

Applied Data Science

The Graduate Certificate in Applied Data Science, offered by the UC Berkeley School of Information, introduces the tools, methods, and conceptual approaches used to support modern data analysis and decision-making in professional and applied research settings. It exposes students to the challenges of working with data (e.g., asking a good question, inference and causality, decision-making) as well as to the new tools and techniques for data analytics (machine learning, data mining, and more).

The certificate is particularly designed to meet the needs of the graduate students in Berkeley's professional schools — both professional master's students and doctoral students — as well as graduate students in the social sciences and the arts & humanities.

The need for expertise in data analytics continues to grow in all organizations and disciplines. Graduate students in every field are now working with data from new sources: websites, electronic medical records, transaction records, sensor networks, smart phones, and digitized records and documents. The analytical tools and methods traditionally used to derive insights from structured and well-curated data sets (census, surveys, and administrative data) are not sufficient for this new, unstructured and often user-generated data.

The Graduate Certificate in Applied Data Science provides hands-on practice working with unstructured and user-generated data to identify new ways to inform decision-making. The curriculum educates professionals and scholars to be intelligent consumers of data science techniques in a variety of domains, with a foundation of skills for applying these techniques in their own domains.

Any UC Berkeley graduate student in good standing may apply. To apply, students should submit the following materials on the School of Information website (<https://www.ischool.berkeley.edu/programs/data-science-certificate/>):

- a letter of intent,
- a proposed study plan,
- a description of their Python programming and statistics competencies,
- their curriculum vitae or resume,
- their Berkeley course transcript.

Applications are accepted twice a year, in the middle of the fall and spring semesters.

Students may apply at any time during their UC Berkeley graduate career, either before or after taking courses that would count toward the certificate.

Prerequisites

Applicants must:

- Be registered and enrolled in a graduate degree program at UC Berkeley
- Be in good academic standing
- Meet course and subject matter prerequisites for courses taken in the certificate program, typically including Python programming and basic statistics knowledge.

Certificate Requirements

The certificate requires three 3-unit courses, taken from the following approved lists:

1. An introductory data science class
2. A course in analytical methods and techniques of data science
3. An additional elective: either a domain-specific data science course or a second methods course.

Courses should be taken for a letter grade and must be completed with a grade of B or higher. At least one of these courses must be an INFO course offered by the School of Information.

1. Introductory data science course

One of the following:

INFO 201	Research Design and Applications for Data and Analysis ¹	3
DATASCI W201	Research Design and Applications for Data and Analysis (MIDS & MICS students only)	3

2. Analytical Methods and Techniques of Data Science

Students must take at least one course from this list:

INFO 251	Applied Machine Learning	4
INFO 254	Course Not Available	3
BIO ENG 245	Introduction to Machine Learning for Computational Biology	4
COMPSCI C200A	Principles and Techniques of Data Science	4
COMPSCI C281A	Statistical Learning Theory	3
COMPSCI 289A	Introduction to Machine Learning	4
CYBER W207	Applied Machine Learning for Cybersecurity (MIDS & MICS students only)	3
DATASCI W207	Applied Machine Learning (MIDS & MICS students only)	3
STAT C200C	Principles and Techniques of Data Science	4
STAT C241A	Statistical Learning Theory	3

3. Electives

Students must take one domain-specific data science course from the following list or a second methods course from the list in Section 2 above:

A,RESEC 213	Applied Econometrics	4
CIV ENG 263N	Scalable Spatial Analytics	3
COMPSCI C267	Applications of Parallel Computers	3
COMPSCI 286A	Introduction to Database Systems	4
COMPSCI C281B	Advanced Topics in Learning and Decision Making	3
COMPSCI 288	Natural Language Processing	4
CY PLAN 204C	Analytic and Research Methods for Planners: Introduction to GIS and City Planning	4
CY PLAN 255	Urban Informatics and Visualization	3
CY PLAN 257	Data Science for Human Mobility and Socio-technical Systems	4
DATASCI W209	Data Visualization (MIDS & MICS students only)	3
DATASCI W241	Experiments and Causal Inference (MIDS & MICS students only)	3

DATASCI W266	Natural Language Processing with Deep Learning (MIDS & MICS students only)	3	POL SCI 239T	An Introduction to Computational Tools and Techniques for Social Science Research	4
EDUC C260F	Machine Learning in Education	3	PUB POL 249	Statistics for Program Evaluation	4
EDUC 275B	Data Analysis in Educational Research II	4	PUB POL 275	Spatial Data and Analysis	4
EDUC 275G	Hierarchical and Longitudinal Modeling	3	PUB POL 279	Research Design and Data Collection for Public Policy Analysis	3
EDUC 276E	Research Design and Methods for Program and Policy Evaluation	3	PUB POL 288	Risk and Optimization Models for Policy	4
EECS 227AT	Optimization Models in Engineering	4	PUB POL 290	Special Topics in Public Policy	1-4
EL ENG 227BT	Convex Optimization	4	SOCIOL C271D	Quantitative/Statistical Research Methods in Social Sciences	3
EL ENG C227C	Convex Optimization and Approximation	3	STAT 215A	Statistical Models: Theory and Application	4
EL ENG C227T	Introduction to Convex Optimization	4	STAT 215B	Statistical Models: Theory and Application	4
ENGIN C233	Applications of Parallel Computers	3	STAT 238	Bayesian Statistics	3
ESPM 215	Hierarchical Statistical Modeling in Environmental Science	2	STAT C239A	The Statistics of Causal Inference in the Social Science	4
ESPM 288	Reproducible and Collaborative Data Science	3	STAT C239B	Quantitative Methodology in the Social Sciences Seminar	4
GEOG 249	Spatiotemporal Data Analysis in the Climate Sciences	3	STAT C241B	Advanced Topics in Learning and Decision Making	3
GEOG 279	Statistics and Multivariate Data Analysis for Research	3	STAT 243	Introduction to Statistical Computing	4
GEOG 282	Geographic Information Systems: Applications in Geographical Research	4	STAT 244	Statistical Computing	4
GEOG 285	Topics in Earth System Remote Sensing	3	STAT C245A	Introduction to Modern Biostatistical Theory and Practice	4
INFO 247	Information Visualization and Presentation	4	STAT C245B	Biostatistical Methods: Survival Analysis and Causality	4
INFO 256	Applied Natural Language Processing	3	STAT C245C	Biostatistical Methods: Computational Statistics with Applications in Biology and Medicine	4
INFO 259	Natural Language Processing	4	STAT C245D	Biostatistical Methods: Computational Statistics with Applications in Biology and Medicine II	4
INFO 288	Big Data and Development	3	STAT C247C	Longitudinal Data Analysis	4
