

Nutritional Sciences: Toxicology

Bachelor of Science (BS)

The Department of Nutritional Sciences and Toxicology offers three undergraduate major program specializations: Physiology and Metabolism, Dietetics, and Toxicology leading to a Bachelor of Science (BS) degree.

Now is an exciting time to explore the sciences of nutrition and toxicology. The media have highlighted many questions about the role of diet in development and aging, the safety of genetically modified foods, links among diet, cancer, and chronic diseases, and the problems of global malnutrition.

The curriculum, driven by NST faculty research, covers a breadth of topics including functions and mechanisms of nutrient actions to the benefits and hazards of chemical agents, cultural and socio-economic determinants of human diets, and development of programs and policies to address human and environmental health and safety.

Overview of Specialization

The Nutritional Science: Toxicology degree combines a strong foundation in biological and chemical sciences with specialized advanced courses focusing on the hazardous and beneficial effects of natural and human-made toxic agents. From industrially produced environmental contaminants and designer drugs to herbs and food products, this field of study applies molecular and computational methods to better understand how these agents interact with living organisms and what should be done to ensure human health and safety.

Admission to the Major

Advice on admission for freshmen and transfer students can be found on the Rausser College of Natural Resources Prospective Student website (<https://nature.berkeley.edu/prospective-students/>). Freshman students may apply directly to the major, or they may select the Rausser College undeclared option and declare the major by the end of their fourth semester. Transfer students may apply directly to the major and indicate their intended specialization through the UC application.

Information for current Berkeley students who would like to declare the major after admission, including information on a change of major or change of college, can be found on Rausser College's Change of College website. (<https://nature.berkeley.edu/advising/change-college/>)

Rausser College Honors Program

The honors program is individual research, NUSCTX H196, for two semesters under the supervision of a faculty member. The supervised independent honors research is specific to aspects of the nutritional sciences and toxicology major, followed by an oral presentation, and written report. Acceptance in the Rausser College Honors Program is required through an application process. Students who are interested in the Honors program should apply during their junior or senior year. Students must have a 3.6 grade-point average (GPA) in order to be eligible for the honors program. Please visit Rausser College's Honors webpage (<https://nature.berkeley.edu/advising/honors-program/>) or contact the Rausser Office of Instruction and Student Affairs in 260 Mulford Hall to learn more.

Minor Program

The department offers a minor program in Toxicology. The course work for the minor addresses topics in the basic principles of toxicology and molecular toxicology as well as computational toxicology, pharmacology, and pesticide chemistry. The minor is best suited for students already pursuing a bioscience degree: a background in chemistry, organic chemistry, biology, and biochemistry is necessary to be prepared to do upper division work in this field. For information regarding how to declare the minor, please contact the Office of Instruction and Student Affairs in 260 Mulford Hall.

Other Minor Offered by the Department of Nutritional Sciences and Toxicology

Nutritional Sciences (<https://nature.berkeley.edu/advising/minors/nutritional-sciences/>)

In addition to the University, campus, and college requirements, listed on the College Requirements tab, students must fulfill the below requirements specific to their major program.

All students must complete R1A & R1B (or equivalent Reading and Comprehension course) before the end of their Sophomore year.

NOTE: The curriculum has been revised effective Fall 2016. Students admitted prior to Fall 16 and following the previous curriculum should refer to the 2015-16 Guide (<http://guide.berkeley.edu/archive/2021-22/archive/2015-16/undergraduate/degree-programs/nutritional-science/#majorrequirementstext>).

The Rausser College of Natural Resources Undergraduate Handbook (<https://nature.berkeley.edu/handbook/>) serves as a guide to the academic policies and information that students need in order to be successful while completing their coursework at Berkeley:

Toxicology Specialization

For Breadth, you are required to take 14 additional units of course work in American Cultures, Arts & Literature, Historical Studies, International Studies, Philosophy & Values, Social & Behavioral Sciences, or Foreign Language. Please refer to the L&S 7 course breadth categories here: <https://ls.berkeley.edu/seven-course-breadth-requirement> (<https://ls.berkeley.edu/seven-course-breadth-requirement/>)

Lower Division Requirements

MATH 16A & MATH 16B & STAT 2	Analytic Geometry and Calculus and Analytic Geometry and Calculus and Introduction to Statistics	10
MATH 1A & MATH 1B & STAT 2	Calculus and Calculus and Introduction to Statistics	12
MATH 10A & MATH 10B	Methods of Mathematics: Calculus, Statistics, and Combinatorics and Methods of Mathematics: Calculus, Statistics, and Combinatorics	8
Complete all of the following:		
CHEM 1A & 1AL	General Chemistry and General Chemistry Laboratory	5
CHEM 3A & 3AL	Chemical Structure and Reactivity and Organic Chemistry Laboratory	5
CHEM 3B & 3BL	Chemical Structure and Reactivity and Organic Chemistry Laboratory	5

PHYSICS 8A	Introductory Physics	4
NUSCTX 11	Introduction to Toxicology	3
MCELLBI 32 & 32L	Introduction to Human Physiology and Introduction to Human Physiology Laboratory	5
BIOLOGY 1A & 1AL	General Biology Lecture and General Biology Laboratory	5

Upper Division Requirements

MCELLBI 102	Survey of the Principles of Biochemistry and Molecular Biology	4
NUSCTX 103	Nutrient Function and Metabolism (or MCELLBI 136 [4])	3
NUSCTX 110	Toxicology	4
NUSCTX 121	Computational Toxicology	3
NUSCTX 170	Experimental Nutrition Laboratory	4
NUSCTX 193	Introduction to Research in Toxicology	1
Electives: Select additional courses from the following to bring the unit total to 30 upper division units:		
CIV ENG 114	Environmental Microbiology	3
CIV ENG 115	Water Chemistry	3
ESPM 100	Environmental Problem Solving	4
ESPM 119	Chemical Ecology	2
ESPM 162	Bioethics and Society	4
ESPM C180	Air Pollution	3
INTEGBI 117	Medical Ethnobotany	2
INTEGBI 131	General Human Anatomy	3
INTEGBI 152	Environmental Toxicology	4
NUSCTX C114/ESPM C148	Pesticide Chemistry and Toxicology	3
NUSCTX 160	Metabolic Bases of Human Health and Diseases	4
NUSCTX 115	Principles of Drug Action	2
NUSCTX H196	Honors Research	4
NUSCTX 199	Supervised Independent Study and Research	1-4
PB HLTH 150A	Introduction to Epidemiology and Human Disease	4
PB HLTH 150B	Human Health and the Environment in a Changing World	3
UGIS 192C	Supervised Research: Biological Sciences	1-4

Other CHEM, INTEGBI, MCELLBI, PLANTBI lecture or lab courses, and any other approved courses on the Nutritional Sciences - Physiology and Metabolism electives list also accepted

Students who wish to minor would complete a minor in Nutritional Sciences or Toxicology. The requirements below are for the Toxicology minor. These programs have set requirements and are noted officially on the transcript in the memoranda section, but they are not noted on diplomas.

General Guidelines

1. All courses taken to fulfill the minor requirements below must be taken for graded credit unless offered only on a P/NP basis.
2. A minimum grade point average (GPA) of 2.5 is required for courses used to fulfill the minor requirements.
3. No more than one course may be used to simultaneously fulfill requirements for a student's major and minor programs.
4. Unit total for minor coursework must total a minimum of 15 units.

At least one of the five courses below must be taken during the academic year (i.e., not all courses may be Summer Session courses).

No substitutions to the courses listed below will be permitted.

Students must complete all prerequisite requirements before enrolling in upper division Nutritional Sciences and Toxicology courses.

Lower Division Prerequisites

CHEM 1A	General Chemistry	3
CHEM 3A	Chemical Structure and Reactivity	3
CHEM 3B	Chemical Structure and Reactivity	3
BIOLOGY 1A	General Biology Lecture	3

Minor Requirements

NUSCTX 11	Introduction to Toxicology	3
NUSCTX 110	Toxicology	4
NUSCTX 121	Computational Toxicology	3
Select at least two electives, worth at least 5 units, from the following:		
NUSCTX 103	Nutrient Function and Metabolism	3
NUSCTX 104	Food, Culture, and the Environment (Or NUSCTX W104 [3])	2
NUSCTX 108A	Introduction and Application of Food Science	3
NUSCTX 115	Principles of Drug Action	2
NUSCTX C159	Course Not Available	4
NUSCTX 160	Metabolic Bases of Human Health and Diseases	4
NUSCTX 161A	Medical Nutrition Therapy	4
NUSCTX 166	Nutrition in the Community	3
NUSCTX 190	Introduction to Research in Nutritional Sciences	1
NUSCTX 193	Introduction to Research in Toxicology	1
NUSCTX H196	Honors Research	4
NUSCTX 199	Supervised Independent Study and Research	1-4

General Guidelines

1. All courses taken to fulfill the major requirements below must be taken for graded credit, other than courses listed which are offered on a Pass/No Pass basis only. Other exceptions to this requirement are noted as applicable.
2. A minimum cumulative grade point average (GPA) of 2.0 is required.
3. A minimum GPA of 2.0 in upper division major requirements is required.
4. At least 15 of the 30 required upper division units must be taken in the College of Natural Resources (except for students majoring in Environmental Economics and Policy; please see the EEP major adviser for further information)(NST-Dietetics has 43 upper division requirements).
5. A maximum of 16 units of independent study (courses numbered 97, 98, 99, 197, 198, and 199) may count toward graduation, with a maximum of 4 units of independent study per semester.
6. No more than 1/3 of the total units attempted at UC Berkeley may be taken Pass/No Pass. This includes units in the Education Abroad Program and UC Intercampus Visitor or Exchange Programs.
7. A maximum of 4 units of physical education courses will count toward graduation.

For full details around all requirements, please see our Student Handbook (<https://nature.berkeley.edu/handbook/>):

Reading and Composition (<http://guide.berkeley.edu/archive/2021-22/undergraduate/colleges-schools/natural-resources/reading-composition-requirement/>)

In order to provide a solid foundation in reading, writing and critical thinking all majors in the College require two semesters of lower division work in composition. Students must complete a first-level reading and composition course by the end of their second semester and a second-level course by the end of their fourth semester.

Foreign Language (<http://guide.berkeley.edu/archive/2021-22/undergraduate/colleges-schools/natural-resources/foreign-language-requirement/>): EEP Majors only

The Foreign Language requirement is only required by Environmental Economics and Policy (EEP) majors. It may be satisfied by demonstrating proficiency in reading comprehension, writing, and conversation in a foreign language equivalent to the second semester college level, either by passing an exam or by completing approved course work.

Quantitative Reasoning (<http://guide.berkeley.edu/archive/2021-22/undergraduate/colleges-schools/natural-resources/quantitative-reasoning-requirement/>): EEP Majors only

The Quantitative Reasoning requirement is only required by Environmental Economics and Policy (EEP) majors. The requirement may be satisfied by exam or by taking an approved course.

Undergraduate Breadth

Undergraduate breadth provide Berkeley students with a rich and varied educational experience outside of their major program and many students complete their breadth courses in their first two years. Breadth courses are built into CNR major requirements and each major requires a different number of breadth courses and categories. The EEP major is the only CNR major that requires the entire 7 course breadth. Refer to the major snapshots on each CNR major page (<https://nature.berkeley.edu/advising/majors-minors/>) for additional information.

High School Exam Credit

CNR students may apply high school exam credit (Advanced Placement, International Baccalaureate, A-Level Exam) towards many College and Major Requirements. See AP Exam Equivalency Chart and Higher Level IB Exam Equivalency Chart (<https://nature.berkeley.edu/advising/courses-grades/#AP%20Exam%20Equivalency%20Chat>) in the CNR Student Handbook (<https://nature.berkeley.edu/handbook/>) for more information.

Units Requirements

- Students must complete at least 120 semester units of courses subject to certain guidelines:
- At least 36 units must be upper division courses, including a minimum of 15 units of upper division courses in the College of Natural Resources.
- A maximum of 16 units of Special Studies coursework (courses numbered 97, 98, 99, 197, 198, or 199) is allowed towards the 120 units; a maximum of four is allowed in a given semester.
- A maximum of 4 units of Physical Education from any school attended will count towards the 120 units.

- Students may receive unit credit for courses graded P (including P/ NP units taken through EAP) up to a limit of one-third of the total units taken and passed on the Berkeley campus at the time of graduation.

Semester Unit Minimum

All CNR students must enroll in at least 13 units each fall and spring semester

Semester Unit Maximum

To request permission to take more than 19.5 units in a semester, please see the major adviser.

Semester Limit

Students admitted as freshmen must graduate within 8 fall/spring semesters at UC Berkeley. Students admitted as transfer students must graduate within 4 fall/spring semesters at UC Berkeley. Students who go on EAP and UCDC can petition for additional semesters. Summer session, UC Extension and non-UC study abroad programs do not count towards this semester limit. Students approved for double majors or simultaneous degrees in two colleges may be granted an additional semester. CNR does not limit the number of total units a student can accrue.

Senior Residence Requirement

After the term in which you achieve and exceed 90 units (senior status), you must complete at least 24 of the remaining 30 units in residence at the College of Natural Resources over at least 2 semesters. To count as residence, a semester must consist of at least 6 passed units taken while the student is a member of CNR. At least one of the two terms must be a fall or spring semester. Senior residence terms do not need to be completed consecutively. All courses offered on campus for the fall, spring, and summer terms by Berkeley departments and programs and all Berkeley online ('W') courses count. Inter-campus Visitor, Education Abroad Program, UC Berkeley Washington Program, and UC Berkeley Extension units do not count toward this requirement.

Students may use Summer Session to satisfy one semester of the Senior Residence Requirement, provided that four units of coursework are completed.

Modified Senior Residence Requirement

Participants in a fall, spring or summer UC Education Abroad Program (UCEAP), Berkeley Summer Abroad, or the UC Berkeley Washington Program may meet a modified Senior Residence Requirement by completing 24 of their final 60 semester units in residence (excluding UCEAP). At least 12 of these 24 units must be completed after senior status is reached. International travel study programs sponsored by Summer Sessions and education abroad programs offered outside of the UC system do not qualify for modified senior residence.

Most students automatically satisfy the residence requirement by attending classes here for four years. In general, there is no need to be concerned about this requirement, unless students go abroad for a semester or year or want to take courses at another institution or through University Extension during their senior year. In these cases, students should make an appointment to see an adviser to determine how they can meet the Senior Residence Requirement.

Grade Requirements

- A 2.0 UC GPA is required for graduation.
- A 2.0 average in all upper division courses required of the major program is required for graduation.
- A grade of at least C- is required in all courses for the major.

Nutritional Science and Toxicology Learning Goals

1. To provide preparation in critical thinking, problem solving, and analytical skills.
2. To provide insight and in-depth information on the interaction of natural and man-made toxicants with people and their impact on human health and disease (depth).
3. To provide strong academic preparation for successful contributions to research, education, industry and government, and/or participation in advanced studies in health and biosciences (breadth).
4. To inspire students to advance the health and well-being of citizens (value).

Major Maps help undergraduate students discover academic, co-curricular, and discovery opportunities at UC Berkeley based on intended major or field of interest. Developed by the Division of Undergraduate Education in collaboration with academic departments, these experience maps will help you:

- **Explore** your major and gain a better understanding of your field of study
- **Connect** with people and programs that inspire and sustain your creativity, drive, curiosity and success
- **Discover** opportunities for independent inquiry, enterprise, and creative expression
- **Engage** locally and globally to broaden your perspectives and change the world
- **Reflect** on your academic career and prepare for life after Berkeley

Use the major map below as a guide to planning your undergraduate journey and designing your own unique Berkeley experience.

View the Nutritional Sciences Major Map PDF. (https://vcue.berkeley.edu/sites/default/files/nutritional_sciences.pdf)

In the Rausser College of Natural Resources, we provide holistic, individual advising services to prospective and current students who are pursuing major and minors in our college. We assist with a range of topics including course selection, academic decision-making, achieving personal and academic goals, and maximizing the Berkeley experience.

If you are looking to explore your options, or you are ready to declare a major, double major, or minor, contact the undergraduate advisor for your intended major. Visit our website (<https://nature.berkeley.edu/advising/meet-cnr-advisors/>) to explore all of our advising services.

NUSCTX 10 Introduction to Human Nutrition 3 Units

Terms offered: Fall 2022, Summer 2022 First 6 Week Session, Summer 2022 Second 6 Week Session

This course focuses on relationships between diet and health, and responses of the human body to diet and food components, including macro and micro nutrients, water, phytochemicals, and alcohol. This course also provides an overview of the interplay between nutrients and physiological and behavioral responses. Lectures, which address contributions of diet to optimal health or disease risk, are based on current nutritional, biochemical, and medical knowledge. Goals include enabling students to make informed decisions about their nutritional needs and current issues concerning nutrition.

Introduction to Human Nutrition: Read More [+]

Rules & Requirements

Credit Restrictions: Students will receive no credit for NUSCTX 10 after completing NUTRSCI 10, NUTRSCI S10X, or NUSCTX 10S. A deficient grade in NUSCTX 10 may be removed by taking NUSCTX 10S.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Summer:

6 weeks - 6 hours of lecture and 1.5 hours of discussion per week
8 weeks - 4 hours of lecture and 2 hours of discussion per week

Additional Details

Subject/Course Level: Nutritional Sciences and Toxicology/ Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Introduction to Human Nutrition: Read Less [-]

NUSCTX 10S Introduction to Human Nutrition: Managing Life 3 Units

Terms offered: Spring 2022, Spring 2021

The course will center on how the body processes nutrients, as well as other components of diet such as water, alcohol, and plant constituents. We will explore how these processes can have a lasting effect on our health and behavior. Students will gain a general understanding of basic human nutrition, how key biological, physical, social and psychological factors affect how we eat. The goal is that students gain sufficient knowledge to be able to make informed dietary choices based on individual nutritional needs, and to understand how these choices can have a long lasting impact on one's life. The lecture will be delivered in two modalities 1) In-person lectures 2) Lectures will be streamed and recorded for viewing later.

Introduction to Human Nutrition: Managing Life: Read More [+]

Rules & Requirements

Credit Restrictions: Students will receive no credit for NUSCTX 10S after completing NUSCTX 10. A deficient grade in NUSCTX 10S may be removed by taking NUSCTX 10.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Instructor: Aponte

Introduction to Human Nutrition: Managing Life: Read Less [-]

NUSCTX 11 Introduction to Toxicology 3 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Discussion of principles for the evaluation of toxic hazard of natural and man-made substances present in the environment, the workplace, food, drink, and drugs. The bases for species selectivity, individual variations in sensitivity and resistance, and the combined effects of toxic agents will be addressed. Issues related to the impact of toxic agents in modern society will be emphasized.

NUSCTX 20 Personal Food Security and Wellness 2 Units

Terms offered: Fall 2022, Spring 2022, Fall 2021

Food insecurity is broadly defined as having unreliable access to adequate foods resulting in disrupted eating patterns or reduced food intake due to a lack of money and other resources for food. NST 20 will improve nutrition-related behaviors and support students in need of improving their food security status. Students whom have limited cooking and food preparation experience will acquire foundational nutrition knowledge and basic cooking skills to be able to prepare healthful and affordable meals in consideration of existing factors, such as: food availability; food budgeting; and time management.

NUSCTX 105 Mediterranean Nutrition and Food System 3 Units

Terms offered: Summer 2022 10 Week Session

Studies consistently demonstrate that the Mediterranean dietary pattern reduces risk of chronic disease and adherence rates are higher compared to other diets prescribed to promote health. More recently, the Mediterranean diet is highlighted as a diet with a relatively lower environmental impact. This course will examine the key elements of the Mediterranean diet, compare different types of Mediterranean diets, and discuss how beneficial aspects of this diet are found around the world. Additionally, students in this course will study food systems through specific ingredients produced on the beautiful and culturally rich island of Chios, Greece, where the course is based.

Mediterranean Nutrition and Food System: [Read More](#) [+]

Hours & Format

Summer: 4 weeks - 6 hours of lecture, 12 hours of discussion, and 4 hours of fieldwork per week

NUSCTX 115 Principles of Drug Action 2 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Basic principles and quantitative aspects of drug action and risk/benefit as applied to the discovery, design, and development of human therapeutics. The course will highlight the importance of integrating pharmacology, toxicology, and pharmacokinetics to create effective and safe treatments for human disease. Special emphasis will be placed on pharmacogenomics and variation in individual response.

Principles of Drug Action: Read More [\[+\]](#)

Rules & Requirements

Prerequisites: 110, and Molecular and Cell Biology 102

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Nutritional Sciences and Toxicology/
Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Johnson

Principles of Drug Action: Read Less [\[-\]](#)

NUSCTX 121 Computational Toxicology 3 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Introducing the use of bioinformatics tools useful in linking the molecular structure of chemicals to the toxicity they induce in biological systems. Discussions on the highly interactive process of collecting, organizing, and assimilating chemistry and toxicology information - and the use of computer programs to visualize, browse, and interpret this information to discover chemical structure-toxicity correlations. The importance of these concepts in drug discovery and development and food safety will be emphasized.

Computational Toxicology: Read More [\[+\]](#)

Rules & Requirements

Prerequisites: BIOLOGY 1A, 1AL, and Chemistry 3B (or equivalent courses).NST 110 also recommended

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Nutritional Sciences and Toxicology/ Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Johnson

Computational Toxicology: Read Less [\[-\]](#)

NUSCTX 135 Food Systems Organization and Management 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Principles of organization and management applied to institutional food service systems: production and delivery systems, management of resources, quality assurance, equipment, layout, marketing, personnel management, fiscal management. Laboratory experiences, projects and field work in institutional situations.

Food Systems Organization and Management: Read More [\[+\]](#)

Rules & Requirements

Prerequisites: Consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of fieldwork per week

NUSCTX 161A Medical Nutrition Therapy 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

This fall course serves as the first of a two part series that addresses the nutritional component of treating disease. The Nutrition Care Process of the Academy of Nutrition and Dietetics provides the framework for nutritional status assessment, diagnosis, nutrition intervention, and evaluation. Disease pathophysiology, diagnosis, medical and pharmacological treatments, and nutritional therapies for prevention and treatment are explored for conditions common throughout the lifecycle. The first part focuses on cardiovascular disease. Additional diseases are addressed in 161B in the spring semester. This course will provide an opportunity to apply knowledge of MNT through case studies and various activities.

Medical Nutrition Therapy: Read More [a+]

Rules & Requirements

Prerequisites: 103 and 160

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of lecture per week

Subject/Course Level: Nutritional Sciences and Toxicology/
Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Medical Nutrition Therapy II: Read Less [-]

NUSCTX 166 Nutrition in the Community 3 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

This course addresses basic nutrition in the context of the community. It explores nutrition programs that serve various segments of the population and the relationships of these programs to nutrition policy at the local, national, and international levels. Community assessment is used as the basis for program planning, implementation, and evaluation. The specific needs of population groups (infants, children, women, and the elderly) are considered and questions of food security are investigated.

Nutrition in the Community: Read More [a+]

Rules & Requirements

Prerequisites: 10 recommended; upper division standing required

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Grading: Letter grade.

Instructor: Vulpe

Molecular Toxicology: [Read Less](#) [-]

NUSCTX 250 Advanced Topics in Metabolic Biology 3 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Overview lectures and discussion of primary literature will be combined in this course to provide a working knowledge of principles, regulation, and experimental approaches in metabolic biology. Select topics ranging from molecular mechanism of metabolite synthesis and cellular signaling to integrative physiology of organismal metabolic homeostasis will be discussed with a particular emphasis on their connection to human diseases.

Advanced Topics in Metabolic Biology: [Read More](#) [+]

Objectives & Outcomes

Course Objectives: Use selective topics in metabolic biology to provide a working understanding of basic concepts and technical approaches in metabolic biology.

Student Learning Outcomes: Students learning outcomes will be focused on their ability to derive basic concepts and technical approaches in metabolic biology from the lectures and primary literature discussion.

Rules & Requirements

Prerequisites: Molecular and Cell Biology 102 or equivalent

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Nutritional Sciences and Toxicology/Graduate

Grading: Letter grade.

Instructor: Nomura

Advanced Topics in Metabolic Biology: [Read Less](#) [-]

NUSCTX 260 Metabolic Bases of Human Health and Diseases Graduate Level 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

The physiological bases of human nutrient homeostasis and common disorders resulting from over and under nutrition will be discussed with a specific focus on macronutrients. Topics related to nutrient deficiency and excess will include adaptation to starvation and the effects of caloric restriction on life-span, obesity and its complications, lipoprotein metabolism and cardiovascular disease, as well as a detailed discussion of the causes, disease mechanisms, and treatment of diabetes mellitus. Metabolic Bases of Human Health and Diseases Graduate Level: Read More [+]

Objectives & Outcomes

Course Objectives: After completing the lectures and discussion sessions, students will have developed an advanced understanding of the contribution of nutrients and metabolic pathway regulation to the development of human diseases. This will be a direct extension and disease oriented application of the general metabolic pathways discussed in NST103. After this unit, the students will have gained insights into basic concepts in metabolic biology, their relationship to common disorders such as diabetes, cancer, and cardiovascular disease as well as the basis for metabolism based pharmacological interventions. In addition critical reading of primary literature and the presentation of advanced topics in metabolic biology will be practiced.

Rules & Requirements

Prerequisites: MCB110, NST103 or equivalent

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
