

Materials Science and Engineering

The Department of Materials Science and Engineering offers three graduate degree programs: the Master of Engineering (MEng), 5th Year Bachelor of Science and Master of Science (BS/MS), and the Doctor of Philosophy (PhD).

Master of Engineering (MEng)

In collaboration with other departments in the College of Engineering, Materials Science and Engineering is offering a professional master's degree. The accelerated program is designed to develop professional engineering leaders in materials science and engineering who are seeking knowledge and leadership experience in MSE.

Prospective students will be engineers, typically with industrial experience, who aspire to substantially advance in their careers and ultimately to lead large, complex organizations, both in the public and private sectors.

You may choose to apply to either the full-time one-year program or part-time program for working professionals. You will be asked to choose which option you will be considered for during the application process. Both options employ the same standards and criteria for admissions.

5th Year Bachelor of Science and Master of Science (BS/MS)

The Department of Materials Science and Engineering offers a five-year combined BS/MS program to our undergraduate student cohort. In this program, the existing four-year undergraduate program (BS) will be augmented with a fifth year of graduate study that provides a professionally-oriented component, preparing students for careers in engineering or engineering management within the business, government, and industrial sectors. This five-year program emphasizes interdisciplinary study through an independent project coupled to coursework.

Doctor of Philosophy (PhD)

Students pursuing the PhD may also declare a designated emphasis (DE) in one of the following programs: Communication, Computation, and Statistics; Computational and Genomic Biology; Computational Science and Engineering; Energy Science and Technology; or Nanoscale Science and Engineering.

Admission to the University

Minimum Requirements for Admission

The following minimum requirements apply to all graduate programs and will be verified by the Graduate Division:

1. A bachelor's degree or recognized equivalent from an accredited institution;
2. A grade point average of B or better (3.0);
3. If the applicant has completed a basic degree from a country or political entity (e.g., Quebec) where English is not the official language, adequate proficiency in English to do graduate work, as evidenced by a TOEFL score of at least 90 on the iBT test, 570 on

the paper-and-pencil test, or an IELTS Band score of at least 7 on a 9-point scale (note that individual programs may set higher levels for any of these); and

4. Sufficient undergraduate training to do graduate work in the given field.

Applicants Who Already Hold a Graduate Degree

The Graduate Council views academic degrees not as vocational training certificates, but as evidence of broad training in research methods, independent study, and articulation of learning. Therefore, applicants who already have academic graduate degrees should be able to pursue new subject matter at an advanced level without the need to enroll in a related or similar graduate program.

Programs may consider students for an additional academic master's or professional master's degree only if the additional degree is in a distinctly different field.

Applicants admitted to a doctoral program that requires a master's degree to be earned at Berkeley as a prerequisite (even though the applicant already has a master's degree from another institution in the same or a closely allied field of study) will be permitted to undertake the second master's degree, despite the overlap in field.

The Graduate Division will admit students for a second doctoral degree only if they meet the following guidelines:

1. Applicants with doctoral degrees may be admitted for an additional doctoral degree only if that degree program is in a general area of knowledge distinctly different from the field in which they earned their original degree. For example, a physics PhD could be admitted to a doctoral degree program in music or history; however, a student with a doctoral degree in mathematics would not be permitted to add a PhD in statistics.
2. Applicants who hold the PhD degree may be admitted to a professional doctorate or professional master's degree program if there is no duplication of training involved.

Applicants may apply only to one single degree program or one concurrent degree program per admission cycle.

Required Documents for Applications

1. **Transcripts:** Applicants may upload *unofficial* transcripts with your application for the departmental initial review. *If the applicant is admitted*, then *official* transcripts of all college-level work will be required. Official transcripts must be in sealed envelopes as issued by the school(s) attended. If you have attended Berkeley, upload your unofficial transcript with your application for the departmental initial review. *If you are admitted*, an official transcript with evidence of degree conferral *will not* be required.
2. **Letters of recommendation:** Applicants may request online letters of recommendation through the online application system. Hard copies of recommendation letters must be sent directly to the program, not the Graduate Division.
3. **Evidence of English language proficiency:** All applicants who have completed a basic degree from a country or political entity in which the official language is not English are required to submit official evidence of English language proficiency. This applies to institutions from Bangladesh, Burma, Nepal, India, Pakistan, Latin America, the Middle East, the People's Republic of China, Taiwan, Japan, Korea, Southeast Asia, most European countries, and Quebec (Canada). However, applicants who, at the time of application, have

already completed at least one year of full-time academic course work with grades of B or better at a US university may submit an official transcript from the US university to fulfill this requirement. The following courses will not fulfill this requirement:

- courses in English as a Second Language,
- courses conducted in a language other than English,
- courses that will be completed after the application is submitted, and
- courses of a non-academic nature.

If applicants have previously been denied admission to Berkeley on the basis of their English language proficiency, they must submit new test scores that meet the current minimum from one of the standardized tests. Official TOEFL score reports must be sent directly from Educational Test Services (ETS). The institution code for Berkeley is 4833. Official IELTS score reports must be sent electronically from the testing center to University of California, Berkeley, Graduate Division, Sproul Hall, Rm 318 MC 5900, Berkeley, CA 94720. TOEFL and IELTS score reports are only valid for two years.

Where to Apply

Visit the Berkeley Graduate Division application page (<http://grad.berkeley.edu/admissions/apply/>).

Admission to the Program

Admission decisions are based on a combination of factors, including academic degrees and records, the statement of purpose, letters of recommendation, test scores, and relevant work experience. The MSE department also considers the appropriateness of your goals to the degree program in which you are interested and to the research interests of the program's faculty.

To be considered for graduate admissions in MSE you need:

- A bachelor's degree or recognized equivalent (must be conferred prior to enrollment into our program) from an accredited institution in engineering, physics or chemistry is required. We do not accept students without these types of degrees.
- Sufficient undergraduate training to do graduate work in your chosen field.
- A minimum grade-point average (GPA) of 3.0 (B). International students should be in the top 5% of their class.
- We require three letters of recommendation submitted online.
- A general Graduate Record Exam (GRE) General Test score (85th percentile or higher is desirable) in the Verbal/Analytical/Quantitative sections.

Normative Time Requirements

Normative Time to Advancement

Step I: Pass the preliminary exam—scheduled prior to the start of the second semester. In this oral exam, students must demonstrate (i) mastery of the essential components of a Materials Science and Engineering education at a level commensurate with the completion of an undergraduate MSE degree at Berkeley, and (ii) their ability to use this knowledge in ongoing research.

Step II: Complete the minimum number of semester units of formal course work (major and minors) is 28, of which 16 must be in graduate units in the major field.

Step III: Pass the qualifying exam.

Normative Time in Candidacy

Step IV: Submission of the doctoral dissertation.

Total Normative Time

Total normative time is five years.

Time to Advancement

Curriculum

Courses Required

Approved study list per student's research interest but must include course requirements below:

Thermodynamics		
MAT SCI 201A	Thermodynamics and Phase Transformations in Solids	4
Select one Structure & Bonding course from the following:		3
MAT SCI 202	Crystal Structure and Bonding [3]	
MAT SCI 215	Computational Materials Science [3]	
Select one Materials Characterization course from the following:		
MAT SCI 204	Materials Characterization [3] (204& 204D must be taken together.)	
MAT SCI 204D	Materials Characterization (204& 204D must be taken together.)	1
MAT SCI 241	Electron Microscopy Laboratory [4]	
MAT SCI 242	Advanced Spectroscopy	3
Select one Material Properties course from the following:		3-4
MAT SCI 205	Defects in Solids [3]	
MAT SCI C212	Deformation and Fracture of Engineering Materials [4]	
MAT SCI 213	Environmental Effects on Materials Properties and Behavior [3]	
MAT SCI 217	Properties of Dielectric and Magnetic Materials [3]	
MAT SCI 223	Semiconductor Materials [3]	
MAT SCI 224	Magnetism and Magnetic Materials [3]	
MAT SCI C225	Thin-Film Science and Technology [3]	
MAT SCI 251	Polymer Surfaces and Interfaces [3]	
MAT SCI 260	Surface Properties of Materials [3]	
Select one Material Processing course from the following:		3-4
MAT SCI 121	Metals Processing [3]	
MAT SCI C216	Macromolecular Science in Biotechnology and Medicine [4]	
MAT SCI 223	Semiconductor Materials [3]	
MAT SCI 224	Magnetism and Magnetic Materials [3]	
MAT SCI C225	Thin-Film Science and Technology [3]	
MAT SCI 251	Polymer Surfaces and Interfaces [3]	
Teaching Pedagogy:		
MAT SCI 375A	Science and Engineering Pedagogy	1-2
or MAT SCI 375B	Supervised Teaching of Materials Science and Engineering	

Preliminary Exams

In this oral exam students must demonstrate:

1. Mastery of the essential components of a Materials Science and Engineering education at a level commensurate with the completion of an undergraduate MSE degree at Berkeley, and
2. Their ability to use this knowledge in ongoing research.

The examination is divided into six topics germane to ceramic, metallic, semiconducting, and soft materials, including their appropriate composites. Six faculty examiners are appointed each semester by the department chair, one examiner per topic, who conduct the exam in individual oral interviews lasting approximately 20 minutes. The examination topics are:

1. Thermodynamics;
2. Phase Transformations;
3. Bonding, Crystallography, and Crystal Defects;
4. Materials Characterization;
5. Mechanical Properties; and
6. Electronic Properties.

Qualifying Examination

The PhD qualifying exam tests the student's ability to identify a significant problem, to assemble the background information needed to grasp it in the context of the field, and to construct a technical approach that provides a plausible path to its solution. At the same time, the qualifying exam will test the student's knowledge of the subject matter within the broad research field and his or her major field.

The examination consists of two parts, namely, a written proposal, and the oral examination:

1. **Written Proposal.** The proposal describes the intended PhD research. At least two weeks before the examination date the student must submit a written research proposal to his/her committee. The proposal must include a one-page abstract and be roughly five to ten pages long. It must contain a concise statement of the research problem and its significance, a discussion of the technical background, the technical approach (experimental and/or theoretical), the anticipated results, and a bibliography. This written proposal is to be prepared by the student without direct collaboration or assistance from the faculty.
2. **The Examination.** The student should prepare a 30-minute oral presentation of the research proposal(s). The committee will question the student on the material presented orally, the material contained in the written proposal, and the general technical background to the research area. The student should be familiar with the relevant literature. The student must also defend the significance of the research problem and the viability of the technical approach. The second part of the examination consists of questions in the major and minor fields.

Time in Candidacy

Dissertation

Required Professional Development

Teaching

The faculty of the Department of Materials Science and Engineering considers teaching experience to be an important part of a doctoral

student's program of study and requires that all graduate students pursuing a PhD serve at least one semester as a graduate student instructor (GSI) in an MSE course (usually after the first year).

Seminar

All graduate students are required to enroll (MAT SCI 298-Sect 1) and attend the weekly department colloquium series.

Unit Requirements

There are two plans for the master of science degree.

Plan I requires a minimum of 20 semester units are required, of which at least 8 must be strictly graduate units in the major subject (University requirement), and of these 8, there shall be no more than 2 units of credit for MAT SCI 299 while the remaining units must be graded course units. The remaining 12 units may be upper division or graduate courses proposed by the student and research supervisor and approved by the major field adviser.

Plan II requires a minimum 24 semester units is required, of which at least 12 must be strictly graduate units in the major subject, and of these 12 units, there shall be no more than a total of 2 units of credit MAT SCI 299. The remaining 12 units may be graded upper division or graduate courses approved by the major field adviser.

Curriculum

Courses Required

Thermodynamics:

MAT SCI 201A	Thermodynamics and Phase Transformations in Solids	4
--------------	--	---

Structure & Bonding:

MAT SCI 202	Crystal Structure and Bonding	3
or MAT SCI 215	Computational Materials Science	

Materials Characterization:

MAT SCI 204	Materials Characterization	3-4
or MAT SCI 241	Electron Microscopy Laboratory	

Select one of the following in Materials Properties:

MAT SCI 205	Defects in Solids [3]	
MAT SCI C212	Deformation and Fracture of Engineering Materials [4]	
MAT SCI 213	Environmental Effects on Materials Properties and Behavior [3]	
MAT SCI 217	Properties of Dielectric and Magnetic Materials [3]	
MAT SCI 223	Semiconductor Materials [3]	
MAT SCI 224	Magnetism and Magnetic Materials [3]	
MAT SCI C225	Thin-Film Science and Technology [3]	
MAT SCI 251	Polymer Surfaces and Interfaces [3]	
MAT SCI 260	Surface Properties of Materials [3]	

Select one of the following in Materials Processing:

MAT SCI 121	Metals Processing [3]	3-4
MAT SCI C216	Macromolecular Science in Biotechnology and Medicine [4]	
MAT SCI 223	Semiconductor Materials [3]	
MAT SCI 224	Magnetism and Magnetic Materials [3]	
MAT SCI C225	Thin-Film Science and Technology [3]	

MAT SCI 251	Polymer Surfaces and Interfaces [3]	
Electives - for remaining units required (20, Plan I; 24, Plan II)		5-9

Capstone/Thesis (Plan I)

A thesis is required. The research topic and research supervisor must be specified in the program of study form.

The thesis committee is formally appointed by the dean of the Graduate Division upon recommendation of the student's major field adviser and the AAC. It consists of three members: the research supervisor plus one other member from the department, and one member either be from outside the College of Engineering or from a field of engineering not closely related to that of the candidate. The student is encouraged to consult all committee members while the research is in progress.

Capstone Report (Plan II)

At least a month before the student intends to graduate, a project report based on MAT SCI 299 work or on a phase of his/her work as a research assistant and approved by the project supervisor, must be submitted to the committee. It is the student's responsibility to see that the final corrected report is submitted and the examination taken by the last day of the semester.

Unit Requirements

- Minimum units to complete the degree is 25 semester units (must be in 200 series).
- 12 units must be materials science and engineering units; 8 semester units must be in core leadership curriculum units (must be in 200 series)
 - 2 Semester units - Capstone Integration (taken S/U)
 - 3 Semester units - Engineering Leadership I (taken for a letter grade)
 - 3 Semester units - Engineering Leadership II (taken for a letter grade)
- Maximum number of Capstone Project Units (297M A-B): 5(2 Fall, 3 Spring)
- Minimum GPA: All students required to have a minimum of 3.0
- Minimum units required: 12 units (Full Time)
- Comprehensive Exam

Curriculum

These concentrations are suggestions only. Students are encouraged to select electives that best satisfy their specific educational objectives.

General Program Concentration

Materials Science and Engineering is a diverse field of study drawing from all areas of physical science such as chemistry, physics, biology, and engineering. In addition to drawing from the physical sciences, materials science and engineering often crosses these disciplinary boundaries. The general program recognizes the inherent interdisciplinary nature of materials science and engineering and allows students to tailor their program of study to address their personal interests

Technical Electives

Select from the following:		3
MAT SCI 200A	Survey of Materials Science	4
MAT SCI 201A	Thermodynamics and Phase Transformations in Solids	4

MAT SCI 204	Materials Characterization	3
MAT SCI 204D	Materials Characterization	1
MAT SCI 223	Semiconductor Materials	3
MAT SCI C226	Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market	3
MAT SCI 202	Crystal Structure and Bonding	3
MAT SCI 205	Defects in Solids	3
MAT SCI C212	Deformation and Fracture of Engineering Materials	4
MAT SCI 213	Environmental Effects on Materials Properties and Behavior	3
MAT SCI 215	Computational Materials Science	3
MAT SCI C216	Macromolecular Science in Biotechnology and Medicine	4
MAT SCI 217	Properties of Dielectric and Magnetic Materials	3
MAT SCI 218	Optical Materials and Devices	3
MAT SCI C225	Thin-Film Science and Technology	3

Biomaterials

Traditionally, biomaterials encompass synthetic alternatives to the native materials found in our body. A central limitation in the performance of traditional materials used in medical device, biotechnological, and pharmaceutical industries is that they lack the ability to integrate with biological systems through either a molecular or cellular pathway, which has relegated biomaterials to a passive role dictated by the constituents of a particular environment, leading to unfavorable outcomes and device failure. The design and synthesis of materials that circumvent their passive behavior in complex mammalian cells is the focus of the work conducted within the MSE Department at Berkeley.

Biomimetic Surface Engineering:

Surface modification of medical implants to control wound healing and tissue regeneration.

Biologically-defined Microdevices:

Design and fabrication of surfaces, using advanced pattern techniques, to facilitate cell and molecular-based microarrays.

Technical Electives

MAT SCI 200A	Survey of Materials Science	4
MAT SCI 201A	Thermodynamics and Phase Transformations in Solids	4
MAT SCI 204	Materials Characterization	3
MAT SCI 204D	Materials Characterization	1
MAT SCI C208	Biological Performance of Materials	4
MAT SCI C216	Macromolecular Science in Biotechnology and Medicine	4
MAT SCI 251	Polymer Surfaces and Interfaces	3
MAT SCI 260	Surface Properties of Materials	3

Advanced Structural Materials

This area focuses on the relationships between the chemical and physical structure of materials and their properties and performance. Regardless of the material class metallic, ceramic, polymeric or composite, an understanding of the structure-property relationships provides a scientific basis for developing engineering materials for advanced applications. Fundamental and applied research in this

field responds to an ever-increasing demand for improved or better-characterized materials.

Technical Electives

Select from the following:	3
MAT SCI 200A Survey of Materials Science	4
MAT SCI 201A Thermodynamics and Phase Transformations in Solids	4
MAT SCI 204 Materials Characterization	3
MAT SCI 204D Materials Characterization	1
MAT SCI 205 Defects in Solids	3
MAT SCI C211 Mechanics of Solids	3

MAT SCI 213 Environmental Effects on Materials Properties and Behavior	3
MAT SCI C214 Micromechanics	3
MAT SCI 215 Computational Materials Science	3

Electronic, Magnetic and Optical Materials

This group of materials is defined by its functionality. Semiconductors, metals, and ceramics are used today to form highly complex systems, such as integrated electronic circuits, optoelectronic devices, and magnetic and optical mass storage media. In intimate contact, the various materials, with precisely controlled properties, perform numerous functions, including the acquisition, processing, transmission, storage, and display of information. Electronic, Magnetic and Optical materials research combines the fundamental principles of solid-state physics and chemistry, of electronic and chemical engineering, and of materials science. Nanoscale science and engineering is of increasing importance in this field.

Technical Electives I

Select from the following:	3
MAT SCI 200A Survey of Materials Science	4
MAT SCI 201A Thermodynamics and Phase Transformations in Solids	4
MAT SCI 202 Crystal Structure and Bonding	3
MAT SCI 205 Defects in Solids	3
MAT SCI 215 Computational Materials Science	3
MAT SCI C216 Macromolecular Science in Biotechnology and Medicine	4
MAT SCI 217 Properties of Dielectric and Magnetic Materials	3
MAT SCI 218 Optical Materials and Devices	3
MAT SCI 223 Semiconductor Materials	3
MAT SCI 224 Magnetism and Magnetic Materials	3
MAT SCI C225 Thin-Film Science and Technology	3
MAT SCI C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market	3

Computational Materials

Computational methods are increasingly important in all areas of science and engineering. Computational Materials Science capitalizes on advancements in these fields, which include high throughput approaches and machine learning. Materials Science and Engineering applications range from the theoretical prediction of the electronic and structural properties of materials to chemical kinetics and equilibria or modeling

the chemical kinetics and equilibria in a materials processing operation, to now predicting the existence of new materials and their properties. These advances in computational techniques have yielded remarkable insight into materials behaviors, particularly at the nanoscale. Under favorable circumstances, it is now possible to predict in exquisite detail many properties of materials at the nanoscale (one nanometer = 1 billionth of a meter) by merely solving Schrodinger's famous equation. These advancements have positioned researchers within the department to be very active in developing data for the Materials Project <https://materialsproject.org> (<https://materialsproject.org/>), an effort to construct a database of all computable properties for all known materials.

Technical Electives:

Select from the following:	
MAT SCI 200A Survey of Materials Science	4
MAT SCI 201A Thermodynamics and Phase Transformations in Solids	4
MAT SCI 202 Crystal Structure and Bonding	3
MAT SCI 205 Defects in Solids	3
MAT SCI C211 Mechanics of Solids	3
MAT SCI C212 Deformation and Fracture of Engineering Materials	4
MAT SCI C214 Micromechanics	3
MAT SCI 215 Computational Materials Science	3
MAT SCI C286 Modeling and Simulation of Advanced Manufacturing Processes	3

Chemical and Electrochemical

Chemical and Electrochemical materials include both the chemical and electrochemical processing of materials, and the chemical and electrochemical behavior of materials. The former includes the scientific and engineering principles utilized in mineral processing, smelting, leaching, and refining materials, and many of the advanced techniques of processing microelectronic devices such as etching and deposition techniques. The latter includes the chemical synthesis of novel materials, environmental degradation of materials, the compatibility of materials with specific environments, along with materials used in advanced energy storage devices, and catalytic materials for energy and the environment.

Technical Electives:

Select from the following:	
MAT SCI 200A Survey of Materials Science	4
MAT SCI 201A Thermodynamics and Phase Transformations in Solids	4

Materials Science and Engineering

Expand all course descriptions [+] Collapse all course descriptions [-]

MAT SCI 200A Survey of Materials Science 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

A survey of Materials Science at the beginning graduate level, intended for those who did not major in the field as undergraduates. Focus on the nature of microstructure and its manipulation and control to determine engineering properties. Reviews bonding, structure and microstructure, the chemical, electromagnetic and mechanical properties of materials, and introduces the student to microstructural engineering.

Survey of Materials Science: Read More [+]

Rules & Requirements

Prerequisites: Graduate standing or consent of instructor

MAT SCI 204 Materials Characterization 3 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

This 3-unit course will cover basic principles and techniques used for the characterization of engineering materials. The course is designed to introduce graduate students to the basic principles of structural, chemical and property characterization techniques. The course is grounded in modern x-ray diffraction and electron microscopy techniques for characterization of the chemical and structural properties of a material. The course introduces the fundamental theoretical framework for diffraction, spectrometry and imaging methods.

Materials Characterization: Read More [+]

Objectives & Outcomes

Course Objectives: Materials characterization lies at the heart of understanding the property-structure-processing relationships of materials. The goal of the course is to prepare graduate students from materials science to understand the basic principles behind material characterization tools and techniques. More specifically, this class will provide students (1) a thorough introduction to the principles and practice of diffraction, (2) introductory exposure to a range of common characterization methods for the determination of structure and composition of solids.

Student Learning Outcomes: A successful student will learn (1) the theory of x-ray and electron diffraction, (2) basic elements of electron microscopy, (3) basic aspects of spectroscopy.

Rules & Requirements

Prerequisites: MAT SCI 102- a basic knowledge of structure, bonding and crystallography will be assumed

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Defects in Solids: Read Less [-]

MAT SCI C208 Biological Performance of Materials 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

This course is intended to give students the opportunity to expand their knowledge of topics related to biomedical materials selection and design. Structure-property relationships of biomedical materials and their interaction with biological systems will be addressed. Applications of the concepts developed include blood-materials compatibility, biomimetic materials, hard and soft tissue-materials interactions, drug delivery, tissue engineering, and biotechnology.

Biological Performance of Materials: Read More [+]

Objectives & Outcomes

Course Objectives: The course is separated into four parts spanning the principles of synthetic materials and surfaces, principles of biological materials, biological performance of materials and devices, and state-of-the-art materials design. Students are required to attend class and master the material therein. In addition, readings from the clinical, life and materials science literature are assigned. Students are encouraged to seek out additional reference material to complement the readings assigned. A mid-term examination is given on basic principles (parts 1 and 2 of the outline). A comprehensive final examination is given as well. The purpose of this course is to introduce students to problems associated with the selection and function of biomaterials. Through class lectures and readings in both the physical and life science literature, students will gain broad knowledge of the criteria used to select biomaterials, especially in devices where the material-tissue or material-solution interface dominates performance. Materials used in devices for medicine, dentistry, tissue engineering, drug delivery, and the biotechnology industry will be addressed.

This course also has a significant design component (~35%). Students will form small teams (five or less) and undertake a semester-long design project related to the subject matter of the course. The project includes the preparation of a paper and a 20 minute oral presentation critically analyzing a current material-tissue or material-solution problem. Students will be expected to design improvements to materials and devices to overcome the problems identified in class with existing materials.

Student Learning Outcomes: Work independently and function on a team, and develop solid communication skills (oral, graphic & written) through the class design project.

- Develop an understanding of the social, safety and medical consequences of biomaterial use and regulatory issues associated with the selection of biomaterials in the context of the silicone breast implant controversy and subsequent biomaterials crisis.
- Design experiments and analyze data from the literature in the context of the class design project.
- Understanding of the origin of surface forces and interfacial free energy, and how they contribute to the development of the biomaterial interface and ultimately biomaterial performance.
- Apply math, science & engineering principles to the understanding of soft materials, surface chemistry, DLVO theory, protein adsorption kinetics, viscoelasticity, mass diffusion, and molecular (i.e., drug) delivery kinetics.
- Apply core concepts in materials science to solve engineering problems related to the selection biomaterials, especially in devices where the material-tissue or material-solution interface dominates performance.

Rules & Requirements

Prerequisites: MAT SCI 45; and CHEM C130 / MCEU BI C100A or

MAT SCI C211 Mechanics of Solids 3 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Mechanical response of materials: Simple tension in elastic, plastic and viscoelastic members. Continuum mechanics: The stress and strain tensors, equilibrium, compatibility. Three-dimensional elastic, plastic and viscoelastic problems. Thermal, transformation, and dealloying stresses. Applications: Plane problems, stress concentrations at defects, metal forming problems.

Mechanics of Solids: Read More [+]

Rules & Requirements

Prerequisites: Graduate standing or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Govindjee

Also listed as: CIV ENG C231

Mechanics of Solids: Read Less [-]

MAT SCI C212 Deformation and Fracture of Engineering Materials 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

This course covers deformation and fracture behavior of engineering materials for both monotonic and cyclic loading conditions.

Deformation and Fracture of Engineering Materials: Read More [+]

Rules & Requirements

Prerequisites: Civil Engineering 130, Engineering 45

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Ritchie, Pruitt, Komvopoulos

Formerly known as: Materials Science and Engineering C212, Mechanical Engineering C225

Also listed as: MEC ENG C225

Deformation and Fracture of Engineering Materials: Read Less [-]

MAT SCI 213 Environmental Effects on Materials Properties and Behavior 3 Units

Terms offered: Fall 2014, Fall 2013, Fall 2012

Review of electrochemical aspects of corrosion; pitting and crevice corrosion; active/passive transition; fracture mechanics approach to corrosion; stress corrosion cracking; hydrogen embrittlement; liquid metal embrittlement; corrosion fatigue; testing methods.

Environmental Effects on Materials Properties and Behavior: Read More [+]

Rules & Requirements

Prerequisites: MSE 112 or equivalent

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Devine

Environmental Effects on Materials Properties and Behavior: Read Less [-]

MAT SCI C214 Micromechanics 3 Units

Terms offered: Spring 2022, Spring 2018, Spring 2016

Basic theories, analytical techniques, and mathematical foundations of micromechanics. It includes 1. physical micromechanics, such as mathematical theory of dislocation, and cohesive fracture models; 2. micro-elasticity that includes Eshelby's eigenstrain theory, comparison variational principles, and micro-crack/micro-cavity based damage theory; 3. theoretical composite material that includes the main methodologies in evaluating overall material properties; 4. meso-plasticity that includes meso-damage theory, and the crystal plasticity; 5. homogenization theory for materials with periodic structures.

Micromechanics: Read More [+]

Rules & Requirements

Prerequisites: Consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Govindjee, Li

Also listed as: CIV ENG C236

Micromechanics: Read Less [-]

MAT SCI 215 Computational Materials Science 3 Units

Terms offered: Fall 2021, Fall 2019, Spring 2019

Introduction to computational materials science. Development of atomic scale simulations for materials science applications. Application of kinetic Monte Carlo, molecular dynamics, and total energy techniques to the modeling of surface diffusion processes, elastic constants, ideal shear strengths, and defect properties. Introduction to simple numerical methods for solving coupled differential equations and for studying correlations.

Computational Materials Science: Read More [+]

Rules & Requirements

Prerequisites: Graduate standing in engineering or sciences, or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Chrzan, Asta, Ceder, Sherburne

Computational Materials Science: Read Less [-]

MAT SCI C216 Macromolecular Science in Biotechnology and Medicine 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020, Spring 2019

Overview of the problems associated with the selection and function of polymers used in biotechnology and medicine. Principles of polymer science, polymer synthesis, and structure-property-performance relationships of polymers. Particular emphasis is placed on the performance of polymers in biological environments. Interactions between macromolecular and biological systems for therapy and diagnosis. Specific applications will include drug delivery, gene therapy, tissue engineering, and surface engineering.

Macromolecular Science in Biotechnology and Medicine: Read More [+]

Rules & Requirements

Prerequisites: BIO ENG 115. Open to seniors with consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Healy

Also listed as: BIO ENG C216

Macromolecular Science in Biotechnology and Medicine: Read Less [-]

MAT SCI 217 Properties of Dielectric and Magnetic Materials 3 Units

Terms offered: Spring 2021, Fall 2020, Spring 2017

Introduction to the physical principles underlying the dielectric and magnetic properties of solids. Processing-microstructure-property relationships of dielectric materials, including piezoelectric, pyroelectric, and ferroelectric oxides, and of magnetic materials, including hard- and soft ferromagnets, ferrites and magneto-optic and -resistive materials.

The course also covers the properties of grain boundary devices (including varistors) as well as ion-conducting and mixed conducting materials for applications in various devices such as sensors, fuel cells, and electric batteries.

Properties of Dielectric and Magnetic Materials: Read More [\[+\]](#)

Rules & Requirements

Prerequisites: PHYSICS 7A, PHYSICS 7B, and PHYSICS 7C; or PHYSICS 7A, PHYSICS 7B, and consent of instructor; MAT SCI 111 is recommended

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Martin

Properties of Dielectric and Magnetic Materials: Read Less [\[-\]](#)

MAT SCI 218 Optical Materials and Devices 3 Units

Terms offered: Fall 2021, Fall 2020, Fall 2019

This course provides an overview of the fundamental physics, processing and device applications of optical materials, including conventional and van der Waals semiconductors, plasmonic materials, metamaterials, etc. This course gives graduate students an introduction of the recent developments in the research fields of optical materials and nanophotonics. Topics covered include:

Basic concepts on light-matter interactions. Excitons, biexcitons and trions. Polaritons: plasmons, phonons and magnons. Plasmonic materials and their applications. Near field optics and its application in plasmonics. Raman spectroscopy and surface/tip enhanced Raman (SERS/TERS). Metamaterials: negative refraction, super-resolution imaging and optical invisibility.

Optical Materials and Devices: Read More [\[+\]](#)

Objectives & Outcomes

Course Objectives: This course is designed to give graduate students an introduction of the recent developments in the research fields of optical materials and nanophotonics.

Rules & Requirements

Prerequisites: Graduate standing in engineering, physics or chemistry

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Yao

Optical Materials and Devices: Read Less [\[-\]](#)

MAT SCI 223 Semiconductor Materials 3 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Semiconductor purification and crystal growth techniques. Doping, radiation damage, and annealing. Metal-semiconductor interfaces and reactions. Interaction between defects and impurities during processing of devices. Major electronic and optical methods for the analysis of semiconductors.

Semiconductor Materials: Read More [+]

Rules & Requirements

Prerequisites: PHYSICS 7C or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Dubon, Wu

Semiconductor Materials: Read Less [-]

MAT SCI 224 Magnetism and Magnetic Materials 3 Units

Terms offered: Fall 2018, Fall 2016, Fall 2014

This course covers the fundamentals of magnetism and magnetic materials in the first two-thirds of the class. Topics include magnetic moments in classical versus quantum mechanical pictures, diamagnetism, paramagnetism, crystal field environments, dipolar and exchange interactions, ferromagnetism, antiferromagnetism, magnetic domains, magnetic anisotropy, and magnetostriction. Magnetic materials covered include transition metals, their alloys and oxides, rare earths and their oxides, organic and molecular magnets. Throughout the course, experimental techniques in magnetic characterization will be discussed. The second part of the course will focus on particular magnetic materials and devices that are of technological interest (e.g., magnetoresistive and magneto-optical materials and devices). Additional topics include biomagnetism and spin glasses.

Magnetism and Magnetic Materials: Read More [+]

Rules & Requirements

Prerequisites: 111 or equivalent or consent of instructor; 117 recommended

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Magnetism and Magnetic Materials: Read Less [-]

MAT SCI C225 Thin-Film Science and Technology 3 Units

Terms offered: Fall 2022, Fall 2021, Spring 2020

Thin-film nucleation and growth, microstructural evolution and reactions. Comparison of thin-film deposition techniques. Characterization techniques. Processing of thin films by ion implantation and rapid annealing. Processing-microstructure-property-performance relationships in the context of applications in information storage, ICs, micro-electromechanical systems and optoelectronics.

Thin-Film Science and Technology: Read More [+]

Rules & Requirements

Prerequisites: Graduate standing in engineering, physics, chemistry, or chemical engineering

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Wu, Dubon

Also listed as: AST C225

Thin-Film Science and Technology: Read Less [-]

MAT SCI C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market 3 Units

Terms offered: Fall 2015, Spring 2013, Spring 2011

This technical course focuses on the fundamentals of photovoltaic energy conversion with respect to the physical principals of operation and design of efficient semiconductor solar cell devices. This course aims to equip students with the concepts and analytical skills necessary to assess the utility and viability of various modern photovoltaic technologies in the context of a growing global renewable energy market.

Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market: Read More [+]

Rules & Requirements

Prerequisites: Material Science and Mineral Engineering 111 or 123 or equivalent. Should have a firm foundation in electronic and optical props of semiconductors and basic semiconductor device physics

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Also listed as: ENE, RES C226

Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market: Read Less [-]

MAT SCI 241 Electron Microscopy Laboratory 4 Units

Terms offered: Spring 2022, Spring 2021, Fall 2020

This course covers the basic principles of techniques used in the characterization of engineering materials by electron microscopy, diffraction, and spectroscopy. In addition to lectures on the theory of electron diffraction and microscopy, there is a hands-on laboratory that offers detailed practical training in the operation of the transmission electron microscope (TEM) in all of its major functional diffraction and imaging modes. Electron Microscopy Laboratory: Read More [+]

Rules & Requirements

Prerequisites: MAT SCI 104

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of laboratory and 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Gronsky, Minor

Electron Microscopy Laboratory: Read Less [-]

MAT SCI 242 Advanced Spectroscopy 3 Units

Terms offered: Spring 2021, Spring 2020, Spring 2019

Advanced structural and functional characterization of materials using spectroscopic methods. Techniques to be discussed include state of the art optical, x-ray and ion-beam spectroscopies used for characterization of advanced materials and devices.

Advanced Spectroscopy: Read More [+]

Rules & Requirements

Prerequisites: MAT SCI 204 or MAT SCI 205; or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Advanced Spectroscopy: Read Less [-]

MAT SCI C250 Nanomaterials in Medicine 3 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

The course is designed for graduate students interested in the emerging field of nanomedicine. The course will involve lectures, literature reviews and proposal writing. Students will be required to formulate a nanomedicine research project and write an NIH-style proposal during the course. The culmination of this project will involve a mock review panel in which students will serve as peer reviewers to read and evaluate the proposals.

Nanomaterials in Medicine: Read More [+]

Objectives & Outcomes

Course Objectives: To review the current literature regarding the use of nanomaterials in medical applications; (2) To describe approaches to nanomaterial synthesis and surface modification; (3) To understand the interaction of nanomaterials with proteins, cells and biological systems; (4) To familiarize students with proposal writing and scientific peer review.

Student Learning Outcomes: Students should be able to (1) identify the important properties of metal, polymer and ceramic nanomaterials used in healthcare; (2) understand the role of size, shape and surface chemistry of nanomaterials in influencing biological fate and performance; (3) understand common methods employed for surface modification of nanomaterials; (4) comprehend the range of cell-nanomaterial interactions and methods for assaying these interactions; (5) read and critically review the scientific literature relating to nanomedicine; (6) formulate and design an experimental nanomedicine research project; (7) understand the principles of the peer review system.

Rules & Requirements

Prerequisites: Graduate Standing

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Messersmith

Also listed as: BIO ENG C250

Nanomaterials in Medicine: Read Less [-]

MAT SCI 251 Polymer Surfaces and Interfaces 3 Units

Terms offered: Spring 2022, Fall 2020, Fall 2019

The course is designed for graduate students to gain a fundamental understanding of the surface and interfacial science of polymeric materials. Beginning with a brief introduction of the principles governing polymer phase behavior in bulk, it develops the thermodynamics of polymers in thin films and at interfaces, the characterization techniques to assess polymer behavior in thin films and at interfaces, and the morphologies of polymer thin films and other dimensionally-restricted structures relevant to nanotechnology and biotechnology. Field trips to national user facilities, laboratory demonstrations and hands-on experiments, and guest lectures will augment the courses lectures. Polymer Surfaces and Interfaces: Read More [+]

Rules & Requirements

Prerequisites: Chemistry 1A or Engineering 5; Material Science and Engineering 151 recommended

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Xu

Polymer Surfaces and Interfaces: Read Less [-]

MAT SCI 260 Surface Properties of Materials 3 Units

Terms offered: Fall 2020, Spring 2019, Spring 2018

Thermodynamics of surfaces and phase boundaries, surface tension of solids and liquids, surface activity, adsorption, phase equilibria, and contact angles, electrochemical double layers at interfaces, theory, and applications.

Surface Properties of Materials: Read More [+]

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Salmeron

Formerly known as: Mineral Engineering 260

Surface Properties of Materials: Read Less [-]

MAT SCI C261 Introduction to Nano-Science and Engineering 3 Units

Terms offered: Spring 2015, Spring 2013, Spring 2012

A three-module introduction to the fundamental topics of Nano-Science and Engineering (NSE) theory and research within chemistry, physics, biology, and engineering. This course includes quantum and solid-state physics; chemical synthesis, growth fabrication, and characterization techniques; structures and properties of semiconductors, polymer, and biomedical materials on nanoscales; and devices based on nanostructures. Students must take this course to satisfy the NSE Designated Emphasis core requirement.

Introduction to Nano-Science and Engineering: Read More [+]

Rules & Requirements

Prerequisites: Major in physical science such as chemistry, physics, etc., or engineering; consent of advisor or instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructors: Gronsky, S.W. Lee, Wu

Also listed as: BIO ENG C280/NSE C201/PHYSICS C201

Introduction to Nano-Science and Engineering: Read Less [-]

MAT SCI C286 Modeling and Simulation of Advanced Manufacturing Processes 3 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

This course provides the student with a modern introduction to the basic industrial practices, modeling techniques, theoretical background, and computational methods to treat classical and cutting edge manufacturing processes in a coherent and self-consistent manner.

Modeling and Simulation of Advanced Manufacturing Processes: Read More [\[+\]](#)

Objectives & Outcomes

Course Objectives: An introduction to modeling and simulation of modern manufacturing processes.

Rules & Requirements

Prerequisites: An undergraduate course in strength of materials or 122

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Zohdi

Also listed as: MEC ENG C201/NUC ENG C226

MAT SCI 296A Independent Research for Five-Year BS/MS Program 1 - 2 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

This is the first semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to formulate, develop and initiate an independent research project under the supervision of a research advisor. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as maintaining a lab notebook, effective oral communication, and writing a journal publication will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A progress report will be due at the end of Materials Science and Engineering 296A. Students will also be expected to give an oral presentation, describing their research project and progress toward their goals in front of their peers at the end of the semester.

Independent Research for Five-Year BS/MS Program: Read More [+]

Rules & Requirements

Prerequisites: Acceptance into the five year BS/MS program

Hours & Format

Fall and/or spring: 15 weeks - 1-2 hours of independent study per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Offered for satisfactory/unsatisfactory grade only.

Independent Research for Five-Year BS/MS Program: Read Less [-]

MAT SCI 296B Independent Research for Five-Year BS/MS Program 1 - 2 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

This is the second semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to complete an independent research project under the supervision of a research advisor initiated in Materials Science and Engineering 296A. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as data analysis and design of experiment will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A final report in journal publication form will be due at the end of the semester. Each student will also give a final presentation on his/her research project at the end of the semester.
