems and of international development have co-evolved over the past half-century, and what opportunities exist going forward.

A focus will be on rural and decentralized energy use, and the issues of technology, culture, and politics that are raised by both current trajectories, and potential alternative energy choices. We will explore the frequently divergent ideas about energy and development that have emerged from civil society, academia, multinational development agencies, and the private and industrial sector.

Final exam required. Instructor: Kammen

ENE,RES C226/MAT SCI C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market 3 Units

Department: Energy and Resources; Energy and Resources Group; Materials Science and Engineering

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Material Science and Mineral Engineering 111 or 123 or equivalent. Should have a firm foundation in electronic and optical props of semiconductors and basic semiconductor device physics.

This technical course focuses on the fundamentals of photovoltaic energy conversion with respect to the physical principals of operation and design of efficient semiconductor solar cell devices. This course aims to equip students with the concepts and analytical skills necessary to assess the utility and viability of various modern photovoltaic technologies in the context of a growing global renewable energy market.

Final exam not required.

ENE,RES 254 Electric Power Systems 3 Units

Department: Energy and Resources Group

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Physics 7B or 8B or equivalent.

Provides an understanding of concepts in the design and operation of electric power systems, including generation, transmission, and consumption. Covers basic electromechanical physics, reactive power, circuit and load analysis, reliability, planning, dispatch, organizational design, regulations, environment, end-use efficiency, and new technologies.

Final exam not required.

ENE,RES 270 Environmental Classics 3 Units

Department: Energy and Resources Group

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Graduate standing.

Motivation: What is the history and evolution of environmental thinking and writing? How have certain "environmental classics" shaped the way in which we think about nature, society, and development? This course will use a selection of 20th-century books and papers that have had a major impact on academic and wider public thinking about the environment and development to probe these issues. The selection includes works and commentaries related to these works that have influenced environmental politics and policy in the U.S. as well as in the developing world. Through the classics and their critiques, reviews, and commentaries, the class will explore the evolution of thought on these transforming ideas.

Final exam not required. Instructors: Kammen, Ray

ENE,RES 273 Research Methods in Social Sciences 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This course aims to introduce graduate students to the rich diversity of research methods that social scientists have developed for the empirical aspects of their work. Its primary goal is to encourage critical thinking about the research process: how we "know," how we match research methods to research questions, how we design and conduct our information/data collection, what we assume explicitly and implicitly, and the ethical dilemmas raised by fieldwork-oriented studies.

Final exam not required. Instructor: Ray

ENE,RES 275 Water and Development 4 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This class is an interdisciplinary graduate seminar for students of water policy in developing countries. It is not a seminar on theories and practices of development through the "lens" of water. Rather, it is a seminar motivated by the fact that over 1 billion people in developing countries have no access to safe drinking water, 3 billion don't have sanitation facilities and many millions of small farmers do not have reliable water supplies to ensure a healthy crop. Readings and discussions will cover: the problems of water access and use in developing countries; the potential for technological, social, and economic solutions to these problems; the role of institutions in access to water and sanitation; and the pitfalls of and assumptions behind some of today's popular "solutions." Final exam not required. Instructor: Ray

ENE,RES 280 Energy Economics 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Economics 100A or equivalent; basic calculus or linear algebra.

Input-output and cost benefit analysis applied to energy; exhaustion theory and economics of energy supply; patterns of energy use; trade-offs in energy conservation; the effect of energy policy on supply and demand; projecting future energy and resource supply and use.

Final exam not required. Instructor: Norgaard

ENE,RES C283/INFO C283 Information and Communications Technology for Development 3 Units**Department:** Energy and Resources; Energy and Resources Group; Information**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar reviews current literature and debates regarding Information and Communication Technologies and Development (ICTD). This is an interdisciplinary and practice-oriented field that draws on insights from economics, sociology, engineering, computer science, management, public health, etc.

Final exam not required. Instructors: Ray, Saxenian

ENE,RES 290 Seminar in Energy and Resources 1 - 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing in Energy and Resources Group or consent of instructor.

Graduate student presentations and faculty-student discussions of advanced topics in energy and resources. Specific topics vary according to faculty and student interest.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 291 Special Topics in Energy and Resources 1 - 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Study and critical analysis of advanced topics in energy and resources using interdisciplinary approaches. Specific topics vary according to faculty and student interest.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ENE,RES 292A Tools of the Trade 2 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Quantitative methods for energy and resource analysis. Topics include linear algebra, differential equations, statistical methods, chemical equilibrium theory, and thermodynamics.

Final exam not required.

ENE,RES 292C Master's Project Seminar 2 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Required of second-year Energy and Resources' Master's candidates.

Topics include the adoption of a research project, research design, presentation of work, statistical analyses. Students will apply the interdisciplinary methods, approaches, and perspectives learned in the core curriculum. Sequence begins fall each year. Credit and grade to be awarded upon completion of the full sequence.

Final exam not required.

ENE,RES 292D Master's Project Seminar 2 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Required of second-year Energy and Resources' Master's candidates.

Topics include the adoption of a research project, research design, presentation of work, statistical analyses. Students will apply the interdisciplinary methods, approaches, and perspectives learned in the core curriculum. Sequence begins fall each year. Credit and grade to be awarded upon completion of the full sequence.

Final exam not required.

ENE,RES 295 Special Topics in Energy and Resources 1 Unit**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of Lecture per week for 15 weeks.

Presentations of research in energy issues by faculty, students, and visiting lecturers. Master's degree students required to enroll for three semesters.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 296 Doctoral Seminar 2 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of section per week.**Prerequisites:** Consent of instructor.

Lectures, reports, and discussions on current research in energy and resources. Particular emphasis on topics of research interest for current Ph.D. students in the Energy and Resources Group.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 298.

ENE,RES 298 Doctoral Seminar 2 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of section per week.**Prerequisites:** Consent of instructor.

Lectures, reports, and discussions on current research in energy and resources. Sections are operated independently and under direction of different staff.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 298N Directed Group Study 1 - 3 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 3 hour of Directed group study per week for 15 weeks.**Prerequisites:** Graduate standing and consent of instructor.

Informal group studies of special problems in energy and resources.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 299 Individual Research in Energy and Resources 1 - 12 Units**Department:** Energy and Resources Group**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Variable.**Prerequisites:** Graduate standing.

Investigation of problems in energy and resources from an interdisciplinary perspective.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENE,RES 301 Graduate Student Instructor Practicum 3 Units**Department:** Energy and Resources Group**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Appointment as a graduate student instructor in the Group and permission of the graduate advisor.

Course credit for experience gained in academic teaching through employment as a graduate student instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Engineering (ENGIN)

ENGIN 7 Introduction to Computer Programming for Scientists and Engineers 4 Units

Department: Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture, 1 hour of Discussion, and 4 hours of Laboratory per week for 15 weeks. 3 hours of Lecture, 1.5 hours of Discussion, and 6 hours of Laboratory per week for 10 weeks.

Prerequisites: Mathematics 1B (maybe taken concurrently).

Elements of procedural and object-oriented programming. Induction, iteration, and recursion. Real functions and floating-point computations for engineering analysis. Introduction to data structures. Representative examples are drawn from mathematics, science, and engineering.

The course uses the MATLAB programming language. Sponsoring departments: Civil and Environmental Engineering and Mechanical Engineering.

Final exam required. Formerly known as 77.

ENGIN W7 Introduction to Computer Programming for Scientists and Engineers 4 Units

Department: Engineering

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of web lecture, 1.5 hours of web discussion, and 6 hours of web laboratory per week for 10 weeks. This is an online course.

Prerequisites: Mathematics 1B (may be taken concurrently).

Elements of procedural and object-oriented programming. Induction, iteration, and recursion. Real functions and floating-point computations for engineering analysis. Introduction to data structures. Representative examples are drawn from mathematics, science, and engineering. The course uses the MATLAB programming language.

Final exam required. Instructor: Papadopoulos

ENGIN 10 Engineering Design and Analysis 3 Units

Department: Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

This is a is an introduction to the profession of engineering and its different disciplines through a variety of individual design and analysis projects. Hands on creativity, teamwork, and effective communication are emphasized. Common lecture sessions address the essence of engineering design, the practice of engineering analysis, the societal context for engineering projects and the ethics of the engineering profession. Students develop design and analysis skills, and practice applying these skills to illustrative problems drawn from various mechanical engineering topics such as material testing, aerodynamics, controls and design.

Course Objectives: The objectives of the course are to: enhance critical thinking and design skills; introduce students to a broad view of engineering analysis and design; reinforce the importance of mathematics and science in engineering design and analysis; emphasize communication skills, both written and oral; develop teamwork skills; offer experience in hands on, creative engineering projects; provide an introduction to different fields of engineering; and introduce students to professional ethics and the societal context of engineering practice.

Student Learning Outcomes: Through active participation in this course, students will: begin to recognize the role of mathematics and science in engineering; understand the design of systems, components, and processes to meet desired needs within realistic constraints; gain experience in working in multi-disciplinary teams; develop early abilities in identifying, formulating, and solving engineering problems; appreciate the importance of professional and ethical responsibility in engineering; obtain experience in effective communication; begin to understand the impact of engineering solutions in a global, economic, environmental, and societal context; and begin to use the techniques, skills, and engineering tools necessary for contemporary and future engineering practice.

Final exam not required.

ENGIN 24 Freshman Seminar 1 Unit

Department: Engineering

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of lecture/discussion/seminar per week.

The Berkeley Seminar Program is designed to provide students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Berkeley Seminars are offered in all college departments, and topics vary from department to department and semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ENGIN 28 Basic Engineering Design Graphics 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour of discussion plus drop-in laboratory.

Introduction to the engineering design process and graphical communications tools used by engineers. Conceptual design of products. Tolerance analysis for fabrication. Documentation of design through engineering drawing. Development of spatial reasoning skills. Basic descriptive geometry. Parametric solid modeling and feature based design. Use of Computer-Assisted Design as a design tool. Final exam required. Instructor: Lieu

ENGIN 39B Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

ENGIN 39E Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

ENGIN 39F Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

Course may be repeated for credit when topic changes. Final exam required.

ENGIN 45 Properties of Materials 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week and 3 hours of laboratory on alternate weeks.**Prerequisites:** Physics 7A.

Application of basic principles of physics and chemistry to the engineering properties of materials. Special emphasis devoted to relation between microstructure and the mechanical properties of metals, concrete, polymers, and ceramics, and the electrical properties of semiconducting materials. Sponsoring Department: Materials Science and Engineering. Final exam required.

ENGIN 47 Supplementary Work in Lower Division Engineering 1 - 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1.5 to 5.5 hours of Independent study per week for 8 weeks.**Prerequisites:** Limited to students who must make up a fraction of a required lower division course.

May be taken only with permission of the Dean of the College of Engineering. Students with partial credit in a lower division engineering course may complete the work under this heading.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ENGIN 92 Perspectives in Engineering 1 Unit**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

This series of lectures provides students, especially undeclared Engineering students, with information on the various engineering disciplines to guide them toward choice of major. Lecturers describe research activities, how they made their own career choices, and indicate future opportunities. Recommended for all Engineering Science students and required for Engineering undeclared students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGIN 93 Energy Engineering Seminar 1 Unit**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

Weekly seminar with different speakers on energy-related topics. The goal is to expose students to a broad range of energy issues.

Final exam not required. Instructor: Zohdi

ENGIN 98 Directed Group Studies for Lower Division Undergraduates 1 - 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Format varies with offering.**Prerequisites:** Consent of instructor.

Seminars for group study of selected topics, which will vary from year to year. Intended for students in the lower division.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGIN 115 Engineering Thermodynamics 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.**Prerequisites:** Physics 7B, Math 54; Chemistry 1B recommended.

Fundamental laws of thermodynamics for simple substances; application to flow processes and to nonreacting mixtures; statistical thermodynamics of ideal gases and crystalline solids; chemical and materials thermodynamics; multiphase and multicomponent equilibria in reacting systems; electrochemistry. Sponsoring Departments: Materials Science and Engineering and Nuclear Engineering.

Students will receive no credit for Engineering 115 after taking Mechanical Engineering 105 or Chemical Engineering 141. Final exam required.

Instructors: Glaeser, Olander

ENGIN 117 Methods of Engineering Analysis 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 53, 54.

Methods of theoretical engineering analysis; techniques for analyzing partial differential equations and the use of special functions related to engineering systems. Sponsoring Department: Mechanical Engineering. Final exam required.

ENGIN 120 Principles of Engineering Economics 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4 hours of Lecture and 2 hours of Discussion per week for 8 weeks.**Prerequisites:** Completion of 60 units of an approved engineering curriculum.

Economic analysis for engineering decision making: Capital flows, effect of time and interest rate. Different methods of evaluation of alternatives. Minimum-cost life and replacement analysis. Depreciation and taxes. Uncertainty; preference under risk; decision analysis. Capital sources and their effects. Economic studies.

Students will receive 2 units for 120 after taking Civil Engineering 167.

Final exam required. Instructor: Adler

ENGIN 125 Ethics, Engineering, and Society 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 5 hours of Lecture and 3 hours of Discussion per week for 6 weeks.

How should engineers analyze and resolve the ethical issues inherent in engineering? This seminar-style course provides an introduction to how theories, concepts, and methods from the humanities and social science can be applied to ethical problems in engineering. Assignments incorporate group and independent research designed to provide students an opportunity to contribute novel findings to the emerging field of engineering ethics while building their analytical and communication skills. This course cannot be used to fulfill any engineering technical requirements (units or courses).

Final exam not required.

ENGIN 128 Advanced Engineering Design Graphics 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 1 hour discussion per week plus drop in laboratory.**Prerequisites:** 28

Advanced graphics tools for engineering design. Parametric solid modeling. Assembly modeling. Presentation using computer animation and multimedia techniques.

Final exam not required. Instructor: Lieu

ENGIN 147 Supplementary Work in Upper Division Engineering 1 - 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Limited to students who must make up a fraction of a required upper division course.

May be taken only with permission of the Dean of the College of Engineering. Students with partial credit in an upper division engineering course may complete the work under this heading.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ENGIN 157AC/IAS 157AC Engineering, The Environment, and Society 4 Units**Department:** Engineering; International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This course engages students at the intersection of environmental justice, social justice, and engineering to explore how problems that are commonly defined in technical terms are at their roots deeply socially embedded. Through partnerships with community-based organizations, students are trained to recognize the socio-political nature of technical problems so that they may approach solutions in ways that prioritize social justice. Topics covered include environmental engineering as it relates to air, water, and soil contamination; race, class, and privilege; expertise; ethics; and engaged citizenship. This course cannot be used to complete any engineering technical or unit requirements.

Satisfies the American Cultures requirement

In order to achieve the pedagogical goals listed in the syllabus, a final paper is required in lieu of a final exam. Rather than requiring students to learn a specific canon of information, this course instead requires students to learn how to approach complex, situated, real-world problems in nuanced and thoughtful ways. A final paper is better suited to demonstrating this skill.

ENGIN 177 Advanced Programming with MATLAB 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 voluntary discussion/computer laboratory per week.**Prerequisites:** 7 or 77; Mathematics 53 and 54 (one of these may be taken concurrently).

The course builds an understanding, demonstrates engineering uses, and provides hand-on experience for object-oriented programming as well as exposes a practical knowledge of advanced features available in MATLAB. The course will begin with a brief review of basic MATLAB features and quickly move to class organization and functionality. The introduced concepts are reinforced by examining the advanced graphical features of MATLAB. The material will also include the effective use of programs written in C and FORTRAN, and will cover SIMULINK, a MATLAB toolbox providing for an effective ways of model simulations. Throughout the course, the emphasis will be placed on examples and homework assignments from engineering disciplines. Final exam required. Instructors: Frenklach, Packard

ENGIN 194 Undergraduate Research 3 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours will vary depending on schedule.**Prerequisites:** Consent of instructor and adviser, junior or senior standing.

Students who have completed a satisfactory number of advanced courses may pursue original research under the direction of one of the members of the staff. Final report and presentation required.

Course may be repeated for credit, but only three units may be used to satisfy a technical elective. Course may be repeated for credit when topic changes. Final exam required.

ENGIN 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units**Department:** Engineering**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks.**Prerequisites:** Upper division standing, plus particular courses to be specified by instructor.

Group study of selected topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGIN 201 Ocean Engineering Seminar 2 or 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture or 2 hours of lecture and 1 hour consultation per week.**Prerequisites:** Enrollment in Ocean Engineering Master of Engineering Program or consent of instructor.

Lectures on new developments in ocean, arctic engineering. The optional third unit covers the analysis and design of arctic structures for ice structure interaction. The additional unit will require that students meet with the instructor one extra hour per week to work on an individual project. Topics covered: ice mechanics, determination of global and local forces, and other ice actions on structures. Term paper required. Sponsoring department: Engineering Interdisciplinary Studies. Final exam not required.

ENGIN 230 Methods of Applied Mathematics 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Mathematics 54 or equivalent. Engineering 117 or equivalent is desirable but not mandatory.

Topics include complex variable methods, contour integration, solution of Laplace's equation via analytic function theory; asymptotic methods for evaluating integrals and solving differential equations; introduction to calculus of variations with applications; introductory integral equations. The course is intended to expose students in engineering and physical sciences to a range of methods for solving equations associated with mathematical models of physical processes.

Final exam not required. Instructor: Steigmann

ENGIN 231 Mathematical Methods in Engineering 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Math 1A-1B, 53 and 54 or equivalent.

This course offers an integrated treatment of three topics essential to modern engineering: linear algebra, random processes, and optimization. These topics will be covered more rapidly than in separate undergraduate courses covering the same material, and will draw on engineering examples for motivation. The stress will be on proofs and computational aspects will also be highlighted. It is intended for engineering students whose research focus has a significant mathematical component, but who have not previously had a thorough exposure to these topics.

Final exam not required. Instructors: Packard, Poola

ENGIN C233/COMPSCI C267 Applications of Parallel Computers 3 Units**Department:** Engineering; Computer Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.

Models for parallel programming. Fundamental algorithms for linear algebra, sorting, FFT, etc. Survey of parallel machines and machine structures. Exiting parallel programming languages, vectorizing compilers, environments, libraries and toolboxes. Data partitioning techniques.

Techniques for synchronization and load balancing. Detailed study and algorithm/program development of medium sized applications.

Course may be repeated for credit when topic changes. Final exam not required. Instructors: Demmel, Yelick

ENGIN 266A Finite Difference Methods for Fluid Dynamics 4 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 3 hours of laboratory, and 1 hour of voluntary discussion per week.**Prerequisites:** A graduate-level course in fluid dynamics or numerical methods for differential equations, or consent of instructor.

Application of finite difference methods to current problems of fluid dynamics, including compressible and incompressible flow. Sponsoring department: Mechanical Engineering.

Final exam required. Formerly known as 266. Instructor: Marcus

ENGIN 266B Spectral Methods for Fluid Dynamics 4 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 3 hours of laboratory, and 1 hour of voluntary discussion per week.**Prerequisites:** A graduate-level course in fluid dynamics or numerical methods for differential equations, or consent of instructor.

Application of spectral methods to current problems of fluid dynamics, including compressible and incompressible flow. Sponsoring department: Mechanical Engineering.

Final exam required. Formerly known as 266. Instructor: Marcus

ENGIN 271 Engineering Leadership I 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per day for 10 days; 1.5 hours of lecture per week for 10 weeks.**Prerequisites:** Admission to the MEng Program.

Designed for professionally-oriented engineering graduate students, this course explores key management and leadership concepts relevant to technology-dependent enterprises. Topics include opportunity recognition, strategies for effective R and D, marketing innovation, disruption, cognitive inertia, product management, market selection, standards wars, two-sided markets, attracting stakeholders, business models, pricing strategies.

Final exam not required.

ENGIN 272 Engineering Leadership II 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per day for 5 days; 3 hours of lecture per week for 10 weeks.**Prerequisites:** Admission to MEng Program and 271.

Designed for professionally-oriented engineering graduate level students, this course explores key operational, leadership, and financial concepts relevant to technology-dependent enterprises. Topics include methods to go to market, direct and indirect sales, logistics, talent management, managing creativity, project management, leadership styles, CFO-style interpretation of financial statements, funding sources, budgeting, and valuation methods.

Final exam required.

ENGIN C282/NUC ENG C282 Charged Particle Sources and Beam Technology 3 Units**Department:** Engineering; Nuclear Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Topics in this course will include the latest technology of various types of ion and electron sources, extraction and formation of charge particle beams, computer simulation of beam propagation, diagnostics of ion sources and beams, and the applications of beams in fusion, synchrotron light source, neutron generation, microelectronics, lithography, and medical therapy. This is a general accelerator technology and engineering course that will be of interest to graduate students in physics, electrical engineering, and nuclear engineering.

Final exam not required. Instructors: Leung, Steier

ENGIN 290 Special Topics in Management of Technology 2 or 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing.

Specific topics, hours and units of credit will vary from section to section, year to year. Courses are related classes in the Management of Technology certificate program.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

ENGIN 290A Introduction to Management of Technology 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course is designed to give students a broad overview of the main topics encompassed by management of technology. It includes the full chain of innovative activities beginning with research and development and extending through production and marketing. Why do many existing firms fail to incorporate new technology in a timely manner? At each stage of innovation, we examine key factors determining successful management of technology. What constitutes a successful technology strategy? The integrating course focus will be on the emergence of the knowledge economy and technology as a key knowledge asset and will involve both general readings and cases. The course also introduces students to Haas and COE faculty working in the relevant areas.

Final exam not required. Instructor: Proctor

ENGIN 290B Biotechnology: Industry Perspectives and Business Development 2 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course is designed to examine the strategic issues that confront the management of the development stage biotech company, i.e., after its start-up via an initial capital infusion, but before it might be deemed successful (e.g., by virtue of a product launch), or otherwise has achieved "first-tier" status. Thus, the intention is to study the biotech organization during the process of its growth and maturation from an early stage existence through "adolescence" into an "adult" company. The focus of the class will be on business development, i.e., the deal making that must occur to accomplish the corporate objectives of bringing in new technologies and getting the initial products to market. We will explore the critical deal issues from both the perspective of the development stage company and the viewpoint of the larger, more mature biotech or big pharma company with which it seeks to partner.

Students will receive no credit for 290E after taking Master of Business Administration 290B or Evening Weekend Master of Business Administration 290B. Final exam not required. Instructors: Hoover, Sanders

ENGIN 290E Marketing Emerging Technologies 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The primary goal of this course is to develop in the student the marketing skills needed to compete aggressively as an entrepreneur in technology fields. Upon completion of the course, the student should have developed the following skills: the ability to assess and predict customer needs in markets that may not yet exist; the ability to create and execute marketing plans that necessarily integrate sophisticated technological development with rapidly evolving customer requirements; the ability to create and grow a focused marketing organization rapidly and efficiently; and the ability to create and use marketing communications to reach prospects, customers, OEMs, and sales channels efficiently and inexpensively.

Students will receive no credit for 290E after taking Master of Business Administration 290E. Final exam not required. Instructor: Isaacs

ENGIN 290G International Trade and Competition in High Technology 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course seeks to make sense of, inter alia, the decline and prospective recovery of U.S. high-technology industries, the evolution of innovation and technology strategies and policies in Western Europe and Asia, the historic and current roles of governments in shaping markets for high-technology goods, and the impact on business strategies of recent developments in early-stage capital markets. Our general approach views technological innovation and competition as dynamic processes that reflect previous choices made by firms and governments. Modern technologies develop in markets that are international scope, often imperfectly competitive, and subject to influence by a variety of economic and political stakeholders. We will use an eclectic mix of theoretical, historical, and practical perspectives throughout the course in examining these issues, although no special familiarity with any of these is assumed. From time to time, we will be joined by venture capitalists, corporate executives, and technologists engaged in global high-technology markets for discussion of these issues.

Students will receive no credit for 290G after taking Master of Business Administration 290G. Final exam not required. Instructor: Wu

ENGIN 290H Management of Technology - Doing Business in China 2 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course prepares students to found a startup business in China or to work with an MNC in China, develops their critical analysis and strategic decision tools and skills needed to compete in the world's most dynamic emerging market, and provides access and useful introductions/Guanxi to aid future business development in China.

Students will receive no credit for 290H after taking Master of Business Administration 290H. Final exam not required. Instructor: Sanderson

ENGIN 290J Entrepreneurship in Biotechnology 2 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.

This course will provide students an introduction to the complexities and unique problems of starting a life sciences company. It is designed for both entrepreneurs and students who may someday work in a biotechnology or medical device startup. Students will be exposed to the topics most critical for successfully founding, financing, and operating a life science company, and will be expected to perform many of the same tasks that founders would normally undertake. Discussions with life-science entrepreneurs, case studies of recent companies, and hands-on work developing entrepreneurial endeavors will all be utilized. Final exam not required. Instructor: Lasky

ENGIN 290O Opportunity Recognition: Technology and Entrepreneurship in Silicon Valley 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course is intended to provide the core skills needed for the identification of opportunities that can lead to successful, entrepreneurial high technology ventures, regardless of the individual's "home" skill set, whether technical or managerial. We examine in depth the approaches most likely to succeed for entrepreneurial companies as a function of markets and technologies. Emphasis is placed on the special requirements for creating and executing strategy in a setting of rapid technological change and limited resources. This course is open to both MBA and Engineering students (who enroll through the College of Engineering), and is particularly suited for those who anticipate founding or operating technology companies.

Final exam not required.

ENGIN 290P Project Management 2 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.

This course will provide you with a comprehensive view of the elements of modern project management, guidelines for success, and related tools. In organizations today, successful operations keep the organization alive and successful projects move it towards strategic objectives. A project is a one-time or infrequently occurring operation with a unique goal, limited lifespan, and limited resources. The fundamental concepts come from the field of operations management, but projects present special types of operations because of their intended focus, limited lives, constraints, and uncertainties. In organizations today, projects are many, diverse, and frequently overlapping.

Final exam not required.

ENGIN 290S Supply Chain Management 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course involves the flows of materials and information among all of the firms that contribute value to a product, from the source of raw materials to end customers. Elements of supply chain management have been studied and practiced for some time in marketing, logistics, and operations management. We will attempt to integrate these different perspectives to develop a broad understanding of how to manage a supply change. This course will focus on effective supply chain strategies for companies that operate globally with emphasis on how to plan and integrate supply chain components into a coordinated system. You will be exposed to concepts and models important in supply chain planning with emphasis on key trade offs and phenomena. The course will introduce and utilize key tactics such as risk pooling and inventory placement, integrated planning and collaboration, and information sharing. Lectures, Internet simulations, computer exercises, and case discussions introduce various models and methods for supply chain analysis and optimization. Students will receive no credit for 290S after taking Master of Business Administration 248A or Evening Weekend Master of Business Administration 248A. Final exam not required. Instructor: Angelus

ENGIN 295 Master of Engineering Capstone Integration 1 Unit**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 1 hour of discussion per week. 1 hours of lecture and 1 hour of discussion per week for 8 weeks. 2 hours of lecture and 1 hour of discussion per week for 6 weeks.

Engineering leadership principles integrated with concurrent technical capstone projects for Master of Engineering students. Students enroll in this supplementary course while they are enrolled in Engineering 296M, Capstone project, with their technical department capstone advisor. This project-based course will apply communication skills, management principles, and leadership concepts to the capstone project. Course may be repeated a maximum of 2 times. Final exam not required. Instructors: Fleming, Keaveny

ENGIN 296MA Master of Engineering Capstone Project 2 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of independent or group research or study per week.**Prerequisites:** Acceptance into the Master of Engineering program.

This course is the first of a sequence of two capstone project courses for candidates of the Masters of Engineering degree. Students engage in professionally oriented independent or group research or study under the supervision of a research advisor. The research and study synthesizes the technical, environmental, economic, and social issues involved in the design and operation of complex engineering devices, systems, and organization. Final exam not required.

ENGIN 296MB Master of Engineering Capstone Project 3 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** 4 hours of independent or group research or study per week.**Prerequisites:** 296MA.

This course is the second of a sequence of two capstone project courses for candidates of the Masters of Engineering degree. Students engage in professionally oriented independent or group research or study under the supervision of a research advisor. The research and study synthesizes the technical, environmental, economic, and social issues involved in the design and operation of complex engineering devices, systems, and organizations.

Final exam not required.

ENGIN 298A Group Studies or Seminars 1 - 6 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Variable.

Advanced group studies or seminars in subjects which are interdisciplinary in the various fields of engineering or other sciences associated with engineering problems. Topics which form the basis of seminars will be announced at the beginning of each semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGIN 298B Group Studies or Seminars 1 - 6 Units**Department:** Engineering**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Variable.

Advanced group studies or seminars in subjects which are interdisciplinary in the various fields of engineering or other sciences associated with engineering problems. Topics which form the basis of seminars will be announced at the beginning of each semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Study of lyric forms and techniques.

Final exam required.

ENGLISH 180N The Novel 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Study of the novel as a literary genre, its formal development and variations, its technical possibilities, its cultural functions. Topics may vary from semester to semester.

Course may be repeated for credit with different topic. Course may be repeated for credit when topic changes. Final exam required.

ENGLISH N180A Autobiography 3 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 4 hours of

Lecture per week for 8 weeks. 6 hours of Lecture per week for 6 weeks.

Lectures on and discussion of autobiographical forms.

Final exam not required.

ENGLISH N180H Short Story 3 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 4 hours of

Lecture per week for 8 weeks. 6 hours of Lecture per week for 6 weeks.

Lectures on and discussion of the form of the short story.

Final exam not required.

ENGLISH N180Z Science Fiction 3 Units**Department:** English**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 8 weeks. 6 hours of

Lecture per week for 6 weeks.

A survey of science fiction which includes both short stories and novels.

The focus will be on the analysis of the texts and on the history and theory

of the genre.

Final exam required.

ENGLISH 180R The Romance 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Study of the romance as a literary genre. Topics may vary from semester to semester; focus may be historical or restricted to a particular period (e.g., medieval, modern).

Course may be repeated for credit with different topic. Course may be repeated for credit with different topic. Course may be repeated for credit when topic changes. Final exam required.

ENGLISH 180Z Science Fiction 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Study of speculative fiction (or science fiction) as a genre. Topics may vary from semester to semester. Focus may be historical or thematic. Course may be repeated for credit with different topic. Course may be repeated for credit when topic changes. Final exam required.

ENGLISH 190 Research Seminar 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Research-oriented and designed for upper-division English majors. Intensive examination of critical approaches, literary theory, or a special topic in literary and cultural studies. Topics vary from semester to semester. Students should consult the department's "Announcement of Classes" for offerings well before the beginning of the semester. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH H195A Honors Course 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open only to senior English major honors candidates (i.e., students with an overall GPA of 3.51 or higher and a GPA of 3.65 or higher in courses taken at Berkeley in the major). Consent of instructor is required.

This is a two-semester course, graded IP at the end of the first semester. During the second semester, each student will write an honors thesis. Completion of the thesis is required for a passing grade in the course. Offered for 4 units in fall and in spring, 3 units in summer. Final exam not required.

ENGLISH H195B Honors Course 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open only to senior English major honors candidates (i.e., students with an overall GPA of 3.51 or higher and a GPA of 3.65 or higher in courses taken at Berkeley in the major). Consent of instructor is required.

This is a two-semester course, graded IP at the end of the first semester. During the second semester, each student will write an honors thesis.

Completion of the thesis is required for a passing grade in the course.

Offered for 4 units in fall and in spring, 3 units in summer. Final exam not required.

ENGLISH 198 Directed Group Study 1 - 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Meetings to be arranged.**Prerequisites:** Open to students who have completed 12 units of upper division English with an average of not less than B.

Enrollment is restricted by university regulations. Group study in a field that shall not coincide with that of any regular course and shall be specific enough to enable students to write essays based upon their studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 199 Supervised Independent Study for Advanced Undergraduates 1 - 4 Units**Department:** English**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Independent.**Prerequisites:** Open to students who have completed 12 units of upper division English with an average grade of not less than B. Meetings to be arranged. Enrollment is restricted by university regulations. Reading and conference with the instructor in a field that shall not coincide with that of any regular course and shall be specific enough to enable students to write essays based upon their studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 200 Problems in the Study of Literature 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open only to students in the English Ph.D. program. Approaches to literary study, including textual analysis, scholarly methodology and bibliography, critical theory and practice. Final exam not required.

ENGLISH 201B Topics in the History of the English Language 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 203 Graduate Readings 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open to advanced undergraduates, with the consent of the instructor.

Graduate lecture courses surveying broad areas and periods of literary history, and directing students in wide reading. Offerings vary from semester to semester. Students should consult the department's "Announcement of Classes" for offerings well before the beginning of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 205A Old English 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open to undergraduates with the consent of the instructor. Offered for 4 units in fall and in spring, 3 units in summer. Final exam not required.**ENGLISH 205B Old English 4 Units****Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Open to undergraduates with the consent of the instructor. Offered for 4 units in fall and in spring, 3 units in summer. Final exam not required.**ENGLISH 211 Chaucer 4 Units****Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Discussion of Chaucer's major works.

Final exam not required.

ENGLISH 212 Readings in Middle English 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Rapid reading of selections in Middle English, from the twelfth century through the fifteenth.

Final exam not required.

ENGLISH 217 Shakespeare 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Discussion of selected works of Shakespeare.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 218 Milton 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Discussion of Milton's major works.

Final exam not required.

ENGLISH 243A Fiction Writing Workshop 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor, normally based on prior writings submitted.

A writing workshop in fiction for graduate students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 243B Poetry Writing Workshop 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor, normally based on prior writings submitted.

A writing workshop in poetry for graduate students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 243N Prose Nonfiction Writing Workshop 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor, normally based on prior writings submitted.

A writing workshop in prose nonfiction for graduate students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 246C Graduate Proseminars: Renaissance: Sixteenth century (excluding, or at least not prominently featuring, Skakespeare) 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246E Graduate Proseminars: Restoration and early 18th century 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246F Graduate Proseminars: Later 18th century 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246G Graduate Proseminars: Romantic 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246I Graduate Proseminars: American to 1855 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246J Graduate Proseminars: American 1855 to 1900 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 246K Graduate Proseminars: Literature in English 1900 to 1945 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Proseminars in the major chronological fields of English and American literature providing graduate instruction in scholarly and critical approaches appropriate to each field.

Final exam not required.

ENGLISH 250 Research Seminars 4 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Seminar per week for 15 weeks.

Required of all Ph.D. students. Advanced study in various fields, leading to a substantial piece of writing. Offerings vary from semester to semester. Students should consult the department's "Announcement of Classes" for offerings well before the beginning of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 298 Special Studies 4 - 12 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent.

Normally reserved for students directly engaged upon the doctoral dissertation.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 299 Special Study 1 - 8 Units**Department:** English**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent.

Primarily for students engaged in preliminary exploration of a restricted field, involving research and the writing of a report. May not be substituted for available seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENGLISH 310 Field Studies in Tutoring Writing 1 - 3 Units**Department:** English**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 to 4 hours of supervised tutoring in Student Learning Center and 1 2-hour seminar per week.**Prerequisites:** Pre-enrollment interviews required.

Tutoring Berkeley undergraduates in College Writing R1A, R1A, R1B, and other writing and/or literature courses. Seminar topics: the writing process, responding to writing, composition theory, grammar, collaborative learning, tutoring methods. Tutors keep a weekly journal, read assigned articles, videotape their tutoring, and write a final paper. This course cannot be used toward fulfillment of the major requirements.

Course may be repeated for a maximum of 6 units. Course may be repeated for a maximum of 6 units. Final exam not required.

ENGLISH 375 The Teaching of Composition and Literature 3 Units**Department:** English**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture/discussion per week.

Discussion of course aims, instructional methods, grading standards, and special problems in the teaching of composition and literature, with practice in handling sample essays. When given for graduate student instructors in the English R1A-R1B Program or the English 45 series, the course will include class visitation.

Course may be repeated for credit with different topic. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as English 302.

ENGLISH 602 Individual Study for Doctoral Students 1 - 12 Units**Department:** English**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Independent.**Prerequisites:** Graduate standing.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. May not be used for unit or residence requirements for the doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Environ Sci, Policy, and Management (ESPM)

ESPM 2 The Biosphere 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

An introduction to the unifying principles and fundamental concepts underlying our scientific understanding of the biosphere. Topics covered include the physical life support system on earth; nutrient cycles and factors regulating the chemical composition of water, air, and soil; the architecture and physiology of life; population biology and community ecology; human dependence on the biosphere; and the magnitude and consequences of human interventions in the biosphere.

Final exam required.

ESPM 6 Environmental Biology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Prerequisites: One course in introductory college biology is recommended. Intended for nonscience majors.

Basic biological and ecological principles discussed in relation to environmental disruptions. Human interactions with the environment; their meaning for animals and plants. Discussion of basic ecological processes as a basis for understanding environmental problems and formulating strategies for their solution.

Final exam required. Instructor: Chapela

ESPM 9 Environmental Science Case Study Seminar 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Utilizing a field intensive seminar format, the course will introduce lower division students to the process of addressing real environmental problems. Through a progression of case studies, students will explore a spectrum of research design and implementation approaches. By the end of the semester, they will be able to frame a researchable question, design a protocol for gathering relevant information, analyze the information, and derive an objective conclusion. Throughout the semester, students will present case study results in oral and written form.

Final exam required. Instructors: Fairfax, Spencer

ESPM C10/L & S C30V Environmental Issues 4 Units

Department: Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Letters and Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

Relationship between human society and the natural environment; case studies of ecosystem maintenance and disruption. Issues of economic development, population, energy, resources, technology, and alternative systems.

Students will receive no credit for C10 after taking 10. Final exam required. Instructor: Welter

ESPM C11/L & S C30U Americans and the Global Forest 4 Units

Department: Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Letters and Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course challenges students to think about how individual and American consumer decisions affect forest ecosystems around the world. A survey course that highlights the consequences of different ways of thinking about the forest as a global ecosystem and as a source of goods like trees, water, wildlife, food, jobs, and services. The scientific tools and concepts that have guided management of the forest for the last 100 years, and the laws, rules, and informal institutions that have shaped use of the forests, are analyzed.

Final exam required.

ESPM C12/ENGLISH C77 Introduction to Environmental Studies 4 Units

Department: Environmental Science, Policy, and Management; English; Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

This integrative course, taught by a humanities professor and a science professor, surveys current global environmental issues; introduces the basic intellectual tools of environmental science; investigates ways the human relationship to nature has been imagined in literary and philosophical traditions; and examines how tools of scientific and literary analysis; scientific method, and imaginative thinking can clarify what is at stake in environmental issues and ecological citizenship.

Students will not receive credit for C12 after taking UGIS C12 or EnglWill count toward ESPM Social Science core requirement for the Conservish C77. ation and Resource studies major. Final exam required.

ESPM 15 Introduction to Environmental Sciences 3 Units

Department: Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to the science underlying biological and physical environmental problems, including water and air quality, global change, energy, ecosystem services, introduced and endangered species, water supply, solid waste, human population, and interaction of technical, social, and political approaches to environmental management.

Final exam required. Formerly known as Environmental Sciences 10.

Instructors: Firestone, Goldstein, Potts

ESPM 24 Freshman Seminar 1 Unit

Department: Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman Seminars are offered in all campus departments, and topics may vary from department to department and semester to semester. Enrollment limited to fifteen freshman.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ESPM 39E Freshman/Sophomore Seminar 1 - 3 Units

Department: Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week per unit.

Prerequisites: Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

ESPM 40 Insects and Human Society 2 Units

Department: Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

An introduction to the diversity and natural history of insects in natural and human environments. The course examines the wonder of insects, their interactions with the living world, and their contributions to and impacts on human society.

Final exam required. Instructor: Will

ESPM 42 Natural History of Insects 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

An outline of the main facts and principles of biology as illustrated by insects, with special emphasis on their relations to plants and animals, including humans.

Final exam required. Instructors: Gillespie, Roderick

ESPM 44 Biological Control 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

Regulation of populations of organisms, especially insects, through interactions with parasites, predators, pathogens, competitors. Discussion of examples from agricultural, forest, urban, and recreational environments.

Final exam required. Instructor: Mills

ESPM 50AC Introduction to Culture and Natural Resource Management 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

An introduction to how culture affects the way we use and manage fire, wildland and urban forests, rangelands, parks and preserves, and croplands in America. The basic concepts and tools for evaluating the role of culture in resource use and management are introduced and used to examine the experience of American cultural groups in the development and management of western natural resources.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 50.

ESPM 60 Environmental Policy, Administration, and Law 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to U.S. environmental policy process focuses on history and evolution of political institutions, importance of property, federal and state roles in decision making, and challenges of environmental policy. Emphasis is on use of science in decision making, choices between regulations and incentives, and role of bureaucracy in resource policy. Case studies on natural resource management, risk management, environmental regulation, and environmental justice.

Final exam required.

ESPM 72 Introduction to Geographic Information Systems 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Three years of high school math.

Introduction to computer systems, data processing software for natural resources studies. Components of geographic information systems; concepts of surveying, mapping, and remote sensing as data sources; various methods of data processing and analysis including classification, map overlay, buffer analysis, topographic modeling, spatial interpolation, and map design with a GIS. Intensive hands-on practices with relevant computer software packages.

Final exam required. Instructor: Gong

ESPM 78A Teaching and Learning Environmental Science 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and 3 hours of field laboratory per week.**Prerequisites:** Consent of instructor.

Introduces theories of cognitive development and the practices of curriculum design and lesson presentation for environmental education. Ecology and natural resource management provide the context of curriculum development. Students create lesson plans integrating core concepts and their knowledge of local environmental issues. Lessons are presented to Bay Area K-12 students in field and classroom settings.

Final exam not required. Instructor: Spencer

ESPM 90 Introduction to Conservation and Resource Studies Major 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar per week for 8 weeks.

Introduction to the major, emphasizing each student's educational goals. Overview of ecological problems and contrasting approaches to solutions through institutional and community-based efforts. Required of all CRS sophomore majors and all entering off-campus transfer students to CRS major. Restricted to CRS majors. One field trip is normally required.

Final exam not required.

ESPM 98 Directed Group Study in ESPM 1 - 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 hour of lecture/discussion per week per unit.**Prerequisites:** Lower division standing; consent of instructor, adviser, and department chair.

Study of special topics that are not covered in depth in regular courses in the department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 99 Supervised Independent Study and Research 1 - 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual meetings.**Prerequisites:** Lower division standing (3.4 GPA or better), consent of instructor, adviser, and department chair. Usually restricted to ESPM majors.

Supervised independent study or research on topics relevant to department that are not covered in depth by other courses. Open to students in good standing who, in consultation with a faculty sponsor, present a proposal with clearly formulated objectives and means of implementation. Intended for exceptional students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 100 Environmental Problem Solving 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1.5 hours of discussion/demonstration per week.**Prerequisites:** One course in ecology; one course in mathematics or statistics; one course in a social science or economics.

Analysis of contrasting approaches to understanding and solving environmental and resource management problems. Case studies and hands-on problem solving that integrate concepts, principles, and practices from physical, biological, social, and economic disciplines. Their use in environmental policies and resource and management plans.

Final exam required. Instructor: Frankie

ESPM 100ES Introduction to the Methods of Environmental Science 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 1.5 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Completion of upper division statistics requirement. Open only to declared Environmental Sciences majors.

Introduction to basic methods used in environmental research by biological, physical, and social scientists; designed to teach skills necessary to conduct independent thesis research in the required senior seminar, 196A-196B/196L. Topics include development of research questions, sampling methods, experimental design, statistical analysis, scientific writing and graphics, and introductions to special techniques for characterizing environmental conditions and features. This course is the prerequisite to 196A.

Final exam not required. Formerly known as Environmental Sciences 100. Instructor: Battles

ESPM 102A Terrestrial Resource Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A-1B or equivalent.

Provides a foundation in terrestrial ecology. Organized around five topics: environmental biophysics, ecosystem carbon balance, ecophysiology, population ecology, community ecology. Examines how each contributes to understanding of distribution and abundance of organisms in biosphere. Laboratory exercises, a mandatory weekend field trip, and a group research project provide opportunities to explore questions in depth. Emphasis on building quantitative understanding of ecological phenomena.

Final exam required. Instructor: McBride

ESPM 102B Natural Resource Sampling 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Statistics 2 or 20.

This course is designed to introduce students to the major sampling systems used in natural resources and ecology. It also introduces students to important sampling and measurement concepts in grassland, forest, wildlife, insect, soil, and water resources. May be taken without laboratory course 102BL.

Final exam required. Instructor: Biging

ESPM 102BL Laboratory in Natural Resource Sampling 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of discussion/laboratory per week.**Prerequisites:** Statistics 2 or 20.

This laboratory course is designed to introduce students to the major sampling systems used in natural resources and ecology. Field data is collected with various important sampling designs and analyzed. Mean values and confidence intervals are constructed from the data collected in this course. This course must be taken in conjunction with lecture course 102B.

Final exam required. Instructor: Biging

ESPM 102C Resource Management 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Precalculus. 156, 184, and 70 are recommended.

Presents concept and practical approaches to public and private natural resource management decision making. The focus is on goals, criteria, data, models, and technology for quantifying and communicating the consequences of planning options. A range of contemporary air, soil, wetland, rangeland, forest, social, economic, and ecosystem management problems is addressed.

Final exam required.

ESPM 102D Resource and Environmental Policy 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Environmental Economics and Policy 1 or one lower division course in a social science, or consent of instructor.

The course develops capacities to analyze and affect the cause, dynamics, and consequences of resources and environmental policy formation and execution. It develops concepts of public policy and how cultural, legal, political, economic, and administrative processes form, execute, and modify it. It examines the causes and outcomes of politics among groups defined by race, ethnicity, class, and scientific/religious identities and analyzes resource and environmental policies that create or reduce enduring inequalities among racial/ethnic groups. It examines the social and environmental consequences of resource policies as well as alternative policies and processes.

Satisfies the American Cultures requirement

Final exam required. Instructor: Romm

ESPM C103/INTEGBI C156 Principles of Conservation Biology 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B or equivalent.

A survey of the principles and practices of conservation biology. Factors that affect the creation, destruction, and distribution of biological diversity at the level of the gene, species, and ecosystem are examined. Tools and management options derived from ecology and evolutionary biology that can recover or prevent the loss of biological diversity are explored.

Final exam required. Instructor: Beissinger

ESPM C104/ENVECON C115 Modeling and Management of Biological Resources 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and ad-hoc laboratories.

Models of population growth, chaos, life tables, and Leslie matrix theory. Harvesting and exploitation theory. Methods for analyzing population interactions, predation, competition. Fisheries, forest stands, and insect pest management. Genetic aspects of population management. Mathematical theory based on simple difference and ordinary differential equations. Use of simulation packages on microcomputers (previous experience with computers not required).

Final exam required. Instructor: Getz

ESPM 105A Sierra Nevada Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture, 30 hours of field work, and 10 hours of project work for 2 weeks.**Prerequisites:** Eight hours biology.

Introduction to silvicultural theory, forest operations, and utilization and manufacture of forest products. Evaluation of silviculture for managing forest stands for multiple objectives including regeneration, stand density control, forest growth, genetic improvement, and prescribed burning. Introduction to harvest and access systems, wood structure and quality, and manufacture of forest product. Field trips and lectures to local areas illustrating different approaches to forest problems.

Final exam required. Instructor: McBride

ESPM 105B Forest Measurements 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 12 hours of lecture, 18 hours of field work, and 10 hours of project work for 1 week.**Prerequisites:** 105A.

This course teaches students how to use common forestry tools, maps, and various sampling methods to collect information about the forest environment. Thirty percent of the time is spent in the classroom learning about the techniques and working up field data. The remaining time is spent in the field applying these techniques in real world settings. Skills taught will include tree and plot measurement procedures, map reading, and simple field orienteering principles.

Final exam required.

ESPM 105C Silviculture and Utilization 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of lecture and 30 hours of field work per week for 2 weeks.**Prerequisites:** 105A, 105B.

Introduction to silvicultural theory, forest operations, and utilization and manufacture of forest products. Evaluation of silviculture for managing forest stands for multiple objectives including regeneration, stand density control, forest growth, genetic improvement, and prescribed burning.

Introduction to harvest and access systems, wood structure and quality, and manufacture of forest product. Field trips and lectures to local areas illustrating different approaches to forest problems.

Final exam required. Instructor: O'Hara

ESPM C105/INTEGBI C105 Natural History Museums and Biodiversity Science 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Term course may be offered:** Fall**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week.

(1) survey of museum resources, including strategies for accession, conservation, collecting and acquiring material, administration, and policies; (2) strategies for making collections digitally available (digitization, databasing, georeferencing, mapping); (3) tools and approaches for examining historical specimens (genomics, isotopes, ecology, morphology, etc); and (4) data integration and inference. The final third of the course will involve individual projects within a given museum.

Final paper and oral presentation Instructors: Gillespie, Mishler, Will, Marshall, McGuire

ESPM 105D Forest Management and Assessment 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Thirty 4 hours of classroom instruction and 52 hours of field work/Thirty 4 hours of classroom instruction and 52 hours of field work/laboratory analysis for 2 weeks. laboratory analysis for 2 weeks.**Prerequisites:** 105A, 105B, and 105C.

Develop skills in evaluating forests and developing management strategies to meet ownership objectives. Develop integrated forest management plan for 160 acre parcel. During first week, inventory and assess ecological condition of the assigned parcel. During second week, develop comprehensive integrated forest resource plan, integrating water, wood, wildlife, range, fisheries, and recreation. Oral reports in both an office and field setting required and written management plan.

Final exam required.

ESPM 106 American Wildlife: Identification and Conservation 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 3 hours of laboratory per week, plus 4 Saturday field trips.

Identification and life histories of wildlife in North America, with emphasis on species with important ecological and recreational value. The conservation of rare and endangered species is highlighted.

Final exam required. Instructor: Barrett

ESPM C107/INTEGBI 158LF Biology and Geomorphology of Tropical Islands 13 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of lecture for 6 weeks; field projects for 6 weeks; 3 hours of lecture for 3 weeks.

Natural history and evolutionary biology of island terrestrial and freshwater organisms, and of marine organisms in the coral reef and lagoon systems will be studied, and the geomorphology of volcanic islands, coral reefs, and reef islands will be discussed. Features of island biogeography will be illustrated with topics linked to subsequent field studies on the island of Moorea (French Polynesia).

Final exam required.

ESPM 108A Trees: Taxonomy, Growth, and Structures 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Study of trees and associated woody species including their taxonomy and distribution, modes of shoot growth and diameter growth, and stem structure. Modes of stem structure and growth will be considered in relation to habitat and life cycles, and to suitability for timber value.

Instruction in oral communication. Oral presentation required.

Final exam required. Instructor: Dodd

ESPM 108B Forest Genetics 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A-1B or equivalents.

Course covers basic mechanisms of inheritance for understanding principles of population genetics and analysis of quantitative traits. It examines methods of measuring and describing quantitative genetic variation in trees. Examples of theoretical aspects of genetics are used to understand patterns of genetic variation in natural populations of forest trees, applications to conservation biology, and their implications for developing strategies for commercial programs of forest tree improvement.

Final exam required. Instructor: Dodd

ESPM 110 Primate Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines the comparative ecology of sympatric primate species in forests of Central and South America, Africa, and Southeast Asia. In addition to primate ecology, students will master comparative information on the three main tropical forest regions of the world and examine the impact of selective logging on primate densities and diversities in each area.

Final exam required. Instructor: Milton

ESPM 111 Ecosystem Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week. 15 to 20 hours of problem solving exercises per term.**Prerequisites:** Biology 1B.

This course will develop principles of ecosystems ecology, emphasizing terrestrial ecosystems, and will consider how these principles apply to ecosystem recovery and to regional and global fluxes of carbon and nutrients.

Final exam required. Formerly known as C111, Integrative Biology C155. Instructors: Baldocchi, Silver

ESPM 112 Microbial Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A and Biology 1B; Molecular and Cell Biology 102 is recommended.

Introduction to the ecology of microorganisms. Topics include the ecology and evolution of microbes and their relationship with each other and the environment. The role and function of microbes in several ecosystems is also discussed.

Final exam required.

ESPM 113 Insect Ecology 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Biology 1B or consent of instructor.

Ecology of insects: interactions with the physical environment; structure and functioning of insect populations and communities; behavioral ecology of predator-prey interactions; plant-insect interactions; social insects; pollination biology; applied insect ecology.

Final exam required. Instructor: Welter

ESPM 114 Wildlife Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Upper division or graduate standing.

Introduction to wildlife ecology and its relationship to management programs. Includes population, community, and ecosystem levels of organization, followed by selected case studies.

Final exam required. Instructor: Brashares

ESPM 115B Biology of Aquatic Insects 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory course in a biological science.

Identification and ecology of aquatic insects, including their role as indicators of environmental quality.

Final exam required. Instructor: Resh

ESPM 115C Fish Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week; 1 Saturday field trip.**Prerequisites:** Introductory course in biological science; upper division or graduate standing.

Introduction to fish ecology, with particular emphasis on the identification and ecology of California's inland fishes. This course will expose students to the diversity of fishes found in California, emphasizing the physical (e.g., temperature, flow), biotic (e.g., predation, competition), and human-related (e.g., dams, fisheries) factors that affect the distribution, diversity, and abundance of these fishes.

Final exam required. Instructor: Carlson

ESPM C115C/INTEG BI C176L Fish Ecology 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture and 3 hours of laboratory per week; 1 Saturday field trip.**Prerequisites:** Introductory course in biological science; upper division or graduate standing.

Introduction to fish ecology, with particular emphasis on the identification and ecology of California's inland fishes. This course will expose students to the diversity of fishes found in California, emphasizing the physical (e.g., temperature, flow), biotic (e.g., predation, competition), and human-related (e.g., dams, fisheries) factors that affect the distribution, diversity, and abundance of these fishes.

Final exam required. Instructor: Carlson

ESPM 116B Range Ecology, Improvements, and Management 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One course in ecology.

The ecological basis for range management activities, considered in the context of western range ecosystem types. Specific range improvement and range management practices are discussed in the context of ecosystem processes.

Final exam required. Instructors: Allen-Diaz, Bartolome

ESPM 116C Tropical Forest Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** One course in ecology and one course in chemistry or consent of instructor.

Introduction to the ecology of terrestrial tropical ecosystems, with particular emphasis on neotropical forests. Explores unique aspects of tropical ecosystems, especially nutrient cycles, net primary productivity, biological diversity, forest structure and dynamics, disturbance ecology, and the natural history of key forest organisms. Basic ecology is integrated with discussion of human disturbances, restoration of tropical ecosystems, and the global importance of tropical forests.

Final exam required. Instructor: Silver

ESPM 117 Urban Garden Ecosystems 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

An ecosystem approach to the study of urban gardens with an organic perspective. Topics include fundamentals of horticulture, soil properties and fertility, pest and disease management, and food preservation. Laboratories include methods in garden design, plant propagation, compost technique, soil preparation, irrigation systems, pest management, individual or group projects, demonstrations, and discussions. Enrollment may be limited.

Final exam required. Instructor: Altieri

ESPM 118 Agricultural Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Examines in a holistic framework fundamental biological, technical, socio-economic, and political processes that govern agroecosystem productivity and stability. Management techniques and farming systems' designs that sustain longterm production are emphasized. One Saturday field trip and one optional field trip.

Final exam required. Instructor: Altieri

ESPM 119 Chemical Ecology 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory courses in organic chemistry and biology or consent of instructor.

Plant toxins and their effects on animals, hormonal interactions between plants and animals, feeding preferences, animal pheromones, and defense substances, biochemical interactions between higher plants, and phytoalexins and phytotoxins.

Final exam required. Instructor: Kubo

ESPM 120 Soil Characteristics 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Chemistry 1A, 3A.

Introduction to physical, engineering, chemical, and biological properties of soil; methods of soil description, identification, geographic distribution and uses; the role of soil in supplying water and nutrients to plants; and soil organisms. Soil management for agriculture, forestry, and urban uses will also be discussed. Includes a Saturday field trip.

Final exam required. Instructor: Ammundson

ESPM 121 Development and Classification of Soils 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered even numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Earth and Planetary Sciences 100A-100B, and Chemistry 1A, 3A recommended.

Development, morphology, and classification of soils as related to geology, environmental factors, and time. Soils as functioning parts of ecosystems; use of soils in archeological and paleoclimatic studies; anthropogenic effects on soil ecosystems.

Final exam required. Instructor: Amundson

ESPM 122 Field Study of Soil Development 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered even numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Fieldwork per week for 15 weeks.

Five day-long Saturday field trips to locations in central California.

The field study of soil development and morphology. Methods of soil morphological descriptions; study of factors controlling soil development; relationship of soil morphology to land use; quaternary geology of central California; use of soils in dating landscapes.

Final exam not required. Instructor: Amundson

ESPM C126/INTEGBI C144 Animal Behavior 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Biology 1A, 1B, or Environmental Science, Policy, and Management 140. Molecular and Cell Biology 140 and C160 recommended.

An introduction to comparative animal behavior and behavioral physiology in an evolutionary context, including but not limited to analysis of behavior, genetics and development, learning, aggression, reproduction, adaptiveness, and physiological substrates.

Students will receive no credit for 144 after taking C144, 145, 146LF, or Psychology C115B. Final exam required. Instructors: Lacey, Caldwell, Bentley, Elias

ESPM C128/CIV ENG C116 Chemistry of Soils 3 Units**Department:** Environmental Science, Policy, and Management; Civil and Environmental Engineering; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Civil Engineering 111 or equivalent.

Chemical mechanisms of reactions controlling the fate and mobility of nutrients and pollutants in soils. Role of soil minerals and humus in geochemical pathways of nutrient bioavailability and pollutant detoxification. Chemical modeling of nutrient and pollutant soil chemistry. Applications to soil acidity and salinity.

Final exam required. Instructor: Sposito

ESPM C129/EPS C129 Biometeorology 3 Units**Department:** Environmental Science, Policy, and Management; Earth and Planetary Science; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course describes how the physical environment (light, wind, temperature, humidity) of plants and soil affects the physiological status of plants and how plants affect their physical environment. Using experimental data and theory, it examines physical, biological, and chemical processes affecting transfer of momentum, energy, and material (water, CO₂, atmospheric trace gases) between vegetation and the atmosphere. Plant biometeorology instrumentation and measurements are also discussed.

Final exam required. Instructor: Baldocchi

ESPM 131 Soil Microbial Ecology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Biology 1A-1B.

Description: Introduction to the organisms that live in the soil and their activities in the soil ecosystem. Lectures will cover the physical and chemical properties of soils and the soil as a habitat for microorganisms, the diversity and ecology of soil microorganisms, and their activity in the context of biogeochemical cycling, plant-microbe interactions, global environmental change and bioremediation. Goals: To gain fundamental knowledge of the occurrence and activities of soil microorganisms and their influence on soil productivity and environmental quality as well as potential applications of soil microbiology. This course is targeted at advanced undergraduate and beginning graduate students who require a comprehensive treatment of the field of soil microbiology. Topics will include: Soil as a habitat for microorganisms, Occurrence and distribution of soil organisms, Methods for studying soil microorganisms, Carbon cycling and soil organic matter, Biogeochemical cycling of nutrients and metals, Xenobiotic degradation and bioremediation.

Final exam required. Instructor: Pallud

ESPM 132 Spider Biology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Biology 1A-1B.

Covers topics ranging from mythological ideas about spiders and their importance in traditional cultures and folklore, to diversity patterns, ecology, behavior, and general biology of spiders. In the laboratory section, students learn to identify local spiders and to prepare a collection. Final exam required. Instructor: Gillespie

ESPM 134 Fire, Insects, and Diseases in Forest Ecosystems 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week and 4 1- to 2-day field trips.**Prerequisites:** One course in biology.

Study of the influence of fire, insects, and diseases on species diversity, succession, and the survival of North American forests including the evolution of these interactions due to modern human policies of preservation and management and exploitation.

Final exam required. Instructor: Bruns

ESPM C138/MCELLBI C114/PLANTBI C114 Introduction to Comparative Virology 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Molecular and Cell Biology; Plant and Microbial Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory chemistry (Chemistry 1A or 3A-3B or equivalent) and introductory biology (Biology 1A, 1AL, and 1B or equivalent) and general biochemistry (Molecular and Cell Biology C100A or equivalent--preferably completed but may be taken concurrently).

This course will provide a comparative overview of virus life cycles and strategies viruses use to infect and replicate in hosts. We will discuss virus structure and classification and the molecular basis of viral reproduction, evolution, assembly, and virus-host interactions. Common features used during virus replication and host cellular responses to infection will be covered. Topics also included are common and emerging virus diseases, their control, and factors affecting their spread.

Final exam required. Instructors: Glaunsinger, Jackson

ESPM 140 General Entomology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Laboratory per week for 15 weeks.**Prerequisites:** Introductory course in a biological science.

Biology of insects, including classification of orders and common families, morphology, physiology, behavior, and ecology.

Final exam required. Instructor: Roderick

ESPM 141 Development of Taxonomic Identification Keys and Natural Language Descriptions 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Prior knowledge of focus group for project.

Tools for identification of organisms to species or higher-level taxonomic groups are critically needed. This course will allow students to learn both the theoretical basis of and practical skills for building traditional dichotomous keys and various types of interactive keys. Emphasis will be on learning to build a web-based interactive key and developing natural language descriptions through students' individual projects. Students can train on the Microoptics Digital XLT imaging system and learn to use Lucid and Lucid Phoenix software. Other Internet identification tools will also be surveyed and discussed. Each student will produce an online key as a project.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Will

ESPM 142 Insect Behavior 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Biology 1A and 1B.

Insects display an incredibly rich array of behaviors, including extravagant displays, rituals, deception, sociality, and slavery. In some cases, these behaviors are innate, but in other cases individual insects can actively learn and modify their future behaviors based on real-life experiences. This course will focus on the development, structure, and function of insect behaviors, using examples from classic and recent publications. We will examine the evolution of insect behavior, how these behaviors play a role in the ecology of the organisms that express them, and explore various modes of communication that allow insects to judge their environment and respond appropriately.

Final exam required. Instructor: Tsutsui

ESPM 144 Insect Physiology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** General biology, zoology, or entomology.

A survey of the unique physiological mechanisms of insects, including the analysis of physiological systems at the cellular-molecular level. The roles of the nervous and endocrine systems in coordinating physiological processes are emphasized.

Final exam required. Instructor: Tanouye

ESPM 146L Medical and Veterinary Entomology Laboratory 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Laboratory per week for 15 weeks.

Laboratory identification of the major arthropod vectors of disease agents to humans and other animals, and study of the structural adaptations associated with free-living and parasitic stages and with blood feeding.

Final exam required. Instructor: Lane

ESPM 147 Field Entomology 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of laboratory/lecture per week with a 3-day weekend field trip on selected dates.**Prerequisites:** 42, 140, or consent of instructor. 42, 140, or consent of instructor.

This course introduces methods and techniques for collection and preparation of specimens and associated biological data, field observation, and recording and interpretation of arthropod behavior, relationships to habitats, and plant-arthropod interactions.

Course may be repeated for a maximum of 4.0 units which may be taken in the same term. Course may be repeated for a maximum of 4 units. Final exam required.

ESPM C148/NUSCTX C114 Pesticide Chemistry and Toxicology 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Nutritional Sciences and Toxicology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Introductory courses in organic chemistry and biology, or consent of instructor.

Chemical composition of pesticides and related compounds, their mode of action, resistance mechanisms, and methods of evaluating their safety and activity.

Final exam required. Instructor: Casida

ESPM C149/INTEGBI C149 Molecular Ecology 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered alternate years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C163, 161, or Molecular and Cell Biology C142 (may be taken concurrently), or consent of instructor.

This course focuses on the use of molecular genetic information in ecology. Applications and techniques covered range from analysis of parentage and relatedness (DNA fingerprinting and multilocus genetic analysis) through gene flow, biogeographic history and community composition (comparative DNA sequencing) to analysis of diet and trophic interactions (biological isotopes). Grades are based on one final exam, problem sheets, and a critique of a recent research paper.

Students will receive no credit for C149 if they took 149 prior to spring 2003. Final exam required. Formerly known as 149.

ESPM 150 Special Topics in Environmental Science, Policy, and Management 2 - 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture per week per unit.

Special topics in Environmental Science, Policy, and Management. Topics may vary from semester to semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ESPM 151 Society, Environment, and Culture 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.**Prerequisites:** Upper division standing.

Issues, concepts, and processes pertaining to the diverse approaches to understanding the relationship between human society, culture, and the environment. Core ideas in and approaches to science, nature, culture, feminism, indigeneity, and postcolonialism as they pertain to the environment and society. Critical analysis and discussion of fundamental and contemporary issues and texts in the field.

Final exam required.

ESPM 152 Global Change Biology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** An introductory course in biological science; upper division or graduate standing.

The course will focus on understanding how anthropogenic changes to the global environment (e.g., climate change, habitat destruction, global trade) impact organisms. We will evaluate responses to global change in a wide diversity of organisms (from microbes to mammals) and ecosystems (from arctic to temperate to tropical). We will also explore conservation and mitigation strategies in the face of global change. Discussions will draw on recent primary research and case studies. Final exam required. Instructor: Rosenblum

ESPM 155 Sociology and Political Ecology of Agro-Food Systems 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Sociology and political ecology of agro-food systems; explores the nexus of agriculture, society, the environment; social and environmental impact analysis; alternative social movement initiatives-fair trade, food justice/food sovereignty, organic farming, urban agriculture.

Final exam required. Instructor: De Master

ESPM 156 Animal Communication 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.**Prerequisites:** Biology 1B. Animal Behavior (ESPM C126/IB C144) recommended.

Communication is central to the lives of most, if not all animals. How and why animals communicate is thus central to understanding the ecology, behavior, neurobiology, and evolution of animal systems.

This course will focus on understanding the basic principles driving the communication system of a species, drawing together topics ranging from the physical properties of the environment, physiology of sensory systems, animal behavior and ecology, using examples from classic and recent publications.

Final exam required. Instructor: Elias

ESPM C159/NUSCTX C159 Human Diet 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Nutritional Sciences and Toxicology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Since we eat every day, wouldn't it be useful to learn more about human dietary practices? A broad overview of the complex interrelationship between humans and their foods. Topics include the human dietary niche, biological variation related to diet, diet and disease, domestication of staple crops, food processing techniques and development of regional cuisines, modern diets and their problems, food taboos, human attitudes toward foods, and dietary politics.

Final exam required. Instructor: Milton

ESPM 160AC/HISTORY 120AC American Environmental and Cultural History 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; History**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

History of the American environment and the ways in which different cultural groups have perceived, used, managed, and conserved it from colonial times to the present. Cultures include American Indians and European and African Americans. Natural resources development includes gathering-hunting-fishing; farming, mining, ranching, forestry, and urbanization. Changes in attitudes and behaviors toward nature and past and present conservation and environmental movements are also examined.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 160AC. Instructor: Merchant

ESPM 161 Environmental Philosophy and Ethics 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

A critical analysis of human environments as physical, social-economic, and technocultural ecosystems with emphasis on the role of ideologies, beliefs, attitudes, and behavior. An examination of contemporary environmental literature and the philosophies embodied therein.

Final exam required. Instructor: Merchant

ESPM 162 Bioethics and Society 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Exploration of the ethical dilemmas arising from recent advances in the biological sciences: genetic engineering, sociobiology, health care delivery, behavior modification, patients' rights, social or private control of research.

Final exam required. Instructor: Winickoff

ESPM 163AC/SOCIOL 137AC Environmental Justice: Race, Class, Equity, and the Environment 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Sociology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture, 1 hour of discussion, and 1 hour of service learning.

Overview of the field of environmental justice, analyzing the implications of race, class, labor, and equity on environmental degradation and regulation. Environmental justice movements and struggles within poor and people of color communities in the U.S., including: African Americans, Latino Americans, and Native American Indians. Frameworks and methods for analyzing race, class, and labor. Cases of environmental injustice, community and government responses, and future strategies for achieving environmental and labor justice.

Satisfies the American Cultures requirement

Final exam required. Formerly known as Sociology 128AC. Instructor: O'Rourke

ESPM 165 International Rural Development Policy 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Comparative analysis of policy systems governing natural resource development in the rural Third World. Emphasis on organization and function of agricultural and mineral development, with particular consideration of rural hunger, resource availability, technology, and patterns of international aid.

Final exam required. Instructor: Carr

ESPM 166 Natural Resource Policy and Indigenous Peoples 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 165 (formerly CRS 163) or consent of instructor; upper division standing.

Critical analysis of the historical transformation of indigenous peoples and their environments in North America and the Third World. The origins and specific patterns of socio-economic problems in these areas, existing and alternative future development policies and their effects.

Final exam required.

ESPM C167/PB HLTH C160 Environmental Health and Development 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Public Health**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The health effects of environmental alterations caused by development programs and other human activities in both developing and developed areas. Case studies will contextualize methodological information and incorporate a global perspective on environmentally mediated diseases in diverse populations. Topics include water management; population change; toxics; energy development; air pollution; climate change; chemical use, etc.

Final exam required. Instructor: Morello-Frosch

ESPM 168 Political Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Analysis of environmental problems in an international context with a focus on political and economic processes, resource access, and representations of nature. Discussion of the ways in which film, literature, and the news media reflect and influence environmental politics. Approaches to policy analysis arising from recent social theory. Final exam required. Instructor: Peluso

ESPM 169 International Environmental Politics 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

The dynamics of international politics are examined over the last 25 years. Attention is paid to different perspectives in global environmental politics, the actors involved, how well international agreements address the problems they are supposed to solve, and the main debates in the field, including trade-environmental conflicts, security, and environmental justice issues. Issues covered vary, but may include climate change, biodiversity, population, and toxics.

Final exam required. Instructor: O'Neill

ESPM C170/EPS C183 Carbon Cycle Dynamics 3 Units**Department:** Environmental Science, Policy, and Management; Earth and Planetary Science; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The focus is the (unsolved) puzzle of the contemporary carbon cycle. Why is the concentration of atmospheric CO₂ changing at the rate observed? What are the terrestrial and oceanic processes that add and remove carbon from the atmosphere? What are the carbon management strategies under discussion? How can emission protocols be verified? Students are encouraged to gain hands-on experience with the available data, and learn modeling skills to evaluate hypotheses of carbon sources and sinks.

Final exam not required. Instructor: Fung

ESPM 172 Photogrammetry and Remote Sensing 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Geometry, algebra, and trigonometry.

This course introduces the concepts and principles of photogrammetry and remote sensing, specifically aerial photography, as important data collection and analysis tools for natural resources management in spatial sciences such as ecology, geography, geology, civil engineering, and environmental design. Photo measures of scale, area, and object height, flight planning, an introduction to the electromagnetic spectrum, photo interpretation and mapping, digital remote sensing, and data management in geographic information systems will be discussed.

Final exam required. Instructor: Gong

ESPM 173 Introduction to Ecological Data Analysis 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.

Introduces concepts and methods for practical analysis of data from ecology and related disciplines. Topics include data summaries, distributions, and probability; comparison of data groups using t-tests and analysis of variance; comparison of multi-factor groups using analysis of variance; evaluation of continuous relationships between variables using regression and correlation; and a glimpse at more advanced topics. In computer laboratories, students put concepts into practice and interpret results.

Final exam required. Instructor: de Valpine

ESPM 174 Design and Analysis of Ecological Research 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of computer laboratory per week.**Prerequisites:** One year calculus; one semester statistics or consent of instructor.

Surveys major designs and analyses for biological field and laboratory studies. Topics include data distributions; regression; analysis of variance; fixed and random effects; blocking, split plots, and repeated measures; maximum likelihood; Generalized Linear Models; basic computer programming. Relies on math to interpret and manipulate equations supported by computer simulations. Examples include population, ecosystem, behavioral, and evolutionary ecology.

Final exam required. Instructor: de Valpine

ESPM 175A Senior Research Seminar in Environmental Sciences 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of seminar per week.**Prerequisites:** Senior standing in Environmental Science, Policy, and Management major and completion of Environmental Science, Policy, and Management 100.

Students design and conduct a senior thesis project, which requires identifying a testable question or problem, designing and executing a research protocol, analyzing data, deriving conclusions, and presenting the research in a scientific paper and an oral presentation. Lectures and assignments emphasize research design, data analysis, scientific writing, and scientific communication.

Final exam not required. Formerly known as Environmental Science 196A.

ESPM 175B Senior Research Seminar in Environmental Sciences 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of seminar per week.**Prerequisites:** Senior standing in Environmental Science, Policy, and Management major and completion of Environmental Science, Policy and Management 100 and Environmental Science, Policy, and Management 175A.

Students design and conduct a senior thesis project, which requires identifying a testable question or problem, designing and executing a research protocol, analyzing data, deriving conclusions, and presenting the research in a scientific paper and an oral presentation. Lectures and assignments emphasize research design, data analysis, scientific writing, and scientific communication.

Final exam not required. Formerly known as Environmental Science 196B.

ESPM 175L Senior Research Laboratory in Environmental Sciences 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Must be taken concurrently with Environmental Science, Policy, and Management 175A-175B.

Independent laboratory or field research in support of the required senior seminar project.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Environmental Science 196L.

ESPM 178B Environmental Science Education Practicum 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 3 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Consent of instructor.

Framed around the topic of sustainability, the course engages students from different science majors to apply the content knowledge from their discipline to build curriculum pieces for presentation in high school classrooms. Students develop pedagogical content knowledge and relate teaching theory to practice. Additional topics covered include classroom management and leadership, lesson planning, presentation skills, and readings in science education.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

ESPM C180/CIV ENG C106/EPS C180 Air Pollution 3 Units**Department:** Environmental Science, Policy, and Management; Civil and Environmental Engineering; Earth and Planetary Science; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Chemistry 1A-1B, Physics 8A or consent of instructor.

This course is an introduction to air pollution and the chemistry of earth's atmosphere. We will focus on the fundamental natural processes controlling trace gas and aerosol concentrations in the atmosphere, and how anthropogenic activity has affected those processes at the local, regional, and global scales. Specific topics include stratospheric ozone depletion, increasing concentrations of green house gasses, smog, and changes in the oxidation capacity of the troposphere.

Final exam required. Instructor: Goldstein

ESPM 181A Wildland Fire Science 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Consent of instructor.

Fundamentals of wildland fire including fire behavior modeling, fire history methods, prescribed fire techniques, fire ecology, fire management, fire in the urban-wildland intermix, wildland fire, and ecosystem sustainability. Laboratories on inventory methods, fire history, modeling of fire behavior and risk, and prescribed burning.

Final exam required. Formerly known as 181. Instructor: Stephens

ESPM 182 Forest Operations Management 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** 101A, 101B, 101C and 101D.

Examination of "on the ground" activities necessary to manage forests. Planning, design, and implementation of activities such as road building, forest harvesting, erosion control, and fire suppression are the central focus of the course. Aspects of timber harvest planning, archaeological surveys related to forest management, road closure, stream bank stabilization, and legislative control of forest operations will also be explored.

Final exam required. Instructor: York

ESPM 183 Forest Planning and Management 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 70, 102B or 171, 102C and 185.

Planning and management of forestlands to meet multiple objectives of land owners and the society. Processing and organization of land data and forest ecosystem dynamics for quantitative analysis with GIS. Fundamentals of land-use planning, valuation, multiple goal decision analysis, and forest management scheduling. Quantitative, analytical, and communication skills are emphasized. Oral presentation required.

Final exam required.

ESPM C183/ENVECON C183 Forest Ecosystem Management 4 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Introduces students to concepts and quantitative tools needed for the sustainable management of multi-use forest ecosystems. Topics covered include: estimation of ecological, economic, and social values: construction of dynamic forest models, methods for optimal decision-making, and development of forest management plans. Application to current issues in temperate and tropical forest management are discussed. Quantitative, analytical, and communication skills are emphasized. Oral presentation required.

Final exam required. Instructor: Potts

ESPM 184 Agroforestry Systems 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Upper division standing.

Agroforestry principles and systems in use worldwide are examined, with emphasis on contemporary temperate agroforestry system design and management. Economic, biologic, social, and political conditions for successful agroforestry systems are analyzed. Some laboratory sessions will be field trips that will extend beyond the scheduled lab time.

Final exam required. Instructor: Altieri

ESPM 185 Applied Forest Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** 102A or course in community ecology.

Concepts and applications of silviculture for the establishment, growth, composition, and quality of forest trees and stands. Silviculture is presented as a tool to meet multiple resource and ecosystem management objectives related to wildlife habitat, watershed resources, forest health, or timber production. Two weekend field trips will be scheduled in lieu of several laboratories.

Final exam required. Instructor: O'Hara

ESPM 186 Management and Conservation of Rangeland Ecosystems 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Begins with the evolution and domestication of grazing animals, continues through ranching and rangeland stewardship practices, and explores new institutional arrangements for conservation and restoration. Woodlands, grasslands, and shrublands provide biodiversity, wildlife habitat, watershed, recreation, open space, and forage. Human practices and ecosystem dynamics meet in rangeland management. Methods for changing, predicting, or assessing the results.

Final exam required. Instructors: Bartolome, Huntsinger

ESPM 187 Restoration Ecology 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 hours of laboratory per week, and 1 mandatory Saturday field trip.**Prerequisites:** One course in ecology; upper division or graduate standing.

This course covers ecological theories that inform the practice of ecological restoration, with particular focus on local (Bay Area) restoration and linkages with social, political, and economic factors. Laboratories focus on assessment techniques and cumulate with formulation of a restoration management plan. Laboratories will be based at the Richmond Field Station, served by campus shuttle.

Final exam required. Instructor: Suding

ESPM 188 Case Histories in Wildlife Management 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** 114

Seminar format with presentation and discussion by each student, with long term paper requirement. Examination in depth of current issues in wildlife management.

Final exam not required. Instructor: Barrett

ESPM 190 Seminar in Environmental Issues 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Upper division standing and consent of instructor.

Interdisciplinary study of issues for advanced students. Designed to develop skills in critical analysis of specific issues. Different topics will be available each semester reflecting faculty and student interest. Major research project required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM C191/AMERSTD C112F/HISTART C189/UGIS C136 The American Forest: Its Ecology, History, and Representation 4 Units**Department:** Environmental Science, Policy, and Management; American Studies; Environ Sci, Policy, and Management; History of Art; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The American forest will be examined in terms of its ecology, history, and representations in paintings, photographs, and literary essays. This examination seeks to understand the American forest in its scientific and economic parameters, as well as the historic, social, and ideological dimensions which have contributed to the evolution of our present attitudes toward the forest.

Final exam required. Instructors: Lovell, McBride

ESPM 192 Molecular Approaches to Environmental Problem Solving 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion per week.**Prerequisites:** Junior or senior standing in Molecular Environmental Biology major, or consent of instructor.

Seminar in which students consider how modern biotechnological approaches, including recombinant DNA methods, can be used to recognize and solve problems in the area of conservation, habitat and endangered species preservation, agriculture and environmental pollution. Students will also develop and present case studies of environmental problems solving using modern molecular methods.

Final exam required. Instructor: Lindow

ESPM C193A/EDUC C193A Environmental Education 3 Units**Department:** Environmental Science, Policy, and Management; Education; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture/discussion and 6 hours of fieldwork per week.

Theory and practice of translating ecological knowledge, environmental issues, and values into educational forms for all age levels and all facets of society, including schools. Concentrated experience in participatory education.

Final exam required. Instructor: Hurst

ESPM 194 Senior Seminar in Conservation and Resource Studies 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Senior standing in CRS major.

Seminar in which students synthesize their knowledge, skills, and interests into a holistic perspective. A one-hour oral presentation in the area of interest and a senior thesis synthesizing the area of interest are required. Required final semester for all CRS majors. Final exam not required.

ESPM 194A Senior Seminar in Conservation and Resource Studies 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Senior standing in CRS major.

Seminar in which students synthesize their knowledge, skills, and interests into a holistic perspective. A one-hour oral presentation in the area of interest and a senior thesis synthesizing the area of interest are required. Required final semester for all CRS majors. Final exam not required.

ESPM 194B Capstone Course in Society and Environment 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of lecture per week for 8 weeks.**Prerequisites:** Senior standing in ESPM Society and Environment major.

Senior capstone project in the student's primary area of concentration and presentation to the ESPM Society and Environment faculty and majors. Required of all graduating seniors in the ESPM and Society and Environment major. Students who have completed ESPM 195, H196, or 197 may substitute that course for ESPM 194B.

Final exam not required.

ESPM 195 Senior Thesis 3 - 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of laboratory/research work per week per unit.**Prerequisites:** Senior standing in ESPM major; 3.0 GPA.

Subject must be approved by faculty sponsor during final semester of the junior year and course initiated in the first semester of the senior year. Credit option: Conservation Resource Studies majors who have successfully completed 195 may petition for exemption from 194. Final exam not required.

ESPM H196 Honors Research 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual research or meeting with faculty sponsor(s). 12 hours of work per week. 18 hours per week for 10 weeks; 22.5 hours per week for 8 weeks; 30 hours per week for 6 weeks.**Prerequisites:** Open only to upper division Environmental Science, Policy, and Management majors, 3.2 minimum GPA. Eligibility restrictions related to GPA and unit accumulation.

Supervised independent honors research specific to aspects of environmental science, policy, and management, followed by a written report to department. Submission of no more than 300 words required for approval.

Course may be repeated for a maximum of 8 units. Course may be repeated for a maximum of 8 units. Final exam not required.

ESPM 197 Field Study in Environmental Science, Policy, and Management 1 - 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of field study per week per unit.**Prerequisites:** Upper division standing. Campus and departmental restrictions apply.

Supervised experience in off-campus organizations relevant to specific aspects of environmental science, policy, and management. Regular individual meetings with faculty sponsor and written reports required. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 198 Directed Group Studies for Advanced Undergraduates 1 - 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Upper division standing; consent of instructor; campus and departmental restrictions apply.

Group study of special topics in environmental science, policy, and management that are not covered in depth in regular courses in the department.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Upper division standing; campus and departmental restrictions apply.

Enrollment restrictions apply; see the Courses and Curricula section of this catalog. Supervised independent study and research specific to aspects of environmental science, policy, and management. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 201A Research Approaches in Environmental Science, Policy, and Management 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion and 1 hour of seminar per week.**Prerequisites:** Graduate standing in ESPM.

Research projects and approaches in environmental science, policy, and management. An introduction to the diverse ways environmental problems are researched, comparing the approaches and methods of various disciplines represented among faculty and students. This course is the first of the core course sequence required for all ESPM graduate students.

Final exam not required. Formerly known as 200B. Instructor: Mills

ESPM 201C Environmental Forum 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of seminar/discussion per week.**Prerequisites:** Graduate standing in ESPM.

Presentation and analysis of current topics in environmental science, policy, and management. This course is required for all ESPM doctoral students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 200C.

ESPM 201S Environmental Science, Policy, and Management Colloquium 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1.5 hours of seminar/discussion per week.

Seminars for the presentation and discussion of original work by faculty, visiting scholars, and graduate students. Core course for the ESPM graduate program.

Final exam not required.

ESPM C204/INTEGBI C204 Research Reviews in Animal Behavior: Behavior Review 1 Unit**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hours of seminar per week.**Prerequisites:** Graduate standing, basic course in animal behavior.

Instructor approval required.

This course will provide a rigorous, critical review of current research in animal behavior. Emphases will include hypothesis testing and experimental design, as well as methods of data collection and analysis. Each week, a student in the course will present original research in the form of a seminar presentation, grant proposal, or manuscript. Through discussion with seminar participants, presenters will gain critical feedback regarding their research.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Lacey, Caldwell, Bentley, Elias

ESPM C205/ENE,RES C205/INTEGBI C205 Quantitative Methods for Ecological and Environmental Modeling 3 Units**Department:** Environmental Science, Policy, and Management; Energy and Resources Group; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

This course will review the background mathematical and statistical tools necessary for students interested in pursuing ecological and environmental modeling. Topics include linear algebra; difference equation, ordinary differential equation, and partial differential equation models; stochastic processes; parameter estimation; and a number of statistical techniques. This course will be recommended as a prerequisite for advanced modeling courses in Integrative Biology, Energy and Resources Group, and Environmental Science, Policy, and Management. Final exam not required.

ESPM 206 Animal Communication 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Term course may be offered:** Spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of discussion per week.

The objective of the course is to explore major topics in animal communication. Topics each year will focus on a different sensory modality and range from visual, acoustic, and chemical senses. Due to the interdisciplinary nature of the study of communication, over the course of the semester, we will draw on a variety of disciplines (including cell biology, ecology, evolution, genetics, neurophysiology, and physics) to understand the mechanisms, function, and evolution of communication. Final exam not required. Instructor: Elias

ESPM 209 Pathogen and Disease Ecology 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Study and discussion of current topics in pathogen and disease ecology. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Almeida

ESPM 210 Spatial Data Analysis for Natural Resources 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** One year of upper division probability and statistics, one course in multivariate analysis, or consent of instructor.

An introduction to natural resource spatial data analysis. Topics to be covered include spatial sampling, quadrat analysis, distance methods, spatial point patterns and Ripley's K function, spatial autocorrelation, and geostatistics (Kriging). Readings will cover applications in various natural resource fields as well as general theory.

Final exam not required. Instructor: Biging

ESPM C211/ENE,RES C202 Modeling Ecological and Meteorological Phenomena 3 Units**Department:** Environmental Science, Policy, and Management; Energy and Resources Group; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Integrative Biology 102 or consent of instructor.

Modeling methods in ecology and meteorology; stability analysis; effects of anthropogenic stress on natural systems. Offered alternate years.

Final exam not required. Instructor: Harte

ESPM 215 Hierarchical Statistical Modeling in Environmental Science 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of lecture/computer laboratory per week.**Prerequisites:** Calculus and experience with common statistical methods such as linear regression, or consent of instructor.

Hierarchical statistical models include generalized linear mixed models, generalized additive mixed models, state-space models for time-series data, and random field models for spatial data. Introduction to formulation and analysis of such models with frequentist methods, including maximum likelihood via numerical integration and restricted maximum likelihood, and Bayesian methods, including Markov chain Monte Carlo. Background in relevant probability theory.

Final exam not required. Instructor: de Valpine

ESPM C216/INTEGBI C216 Freshwater Ecology 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This graduate course will combine formal lectures and discussion, with the overall goal of exposing students to general concepts in freshwater ecology. We will discuss a broad range of topics including freshwater environments and biota, natural selection and adaptive evolution, food webs and trophic cascades, cross-ecosystem linkages, and social-ecological resilience of freshwater ecosystems under global change. Upper division undergraduates are welcome, with permission of the instructors.

Final exam not required. Instructors: Carlson, Power

ESPM C220/EPS C241/INTEGBI C227 Stable Isotope Ecology 5 Units**Department:** Environmental Science, Policy, and Management; Earth and Planetary Science; Environ Sci, Policy, and Management; Integrative Biology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing.

Course focuses on principles and applications of stable isotope chemistry as applied to the broad science of ecology. Lecture topics include principles of isotope behavior and chemistry, and isotope measurements in the context of terrestrial, aquatic, and marine ecological processes and problems. Students participate in a set of laboratory exercises involving preparation of samples of choice for isotopic analyses, the use of the mass spectrometer and optical analysis systems, and the analysis of data. Final exam not required. Instructors: Amundson, Dawson, Mambelli

ESPM 222 Surface and Colloid Chemistry of Natural Particles 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 126 or consent of instructor.

Structure and coordination chemistry of natural adsorbent particles in aqueous systems; solute adsorption mechanisms and theoretical models; interparticle forces and colloidal phenomena; applications to biogeochemistry and contaminant hydrology.

Final exam not required. Instructor: Sposito

ESPM C225/INTEGBI C226 Isotopics 2 Units

Department: Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Integrative Biology

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 3 hours of Seminar per week for 10 weeks.

This seminar will explore current topics that employ the use of stable isotopes. Discussion topics include the areas of biology, paleontology, biogeochemistry, soil science, and atmospheric science. Students will be required to lead at least one discussion of relevant literature in the topic area.

Final exam not required. Instructors: Amundson, Dawson, Mambelli

ESPM 226 Interdisciplinary Food and Agriculture Studies 3 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor.

A graduate seminar exploring the ecological, social, and economic risks inherent in different forms of agriculture, from highly diversified, agroecological farming systems to industrialized agriculture. We will examine how different farm management techniques, government policies, supply chains, R&D, technology, and science may influence various risks and uncertainties, including climate change, agrobiodiversity, farmer livelihoods, food safety, public health, and nutrition.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Iles, Kremen

ESPM 227 Science Communication 2 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Term course may be offered: Spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 3 hours of lecture per week.

Effective communication is an important skill that all scientists should master. There are many different forms of communication, and these require different approaches and techniques. The goal of this course is to provide students with the skills to communicate scientific findings to a wide range of audiences. We will discuss approaches to communicating our findings and those of others to other scientists, the public, and the media. We will then prepare and practice communicating through papers, proposals, presentations, sound bites, and podcasts. Exercises and assignments are designed to give students hands on experience developing their own stories and packaging them to selected audiences.

Final exam required. Instructor: Silver

ESPM 228 Advanced Topics in Biometeorology and Micrometeorology 2 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Lecture per week for 15 weeks.

Prerequisites: C129 or consent of instructor.

Measurement and modeling of trace gases and energy between the terrestrial biosphere and atmosphere. Micrometeorological flux measurement methods, including eddy covariance, profile, and eddy accumulation methods. A hierarchy of biophysical models are discussed for interpreting flux measurements. Information and theory on big-leaf, two-layer, and multi-layer models that couple energy, water, and carbon to predict trace gas fluxes are presented. How models integrate information from leaf to canopy to landscape scales is discussed.

Final exam not required. Instructor: Baldocchi

ESPM 233 Geographic Information Systems for Environmental Science and Management 3 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.

Prerequisites: Introduction to Geographic Information Systems (GIS).

The objectives of the course are to: 1) review the GIS basics (data, analysis, and product generation) with special reference to data used in managing California environments; 2) understand the issues surrounding, and algorithms used in, a particular GIS application; and 3) develop an operational GIS project in a chosen area. This course is divided into three sections: 1) an intensive GIS fundamentals section covering geospatial data input, manipulation, analysis, and effective communication using common geospatial data from California sources; 2) a section that discusses linkages with other GIScience disciplines; 3) a topic based case-study portion; and 4) a project development phase. Topics will need to have management applicability for an agency, not-for-profit, or similar type of group involved in environmental management. There will be lectures and labs throughout the class, although lab time nearer the end of class will be focused on class projects. Reading will be assigned throughout, and class discussion held. The final class period will be used as an "illustrated paper" session, in which final projects are displayed and discussed.

Final exam required. Instructor: Kelly

ESPM C234/CHEM C234/PB HLTH C234 Green Chemistry: An Interdisciplinary Approach to Sustainability 3 Units

Department: Environmental Science, Policy, and Management; Chemistry; Environ Sci, Policy, and Management; Public Health

Course level: Graduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 20 hours of Lecture per week for 6 weeks.

Prerequisites: One year of chemistry, including a semester of organic chemistry, or consent of instructors based on previous experience. Meeting the challenge of global sustainability will require interdisciplinary approaches to research and education, as well as the integration of this new knowledge into society, policymaking, and business. Green Chemistry is an intellectual framework created to meet these challenges and guide technological development. It encourages the design and production of safer and more sustainable chemicals and products. Final exam not required. Instructors: Arnold, Bergman, Guth, Iles, Kokai, Mulvihill, Schwarzman, Wilson

ESPM 249 Bioethics, Law, and the Life Sciences 3 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. Developments in biotechnology and the life sciences are unsettling legal and policy approaches to intellectual property, reproduction, health care, medical research, and the criminal justice system. Through reading primary materials and relevant secondary sources, this course investigates ethical, legal, and policy problems associated with these developments, and explores possible solutions. Final exam not required. Instructor: Winickoff

ESPM 250 Environmental History 4 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring. Offered odd-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: Upper division course in history or history of science or a social science.

A critical survey of classical and recent literature in the field of environmental history, philosophy, and ethics, with special emphasis on the American environment. Topics will include environmental historiography, theories of environmental history, and the relationships between environmental history, philosophy, ethics, ecology, and policy. Final exam not required. Instructor: Merchant

ESPM 251 International Conservation and Development Policy 3 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: One upper division course in international development. Changes in Third World rural economy, ecology, and environment and ways in which these are affected by development policies. Historical dimensions of Third World environmental problems. Changing patterns of rural production (especially food) and resource use; alternative theories of natural resource and socioeconomic development; linkages between socioeconomy and environment in agrarian change and development policy; technology and resource control; conservation and development problems.

Final exam not required. Instructor: Carr

ESPM C252/ANTHRO C254/HISTORY C250/STS C200 Topics in Science and Technology Studies 3 Units

Department: Environmental Science, Policy, and Management; Anthropology; Environ Sci, Policy, and Management; History; Science and Technology Studies

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks. This course provides a strong foundation for graduate work in STS, a multidisciplinary field with a signature capacity to rethink the relationship among science, technology, and political and social life. From climate change to population genomics, access to medicines and the impact of new media, the problems of our time are simultaneously scientific and social, technological and political, ethical and economic. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 253 Advanced Readings in Political Ecology 4 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor; significant background in social theory.

Critique and comparison of literature in political ecology--an approach to sociological analysis of environmental change focusing on environmental conflict. Initial sessions address the definition of political ecology, its origins, and the politics and discourses of natural resource management. Literature includes domestic and international research involving the combination of social and environmental history, local perspectives, and political economy to discuss accounts of social and environmental change.

Final exam not required. Instructor: Peluso

ESPM C254/PB HLTH C202B Ethnic and Cultural Diversity in Health Status 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Public Health**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Focus on ethnic and cultural diversity in health behavior as a basis for public health programs. Consideration of U.S. ethnic minority groups and cultural groups in non-Western societies. Health status and behavior examined in context of relevant social and anthropological theory (social class, acculturation, political economy). Influence of socio-cultural background on concepts of health, illness, and health-seeking behavior. Implications for planning public health programs and policies.

Final exam not required. Instructor: Morello-Frosch

ESPM C255/GEOG C250 Seminar in Sociology of Forest and Wildland Resources 3 Units**Department:** Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Individual projects and group discussions concerning social constraints to, and effects of, natural resource planning and management. Application of sociological theories to problems of managing wildland ecosystems. Students will examine topics of individual interest related to the management of wildland uses. Enrollment limited.

Final exam not required. Instructor: Fortmann

ESPM 256 Science, Technology, and the Politics of Nature 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered even-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course will introduce the methods and theories of Science and Technology Studies (STS) in order to explore the relationships among science, technology, law, and politics in the domains of environment and health. The course will focus some attention on the tension between technocracy and democracy in science policy, and on the role of biotechnology in reshaping the natural and political order. The course will equip graduate students in the social sciences, law, life sciences, and public policy with theoretical and practical tools for analyzing complex problems at the science, technology, and society interface.

Final exam not required. Instructor: Winickoff

ESPM 258 Race, Science, and Resource Policy 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course addresses explanation and strategy in natural resource policy with an emphasis on whether, why, and how (a) 'race' distributes access to and control of environmental resources, (b) 'science' creates and arrays perceptions, organization and control of these resources, and (c) public policy shapes racial disparities in natural resource opportunities. Topics are drawn primarily from issues in metropolitan, agricultural, and public resource systems.

Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 214. Instructor: Romm

ESPM 259 Transnational Environmental Politics and Movements 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Upper division course in environmental policy or social science.

Contemporary issues in international environmental politics; impacts of globalization on the environment; comparative transnational environmental movements. Study of current and historical texts. Case studies drawn from around the world with a focus on methods and research techniques.

Final exam not required. Instructor: O'Neill

ESPM 260 Governance of Global Production 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course explores critical policy and theoretical questions in the governance of global production. Current trends in the restructuring of industrial production; distributions of environmental, labor, and social impacts from this production; and new strategies for democratic governance are analyzed, including corporate self-regulation, monitoring, certification and labeling, fair trade programs, legal strategies, and international accords and agreements.

Final exam not required. Instructor: O'Rourke

ESPM 261 Sustainability and Society 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Science-based technologies that are central to the search for sustainability in contemporary societies and their environmental impacts.

Theoretical approaches to investigating how science, technology, and environment intersect. How societies move closer to sustainable technological systems. Redesign of existing technologies and the introduction of new technologies. How adverse impacts can be prevented through policy. Case studies of contemporary developments.

Final exam not required. Instructor: Iles

ESPM 262 Race, Identity, and the Environment 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

Advanced readings on environment and race. Shifting meanings of "race" and its application and usefulness in theorizing human-environment relationships. Foundations of environmental ideas and attitudes towards the natural environment and their connections to contemporary environmental practices. Construction of environmental narratives and images in defining ideas of racial and place identity. How representations of the natural environment are structurally and culturally racialized within environmental institutions and the media. Post-race possibilities.

Final exam not required. Instructor: Finney

ESPM 263 Indigenous, Feminist, and Postcolonial Approaches to Science, Technology, and Environment 4 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This seminar presents material from indigenous studies; feminist and postcolonial science and technology studies (STS), including animal studies; political ecology; and other fields. It engages non-dominant knowledges while interrogating the role of key technoscientific concepts (modernity, objectivity, universality) in colonizations of both humans and nonhumans. This course highlights the role of critical methods in shifting power relations in research, including students' own research.

Final exam not required. Instructor: TallBear

ESPM 264 Silviculture Seminar 1 Unit**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** 185 or consent of instructor.

A seminar covering various aspects of silviculture and related issues.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: O'Hara

ESPM 265 Seminar on Fire as an Ecological Factor 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/seminar per week.

Effect of fire on ecology of forest and rangeland.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Stephens

ESPM 268 Seminar in Range Ecology 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor.

A seminar course dealing with selected topics in ecology of rangelands.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 271 Advanced Remote Sensing of Natural Resources 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.**Prerequisites:** 172, Statistics 20, or consent of instructor.

Advanced photographic systems. Nonphotographic systems including multispectral scanner, imaging spectrometry, thermal, and RADAR. The use of digital image processing, geographic information systems (GIS,) and accuracy assessment. A look into linking remote sensing with GIS and integrated analysis of multisource spatial data. Laboratories and application projects are to be arranged.

Final exam not required. Instructor: Gong

ESPM C273/ANTHRO C273/HISTORY C251/STS C250 Science and Technology Studies Research Seminar 3 Units**Department:** Environmental Science, Policy, and Management; Anthropology; Environ Sci, Policy, and Management; History; Science and Technology Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course will cover methods and approaches for students considering professionalizing in the field of STS, including a chance for students to workshop written work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 276 Advanced Silviculture 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.**Prerequisites:** 185 or equivalent.

Advanced topics related to the dynamics and management of forest stands such as competition effects, mixed-species interactions, managed stand silviculture, pruning, thinning regimes, management for old growth features, wood quality effects, and others. Field trips may be included. Final exam not required. Instructor: O'Hara

ESPM 277 Advanced Topics in Conservation Biology 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks.**Prerequisites:** Undergraduate courses in ecology, population biology, or conservation biology.

A graduate level seminar covering advanced topics in conservation of biodiversity, focused on designing protected area networks. We will first lay the groundwork for the course by exploring the fundamental papers in ecology and conservation biology that led to systematic conservation planning. Then, we will study various issues at the current frontiers of the discipline, such as incorporating threats, costs, evolutionary processes, and ecosystem services into reserve network design. The class will encourage student engagement through discussions, peer instruction and peer review of essays.

Course may be repeated for credit when topic changes. Final exam not required. Instructor: Kremen

ESPM 278 Range Assessment 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring. Offered odd-numbered years.**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.**Prerequisites:** 186 and one semester of statistics.

Rangeland vegetation sampling techniques with emphasis on comparing the relative efficiency of different techniques of vegetation measurement. Includes weekly lab exercises on artificial sampling boards and/or in the field. Juniors and seniors are encouraged. Final exam not required. Instructor: Allen-Diaz

ESPM 279 Seminar on Pastoralism 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week plus 4 field trips.**Prerequisites:** Consent of instructor.

A survey of pastoral animal management and production systems, as they influence and are influenced by the rangeland environment. Review of the evolution of animal management practices; contemporary management systems in California, the West, and worldwide; and production systems with both traditional and nontraditional goals. Examination of agroforestry and nomadic and transhumant grazing systems, sheep and cattle production, game ranching, and organic meat production will be included. Final exam not required. Instructor: Huntsinger

ESPM 280 Seminar in Range Ecosystem Planning and Policy 3 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.**Prerequisites:** Consent of instructor.

A seminar course dealing with selected current topics in range ecosystem planning and policy.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Bartolome

ESPM 281 Seminar in Wildlife Biology and Management 2 Units**Department:** Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/seminar per week.**Prerequisites:** 114 and 187.

Reading, conference, and discussion. Reports and discussion of recent studies in wildlife biology and management. Open to qualified graduate students from other departments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM C282/PB HLTH C271G Health Implications of Climate Change 3 Units

Department: Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Public Health

Course level: Graduate

Term course may be offered: Spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week.

Prerequisites: The material will be presented with minimal expectation of a background in physical science, although some additional reading may be needed for students with no university science courses. A background in epidemiology is also helpful, but not necessary.

The course will provide a basic foundation in the physical mechanisms of, responses to, and health implications of climate change. We will explore the variety of epidemiologic, risk assessment, and statistical methods used to understand the impacts of climate change on health across diverse demographic groups. The public health implications, positive and negative, of efforts to mitigate and adapt to climate change will be elaborated, including discussions of ethical, political, and economic aspects of these efforts. Students will be responsible for leading class discussions and presenting a poster on their choice of a topic related to climate change and health.

Final exam required. Instructors: Jerrett, Morello-Frosch

ESPM 284 Demographic Methods for Population Viability Analysis 3 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring. Offered even-numbered years.

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Graduate standing or consent of instructor.

Application of demographic methods to the management of plant and animal populations. Conservation problems faced by small populations of threatened or exploited species will be emphasized. Implications for life-history theory will also be discussed. Demographic analyses include (1) an understanding of life cycle diagrams, projection matrices, and age- and stage-based approaches; (2) calculation of population growth rate and sensitivity of demographic parameters to perturbation; and (3) advanced techniques of stochastic simulation modeling, spatial analyses, and population viability analyses will be learned.

Final exam not required. Instructor: Beissinger

ESPM 290 Special Topics in Environmental Science, Policy, and Management 1 - 4 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 hour of seminar per week per unit.

Prerequisites: Graduate standing or consent of instructor.

Study and critical analysis of topics, research, and texts pertinent to environmental science, policy, and management. Different topics will be available each semester reflecting faculty and student interest.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 296 Individual Study 1 - 7 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Hours to be arranged.

Individual study in consultation with a member of the faculty directed to analysis and synthesis of the literature of a specialized subject area in forestry and resource management.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 298 Directed Group Study 1 - 6 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall, spring and summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 4 hours of laboratory/discussion per week per unit.

Prerequisites: Consent of instructor.

Advanced study of research topics which vary each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM 299 Individual Research 1 - 12 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 4 hours of laboratory/discussion per week per unit.

Prerequisites: Consent of instructor.

Individual research under the supervision of a faculty member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM N299 Individual Research 1 - 8 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate

Term course may be offered: Summer

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 4 hours of laboratory/discussion per week per unit.

Prerequisites: Consent of instructor.

Individual research under the supervision of a faculty member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Entomological Sciences 299, Forestry and Resource Management 299, Plant Pathology 299, and Soil Science 299.

ESPM 300 Supervised Teaching in Environmental Science, Policy, and Management 1 - 6 Units

Department: Environ Sci, Policy, and Management

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Hours to be arranged.

Prerequisites: Consent of instructor and appointment as graduate student instructor.

Teaching methods at the University level; course content; problem set review and development; guidance of laboratory experiments; course development and evaluation; supervised practice teaching.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ESPM C302/GEOG C302 Effective Scientific Communication 3 Units

Department: Environmental Science, Policy, and Management; Environ Sci, Policy, and Management; Geography

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Seminar per week for 15 weeks.

This course will introduce methods of organizing and delivering oral presentations, initiating and organizing manuscripts, and utilizing digital communication methods, such as web-based media. Students will develop effective communication techniques through in-class experience. This class will have an emphasis on the sciences but will be useful and open to graduate students of all disciplines.

Final exam not required. Instructors: Resh, Rhew

ESPM 375 Professional Preparation: Teaching in Environmental Science, Policy, and Management 2 Units

Department: Environ Sci, Policy, and Management

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 7.5 hours of lecture/discussion/demonstration and 1 Saturday laboratory.

The course will consist of readings and discussions led by instructors, graduate students, and guest speakers covering topics on developing teaching skills relevant to an interdisciplinary environmental science program. Students will present brief lectures that will be taped and evaluated and will learn skills for evaluating success in conveying complex ideas to their own students.

Final exam not required. Formerly known as Environmental Science, Policy, and Management 301. Instructors: Fairfax, Resh

ESPM 400 Professional Training in Research 1 - 6 Units

Department: Environ Sci, Policy, and Management

Course level: Other professional

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Hours to be arranged.

Prerequisites: Consent of instructor and appointment as graduate student researcher.

Training for students in planning and performing research under the supervision of a faculty member. This course is intended to provide credit for experience obtained.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements. Final exam not required.

ESPM 601 Individual Study for Master's Students 1 - 8 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate examination preparation

Terms course may be offered: Fall, spring and summer

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 4 hours of laboratory/discussion per week per unit.

Prerequisites: Consent of instructor.

Individual study for the comprehensive examination in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

ESPM 602 Individual Study for Doctoral Students 1 - 8 Units

Department: Environ Sci, Policy, and Management

Course level: Graduate examination preparation

Terms course may be offered: Fall, spring and summer

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 4 hours of laboratory/discussion per week per unit.

Prerequisites: Consent of instructor.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

May not be used for residence requirements for the doctoral degree.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Environmental Design (ENV DES)

ENV DES 1 People and Environmental Design 3 Units

Department: Environmental Design

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 2 hours of Discussion per week for 15 weeks. 6 hours of Lecture and 4 hours of Discussion per week for 8 weeks.

Environmental design involves the study of built, natural, global, and virtual environments. Various forms of practice include architecture, planning, urban design, and social and environmental activism. This course is a survey of relationships between people and environments, designed and non-designed, with an introduction to the literature and professional practices. Open to all undergraduate students in the College of Environmental Design as well as other colleges and majors.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Student will receive no credit for 1 after taking 4.

Final exam required. Instructors: de Monchaux, Jewell

ENV DES 2 Introduction to Environmental Design Summer Lectures 1 Unit

Department: Environmental Design

Course level: Undergraduate

Term course may be offered: Summer

Grading: Offered for pass/not pass grade only.

Hours and format: 2 hours of Lecture per week for 8 weeks. 3 hours of Lecture per week for 6 weeks.

This course accompanies the summer studio and media classes in the architecture and landscape architecture post-baccalaureate programs, (IN)Arch and (IN)Land, of the College of Environmental Design. This series of eight lectures by faculty in the College of Environmental Design at Berkeley presents a range of approaches, theories, and practices in the design fields. Lectures will include topics in landscape architecture, architectural practice, building construction and systems, global cities, urban ecology, building sustainability, social and political aspects of architecture, and a panel discussion by professionals who are previous students of the College.

Final exam not required.

ENV DES R3B Reading and Composition in Energy, Society, and Environmental Design 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** UC Entry Writing Requirement or UC Analytical Writing Placement Exam. R1A or equivalent course is prerequisite to R1B.

This course will expose students to key literature that examines, primarily, the relationship between sustainability and environmental design disciplines. Our goal will be not only to investigate the central ideas that inform the design of sustainable landscapes, cities, and buildings, but also to understand how competing arguments are presented in writing. Satisfies the second half of the Reading and Composition Requirement. Satisfies the second half of the Reading and Composition requirement. Course may be repeated for credit when topic changes. Final exam not required.

ENV DES 4A Design and Activism 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course explores the relationships between design and activism, raising critical questions about what design is, and how designers serve as guardians of culture and as agents of change. Students will participate in "spontaneous acts of design activism" that address contemporary issues through the making of forms and space to reinvent relationships between people and their environments.

Final exam required.

ENV DES 4B Global Cities 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This study of cities is more important than ever; for the first time in history more people live in urban than rural areas, and cities will account for all of the world's population growth for at least the next half-century.

We will explore the challenges facing global cities in the 21st Century and expose students to some of the key texts, theories, and methods of inquiry that shape the built environment, from the human scale of home and community to the regional scale of the megacity.

Final exam required.

ENV DES 4C Future Ecologies: Urban Design, Climate Adaptation, and Thermodynamics 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is intended to provide students with an overview of current thinking about cities and their components (buildings, parks, streets) as ecological and cultural systems. It will provide an introduction to methods for investigating the dynamics of flows and relationships in the built environment and students will gain experience constructing their own narratives as ways of asking and answering questions about human habitat that could shape the future.

Final exam required.

ENV DES 8 Summer DIScovery Program: Design & Innovation for Sustainable Cities (DISC) 5 Units**Department:** Environmental Design**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.

Hours and format: 15 hours of studio, 10 hours of lecture, and 15 hours of laboratory per week for 4 weeks. There are typically 2 major field trips and 1 guest speaker (typically a Berkeley faculty member) per week, and for the studio component, "making" or equipment use demonstrations by our technical staff.

This course is about cities, their environmental challenges, and the potentials of design innovation as a catalyst for change. The course is organized in four components: global cities and global challenges, design innovators, technology and media workshop on environmental visualization, and product design and fabrication studio.

Course Objectives: • Construct a project that bridges from conception to design and production. • Design a product, artifact or intervention that affects environmental awareness or change. • Identify the major debates around global urbanization. • Understand the importance of user experience. • Understand the issues of spatial scales and levels of intervention. • Understand the potentials and dangers of design and technology interventions.

Workshop & Studio Projects

ENV DES 9 Introduction to Environmental Design: embARC 1 Unit**Department:** Environmental Design**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of lecture and 2.5 hours of studio per week for 4 weeks.

The embARC program allows high school students to explore the fields of sustainable environmental design and experience the culture of the design studio. Students study architecture, urban design, and city planning through a series of lectures, field trips, and studios. Introductory instruction in freehand sketching, drafting, model building and digital representation teaches students how to think with and communicate two- and three-dimensional design ideas.

Final exam required.

ENV DES 10 The History of Thought in Environmental Design 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.**Prerequisites:** None. Open to all undergraduates in the College of Environmental Design and other colleges and majors.

With emphasis on key events of the 20th and now 21st century, this course introduces the big ideas and individuals that have shaped architecture, urban planning, and landscape architecture.

Final exam required.

ENV DES 11A Introduction to Visual Representation and Drawing 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 6 hours of Studio per week for 15 weeks. 3.5 hours of Lecture and 11 hours of Studio per week for 8 weeks.**Prerequisites:** 1 with C- or better.

Introductory studio course: theories of representation and the use of several visual means, including freehand drawing and digital media, to analyze and convey ideas regarding the environment. Topics include contour, scale, perspective, color, tone, texture, and design.

Final exam not required.

ENV DES 11B Introduction to Design 5 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 6 hours of Studio, and 2 hours of Laboratory per week for 15 weeks. 6 hours of Lecture, 11 hours of Studio, and 3.5 hours of Laboratory per week for 8 weeks.**Prerequisites:** 11A with C- or better.

Introduction to design concepts and conventions of graphic representation and model building as related to the study of architecture, landscape architecture, urban design, and city planning. Students draw in plan, section, elevation, axonometric, and perspective and are introduced to digital media. Design projects address concepts of order, site analysis, scale, structure, rhythm, detail, culture, and landscape.

Final exam not required.

ENV DES 98 Directed Group Study 1 - 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hours of directed group study per week. 2 to 8 hours of directed group study per week for 8 weeks. 2.5 to 10 hours of directed group study per week for 6 weeks.**Prerequisites:** Restricted to 1st and 2nd year students.

This is a special topics course intended to fulfill the individual interests of students, and provide a vehicle for professors to instruct students based on new and innovative developments in the field of environmental design. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENV DES 100 The City: Theories and Methods in Urban Studies 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and 3 to 4 hours of reading, analysis, and research per week.

This course is concerned with the study of cities. Focusing on great cities around the world - from Chicago to Los Angeles, from Rio to Shanghai, from Vienna to Cairo it covers of historical and contemporary patterns of urbanization and urbanism. Through these case studies, it introduces the key ideas, debates, and research genres of the interdisciplinary field of urban studies. In other words, this is simultaneously a "great cities" and "great theories" course. Its purpose is to train students in critical analysis of the socio-spatial formations of their lived world.

Final exam required. Instructor: Roy

ENV DES 101A Writing about Environmental Design: Short Compositions 2 - 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of laboratory per week for 10 weeks .5 hour tutorial every other week.**Prerequisites:** English 1B and consent of instructor.

An intensive workshop for students interested in writing about architecture, landscape, and the built environment. Recognizing that undergraduate students who take this course represent departments outside as well as within the College of Environmental Design, assignments are touchstones for students of different disciplines to bring their current academic interests into play when writing about environmental design. Weekly assignments include prose readings, generally essays related to life experience. Brief readings and discussions during each class, along with weekly writing assignments of 3-5 pages of prose will illustrate the skills involved in the craft of writing.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 101.

Instructor: Lifchez

ENV DES 101B Writing about Environmental Design: One Longer Composition 2 - 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of laboratory per week .5 hour tutorial every other week.**Prerequisites:** English 1B and consent of instructor.

In 101B: The Notebook (one long composition in 14 weekly assignments) assigned readings (principally short stories) offer examples of writing which parallel the focus of the week's writing assignment. Prompts and assigned readings encourage the individual development of a "story" or "theme" that each student at the outset or in the process of writing, arrives at a personal narrative. Course approved for English department credit and UC Undergraduate Minor in Creative Writing.

Course may be repeated once for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as 101. Instructor: Lifchez

ENV DES 102 Critical Debates in Sustainable Urbanism 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The aim of the course is to provide students with knowledge and insight into the major issues and debates relating to sustainability. By the end of the course, students should have a critical understanding of the complexity and scale of the sustainability challenge, how different actors characterize and understand sustainability, the approaches that have been developed to implement these varying visions, and the institutional, political, and individual barriers to these visions.

Final exam required.

ENV DES 105 Deep Green Design 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Seminar per week for 15 weeks.**Prerequisites:** Consent of instructor and upper division standing.

Students are to have taken at least one design studio and one course on sustainable design prior to taking this course.

Design problems from an ecological perspective. Design studies of relationships among ecosystem, energy, and resource flows, human social and cultural values, and technological variables as they interact to produce the built environment.

Final exam required. Instructor: Ubbelohde

ENV DES 106 Sustainable Environmental Design Workshop 5 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture and 4 hours of Studio per week for 15 weeks.**Prerequisites:** Environmental Design 102.

This course asks students to reflect back, reviewing the various disciplinary approaches introduced toward sustainability and to look forward by proposing interdisciplinary ways to affect the environment. Each year will be organized around a theme and project advanced by the faculty of the College. The workshop will require independent as well as collaborative research often in partnership with an external 'client' organization.

Final exam not required.

ENV DES C169A/AMERSTD C112A/GEOG C160A American Cultural Landscapes, 1600 to 1900 4 Units**Department:** Environmental Design; American Studies; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduces ways of seeing and interpreting American histories and cultures, as revealed in everyday built surroundings-- houses, highways, farms, factories, stores, recreation areas, small towns, city districts, and regions. Encourages students to read landscapes as records of past and present social relations and to speculate for themselves about cultural meaning.

Final exam required. Instructor: Groth

ENV DES C169B/AMERSTD C112B/GEOG C160B American Cultural Landscapes, 1900 to Present 4 Units**Department:** Environmental Design; American Studies; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduces ways of seeing and interpreting American histories and cultures, as revealed in everyday built surroundings--homes, highways, farms, factories, stores, recreation areas, small towns, city districts, and regions. Encourages students to read landscapes as records of past and present social relations, and to speculate for themselves about cultural meaning.

Final exam required. Instructor: Groth

ENV DES 170 The Social Art of Architecture 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

What is the social art of architecture in America? What was it historically, where is it now, where is it going--and why should you care? In this course, we will explore contemporary and historic attempts to confront social needs through themes: Design by Professionals (Architects, City Planners, Urban Designers, Sociologists, Philosophers, Philanthropists), and Design by Laypeople (Squatters, Intentional Communities, Do It Yourself). The objective is to discharge the false dualism that has emerged in architecture between social concerns and creative design. Course may be repeated by students working on thesis or dissertation. Course may be repeated for credit by students working on thesis or dissertation. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Lifchez

ENV DES 193 Curricular Practical Training for International Students 0 Units**Department:** Environmental Design**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Internship per week for 8 weeks.**Prerequisites:** International students only.

This is a zero-unit internship course for F-1, non-immigrant, international students participating in internships under the Curricular Practical Training program. Requires a paper exploring how the theoretical constructs learned in Environmental Design courses were applied during the internship.

Final exam not required.

ENV DES 195 Senior Thesis 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks.**Prerequisites:** Limited to students with approved individual majors in the College of Environmental Design.

Directed study leading to preparation of a senior thesis.

Course may be repeated once for credit. Course may be repeated for a maximum of 8 units. Final exam required.

ENV DES 195A Introduction to Methods and Thesis Preparation 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The Senior Thesis in Environmental Design is an advanced research and writing project that presents an original and thorough analysis of a topic of individual interest in architecture, landscape architecture, or urban studies. This class provides an introduction to various methodologies relevant for a senior thesis including qualitative, quantitative, and descriptive research approaches.

Final exam not required.

ENV DES 195B Thesis Research and Writing 3 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged with faculty advisor.**Prerequisites:** Environmental Design 195A.

Students taking this class will use it to complete the writing of their thesis under the supervision of a Senior Thesis Advisor. This class will operate as an independent study; faculty with more than one Senior Thesis student may choose to meet them in group sessions.

Final exam not required.

ENV DES 198 Directed Group Study 1 - 4 Units**Department:** Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hours of directed group study per week. 2 to 8 hours of directed group study per week for 8 weeks. 2.5 to 10 hours of directed group study per week for 6 weeks.**Prerequisites:** Restricted to 3rd and 4th year students.

This is a special topics course intended to fulfill the individual interests of students, and provide a vehicle for professors to instruct students based on new and innovative developments in the field of environmental design. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENV DES 201 Urban Places Advanced Design Studio 5 Units**Department:** Environmental Design**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of studio and 3 hours of seminar per week.**Prerequisites:** Students enrolled in the Master of Urban Design program have priority. Others welcome with consent of instructor.

An intensive studio involving collaborative work on problems that are large in scope, yet require attention to spatial organization and design details.

The studio course is offered each fall semester and required for incoming graduate students in the Master of Urban Design Program (MUD).

The course is also open to College of Environmental Design graduate students of advanced standing in the Master of City Planning Program/ Urban Design Concentration, the Master of Architecture and Master of Landscape Architecture Programs.

Final exam not required.

ENV DES 251 Discourse and Methods in Contemporary Urban Design 1 or 3 Units**Department:** Environmental Design**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of seminar per week.**Prerequisites:** The one unit section is open to all students. The three unit section is for students enrolled in the Master of Urban Design program or those who have obtained the consent of the instructor.

The course is the first of three courses (ED251, ED252, ED253) directed toward the development of research and design proposals that advance the field of urban design. As the first course in the sequence, ED251 introduces topics and research methods in contemporary urban design. There is a lecture component (Section 1) that is open to the College and campus. Graduate students preparing for theses and professional reports in urban design will enroll in Section 2, which includes attending the lectures as well as a seminar that expands on the lecture topics by exploring various research and design methodologies.

Final exam not required.

ENV DES 252 Urban Place Studies 3 Units**Department:** Environmental Design**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Students must be in the Master of Urban Design program or obtain consent of instructor.

Seminar focuses on individual urban design interests, the design and research work that students are pursuing in other courses, and development of thesis or final design projects.

Final exam not required. Instructor: Southworth

ENV DES 253 Urban Places Thesis Studio 4 Units**Department:** Environmental Design**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar and 7 hours of Studio per week for 10 weeks.**Prerequisites:** 252

A studio for Masters of Urban Design students aimed to support students during the final months of their thesis work. Faculty will hold bi-weekly individual desk critiques of student work and organize preliminary reviews to outside reviewers in preparation of the final review scheduled during the late August orientation week.

Final exam not required.

ENV DES 298 Environmental Design Group Studies 1 - 4 Units**Department:** Environmental Design**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 4 to 14 hours of Directed group study per week for 4 weeks.**Prerequisites:** Consent of instructor.

Topics to be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Environmental Economics and Policy (ENVECON)

ENVECON C1/ECON C3 Introduction to Environmental Economics and Policy 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Mathematics 32.

Introduction to microeconomics with emphasis on resource, agricultural, and environmental issues.

Students will receive 2 units of credit for 1 after taking Economics 1. Final exam required.

ENVECON 39D Freshman/Sophomore Seminar 1.5 - 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Seminar format.**Prerequisites:** Priority given to freshmen and sophomores.

Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Course may be repeated for credit when topic changes. Final exam required.

ENVECON 100 Microeconomic Theory with Application to Natural Resources 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** C1 or Economics 1 or C3 and Mathematics 16A or consent of instructor.

Covers the basic microeconomic tools for further study of natural resource problems. Theory of consumption, production, theory of the firm, industrial organization, general equilibrium, public goods and externalities. Applications to agriculture and natural resources.

Students will receive 2 units of credit for Economics 100A, Economics 101A, or Undergraduate Business Administration 110 after taking 100.

Final exam required. Instructor: Ligon and Rausser

ENVECON C101/ECON C125 Environmental Economics 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100, Mathematics 16A-16B, or Economics 100A or 101A.

Theories of externalities and public goods applied to pollution and environmental policy. Trade-off between production and environmental amenities. Assessing nonmarket value of environmental amenities. Remediation and clean-up policies. Environment and development. Biodiversity management.

Final exam required. Instructor: Zilberman

ENVECON C102 Natural Resource Economics 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100, or Economics 100A or 100B.

Introduction to the economics of natural resources. Land and the concept of economic rent. Models of optimal depletion of nonrenewable resources and optimal use of renewable resources. Application to energy, forests, fisheries, water, and climate change. Resources, growth, and sustainability.

Final exam required. Instructor: Sunding

ENVECON C115/ESPM C104 Modeling and Management of Biological Resources 4 Units**Department:** Environmental Economics and Policy; Environ Sci, Policy, and Management**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture, 1 hour of discussion, and ad-hoc laboratories.

Models of population growth, chaos, life tables, and Leslie matrix theory. Harvesting and exploitation theory. Methods for analyzing population interactions, predation, competition. Fisheries, forest stands, and insect pest management. Genetic aspects of population management. Mathematical theory based on simple difference and ordinary differential equations. Use of simulation packages on microcomputers (previous experience with computers not required).

Final exam required. Instructor: Getz

ENVECON C118/IAS C118 Introductory Applied Econometrics 4 Units**Department:** Environmental Economics and Policy; International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Formulation of a research hypothesis and definition of an empirical strategy. Regression analysis with cross-sectional and time-series data; econometric methods for the analysis of qualitative information; hypothesis testing. The techniques of statistical and econometric analysis are developed through applications to a set of case studies and real data in the fields of environmental, resource, and international development economics. Students learn the use of a statistical software for economic data analysis.

Final exam required. Instructor: Sadoulet

ENVECON 131 Globalization and the Natural Environment 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Intermediate micro-economic theory or consent of instructor.

An examination of the environmental effects of globalization. How has increased international trade, the integration of factor markets, and the adoption of international agreements affected the environment? Case studies include the environmental impact of GATT/WTO and NAFTA. Multi-disciplinary approach examines the actual laws and institutions and the economic theories of globalization, in addition to the empirical evidence of globalization's environmental effects.

Final exam required. Instructor: Karp

ENVECON 140AC Economics of Race, Agriculture, and the Environment 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 1, or one lower division course in a social science, or consent of instructor.

This course examines whether and how economic processes explain shifting formations of race and differential experiences among racial groups in U.S. agricultural and environmental systems. It approaches economic processes as organizing dynamics of racial differentiation and integration, and uses comparative experience among different racial and ethnic groups as sources of evidence against which economic theories of differentiation and integration can be tested.

Satisfies the American Cultures requirement

Final exam required. Instructor: Romm

ENVECON 142 Industrial Organization with Applications to Agriculture and Natural Resources 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week.**Prerequisites:** Environmental Economics and Policy 100 or Economics 100A or 101A.

Organization and performance of agricultural and resource markets. Conduct of firms within those markets, such as price competition, product differentiation, predatory pricing, vertical integration, dealer networks and advertising. The role of public policy in the markets. Case studies include oil cartel OPEC, agricultural cooperatives, vertical integration of food processors and franchising of fast-food chains. Discussion sections cover empirical applications of theory presented during lectures for current environmental and agricultural policies.

Final exam required. Instructor: Villas-Boas

ENVECON 143 Economics of Innovation and Intellectual Property 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 100 or Economics 100A or 101A.

This course addresses the economics of research and incentives for innovation including intellectual property rights. Topics include the standard modern economics of invention; modern intellectual property rights; innovation examples from agriculture, energy, pharmaceuticals, software, and electronics; the roles of the public and private sectors; innovation and market structure; the needs of the poor; and global intellectual property negotiations.

Final exam required. Instructor: Wright

ENVECON 145 Health and Environmental Economic Policy 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Intermediate microeconomics, 100, Economics 100 or 101A, and some statistics.

This course introduces students to key issues and findings in the field of health and environmental economics. The first half of the course focuses on the theoretical and statistical frameworks used to analyze instances of market failure in the provision of health and environmental goods. The second half focuses on policy-relevant empirical findings in the field.

Final exam required. Instructor: Anderson

ENVECON 147 Regulation of Energy and the Environment 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Intermediate microeconomic theory and calculus.

This is an applied economics course on government regulation of energy with an emphasis on policies that seek to mitigate the impact of energy production and consumption on the environment. The course is designed to help students make connections between economic concepts and real world regulatory policy questions and issues.

Final exam required. Instructor: Fowlie

ENVECON C151/ECON C171 Economic Development 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Prerequisites: 100, Economics 100A or 101A.

Problems of underdevelopment and poverty, policy issues, and development strategy.

Final exam required. Instructor: de Janvry

ENVECON 152 Advanced Topics in Development and International Trade 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or Economics 100A.

This course discusses recent efforts to understand behavior and institutions in village economies, with particular attention paid to the importance of risk. Economic analysis of savings, consumption, insurance, production, trade, welfare distribution and institutions of villages in developing countries. Roughly equal parts of theory, evidence, and policy.

Final exam required. Instructor: Magruder

ENVECON 153 Population, Environment, and Development 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Intermediate microeconomic theory or consent of instructor.

This course takes an interdisciplinary approach to the complex interactions between population, environmental change, and economic development, including the leading theories for understanding these interactions. The origins and history of current debates are discussed as well as some of the major issues stemming from these debates, such as immigration, international trade, family planning policies and concerns over the global commons. Specific natural resources and services like fresh water, food supply, and forest cover are analyzed as case studies. Policy options for sustainable development are discussed.

Final exam required.

ENVECON 154 Economics of Poverty and Technology 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Intermediate microeconomics.

Introduction to the economic framework underlying the use of technology to address rural poverty in developing countries. Analyzes the path of technology development from innovation and design to the adoption and use of technology in rural economies. Focuses on technologies related to agricultural production, processing, market access, value chains, and climate change.

Final exam required. Instructor: Boettiger

ENVECON 161 Advanced Topics in Environmental and Resource Economics 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or Economics 100A or Economics 101A; 101 recommended.

The roots of environmental and resource economics. Theories of land and resource rent. Models of optimal use of renewable and nonrenewable resources with applications to energy and timber. Balancing environmental and extractive values. Resources, growth, and sustainability. Special topic: the problem of global climate change. Final exam required.

ENVECON 162 Economics of Water Resources 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 100 or Economics 100A or 101A; 101 recommended.

Urban demand for water; water supply and economic growth; water utility economics; irrigation demand; large water projects; economic impacts of surface water law and institutions; economics of salinity and drainage; economics of groundwater management.

Final exam required.

ENVECON C175/IAS C175 The Economics of Climate Change 4 Units**Department:** Environmental Economics and Policy; International and Area Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** 106, 107, Economics 1, or equivalent.

The course will start with a brief introduction and evaluation of the scientific aspects behind climate change. Economic models will be developed to analyze the impacts of climate change and provide and critique existing and proposed policy tools. Specific topics studied are impacts on water resources and agriculture, economic evaluation of impacts, optimal control of greenhouse gases, benefit cost analysis, international treaty formation, discounting, uncertainty, irreversibility, and extreme events.

Final exam required. Instructors: Aufhammer, Fisher

ENVECON C180/ENE,RES C180 Ecological Economics in Historical Context 3 Units

Department: Environmental Economics and Policy; Energy and Resources Group

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Economists through history have explored economic and environmental interactions, physical limits to growth, what constitutes the good life, and how economic justice can be assured. Yet economists continue to use measures and models that simplify these issues and promote bad outcomes. Ecological economics responds to this tension between the desire for simplicity and the multiple perspectives needed to understand complexity in order to move toward sustainable, fulfilling, just economies. Final exam required. Instructor: Norgaard

ENVECON C181 International Trade 4 Units

Department: Environmental Economics and Policy

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks.

Prerequisites: 100A-100B or 101A-101B.

The theory of international trade and its applications to tariff protection.

This course is equivalent to UGBA 118; students will not receive credit for both courses.

Final exam required.

ENVECON C183/ESPM C183 Forest Ecosystem Management 4 Units

Department: Environmental Economics and Policy; Environ Sci, Policy, and Management

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

Introduces students to concepts and quantitative tools needed for the sustainable management of multi-use forest ecosystems. Topics covered include: estimation of ecological, economic, and social values; construction of dynamic forest models, methods for optimal decision-making, and development of forest management plans. Application to current issues in temperate and tropical forest management are discussed. Quantitative, analytical, and communication skills are emphasized. Oral presentation required.

Final exam required. Instructor: Potts

ENVECON 195 Senior Thesis 4 Units

Department: Environmental Economics and Policy

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Individual meetings with faculty sponsor.

Prerequisites: Senior standing in Environmental Economics and Policy and consent of instructor.

Writing of a thesis under the direction of member(s) of the faculty. Subject must be approved by faculty sponsor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENVECON 196 Senior Research Seminar 4 Units

Department: Environmental Economics and Policy

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of presentation and discussion of research projects per week.

Prerequisites: Student must be a senior with at least a 3.6 GPA in the Environmental Economics and Policy major.

This course is intended as a capstone experience for undergraduates in the major coordinated by one faculty member with participation by others. Following presentations by faculty on researchable topics in their areas of expertise, students will develop ideas for a research paper and discuss in subsequent seminar sessions. Approximately the last five weeks of the semester will be devoted to student presentations of papers either already completed or in progress, and discussion by seminar participants and faculty.

Final exam not required. Instructor: Fisher

ENVECON H196 Honors Research 4 Units

Department: Environmental Economics and Policy

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Individual research or meetings with faculty sponsor(s).

Prerequisites: Upper division standing. Eligibility restrictions related to GPA and unit accumulation. Open only to Environmental Economics and Policy majors in the College of Natural Resources. Supervised independent honors research specific to aspects of environmental economics and policy, followed by a oral presentation and a written report.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

ENVECON 197 Field Study in Environmental Economics and Policy 1 - 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Independent study. Minimum of 3 hours of work per week per unit of credit.**Prerequisites:** Consent of instructor.

Supervised experience in off-campus organizations relevant to specific aspects of environmental economics and policy. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENVECON 198 Directed Group Studies for Advanced Undergraduates 1 - 3 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Meetings to be arranged.**Prerequisites:** Consent of instructor.

Group study of selected topic or topics in Environmental Economics and Policy.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ENVECON 199 Supervised Independent Study and Research 1 - 4 Units**Department:** Environmental Economics and Policy**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Independent meetings.**Prerequisites:** Upper division standing and consent of instructor.

Enrollment restrictions apply. Open to qualified upper division students wishing to pursue special study and directed research under the direction of a member of the staff.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

Environmental Sciences (ENV SCI)

ENV SCI 8X Climate Change: The Interface of Science and Public Policy 2 Units**Department:** Environmental Sciences**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 6 weeks.

The possible impacts of climate changes enhanced by or following from human activities create challenges for planners, policy-makers, industrialists, and all citizens of the globe. This course seeks to examine the science of climate change and the policy issues that follow from that change.

Final exam required. Instructor: Berry

ENV SCI 10 Introduction to Environmental Sciences 3 Units**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of discussion per week and 1 8-hour fieldtrip per semester.

A survey of biological and physical environmental problems, focusing on geologic hazards, water and air quality, water supply, solid waste, introduced and endangered species, preservation of wetland ecosystems. Interaction of technical, social, and political approaches to environmental management.

Final exam required.

ENV SCI 10L Field Study in Environmental Sciences 1 Unit**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Fieldwork per week for 15 weeks.**Prerequisites:** 10 (must be taken concurrently).

Field and laboratory studies of Strawberry Creek throughout its course from the hills to the Bay are used to exemplify integration of the physical, biological, and social components of science-based approaches to environmental management.

Final exam not required. Instructors: Berry, Kondolf

ENV SCI 24 Freshman Seminar 1 Unit**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman Seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to fifteen freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ENV SCI 84 Sophomore Seminar 1 or 2 Units**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.

Hours and format: 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.

Prerequisites: At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ENV SCI 100 Introduction to the Methods of Environmental Science 4 Units**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture, 1 hour of Discussion, and 1.5 hours of Fieldwork per week for 15 weeks.**Prerequisites:** Environmental science statistics requirement. Open only to declared environmental sciences majors.

Introduction to basic methods used in environmental research by biological, physical, and social scientists. The course is designed to teach skills necessary for majors to conduct independent thesis research in the required senior seminar, 196A-196B/196L. Topics include development of research questions, sampling methods, experimental design, statistical analysis, scientific writing and graphics, and introductions to special techniques for characterizing environmental conditions and features. This course is the prerequisite to 196A, from which the senior thesis topic statement is determined.

Final exam not required.

ENV SCI 125 Environments of the San Francisco Bay Area 3 Units**Department:** Environmental Sciences**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The weather and climate, plants and animals, geology, landforms, and soils of the Bay Area, with an emphasis on the interaction of these physical elements, their modification by humans, and problems deriving from human use.

Final exam not required. Instructor: Berry

Ethnic Studies (ETH STD)

ETH STD 10AC A History of Race and Ethnicity in Western North America, 1598-Present 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This course explores the role of "race" and ethnicity in the history of what became the Western United States from the Spanish invasion of the Southwest to contemporary controversies surrounding "race" in California. Rather than providing a continuous historical narrative, or treating each racialized "other" separately, the course works through a series of chronologically organized events in which issues of racial differences played key roles in creating what became a western identity. Satisfies the American Cultures requirement

Final exam required.

ETH STD 11AC Theories and Concepts in Comparative Ethnic Studies An Introduction 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This explores the work of key theorists of race, ethnicity, and de-colonization whose work and ideas have formed the basis of scholarly work in the broad, interdisciplinary field of comparative ethnic studies. It is intended both to offer beginning students a ground in the ideas and methods they will encounter throughout their major, and to introduce names, texts, and concepts with which all majors should be familiar. This course satisfies the American cultures requirement. Satisfies the American Cultures requirement

Final exam required. Formerly known as 10B.

ETH STD 20AC Introduction to Ethnic Studies 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

The University, its relationship to corporate structures, legislative bodies, community people, and specifically, Third World people will be analyzed. The University's values will be critically examined. The history of ethnic studies programs in this country, their development, and, their struggles will be discussed.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 20.

ETH STD 21AC A Comparative Survey of Racial and Ethnic Groups in the U.S 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This survey course will examine the historical experiences of European immigrants, African Americans, and Latinos, emphasizing the themes of migration and economic change since the late 19th century. Though the class will focus on the three groups, the course will also address salient features of the experiences of Asian Americans, Native Americans, and recently arrived immigrants in light of the themes of the course. Intragroup differences such as class and gender will be discussed.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 21.

ETH STD 24 Freshman Seminar 1 Unit**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ETH STD 41AC A Comparative Survey of Protest Movements Since the 60's 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 10 hours of Lecture per week for 6 weeks.

An introductory, comparative, and interdisciplinary study of Native American, Mexican American, African American, and Asian American social and political struggles from 1960 to the present. The course traces the development of protest movements created by people of color in response to racial, class, gender, and political inequality in the context of U.S. politics and history. The course critically examines the internal and external factors contributing to the rise and fall of social and political movements and concludes with an analysis of the current conjuncture of race, ethnicity, culture, class, gender, and sexual preference in U.S. politics.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 41.

ETH STD N41AC A Comparative Survey of Protest Movements Since the 60's 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 6 weeks.

An introductory, comparative, and interdisciplinary study of Native American, Mexican American, African American, and Asian American social and political struggles from 1960 to the present. The course traces the development of protest movements created by people of color in response to racial, class, gender, and political inequality in the context of U.S. politics and history. The course critically examines the internal and external factors contributing to the rise and fall of social and political movements and concludes with an analysis of the current conjuncture of race, ethnicity, culture, class, gender, and sexual preference in U.S. politics.

Satisfies the American Cultures requirement

Final exam required. Instructor: Munoz

ETH STD C73AC/NATAMST C73AC Indigenous Peoples in Global Inequality 4 Units**Department:** Ethnic Studies; Native American Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course examines the history of indigenous, aboriginal, native, or "tribal" peoples over the last five centuries. Particular attention is paid to how these groups were brought into relations with an expanding Europe, capitalist development, and modern nation-states. How have these peoples survived, what are the contemporary challenges they face, and what resources and allies have they drawn on in the present?.

Satisfies the American Cultures requirement

Final exam required. Instructor: Biolsi

ETH STD 97 Field Study in Communities of Color 1 - 3 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of fieldwork per week per unit.**Prerequisites:** Consent of instructor. Open to freshmen and sophomores only.

Supervised community field study.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ETH STD 98 Supervised Group Study 1 - 3 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Consent of instructor. Open to freshmen and sophomores only.

Group study of selected topics which will vary from semester to semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ETH STD 99 Supervised Independent Study and Research 1 - 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of work per week per unit.**Prerequisites:** Consent of instructor.

Individual research on a topic which will lead to the writing of major paper. Regular meetings with the faculty sponsor. Limited to freshmen and sophomores.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

ETH STD 100 Comparative Ethnic Literature in America 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hour of discussion per week.

Analysis of how selected works (poetry, short stories, novels, drama, and oral literature) reflect African American, Chicano, Asian American, and Native American consciousness and experiences.

Final exam not required.

ETH STD N100 Comparative Ethnic Literature in America 3 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Analysis of how selected works (poetry, short stories, novels, drama, and oral literature) reflect African-American, Chicano, Asian-American, and Native American consciousness and experiences.

Final exam required. Instructor: Fabi

ETH STD 101A Social Science Methods in Ethnic Studies 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and zero to 1 hours of discussion per week. 7.5 hours of lecture and zero to 2.5 hours of discussion per week for 6 weeks.

The course provides an overview of social science methods used in ethnic studies fieldwork, archival research, oral histories, literature review, and critical theory. Particular attention is given to research design, forms of data, research presentation and analysis, and the ethical questions involved in doing research on communities of color. The course will emphasize presenting research in a clear, concise manner, and students will be expected to do a research practicum and present their work in writing on a regular basis.

Final exam required.

ETH STD 101B Humanities Methods in Ethnic Studies 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture/discussion per week for 6 weeks.

The course provides an introduction to basic theoretical approaches to the literary and other cultural productions of ethnic or "minority" communities in the United States. It also involves the study of important writings by Latina/o, Native American, African American, Asian American, and mixed race writers, and to a lesser degree, the visual art production of these same communities. The course will focus with particular care on discourses of racialization, gender, and sexuality.

Final exam not required.

ETH STD 103A Proseminar: Issues in the Fields of Ethnic Studies: Racialization and Empire 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week. 7.5 hours of seminar/discussion per week for 6 weeks.

Designed primarily to give majors in Asian American studies, Chicano studies, Latin American studies, ethnic studies, and Native American studies elementary training in theoretical approaches to the study of race and ethnicity. Emphasis will be placed on writing and discussion. For a precise schedule of offerings, see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam required.

ETH STD 103C Proseminar: Issues in the Fields of Ethnic Studies: Racialization and Contemporary Communities 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week. 7.5 hours of seminar/discussion per week for 6 weeks.

Designed primarily to give majors in Asian American studies, Chicano studies, Latin American studies, ethnic studies, and Native American studies elementary training in theoretical approaches to the study of race and ethnicity. Emphasis will be placed on writing and discussion. For a precise schedule of offerings, see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam required.

ETH STD 103E Proseminar: Issues in the Fields of Ethnic Studies: Racialization, Gender, and Popular Culture 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar/discussion per week. 7.5 hours of seminar/discussion per week for 6 weeks.

Designed primarily to give majors in Asian American studies, Chicano studies, Latin American studies, ethnic studies, and Native American studies elementary training in theoretical approaches to the study of race and ethnicity. Emphasis will be placed on writing and discussion. For a precise schedule of offerings, see department catalog during pre-enrollment week each semester.

Course may be repeated for credit when topic changes. Final exam required.

ETH STD 122AC Ethnicity and Race in Contemporary American Films 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.

The depiction of race and ethnic relations in American films from the 1960s to the present. The course covers independent features as well as mainstream Hollywood studio films.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 122.

ETH STD 126 Ethnicity, Gender, and Sexuality 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3 hours of Lecture and 1 hour of Discussion per week for 8 weeks.

Course focuses on the production of sexualities, sexual identification, and gender differentiation across multiple discourses and locations.

Final exam required.

ETH STD C126/LGBT C148 Ethnicity, Gender, and Sexuality 4 Units**Department:** Ethnic Studies; Lesbian Gay Bisexual Transgender St**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 3 hours of Lecture and 1 hour of Discussion per week for 8 weeks.

Course focuses on the production of sexualities, sexual identification, and gender differentiation across multiple discourses and locations.

Final exam required. Formerly known as 126.

ETH STD 130 The Making of Multicultural America: A Comparative Historical Perspective 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

How and why did American society become racially and ethnically diverse? This comparative study of racial minorities and European immigrant groups examines selected historical developments, events, and themes from the 17th century to the present.

Final exam required. Formerly known as 130AC.

ETH STD N130 Racial Inequality in America: A Comparative Historical Analysis 3 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

A comparative and historical study of racial inequality from 1600 to the present. Readings and lectures will focus on white racial attitudes and the subordination of Afro-Americans, Asians, Chicanos, and Native Americans within the context of American society and culture.

Satisfies the American Cultures requirement

Final exam required.

ETH STD 135 Contemporary U.S. Immigration 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and Zero to 1.5 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.

The myth, reality and history of U.S. immigration. This course discusses issues raised by the recent immigration in a comparative, historical approach. An examination of theories, politics, and policy of U.S. immigration restriction.

Final exam required. Formerly known as 135AC. Instructors: Choy, Montejano

ETH STD 136 Immigrant Women 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.**Prerequisites:** Upper division standing and consent of instructor.

Examines patterns of women's immigration to the U.S. in specific socio-historical and cultural contexts. Special attention to race, ethnic, and identity issues from woman-centered analysis and methodology.

Final exam required.

ETH STD 141 Racial Politics in America 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Upper division standing with priority to Ethnic Studies majors.

A critical and comparative analysis of contemporary politics and issues affecting Mexican American/Latino, Native American, Asian American, and African American communities in the United States.

Final exam required.

ETH STD 144AC Racism and the U.S. Law: Historical Treatment of Peoples of Color 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.

Intensive histori-legal survey of racism in the United States, exploring the legal antecedents of the country's contemporary stratified society, and emphasizing the role of law as a social policy instrument. Readings and lectures will investigate the prevailing legal currency of racism in the United States through an examination of the country's formative legal documents and the consequent effects of a myriad of judicial decisions on peoples of color.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 144.

ETH STD N144 Racism and the U.S. Law 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

A comparative examination of the historical treatment of the four major groups of color under United States law. Some contemporary issues are also examined. The experiences of individuals and groups under repressive law and how communities resist such laws and policies are other considerations. Students will study landmark case law and legislation dealing with race-based issues and critical theoretical discourses concerning race and law in the U.S.

Satisfies the American Cultures requirement

Final exam required. Instructor: Witkin

ETH STD 147 Women of Color in the United States 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 20 or the introductory class in any of the Ethnic Studies programs.

Examines the history and contemporary situations of Chicana/Latina, African American, Asian American and Native American Women.

Conceptual focus will draw on lived experiences and theoretical constructs of race, class and gender.

Final exam required.

ETH STD N147 Women of Color in the United States 3 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** 20 or the introductory class in any of the Ethnic Studies programs.

Examines the history and contemporary situations of Chicana/Latina, African American, Asian American, and Native American women.

Conceptual focus will draw on lived experiences and theoretical constructs of race, class, and gender.

Final exam required.

ETH STD 150 People of Mixed Racial Descent 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and Zero to 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and Zero to 2.5 hours of Discussion per week for 6 weeks.

Deals with phenomenon of people of mixed-race descent, focusing on United States but with reference to other nations for comparative purposes. Includes historical perspective as well as exploring the psychology, sociology, literature, and cinema pertaining to topic.

Final exam required. Formerly known as 150AC.

ETH STD 159AC/EDUC 186AC/GEOG 159AC The Southern Border 4 Units**Department:** Ethnic Studies; Education; Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.**Prerequisites:** Upper division standing.

The southern border--from California to Florida--is the longest physical divide between the First and Third Worlds. This course will examine the border as a distinct landscape where North-South relations take on a specific spatial and cultural dimension, and as a region which has been the testing ground for such issues as free trade, immigration, and ethnic politics.

Satisfies the American Cultures requirement

Final exam required. Instructors: Manz, Shaiken

ETH STD 174 Existential Panic in American Ethnic Literature 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks.

This course comprises extensive analyses of the ways in which American ethnic writers engage ontologies of self in characters who attempt to move beyond and out of the existential panic of being seen before they are seen. The direction of the course will move from the promise of Americanness, (i.e., Romanticist notions of self) in traditional American literary works to the legislated self in works by writers of color to modernist and postmodernist pastiche by various ethnic American writers. Final exam not required.

ETH STD 175 Literature from Ethnic Movements 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks.

Comparative survey of literature and cultural production from, and reflective of Ethnic Movement eras, particularly, but not limited to, those of the sixties. Representative literatures include Asian American, Chicano, African American, and Native American. Final exam not required.

ETH STD 176 Against the Grain: Ethnic American Art and Artists 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks.

Comparative survey of art and other cultural production from a cross-section of selected American ethnic groups (in general, Asian American, Chicano, African American, and Native American). We approach works from various critical/theoretical perspectives, often constructing them as we analyze, and through the lens of Ethnic Studies.

Final exam not required.

ETH STD 180 Selected Topics in Comparative Ethnic Studies 1 - 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture per week. 1.5 to 6 hours of lecture per week for 10 weeks. 2 to 7.5 hours of lecture per week for 8 weeks. 2.5 to 10 hours of lecture per week for 6 weeks.

Students will examine social dynamics as well as cultural and intellectual productions by or about communities of color nationally and internationally from different methodological perspectives.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ETH STD N180 Selected Topics in Comparative Ethnic Studies - Study Abroad 6 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20-8 hours of lecture per week for 5 weeks of travel, plus 1 week of independent work upon returning.

This study abroad course is designed primarily to permit instructors to deal with topics with which they are especially concerned; subject matter usually is more restricted than that of a regular course.

May be repeated for credit if the course is taken in a different city May be repeated for credit if course is taken in a different city or country. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Ethnic Studies N190.

ETH STD 181AC/ARCH 180AC/LEGALST 185AC Prison 4 Units**Department:** Ethnic Studies; Architecture; Legal Studies**Course level:** Undergraduate**Term course may be offered:** Spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Taking a broad interdisciplinary approach, this course embraces the longue duree of critical prison studies, questioning the shadows of normality that cloak mass incarceration both across the globe and, more particularly, in the contemporary United States. This course thus explores a series of visceral, unsettling juxtapositions: "freedom" and "slavery"; "citizenship" and "subjugation"; "marginalization" and "inclusion", in each case explicating the ways that story making, political demagoguery, and racial, class, and sexual inequalities have wrought an untenable social condition.

Satisfies the American Cultures requirement

Final exam required. Instructors: Hilden, Simon, Stoner, Robinson

ETH STD 190 Advanced Seminar in Comparative Ethnic Studies 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 5.5 hours of Seminar per week for 8 weeks. 7.5 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

In addition to class meetings, an extra assignment/research component will be added to the course to increase contact hours with students.

Possible components include additional readings, outside-of-class research projects, and any other project which the instructor feels will add to the value of the course. Topics to be announced at the beginning of each semester.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

ETH STD 190AC Advanced Seminar in Ethnic Studies 3 - 4 Units**Department:** Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 to 4 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

For a four unit course, an extra assignment/research component will be added to the course to increase contact hours with students. Possible components include additional readings, outside-of-class research projects and any other project which the instructor feels will add to the value of the course. Topics to be announced at the beginning of each semester.

Eve/Wknd Masters in Bus. Adm. (EWMBA)

EWMBA 200C Leadership Communications 1 Unit**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.

Leadership communication is a workshop in the fundamentals of public speaking in today's business environment. Through prepared and impromptu speeches aimed at moving others to action, peer coaching, and lectures, students will sharpen their authentic and persuasive communication skills, develop critical listening skills, improve abilities to give, receive, and apply feedback, and gain confidence as public speakers.

Final exam not required.

EWMBA 200P Problem Finding, Problem Solving 1 Unit**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of lecture per week for 8 weeks.

Problem Finding, Problem Solving (PFPS) teaches basic skills drawn from the fields of critical thinking, design thinking and systems thinking that support innovation. Specifically, it covers ways of collecting information to characterize a problem, framing and re-framing that problem, coming up with a range of solutions and then gathering feedback to assess those solutions. Following Confucius's notion: "I hear and I forget. I see and I remember. I do and I understand." The class consists primarily of hands-on exercises to experiment with and learn the tools and techniques presented, applying them to the design and testing of alternative business models for start-up and other businesses.

Final exam not required.

EWMBA 201A Economics for Business Decision Making 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.**Prerequisites:** E204.

This course uses the tools and concepts of microeconomics to analyze decision problems within a business firm. Particular emphasis is placed on the firm's choice of policies in determining prices, inputs usage, and outputs. The effects of the state of the competitive environment on business policies are also examined.

Final exam not required. Formerly known as Business Administration E201A.

EW MBA 201B Macroeconomics in the Global Economy 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.**Prerequisites:** Business Administration E201A.

This course builds on the foundations developed in E201A to develop theories of fiscal policy, monetary policy, and other macro-economic policies. Both the issues and the evidence in connection with these policies will be examined. Other topics covered in the course range from the specifics of the U.S. balance of payments situation to the broader problems associated with economic growth and decay in the world. Final exam not required. Formerly known as Business Administration E201B.

EW MBA 202 Financial Reporting 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.

Published financial reports provide the most important single set of data on modern organizations. This course is designed to provide a working knowledge of accounting measurements which are necessary for a clear understanding of published financial reports.

Final exam not required. Formerly known as Business Administration E202A.

EW MBA 203 Introduction to Finance 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.

This course will examine the wide menu of available assets, the institutional structure of U.S. and international financial markets, and the market mechanisms for trading securities. Topics include discounting, capital budgeting, historical behavior of asset returns, and diversification and portfolio theory. Course will also provide introductions to asset pricing theory for primary and derivative assets and to the principles governing corporate financial arrangements and contracting.

Final exam not required. Formerly known as Business Administration E203.

EW MBA 204 Operations 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture per weekend for 7 weeks or 3.5 hours of lecture per week for 9 weeks.**Prerequisites:** Admission to the program.

An introduction to the application of quantitative methods to management decision problems. Topics include linear programming, probability theory, decision analysis, regression and correlation, and time series analysis. Final exam not required. Formerly known as Business Administration E204.

EW MBA 205 Leading People 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Survey of the forces changing and shaping global finance and intermediation, especially the effects of greater ease of communication, deregulation and globalized disciplines expected to continue to be essential to corporate finance and intermediation, e.g., investment analysis, valuation, structured finance/securitization, and derivative applications. The case method is utilized with occasional additional assigned readings and text sources.

Final exam required.

EW MBA 236D Portfolio Management 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks.**Prerequisites:** 203 or consent of instructor.

This course explores the broad range of portfolio management in practice. The class will examine the assets, strategies, characteristics, operations, and concerns unique to each type of portfolio. Practitioners will present descriptions of their businesses as well as methods and strategies that they employ.

Final exam required.

EW MBA 236E Mergers and Acquisitions: A Practical Primer 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 4 hours of Lecture per week for 8 weeks.**Prerequisites:** 203 or consent of instructor.

Survey of the day-to-day practices and techniques used in change of control transaction. Topics include valuation, financing, deal structuring, tax and accounting considerations, agreements, closing documents, practices used in management buyouts, divestitures, hostile takeovers, and takeover defenses. Also covers distinctions in technology M&A, detecting corruption in cross border transaction attempts, and betting on deals through risk arbitrage. Blend of lectures, case studies, and guest lectures.

Final exam required.

EW MBA 236F Behavioral Finance 1 - 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture for 15 weeks. 5 to 14 hours of lecture per week for 3 weeks.**Prerequisites:** 203

This course looks at the influence of decision heuristics and biases on investor welfare, financial markets, and corporate decisions. Topics include overconfidence, attribution theory, representative heuristic, availability heuristic, anchoring and adjustment, prospect theory, "Winner's Curse," speculative bubbles, IPOs, market efficiency, limits of arbitrage, relative mis-pricing of common stocks, the tendency to trade in a highly correlated fashion, investor welfare, and market anomalies. Final exam not required.

EW MBA 236G Designing Financial Models that Work 1 or 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks. 14 hours of lecture per week for 4 weeks. 1.5 to 3 hours of lecture per week for 10 weeks. 2 to 3.5 hours of lecture per week for 8 weeks. 2.5 to 5 hours of lecture per week for 6 weeks.**Prerequisites:** 203 or consent of instructor.

Spreadsheet financial models are often too big, complicated, and buggy to help people. In this course, students learn to design financial models that work because they're small (fit on a screen or two), straightforward (involve basic math), clear (a non-MBA can follow them readily), and fast to build. These simple yet powerful representations of the cash flow for a new product/deal/venture help people share their vision, recognize tradeoffs, brainstorm possibilities, and make decisions. Final exam not required.

EW MBA 236H Financial Statement Modeling for Finance Careers 1 or 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks. 14 hours of lecture per week for 4 weeks. 1.5 to 3 hours of lecture per week for 10 weeks. 2 to 3.5 hours of lecture per week for 8 weeks. 2 re per week for 4 weeks. .5 to 5 hours of lecture per week for 6 weeks.**Prerequisites:** 203 or consent of instructor.

Spreadsheet financial models are often too big, complicated, and buggy to help people. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks or 8 hours of lecture per day on 2 Sundays.

This course introduces the field of social investment. The use of ESG (environmental, social, and governance) criteria is becoming increasingly prevalent among both high net worth individuals and institutions. Many ethical and religious traditions advocate altruism and community-mindedness in all dealings, while some economic and financial theorists argue for a narrow focus on risk and reward, with little regard for the impact of decisions on stakeholder groups or the environment.

Final exam required. Instructor: Kurtz

EW MBA 292J Haas Socially Responsible Investment Fund 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.**Prerequisites:** Evening and Weekend Masters in Business Administration 292I.

In this course, students manage a real investment fund (\$1.7 million +) focused on both social and financial returns. Through the Fund students have the opportunity to test the investment and corporate responsibility principles they have learned in the classroom, and to experience the complexities, challenges, and rewards of the investing world. Students have full responsibility for investment decisions, including conducting their own research on companies' environmental, social and governance (ESG) performance. Students receive guidance from both a faculty advisor and an advisory board. The faculty advisor provides regular input on portfolio management, understanding portfolio performance and ESG investing.

Course may be repeated for a maximum of 6 units. Final exam not required.

EW MBA 292N Topics in Nonprofit and Public Management 1 - 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks.

Advanced study in the field of nonprofit and public management. Topics will vary from year to year and will be announced at the beginning of each semester.

Final exam not required. Formerly known as Evening and Weekend Master in Business Administration 292M.

EW MBA 292S Social Sector Solutions: Social Enterprise 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3.5 hours of Lecture per week for 15 weeks.

The purpose of this course is to develop students' skills and knowledge in problem solving, management consulting, and nonprofit organizations. Instruction covers frameworks for problem solving, senior management consulting, and assessing nonprofit organizations. The course includes an assignment to a consultation team that works with a select nonprofit client to help them succeed in an entrepreneurial venture. A partnership with a professional management consulting firm, McKinsey & Company, the course includes experienced McKinsey consultants coaching each of the student teams.

Final exam not required.

EW MBA 292T Topics in Socially Responsible Business 0.5 - 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Hours and format: 1 to 5 hour of Independent study per week for 15 weeks. 2 to 7.5 hours of Independent study per week for 8 weeks. Individually supervised study of subjects not available to the student in the regular schedule, approved by faculty adviser as appropriate for the student's program.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EW MBA 293C Curricular Practical Training Internship 0 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Zero hours of Internship per week for 15 weeks. Zero hours of Internship per week for 8 weeks.

This is an independent study course for international students doing internships under the Curricular Practical Training program. Requires a paper exploring how the theoretical constructs learned in MBA courses were applied during the internship.

Course may be repeated. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Gent

EW MBA 295A Entrepreneurship 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of evening lecture per week.**Prerequisites:** Business Administration E206.

The development of creative marketing strategies for new ventures, as well as the resolution of specific marketing problems in smaller companies which provide innovative goods and services. Emphasis is on decision making under conditions of weak data, inadequate resources, emerging markets, and rapidly changing environments.

Final exam not required. Formerly known as Business Administration E295.

EW MBA 295B Venture Capital and Private Equity 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 295A and 234 recommended.

This is an advanced case-based course intended to provide the background, tools, and themes of the venture capital industry. The course is organized in four modules of the private equity cycle: (1) fund raising -- examines how private equity funds are raised and structured, (2) investing -- considers the interactions between private equity investors and the entrepreneurs that they finance, (3) exiting -- examines the process through which private equity investors exit their investments; and (4) new frontiers -- reviews many of the key ideas developed in the course. Final exam not required.

EW MBA 295D New Venture Finance 2 - 3 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3.5 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 8 weeks.

This is a course about financing new entrepreneurial ventures, emphasizing those that have the possibility of creating a national or international impact or both. It will take two perspectives--the entrepreneur's and the investor's- and it will place a special focus on the venture capital process, including how they are formed and managed, accessing the public markets, mergers, and strategic alliances. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

EW MBA 295E Case Studies in Entrepreneurship 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks. 4 hours of Lecture per week for 8 weeks.

This course integrates the learnings from summer entrepreneurship into academic experience. Classes will include development of an analysis of cases based on the internship, and opportunities to meet with management of the host programs. By the end of the semester, students will better understand what it takes to run an entrepreneurial enterprise. Final exam not required.

EW MBA 295F The Lean Launch Pad 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week.**Prerequisites:** Graduate standing.

This course provides real world, hands-on learning on what it's like to actually start a high-tech company. This class is not about how to write a business plan. It's not an exercise on how smart you are in a classroom, or how well you use the research library to size markets. And the end result is not a PowerPoint slide deck for a VC presentation. And it is most definitely not an incubator where you come to build the "hot-idea" that you have in mind. This is a practical class: Our goal, within the constraints of a classroom and a limited amount of time, is to create an entrepreneurial experience for you with all of the pressures and demands of the real world in an early stage start up.

Final exam not required.

EW MBA 295G Investing in Entrepreneurial Opportunities: Building an Investment Screen, Methodology, and Process 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This course will provide students with an education in to the complexities and unique problems of entrepreneurship in companies with great growth potential, but that are facing significant challenges to achieving that potential. This class is designed to provide students with the tools and skills most critical to successfully screening, investing in, and/or leading companies that have both a great set future growth opportunities and a great set of current problems. This class will use case studies, practical valuation and other exercises, and the energy, enthusiasm, and intellectual capacity of its students to create a great learning environment.

Final exam not required.

EW MBA 295I Entrepreneurship Workshop for Startups 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture per week for 15 weeks.

This workshop is intended for students who have their own experimental venture project under development. The business concept may be in the startup mode or further along in its evolution. The pedagogy is one of guided entrepreneurship where students, often working in teams, undertake the real challenges of building a venture. Students must be willing to discuss their projects with others in the workshop, as group deliberation of the entrepreneurial challenges is a key component of the class.

Final exam not required.

EW MBA 295M Business Model Innovation and Entrepreneurial Strategy 2 Units**Department:** Eve/Wknd Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 15 weeks. 3.5 hours of lecture per week for 10 weeks.

The course teaches how to characterize and analyze business models and how to efficiently construct and test new business models. The course examines businesses across industries and phases of a firm's growth. Critical entrepreneurial strategies are illuminated for new ventures or in building a new enterprise inside a corporation. The course provides students with the skills and knowledge to rapidly assess and shape business models to their advantage in constructing new enterprises. Final exam not required. Instructor: Charron

EW MBA 295T Topics in Entrepreneurship 0.5 - 3 Units**Department:** Eve/Wknd Masters in Bus. Executive Masters in Bus. Adm. (XMBA)

XMBA 200C Leadership Communication 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 6 weeks.

Leadership Communication is a workshop in the fundamentals of public speaking in today's business environment. Through prepared and impromptu speeches aimed at moving others to action, peer coaching, and lectures, students will sharpen their authentic and persuasive communication skills, develop critical listening skills, improve abilities to give, receive, and apply feedback, and gain confidence as public speakers.

Final exam not required.

XMBA 200P Problem Finding, Problem Solving 1 Unit**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.

Problem Finding, Problem Solving (PFPS) teaches basic skills drawn from the fields of critical thinking, design thinking and systems thinking that support innovation. Specifically, it covers ways of collecting information to characterize a problem, framing and re-framing that problem, coming up with a range of solutions and then gathering feedback to assess those solutions. Following Confucius's notion: "I hear and I forget. I see and I remember. I do and I understand." The class consists primarily of hands-on exercises to experiment with and learn the tools and techniques presented, applying them to the design and testing of alternative business models for start-up and other businesses.

Final exam not required.

XMBA 200Q Decision Models 1 Unit**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 5 hours of Lecture and 5 hours of Lecture per week for 3 weeks.

This core course introduces students to quantitative concepts, techniques, and software with which all successful managers should be familiar. The objective of this course is to improve managerial decision making by introducing managers to optimization techniques, simulation, and project management.

Final exam not required.

XMBA 200S Data and Decisions 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of lecture per week for 10 weeks. 15 hours of lecture per week for 3 weeks.

The objective of this core course is to make students critical consumers of statistical analysis using available software packages. Key concepts include interpretation of regression analysis, model formation and testing, and diagnostic checking.

Final exam not required. Formerly known as Business Administration 200S.

XMBA 201A Managerial Economics 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 4.5 hours of Lecture per week for 10 weeks. 3 hours of Lecture per week for 3 weeks.

This course uses the tools and concepts of microeconomics to analyze decision problems within a business firm. Particular emphasis is placed on the firm's choice of policies in determining prices, inputs usage, and outputs. The effects of the state of the competitive environment on business policies are also examined.

Final exam not required.

XMBA 201B Global Economic Environment 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 10 hours of Lecture and 10 hours of Lecture per week for 3 weeks.

This core course addresses the determination of economic concepts and financial practices at work in the global economic environment. Topics include long-run productivity and growth, short-run economic fluctuations in both closed and open economies, exchange rates and the balance of payments, the natural rate of unemployment, and the causes and consequences of inflation. The instructor will draw examples from a number of countries and a variety of economies to illustrate theoretical concepts.

Final exam not required.

XMBA 202A Financial Accounting 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture per week for 3 weeks.

This course examines accounting measurements for general-purpose financial reports. An objective of the course is to provide not only a working knowledge but also a clear understanding of the contents of published financial statements.

Final exam required. Formerly known as Business Administration 202A.

XMBA 203 Finance 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 10 hours of Lecture and 10 hours of Lecture per week for 3 weeks.

This core course examines the wide menu of available assets, the institutional structure of U.S. and international financial markets, and the market mechanisms for trading securities. Topics include discounting, capital budgeting, historical behavior of asset returns, and diversification and portfolio theory. The course will also provide introductions to asset pricing theory for primary and derivative assets and to the principles governing corporate financial arrangements and contracting.

Final exam not required.

XMBA 204 Operations Management 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 10 hours of Lecture and 10 hours of Lecture per week for 3 weeks.**Prerequisites:** 200S.

This core course provides students with an understanding of the basic issues involved in managing a manufacturing-based business and introduces them to the tools that are available to deal with these issues. Students will also learn pertinent fundamental concepts in management science that are applicable to other functional areas.

Final exam not required.

Term course may be offered: Summer

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: 10 hours of Lecture and 10 hours of Lecture per week for 3 weeks.

Prerequisites: 206 or equivalent.

High technology refers to that class of products and services which is subject to technological change at a pace significantly faster than for most goods in the economy. Under such circumstances, the marketing task faced by the high technology firm differs in some ways from the usual. The purpose of this advanced elective course is to explore these differences.

Final exam not required.

XMBA 273 Dynamic Capabilities 2 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This is a course in strategic management. It draws on a variety of disciplines and integrates them in the fashion that will generate key insights into how technology can be developed and managed.

This course will help students acquire and practice concepts and skills that are relevant to management in a technologically dynamic environment. It provides frameworks for intellectual capital management in the private sector.

This course is aimed at those interested in working for either large or small firms in technologically progressive industries, as well as those wishing to understand how mature industries can create and respond to innovation.

Final exam not required.

XMBA 290H Haas@Work 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

The primary objective of this course and the associated innovation consulting projects is for students to learn and apply the approaches, skills, and behaviors required to successfully initiate and drive innovation in a complex organization. Students taking the course will use concepts and tools from several other Haas courses, including Economic Analysis for Business Decisions, Strategic Leadership, Leading People, Finance, and Problem Finding Problem Solving. As important, the student teams are expected to deliver the highest quality work and deliverables, genuine insights, innovative solutions, and real value on mission-critical client projects.

Final exam not required.

XMBA 290T Topics in Innovation and Design 1 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 to 10 hours of lecture per week for 3 weeks. 5 to 10 hours of lecture per week for 3 weeks.

Advanced study in the fields of innovation and design. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

XMBA 290V Corporate Strategy in Telecommunications and Media 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Prerequisites:** Business Administration 204.

This course is intended for students who wish to gain better understanding of one of the most important issues facing management today--designing, implementing, and managing telecommunication and distributed computer systems. The following topics are covered: a survey of networking technologies; the selection, design, and management of telecommunication systems; strategies for distributed data processing; office automation; and management of personal computers in organizations.

Final exam not required.

XMBA 291C Active Communicating 1 Unit**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture per week for 2 weeks.

This course develops the basic building blocks of impactful communication--e.g., concentration, energy, voice, physical expressiveness, spontaneity, listening, awareness, and presence--by drawing upon expertise from theater arts. Active, participatory exercises allow for the development and embodiment of effective communication skills. Class readings, lectures, and discussions address participants' specific workplace applications.

Final exam not required.

XMBA 291L Leader as Coach 1 Unit**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture per week for 2 weeks.

This course focuses on the art and science of coaching including theory and practice. The curriculum will cover theory and practice for three aspects of the coaching process -- knowledge-based (information and skills), motivation-based (inspiration and passion), and strategy-based (communication and integration). The curriculum will focus on primary coaching skills, tools, processes and behaviors that a coach uses. In addition, participants will learn facilitation skills as the preferred methodology in achieving successful coaching programs. Course participants will have the opportunity to utilize this material in practice coaching sessions with supervision and feedback from peers and the instructor.

Final exam not required.

XMBA 291S Storytelling for Leadership 1 Unit**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week for 8 weeks.

This course will provide the student with specialized knowledge in some area of managerial communications. Topics include multimedia business presentations, personal leadership development, diversity management, and making meetings work. Topics will vary from semester to semester. Final exam not required.

XMBA 291T Topics in Managerial Communications 1 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 to 10 hours of Lecture and 5 to 10 hours of Lecture per week for 3 weeks.

This course will provide the student with specialized knowledge in some area of managerial communications. Topics include multimedia business presentations, personal leadership development, diversity management, and making meetings work. Topics will vary from semester to semester. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

XMBA 292P Strategic CSR 1 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1.5 hours of Lecture and 1.5 hours of Lecture per week for 10 weeks.

Discuss the field of strategic CSR through a series of lecture, guest speakers, and projects. It will examine best practices used by companies to engage in socially responsible practices. It will provide students with a flavor of the complex dilemmas one can face in business in trying to do both "good for society" and "well for shareholders." It looks at CSR from a corporate strategy perspective, and how it supports core business objectives, core competencies, and bottom line profits. Final exam not required.

XMBA 293 Individual Supervised Study for Graduate Students 1 - 6 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Independent study per week for 15 weeks. 2 to 12 hours of Independent study per week for 8 weeks.**Prerequisites:** Consent of supervising faculty.

Individually supervised study of subjects not available to the student in the regular schedule, approved by faculty adviser as appropriate for the student's program.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

XMBA 295A Entrepreneurship and Innovation 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 4 hours of lecture per week for 12 weeks.

The development of creative marketing strategies for new ventures, as well as the resolution of specific marketing problems in smaller companies which provide innovative goods and services. Emphasis is on decision making under conditions of weak data, inadequate resources, emerging markets, and rapidly changing environments. Final exam not required.

XMBA 295D New Venture Finance 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Lecture per week for 3 weeks.

This is a course about financing new entrepreneurial ventures, emphasizing those that have the possibility of creating a national or international impact or both. It will take two perspectives--the entrepreneur's and the investor's--and it will place a special focus on the venture capital process, including how they are formed and managed, accessing the public markets, mergers, and strategic alliances. Final exam not required.

XMBA 295F Customer and Business Development in High-Tech Enterprise 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Lecture per week for 3 weeks.

This course is about how to successfully organize sales, marketing, and business development in a startup. For the purpose of this course, a "startup" can either be a new venture, or an existing company entering a new market. Both must solve a common set of issues: Where is our market? Who are our customers? How do we build the right team? How do we scale sales? These issues are at the heart of the "Customer Development" process covered in this course. Final exam not required.

XMBA 295T Special Topics in Entrepreneurship 1 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks. 1.5 to 4.5 hours of Lecture per week for 10 weeks.**Prerequisites:** All core courses or equivalents.

Advanced study in the field of entrepreneurship. Topics will vary from year to year and will be announced at the beginning of each semester. Final exam not required.

XMBA 296 Special Topics in Business Administration 1 - 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hour of Lecture per week for 15 weeks. 1.5 to 4.5 hours of Lecture per week for 10 weeks.

Advanced study in various fields of business administration. Topics will vary from year to year and will be announced at the beginning of each semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

XMBA 298A International Business 2 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 15 hours of Lecture per week for 3 weeks.

Course will focus on the challenges, opportunities, and risks of doing business in emerging market economies. The course is designed to enhance students' ability to start, manage, lead, and invest in companies operating in emerging markets and to respond to new competitors from emerging markets. Emerging markets are home to nearly 80% of the world's population and are expected to account for half of global GDP growth over the next 25 years.

Final exam not required.

XMBA 298C International Field Seminar 3 Units**Department:** Executive Masters in Bus. Adm.**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** Thirty hours of fieldwork per week for 1 week. Thirty hours of fieldwork per week for 1 week. Thirty hours of fieldwork per week for 1 week. Thirty hours of fieldwork per week for 1 week. Thirty hours of fieldwork per week for 1 week. Thirty hours of fieldwork per week for 1 week.**Prerequisites:** 298A.

This required course entails an experimental study of an international business topic undertaken during a one-week field study session abroad.

The course includes a combination of lectures and site visits.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Filipino (FILIPN)

FILIPN 1A Introductory Filipino 5 Units**Department:** Filipino**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A: None. 1B: 1A.

A systematic introduction to the grammar, sentence patterns, and essential vocabulary of modern standard Filipino. Emphasis is placed on extensive practice in idiomatic Filipino conversation, with additional practice in reading and writing Filipino.

Final exam required. Formerly known as Tagalog 1A. Instructor: Barrios-Leblanc

FILIPN 1B Introductory Filipino 5 Units**Department:** Filipino**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1B.

A systematic introduction to the grammar, sentence patterns, and essential vocabulary of modern standard Filipino. Emphasis is placed on extensive practice in idiomatic Filipino conversation, with additional practice in reading and writing Filipino.

Final exam required. Formerly known as Tagalog 1B. Instructor: Gosalvez

FILIPN 15 Intensive Introductory Filipino 10 Units**Department:** Filipino**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20 hours of Lecture and 5 hours of Discussion per week for 8 weeks.

Provides the learner with essential vocabulary and study of sentence structures and grammar. Topics include: everyday life, the use of language in negotiations in the community, language and cultur,; and the history of Tagalog/Pilipino/Filipino. Students read simple texts and write short essays/creative pieces.

Final exam required. Instructor: Aban

FILIPN 100A Intermediate Filipino 5 Units**Department:** Filipino**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A-1B.

The goal of this course is to enable students to increase their proficiency in Filipino to at least the intermediate-high level of the national ACTFL Proficiency Guidelines. While speaking and listening comprehension will be stressed, training in reading and writing Filipino will be an integral part of instruction. Films and video/audio materials will supplement written texts.

Final exam required. Formerly known as Tagalog 100A-100B. Instructor: Barrios-Leblanc

FILIPN 100B Intermediate Filipino 5 Units**Department:** Filipino**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 5 hours of Lecture per week for 15 weeks.**Prerequisites:** 1A-1B.

Film and Media (FILM)**FILM R1A The Craft of Writing - Film Focus 4 Units****Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week, plus individual conferences. 7.5 hours of lecture/discussion per week, plus individual conferences.

Rhetorical approach to reading and writing argumentative discourse with a film focus. Close reading of selected texts; written themes developed from class discussion and analysis of rhetorical strategies. Satisfies the first half of the Reading and Composition requirement. Satisfies the first half of the Reading and Composition requirement. Final exam not required. Formerly known as Rhetoric R5A.

FILM R1B The Craft of Writing - Film Focus 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week, plus individual conferences. 7.5 hours of lecture/discussion per week, plus individual conferences.

Intensive argumentative writing stimulated through selected readings, films, and class discussion. Satisfies the second half of the Reading and Composition requirement.

Satisfies the second half of the Reading and Composition requirement. Final exam not required. Formerly known as Rhetoric R5B.

FILM 25A The History of Film 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 to 4 hours of Laboratory per week for 15 weeks. 6 hours of Lecture and 3 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 3 hours of Discussion per week for 6 weeks.

From the beginnings through the conversion to sound. In addition to the development of the silent film, the course will conclude with an examination of the technology of sound conversion and examples of early sound experiments.

Final exam required.

FILM 25B The History of Film 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 to 4 hours of Laboratory per week for 15 weeks. 6 hours of Lecture and 3 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 3 hours of Discussion per week for 6 weeks.**Prerequisites:** 25A or equivalent.

The sound era through 1971.

Final exam required.

FILM 26 Moving Image Media 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 to 4 hours of Laboratory per week for 15 weeks.**Prerequisites:** 25A.

The objective of this class is to provide a basic technical foundation for digital video film production while emphasizing the techniques and languages of creative moving image media from traditional story genres to more contemporary experimental forms. Training will move from pre-production-scripting and storyboarding, through production, including image capture, lighting and sound recording, to post-production with non-linear digital editing programs such as Final Cut Pro and editing strategies and aesthetics. The course will consist of lectures/screenings, discussion/critique, visiting artists, and production workshops in which students produce a series of exercises and a final project.

Final exam required.

FILM 50 Introduction to Film for Nonmajors 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1.5 hours of Discussion per week for 15 weeks.

An introduction to film art and film technique for students who are interested in exploring the history and aesthetics of cinema but do not intend to major in film. The course traces the development of world cinema from the first films of the 1890s to the 1970s, drawing on examples from American, European, Asian, and Third World cinema. Final exam required.

FILM N70 Introduction to Film Genre 3 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/film screenings per week for 6 weeks. 10.5 hours of lecture/film screenings per week for 4 weeks.

The study of films as categorized either by industry-identified genres (westerns, horror films, musicals, film noir, etc.) or broader interpretive modes (melodrama, realism, fantasy, etc.).

Final exam not required.

FILM 75 Postmodernism and Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 2 hours of film screening per week.

This course examines postmodernism as it manifests itself in film. We will begin with a general overview of the postmodern, and then look at how postmodernism reformulates certain theoretical issues: e.g., ideology, history, subjectivity and gender. Primary films will be juxtaposed not just with theoretical texts, but also with texts from architecture, photography, literature and classical Hollywood cinema. Requirements: take home mid-term, final exam.

Final exam not required. Instructors: Tuma, Forter

FILM 76 Reading Violence: The Gangster Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 2 hours of film screening per week for 8 weeks.

This course will survey American gangster films and encourage students to attend to film technique through analysis of this genre's sequences of violence. Reading will include film criticism and theory, and a broad range of arguments addressing the forms and function of violence in culture. The class will explore the proposition that violence is at least as constructive as it is destructive of bodies, identities, and cultural values.

Final exam required. Instructor: Loughheed

FILM 77X The Vampire Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours lecture and 3 hours screening per week for 6 weeks.

In this course, we will closely analyze classic examples of a sub-genre of horror, the vampire film. Our reading of classic vampire films and other texts will emphasize two central areas of inquiry: the vampire and narratology and the vampire and realism. We will concern ourselves with such questions as these: How do narrative devices and generic conventions affect the reception of these texts? How are horror films constructed and received as realistic? How are filmic portrayals of the uncanny reflective of social "reality"? With additional work, this course will satisfy the Genre requirement for the Film major.

Final exam required.

FILM 78X Outsiders in American Films of the Fifties 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture and 2.5 hours of screening per week for 6 weeks.

This course will address the ways American films of the 1950s represent those on the margins of mainstream fifties' culture: juvenile delinquents, minorities, people with conscience, women, loners, homosexuals, unmarried people, and interracial couples. We will consider such topics as the pathologizing of dissent, the limits of racial freedom, women as consumers, the effects of institutional training, and the nature of the family.

Final exam required.

FILM 84 Sophomore Seminar 1 or 2 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week per unit for 15 weeks. 1 and 1 half hours of seminar per week per unit for 10 weeks. 2 hours of seminar per week per unit for 8 weeks. 3 hours of seminar per week per unit for 5 weeks.**Prerequisites:** At discretion of instructor.

Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

FILM 98 Directed Group Study 1 - 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.**Prerequisites:** Restricted to freshmen and sophomores; consent of instructor.

Supervised research by lower division students.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM 100 History of Film Theory 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 3 to 4 hours of film laboratory per week.**Prerequisites:** 25A or equivalent.

The study, from an historical perspective, of major theorists of film.

Final exam required.

FILM 105 Senior Seminar 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar and 2 hours of Laboratory per week for 15 weeks.

Prerequisites: Senior standing; completion of all lower division requirements and two out of three of the upper division requirements; GPA of 3.4 or better in the major.

Intensive study of topics in film and moving-image media.

Final exam required.

FILM 108 Special Topics in Film Genre 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 to 3 hours of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 2 to 4 hours of Laboratory per week for 6 weeks.**Prerequisites:** Consent of instructor.

The study of films as categorized either by industry-identified genres (westerns, horror films, musicals, film noir, etc.) or broader interpretive modes (melodrama, realism, fantasy, etc.).

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as C108.

FILM N108 Film Genres 4 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of Lecture and 4 hours of Laboratory per week for 6 weeks.**Prerequisites:** Consent of instructor.

The study of film by kind. Focus on a particular genre such as the documentary, the western, the animated film, , the musical.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM C115/AMERSTD C115 The American Detective in Fiction, Film, and Television 4 Units**Department:** Film; American Studies; Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of Lecture per week for 8 weeks.

This course considers how the American detective is represented in fiction, film, and popular culture. We will examine how representations of the American detective are affected by diverse historical and socio-cultural factors, including the ideology of American individualism, paradigms of investigation and ordered knowledge, and competing discourses of race, class, gender, and sexual orientation. After a brief consideration of early American detectives and detectives in the classic American hardboiled tradition, we will focus on many detectives from traditionally understudied groups, including female detectives, African American detectives, Chicana detectives, Asian American detectives, Native American detectives, and gay and lesbian detectives. This course may be used as an elective in the American Studies major.

Final exam required. Instructor: Dresner

FILM 116X Men and Women in Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture and 3 hours of screening per week for 6 weeks.

This course will trace the development of representations of men and women in the medium of film. We will examine the techniques and narrative patterns that cinema uses in the cultural construction of masculinity and femininity. We will look at films which present dominant versions of sexuality and gender, and we will also consider films which question and/or undermine those traditional representations. For our methodology, we will combine semiotic and sociological approaches with a basic understanding of psychoanalytic theories. This course may be used as an elective in the Film major.

Final exam required. Instructor: del Rio

FILM 117 The Screwball Comedy 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Forty-8 hours of lecture/discussion for 6 or 8 weeks. This course explores the screwball comedy through close attention to 15 films. We will explore the politics of those films' romantic conflicts and resolutions. We will try to interpret the cultural fantasies that the films speak to and help to shape. We will talk about the genres relation to the Depression and to the other genre's of that era. And we will address the films' utopian longings, which find expression in the eradication of real differences--especially gender and class--in and through the power of love. This course will satisfy the genre requirement for the film major. Final exam required. Instructor: Forter

FILM 118 Representing America in Classical Hollywood Cinema 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Forty-8 hours of lecture/discussion for 6 or 8 weeks. This course examines a range of classic Hollywood films to consider what they envision as classically "American." Studying early, classical, and late examples of several different genres, we will consider how they have variously imagined what it means to be American. We will also consider how such fantasies come apart in films like and Through the course we will analyze how ethnicity, race, class, and gender continually haunt these generic fantasies of America. This course may be used as an elective in the film major.

Final exam required. Instructor: Courtney

FILM 128 Documentary 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 to 3 hours of screening per week.**Prerequisites:** 25A.

A survey of the history, theory, and practice of the documentary film (including video). How have the forms and ethics of the documentary changed since the beginning of cinema? A range of practices and strategies will be covered: cinema verite, direct cinema, narrational documentary, autobiography, investigative documentary, and recent fictional styles that combine the essayistic with the observational. The course moves between classic works of the genre as well as highly experimental works that critique traditional approaches. Throughout, the emphasis will be on the formal analysis of the films focusing on their narrative structures and the ways in which they make meaning. Students will receive no credit for 128 after taking 28A. Final exam required.

FILM 129 History of Avant-Garde Film 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture and 2.5 hours of laboratory/discussion per week for 6 weeks.**Prerequisites:** 25A.

This course is a survey of the rich history and aesthetics of the international film Avant-Garde from the 1920s to the present. The course explores the development of a range of experimental film forms and practices, situating them in relation to the larger artistic, social, and intellectual contexts in which they arise. We look at the ways artists have not only created new film languages in order to express their unique ideas and vision, but also how they inverted alternative modes of production, distribution, and exhibition for their work. We examine the major formal modes of Avant-Garde cinema, moving between historical and current developments. These include abstract, surrealist/Dada, psychodrama, the lyric film-poem, autobiographical, materialist and structural forms, political and activist, new narrative, recycled cinema, the film essay, feminist and queer cinemas, as well as expanded forms such as installation and web based cinema.

Final exam required.

FILM 140 Special Topics in Film 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of lecture, 2 hours of discussion, and 2 hours of screening per week for 6 weeks.**Prerequisites:** Declared film major or consent of instructor.

Selected topics in the study of film.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

FILM 151 Auteur Theory 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 to 3 hours of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 2 to 4 hours of Laboratory per week for 6 weeks.**Prerequisites:** 25A or consent of instructor.

The study of films from the perspective of directorial style, theme, or filmmaking career.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

FILM 152 The Films of Alfred Hitchcock 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 2 hours of film screening per week.

An investigation in Hitchcock's life and the unique visual language he created to exteriorize complex and disturbing emotional states. The following questions shall be explored: How universal is Hitchcock's appeal? Do his films express the desires and vent the anxieties of only men in the audience or does the appeal of the films cross gender boundaries? The course fulfills the requirement for declared Film majors. Final exam not required. Instructor: Fabe

FILM 153 The Films of Woody Allen 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of lecture/screenings and 1 hour of discussion per week for 8 weeks.

An exploration of Woody Allen's self-reflexive comedy through a study of the film styles, conventions, and traditions he mimics and parodies. We will also look at psychoanalytic theories of comedy to shed light on the relation of humor, guilt, and morality in Woody Allen's work as well as consider Allen's comedy from a feminist perspective. Course satisfies the auteur requirement for the film major.

Final exam required. Instructor: Fabe

FILM 154 The Science Fiction Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture and 2 hours of screening per week for 8 weeks.

This course on the science fiction film is designed to introduce us to a set of concepts and themes that seem to characterize the genre, namely, the notion of the alien, the function of temporal and spatial displacement, and a massive reliance on technological deployment. We will examine these conventions in the light of their ideological involvement with present conflicts and anxieties that define the cultural context in which the films emerge. We will also approach the science fiction film as a "cyborg" category, one which draws from other filmic genres (horror film noir, love story, essay film, Western) in the attempt to imagine and represent the future. This course will satisfy the genre requirement for the Film major. Final exam required.

FILM 155X The Action Film 3 Units**Department:** Film and Media**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture and 3 hours of screening per week for 6 weeks.

In this course we will study the development of the action film in its cultural context, including such issues as the representation of masculinity, the dramatization of extreme political stances, the influence of recent special effects technology on the genre, and genre theory in general. Films include DIRTY HARRY, ENTER THE DRAGON, RESERVOIR DOGS, THE TERMINATOR I & II, THELMA & LOUISE. The course will satisfy the genre requirement for the film major.

Final exam required. Instructor: Jones

FILM 160 National Cinema 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture and viewing per week for 8 weeks.**Prerequisites:** Declared film major or consent of instructor.

This course will focus on the cinema of a particular nation or region.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

FILM N160 National Cinema 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 8 hours of lecture and viewing per week for 8 weeks.**Prerequisites:** Declared film major or consent of instructor.

This course will focus on the cinema of a particular nation or region.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

FILM 180A Screenwriting 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor.

The course explores the art and craft of writing a feature-length, narrative screenplay. Participants present three story ideas to the class, develop one concept into a detailed treatment, and write the first act of the script in professional screenplay form. The focus is on rewriting, with regular presentations of outlines and scripts to fellow writers. The emphasis is on story structure, character development, and screenplay form.

Final exam required. Formerly known as 180.

FILM 180B Screenwriting 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Consent of instructor; 180A recommended.

The course explores the art and craft of writing a feature-length narrative screenplay. Participants begin with a detailed outline of a narrative script and a portion of the script in proper form and develop it into a completed screenplay. The focus is on rewriting, with regular presentations of scenes to fellow writers. Participants also write short scripts and explore alternative story structure. The emphasis is on characterization, scene structure, visual story telling, dialogue, and creating a unified script. The class culminates with reading of completed scripts.

Final exam required.

FILM C181/ART C178 Game Design Methods 4 Units**Department:** Film; Film and Media; Practice of Art**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 2 to 4 hours of Laboratory per week for 15 weeks. 6 hours of Lecture and 3 hours of Laboratory per week for 8 weeks. 8 hours of Lecture and 3 hours of Laboratory per week for 6 weeks.**Prerequisites:** 25A.

This course offers an introduction to game design and game studies.

Game studies has five core elements: the study of games as culture generators, the study of play and interactivity, the study of games as symbolic systems, the study of games as artifacts, and the design of games. One process which is crucial to all these elements is to play. We will study the core elements of game studies through play, play tests, and the study of people playing. There will also be a close examination of classical game studies as well as practice-oriented texts. The final exam for this course is to design, test, and evaluate a playable game.

Final exam required.

FILM 185 The Language of Cinema 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of Studio per week for 15 weeks. 20-2.5 hours of Studio per week for 6 weeks.**Prerequisites:** Declared film major. Completion of all lower division requirements with grade of B+ or better; consent of instructor.

The essentials of film and video production--camera, sound, lighting, and editing. Drawing on previous study of narrative, documentary, avant-garde film and video, students gain a deeper understanding of the complex relationship between the visual and aural elements of moving-image through hands-on experimentation.

Final exam required.

FILM C185/ART C171 Digital Video: The Architecture of Time 4 Units**Department:** Film; Film and Media; Practice of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of Studio per week for 15 weeks.

This hands-on studio course is designed to present students with a foundation-level introduction to the skills, theories, and concepts used in digital video production. As digital technologies continue to expand our notion of time and space, value and meaning, artists are using these tools to envision the impossible. Nonlinear and nondestructive editing methods used in digital video are defining new "architectures of time" for cinematic creation and experience, and offer new and innovative possibilities for authoring new forms of the moving image. Through direct experimentation, this course will expose students to a broad range of industry-standard equipment, film and video history, theory, terminology, field, and post-production skills. Students will be required to technically master the digital media tools introduced in the course, and personalize the new possibilities digital video brings to time-based art forms. Final exam required.

FILM 186 Special Topics in Moving-Image Production 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 13.5 hours of scheduled studio and 9 hours of studio to be arranged per week for 6 weeks.**Prerequisites:** 185 with a grade of A- or better and consent of instructor.

This course investigates special topics in, and special technologies of, moving-image production: e.g., experimental film, documentary film, digital special effects, etc. This is a hands-on studio course designed for students who have mastered the basics of moving-image production and are ready to pursue more specialized film or video production. Final exam required.

FILM C187/ART C174 Advanced Digital Video 4 Units**Department:** Film; Film and Media; Practice of Art**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9 hours of Studio per week for 15 weeks.

This advanced studio course is designed for students who have mastered basic skills and concepts involved in digital video production and are interested in further investigating critical, theoretical, and creative research topics in digital video production. Final exam required.

FILM H195 Film Honors Thesis 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Independent study with film faculty.**Prerequisites:** Senior standing with a 3.3 GPA on all University work and a 3.5 GPA in courses in the major.

Students in the honors program are to take H195 for a letter grade to complete a senior honors thesis. Although the production of a film may be part of the preparation of the thesis and the film submitted as a documentation or example, it is expected that the thesis will be a substantial piece of writing of film criticism or film history.

Final exam not required.

FILM 197A Field Study at the Pacific Film Archive 2 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 hours of field work and 1 hour of group meetings per week.**Prerequisites:** Consent of instructor; film majors only.

Students will learn about film bibliography and research materials. Interns will get a thorough orientation to the Pacific Film Archive library through introductory lectures and training sessions. Then, for three hours per week, they will help organize materials for inclusion in the clippings files. Interns will gain experience in library organization and film bibliography, as well as a broad knowledge of the kinds of film reviews and criticism found in a variety of sources.

Final exam not required.

FILM 197B Field Studies for Majors 3 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences with Faculty Sponsor and at least 9 hours per week at field study.**Prerequisites:** Consent of instructor; film majors only.

The supervised field program may include experience in a broad range of pre- and post-production film and video production related activities. The student will develop the field experience and its relationship to academic training with a member of the faculty on the Film Advisory Committee. Faculty sponsor and student will establish individual meeting times and academic requirements for acceptable completion of the course. Commitment to at least nine hours of field work per week. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM 197C Film Curating Internship 2 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of Fieldwork and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Declared film study or art practice major, junior standing (60-unit minimum), and consent of instructor.

Experience "behind-the-scenes" at the Pacific Film Archive! Interns will learn about film curating through creating a program of works by UC Berkeley students to present at PFA the following spring semester. Students will solicit films and videos, preview them, and make a final selection as a group. Students will write short analyses of local film exhibition programs and will do projects related to PFA's ongoing exhibition program.

Final exam not required.

FILM 197D Field Study at Film Quarterly 2 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 2 hours of Fieldwork and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Declared film major with junior or senior standing. Consent of instructor.

Interning at Interns will gain experience in the editorial process. This internship will help the student refine critical skills, develop editorial skills, and experience working on a film journal.

Final exam not required.

FILM 198 Directed Group Study 1 - 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.**Prerequisites:** 25A or equivalent and consent of instructor.

Group studies of selected topics which vary from year to year. Field shall not coincide with that of any regular course and shall be specific enough to allow students to write an essay based on the study.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

FILM 199 Supervised Independent Study for Advanced Undergraduates 1 - 4 Units**Department:** Film and Media**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** 25A or equivalent and consent of instructor.

Reading and conference with the instructor in a field that shall not coincide with that of any regular course and shall be specific enough to enable the student to write an essay based upon his/her study.

Course may be repeated for credit when topic changes. Final exam not required.

FILM 200 Graduate Film Theory Seminar 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This seminar will examine both traditional and recent critical approaches to a systematic and historical study of film. Although we will emphasize contemporary structuralist-semiotic, psychoanalytical, and socio-critical methods, we will also study the classical debates in film theory about representation, filmic vs. literary signification, sexual difference, and the social function of images in modernism and postmodernism. Illustrations will be taken from film history from 1910 to 1980.

Final exam not required.

FILM 201 Graduate Film Historiography 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

The theoretical and methodological issues raised by the recent practice of film history are the focus of this seminar. Intended primarily for first-year film studies graduate students and other students interested in starting work on film history, the seminar provides both a theoretical overview of film historiography and an introduction to the practice of historically oriented film research. The first part of the course uses both overtly historiographic readings and film history examples to raise historical questions of technology, institution-formation, exhibition, cultural history, and spectatorship.

Final exam not required.

FILM 203 Film Studies Proseminar 2 - 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

A seminar introducing Film Studies graduate students to the field, the profession, and the faculty practicing film studies. Envisioned as a way for new students to learn what is expected of them and for more advanced students to pass through the all-important last years of their training in an atmosphere of helpful camaraderie. Introduces students to the intellectual and physical resources of the Berkeley campus as well as the Bay Area. By the end of the semester students should gain an understanding of the expectations of their performance in graduate school, have identified the major goals on the way towards getting a Ph.D., and, depending on where they are in their studies, have begun to achieve those goals.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM 204 Compact Seminar 2 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of seminar (meeting 2 times per week).

A compact seminar features a distinguished, short-term visitor with expertise in Film and Media. During the stay, the visitor meets intensively with graduate students, who then continue to work on research topics for the remainder of the semester. The seminar meets eight times one hundred and twenty minutes, not including screening time, and a substantial (twenty-five page) research paper is required at the end of the semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM 220 Film Curating 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar and 1 to 4 hour of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

An introduction to the theory, history, and practice of film curating taught by Pacific Film Archive curators. What do curators do? How do they decide what to show? What is the role of film archives and film exhibition in the field of film and moving image study? Using the Pacific Film Archive and its programmers as a laboratory, students will go behind-the-scenes of the Archive's curatorial, print traffic, publicity, and editorial departments and learn how to program by doing. The course will culminate in a proposal for a comprehensive film series. Final exam not required.

FILM 221 Film Curating Part 2 2 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 220

Students will develop and present a film series for presentation at the Pacific Film Archive. Possibly refining a series proposed in 220. PFA curators will have final approval of the series topic and the film/video selection. Students will locate and book all films, write program notes, do outreach, and introduce programs. Guest speakers will include local press, writers, and artists. Local film and videomakers will trace the history of a work from production through exhibition. Final exam not required.

FILM 230 Graduate Production Seminar 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 3 to 5 hours of Laboratory per week for 15 weeks.**Prerequisites:** Graduate standing and consent of instructor.

Intensive study of the basic elements of film and digital video production and post-production. Graduate students will develop a working knowledge of film and video making through hands-on production experience that will enable them to film and edit their own productions. They will also acquire training to teach basic video and film production classes. The uses of specific technologies and formats will be discussed in relation to aesthetic and theoretical questions. Training includes pre-production-scripting and storyboarding, production elements including image capture, and post-production strategies and aesthetics for non-linear digital editing programs. The course will also introduce problems of how to format video/films for exhibition and approaches to distribution, exhibition, and funding. Classes will consist of technical lectures and hands-on workshops, creative exercises, seminar-style discussion and critique, film screenings, assigned readings, and visiting artists and speakers. Final exam not required.

FILM 240 Graduate Topics in Film 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Graduate standing or consent of instructor.

Selected topics in the study of film.

Final exam not required.

FILM 298 Special Study 1 - 4 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences. Individual conferences.**Prerequisites:** Consent of instructor. Graduate standing.

Designed to allow students to do research in areas not covered by other courses. Requires regular discussions with the instructor and a final written report.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

FILM 299 Directed Research 1 - 12 Units**Department:** Film and Media**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 12 hour of Independent study per week for 15 weeks. 1.5 to 20-2.5 hours of Independent study per week for 8 weeks. Open to graduate students who have passed their Ph.D. qualifying examinations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FILM 602 Individual Study for Doctoral Students 1 - 6 Units**Department:** Film and Media**Course level:** Graduate examination preparation**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 to 6 hour of Independent study per week for 15 weeks. 1.5 to 11 hours of Independent study per week for 8 weeks.

Individual study in consultation with faculty director as preparation for degree examinations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Folklore (FOLKLOR)

FOLKLOR C261/ANTHRO C261 Theories of Narrative 4 Units**Department:** Folklore; Anthropology**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks. 7.5 hours of Lecture per week for 8 weeks. 10 hours of Lecture per week for 6 weeks.

This course examines a broad range of theories that elucidate the formal, structural, and contextual properties of narratives in relation to gestures, the body, and emotion; imagination and fantasy; memory and the senses; space and time. It focuses on narratives at work, on the move, in action as they emerge from the matrix of the everyday preeminently, storytelling in conversation--as key to folk genres--the folktale, the legend, the epic, the myth.

Final exam not required.

FOLKLOR C262A/ANTHRO C262A Theories of Traditionality and Modernity 4 Units**Department:** Folklore; Anthropology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing or consent of instructor.

This seminar explores the emergence of notions of tradition and modernity and their reproduction in Eurocentric epistemologies and political formations. It uses work by such authors as Anderson, Butler, Chakrabarty, Clifford, Derrida, Foucault, Latour, Mignolo, Pateman, and Poovey to critically reread foundational works published between the 17th century and the present--along with philosophical texts with which they are in dialogue--in terms of how they are imbricated within and help produce traditionalities and modernities.

Course may be repeated for credit with different topic and different instructor. Course may be repeated for credit when topic changes. Final exam not required.

FOLKLOR C262B/ANTHRO C262B Theories of Traditionality and Modernity 4 Units**Department:** Folklore; Anthropology**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar explores the emergence of notions of tradition and modernity and their reproduction in Eurocentric epistemologies and political formations. FOLKLOR 298 Readings in Folklore 3 - 6 Units**Department:** Folklore**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

FOLKLOR 299 Directed Research 3 - 6 Units**Department:** Folklore**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences to be arranged.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

French (FRENCH)

FRENCH 1 Elementary French 5 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 10 hours of Lecture and 2 hours of Laboratory per week for 8 weeks.

Introduction to speaking, listening, reading, and writing in French. Final exam required.

FRENCH R1A English Composition in Connection with the Reading of Literature 4 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is designed to fulfill the first half of the Reading and Composition requirement. The primary goal of this course is to develop students' reading and writing skills through a series of assignments that will provide them with the opportunity to formulate observations made in class discussions into coherent argumentative essays. Emphasis will be placed on the refinement of effective sentence, paragraph, and thesis formation, keeping in mind the notion of writing as a process. Other goals in this course are a familiarization with French literature and the specific questions that are relevant to this field. In addition, students will be introduced to different methods of literary and linguistic analysis in their nonliterary readings.

Satisfies the first half of the Reading and Composition requirement

Final exam not required.

FRENCH R1B English Composition in Connection with the Reading of Literature 4 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.

This course is designed to fulfill the second half of the Reading and Composition requirement. The primary goal of this course is to develop students' reading and writing skills through a series of assignments that will provide them with the opportunity to formulate observations made in class discussions into coherent argumentative essays. Emphasis will be placed on the refinement of effective sentence, paragraph, and thesis formation, keeping in mind the notion of writing as a process. Other goals in this course are a familiarization with French literature and the specific questions that are relevant to this field. In addition, students will be introduced to different methods of literary and linguistic analysis in their nonliterary readings.

Satisfies the second half of the Reading and Composition requirement

Final exam not required.

FRENCH 2 Elementary French 5 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 10 hours of Lecture and 2 hours of Laboratory per week for 8 weeks.**Prerequisites:** 1 or equivalent.

Introduction to speaking, listening, reading, and writing in French.

Continuation of French 1.

Final exam required.

FRENCH 3 Intermediate French 5 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks. 10 hours of Lecture per week for 8 weeks.**Prerequisites:** 2 or equivalent.

Building on foundation established in first year, trains students in listening, reading, writing, and speaking French. Review and refinement of grammar.

Final exam required.

FRENCH 4 Advanced Intermediate French 5 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of Lecture per week for 15 weeks. 10 hours of Lecture per week for 8 weeks.**Prerequisites:** 3 or equivalent.

Advanced training in listening, reading, writing, and speaking French.

Review and refinement of grammar.

Final exam required.

FRENCH 12 Intensive French 1 and 2 10 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 10 hours of lecture per week. 15 hours of lecture per week for 10 weeks.

Intensive introduction to speaking, listening, reading, and writing in French. Equivalent to French 1 and 2 on the semester system at Berkeley.

Students will receive no credit for 12 after taking 1 and 2. Course may be repeated for credit when topic changes. Final exam required.

FRENCH 13 Intermediate Conversation 2 Units**Department:** French**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 8 hours of Lecture per week for 6 weeks.**Prerequisites:** 2 or consent of Director of Lower Division.

Intermediate French conversation. May not be repeated for credit.

Final exam not required.

FRENCH 301 Teaching French in College: First Year 4 Units**Department:** French**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture and at 10 dance at demonstration class for 5 hours per week.**Prerequisites:** For graduate students teaching at college level. Required for all new T.A.s.

Bi-weekly lectures on methodology, grading and testing, demonstration class with required attendance five times per week; language laboratory observations; supervised classroom practice. Additional seminars and discussion sections on methodology. Required for all Graduate Student Instructors teaching French 1 for the first time.

Final exam not required. Instructor: Chavdarian

FRENCH 302 Teaching French in College: Advanced First Year 4 Units**Department:** French**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of lecture and at 10 dance at demonstration class for 5 hours per week.

Bi-weekly lectures on methodology, grading and testing in French 2. Demonstration class with required attendance five times per week; laboratory observations; supervised classroom practice. Additional seminars and discussion sections on methodology. Required for all Graduate Student Instructors teaching French 2 for the first time.

Final exam not required. Instructor: Chavdarian

FRENCH 303 Teaching French in College: Second Year 4 Units**Department:** French**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks.**Prerequisites:** 301, 302 or consent of instructor.

Lectures and discussion on the methodologies used in teaching second-year French, grading and testing; occasional attendance at demonstration classes; language laboratory observations; supervised classroom teaching. Required of all instructors teaching French 3 or 4.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Pries

FRENCH 335 Teaching French in College: Practical Phonetics and Listening Comprehension--Instruction on Creating a Web-Assisted Course 3 Units**Department:** French**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Graduate students.

Required of all GSIs teaching French 35 for the first time. Attendance at demonstration class two hours per week. Readings. Journal of observations. Practical training in creating multimedia documents, Web pages, and exercises. Final paper and or/final project.

Final exam not required.

FRENCH 601 Special Study for Graduate Students 1 - 12 Units**Department:** French**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.

Individual study for the comprehensive exam in consultation with the field adviser.

May not be used to satisfy units or residence requirements. Final exam not required.

FRENCH 602 Individual Study 1 - 12 Units**Department:** French**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.**Prerequisites:** M.A. or completion of at least 16 units beyond B.A.

Individual study with an adviser, intended to provide an opportunity for qualified students to prepare for the various examinations required of candidates for the Ph.D.

May not be used to satisfy units or residence requirements. Final exam not required.

FRENCH N602 Individual Study 1 - 4 Units**Department:** French**Course level:** Graduate examination preparation**Term course may be offered:** Summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conferences.**Prerequisites:** M.A. or completion of at least 16 units beyond B.A.

Individual study with an adviser, intended to provide an opportunity for qualified students to prepare for the various examinations required of candidates for the Ph.D.

May not be used to satisfy units or residence requirements. Final exam not required.

Gender and Women's Studies (GWS)

GWS N1B Reading and Composition 3 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 6 hours of Lecture and 1 hour of Discussion per week for 8 weeks. 8 hours of Lecture and 1 hour of Discussion per week for 6 weeks.

Training and instruction in expository writing in conjunction with reading literature. The readings and assignments will focus on themes and issues in women's studies.

Satisfies the second half of the Reading and Composition requirement

Final exam not required. Formerly known as Women's Studies N1B.

GWS R1B Reading and Composition 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Training and instruction in expository writing in conjunction with reading literature. The readings and assignments will focus on themes and issues in gender and women's studies. This course satisfies the second half of the Reading and Composition requirement.

Satisfies the second half of the Reading and Composition requirement
Final exam not required. Formerly known as Women's Studies R1B.

GWS 10 Introduction to Gender and Women's Studies 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week. 7.5 hours of lecture/discussion per week for 8 weeks.

Introduction to questions and concepts in gender and women's studies.

Critical study of the formation of gender and its intersections with other relations of power, such as sexuality, racialization, class, religion, and age. Questions will be addressed within the context of a transnational world. Emphasis of the course will change depending on the instructor. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 10.

GWS 14 Gender, Sexuality, and Race in Global Political Issues 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

The production of gender, sexuality, and processes of racialization in contemporary global political issues. Topics and geographical foci may vary. Examples: the post-9-11 situation in the U.S. and U.S. wars in Afghanistan and Iraq; Hindu-Muslim conflict in India; the wars in the former Yugoslavia and Rwanda; the Israel/Palestine situation; global right-wing movements; state and social movement terrorisms and transnational "security" measures.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 14.

GWS 20 Introduction to Feminist Theory 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.

Why study theory? How, and from where, does the desire to theorize gender emerge? What does theory do? What forms does theory take? What is the relationship between theory and social movements? This course will introduce students to one of the most exciting and dynamic areas of contemporary inquiry.

Final exam required. Formerly known as Women's Studies 20.

GWS 24 Freshman Seminars 1 Unit**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of seminar per week. 1.5 hours of seminar per week for 10 weeks. 2 hours of seminar per week for 8 weeks.

The Freshman and Sophomore Seminars program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to fifteen freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 24.

GWS 40 Special Topics 3 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The findings of feminist scholarship as they apply to a particular problem, field, or existing discipline. Designed primarily for lower division students and non-majors. Topics vary from semester to semester. Students should consult the Women's Studies announcement of courses for specific semester topics.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 40.

GWS 50AC Gender in American Culture 3 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

A multi-disciplinary course designed to provide students with an opportunity to work with faculty investigating the topic gender in American culture.

Satisfies the American Cultures requirement

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 50AC.

GWS 97 Internship 2 - 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Individual conferences and 10 hours of internship required per week. Individual conferences and 10 hours of internship per week for 6, 8, and 10 weeks.**Prerequisites:** Consent of instructor.

Internship Program: Field work in an organization concerned with women's issues plus individual conferences with faculty. Students must present a written scope of work to the supervising faculty members before enrolling. Credit earned depends on the amount of written work completed by students that interprets the experience through diaries, historical reports, and creative work done for the organization. Faculty supervisor and student must agree on assignments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GWS 98 Directed Group Study for Undergraduates 1 - 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks.

Seminars for the group study of selected topics not covered by regularly scheduled courses. Topics will vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required. Formerly known as Women's Studies 98.

GWS 99 Supervised Independent Study and Research 1 - 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 3 to 12 hours of tutorial or fieldwork per week.**Prerequisites:** Freshmen or sophomores only.

Individual research by lower division students only.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Women's Studies 99.

GWS 100AC Women in American Culture 3 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is designed to provide students with an opportunity to work with faculty investigating the topic women in American culture.

Satisfies the American Cultures requirement

Final exam required. Formerly known as Women's Studies 100AC.

GWS 101 Doing Feminist Research 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 10 and 20.

In this course, students will learn to do feminist research using techniques from the arts, humanities, social sciences, and sciences. The teaching of interdisciplinary research skills will focus on practices of gender in a particular domain such as labor, love, science, aesthetics, film, religion, politics, or kinship. Topics will vary depending on the instructor. Final exam required. Formerly known as Women's Studies 101.

GWS 102 Transnational Feminism 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.

An overview of transnational feminist theories and practices, which address the workings of power that shape our world, and women's practices of resistance within and beyond the U.S. The course engages with genealogies of transnational feminist theories, including analyses of women, gender, sexuality, "race," racism, ethnicity, class, nation; postcoloniality; international relations; post-"development"; globalization; area studies; and cultural studies.

Final exam not required. Formerly known as Women's Studies 102.

GWS 103 Identities Across Difference 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.**Prerequisites:** 10

The course studies identity as a product of articulation and investigation of self and other, rather than an inherited marking. Emphasis, for example, may be placed on the complexities of the lived experiences of women of color in the United States and in diverse parts of the world.

Final exam required. Formerly known as Women's Studies 103.

GWS 104 Feminist Theory 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 10 and 20.

Feminist theory examines the basic categories that structure social life and that condition dominant modes of thought. Feminist theory engages with many currents of thought such as liberalism, Marxism, psychoanalysis, postcolonial theory, and transnational feminist theory. In this course, students will gain a working knowledge of the range and uses of feminist theory.

Final exam required. Formerly known as Women's Studies 104.

GWS 111 Special Topics 1 - 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 3 hours of lecture/discussion per week.

This course is designed to provide students with an opportunity to work closely with Gender and Women's Studies faculty, investigating a topic of mutual interest in great depth. Emphasis in on student discussion and collaboration. Topics will vary from semester to semester. Number of units will vary depending on specific course, format, and requirements.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 111.

GWS 115 Engaged Scholarship in Women and Gender 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture/discussion and 3 hours of internship per week. 5 hours of lecture/discussion and 5.5 hours of internship per week for 6 weeks.

This class provides students the opportunity to do supervised community service with an organization that relates to women and gender. Students will be placed in an organization and complete an internship throughout the course of the semester. Students will also spend time reflecting on their internship experiences, connecting their service with concepts learned in gender and women's studies classes, and meeting as a group to evaluate and assess issues such as volunteer/unpaid labor, activism and the academy, and the political economy of gender and women's services.

Final exam not required.

GWS 116AC Queer Theories: Activist Practices 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 1 hour of Internship per week for 15 weeks. 5 hours of Lecture and 2.5 hours of Internship per week for 6 weeks.

This class will examine various forms of activist practices and create possibilities for students to participate in community projects that allow them to explore their own definitions of activism, community engagement, and social transformation. As a class, we will consider different types of interventions -- art, law, advocacy, and direct action -- and examine the limits and possibilities of these different forms of social engagement.

Satisfies the American Cultures requirement

Final exam not required.

GWS 120 The History of American Women 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will survey the history of women in the United States from approximately 1890 to the present, a century of dramatic and fundamental change in the meaning of gender difference. We will examine such topics as work, the family, sexuality, and politics and be attentive to variations in the structure and experience of gender based on race, ethnicity, and class.

Final exam required. Formerly known as Women's Studies 120.

GWS 125 Women and Film 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 2 hours of screening per week. 7.5 hours of lecture and 5 hours of screening per week for 6 weeks.**Prerequisites:** 10 and 20.

This course explores the role of women both in front of and behind the camera. It examines the socially constructed nature of gender representations in film and analyzes the position of women as related to the production and reception of films. Emphasis is on feminist approaches that challenge and expose the underlying working of patriarchy in cinema. Final exam required. Formerly known as Women's Studies 125.

GWS 126 Film, Feminism, and the Avant-Garde 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Focusing on the creative process while engaging in critical debates on politics, ethics, and aesthetics, the course explores the site where feminist film-making practice meets with and challenges the avant-garde tradition. It emphasizes works that question conventional notions of subjectivity, audience, and interpretation in relation to film making, film viewing, and the cinematic apparatus.

Final exam required. Formerly known as Women's Studies 126.

GWS 129 Bodies and Boundaries 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

Examines gender and embodiment in interdisciplinary transnational perspective. The human body as both a source of pleasure and as a site of coercion, which expresses individuality and reflects social worlds. Looks at bodies as gendered, raced, disabled/able-bodied, young or old, rich or poor, fat or thin, commodity or inalienable. Considers masculinity, women's bodies, sexuality, sports, clothing, bodies constrained, in leisure, at work, in nation-building, at war, and as feminist theory.

Final exam required. Formerly known as Women's Studies 129.

GWS 130AC Gender, Race, Nation, and Health 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Examines the role of gender in health care status, in definitions and experiences of health, and in practices of medicine. Feminist perspectives on health care disparities, the medicalization of society, and transnational processes relating to health. Gender will be considered in dynamic interaction with race, ethnicity, sexuality, immigration status, religion, nation, age, and disability, and in both urban and rural settings. Satisfies the American Cultures requirement

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as 130.

GWS 133AC Women, Men, and Other Animals: Human Animality in American Cultures 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

Explores various ways that human groups and interests, particularly in the United States, have both attached and divorced themselves from other animals, with particular focus on gender, race, ability, and sexuality as the definitional foils for human engagements with animality.

Satisfies the American Cultures requirement

Final exam not required.

GWS 134 Gender and the Politics of Childhood 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Explores gender and age as interrelated dimensions of social structure, meaning, identity, and embodiment. Emphasis on the gendered politics of childhood--for example, in the social regulation of reproduction; child-rearing, motherhood, fatherhood, care, and rights; the changing global political economy of childhoods and varied constructions of "the child"; child laborers, soldiers, street children; consumption by and for children; growing up in schools, neighborhoods, and families.

Final exam required. Formerly known as Women's Studies 134.

GWS 139 Women and Work 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

This course uses gender as a lens to examine the nature, meaning, and organization of women's work. Students learn varied conceptual approaches with which to probe such issues as gender divisions of labor, the economic significance of caring and other forms of unpaid labor, earnings disparities between men and women, race and class differences in women's work, transnational labor immigration, and worker resistance and organizing.

Final exam required. Formerly known as Women's Studies 139.

GWS 140 Feminist Cultural Studies 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course introduces students to the interdisciplinary field of feminist cultural studies. Drawing upon contemporary theories of representational politics, the specific focus of the course will vary, but the emphasis will remain on the intersections of gender, race, nation, sexuality, and class in particular cultural and critical practices.

Final exam required. Formerly known as Women's Studies 140.

GWS 141 Interrogating Global Economic "Development" 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.**Prerequisites:** Consent of instructor.

An introduction to women and gender in "development." Addresses theories of "development" (modernization, demographic transition, dependency, world systems, post-development, postcolonial, and transnational feminist): productions and representations of "underdevelopment"; national and international "development" apparatuses; "development" practices about labor, population, resources, environment, literacy, technologies, media; and women's resistance and alternatives.

Final exam required. Formerly known as Women's Studies 141.

GWS 142 Women in the Muslim and Arab Worlds 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

Examines differences and similarities in women's lives in the Muslim/ Arab worlds, including diasporas in Europe and North America. Analysis of issues of gender in relation to "race," ethnicity, nation, religion, and culture.

Final exam required.

GWS 143 Women, Poverty, and Globalization 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course examines new patterns of inequality as they relate to the feminization of poverty in a global and transnational context. It will give students the opportunity to enhance their critical knowledge of new forms of globalization and their impact on the least-privileged group of women locally and globally. It also provides an opportunity for students to work with a local or global non-governmental or community organization with a focus on gender and poverty, and to engage in a systematic analysis of the strategies and practices of these organizations.

Final exam not required.

GWS 144 Alternate Sexualities in a Transnational World 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

This course engages with contemporary narrations produced by and about lesbian, gay, bisexual, and transsexual postcolonial subjects through genres such as autobiography, fiction, academic writing, film, journalism, and poetry. Each semester the focus is geopolitically limited to no more than two countries to allow students to consider the conditions out of which the narrations are produced. Sites and subjects may vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as Women's Studies 144.

GWS C146A/LGBT C146A Cultural Representations of Sexualities: Queer Literary Culture 4 Units**Department:** Gender and Women's Studies; Lesbian Gay Bisexual Transgender St**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course examines modern literary cultures that construct ways of seeing diverse sexualities. Considering Western conventions of representation during the modern period, we will investigate the social forces and institutions that would be necessary to sustain a newly imagined or re-imagined sexual identity across time.

Final exam required.

GWS C146B/LGBT C146B Cultural Representations of Sexualities: Queer Visual Culture 4 Units**Department:** Gender and Women's Studies; Lesbian Gay Bisexual Transgender St**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

This course examines modern visual cultures that construct ways of seeing diverse sexualities. Considering Western conventions of representation during the modern period, we will investigate film, television, and video. How and when do "normative" and "queer" sexualities become visually defined?.

Final exam required. Formerly known as Women's Studies C146.

GWS 155 Gender and Transnational Migration 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture/discussion per week for 6 weeks. 3 hours of lecture/discussion per week.

What economic, social, and cultural forces impel women to migrate and shape their experiences as immigrants? How does gender, together with race/ethnicity and class, affect processes of settlement, community building, and incorporation into labor markets? This course examines gender structures and relations as they are reconfigured and maintained through immigration. It emphasizes the agency of immigrant women as they cope with change and claim their rights as citizens.

Final exam required. Formerly known as Women's Studies 155.

GWS 195 Gender and Women's Studies Senior Seminar 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 101

This seminar is required for all seniors majoring in gender and women's studies. The goal of the course is for students to produce a research paper of 25-30 pages that reflects feminist methods, interpretations, or analysis.

Final exam not required. Formerly known as Women's Studies 195.

GWS H195 Gender and Women's Studies Senior Honors Thesis 4 Units**Department:** Gender and Women's Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conferences.**Prerequisites:** 15 upper division units in Gender and Women's Studies; 3.3 GPA in all University work and 3.3 GPA in courses in the major.

Entails writing a bachelor's honors thesis pertaining to the student's major in gender and women's studies. Each student will work under the guidance of a faculty adviser who will read and grade the thesis.

Final exam not required. Formerly known as Women's Studies H195.

GWS C196A/HISTART C196A/HISTORY C196A/MEDIAST C196A/POL SCI C196A/POLECON C196A/SOCIOL C196A/UGIS C196A UCDC**Core Seminar 4 Units****Department:** Gender and Women's Studies; History; History of Art; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 4.5 hours of Lecture and 1.5 hours of Discussion per week for 10 weeks.**Prerequisites:** C196B (must be taken concurrently).

This course is the UCDC letter-graded core seminar for 4 units that complements the P/NP credited internship course UGIS C196B. Core seminars are designed to enhance the experience of and provide an intellectual framework for the student's internship. UCDC core seminars are taught in sections that cover various tracks such as the Congress, media, bureaucratic organizations and the Executive Branch, international relations, public policy and general un-themed original research.

Final exam not required. Instructor: Cain

GWS C196B/HISTART C196B/HISTORY C196B/MEDIAST C196B/POL SCI C196B/POLECON C196B/SOCIOL C196B/UGIS C196B UCDC**Internship 6.5 Units****Department:** Gender and Women's Studies; History; History of Art; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** 20-4 to Thirty hours of Internship per week for 15 weeks.**Prerequisites:** C196A (must be taken concurrently).

This course provides a credited internship for all students enrolled in the UCDC and Cal in the Capital Programs. It must be taken in conjunction with the required academic core course C196A. C196B requires that students work 3-4 days per week as interns in settings selected to provide them with exposure to and experience in government, public policy, international affairs, media, the arts or other areas or relevance to their major fields of study.

Final exam not required. Instructor: Cain

Special Field Research 10.5 Units

Department: Gender and Women's Studies; History; History of Art; Media Studies; Political Economy; Political Science; Sociology; Undergrad Interdisciplinary Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 240-300 hours of work per semester plus regular meetings with the faculty supervisor.

Prerequisites: Consent of instructor.

Students work in selected internship programs approved in advance by the faculty coordinator and for which written contracts have been established between the sponsoring organization and the student. Students will be expected to produce two progress reports for their faculty coordinator during the course of the internship, as well as a final paper for the course consisting of at least 35 pages. Other restrictions apply; see faculty adviser.

Course may be repeated for a maximum of 12 units. Course may be repeated for a maximum of 12 units. Final exam not required. Formerly known as 196W.

GWS 197 Internship 2 - 4 Units

Department: Gender and Women's Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Individual conferences and 10 hours of internship required per week. Individual conferences and 10 hours of internship per week for 6, 8, and 10 weeks.

Prerequisites: Consent of instructor.

Internship Program: Field work in an organization concerned with women's issues plus individual conferences with faculty. Students must present a written scope of work to the supervising faculty members before enrolling. Credit earned depends on the amount of written work completed by students that interprets the experience through diaries, historical reports, and creative work done for the organization. Faculty supervisor and student must agree on assignments.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Women's Studies 197.

GWS 198 Directed Group Study for Advanced Undergraduates 1 - 4 Units

Department: Gender and Women's Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: 1 to 4 hour of Directed group study per week for 15 weeks. 1 to 4 hour of Directed group study per week for 8 weeks.

Prerequisites: Gender and women's studies major.

Seminars for group study of selected topics not covered by regularly scheduled courses. Topics will vary from year to year.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Women's Studies 198.

GWS 199 Supervised Independent Study for Advanced Undergraduates 1 - 4 Units

Department: Gender and Women's Studies

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Offered for pass/not pass grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks. 1 to 4 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.

Prerequisites: Gender and women's studies major.

Reading and conference with the instructor in a field that does not coincide with that of any regular course and is specific enough to enable students to write an essay based upon their studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Women's Studies 199.

GWS 200 Theory and Critical Research 4 Units

Department: Gender and Women's Studies

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 to 3 hours of Seminar per week for 15 weeks.

Prerequisites: Consent of instructor, 104, or the equivalent.

This course will provide an opportunity for the examination of diverse feminist theories produced in different disciplines and across disciplines. The course will ground contemporary philosophical and theoretical developments in the study of gender to specific histories of class, race, ethnicity, nation, and sexuality. Participants in the class will be urged to draw upon their own disciplinary and interdisciplinary backgrounds and interests to produce multifaceted analyses of how feminist theory has acted to delimit the study of women in some instances as well as how it may be used critically and imaginatively to open the field in complex and dynamic ways. Graduate students research and write a substantial (25-50 page) paper for the course. They will also participate in organizing and leading class discussion on a rotating basis.

Final exam not required. Formerly known as Women's Studies 200.

GWS 210 Advanced Interdisciplinary Studies 4 Units

Department: Gender and Women's Studies

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture and 1 hour of Seminar per week for 15 weeks.

Prerequisites: 104 or equivalent and consent of instructor.

A cross-disciplinary examination of specific problems in the study of gender, women, and sexuality. Topics will vary; for example, representations of motherhood, women in the public sphere, work and gender, globalization of gender, and the history of sexuality.

Final exam not required. Formerly known as Women's Studies 210.

GWS 220 Research Seminar 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Seminar per week for 15 weeks.**Prerequisites:** Open to graduate students advanced to Ph.D. candidacy. Members of the seminar will present their ongoing dissertation research and mutually explore the interdisciplinary dimensions and implications of their work.

Final exam not required. Formerly known as Women's Studies 220.

GWS 230 Transnational Feminist Theories 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

The aim of this course is to provide graduate students with an understanding of transnational feminist theories so that they may more effectively engage with this area of scholarship, but moreover so that they may critically and creatively contribute to it through their own writing.

Final exam not required.

GWS 231 Proseminar in Transnational Gender and Women's Studies 1 Unit**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hour of Lecture per week for 15 weeks.

Designed to encourage dialogue around themes related to transnational gender and women's studies, this proseminar is organized around colloquia, panels, and conferences sponsored by the Department of Gender and Women's Studies, the Beatrice Bain Research Group, the Center for Race and Gender, the Center for the Study of Sexual Cultures, and (as relevant) other campus units.

Final exam not required.

GWS 232 Transnational Feminist Approaches to Knowledge Production 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course focuses on incorporating the analytic power of transnational feminist studies in academic research projects and practices. It examines the ways in which interdisciplinary and transnational approaches to gender and women replicate, challenge, reconfigure, and transform the emergence of new knowledge frames, analytics, and research practices. Students in this course will explore these and other questions in the context of their own research projects.

Final exam not required.

GWS 236 Diaspora, Border, and Transnational Identities 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will study debates around the notions of home, location, migrancy, mobility, and dislocation by focusing on issues of gender and sexuality. We will examine the ways in which various cultural flows have fundamentally challenged and changed the nature of global economy by expanding mobility of capital, labor, and systems of representations in a transnational context. We will also look at the impact of new technologies in production, distribution, communication, and circulation of cultural meanings and social identities by linking nationalism, immigration, diaspora, and globalization to the process of subject formation in a postcolonial context.

Final exam not required.

GWS 237 Transnational Science, Technology, and New Media 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This is a core class of the new Ph.D in Transnational Gender and Women's Studies. It will expose students to critical thinking about science, technology, and new media. The class explores intersections of gender and women's studies with science, technology, engineering, medicine, and new media around the world; including women in science; transnational feminist science and technology studies; technologies of reproduction, production and destruction; divisions of scientific and technical labor; embodiment and subjectivity; digital divides, digital consumption, embodiment, and circulation; modernist projects of categorization; and the making and breaking of gendered bodies. It mixes secondary sources with primary sources, and among the primary sources, mixes scientific and technical documents with new media and the arts. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GWS 238 Feminist Bio-Politics 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This course is divided into three sections, Theorists and Methods, The Sciences of Life, and Bio-and-Necro-politics, and within each section there are further thematic headings. The course serves both to introduce graduate students to science and technology studies and to introduce new works and directions in the field. The syllabus foregrounds the life and biomedical sciences, and thematizes space and trans-place, time and genealogy, disciplines and inter-disciplines, method and/as theory, identity and governance, ethics and objectivity, knowledge and stratification, security and transparency.

Final exam not required.

GWS 250 Queer Translation 4 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar aims for both a familiarization and a potential reworking of selected contemporary debates in queer theory: those concerning migration, race, globalization, and movements of theory. How do queer theories, queer theories-as-practice, queer practices travel? Furthermore, do critiques of stability found in queer theory invite presumptions of mobility? We will interrogate the shadow of "mobility" in queer theory by considering queer tourism, gender identity, sub-class labor migration, and the outer zones of citizenship.

Final exam not required.

GWS 299 Individual Study and Research 1 - 9 Units**Department:** Gender and Women's Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Regular meetings to be arranged with instructor.**Prerequisites:** Consent of instructor.

For students engaged in individual research and study. May not be substituted for available graduate lecture courses.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Formerly known as Women's Studies 299.

Geography (GEOG)

GEOG 1 Global Environmental Change 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks. 7.5 hours of Lecture and 5 hours of Laboratory per week for 6 weeks.

The global pattern of climate, landforms, vegetation, and soils. The relative importance of natural and human-induced change, global warming, forest clearance, accelerated soil erosion, glacial/postglacial climate change and its consequences.

Final exam required. Instructor: Byrne

GEOG 4 World Peoples and Cultural Environments 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Laboratory per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Historical and contemporary cultural-environmental patterns. The development and spread of cultural adaptations, human use of resources, transformation and creation of human environments.

Final exam required.

GEOG 10 World Regions, Peoples, and States 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course will provide a framework for recognizing and analyzing the major distinctive regions of the world in comparative context. The most important interrelations between environment, economy, ethnicity, and the national identity and viability of states will be explored.

Final exam required. Instructor: Sayre

GEOG 20 Globalization 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

How and why are geographical patterns of employment, production, and consumption unstable in the contemporary world? What are the consequences of NAFTA, an expanded European Community, and post-colonial migration flows? How is global restructuring culturally reworked locally and nationally?

Final exam required.

GEOG N20 Globalization 3 Units**Department:** Geography**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

Global economics and politics are undergoing a revolution. Transnational enterprises, international trade, and digitized finance are merging its formerly separate national economies. New regional and transnational treaties and institutions, from the EU and NAFTA to the IMF, the WTO and the World Bank, are arising to regulate the new global economy.

Power is being transferred from national states to these institutions, not always smoothly or in predictable ways. This course is about this medley.

Final exam not required.

GEOG 24 Freshman Seminar 1 Unit**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics vary from department to department and semester to semester. Enrollment limited to 15 freshmen.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

GEOG 30 The Ocean World 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

Introduction to the cultural and physical geography of the world's oceans. Ecology of ocean biota and environments. History and geography of ocean peoples, cultures, and resource use. Problems confronting ocean peoples and environments. New approaches to saving the oceans. Final exam required.

GEOG 31 Justice, Nature, and the Geographies of Identity 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The intersection of nature, identity, and politics pepper the pages of newspapers almost every day from stories of toxic waste sites, crime, genetic engineering to indigenous struggles, and terrorist tendencies. In all these and many other cases, ideas of race, class, and gender intersect with ideas of nature and geography in often tenacious and troubling ways. Our approach will be to understand these traditional ideas of environmental justice as well as to examine less traditional sites of environmental justice such as the laboratory, the war zone, the urban mall, and the courtroom.

Final exam required. Instructor: Kosek

GEOG C32/DEV STD C10 Introduction to Development 4 Units**Department:** Geography; Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture per week for 8 weeks. 10 hours of lecture per week for 6 weeks.

This course is designed as an introduction to comparative development. The course will be a general service course, as well as a prerequisite for the upper division 100 series. It is assumed that students enrolled in 10 know little about life in the Third World countries and are unfamiliar with the relevant theory in political economy of development and underdevelopment. The course will be structured around three critical concepts: land, labor, and work.

Final exam required. Instructor: Watts

GEOG 35 Global Ecology and Development 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

Problems of Third World poverty and development have come to be seen as inseparable from environmental health and sustainability. The course explores the global and interconnected character of environment and development in the less developed world. Drawing on case studies of the environmental problems of the newly industrializing states, food problems, and environmental security in Africa, and the global consequences of tropical deforestation in Amazonia and carbon dioxide emissions in China, this course explores how growth and stagnation are linked to problems of environmental sustainability.

Final exam required. Instructor: Watts

GEOG 37 The Politics of Science and Technology 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines how shifting understandings of science and technology have radically remade some of our most basic social and biological categories and concepts. The course explores the field of science and technology studies. In particular, students will explore formations and understandings of truth, objectivity, universality of science and technology, and the consequences of these cultural formations in contemporary debates around the world.

Final exam required. Instructor: Kosek

GEOG 40 Introduction to Earth System Science 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

The goals of this introductory Earth System Science course are to achieve a scientific understanding of important problems in global environmental change and to learn how to analyze a complex system using scientific methods. Earth System Science is an interdisciplinary field that describes the cycling of energy and matter between the different spheres (atmosphere, hydrosphere, biosphere, cryosphere, and lithosphere) of the earth system. In addition to the themes of climate change, stratospheric ozone depletion, and biodiversity loss, we will also discuss air and water pollution, fisheries depletion, and science in public policy.

Final exam required. Instructors: Chiang, Cuffey, Rhew

GEOG 50AC California 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 1.5 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2 hours of Discussion per week for 6 weeks.

California had been called "the great exception" and "America, only more so." Yet few of us pay attention to its distinctive traits and to its effects beyond our borders. California may be "a state of mind," but it is also the most dynamic place in the most powerful country in the world, and would be the 5th largest economy if it were a country. Its wealth has been built on mining, agriculture, industry, trade, and finance. Natural abundance and geographic advantage have played their parts, but the state's greatest resource has been its wealth and diversity of people, who have made it a center of technological and cultural innovation from Hollywood to Silicon Valley. Yet California has a dark side of exploitation and racialization of many peoples, and of violent efforts to exclude immigrants and control the poor. This course pursues classic themes in geography, such as regional difference, the transformation of nature, the space of cities, and the changing landscape.

Satisfies the American Cultures requirement

Final exam required. Formerly known as 150AC. Instructor: Walker

GEOG 51 Political Economy of Development in East Asia 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course focuses on the political economy of development in East and Southeast Asia. Topics include the colonial histories and legacies in East Asia, the transition of the development state, transformation of former socialist economies, technology exchanges and transfer across the Pacific, new generations of women workers in the global economy, the politics of deforestation, and Asian financial crises and recovery. Cases used to illustrate the development issues in East Asia include China, South Korea, Singapore, Taiwan, Malaysia, Indonesia, Vietnam, and Thailand.

Final exam required. Instructor: Hsing

GEOG C55/NE STUD C26 Introduction to Central Asia 3 Units**Department:** Geography; Near Eastern Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course will introduce the student not only to ancient and modern Central Asia, but also to the role played by the region in the shaping of the history of neighboring regions and regimes. The course will outline the history, languages, ethnicities, religions, and archaeology of the region and will acquaint the student with the historical foundations of some of the political, social and economic challenges for contemporary post-Soviet Central Asian republics.

Final exam required.

GEOG 70AC The Urban Experience 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of mandatory discussion section per week.

We will track the historical evolution of the American city. We'll look at the economics of city life, at the organization of metropolitan political power, and at the aesthetics of the urban scene--to see how the core cultural themes of American urban life have endured over time while continuously adjusting to new circumstances. Our approach is to focus on major themes in urban life and to show how various groups have had different kinds of experiences in these urban realms.

Satisfies the American Cultures requirement

Final exam required. Instructor: Johns

GEOG C82/EPS C82/INTEG BI C82 Oceans 3 Units**Department:** Geography; Earth and Planetary Science; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 3.5 hours of Lecture per week for 8 weeks. 5 hours of Lecture per week for 6 weeks.

This course offers multidisciplinary approach to begin answering the question "Why are oceans important to us?" Upon a physical, chemical, and geologic base, we introduce the alien world of sea life, the importance of the ocean to the global carbon cycle, and the principles of ecology with a focus on the important concept of energy flow through food webs. Lectures expand beyond science to include current topics as diverse as music, movies, mythology, biomechanics, policy, and trade.

Final exam required.

GEOG 98 Directed Group Study 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged. 1 to 4 hours of group study (or fieldwork) per week.

Lectures and small group discussion focusing on topics of interest that vary from semester to semester.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 109 Prehistoric Agriculture 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Agricultural origins and dispersals in the light of recent biological and archaeological evidence.

Final exam required. Instructor: Byrne

GEOG C110/ISF C101 Economic Geography of the Industrial World 4 Units**Department:** Geography; Interdisciplinary Studies Field Maj**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** 20 or prior courses in economic or regional development strongly suggested.

Industrialization, urbanization, and economic growth in the global North.

Locational patterns in manufacturing, retailing trade, and finance.

Geographic dynamics of technical change, employment, business

organization, resource use, and divisions of labor. Property, labor, and

social conflict as geographic forces. Local, national, and continental

rivalries in a global economy, and challenges to U.S. dominance.

Students will receive no credit for C110 after taking 110 or

Interdisciplinary Studies 100A. Final exam required. Instructor: Walker

GEOG C112/DEV STD C100 History of Development and Underdevelopment 4 Units**Department:** Geography; Development Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Historical review of the development of world economic systems and

the impact of these developments on less advanced countries. Course

objective is to provide a background against which to understand and

assess theoretical interpretations of development and underdevelopment.

Final exam required. Instructor: Hart

GEOG 113 The Geography of the Global Food Economy 3 Units**Department:** Geography**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course will examine the historical development and contemporary restructuring of the global food economy.

Final exam required.

GEOG 123 Postcolonial Geographies 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of Lecture per week for 15 weeks.

Postcolonial studies focus on how processes of colonialism/imperialism continue even after the formal dissolution of empire. A central argument

of this course is that critical human geography can make important

contributions to understanding the interconnections between forces at

play in different parts of the world. Drawing on concepts of space, place,

culture, power, and difference, its purpose is to provide a set of tools for grappling with the conditions in which we find ourselves, and for thinking

about the possibilities for social change.

Final exam required. Instructor: Hart

GEOG 125 The American City 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The American city, palimpsest of a nation. It all comes together in the

modern metropolis: economy, society, politics, culture, and geography.

Cities as the economic engines of capitalism, centers of industry, finance,

business, consumption, and innovation. Cities as political powers and

political pawns, and the government of cities, suburbs, and metropolitan

areas. Cities as magnificent constructs, built of concrete, credit and land

rents, from skyscrapers to housing tracts, freeways to shopping malls,

airports to open spaces. Cities as landscapes of social division by class,

race and nationality, and the turf battles from mean ghetto streets to the

hideaways of privilege. Cities as cultural hearths, places of high art and

popular entertainment, style and monumentality, rebellion and desire.

The geography of civic upheaval, as urban space is constantly remade by

growth, economic shifts, building cycles, land speculation, gentrification

and redevelopment.

Final exam required. Instructors: Johns, Walker

GEOG 130 Food and the Environment 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of

Lecture per week for 6 weeks.

How do human populations organize and alter natural resources and

ecosystems to produce food? The role of agriculture in the world

economy, national development, and environmental degradation in

the Global North and the Global South. The origins of scarcity and

abundance, population growth and migration, hunger, and poverty.

Final exam required. Instructors: Sayre, Watts

GEOG N130 Food and the Environment 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6

weeks.

How do human populations organize and alter natural resources and

ecosystems to produce food? The role of agriculture in the world

economy, national development, and environmental degradation in

the Global North and the Global South. The origins of scarcity and

abundance, population growth and migration, hunger, and poverty.

Final exam required.

GEOG 132 Environmental Politics and Political Economy in the U.S.: Past, Present, and Future 3 Units

Department: Geography

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 7.5 hours of Lecture per week for 6 weeks.

This course will trace and analyze the development of environmental politics in the United States between the late 19th century and the present. The major goal of the course will be to place these and other perspectives within a broader framework by understanding the evolution of environmentalism in relation to major periods of the political economy of the nation as a whole. The course will focus particularly on the performance of the national economy and current thinking about the proper role of government. We will examine the development of environmentalism as a social movement; the major milestones of environmental legislation, administration, and regulation in the U.S.; the importance of political-economic relations beyond the U.S. in shaping these; and the future of environmentalism.

Final exam required.

GEOG 137 Top Ten Global Environmental Problems 4 Units

Department: Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Geography 40 and Environmental Science 10 or equivalent.

Conceptualizing global environmental problems is difficult because of the complexity of the issues, the magnitude of the problems, and the different time scales of action versus reaction. These issues apply both to the natural earth system as well as human societies. This course will examine the scientific basis underlying the largest environmental threats, and then reframe the issues to explore the societal basis of those problems. Class is not open to freshmen.

Final exam not required. Instructor: Rhew

GEOG 138 Global Environmental Politics 4 Units

Department: Geography

Course level: Undergraduate

Terms course may be offered: Fall, spring and summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

Political factors affecting ecological conditions in the Third World.

Topics include environmental degradation, migrations, agricultural production, role of international aid, divergence in standard of living, political power, participation and decision making, access to resources, global environmental policies and treaties, political strife and war.

Final exam required.

GEOG C139/EPS C181 Atmospheric Physics and Dynamics 3 Units

Department: Geography; Earth and Planetary Science

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Prerequisites: Mathematics 53, 54; Physics 7A-7B-7C.

This course examines the processes that determine the structure and circulation of the Earth's atmosphere. The approach is deductive rather than descriptive: to figure out the properties and behavior of the Earth's atmosphere based on the laws of physics and fluid dynamics. Topics will include interaction between radiation and atmospheric composition; the role of water in the energy and radiation balance; governing equations for atmospheric motion, mass conservation, and thermodynamic energy balance; geostrophic flow, quasigeostrophic motion, baroclinic instability and dynamics of extratropical cyclones.

Final exam not required. Formerly known as 144. Instructors: Chiang, Fung

GEOG 140A Physical Landscapes: Process and Form 4 Units

Department: Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 4.5 hours of Lecture per week for 15 weeks.

Prerequisites: 1 or equivalent.

Understanding the physical characteristics of the Earth's surface, and the processes active on it, is essential for maintaining the long-term health of the environment, and for appreciating the unique, defining qualities of geographic regions. In this course, we build an understanding of global tectonics, rivers, hillslopes, and coastlines and discover how these act in concert with the underlying geologic framework to produce the magnificent landscapes of our planet. Through our review of formative processes, we learn how physical landscapes change and are susceptible to human modifications, which are often unintentional.

Final exam required. Formerly known as 140. Instructor: Cuffey

GEOG 142 Climate Dynamics 4 Units

Department: Geography

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture per week and 1 or 2 computer laboratory projects.

This course examines how various components of the climate system--the atmosphere, ocean, land, and cryosphere--interact in determining its observed state. Covered topics: observations of the climate system; the earth's energy balance; atmospheric radiative transfer; the surface energy balance; the hydrologic cycle; atmospheric circulation and its relation to the energy balance; the role of the ocean and the cryosphere. Additional topics, as time permits, will cover climate change, natural and anthropogenic; and computer modeling of climate.

Final exam required. Instructor: Chiang

GEOG 143 Global Change Biogeochemistry 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.**Prerequisites:** Chemistry 1A or equivalent.

The field of biogeochemistry offers an interdisciplinary approach to modern global environmental issues, such as climate change feedback effects, stratospheric ozone loss, oxidation capacity of the atmosphere, land use change, and marine ecosystem health. Earth is a complex system where the transformation and flow of chemicals and energy within and between biomes have ramifications for life on this planet. The overall theme of this course will be to explore the imprint of the biota (including humans) on the chemistry of the ocean, land, and atmosphere. This course will explore the biogeochemical cycles of terrestrial, freshwater, and marine biomes. In addition, the global cycles of environmentally important elements and gases will be explored.

Final exam required. Instructor: Rhew

GEOG 144 Principles of Meteorology 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Weather development in relation to different scales of atmospheric circulation including analysis and forecasting with examples from the Northeastern Pacific-Western North American area.

Final exam required.

GEOG C145/EPS C146 Geological Oceanography 4 Units**Department:** Geography; Earth and Planetary Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 3 hours of Laboratory per week for 15 weeks.

The tectonics and morphology of the sea floor, the geologic processes in the deep and shelf seas, and the climatic record contained in deep-sea sediments. The course will cover sources and composition of marine sediments, sea-level change, ocean circulation, paleoenvironmental reconstruction using fossils, imprint of climatic zonation on marine sediments, marine stratigraphy, and ocean floor resources.

Final exam required. Formerly known as Geology C145. Instructor: Ingram

GEOG C146/EPS C100/INTEGBI C100 Communicating Ocean Science 4 Units**Department:** Geography; Earth and Planetary Science; Integrative Biology**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.

Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science; junior, senior, or graduate standing; consent of instructor required for sophomores.

For undergraduates interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam required. Instructor: Ingram

GEOG 148 Biogeography 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Prerequisites: 1 or a lower division course in Biology or Earth Science. Changing distribution patterns of plants and animals on a variety of spatial and temporal scales. The effects of "continental drift," Pleistocene climatic change, agricultural origins and dispersals. The ecology of invasions and extinctions. Island biogeography.

Final exam required. Instructor: Byrne

GEOG 155 Revolution and Counter-Revolution in Latin America 4 Units**Department:** Geography**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture per week for 8 week session; 7.5 hours of lecture per week for 6 week session.

From the Mexican Revolution of 1910 to Cuba and Central America, Latin America has produced some of the most important social movements of the 20th century. This course will explore the origins, courses, and outcomes of revolution in Latin America. In-depth case studies will review the changing conceptions of revolution and attempt to identify conditions that explain the emergence and limitations of past revolutionary movements in the region. Finally, the course will explore the current options for Latin American social movements within a rapidly changing global economic order.

Final exam required.

GEOG C157/CHICANO C161 Central American Peoples and Cultures 4 Units**Department:** Geography; Chicano Studies**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

A comparative survey of the peoples and cultures of the seven countries of the Central American Isthmus from a historical and contemporary perspective.

Final exam required. Instructor: Manz

GEOG 159AC/EDUC 186AC/ETH STD 159AC The Southern Border 4 Units**Department:** Geography; Education; Ethnic Studies**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.**Prerequisites:** Upper division standing.

The southern border--from California to Florida--is the longest physical divide between the First and Third Worlds. This course will examine the border as a distinct landscape where North-South relations take on a specific spatial and cultural dimension, and as a region which has been the testing ground for such issues as free trade, immigration, and ethnic politics.

Satisfies the American Cultures requirement

Final exam required. Instructors: Manz, Shaiken

GEOG C160A/AMERSTD C112A/ENV DES C169A American Cultural Landscapes, 1600 to 1900 4 Units**Department:** Geography; American Studies; Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduces ways of seeing and interpreting American histories and cultures, as revealed in everyday built surroundings-- houses, highways, farms, factories, stores, recreation areas, small towns, city districts, and regions. Encourages students to read landscapes as records of past and present social relations and to speculate for themselves about cultural meaning.

Final exam required. Instructor: Groth

GEOG C160B/AMERSTD C112B/ENV DES C169B American Cultural Landscapes, 1900 to Present 4 Units**Department:** Geography; American Studies; Environmental Design**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduces ways of seeing and interpreting American histories and cultures, as revealed in everyday built surroundings--homes, highways, farms, factories, stores, recreation areas, small towns, city districts, and regions. Encourages students to read landscapes as records of past and present social relations, and to speculate for themselves about cultural meaning.

Final exam required. Instructor: Groth

GEOG 163 Southeast Asia 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 5.5 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is a political, economic, and historical geography of mainland and insular Southeast Asia. We will discuss the region's physical geography, its cultural unities and differences, the origin of agriculture and the emergence of states, its classical period, the effects of colonialism, and its contemporary economics and geopolitics.

Final exam required.

GEOG 164 The Geography of Economic Development in China 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course focuses on four issues in contemporary China: (1) the transformation of the socialist state, (2) the politics of resource struggle, (3) the interplay of gender and class in the transitional society, and (4) Chinese Diaspora and business networks in the context of globalization. Each of these issues will be examined with reference to theories of development and histories of China. We will also take a critical approach in our exploration of China's development. This is a lecture course designed mainly for upper level undergraduate students with preliminary background in East Asian-Chinese studies or development studies or both.

Final exam required. Instructor: Hsing

GEOG 170 Special Topics in Geography 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is designed to provide a vehicle for instructors to address a topic with which they are especially concerned; usually more restricted than the subject matter of a regular lecture course. Topics will vary with instructor. See departmental announcements.

Course may be repeated for credit with different topic. Course may be repeated for credit when topic changes. Final exam required.

GEOG 171 Special Topics in Physical Geography 3 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 7.5 hours of Lecture per week for 6 weeks.

This course is designed to provide a vehicle for instructors to address a topic in physical geography with which they are especially concerned; usually more restricted than the subject matter of a regular lecture course. Topics will vary with instructor. See departmental announcements.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

GEOG 172 Topics in Social Geography 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 4 hours of lecture/discussion per week.

This course is designed to provide a vehicle for instructors to address a topic in social geography with which they are especially concerned; usually more restricted than the subject matter of a regular lecture course. Topics will vary with instructor. See departmental announcements.

Course may be repeated for credit with different instructor or different topic. Course may be repeated for credit when topic changes. Final exam required.

GEOG 173A Cross-listed Topics in Human Geography 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 to 4 hour of Lecture per week for 15 weeks.

This course is designed to accommodate cross-listed courses offered through other departments, the content of which is applicable to geography majors. Content and unit values vary from course to course. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required.

GEOG 175 Undergraduate Seminars 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

A reading and research seminar for undergraduate students. Topics will vary with instructor.

Course may be repeated for credit. Course may be repeated for credit with different topic and consent of instructor. Course may be repeated for credit when topic changes. Final exam required.

GEOG 180 Field Methods for Physical Geography 5 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of lecture per week and 6 weekend field trips.**Prerequisites:** 1 or equivalent, and consent of instructor.

Field introduction to geomorphology, biogeography, and California landscapes. Students conduct field experiments and mapping exercises. Results of field projects are analyzed and presented as a technical report. Oral field reports are required for some trips.

Final exam required.

GEOG 181 Urban Field Study 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of lecture and 9 hours (1 day) of fieldwork per week.**Prerequisites:** Consent of instructor.

Introduction to the metropolitan Bay Area: its history, economy, social makeup. Evolution of urban landscapes and spatial patterns. Social justice and conflict in the city. Business and industry location, real estate and housing, producing and consuming in the city. Regional characteristics of class, race, gender and politics.

Final exam not required. Instructor: Walker

GEOG 182 Field Study of Buildings and Cities 3 Units**Department:** Geography**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 7.5 hours of lecture per week for 6 weeks. Lectures will be given on sites as part of field trips.

Traveling on foot and by BART—and with on-site lectures and discussions about architecture, urban design, cultural landscapes, and spatial patterns in Berkeley, Oakland, San Francisco, and Pleasanton—students in this course will explore the historical geography of the American city since 1850. Enrollment limited to 25 students. No pre-requisites. Both undergraduate and graduate students are welcome.

Course Objectives: The goal of this course is to introduce ways of seeing various building types, street and block forms, land use patterns, and other cultural features of the Bay Area as records of social relations and of repeating processes of American geographical history: cyclical periods of investment and disinvestment, migration and immigration, economic production and consumption, connection and disconnection, reinforcement of individual and social identities, as well as day-to-day maintenance and care

The final exam for the course is a take-home assignment. Each student will write a 5-page, double spaced paper exploring the evidence (or lack of evidence) of one general process of urban change as observed throughout the course. At the beginning of the course, students will be assigned or will choose one particular process to observe throughout the course. Sample process analysis papers are also included in the course reader. The final papers are due as E-mail attachments by midnight Monday, on the week following the course. The papers will be evaluated and returned to students as pdf files by E-mail. Instructor: Groth

GEOG 183 Cartographic Representation 5 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Lecture and 4 hours of Laboratory per week for 15 weeks.

Problems in the representation of quantitative and qualitative data on thematic maps.

Final exam not required.

GEOG 186 Map Reading, Analysis, and Interpretation 4 Units**Department:** Geography**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5.5 hours of lecture/laboratory per week for 8 weeks. 7.5 hours of lecture/laboratory per week for 6 weeks.

The broad field of mapping will be explored. Students will learn to read, analyze, critique, and draw maps by both traditional and computer methods. Class enrollment is limited.

Final exam required. Instructor: Semans

GEOG 187 Advanced Cartographic Methods: GIS for Cartographers 5 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours lecture and 1 hour laboratory per week.**Prerequisites:** 183 or C188 (or other GIS course) strongly recommended.

Advanced cartographic methods will focus primarily on data acquisition, manipulation, analysis, and representation using GIS software and vector-based illustration software, in the service of geographical analysis. Some field research will be required.

Final exam required. Instructor: Jensen

GEOG C188/LD ARCH C188 Geographic Information Systems 4 Units**Department:** Geography; Landscape Architecture**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 2 hours of Laboratory per week for 15 weeks.**Prerequisites:** Some computer experience.

This course introduces the student to the rapidly expanding field of Geographic Information Systems (GIS). It addresses both theory and application and provides the student with a dynamic analytical framework within which temporal and spatial data and information is gathered, integrated, interpreted, and manipulated. It emphasizes a conceptual appreciation of GIS and offers an opportunity to apply some of those concepts to contemporary geographical and planning issues.

Final exam required. Formerly known as C188X. Instructor: Radke

GEOG H195A Honors Course 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** Hours to be arranged. Hours to be arranged. Hours to be arranged.**Prerequisites:** Admission to Honors Program.

Required for Honors in Geography. Students will write a thesis. One or two semesters, at the instructor's option; if two semesters, credit and grade to be awarded upon completion of the sequence.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG H195B Honors Course 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.**Hours and format:** Hours to be arranged. Hours to be arranged. Hours to be arranged.**Prerequisites:** Admission to Honors Program.

Required for Honors in Geography. Students will write a thesis. One or two semesters, at the instructor's option; if two semesters, credit and grade to be awarded upon completion of the sequence.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 197 Field Study in Geography 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Regular individual meetings with faculty sponsor.**Prerequisites:** Consent of instructor.

Supervised experience in application of geography in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 198 Directed Group Study 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** 1 to 4 hour of Directed group study per week for 15 weeks. 1.5 to 7.5 hours of Directed group study per week for 8 weeks. 2.5 to 7.5 hours of Directed group study per week for 6 weeks.**Prerequisites:** Consent of instructor.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 199 Supervised Independent Study 1 - 4 Units**Department:** Geography**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for pass/not pass grade only.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 1 to 5 hour of Independent study per week for 8 weeks. 1 to 5 hour of Independent study per week for 6 weeks.**Prerequisites:** Senior standing. Overall GPA in major of 3.00.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 200A Contemporary Geographic Thought 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Required of all first year graduate students.

The class has several goals. One is to give students a sound basis upon which to judge arguments. A second is to help students see, think, and write geographically--that is, to interpret the making and meaning of our physical and human landscapes. A third goal is to introduce students to the tremendous range of geographical inquiry and what is probably the major strength of geography as a form of thought: to wit, making links across space, among peoples, and between humans and the earth. Sequence begins in the fall.

Final exam not required. Instructor: Johns

GEOG 200B Contemporary Geographic Thought 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Required of all first-year graduate students.

The class has several goals. One is to give students a sound basis upon which to judge arguments. A second is to help students see, think, and write geographically--that is, to interpret the making and meaning of our physical and human landscapes. A third goal is to introduce students to the tremendous range of geographical inquiry and what is probably the major strength of geography as a form of thought: to wit, making links across space, among peoples, and between humans and the earth. Final exam not required. Instructor: Johns

GEOG 203 Nature and Culture: Social Theory, Social Practice, and the Environment 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

The relationship between societies and natural environments lies at the heart of geographical inquiry and has gained urgency as the rate and scale of human transformation of nature have grown, often outstripping our understanding of causes and effects. The physical side of environmental science has received most of the emphasis in university research, but the social basis of environmental change must be studied as well. Recent developments in social theory have much to offer environmental studies, while the latter has, in turn, exploded many formerly safe assumptions about how and what the social sciences and humanities ought to be preoccupied with. This seminar allows students to explore some classics in environmental thought as well as recent contributions that put the field on the forefront of social knowledge today.

Final exam not required. Instructor: Sayre

GEOG 214 Development Theories and Practices 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of consultation per week.

This course examines how concepts and theories of "development" have been produced, maintained, used, and challenged in different regions of the world economy. It will offer a framework for analyzing how changing and contending models of development both reflect and shape social processes and practices.

Final exam not required. Instructor: Hart

GEOG 215 Seminar in Comparative and International Development 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of seminar and 1 hour of consultation per week.

This seminar is designed for students intending to do research on topics of comparative development, the organization of work, and access to resources in different regions of the world economy. Participants in the seminar will be expected to write a research proposal and to participate actively in reading and responding to each other's work.

Final exam not required. Instructors: Hart, Hsing

GEOG 220 Capital, Value, and Scale 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

This seminar focuses on major works in political economy and social theory concerning capitalism, human action, and space-time. First we grapple with what "value" means in volume 1 of , paying particular attention to issues of historical specificity, abstract labor time, and the "value theory of labor," then we spatialize the argument by a close reading of David Harvey's classic, Next, we look at attempts to understand capital's relation to human action and other forms of value, specifically in anthropology and the work of Pierre Bourdieu. Finally, we take up the issue of scale in hope of formulating a coherent conceptual framework for integrating across scales, from the human-body (or even smaller scales) up to global economic, cultural, and ecological processes.

Final exam not required. Instructor: Sayre

GEOG C241/EPS C242 Glaciology 4 Units**Department:** Geography; Earth and Planetary Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture and 1 hour of consultation per week.**Prerequisites:** Graduate standing or consent of instructor.

A review of the mechanics of glacial systems, including formation of ice masses, glacial flow mechanisms, subglacial hydrology, temperature and heat transport, global flow, and response of ice sheets and glaciers. We will use this knowledge to examine glaciers as geomorphologic agents and as participants in climate change.

Final exam not required. Formerly known as 241. Instructor: Cuffey

GEOG 244 Complex Environmental Systems 3 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Applying a complex-systems approach to environmental problems can yield valuable insight into risk, potential drivers of change, likely outcomes of perturbation, and whether it is even possible to forecast or manage system behavior. This course explores complex-systems theory and applications in geography, ecology, and earth science. Case studies include climate change, coupled human-environmental systems, vegetation community change, river networks, forest fires, earthquakes, and peatlands.

Final exam not required. Instructor: Larsen

GEOG 246 Geomorphology of California 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Seminar. 2 major field trips of 4 days' duration, each with 12-hour days.

Prerequisites: Graduate standing in either geography or earth and planetary science and consent of instructor. Undergraduates need consent of instructor and 140A-140B or 140B and Earth and Planetary Science 117.

Numerous tectonic and Earth surface processes act in concert to produce the physical landscapes of our planet. This course examines three major regions of California (the Sierra Nevada, the Basin and Range, and the Southern Coast Ranges) as specific case studies for demonstrating how landscapes can be understood using concepts from tectonics, geomorphology, and geography. Two four-day field trips and preparatory readings for them will illuminate the integrated action of tectonics, geologic structure and lithology, drainage network development, hydraulics, soil production, hillslope transport, fluvial transport, aeolian transport, and glacial/periglacial processes. A term project will be required. Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Cuffey

GEOG 249 Spatiotemporal Data Analysis in the Climate Sciences 3 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** A first course in linear algebra. Access to MATLAB.

This graduate seminar teaches objective techniques for spatiotemporal data analysis focusing primarily on Empirical Orthogonal Function (EOF) analysis and its derivatives. The context will be climate data analysis, but the technique is readily translatable to other fields. The goal is to get the student sufficiently comfortable with the technique so they can use it in their research.

Final exam not required. Instructor: Chiang

GEOG C250/ESPM C255 Seminar in Sociology of Forest and Wildland Resources 3 Units**Department:** Geography; Environ Sci, Policy, and Management**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** Consent of instructor.

Individual projects and group discussions concerning social constraints to, and effects of, natural resource planning and management. Application of sociological theories to problems of managing wildland ecosystems. Students will examine topics of individual interest related to the management of wildland uses. Enrollment limited.

Final exam not required. Instructor: Fortmann

GEOG 251 Topics in Cultural Geography 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar and 1 hour of consultation per week.

Research seminar on selected topics in cultural geography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Groth, Walker

GEOG 252 Topics in Economic Geography 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Research seminar on selected topics in economic geography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Hsing, Shaiken, Walker, Watts

GEOG 253 Topics in Urban Geography 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar and 1 hour of consultation per week.

Research seminar on selected topics in urban geography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructors: Groth, Walker

GEOG 255 Topics in Political Geography 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar and 1 hour of consultation per week.

Research seminar on selected topics in political geography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Hart

GEOG 257 Topics in Climatology 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar and 1 hour of consultation per week.

Research seminar on selected topics in climatology.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Chiang

GEOG 260 Topics in Biogeography 4 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of seminar and 1 hour of consultation per week.

Research seminar on selected topics in biogeography.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Byrne

GEOG 280 Advanced Field Study in Geography 3 - 7 Units**Department:** Geography**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Lecture and 11 hours of Fieldwork per week for 15 weeks.

All day Saturday. Each additional unit requires four hours of field work per week. Extended field project required.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 282 Geographic Information Systems: Applications in Geographical Research 4 Units

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of lecture and 2 hours of directed practicum per week.

This course introduces graduate students to a range of applications of Geographic Information Systems (GIS) in geographical research, and theoretical considerations of the meaning, strengths, and limitations of the methods. We first review, in general, how geographic variables can be represented in a database. This leads to an extended discussion of the application of GIS methods to a variety of problems in physical and human geography, using topographic data, census data, and other sources, manipulated by widely used GIS software. Students build skills and understanding through work on example problems. Finally, the broad question of how GIS represents geographic variables, and the strengths and limitations of the technique, are re-visited using perspective gained from examples. Students will be expected to elaborate these issues in the context of their own research programs.

Final exam not required.

GEOG 295 Geography Colloquium 1 Unit

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1.5 hours of Lecture per week for 15 weeks.

Prerequisites: Required of all graduate students not yet advanced to candidacy.

Invited lectures on current research and field work.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 296 Directed Dissertation Research 1 - 12 Units

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Prerequisites: Advancement to Ph.D. candidacy.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG N296 Directed Dissertation Research 1 - 4 Units

Department: Geography

Course level: Graduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hour of Independent study per week for 8 weeks. 1 to 4 hour of Independent study per week for 6 weeks.

Prerequisites: Advancement to Ph.D. candidacy.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 297 Directed Field Studies 1 - 6 Units

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1 to 6 hour of Fieldwork per week for 15 weeks.

Prerequisites: Open to students directly engaged in field studies.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 298 Directed Study for Graduate Students 1 - 6 Units

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: The grading option will be decided by the instructor when the class is offered.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Special tutorial or seminar on selected topics not covered by available courses or seminars.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 299 Individual Research 1 - 8 Units

Department: Geography

Course level: Graduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Individual research for graduate students in consultation with staff member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG N299 Individual Research 1 - 4 Units

Department: Geography

Course level: Graduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 1 to 4 hour of Independent study per week for 8 weeks. 1 to 4 hour of Independent study per week for 6 weeks.

Individual research for graduate students in consultation with staff member.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG 301 Professional Training: Teaching Practice 1 - 4 Units

Department: Geography

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GEOG C301/EPS C301/INTEGBI C215 Communicating Ocean Science 4 Units

Department: Geography; Earth and Planetary Science; Integrative Biology

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2.5 hours of Lecture, 1 hour of Discussion, and 2 hours of Fieldwork per week for 15 weeks.

Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science. For graduate students interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Final exam not required. Instructor: Ingram

GEOG C302/ESPM C302 Effective Scientific Communication 3 Units

Department: Geography; Environ Sci, Policy, and Management

Course level: Professional course for teachers or prospective teachers

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 2 hours of Seminar per week for 15 weeks.

This course will introduce methods of organizing and delivering oral presentations, initiating and organizing manuscripts, and utilizing digital communication methods, such as web-based media. Students will develop effective communication techniques through in-class experience. This class will have an emphasis on the sciences but will be useful and open to graduate students of all disciplines.

Final exam not required. Instructors: Resh, Rhew

GEOG 601 Individual Study for Master's Students 1 - 6 Units

Department: Geography

Course level: Graduate examination preparation

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Prerequisites: For candidates for master's degree.

Individual study for comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

GEOG N601 Individual Study for Master's Students 1 - 3 Units

Department: Geography

Course level: Graduate examination preparation

Term course may be offered: Summer

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: 1.5 to 5.5 hours of Independent study per week for 8 weeks. 2.5 to 7.5 hours of Independent study per week for 6 weeks.

Prerequisites: For candidates for master's degree.

Individual study for comprehensive or language requirements in consultation with the field adviser.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for master's degree. Final exam not required.

GEOG 602 Individual Study for Doctoral Students 1 - 6 Units

Department: Geography

Course level: Graduate examination preparation

Terms course may be offered: Fall and spring

Grading: Offered for satisfactory/unsatisfactory grade only.

Hours and format: Zero hours of Independent study per week for 15 weeks.

Prerequisites: For candidates for Ph.D.

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Course does not satisfy unit or residence requirements for doctoral degree. Final exam not required.

German (GERMAN)

GERMAN 1 Elementary German 1 5 Units

Department: German

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 15 hours of lecture per week for 5 weeks.

All four foreign language skills (reading, writing, speaking, and listening) are addressed to help students acquire communicative competence in the German language while being sensitized to the links between language and culture. This course is for students with no prior knowledge of German.

Final exam required. Instructor: Euba

GERMAN 1E Accelerated Elementary German 3 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: Prior exposure to German equivalent to one year of high school German.

Students review and continue to develop the basic elements of communicative competence in both spoken and written language while being sensitized to the links between language and culture. This course covers the same material as 1 in a condensed way and at an accelerated speed. Upon completion of this course, students will qualify for enrollment in 2.

Students will receive no credit for 1E after taking 1. Final exam required. Formerly known as 12. Instructor: Euba

GERMAN 1G Elementary German for Graduate Students 0 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 5 hours of Lecture per week for 7.5 weeks.**Prerequisites:** One year of prior college level German instruction required.

Elementary German for graduate students preparing for reading examinations.

Final exam not required.

GERMAN 2 Elementary German 2 5 Units**Department:** German**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 15 hours of lecture per week for 5 weeks.**Prerequisites:** 1 or equivalent.

In this course, students will continue to develop communicative competence in the German language and expand their sensitivity towards the relationship between language and culture. While all language skills will be addressed, additional emphasis will be on the various styles of written and spoken German.

Final exam required. Instructor: Euba

GERMAN 2G Elementary German for Graduate Students 0 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 5 hours of Lecture per week for 7.5 weeks.**Prerequisites:** 1G.

Elementary German for graduates preparing for reading examinations.

Final exam not required.

GERMAN 3 Intermediate German I 5 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 9.5 hours of lecture per week for 8 weeks. 15 hours of lecture per week for 5 weeks.**Prerequisites:** 2 or equivalent.

While continuing to expand students' communicative competence in German, this content-driven course will provide insights into postwar German history and cultural trends. Primary focus will be on the development of literacy skills (critical reading and writing), vocabulary expansion, and a thorough review of structural concepts. You will be guided towards expressing yourself on more abstract topics, such as language and power in society, multiculturalism, rebellion and protest, and social justice, and towards drawing connections between texts and contexts, using a variety of text genres (journalistic, historical, short story, poetry, drama, advertising, film).

Final exam required. Instructor: Euba

GERMAN 4 Intermediate German II 5 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 5 hours of lecture per week. 12 hours of lecture per week for 6 weeks.**Prerequisites:** 3 or equivalent.

In this fourth-semester German language course you will work on strengthening your interpretative abilities as well as your written and oral forms of expression. While continuing the development of communicative competence and literacy skills, students will discuss a variety of texts and film and try to find innovative ways in which to engage with familiar presuppositions about who we are, about what determines our values and actions, and about the function and power of language.

Final exam not required. Instructor: Euba

GERMAN R5A Reading and Composition 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** UC Entry Level Writing Requirement or UC Analytical Writing Placement Exam for 5A. Any A-level course for 5B.

This course offers a survey of modern German literary, cultural, and intellectual currents, as well as an introduction to argumentation and analysis. Students will examine numerous issues and questions central to defining the complexity of modern German culture. R5A satisfies the first half of the Reading and Composition requirement, and R5B satisfies the second half.

Satisfies the first half of the Reading and Composition requirement

Final exam not required. Formerly known as 5A.

GERMAN R5B Reading and Composition 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks. 7.5 hours of Lecture per week for 6 weeks.**Prerequisites:** UC Entry Level Writing Requirement or UC Analytical Writing Placement Exam for 5A. Any A-level course for 5B.

This course offers a survey of modern German literary, cultural, and intellectual currents, as well as an introduction to argumentation and analysis. Students will examine numerous issues and questions central to defining the complexity of modern German culture. R5A satisfies the first half of the Reading and Composition requirement, and R5B satisfies the second half.

Satisfies the second half of the Reading and Composition requirement

Final exam not required. Formerly known as 5B.

GERMAN 10B Elementary German Intensive Workshop in Berlin 8 Units**Department:** German**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 20 hours of class meetings and excursions per week for 6 weeks. 20 hours of class meetings and excursions per week for 6 weeks.

This workshop combines the exhilaration of total immersion in a foreign language with a living experience in Germany's capital of Berlin, offering unique opportunities for students to learn about and absorb German language, history, culture, and a world perspective. Carrying 8 units, this intensive course is designed to give students the opportunity to complete the first year while being sensitized to the relationship between language and culture. Guided excursions and housing arrangements with families in Berlin will complement formal language instruction.

Students will receive no credit for 10B after taking 1, 2, or 12. Final exam required. Instructor: Euba

GERMAN 24 Freshman Seminar 1 Unit**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** The grading option will be decided by the instructor when the class is offered.**Hours and format:** 1 hour of Seminar per week for 15 weeks.

The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, and topics may vary from department to department and semester to semester. Enrollment limited to 15 freshmen.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

GERMAN C25/L & S C60U Revolutionary Thinking: Marx, Nietzsche, Freud 4 Units**Department:** German; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

We will explore the ways in which Marx, Nietzsche, and Freud--three of the most important thinkers in modern Western thought--can be read as responding to the Enlightenment and its notions of reason and progress. We will consider how each remakes a scientific understanding of truth, knowledge, and subjectivity, such that rationality, logic, and the powers of human cognition are shown to be distorted, limited, and subject to forces outside our individual control. All lectures and readings in English.

Final exam required. Instructor: Feldman

GERMAN 39A Freshman Seminar 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

No knowledge of German required.

Course may be repeated for credit when topic changes. Final exam required.

GERMAN 39H Freshman Seminar 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

No knowledge of German required.

Course may be repeated for credit when topic changes. Final exam required.

GERMAN 39L Freshman Seminar 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

No knowledge of German required.

Course may be repeated for credit when topic changes. Final exam required.

GERMAN 40 German Conversation 2 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** 4 or equivalent.

Advanced German conversation course that includes discussions, debates, individual presentations, and one or two in-class movies in German. Most materials will be provided by the instructor but students will also be asked to use their own resources from printed or online media. Regular vocabulary quizzes will be part of the course grade. Taught in German.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam required. Formerly known as 102A-102B-102C.

GERMAN 41 Exploring German Culture 1 Unit**Department:** German**Course level:** Undergraduate**Term course may be offered:** Summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 1 hour of Session per week for 6 weeks.**Prerequisites:** Concurrent enrollment in 1, 2, 3, or 4 in Berlin Summer Program.

Students will explore historical and contemporary aspects of German culture through readings, discussions, guided excursions in Berlin and Weimar, and individual research projects. The course will engage students to develop a deeper understanding of the specific ways in which cultural issues are respected and reflected in the German language, which they study concurrently. Topics include multiculturalism and minority experience; Berlin as divided city and capital; city planning and public discourse, past and present in German architecture; Berlin in popular literature, film, and theatre; the art scene in Berlin; and the Weimar classical period. Taught in German and English.

Final exam required. Instructor: Euba

GERMAN C75/L & S C60T What is Beauty? 4 Units**Department:** German; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

What or who decides whether something is beautiful or not? What purpose do beauty and art serve? Where do originality, genius, and inspiration come from? What do art and beauty have to do with freedom and human progress? We will examine primarily western European and North American approaches to beauty as presented in works of philosophy, literary theory, and theories of art and aesthetics, exploring key theoretical questions as they evolve among several intellectual arenas over many centuries.

Final exam required. Instructor: Feldman

GERMAN C76/L & S C76 Beauty and the Beholder: Approaching Art at the Berkeley Art Museum 4 Units**Department:** German; Letters and Science**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

This seminar-style course will take up a range of questions related to art works, aesthetic theory, the politics of art, and the relationship between artistic form and meaningful content by way of examinations of specific works at the UC Berkeley Art Museum and Pacific Film Archive (BAM/PFA). Students will see how experts from several different disciplines approach works of art: What questions do scholars bring to an art work? What is a formal analysis vs. a critical interpretation of an art work? How do curators approach art? Are we supposed to 'learn from' an art work or 'experience' it or have some particular 'relationship' to it? Is art a matter of conveying feeling, a message, or an encounter with beauty?.

Final exam required. Instructor: Feldman

GERMAN 98 Directed Group Study 1 - 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Consent of instructor.

Group study of selected topics not covered by regularly scheduled courses. Topics may be initiated by students under the sponsorship and direction of a member of the German Department's faculty. Course may be repeated for credit. Course may be repeated for credit when topic changes. Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog. Final exam not required.

GERMAN 99 Supervised Independent Study 1 - 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Offered for pass/not pass grade only.**Hours and format:** Hours to be arranged.**Prerequisites:** Open only to freshmen and sophomores. Consent of instructor.

Independent study and research by arrangement with faculty.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GERMAN 100 Introduction to Reading Culture 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Knowledge of German required.

The course is intended to acquaint students with selected works from German cultural history and to familiarize them with various methods of interpretation and analysis. Required of all German majors. Final exam required.

GERMAN 101 Advanced German: Conversation, Composition and Style 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 4 or equivalent.

Focusing on five central themes, this advanced-level language course will help students to improve and expand on spoken and written language functions utilizing a variety of works from different genres in journalism, broadcasting, literature, fine arts, and the cinema. The final goal is to enable students to participate in the academic discourse--written and spoken--at a linguistic and stylistic level appropriate for an advanced student of German in upper division courses.

Final exam not required. Instructor: Euba

GERMAN 102A Advanced Language Practice: German Performance 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks. 6 hours of Lecture per week for 8 weeks.**Prerequisites:** 4 or equivalent, or consent of instructor.

Analysis, discussion, adaptation, and public performance of authentic texts from German Kabarett, such as comedic skits, political and social satire, parody, humorous poetry. Text selection will vary each semester. Final exam not required. Formerly known as 188. Instructor: Euba

GERMAN 102B Advanced Language Practice: German for Business 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 4 or equivalent. Not open to native speakers.

This advanced language/culture course focuses on the structure and practices of German business as well as current economic, political, and cultural issues relevant to conducting business in the German-speaking world. German-language news media, video, and Internet resources keep us abreast of contemporary developments in the business scenes of the German-speaking countries and the rest of Europe. Language skills practiced include business writing, presentations, and negotiation. Final exam required. Formerly known as 103. Instructor: Toth

GERMAN 102D Advanced Language Practice: Popular Culture in Germany 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Focusing on popular culture in German speaking countries, this advanced level language course will help students to improve and expand on spoken and written language functions utilizing a variety of works from different genres in journalism, broadcasting, literature, fine arts, music, and the cinema. Readings, screenings, discussion, and writing assignments will advance students' language skills and further develop their communicative competencies in German at a linguistic and stylistic level appropriate for an advanced student.

Final exam required. Instructor: Euba

GERMAN 103 Introduction to German Linguistics 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

This course is designed to provide students with an overview of the major subfields of linguistics as they apply to the German language. It also serves as the gateway course for the further study of German linguistics at the undergraduate level. The first part of the course will focus on the synchronic description of contemporary German. The second part of the course will concern itself with variation in German. There are no prerequisites for this class and no prior experience with linguistics is presupposed. However, an advanced knowledge of German (at least German 4 level) is expected.

Final exam required. Instructor: Shannon

GERMAN 104 Senior Colloquium 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.**Prerequisites:** 102 or consent of instructor. Returnees from EAP Goettingen welcome.

This course is intended for students who wish to improve their skills in reading, speaking, and writing German. We will work with texts that were particularly influential in Germany during the first decades of the 20th century, regardless of when they were written. Segments of philosophical writings (Schopenhauer, Kierkegaard, Nietzsche, literary works (George, Rilke, Th. Mann) but also texts by scientists and journalists will be analyzed. Participants are expected to prepare several oral presentations and approximately one written assignment per week. No midterm or final examination.

Final exam required. Instructor: Hillen

GERMAN 105 Middle High German for Undergraduates 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/translation/discussion per week.**Prerequisites:** Knowledge of modern German required.

Students will learn the fundamentals of Middle High German grammar and will read selections from major narrative works of the High Middle Ages. Selections from major works from the 13th century.

Open to graduate students when 203 is not offered. Final exam required.

Instructors: Tennant, Largier

GERMAN C106/EDUC C145 Literacy through Literature 3 Units**Department:** German; Education**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Exploration of the role that literature can play in the acquisition of literacy in a first and second language. Linguistic and psycholinguistic issues: orality and literacy, discourse text, schema theory, and reading research. Literary issues: stylistics and critical reading, reader response, structure of narratives. Educational issues: the literary text in the social context of its production and reception by intended and non-intended readers. Final exam required. Instructor: Kramsch

GERMAN 157A German Intellectual History in a European Context: Historical Figures and Contemporary Reflections: Luther, Kant, Hegel 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

Introduction to the intellectual history of Germany from the age of the Reformation to the period of Idealism. We will focus on three major thinkers--Martin Luther, Immanuel Kant, and G.W.F. Hegel--on key issues in their thought, and on the reception and discussion of some of these issues in 20th century theory. Lectures and readings in English. Final exam required.

GERMAN 157B German Intellectual History in a European Context: Historical Figures and Contemporary Reflections: Marx, Nietzsche, Freud 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

The aim of the course is to explore the central theoretical and philosophical premises of three of the most influential thinkers in the German-speaking world and to examine in detail several works in which problems of history, ideology, values, and methodology are considered. Lecture and readings in English.

Final exam required. Formerly known as 157.

GERMAN 157C German Intellectual History in a European Context: Historical Figures and Contemporary Reflections: Heidegger and Arendt 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course is an introduction to the work of Martin Heidegger and Hannah Arendt. We will begin with an investigation into Heidegger's conceptualizations of language, time, and human dwelling. We will then move to an examination of Arendt's political philosophy, including her focus on the public/private distinction. Taught in English.

Final exam required.

GERMAN 157D German Intellectual History in a European Context: Historical Figures and Contemporary Reflections: Adorno, Benjamin, Habermas 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course examines the writings of the Frankfurt School of Critical Theory, a major branch of western Marxism. Focusing on confrontations with modernity, the lectures will deal with three seminal thinkers: Walter Benjamin, known for his genial insights into the culture of modernism; Theodor Adorno, the versatile philosopher and aesthetic theorist of the avant garde; and Jurgen Habermas, the most influential German intellectual after World War II.

Final exam required.

GERMAN 160A Politics and Culture in 20th-Century Germany: A Century of Extremes 4 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week; plus additional film screenings.

The story of Germany in the 20th century is a dramatic one, comprising two world wars, genocide, Allied occupation, a division into two states on opposing sides of the Cold War, and recently an unexpected unification. This course offers an introduction to the history and culture of contemporary Germany. It aims at a systematic account of German history in the 20th century, and it intends to provide a better understanding of today's German culture and politics. In addition to following a chronological approach, we will frequently stop to explore issues that are crucial to providing insights into current developments. Final exam required. Formerly known as 150.

GERMAN 160B Politics and Culture in 20th-Century Germany: Facism and Propaganda 4 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week; plus additional film screenings.

This course will focus on the theory and practice of propaganda during the 12 years of the Third Reich. It takes a close look at the ideology the Nazis tried to transmit, the techniques, organization, and effectiveness of their propaganda. Challenging the idea of the total power of propaganda, it looks for the limits of persuasion and possible other reasons for which Germans might have decided to follow Hitler. Sources will include the press, radio, film, photography, political posters, and a few literary works of the time.

Final exam required.

GERMAN 160C Politics and Culture in 20th-Century Germany: A Divided Nation. Politics and Culture in Germany 1945-1990 4 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week; plus additional film screenings.

This course offers an introduction to the history and culture of divided Germany in the era of the Cold War. It will look at the different ways the two states dealt with the country's pre-1945 history, the relations to the Allied Powers, and the major cultural shifts which eventually created a watershed in the history of German mentalities. We will look at various kinds of sources, including literature and film. Major national debates will be touched upon, such as breaks and continuities within the national elites, re-armament and pacifism, the student movement, opposition and conformity under Socialism, and the rise of environmentalism. We will also discuss the problems and opportunities of re-unification.

Final exam required.

GERMAN 160D Politics and Culture in 20th-Century Germany: Multicultural Germany 4 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week; plus additional film screenings.

This course will deal with the culture and politics of minorities in contemporary Germany. We will discuss how ethnic identities are perceived, constructed, and marketed. We also engage critically with such concepts as migration, assimilation, citizenship, diaspora, hybridity, and authenticity, as well as rhetorical strategies of "speaking back."

We will focus on exemplary texts and films from Germany, but include comparisons with minority experiences in other countries.

Final exam required.

GERMAN 160K Politics and Culture in 20th-Century Germany: The Weimar Republic: Politics and Culture in Germany 1918-1933 4 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week; plus additional film screenings.

The history of Germany's first parliamentary democracy is a dramatic one, dominated by economic woes, political violence, and a general perception of crisis and decline. The ill-fated republic bore the burden of a devastating war and suffered from an increasing lack of popular support. Democratic procedures were constantly undermined by radical and reactionary forces. Cultural pessimism was nurtured by the overwhelming experience of historical contingency, i.e., a fundamental lack of confidence in the predictability of modern life.

Final exam required.

GERMAN 170 History of the German Language 3 Units

Department: German

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of lecture/discussion per week.

Designed for undergraduate and graduate students interested in the history of the language of the newly united Germanys, which transverges a rich linguistic legacy from the , through Luther and Grimm, to Grass and . Discussion, via linguistic principles, of language processes in the genetic development of the German language, as well as its interchange over time with closely and remotely related languages such as English and Russian.

Final exam required. Instructor: Rauch

GERMAN 172 German Dialects 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture per week.

This course examines geographical and social variation within the German language. Among other things we will consider the differences between language and dialect, the division of German dialects and the history of German dialect study, various linguistic features (phonological, morphological, syntactic, and lexical) characteristic of the major German dialect areas, and issues involving the use of dialect versus standard language in contemporary society. Besides regular readings and written assignments, grades will be based on active participation and a paper or exam.

Final exam not required. Instructor: Shannon

GERMAN 173 The Phonetics and Phonology of Modern German 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

A course designed for undergraduates and graduates on the structure of modern German covering the fundamentals of German phonetics and phonology, with comparison to English. Some discussion of German dialect phonology.

Students will receive no credit for 173 after taking 103 before Spring 2002.

Final exam required. Instructor: Shannon

Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

A course designed for undergraduates and graduates on the grammatical structure of modern German covering the fundamentals of German morphology, syntax and semantics, with comparison to English.

Final exam required. Instructor: Shannon

GERMAN 175B Undergraduate Seminars: 20th-Century Poetry 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** 100

Analysis of various poetry from the beginning of the century to today, including works by Trakl, Benn, Bachmann, Sachs, Celan, and Brinkmann. A 20-page research paper will be part of the requirements for this course.

Final exam required. Instructor: Kudsus

GERMAN 177 The Cultural History of Switzerland in Literature and Film 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

On the basis of literary texts (in translation) and films, we will examine major topics pertaining to the cultural identity of Switzerland. Special attention will be paid to the cultural history of Switzerland in a European context. Themes in discussion will be Swiss multiculturalism and multilingualism, the importance of the Alps for national self-identification, the origin and development of the Swiss model of direct democracy, and the Swiss policy of neutrality.

Final exam required.

GERMAN 178 Semiotics 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks.

This course introduces principal figures from the basic disciplines of philosophy, biology, and linguistics who are particularly influential in current trends in semiotic method. It undertakes to lay the foundation of a semiotic method distinct from monolithic traditional structuralism, so, e.g. it concentrates on anti-Saussurean thought. In presenting semiotic universals, the course pursues the formulation and the application of a theoretical construct valid for any and all semiotic modalities ranging from the literary text, to the language act as text, and to the human being as text.

Final exam not required. Formerly known as 296. Instructor: Rauch

GERMAN 179 Special Topics in German 3 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Knowledge of German may be required depending on topic.

Topics will vary from semester to semester. See departmental announcement for offerings. Additional screening time may be required for film topics.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

GERMAN C179/SPANISH C179 Special Topics in German 3 Units**Department:** German; Spanish**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.**Prerequisites:** Open to any foreign language student.

Issues in bilingualism for students of foreign languages. This course explores what research on bilingualism says about what it means to learn someone else's language -- the cognitive, affective, and social dimensions of second language acquisition, the relation of language and culture, and language and identity. Fieldwork will include observing, recording, and transcribing segments of foreign language classrooms, visits to bilingual schools in the area, and interviews with native speakers of various languages on campus. Course taught in English, open to any foreign language student, data collected in the languages of the participants. Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam required.

GERMAN 182 German Cinema in Exile 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

The course will deal with the topic from various angles; a representative selection of American films noirs from the United States and some films (as forerunners) from the Weimar Republic will be shown and discussed in terms of their visuals and narratives. There will also be literary texts and cultural documents (articles on crime in the United States; on the working conditions in Hollywood) pertaining to the topic. Films have English subtitles.

Final exam required. Instructor: Kaes

GERMAN 186 Transnational Cinemas 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week, plus weekly film screenings.

This course will explore how experiences of migration, dislocation, or exile are visualized in cinema, and how processes of internationalization in film production and distribution intersect with the projection of a transnational global imagery. Some examples of transnational cinematic connections will be analyzed in historical perspective as well as contemporary examples of "migrant cinema." We will investigate how these films engage with debates about multiculturalism and assimilation/segregation of minorities, as scenarios of itinerancy and mobility are often intertwined with representations of ethnicity and gender.

Final exam required. Instructor: Gokturk

GERMAN H196 Honors Studies in German 2 - 4 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Zero hours of Independent study per week for 15 weeks. 3.5 to 7.5 hours of Independent study per week for 8 weeks.**Prerequisites:** One of the 195 courses.

Supervised independent study and research course for honor students who are writing their theses for completion of the requirements for the Honors Program.

Final exam not required.

GERMAN H196A Honors Studies in German 2 Units**Department:** German**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass. This is part one of a year long series course. A comparison of literary and cultural developments in Germany and the United States. Emphasis is placed on individual research designed to develop teaching materials.

Final exam not required.

GERMAN 270 History of the German Language 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Designed for students interested in the history of the language and culture of united Germany, Austria, Switzerland, and Liechtenstein, which transverse a rich legacy from the , through Luther and Grimm, to Grass and . Discussion, via linguistic principles, of language processes in the genetic development of the German language, as well as its interchange over time with closely and remotely related languages.

Final exam required.

GERMAN 271 Comparative Germanic 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Advanced topics in Germanic phonology, morphology, syntax, semantics, pragmatics. The principal Germanic dialects viewed within laryngeal theory and reconstruction.

Final exam not required. Instructor: Rauch

GERMAN 273 Gothic 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Study of the linguistic structures of the earliest Germanic dialect with a sizable corpus. Indo-European origins, Germanic relationships, and Gothic as a synchronic construct are considered.

Final exam not required. Instructor: Rauch

GERMAN 276 Old High German 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture per week for 15 weeks.

Reading of poetic and prose texts in Old High German. The synchronic and diachronic study of the dialects of the High German language from the eighth to the eleventh century within the framework of current linguistic method.

Final exam not required. Instructor: Rauch

GERMAN 280 North Sea Germanic 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.

Readings and discussion of poetic and prose texts in the Ingwaëonic languages (broadly construed) not covered elsewhere: Old Low Franconian, Middle Dutch, Old Frisian, Middle Low German.

Final exam not required. Instructor: Shannon

GERMAN 282 Old Saxon 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/discussion per week.

Study of the most provocative of the major Germanic languages in terms of structural identification. The literary and ethnographic setting of the and its shared isogrammar.

Final exam not required. Instructor: Rauch

GERMAN 285 Approaches and Issues in the Study of Modern German 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar and 1 hour of Tutorial per week for 15 weeks.**Prerequisites:** 103

A survey of relevant contemporary issues and topics in linguistic research on the structure of German.

Final exam not required. Instructor: Shannon

GERMAN 290 Seminar in German Linguistics 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar and 1 hour of Tutorial per week for 15 weeks.

Variable topic. For specific topic contact departmental office.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GERMAN 291 Methods and Issues in German Morphology 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

The seminar will deal with the methods and results of morphological analysis as applied to the German language. It will introduce basic concepts and means of morphological analyses, as well as study and apply various theories of word structure to German. The primary concern will be the synchronic analyses of modern German word formation, but questions of a diachronic nature as well as ones about inflection will also be discussed.

Final exam not required. Instructor: Shannon

GERMAN 292 German Syntax 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Discussion of current syntactic theories as applied to a number of issues in modern German syntax with an eye toward their description and explanatory potential. Typological comparison, especially with English.

Final exam not required.

GERMAN 293 German Semantics 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Concentration on the essential categories of semantics via data from German and Germanic. Extensive discussion of semantic change, the semantics of prevarication, and the semantics of pathological language.

Final exam not required.

GERMAN 294 Contrastive Grammars 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Theory and methods of contrastive linguistic analyses. Study of pairs of contrastive language sets in two time perspectives: Modern German with Modern English and Early New High German with Early New English.

Final exam not required. Instructor: Rauch

GERMAN 296 Semiotics 4 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

Discussion of the principal figures from the basic disciplines of philosophy, biology, and linguistics influential in current trends in semiotics.

Application of Peircean semiotics to a wide range of semiotic modalities.

Final exam not required. Instructor: Rauch

GERMAN 298 Directed Group Study 2 - 8 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Seminar.

Course may be repeated for credit as topic varies. Course may be repeated for credit when topic changes. Final exam not required.

GERMAN 299 Individual Study for Graduate Students in Literature and Linguistics 2 - 12 Units**Department:** German**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Individual conference. Individual conference.

Primarily for post-M.A. students engaged in exploration of a restricted field, involving writing of a report, and for students writing their doctoral dissertations.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

GERMAN 375A Seminar in Foreign Language Pedagogy: Teaching College German I 3 Units**Department:** German**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

The course focuses on the theory and practice of foreign language pedagogy. It introduces students to second language acquisition research and its relationship to pedagogy, providing a basis for staying theoretically informed and for participating in professional discourse of the field throughout one's teaching career. It also emphasizes critical reflection on pedagogical practices. Includes a practical component dealing directly with the day-to-day challenges of teaching elementary German.

Final exam not required. Formerly known as German 350.

GERMAN 375B Seminar in Foreign Language Pedagogy: Teaching College German II 3 Units**Department:** German**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

This course expands upon the basis of methodology and theory of language teaching covered in 350 and prepares students for teaching at the intermediate level. The theoretical and practical exploration of recent developments in second language teaching concentrates on instructional technology, teaching writing, teaching literary texts, and curriculum design. Students reflect on their development as teachers through a journal, video, and observation of their teaching, and the final portfolio.

Final exam not required. Formerly known as German 351.

GERMAN 602 Individual Study for Doctoral Students 1 - 8 Units**Department:** German**Course level:** Graduate examination preparation**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** Individual conference.**Prerequisites:** M.A. in German.

Independent study in consultation with graduate adviser to provide an opportunity for Ph.D. students to prepare for the qualifying examination. Course may be repeated once for credit. Course may be repeated for credit when topic changes. Final exam not required.

Global Metropolitan Studies (GMS)

GMS 200 Global Metropolitan Studies: Introduction to Theories, Histories, and Methods 3 Units**Department:** Global Metropolitan Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of lecture/seminar per week.**Prerequisites:** Ph.D. student in Global Metropolitan Studies Designated Emphasis, or consent of instructor.

The investigation of modern cities presents great challenges for social and urban theory. This seminar addresses these challenges through a multidisciplinary perspective that structures the discussion in terms of a history of metropolitan transformations, global urbanization, and the production and regulation of cities as spaces of contestation and creativity.

Final exam not required.

GMS 201 Research Seminar in Comparative Urban Studies 3 Units**Department:** Global Metropolitan Studies**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Ph.D. candidate in Global Metropolitan Studies Designated Emphasis or consent of instructor.

This core seminar for the Designated Emphasis in Global Metropolitan Studies offers an in-depth examination of contemporary research topics, data and methods, recent research findings, and challenges in specific subfields of international urban studies. Emphasis will be placed upon the discussion and improvement of students' dissertation chapters.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Post

GMS C203/POL SCI C203 Urban and Subnational Politics in Developing Countries 4 Units**Department:** Global Metropolitan Studies; Political Science**Course level:** Graduate**Terms course may be offered:** Fall and spring**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 to 3 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate student standing.

This course will consider the political and institutional environment in which efforts to address metropolitan problems are developed, the financial and institutional vehicles used to provide services of different types, and the role of political parties and other forms of political organization in the development and allocation of services. Emphasis will be placed upon fertile areas for research within the social sciences. Final exam not required.

GMS 299 Independent Study or Research 1 - 12 Units**Department:** Global Metropolitan Studies**Course level:** Graduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** Hours to be arranged. Hours to be arranged.

Prerequisites: Restricted to GMS Designated Emphasis Ph.D. students. Individual study or research program; must be worked out with GMS faculty in advance of signing up for credits.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required.

Global Poverty and Practice (GPP)

GPP 105 The Ethics, Methods, and Pragmatics of Global Practice 4 Units**Department:** Global Poverty and Practice**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Seminar and 1 hour of Discussion per week for 15 weeks. 6 hours of Seminar per week for 8 weeks. 8 hours of Seminar per week for 6 weeks.

Prerequisites: Consent of instructor.

This course is intended to provide students with the necessary background and knowledge to undertake projects and work experience of a global scope. Students will be exposed to a diversity of methodological frameworks, introduced to the basic skills needed to effectively participate in organizations, and to understand the ethics of global service and practice. Students will be required to complete a literature review and a major project proposal.

Final exam not required. Formerly known as International and Area Studies 105. Instructor: Talwalker

GPP 115 Global Poverty: Challenges and Hopes in the New Millennium 4 Units**Department:** Global Poverty and Practice**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 3 hours of Lecture and 1 hour of Discussion per week for 15 weeks. 6 hours of Lecture and 2 hours of Discussion per week for 8 weeks. 8 hours of Lecture and 2.5 hours of Discussion per week for 6 weeks.

This class seeks to provide a rigorous understanding of 20th century development and thus 21st century poverty alleviation. Students will take a look at popular ideas of poverty alleviation, the institutional framework of poverty ideas and practices, and the social and political mobilizations that seek to transform the structures of poverty.

Final exam required. Instructor: Roy

GPP 196 Global Poverty and Practice Capstone Course 3 Units**Department:** Global Poverty and Practice**Course level:** Undergraduate**Terms course may be offered:** Fall, spring and summer**Grading:** Letter grade. Qualified students may select to take this course pass/not pass.**Hours and format:** 2 hours of Seminar per week for 15 weeks. 6 hours of Seminar per week for 8 weeks. 7 hours of Seminar per week for 6 weeks.**Prerequisites:** Consent of instructor.

This course is intended to provide students with a forum for reflection on the Practice Experience component of the Global Poverty and Practice minor. Lessons learned in the minor will be applied to the realm of public discourse through various forms of public scholarship. Issues of power and privilege, civic engagement, and tensions between tourism vs. travel and community service vs. engagement will be addressed. Students will also explore academic and professional post-graduation options.

Final exam not required. Formerly known as International and Area Studies 196.

Grad Student Prof Development Pgm (GSPDP)

GSPDP 301 Mentoring in Higher Education 1 Unit**Department:** Grad Student Prof Development Pgm**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 1 hours of seminar per week.

This seminar will introduce graduate students to the role of mentoring in U.S. higher education and help guide graduate students as they mentor undergraduates at Berkeley, work in the context of a mentoring relationship with their graduate advisers, and prepare for the mentoring they will do in future academic and non-academic careers. The course will consist of readings, face-to-face and online discussion, short assignments, and an applied component of mentoring.

Final exam not required. Instructors: von Hoene, Soracco

GSPDP 302 Reading and Composition Pedagogy for Graduate Student Instructors 1 Unit**Department:** Grad Student Prof Development Pgm**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 6 weeks.

This course prepares GSIs across the disciplines to teach effective Reading and Composition (R&C) courses. It is intended for experienced GSIs who have already satisfied the Graduate Council's 300-level pedagogy course requirement but who would benefit from specific preparation to teach R&C. Seminar readings, discussions, and assignments provide GSIs with an overview of pedagogical theories and concrete practices that will assist them in designing and teaching R&C courses.

Course may be repeated for credit. Course may be repeated for credit when topic changes. Final exam not required. Instructor: Starr-Reid

GSPDP 320 Academic Writing for Graduate Students 2 Units**Department:** Grad Student Prof Development Pgm**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.**Prerequisites:** Graduate standing.

The purpose of this course is to provide graduate students with formal instruction in the genres and mechanics of academic writing at the graduate and professional level. Through presentations, readings, discussion, and weekly peer editing, graduate students will develop writing and editing skills necessary for their success as graduate students and future faculty.

Final exam not required. Instructor: Soracco

GSPDP 375 Teaching and Learning in Higher Education 2 Units**Department:** Grad Student Prof Development Pgm**Course level:** Professional course for teachers or prospective teachers**Terms course may be offered:** Fall and spring**Grading:** Offered for satisfactory/unsatisfactory grade only.**Hours and format:** 2 hours of Seminar per week for 15 weeks.

This seminar will introduce graduate students to the theory and practice of teaching and learning in higher education and will prepare new GSIs for the teaching they will do at Berkeley and for the teaching they may do in future careers. The course will provide an introduction to the research on how adults learn and will enable GSIs to select teaching methods that are appropriate to specific courses and educational contexts. The course brings together a cross-disciplinary group of graduate students who will discuss selected texts from the current literature on teaching and learning, experiment with and assess various teaching methods and their impact on learning, and develop professional skills that can be used throughout their careers.

Final exam not required. Formerly known as Graduate Student Professional Development Program 300. Instructor: von Hoene

Greek (GREEK)

GREEK 1 Elementary Greek 4 Units

Department: Greek

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Beginners' course.

Final exam required.

GREEK 2 Elementary Greek 4 Units

Department: Greek

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 3 hours of Lecture per week for 15 weeks.

Prerequisites: 1 or equivalent.

Beginners' course.

Final exam required.

GREEK 10 Intensive Elementary Greek 8 Units

Department: Greek

Course level: Undergraduate

Terms course may be offered: Fall and spring

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 5 hours of Lecture per week for 15 weeks.

Beginners' course (intensive); equivalent to Greek 1-2.

Final exam required.

GREEK 15 The Greek Workshop 10 Units

Department: Greek

Course level: Undergraduate

Term course may be offered: Summer

Grading: Letter grade. Qualified students may select to take this course pass/not pass.

Hours and format: 6 hours of instruction per day, 5 days per week, for 10 weeks.

Prerequisites: Senior or graduate standing, or consent of instructor.

Designed primarily for prospective and beginning graduate students wishing to complete as early as possible a requirement in the classical languages or to gain rapidly a basic control of Greek in order to proceed directly into intermediate courses in Homer, Plato, and Euripides.

Lectures, discussions, drills and tutorial sessions on grammar and vocabulary; readings in Attic prose and poetry (Plato and Greek Tragedy).

A grade of B enables the students to enroll directly in upper division Greek.

Final exam not required. Instructor: Chairman
